KĀSIM PASHA, Ewliyâ, Ottoman officer and poet of the second half of the 9th/15th century. It is conjectured that he was the son of Todor Muzak, the great Albanian lord (Āṣhîk-i bâsîha, ed. ʿÂlî, Istanbul 1332, 129; Nêşri, ed. Taeschner, i, 230; H. Inalcik, Fatih devri ittice tarihîler ve reşitâlar, Ankara 1954, 162). It is not known at what date he was taken by the derşîrîme to be brought up in Ottoman service; however, as he came to prominence during the reign of Mehmed II, this probably occurred towards the end of Mehmed I's reign. The most important post he had was that of beylerbeşî of Rûmelî, and it is known that he spent a part of his life at Edirne. In 883/1478, he caused to be built a domed mosque, a hospice (şâmârâq and a double hammâm near the district of Selâhîne on the Tundja river (Hîbrick).
resting on accumulated wealth and an alliance with the older indigenous faction of Īrām, just as its
opponent, the Dhu ’l-Fākārīyya (q.v.), allied with
the rival faction of Sa’d. Hostility between the two
groups manifested itself in 1057/1647, when the Otto-
man viceroy combined with the two leaders of the
Kāsimiyya, Kānsawh Bey and Māmāy Bey, to over-
throw the powerful amīr al-ḥādīdī Rīdwan Bey al-
Fākārī. A counterboup by the Dhu ’l-Fākārīyya was,
however, successful, and in the resulting proscrition of
the Kāsimiyya, Kānsawh and Māmāy were put
to death. After Rīdwan’s death in 1066/1656, the fondness of the Kāsimiyya gradually revived under
its leader, Ahmād Bey the Bosniak. In a revolt of the
Dhu ’l-Fākārīyya in 1071/1660, Ahmād Bey gave
strong support to the viceroy Gūrğū Muṣṭafā Pasha,
and was personally responsible for the killing of
three boys who had received a safeconduct. His own
assassination was procured by the next viceroy (1072/
1662). Thereafter until the early 12th/18th century,
factional hostility between Kāsimiyya and Dhu
’l-Fākārīyya was unimportant. In 1123/1711 a clash
between rival corps of the Ottoman garrison in Cairo,
the Janissaries and Āzāb (’Āzābān), involved the Mamlūk factions, the Kāsimiyya supporting the
Āzābs. By their victory in this insurrection they re-
established their ascendancy in Egypt, but at the
same time reopened the fatal vendetta with the Dhu
’l-Fākārīyya. Ismā’īl Bey b. Īwāz Bāy, the head of the Kāsimiyya, as the holder of supremacy (al-rī’āsā)
was entitled “commander of Cairo” (amīr Misr), a
term synonymous with the better known shaykh al-
balād. Conflicts between the adherents of Ismā’īl, the
Īwāzīyya, and a rival Kāsimi household, the Shāhā-
biyya, resulted in the assassination of Ismā’īl in 1161/1774, and gave the Dhu ’l-Fākārīyya an op-
tportunity to gain the supremacy. In 1142/1730 they
finally broke the power of the Kāsimiyya. Surviving
members of the faction took service under Shāykh
Humān of Hawwārā (q.v.), who at this period
dominated Upper Egypt, and they became assim-
lated to his tribesmen. The last Kāsimi notable,
Sālīh Bāy, played a part of some importance in the
relations between Humān and the Kāsimi Bey (q.v.), who procured his assassination in 1182/1768.

Kāsimov, the chief town of a district of the
governorate of the province of Ryazan (USSR), which was the capital of a khanate whose sovereigns bore in Russian
the title of “tsar” or “tsarevitch” and whose exist-
cence is a historical curiosity.

The khanate of Kāsimov was founded between 850/1442 and 860/1452 by Kāsim, the son of Kān Ulugh Muḥammad of Kāzān, who was driven from his īslām by his brother Māmāy in 850/
1442, but escaped to the service of Grand Prince Vasili II, who conceded to him the small town of Gorodets (or Gorodok Meshčenskiy), which later received the name of
Kāsimov (in Tatar, Kān Karmān) in his honour.

It was a small principality—just as a feudal, Tatar
vassal of Moscow, whose īslām nominated or affirmed
the īslām; their position vis-à-vis Moscow was com-
parable to that of the īslāms of the Crimea vis-à-vis
their overlords, the Ottoman paşāshahs, but their
autonomy was more limited. The internal affairs of
the khanate were in fact administered by a Russian
vōyod named by the Polu’skiy Prikaz. The īslāms
received a salary from Moscow and collected the
yaqūt of the local population, composed mostly of
Finns, Mordvins and Meshčerans and some Russian
colonists; the Muslim Tatars formed only a minority.
Kāsim remained a Muslim, but served the grand
prince of Moscow faithfully; this was the first time
that a Īzgīzīdī had become his vassal. After this,
and almost throughout its entire history, Kāsimov
served as a place of refuge for the various Īzgīzīdī princes driven from their īslāms. They were used by
the Russians against their cousins and co-religionists
of the Golden Horde and of Kāzān.

In 872-3/1468, after the death of Maḥmūdī in
Kāzān, Kāsim, at the head of a Muscovite army,
tried to seize power in Kāzān, but failed. His son
Dāniyār succeeded him in 873/1469 and reigned until
908/1406. He took part, on the side of the Muscovites,
in the war against Abū-l-Ṭaymī of the Golden Horde,
and almost throughout its entire history, Kasimov
remained a Muslim, but served the grand prince of Moscow, whom he served
devotedly. After his death, the throne of Kāsimov
was occupied for some time by his sons, Sa’dallāh
and Dijānī. Ca. 918/1512, the īslāms were replaced by
another Īzgīzīdī branch. The first ruler was Shaykh
Awliyār (grandson of Kān Kücük Muḥammad,
descended from Orda, brother of Batu and the first
khan of the “White” (or “Blue”) Horde and cousin
of Kān Sayyid Abū-l-Ṭaymī). In 922-3/1516-17, his young brother, Shāh ‘All (the “Shigaley” of Russian
sources), succeeded him and remained intermittently
the khan of Kāsimov until his death on 10 Shawwal
974/21 April 1567.

The period between 927/1521 and 959/1552 is that
of the struggle between Moscow and the Crimea for
the possession of the īslām of Kāzān. In this conflict,
Shāh ‘All played a very active role. Twice he was
placed by the Russians on the throne of Kāzān—
between 925/1519 and 927/1521, then again in 931/
1546. While he was governing Kāzān, he was replaced
at Kāsimov by his brother Dīnāb-Īl— who also was
khan of Kāzān between 938/1532 and 941/1533 (he died in a popular uprising).

Shāh ‘Ali, who died childless, had as a successor
a distant cousin, Sāyín Bułāt, the great-grandson
of Kān Abū-l-Ṭaymī of the Golden Horde, who was
converted to Orthodox Christianity in 980/1573, took
the name of Simeon Bekbulatić and reigned in Kāsimov
until almost 991/1583. In 982/1574, Ivan the Terrible
named him in his place “tsar and grand prince of all
the Russians”. The next two years, during which
Russia was ruled by a Īzgīzīdī prince was a period
unique in Russian history.

Simeon Bekbulatić died in 1616; but between
981/1573 and 991/1583, he had been replaced in
Kāsimov by Muṣṭafā ‘All, another Īzgīzīdī prince,
who was also descended from Kān Abū-l-Ṭaymī of
the Golden Horde. During the period of troubles
the throne of Kāsimov was occupied by other Īzgīzīdīs:
at first by a member of the dynasty of the īslāms of
Kirgiz Kazak, Uraz Muhammad, who took part in the civil war and was killed in 1610, and then, under the Romanovs, by the descendants of Kutum, the last khan of Siberia. His grandson Arslan is mentioned as "tsar" of Kasimov in 1623-1614; the son of the latter, Sayyid Buhân, seems to have ascended the throne towards 1036/1627. This prince was baptized under the name of Vassili and ruled until his death, which occurred suddenly in 1678. He was the last sovereign of Kasimov. For a few years after his death until 1032/1628, his mother, Faïman Sultan, who apparently remained a Muslim, was still mentioned as "princes" of Kasimov. The town was then annexed administratively to the crown domains.

KASUYAN (Djabal), mountain which forms part of the Anti-Lebanon and rises to the north-west of Damascus [see Dimashq]. Two tributaries of the Barada [q.v.], the Nahr Thawra and the Nahr Yazdû, up until the middle of the 20th century used to irrigate the orchards of Nayarab, which rose in tiers on the southern flank of this mountain.

This mountain has a sacred character because God is said to have spoken to it and also due to ancient traditions which relate to some grottoes opening in the midst of the slope. Three of them, Musallât al-Khîrî, Maghârat al-Djawâ and Maghârat al-Dam, which marks the place where the blood of Hâbil was shed and where people used to come and pray for rain, today constitute a modern oratory known by the name of Kubbat al-Arâhân in memory of forty prophets—seventy according to certain traditions—who died of hunger there; a legend speaks of Yahyâ b. Zakariyâ having allegedly stayed there forty years with his mother. Slightly to the south-west of this oratory, is situated the Grotto of Adam, also called Kahf Pjibrîl or al-Kahf, an oratory dedicated to irrigate the orchards of Nayrab, which rose in tiers on the southern flank of this mountain. Three of them, Musallât al-Khîrî, Maghârat al-Djawâ and Maghârat al-Dam, which marks the place where the blood of Hâbil was shed and where people used to come and pray for rain, today constitute a modern oratory known by the name of Kubbat al-Arâhân in memory of forty prophets—seventy according to certain traditions—who died of hunger there; a legend speaks of Yahyâ b. Zakariyâ having allegedly stayed there forty years with his mother. Slightly to the south-west of this oratory, is situated the Grotto of Adam, also called Kahf Pjibrîl or al-Kahf, an oratory dedicated to the Asfcab al-Kahf, the Seven Sleepers of Sura of Sura, to develop, while a radio-television station functions at the summit of the mountain.

KASKAR, the name of a town in 'Irāk. When al-Hâdjdâdî [q.v.], the governor of 'Irāk appointed by the caliph 'Abd al-Malik had put down the rebellion there, he began in 83-6/702-5 to build a new town which was called Wâsi't ("centre") because it was midway between the two older Arab capitals of this province, al-Kūfa in the north and al-Baṣra in the south. For the site of the town he chose the vicinity of Kaskar, on the Tigris, which had played a not unimportant part in the Sasanian period. The new Muslim town was built on the east bank of the Tigris, while Kaskar lay opposite it on the west side; a bridge of boats linked the two halves of the city. Neither Wâsi't nor Kaskar exist at the present day, and until modern times their exact situation was uncertain as the Tigris bed has changed its course, bypassing the sites and rendering them obsolete by the 9th/14th century. The exact relationship between Kaskar and Wâsi't is not clear. Recent excavations at Wâsi't indicate the administrative importance of the city as the centre of Unayyad rule (F. Safar, The Sixth Season's Excavations, Cairo 1945). The remarkable similarity of the administrative buildings to those of the Round City at Baghdad (O. Grabar, Al-Mushatta, Baghdad, and Wâsi't, in The World of Islam, Studies in Honor of Phillip K. Hitti, London 1959, 98-108) raises the question of whether Kaskar was originally intended as the administrative centre for the general populace as distinct from Wâsi't, which would then have housed the administration and perhaps military garrison. A similar situation apparently prevailed at al-Rakka-al-Rafîka (Yâkût, Mu'âjavam, ii, 734). In the course of time, Kaskar was subsumed by the more famous site. For further information on Wâsi't, see the article.

Kaskar probably dates back to the Assyrian period. A Babylonian town, Ka-as-ka-ri, appears to be mentioned in a fragment of an inscription probably of the time of Assur-baniapal in the British Museum (18 82:3-2:128; see Besold, Catalogue, 1824; cf. Streck, Assurbanipal, Leipzig 1916, pp. lxxviii, 790). The place is perhaps also mentioned in the Babylonian Talmud (Yoma, fol. 104a, where Bashk should probably be amended to Kaškar; see Marguart, Erânsârâh, Abh. G. W. Götte, New Series, i,2a, Berlin 1907, 164). In any case Kaskar, called Kaškar in Syria and Christian Arabic sources, is one of the oldest Christian towns in Babylonia. It frequently appears in the ecclesiastical history of this region. The episcopal diocese of this name was considered second in importance within the Nestorian church. Its occupant was the right arm of the patriarch of Seleucia-Ctesiphon [see Al-Madâ'in] and his representative when the official residence, Ta'rikh Dimashq, was vacated.

Among the signatories to the acts of the Syriac councils from the period 410-790 were bishops of
Kaskar (Guidi in ZDMG, xliii, 411, and Chabot in Notices et extraits, xxxvii (Paris 1902), 679). According to the Syriac “Chronicle of Arbela” there was a bishop in Kaskar as early as the first half of the 3rd century A.D. The Christian Arabic “Chronicle of Se’ert” also mentions an occupant of the episcopal seat there of the period before 410 A.D. On the bishopric of Kaskar and for a list of its occupants, see J. Labourt, Le Christianisme dans l’empire Persé sous la Dynastie Sassanide, Paris 1904, passim (see the index s.v.); Sachau, Die Chronik von Arbela (= Abb. Pr. Ak. Wiss., 1915, no. 6), 21; Sachau, Zur Ausbreitung des Christentum in Asien (= Abb. Pr. Ak. Wiss., 1910, no. 1), 30-1.

The town of Kaskar, like the bishopric which bore its name, was the home of many founders of monasteries, as may be seen from the work compiled in the 8th century by Yeshu’denab, entitled K’tubah al-Nakhâpatâ (ed. Chabot in Mélanges, et d’histoire de l’École Française de Rome, xvi (Paris 1896), 225 f.); the Great Abraham (d. 588) was especially famous (see Yeshu’denab, no. 14; Labourt, op. cit., 315; A. Baumstark, Gesch. der syrisch. Literatur, Bonn 1922, 130). One of the most influential personalities at the court of the Sasanian King Khusrav II Parvēz (590-628) was Abâd of Kaskar; on him see Baumstark, op. cit., 123. On other Syriac writers who belonged to Kaskar (‘Ab’dshù, Grîghî, Elijû) see Baumstark, op. cit., 30, 128, 420. For the Syriac sources on Kaskar, see also the indices in Wright, Catalogue of the Syriac Manuscripts in the British Museum, London 1870, and idem, Cat. of the Syriac manuscripts in Cambridge, Cambridge 1901, 128, also in Sachau, Katalog der syrisch. Handschr. in Berlin, Berlin 1909, 92.

In the Arscadic period, there seems to have been a little kingdom of Kaskar, which was destroyed by the first Sasanian, Ardashîr I; cf. Noldeke, Gesch. der Arab. und Perser zur Zeit der Sasaniden, Cal., Mission scientifique en Perse, i, Paris 1894, passim (see the index s.v.); Sachau, Isl., xiv (1924), 17 f. The bishopric of Kaskar must have coincided pretty much with the Sasanian district of the same name; cf. the map in Sachau, Die Chronik von Arbela, 16.

Kaskar is mentioned as one of the 72 administrative districts; see Streck, (see Sachau, Die Chronik von Arbela, 16.

Kaskar is also given as the name of the capital of Daylam, which was usually called Dûlûb; cf. G. Le Strange, The Lands of the East. Cal., 174; de Morgan, Mission scientifique en Perse, i, Paris 1894, 276.

(M. Streck—J. Lassner)

KAYSAR, from the root KSR, with the sense in Arabic of “to break”, as a mathematical term means “fraction”. Ibn al-Banna’ (q.r.); in his Talkhs̲s al-’as̲b̲āb gives the following definition: “A fraction is the relationship between two numbers when it is a part or several parts. The relationship between the part and the number which bears the same name is called a fraction”. The part or the numerator is called bas; the number with which it is in relationship (asmâl) is called imâm (Talkhs̲s, Kâsh al-’as̲b̲āb). Bahâ al-Dîn al-‘Amîlî (9th/10th century) uses the terms ܨܪܐ and ܡܡܐ, as do al-Kâshî (ms. Tunis 2039, f. 7a) and the Revue de l’Académie du Caire, 1937; mushk̲ār̲d̲î or mukhr̲ād̲î is also found (the Ikhwan al-Ṣaḥâba), connecting the idea of the fraction to that of division (kasr). The term being specialised to translate “quotient”. The idea of the part, by definition, is not as the whole, led the Arab academics to consider the fraction as being, by its very essence, inferior to the idea of the unit; at the base of this is the concrete idea of dividing up a given amount. Ibn al-Banna’ is very explicit here: “The addition of fractions stops when one arrives at a fraction whose numerator is less by a unit to its denominator”. Al-Kalâsâdî says in a precise fashion that “One does not say four fourths or five fifths” (Kashf al-’as̲b̲âr, ms. Tunis 3292, f. 39b).

For denoting fractions whose denominator lies between 3 and 10, the paradigm fuṭ’ or fu’dî is used; for “half” or “equal part”, however, nisf is used. This category of fractions is called musnâd “pronounceable”: or nishîd “open”, cf. al-Kâshî, Misbâh al-hisâb, ms. Tunis 1901, ff. 7b-7c. The rest are called asamm “deal” they are expressed by using the expression gjûz min ("a part of ...", “a part from amongst ...”).

For the notation of fractions, it was al-Kalâsâdî who first used the symbols still in use today, sc. writing the numerator above the denominator and separating the two terms by a horizontal line (Kashf al-’as̲b̲âr, f. 17b). Since this notation was new, al-Kalâsâdî seems to stress its explanation, using the expressions ’alā ra’îsî ("placed above it") and mā fawk al-khâṣî ("that which is above the line"); see the commentary on the Talkhs̲s, ms. Tunis 307R, f. 112b.

From the time of Ibn al-Banna’ onwards, the Arabic mathematicians distinguish five kinds of fraction: (1) simple or ordinary fractions (mufrad); (2) fraction of relationship (muntassîb), as in this example from al-Kalâsâdî 3.1.4.5. which is written in modern notation: 4 \cdot 3 \cdot 7 \cdot 9.

\[
\begin{align*}
& 1 + \frac{3}{4} \\
& 4 + \frac{3}{5} \\
& 7 + \frac{480}{9} \\
& 9 \times 7 \times 3 \times 4 \times 3 \\
& = 756
\end{align*}
\]

(3) disjunct fractions (mukhlâfîf), which do not have the same denominator. (4) subdivided fractions (musha’dâd), or fractions of fractions, noted by al-Kalâsâdî 6 \frac{1}{4} or 6 \times 4 \times 1 = 24 \frac{7533}{33}, the numbers making up the numerator and denominator being separated, but without using any dots (5) excepted fractions (mistaṭnîhî), separated but without using any sign.

In geometry, the idea of the fraction is usually conveyed not by kasr, but by the terms nisba "relationship" or tasmiya "denomination". However, words derived from the root KSR are used to translate the concept of area: kassara, tasbîr “area”, mukhassar “square of a unit of linear measure” (al-
The Umayyad castle in the Syrian desert at 60 km. SSW of Palmyra, a 'birkah', was an important water-distributing system. The traces of the watch-tower's house can still be seen. Upstream, on a lateral drain, are the ruins of a water-mill. Close to the 'birkah' rise the vestiges of an almost square construction, about 55 m. long, none of its angles is a right angle. This is the 'khân al-mîh', "whose walls had been of mud brick resting on a base of well cut stone." On the eastern side was a large gateway which has now been removed to the National Museum at Damascus. Its lintel carried an inscription dated Raqjâb 109/Sept.-Nov. 727. The entrance was framed by two wings which stood out 18 m. from the façade along the northern and southern walls. In the southern wing was a mosque, as can be concluded from a still-existing mîhrāb with small columns; the northern wing contains a drinking-trough. Inside there is a central court-yard 22.50 by 23 m., surrounded by a portico 2.50 m. deep. On the northern, western and southern sides are three rooms 45 m. long and 4.80 m. wide, possibly stables or cattle sheds. On the eastern side there are six rooms of various size and a vestibule.

Lying 30 m. north of the palace there was a bath of classical type, dating from the Roman-Byzantine period. It had four cool rooms, the southern one containing a mîhrāb, and a suit of three warm rooms constructed over hypocausts. Externally the palace was of a square construction 70 m. long—the equivalent of 200 Roman feet—, with a wall of limestone and basaltic blocks 2.60 m. surrounded by mud brick which rests upon a zone of burnt brick. This wall has a semi-circular buttress in the middle of each side, except the oriental one, where two half-towers flank the entrance-gate. The corners are protected by round towers, except at the north-western angle, where the enclosure incorporates a Byzantine tower, which on its southern side has a machicolation defending a gate. Later, this tower served as watch- and relay-tower for the fire-signals between Bayḍâ and Karyatayn. The round buttresses of the wall, unknown in Roman and Byzantine fortifications, are Sasanian elements.

Through a round-arched gate, 3 m. wide, provided with a semi-circular tympanum built in brickwork covered with cubes of glass and two jamb of 4 m. decorated with leafwork of vine-tendrils, one enters a large entrance passage 11 m. long, cradle-vaulted and provided with small benches on each side. It leads into a courtyard of 37 m. square, paved with a small basin in the centre. The portico has columns with Corinthian capitals, the bases of which consist of Doric capitals. At the angles of the portico, which is 4 m. deep, are square-sectioned piers.

The palace is a residence on two floors. The ground floor consists of six insulae, sets of rooms (bayds) accessible through the portico. According to Creswell, their disposition originates from the palace of the Roman governor at Bosra [q.v.]. The plan of the...
upper floor repeated that of the ground-floor, with which it is connected by two staircases. All around ran a gallery with small columns and balustrades. The residence, which had no windows on the outside, received light through the doors and through stucco grilles in the tympanums of the doors, none of which was found undamaged on the spot during the excavations. It has been possible to replace a great number of these window-grilles (claustra), made in stucco and then bored out with a trepan. They now received light through the doors and through stucco ran a gallery with small columns and balustrades.

It has been possible to reconstruct many elements of figurative art: human beings or animals in bas-relief in one of the divisions of the semi-towers of the entrance, and on the panels of the interior balustrade. There are even genuine sculptures, among which figures the statue of a man, almost life size, sitting on a throne, with a crown (ṭādjī) on his head, knees wide apart and heels close together, generally identified as Ḥishām b. ‘Abd al-Malik. Human beings and animals are also represented in the large compositions which are painted in fresco on the floor of the two staircase rooms of the palace. One, 5 by 4.58 m., is divided horizontally into three parts. On the upper one two musicians are depicted, on the second one a hunting scene, representing “the caliph on horseback with bow and arrow and using stirrups, which is almost the oldest known record of their use” [see Architecture, I, 613A]; on the lower part, badly preserved, one can distinguish animals and a human being leading a bovine. On the second painting, 5.24 by 4.43 m., there is in the centre a great medallion with a large bust of a woman on a background of foliage, with on upper side there are marine centaurs and on the lower animals, including a fox and two crested stilt-legged aquatic birds.

On the walls of the rooms on the ground floor there have been discovered simple geometrical motifs, in which the lozenge dominates, and imitations of marble facing, painted in fresco-colours and executed schematically. The central part of the eastern wing, the most decorated of the palace, has been reconstructed in the National Museum of Damascus.

Kasr al-Hayr is particularly important, not only because it has the characteristics marking Umayyad castles, as defined by Henri Stern (Note, 81): “A rectangular fence with rounded, buttressed towers and bayāts within it and a mosque are the centre of an area of agricultural exploitation irrigated by means of a big dam”, but the variety of its various architectural elements and the riches of its decorations make it a first-class piece of evidence for the study of art and civilization in the Umayyad period.

**Kasr al-Hayr al-Sharqī**, important Umayyad agricultural settlement in the Syrian desert at the foot of the Djabal Bighri, about 100 km. NE of Palmyra and 65 km. S of Rusafa-Sergiopolis. It lies at the intersection of the road joining Mayyadīn on the Euphrates to Palmyra and Ḥims with the one leading from Halab to Rusafa and permitting to reach Baghdaḍ and Baṣra by crossing the pass of Tayyib, situated at 14 kms. to the N–NE. The village of Tayyib is usually identified with Oriza mentioned in the Annals of Assurbanipal (*Ur* of the Middle Ages).

Many travellers who took that route between the 14th and the beginning of the 19th centuries, have been able to see the ruins of Kasr al-Hayr. Later, towards 1840, the desert route to India was abandoned in favour of the "Overland Road" and the site was mentioned no more.

The ruins, visited by A. Musil in 1908, were re-discovered and studied on the surface by Albert Gabriel in 1925 and by K. A. C. Creswell in 1928-30, before being excavated by Oleg Grabar in 1964, 1966 and 1969.

The whole of the settlement covers an area of over 6 x 3 km., surrounded by a wall 17 km. long. The southern part comprises a curious system of canalizations and openings which have been variously interpreted. At the northern angle, down stream from a large artificial wāḍī, are two square enclosures, reinforced by semi-circular towers; the small one being called al-Karṣ, the big one al-Mudīna. Their fronts are orientated perpendicularly to the cardinal points, whereas the eastern and western axes are not in even line with each other, there being a difference of 10 m. These are the oldest fortified Muslim enclosures that exist.

The small enclosure has a side-line of 70 m., the eastern front not being parallel to the western front, which is the only one to have a gate. The wall, 2.03 m. thick and ca. 14 m. high, is built with pieces of limestone, in courses 0.35 m. thick and strongly joined with gypsum. Each angle of the wall is reinforced by a round tower 4.43 m. in diameter and two semi-circular towers on each front; altogether 12 towers all covered with a small cupola of bricks. On the western front the disposition is different because from the monumental gate which is flanked by two semi-towers 4.15 m. in diameter, jutting out 2.95 m. The entrance, 3 m. wide, is surmounted by a round arch and a tympanum of masonry. The higher parts of the towers have a decoration of bricks and of stucco panels with vegetative motifs, representing the oldest decoration of this kind in Islam. In the centre above the entrance a parapet consisting of three consoles form the oldest Muslim example of a machicolation (sakhbāt) being used as an element of defence and no longer as latrine.

To enter the inner side of the fence, one passes through a flagged vestibule 5.30 m. wide and 7 m. deep, flanked by two rooms facing a courtyard with sides of 37 m., and is surrounded by a portico 5 m. wide with arcades resting on columns 0.55 m. in diameter and a shaft of 3.70 m., surmounted by capitals of acanthus leaves. This portico gives access to many rooms with cradle vaulting, 12 m. deep but of different width. On the upper floor, under the gallery, are rooms with flat wooden ceilings whose
Disposition corresponds to the plan of the ground floor. Nothing is known about the use of these rooms. The building was constructed at two periods: begun under Hishām [q.v.] and finished in the early 'Abbāsīd period. Fragments of ceramics indicate that it was occupied from the 5th-7th/11th-13th centuries.

The big enclosure with sides of 160 m. has a stone wall 2.12 m. wide which is in a very bad condition. On each front are towers with rounded corners 4 m. in diameter, and 6 semi-circular towers, altogether 28 towers, standing at a distance of 26.25 m. from axis to axis, except those which flank the entrance constructed in the middle of each front. To be noted are two sally-ports on the eastern front and some inside staircases which lead one to imagine that there was once a gallery facing the interior front of the wall. At the top of the towers, which are crowned with a cupola in bricks, is a room with three loopholes permitting shooting to the front and sideways. The entrances are all identical: 3 m. wide, surmounted by a lightly broken arch, with a tympanum in masonry and a parapet with two openings. The parapet of the northern gate has five machicolations and covers the space between the two flanking towers. In the middle of the enclosure extends a vast open space, the midān.

At the southeastern corner survive the vestiges of eight big pillars, some of which support arcades. Creswell has discovered there a mosque, the plan of which shows close analogy with that of the Great Mosque in Damascus. This sanctuary is dated by an inscription of 1107/289-9. The prayer-room, 22 m. deep and 37 m. wide, has a central nave with pillars in T-form while the remains of arcades mark off three aisles. The room faces a courtyard with a cistern fed by water from a canalization.

The arch at the southeastern corner of the courtyard is slightly broken and in shape a Norse arch: it is the oldest example of this type actually known.

According to O. Grabar there is, to the southwest of the mosque, an official building, the dār al-imāna, with a courtyard surrounded by a portico, rooms and a reception-hall, the back wall of which leans against the enclosure wall.

To the north of the mosque, in the extension of the western wall, a street 3.50 m. wide is bordered, on its eastern side, by installations with ovens and presses, that reveal the existence of soap-works. In the same area, a bath faced the midān and not towards the southwest; an enormous cistern should also be noted there.

The vestiges of the southwestern part of the enclosure suggest that it may have been destroyed during the Karmatī expeditions of the beginning of the 4th/10th century.

In the space of 42 m. which separates the two enclosures there rises a square tower with sides of 2.94 m. and 10 m. high. An entrance on the south side gives access to a spiral staircase. The analysis of the construction permits us to date it to the same period as the enclosures, with a post-Umayyad reconstruction. Why does the tower stand isolated? There is no minaret attached to the mosque, hence possibly it served as minaret for both enclosures. If so, it would be the third known minaret in the history of Islam.

To the south of the Kāsr and the Madīna, a vast polygonal enclosure 17 km. long covers an area of 850 hectares. One can distinguish a wall to retain water, alternately reinforced on both sides with four rows of stone 0.30 m. high, above which there are rows of mud bricks at a height of about 2 m. and a row of stone to protect it. There is also a wall for lock-gates, the buttresses of which have a diameter of 2 m. and are at 10 m. distance from each other; they frame a series of four locks, 1.11 m. wide and 1.55 m. high, with double vaults of bricks. The locks worked through a system of sliding-doors. The water arrived from the region of Tayyība through two subterranean aqueducts. This enclosure poses problems of interpretation: accordingly some have considered it a lake at some point for irrigation, others that it was a reserve for animals. H. Seyrig considers it to be a large garden protected against Bedouin razzias.

To epitomise the history of the site: it may be recalled that an installation, dating from the 7th century B.C., is mentioned in the contemporary texts; the Roman occupation in the Palmyran period was followed by a Christian period, the Umayyad constructions and finally building activities at the beginning of the 'Abbāsīd period. Destroyed by the Karmāṭ in 289/1002, the complex became part of the ḏīḥ [q.v.] of Shirkūh and his successors, the āmirs of Hims; it was devastated by the Mongols in Rājīb 702/March 1303. It was certainly reoccupied before being ruined in 1048/1638 by order of Murād IV, in order to prevent the creation of a Bedouin centre of rebellion. From the end of the 10th century onwards, the ruins have been giving shelter to nomad encampments.

The site of Kāsr al-Hayr poses identification problems: most of the authors identify Tayyība with Orīza-ʿUrd while Kāsr al-Hayr, according to Ptolemy, followed by A. Musil, is identified with Adada, an ancient Roman camp. In 1939 J. Sauvaget positively identified the site with Hishām, as being those of a caravanserai, which in that case would be the oldest ḏīḥ [q.v.] of Muslim architecture.

(Elisséeff)
with Madinat b. Hubayra, which was situated closer to al-Kufa, where the same Yazid began building until forced to abandon the site by order of the Umayyad caliph Marwan II (Baladhuri, Futūḥ, 287; Tabari, iii, 80, 183; Yāqūt i, 680; 3, 280; 4, 123, 946; see also Le Strange, Baghdād, 6 n. 1; Lands, 71). Yāqūt reports that the 'Adabṣābil al-qalīf al-Chifīnī established his capital at Kasr b. Hubayra, completing the construction begun by Yazid, and named it al-Hashimiyā, but as the populace persisted in calling the town by its original name, he felt compelled to abandon the site for a location nearby. This account apparently confuses the report of Baladhuri which indicates that al-Saffāf settled at Madīnat b. Hubayra (Yāqūt, iv, 546; Baladhuri, 287; see also al-Ḥashimiyya, where Yāqūt's account is given greater credence). The 4th-5th/10th-11th century geographers report that it was the largest town between Baghdād and al-Kufa and was situated close to the Euphrates and the bifurcation of various water channels which brought wares to its many markets. With its decline some time before the 6th/12th century, al-Ḫilla became the major town of the area (see al-Ḫilla). (J. Lassen)

al-Ḵāṣr al-Kabīr, Alcazarquivir, a town in North Morocco, about 50 miles south of Tangier on the right bank of the Wādī Lūkkus; at one time, this ran through it, but the course of the stream was diverted to prevent inundations. Lying in a vast plain commanded on the east by hills, it is divided into two parts, al-Shari'a in the north and Bāb al-Wād on the south, between which lies the market-place. The only buildings of any importance are the great mosque which is pre-Islamic, the mosque of the Khlot, Thk and Djbala. It also included Rifans, a settlement west of town between Baghdad and al-Kufa and was situated close to the Euphrates and the bifurcation of various water channels which brought wares to its many markets. With its decline some time before the 6th/12th century, al-Ḫilla became the major town of the area (see al-Ḫilla). (J. Lassen)

al-Ḵāṣr al-Sāghīr, El-Ksar al-Acabir, a town in Morocco, 14 miles west of Ceuta, 23 miles

ever, a makes a distinction between Sūk Kutāma "a large and magnificent town situated on the river Lūkkus with a djāmīsī and a very busy market" and Kasr Danhādja "a castle built on a hill and commanding a large river". Ibn Khaldūn, on the other hand (op. cit., text i, 188, tr. ii, 291), connects Kasr Kutāma with the Danhādja (cf. also Kitāb al-Idhtisāb). Sūk Kutāma was the capital of the state governed by Idrīs al-Maṣūm b. al-Ḵāṣr al-Sāghīr; Almohad, the mosque of Sidl al-Azmlri and the Diamī ḥalām, finished in 1100/1689. Within and around the town are many kubbas dedicated to local saints. The most venerated marabouts are Abu 'l-Ḫasan al-Kurashi (Kurashi), a native of Spain who came towards the end of his life to teach in the town between Baghdad and al-Kufa and was situated close to the Euphrates and the bifurcation of various water channels which brought wares to its many markets. With its decline some time before the 6th/12th century, al-Ḫilla became the major town of the area (see al-Ḫilla). (J. Lassen)

The period following the disappearance of the Banū Ḥadhīlūla was one of calamities. The Portuguese, who first established on the coast, threatened the town. The inhabitants did not dare to cultivate the soil more than six miles from the walls. In 1503 the governor of Aqliya, Don Juan de Meneces, attempted to take it but without success. In the century following, al-Ḵāṣr became the most advanced post of the "volunteers of faith" (Muqāḏimān) who harassed the Christians settled on the coast. During the period of anarchy that preceded the establishment of the 'Alwī dynasty, the town became the residence of the Kālid Ghlān, who had gained possession of all Gharb. Driven from his capital by Mūṣāy Af-al-Rašīd in 1078/1668, Ghlān was able to return to it on the death of this prince. He held out there till 1084/ 1673 when he was defeated and killed by Mūṣāy Ismā'īl. Al-Ḵāṣr fell again, this time finally, into the hands of the Ṣafar, who dismantled its walls.

E. of Tangier, at the head of a bay sheltered by a spur of the Djebel Ghomari at the mouth of a navigable river.

In ancient times this site was perhaps occupied by a Phoenician factory and then by a Roman town (Lissa or Exilissa of Ptolemy). A fortress was erected there quite early in the period of Muslim occupation, in 907/08-9, according to al-Ziyânî, in **Archives Marocaines**, vi, 494, on the territory of the Maamûd, whence the name of Kašr Naamûd (cf. Ibn Khaldûn, *Hist. des Berbères*, ed. de Slane, i, 280, 13, tr. ii, 134) which is given by the author of the *Kitâb al-Istibdâr* and by al-Idrîsî. Al-Bakîr calls it al-Kašr al-Anwâl to distinguish it from al-Kašr al-Kâbir [q.v.]. According to him, it was inhabited by the Banû Tarîf and surrounded by great plantations. Under the Almohads it took the place of Marâs Mâsâ as the port of embarkation for Spain. Many authors call it therefore Kašr al-Madâjz (Georg. d'Aboul-fida, tr. Reinaud, ii, 185; Ibn Khaldûn, loc. cit.), or Kašr al-Siwaâ “Castle of the crossing” (Ibn Abî Za'r, *Raud al-Kifâs*, ed. Tornberg, 138, 143, 146). The Almohads erected important buildings in it and established naval dockyards there. But the prosperity of the town declined in proportion as the rulers of the Maârîb lost their hold on Spain. Deprived of the income the transport of the armies had assured them, the inhabitants turned to piracy. Al-Kašr therefore became one of the first towns that the Portuguese sought to capture. In 1458 King Alfonso V attacked it with a fleet of 80 ships and an army of 17,000 men; after repelling two assaults, the Muslims, overwhelmed by the Christian artillery, capitulated. They were, however, granted permission to retreat with their arms and baggage. Alfonso V entered the town on Oct. 19, 1458. The great mosque was turned into a church, the fortifications were strengthened and a garrison installed under the command of Don E. de Minecez. Two attempts made by the Sulînân of Fâs in 1458 and 1459 to recapture the town did not succeed. In 1463 the tribes of Angierra recognised the suzerainty of Portugal and in 1471 Sulînân Mûsâ Sa'dî signed a treaty by which he ceded al-Kašr to the king of Portugal.

Al-kašr remained in Christian hands till 1540 but during this period it was continually being attacked by the Moors. John III therefore decided to evacuate it after previously dismantling it. Some years later (1559) a French prince, Antoine de Bourbon, king of Navarre, obtained al-kašr in exchange for the men-at-arms that he was to supply to the Sharîf of Fâs, but the intrigues of the king of Spain, Philip II, prevented the treaty from being carried out. Since that date no attempt has been made to rebuild the town. The inhabitants abandoned it and the harbour became silted up and no longer used except by smugglers. The site is marked by the ruins, still imposing, of the Portuguese fortress, by ditches, and by the remains of the walls and the ruins of the gate through which the citadel communicated with the town proper.

(G. Yver)

**KAŠR-I SHIRIN,** town in the south-western part of the district of Ardîlân or Persian Kûrdîstân in 34°30' N. lat. and 45°30' E. long. (Greenwich) on the right bank of the Hulwân. To the west and south-west of Kašr-i Shirîn lies the great range of Agh-Dagh; in the S.E. also on the left bank of the river run imposing mountain chains. Kašr-i Shirîn was an important caravan station from the earliest times. The most important route through it is the very old road from Baghdad to the Iranian highlands—the Târîk Khurâsan of the Arabs of the Middle Ages. Kašr-i Shirîn lies about half-way between the two stations of Khânîkîn [q.v.] in the south-west and Sar-i-pul (in mediavals times Hulwân, south of Sar-i-pul) in the east. Less important roads also branch off here to the north, north-west, and south-east.

The modern Kašr-i Shirîn (1600 feet above sea-level) is an insignificant town surrounded by a wall of earth and stone. Only the walls of the site of Kašr-i Shâh, a commodious caravanserai; to the west is a fort in modern style which, according to Aubin (*op. cit. in Bibl.*), Dîwân Mir built at the beginning of the 19th century, using it to plunder passing pilgrims to Karbâlî and merchants. Opposite the town on the left bank of the river lies the Bâgh-i Shâh, “King’s Gardens”, a park laid out with date-palms and orange and pomegranate trees by Nasr al-Dîn Shâh on the occasion of his pilgrimage to Karbâlî.

The most remarkable feature of Kašr-i Shirîn, which makes it one of the most interesting places in Persia to the historian or archaeologist, is the extensive system of ruins dating from the Sâsânian period in its vicinity. The name Kašr-i Shirîn, “Shîrin’s Palace”, dates from the later period of the Sâsânian empire (farhâd), a Christian, was the favourite wife of Khusrâw II Parwâz (560-628 A.D.), who called the great palace he built as a summer residence after her. Kašr-i Shirîn and the neighbourhood was the scene of the unhappy love-story of Shirîn and the royal architect Farhâd [see *farhâd wa-shâhre*]. A rock tomb south of Kašr-i Shirîn is popularly known as Úãâ-k-i Farhâd, “Farhâd’s chamber” see Sarre and Herzfeld, *Iranisches Namenbuch*, 63), also spent some time at the imperial court at Kašr-i Shirîn.

The period of Kašr-i Shirîn’s glory was only brief. Ten years after the death of Khusrâw II the Sâsânian empire collapsed before the Arabs, and in the Muslim period the palaces of Kašr-i Shirîn seem no longer to have been inhabited. They fell quickly into ruins. Ya’kûtî, *Buldân*, 270, mentions the ruins as early as 798/891. Ibn al-Afîrî, viii, 388, mentions that as a result of an earthquake in 454/956 the walls of Kašr-i Shirîn cracked. Such Arab and Persian authors as Ibn Rusta, Ya’kûtî, al-Kâzwinî and Hamd Allâh Mustawfî emphasize the great scale of Kašr-i Shirîn, with its halls, hermitages, treasure houses, etc. and the splendid gardens containing very rare animals, but give no detailed descriptions. Ya’kûtî and al-Kâz- winî give especially the story of the origin of the palace, which the former (iv, 113) actually regarded as one of the wonders of the world.
We owe the most accurate description of the modern ruins to the French expedition of J. de Morgan. The main ruins lie on a broad plateau north-east of the modern town. Near the latter is the rectangular citadel flanked by six round towers (called Kal’a or Kasr-i Khusrav, also Kal’a-i Khusravi) surrounded by a ditch. North of the Kal’a are further mounds of ruins whose object is unknown. About 300 yards to the N.E. is the wall of a gigantic park, enclosing the summer-residence proper of the king, which measures, according to de Morgan, 300 acres. The wall round it, which also served as an aqueduct, reaches 20 feet at the highest part and is about 6,000 paces in extent. Another aqueduct-wall divides the park into two parts. The water for the irrigation of the gardens was brought from the Hulwan-Rud; the aqueduct can still be traced in the Hulwan-Rud valley until it is lost in the maze of ruins of Hawsh Kuri. In the centre of the whole scheme is the main palace, now called ‘Amrārat-i Khusrav (“house of Khusrav”)’ or Hājjī Kala’sī (“pilgrim’s palace”). In front of the palace still exists a 600-yard long stretch of the aqueduct flanked by two kiosks. West of the ‘Amrārat-i Khusrav stands a smaller, similar vaulted building with four doors and a square principal chamber. It is now called Cudr Kapu, Kār Darud, or Hadjdjl Kal’c. It is 220 feet long, and is so called from the words “four Doors”, or Kal’a-i Cudr Kapu, “Palace of the four Doors”. The purpose of this building is obscure. About 3 miles E. of Kasr-i Shirin is another late Sasanian ruined palace, popularly believed to have contained the stables belonging to the palace of Kasr-i Shirin. These ruins, which consist of a palace 600 feet long with annexes and another mound of ruins, are the latest of all the palaces of Parwez so far known. Kasr-i Shirin is, of course, a site of much greater antiquity, but it has not been ascertained what ancient city stood there.

Bibliography: BGA, passim, especially viii, 164 (Ibn Rusta); Yākūt, iv, 121 f.; al-Kazwīnī, Abhār al-Biład, ed. Wustenfeld, 295-7; Hamd Allāh Mustawfī, Nasā, 43 f., Le Strange, 63; Pietro della Valle, Reise-Beschreibung, Geneva 1674, ii, 4: “Olivier, Voyage dans l’empire Otho-

Kāsr Yānī [see KASRYANNIH].

KASRA, the Arabic grammatical term denoting the vowel i: kasra designates the written sign itself, kasr the sound as question (Wright, Ar. Gr., i, 8A). This distinction corresponds, for example, with the text of al-Dānī, al-Muḥkam fi naḵt al-maṣāḥīb, Damascus 1379/1960, 42, ii, 4-7, and Kitāb al-Naḵt (Bibl. Isl., 3, 1932), 137, ll. 8-21, but kasr can also have another interpretation: the verb kasara (i) “to break”, can be used to mean: “to provide [a harf] with a kasra”, the mouth being considered “broken” at the time of the pronunciation of the harakāt al-mushbaṭ, not mushbaṭ, sounds reduced by the ikhtilds or the rawm (see H. Fleisch, Traite, i, 36 f., and IDAFA. In the normal pronunciation of the kasra, the latter are opposed to the harakāt, not mushbaṭ: sounds reduced by the ikhtilds or the rawm (see H. Fleisch, Traite, i, 36 f., and IDAFA. The first notation of the kasra and the other harakāt, fatha and damma, was made by means of full points (al-Dānī, Muḥkam, 23, i, 11; 42, i, 12), in order to remedy the deficiencies of kur’ānic script and at first to indicate the direction in which the sound was to be pronounced. The kasra in the middle of a word was invariably attributed to Abu ’l-Aṣwad al-Du’ālī (d. 696/1298) (al-Dani, 43, 1. 15), like kur’ānic script, and according to al-Dānī, 47, 1. 15, like kur’ānic script, and according to al-Dānī, 44, 1. 16, it was still in use (ibid., 98). This innovation was not imposed without long resistance (ibid., 95-98), and at the time of al-Dānī (d. 444/1053) it was still in use (ibid., 98).

Care must be taken in distinguishing the vowel points in the body of kufrānic script. They are characterized by the use of red points; a green point is used for the hamza (the unvoiced glottal occlusive); and a yellow point for the tashdi (gemination) (Abū Bakr b. Ḫudayjād, cited by al-Dānī, Muḥkam, 23, ii, 9 f.; see also, ibid., 19-20, for other old practices in the use of colours). All these points constitute al-šakl al-mudawwar. But the diacritical points of the harāfī are bi ’l-sawād “in black” (ibid., 22, i, 17; 43, i, 15), like kufrānic script, and according to al-Dānī, 43, i, 16, serve to establish a distinction between the diacritical marks and the harakāt; see his chapter (35-41) on the diacritical marks. In matters of tāb, the kasra was the sign of ājār (or kafād) [see ʻrāʾ]. On the nature of the kasra and the other harākāt, see HARA KWA-SUKUN. For the way in which the presence of the kasra is explained, in the second part of the iddāa, see ʻrāʾa. Some further points: (1). The points indicated concern al-harakāt al-muḥṣabād, the normal ones (literally “satisfied”). The latter are opposed to the harakāt, not musbādā: sounds reduced by the ikhtilds or the rawm (see H. Fleisch, Traite, i, 36 f.,
He also attacked much of Persian poetry, concentrating on Ḵayyām, Saʿdī, Rūmī, and particularly Hāfiz. This poetry, he asserted, is replete with doctrines such as fatalism, Ṣūfism and ḵẖāḍālīgāri (as in Ḵayyām's ideas), with excessive praise of wine and shameless talk of homosexuality. It encourages beggary, flattery, cowardice, hypocrisy and the like.

As an act of confession, and to draw attention to their activities, Kasrawi and his supporters instituted a festival, on the first day of winter, to destroy harmful writings which they had owned before joining the group. Called Ḵḏišḵtī Kitāb-sūzūn, "festival of book-burning", this activity attracted considerable hostility.

In Kasrawi's view, there are two opposing forces or "essences" (gawhar or širvēt) within each individual. Ḫḏišn is the source of egoism; from it emanate self-interest, greed, injustice, jealousy, etc. Rawṯn is the source of altruism; from it emanate self-sacrifice, justice, sympathy, honesty, truth-seeking, etc. Related to Ḫḏišn is ḵẖāsad, the faculty of distinguishing right from wrong, good from evil. Ḫḏišn and Ḳawtht are constantly at war. The duty of religion, and of similar institutions, is the strengthening of Ḳawthn. Religion means "learning the truths" and living by the dictates of the Ḫḏišn. It should help man to subdue his Ḫḏišn, and find the hanggliders. Large enterprises should be owned only by partnerships. "Land should be owned by him who tills it, who keeps it cultivated". Failing this, he should sell it or hand it over to others. Few middlemen should intervene between the producer and the consumer. The government's functions should be limited chiefly to legislation, national security and defense, foreign relations, education, public health. It should not engage in agriculture, commerce, and, in general, industry.

Education means preparing for life, and the strengthening of Ḳawthn. Compulsory education should include literacy and basic science, in the elementary school, and the "truths of life", including civics. Vocational and professional education and work in advanced science should follow. "Evil teachings" should not be taught under any circumstances, unless they are clearly exposed as harmful.

Women should not enter certain professions, e.g., law, engineering and politics, but should vote. Bigamy should be permitted only when the first wife is barren. Those with contagious diseases should not marry. Kābin ("marriage portion"), ṣẖirbāḥ (bride price), and Ḫḏištī ("dowry") should be eliminated. Divorce should be available to women as well as to men, and on the same grounds.

Kasrawi denied that Ḳawthn claimed to be a prophet (payḵẖẖūm). He termed his ideology ḵẖāḥḏīn "pu-rity-of-religion" (occasionally ḳẖāṭīḏīḏ), and referred...
KASRAWI TABRIZI — KASS

733

to it as a 'rah, "road, path," not a din "religion"). "Pâkđînî is Islam's successor and its continuation," although he was rarely very explicit on the relationship between the two.

Kasrawi's writings created a widespread intellectual movement, particularly among the youth. He formed a fraternal organization, called the Pâkđînîn, "the pure of religion," or the Assagîn, preaching this doctrines with missionary zeal and in the teeth of intense antagonism. The numerical strength of his followers is not known.

Kasrawi's bold and outspoken views, particularly those on religion and literature, met with vehement and violent opposition: some of his books were banned; his supporters were often persecuted and socially ostracized; and, finally, charges of "slander of Islam" were brought against him. On 11 March 1946, at the last session of the preliminary hearings on those charges held in the Palace of Justice in Tehran, he was assassinated by the Fidâ'îyyân-i Islam [q.v.], who had only wounded him in an earlier attempt in April 1945. His followers continue, however, to be active.

Bibliography: The only detailed account of Kasrawi's life is found in his own Zindasînî-yi man (Tehran 1945) and Dâr ʿalîyya (Tehran 1945), covering his life up to about 1929. A bibliography (neither complete nor always accurate) of his books is found in Khânbâbâ Muḥârag, Muʿallîsîn-i kutub-i āspî-i farsi wa ʿarabî az dghdz-i ʿarabi az dghdz-i sâbî ta kurnân, i, Tehran 1961, cols. 437-46; and a partial bibliography of his articles on language and history is in ʿIrâdî Afghâr, Index Iranicus, i, Tehran 1961. A selection of his scholarly articles has been collected by Yahya Dhuka, in Cihâl makbûd-i Kasrawî, Tehran 1956.

(M. A. Jazayeri)

KAŞRYANNIH, Arabic version of the mediaeval Sicilian place name Castrum Ennae, itself already deformed in local speech usage; the Arabised form was used in the mediaeval Arabic sources, Kasryannih seems to be the most acceptable; it appears in Yâkût's Muṣḥarâtik, with the exact pronunciation, including the geminated nîn, specified, although it does not appear in his Muṣhtag.

It was besieged from 243/859 onwards by the Arab-Berber army of Asaf b. al-Furat [q.v.], who had landed two years previously at Mazara, and this fortified rock became the symbol of Christian resistance in the island after the capitulation of Palermo in Radjab 216/August-September 831. For a period of thirty years, the town and citadel underwent various vicissitudes, and the fortunes of war went backwards and forwards until the Byzantine strongholds surrendered in Radjab 243/January 859. The concluding military operations were prepared and led by al-ʿAbbâs b. al-Fadl, amîr of Sicily 236-46/851-61, who during the preceding years had sapped the resistance of the defenders by continuous assaults. Nevertheless, according to the sources, it was a Christian captive who brought on the surrender through his showing the Muslims, in order to save his own skin, a secret way into the fortress. Certain Arabic chronicles say that al-ʿAbbâs celebrated this victory by building a mosque in Castrogiovanni, and immediately afterwards, he went on to restore the citadel's fortifications.

The rule of the Kalbid amîrs came to an end ca.

431/1040, and in the general state of anarchy which followed and which continued to rack the island till the arrival of the Normans, Kasryannî, together with Girgenti and Castronuovo, formed part of the possessions of the kadîd ibn al-Ḥâwâs [q.v.]. Some months after the Normans landed in Sicily (Muḥarram 1453/February 1061), Robert Guiscard laid siege to the fortress, whose garrison had meanwhile been reinforced by new troops sent by the Zîrids from Africa, but difficulties made him give up the attempt. The Count Roger made a fresh attempt, and after some temporary successes, he finally compelled it to capitulate. Western chroniclers place the capture of the stronghold, thanks to Altavilla, at dates which vary between the middle of 480/1087 and the opening months of 481/1088, whilst the Arabic chroniclers place it three years later. The local ruler ibn ʿAbbâs surrendered himself without resistance, and according to the Norman historian Malaterra, became a convert to Catholicism.

The Arabic sources all agree that Kasryannîs constituted not only a stronghold which was powerfully fortified and difficult to dismantle, but was also an important town in a fertile and well-watered region, with commodious markets, a lively commercial activity, abundant provisions and an excellent urban organisation.

Bibliography: The Arabic sources with information on Kasryannîs have virtually all been brought together by M. Amari in his Biblioteca arabo-sicula, Ar. text, Leipzig 1857, Ital. tr. Turin-Rome, i-ii, 1880-1; see also for other details Amari, Storia dei musulmani di Sicilia, Catania 1933-9, index, and see further U. Rizzitano, L'Italia nei secoli ar-râwî, fi ḥabar al-ʿaṭṭar dî ibn ʿAbî al-Musîm al-Ḥîmyârî, Cairo 1908, also in Bull. of the Fac. of Arts, Cairo University, xviii/1 (May 1956), 170-1.

(U. Rizzitano)

KÂSS (a.), pl. kâssât, "popular story-teller or preacher, deliverer of sermons" whose activity considerably varied over the centuries, from preaching in the mosques with a form of kûr'anic exegesis to downright charlatanism. This term does not appear in the Kur'ân, although the verb kâşṣa is quite often used (see Flügel, Concordantiae) always, except in VI, 57, with the meaning "to recount, to relate, to report" a generally edifying narration (see kîṣā) and frequently in the first person, when the narrator is God Himself. The LA (root kṣṣ) reproduces zadîqîs in which appear the word kâṣṣ (al-kâṣṣ yâstâṣîr al-mâṣîḥ) and the verb kâṣṣa, in the absolute use, with the meaning "to tell, to recount stories" and also "to preach" (kâṣṣa `alâ l-nâs); the Prophet is reported to have said "None but an amîr, a subordinate [of an amîr] or a proud man shall preach" (lâ yaḥṣûṣu lâl amîr asw mā mîr asw maḥdîlî, where we have translated kâṣṣa by "to preach") because it probably concerns the khabûba [q.v.]. It would be difficult to date precisely the intransitive use of the verb in the sense of "to perform the function of a popular story-teller or deliverer of sermons" which was to become current (e.g. al-Ḍabhî, Ḥayâyûn, iii, 24-5 and Bayân, i, 367-9) for it seems likely that the zadîqîs cited in the Lisan may be later and may date from the time when the men of religion and the mystics had reacted against the kâṣṣa. Indeed, if it is reasonable to suppose that all pious Muslims early deemed it their duty to improve the religious sentiments of the uninformed majority, the function of the kâṣṣ did not yet exist at the
time of the Prophet; according to al-Makrīzī, Kḥāṣṣ, ii, 253-4, there was a distinction between the private Kāṣṣ and the official one, instituted by Muʿāwiya who, after morning prayer, was supposed in particular to curse the enemies of Islam and all the infidels and, after the ḥuṣba on Fridays, to explain the Qurʿān; however, only in Egypt are there traces of the existence of this function, which was occupied formerly by the kāṣṣ, then little by little fell into disuse. From the 8th century onwards this kāṣṣ was replaced by the muḥātkhir and by the waṣīq [q.v.].

Otherwise the office was loosely defined. At its inception it was supposed to consist of commenting on the Qurʿānic narratives concerning the fates of the Prophets and the official one, instituted by Muḥammad. Indeed, to enliven their narration, the first religious authorities and to appeal to the crowds, the "sermonisers" who were among them men of great learning in Islamic law and who, in addition, expressed themselves in very correct language. This partly explains that interest which the authorities were making an exception in favour of al-Dārān, who was, moreover, al-Dārā at Dārā, and who, in addition, expressed himself in very correct language. In the 4th-5th/10th-11th centuries, the first religious authorities and to appeal to the crowds, the "sermonisers" who were among them men of great learning and Ibn al-Diʿawī, who is still nevertheless hostile towards them, very rightly stresses this (Ṭabīk Iblīs, Cairo, 1340, 131); the list which al-Dībājī provides (Bayān, i, 367-9; used by L. Massignon, Essai, 141 ff. and Ch. Pellat, Milieu, 108 f.f.) is instructive in this respect. It includes, among others, al-Hasan al-Baṣrī, his brother Saʿdī and his son Ḥafṣ, ʿAlīb al-Taymī, and in particular, Mūsā b. Sāyār al-Uṣwārī (see Līdān al-Mīṣān, vi, 120, 136; al-Samḥānī, Anṣāb, 37), who commented on the Qurʿān in Arabic and Persian, as well as another kāṣṣ, Abū ʿAlī al-Uṣwārī (d. after 200/815; see Līdān al-Mīṣān, iv, 372-3), who at the age of 36 did not manage to exhaust his flow of commentary and who, in addition, expressed himself in very correct language. These two people are described as Kādarīs [see KADARIYYA], as was another well known kāṣṣ, Shālīb al-Mūrī (d. 172/788-9; cf. Abū Nuʿaym, Ḥiyā, Cairo 1351-6/1932-3, vi, 165-7); the Kāḍārīs equally distinguished themselves by their talent in this field.

L. Massignon (Essai, 143-4) considers that the 2nd/8th century is "especially at Baṣra, the century of "sermonisers" who, without any official mandate, and before the ʿAbbāsid rules and regulations for the Friday sermons, delivered ḥuṣbas to arouse the fervour of the faithful and to spread the word of Islam. Probably the activity of a great number of ḥuṣbas was quite disinterested to begin with, each sāhih or nāṣik feeling an obligation to preach, even to the point where later mystical theology claimed several of them; but if some strove by their narrations to edify the faithful, and to arouse their religious zeal, others were not slow to be employed by the supporters of the various political and religious doctrines, which were emerging at that time. From the year 65/685, in the course of the affair of the Tawwābūn [q.v.], there were in the crowd gathered to avenge the murder of Ḥusayn, three ḥuṣbas. Al-Taḥbīr (ii, 559) records their names and their speeches designed to sustain the zeal of the fighters; other examples have been collected by Goldziher (Mukh. St., ii, 162), who thought (Goldziher (ii, 168-9) that these "sermonisers" had no partisan tendencies. Again in the 4th-5th/10th-11th centuries, Shīʿīs and Ḥanbalis did not overlook this useful means of reaching the masses (cf. G. Māḏkūsī, Ibn ʿAqīl, Damascus 1953, 323); it is true that the representatives of the two rival factions sometimes came together and shared the takings (Mukh. St., ii, 165-6). The names of three Kādarīs are cited above, and it seems legitimate to believe that from the 2nd/8th century the Muʿtazzīls themselves had used "sermonisers" to spread abroad their opinions. This partly explains that interest which al-Dībājī takes in them, who was, moreover, always ready to admire eloquence even in the common people.

It appears therefore that the prohibitions were also justified by the care which the authorities were taking to limit propaganda carried on by word of mouth by the opposition parties, knowing well that they were provoked in the first place by the complaints of religious figures anxious to put an end to these abuses. Indeed, to enliven their narratives, the ḥuṣbas did not hesitate to quote the apocryphal traditions (and it is probable that they contributed to the propagation of these traditions which, put together from all sorts of different fragments), fabulous deeds and marvellous stories which the credulous masses took for gospel truth, thus placing...
the authentic Islamic tradition in real jeopardy. Because of this conduct, they incurred the theoretical and practical condemnation of the religious authorities. Al-Ghazâlî ([Ihya', ix/3) protests against the reprehensible doings of ḥussâs and the ṭūna [see wa'tir] who mixed heresies with their subject-matter; Ibn al-Djawâlī (Tabîb, 131) and the mystics gave strong advice not to join their congregations because they lacked integrity. In Spain, where they were less numerous (al-Mukaddasî, 226), for the Mâlikîs would scarcely tolerate them, the word kâşs had become synonymous with "storyteller", and the authors of works of hisba do not fail to express a desire that the activity of the ḥussâs should be limited. Ibn ʿAbîn (cf. Lévi-Provençal, Sûvîlî musulmane, Paris 1947, § 54) wished to forbid them, as fortune-tellers were forbidden, to install themselves in the cemeteries, and they were also prohibited from telling stories in which the Prophet was mentioned. Ibn ʿAbd al-Raḍîf [cf. R. Arié in Hsîpîris-Tabîda, i/3 (1960), 362] calls the kâss a mere story-teller of the streets.

At this period, and already for a long time in the Orient, it was indeed difficult to distinguish a "sermoniser" from one of those narrators of whom al-Maṣʿûdî speaks (Murūjû, v, 86; viii, 161 ff.); al-Maṣʿûdî himself (Kasâf, ii, 25; Ibn al-Ḥâdîdî, Madâhîr, ii, 146); The author of the Kitâb al-Tâbîdî (40; tr. Le livre de la Couronne, 68) speaks of the "wiles of ḥussâs and men who go round with performing monkeys". So, after having been a popular ex-voto, the Kârisîn and a "sermoniser", the kâşs became a sort of buffoon who mainly replaced edifying narrations by comical and often improper stories especially ridiculing biblical characters (see for example the story of the wolf that did not eat Joseph; Ibn Abî I-Hâdîdî, Sharh Nāhâj al-balâgka iv, 260). Some became notable mountebanks, who contributed to "play to the gallery", provided that the collaboration produced a substantial reward. From the rivalry among these comedians sprang the mawâllîd proverb "a kâšs not another kâšs" (al-Majdûdî, ii, 76). It is understandable therefore that the discredit thrown on an otherwise respectable function reboarded on the serious preachers of popular sermons, and they were replaced by more or less official preachers.

All things considered, passing from edifying narrations to profane stories was very easy, and the raʾsaî [q.v.] or the meddâh who narrates the episodes of The Thousand and One Nights or chivalric romances—not without playing the rôle of a political agent if the opportunity presents itself—is easily comparable to the later kâsîs, whereas the mukâddî [q.v.] who recounts his own adventures and fore-shadow the Spanish plácido is not far removed from him. (See also Maškâmâ.)

Bibliography: Largely given in the text. I. Goldziher (Muh. Studien, ii, 161-70; tr. L. Bercher, 198-208) has largely exploited the K. al-Kuṣṣâs of Ibn al-Djawâlî, and the pages which he devoted to the "sermonisers" represent the most thorough study of this social group. See further, L. Massignon, Essai sur les origines du lexique technique de la mythique, Ch. Pellat, Milieu (on the kuṣṣâs of Baṣra); A. Med, Renaissance, index; M. S. Swartz, Ibn al-Jawâlî's Kitâb al-Qusṣâs wâlī-Mudâkhîrîn, ed., Eng. tr. and introd., Beirut 1971; C. E. Bosworth, The medieval Islamic underworld i. The Danû Bâṣrîn in Arabic society and literature, Leiden 1976, 24 et seqq.; see also Sayûtî, Tahâwar al-hâwâsî min aḥâdîth al-kuṣṣâs, ed. Muḥ. Ṣâbâḥî, Beirut 1973. (Ch. Pellat)

KASSALA [see KASALA].

KASSAM, the title given in Ottoman law to the trustee who divided an estate between the heirs of a deceased person. Ottoman law recognised two types of kâssâm, those under the kâdî's (q.v.) and the others employed locally in each kâdî's (q.v.) court (Kânân-name, Veliyüdîn Efendi 1970, ff. 66 a-b). The earliest references to the post date from the 9th/10th century.

The kâsîm received a fee from the heirs called resm-i kîsmet in payment for the trusteedship of the estate. Resm-i kîsmet levied from a member of the military (tâshkîr, [q.v.]) class was entered in the kâdîasker's accounts, so that in places where the military class was numerous, kâssâmms appointed by the kâdîaskers divided inheritances (Kânân-name-i Âl-i ʿOṯmân, TOEM suppl., Istanbul 1329/1911, 40). These military kâssâmms recorded their transactions in separate registers, called kâssâm registers (kâssâm defterleri) (O. L. Barkan, Edirne askeri khasmaana ait terehe defterleri 1545-1589, Belgeliler, in Türk Tarih Belgeliler Dergisi, iii/5, 1966). The local kâssâmms, called shekrib or beledi acting in the name of the kâdî, kept registers recording the resm-i kîsmet levied from non-military townspeople and villagers. There was a separate kâssâm register for each kâdî's district. In the division of inheritance kâssâmms were obliged to respect the rights of orphans and the law forbade them to overvalue goods or to levy resm-i kîsmet where this was not the legal requirement (Kânân-name, Veliyüdîn Efendi 1970, 1:66; cf. also the Kânân-name of ʿAbd al-raḥmân ʿAbdî Paşa, MTM, iii, Istanbul 1331/1913, 541). The kâssâm register of 924/1518 from the court of Bursa shows the procedure in the division of inheritance. The belongings of a deceased person were first examined in the presence of the kâssâm and entered in the register. An expert then valued their worth and, if the money was recorded on each item, before the kâsîm assessed the proportion to which the husband, wife or others heirs were entitled. After the deduction from the total of the kâssâm's fees and the deceased's funeral expenses, the remainder was handed over to the heirs (I. H. Uzunçarşılı, Osmanlı devletinin ilmiye teşkilâtı, Ankara 1965, 124).

Occasionally, the government appointed inspectors to examine the proceedings of the military kâssâmms and to collect the resm-i kîsmet levied in the name of the kâdîaskers. Kâssâmms from the three wings of the cavalry (sûvîrî) divisions were despatched to Anatolia and Rumelia for this purpose. These mounted inspector-kâssâmms took delivery from the kâdî's treasury of the resm-i kîsmet that had been raised, and had the registers sealed by the kâdî or deputy who transferred the money. The mounted kâssâmms had the authority to remove a local military kâssâm and appoint another in his place (I. H. Uzunçarşılı, op. cit., 121 ff.).

The question of who had the right to the resm-i kîsmet led occasionally to disputes between the local and the kâdîaskers' kâssâmms. A major factor in these disputes was the tendency of the military kâssâmms to extend the military class in order to increase the revenue on the kâssâm registers for which they worked. To prevent this, the government intermittently issued decrees to define who belonged to the military class, but they were never able to stop
the practice altogether (Basbakanlık Archives, Istanbul, Dışiş-i hükmâyên mükmîm defteri, vol. iv, 120; vol. lxx, 33). There was a kassâm in the covered market in Istanbul and another in Galata, whose duty it was to deputise for the bâdî′asker of Rumelia in settling disputes concerning the division of inheritances (Hzârînîn Rusayn, Talhâvi al-bâyân fi hâkimîn-i Âl-i Othmânî, Bibliothèque Nationale, Paris, f. 140 a).

The functions of the kassâm began slowly to diminish in the 19th century. After the Tanzîmât (q.v.), the separate offices of the bâdî′asker and bâdî′s kassâmns were abolished, to be replaced by a single office in Istanbul called the Treasury kassâm's office (bayt al-mâl kassâmîlgâh), which combined the functions of all the others (Lutfi, Taʾrikh, Istanbul, 1290/1873, vi, 30). The court concerned with inheritances, known as the hizmet-i belediye makameısı, was, at about the same time, united with this lower bâb court. Therefore, the bâb courts supervised the division of inheritance among the heirs (Dîwân-i hükmâyên mükmîm defteri, no. 261, serial nos. 36, 440).

In the years 1333-34/1915-16 there was a section called the general kassâm (kassâm-i umumî) in the Courts Department of the Office of the Shâkh al-İslâm (q.v.). At the head of the section was an official called the General kassâm (kassâm-i umumî) with two assistants as first and second advisory kassâm (dîmiyên teşkilâtî, Istanbul 1334/1916, 155 ff.). With the abolition of the šârî′a courts under the Turkish Republic, the civil section of the court of first instance (asilîye makameısı hukuk dairesi) replaced the kassâm court.

IDRîS B. ÂLI AL-HIMYARI, jurist, poet and historian of Morocco, who was born and lived in Fâs, where he put together a Dîwân, in one volume; a history called Takkîh al-âkhbîr ‘amman mâta min ’ulumî al-karn al-thâlîth′ askar; and above all, three commentaries, the most important being the one on the Sharî′a Bannânî alâd Sülâm al-Ashbârî, the second on Ibn Hîghâmîn Al-Mawdîdî and the third on the Bahàrîm Al-Şâhirî. He died at Fâs on 13 Râdîb 1259/9 August 1843, and was buried in that city.

Bibliography: E. Lévi-Provençal, Chorfa, 369 and n. 4; Kattânî, Salwa, ii, 265; ‘A. Ibn Sûda, Dâli, i, 255, ii, 390. (M. Lâkhdar) AL-KASTALLÂNî, ÂBU ‘L-’ABBÂS ÂHMAD B. MUHAMMAD B. ABî BAQR AL-KÂHTÂN SHÎHÂB AL-DÎN AL-ÂGÎRî, an authority on tradition and theologian, born on 12 Dhu ‘l-Ka‘da 851/20 January 1448 in Cairo, where he spent his life as a preacher — apart from two stays of some duration in Mecca — and died on Friday, 7 Muḥarram 923/31 January 1517. He owed his literary fame mainly to his exhausive commentary on the Sahîh of al-Bukhârî etitleld Ithâb al-Šâri fi Sharh al-Bukhârî, which exists in numerous manuscripts and printed copies; of these, the latter, the earliest may be that of Bûlûkî of 1267 and next the Lucknow edition of 1567 (other editions: Brockelmann, i, 165, S ii, 262-3). The Cairo edition in 1325-6 gives the glosses of Yahyâ al-Anṣârî and the Cairo edition of 1279 those of Hasan al-Idâwî (d. 1303/1887). In the field of Hadîth he wrote a Muḥaddîmûm which was printed at Cairo (n.d.) with the commentary of ‘Abd al-Hâdî al-Abyârî (d. 1305/1883). Great popularity is enjoyed in the Muslim world by his history of the Prophet entitled Al-Mawdîdî al-Adâmîyya fi l′-Minâh al-Muḥaddîmîyya, which he completed on 15 Shabân 899/21 May 1474 and which caused him to be accused of plagiarism by al-Sûyûtî. It exists in numerous manuscripts and has also been printed several times, e.g. Cairo 1281, several times commented on, e.g. by al-Zurkânî (d. 1122/1710), printed in 8 vols., Bûlûkî 1278, 1295, and translated by ‘Abd al-Dîdî into Turkish, printed Istanbul 1267; Al-Nabîbî published a synopsis of it entitled Al-Anbût al-Muḥaddîmîyya min al-Mawdîdî al-Adâmîyya, Beirut 1310-12. Finally in the same field, he prepared a commentary on the Kitâb al-Šamâlî′ of al-Tirmîdî (Brockelmann, i, 170, S i, 268). Besides studying the science of tradition, he worked also at the readings of the Kur′ân. His principal work on the subject is entitled La′fi′î al-İshârîl-i Fumnân al-Karîdî. He also wrote a biography of the teacher of Kur′ân reading, Abu ‘l-Kâsim al-Shâbî (Brockelmann, i, 520, S i, 725), and a commentary on the Muḥaddîmûm of al-Djazârî on Taqwilî (op. cit., ii, 250). Finally, he also wrote on mysticism and
personal piety; among his works in this sphere are his *Mawdadi* al-Šarfi, *Mashā'iq al-Šuhna* (*fī Ṣaḥar al-Mašā'iq* al-Šalii *fī l-Nabi al-muṣafā*), and his commentary on the *Burda* of al-Buṣūrī (Brockelmann, I, 310).

**Bibliography:** ʿAllî Bāsha Mubārak, al-Khaṭāʾi al-tawfīhiyya, Bulāk 1306, vi, 11; Wistenfeld, *Die Geschichtsschreiber der Araber*, no. 509; Brockelmann, II, 87-8; S, 78-9. (C. Brockelmann)

**KASTALLANI** (Kestel, Kestelli), Muṣliḥ al-dīn muṣṭafā, Ottoman theologian and Hanafi jurist, d. 901/1495-6. He was a native of Kestel (Latin *Castellum*), a village near Bursa, where later in his career he built a mosque; from this village comes his nisba of Kestelli if or, more grandiloquently, Kastallani. He studied at Bursa under the famous scholar Ḳhidr Beg, *madrasa* at the Sultan madrasa there, and after concluding his legal and theological studies became himself a teacher in Murdunk, in the Urudu *Fasha madrasa* at Dimetoka (Demotica), and then in one of Mehmed 11’s newly-founded “eight madrasas” in Istanbul. Later he became kādī in Bursa, Edirne, and in (886/1481) in Istanbul. In this latter year he also became Kādī-ud-dīn, i.e. of Rūmeli, the first man to hold this office after the division of this important post into two, Ḳādī-ud-dīn Hasanāzāde Mehmed Efendi becoming Ḳādī-ud-dīn in Anatolia. He was dismissed with a pension in 891/1486 during the reign of Ḳāyız, and died in 901/1495-6 in the capital, being buried in the Eyyūb cemetery.

Kastallani was the author of a number of highly-esteemed legal works in Arabic, including glosses to al-Taftāzāni’s commentary on the *Åṣik‘id* of Naṣāfī al-Dīn al-Naṣāfī (cf. Ḳādī-ud-dīn Khilafī, iv, 226; Brockelmann, I, 549); a work on seven difficult problems (aškhāl) in al-Durǧānī’s commentary on al-Ṭāfī’s *K. al-Mawṣūb* fī *ṭiʿām al-kalām* (Ḵādī-ud-dīn Khilafī, vi, 240); an epistle on the orientation of the kibla, *R. fī Dirḥ al-kibla* (ibid., i, 357); and a work called *Yabāta Ṭāwīb* fī *ṭiʿāb* (ibid., vi, 511).

**KASTAMONI,** modern Turkish form *kastamona*, a town (pop. 1970, 29,338) situated in the western Pontic zone of northern Turkey (42°22′ N, 35°47′ E), the provincial capital (*il merkezi*) and a busy market town for the surrounding region. The *il* (province) of Kastamonu—an area roughly equi-

valent to the ancient Paphlagonia—which is divided at present into fourteen administrative sub-divisions (*ilçe*), is bounded by the Black Sea on the north, and by the *ils* of Zonguldak, Çankiri (*Kangırli*), Candarlı (*Kandirli*), Sinop (*Sinup*), and had a population (1970) of 446,601.

The town of Kastamonu lies on both sides of a narrow valley (Kastamonu deresi or *Kara-omak* deresi) which has been formed by a minor tributary of the upper Giyirmak. The centre of the town, situated on the left (west) bank, is dominated by the precipitous mass of the citadel. This, the “lofty stronghold of the Turcomans” of Ibn Saʿīd, is a congeries of Byzantine, Saljuk, Candarlı and Ottoman structures, being in part, un-
garrisoned and deserted since the reign of Mahmūd II, and finally almost destroyed by an earthquake in 1943.

The toponym of Kastamonu remains obscure in its origins. As Ramsay long ago pointed out, although Kastamonu was situated on “the most important Roman road in the north of Asia Minor” (sc. Nicoma-

edia Iznikmīd (*Izmit*)—Pompeipoli (Taşkőprü, near Kastamonu)—Amaseia (Amasya), and was evidently an important city in later Byzantine times, it is never mentioned in Roman or early Byzantine documents. Consequently attempts to identify Kastamonu with, e.g. Germanicopolis (Ainsworth, Boré, and many later writers) or with Sora (Doublet, *Bull. Corr. Hell.*, 1889), or to supply specious derivations from even the Hittites (Gas-

Tumanna > Kastamonu) (Yūcel, ch. vii) from its known association with the Comneni, must founder on the fact that no form earlier than the 11th cent. Byzantine usage of *kastamona* has yet been traced.

From this form (or, rather, as commonly in such direct transfers, from the accusative *kastamuna*— cf. P. Wittke, *BZ* (1935), 49-50) derive the various forms of Arabic and Turkish usage. Most commonly, from the Saljūkīs down to and throughout the Ottoman period, the name is given as Ḳaṣāmūnī. Cf. however, the variants Ḳaṣṭamūnī (Iḍrisī, cf. Miller, *Mappae Arabicae* 1977, pl. 39; *cf.* 4); Ḳaṣṭamūnlūyā (al-Dimashkī, R. Nābkī, Mehren, 228); Ḳaṣṭamūnīyya (al-ʿUmarī, ed. Qua-

tremère, 340; ed. Taschner, 23, 39-40), and also the various western corruptions: civitas Constamnanis (Albertus Aquensis); Castamana (Clavijo); Castamina, Castamena (Promontorio de Campis (c. 1475), ed. Babinger); Chastarmina, Castimama (Benedetto Del); Castemol (Menavino); for the 19th century: Castemboli, Castemouni (Boré, 1838); Costambone (Murray, *Handbook for Asia Minor* [c. 1870].

The political history of Kastamonu during the four centuries which lie between its first seizure by the Turks in the aftermath of Manzikert (463/1071) and its second and final absorption into the Ottoman state, as a *sandjak* in the *eyālet* of Anadolu (866/1462-3), is often confused, and the establishment of the exact sequence of political authority has not, despite efforts by Cl. Cahen and others, been satisfactorily accomplished. Until the expansion of the Ottoman state in the first part of the 8th/14th century, and the consequent shift westwards of the frontier between dār al-Islām and dār al-barb, the town and fortress of Kastamonu formed the centre of a vast province, which was dominated by the Turkishmans of the * ugl*, and formed a battleground for the conflicting and successive claims of Byzantine, Dānishmend and Saljūk rulers, and of various more or less local autonomous dynasties, of which the *Isfendiyār-oghullar* or *Čandarlar* [q.v.] were the most significant.

As early as 1073-4 the Byzantine emperor Alexis Comnenus had great difficulty in escaping from some Turkmans in the vicinity of Kastamonu; hence, according to a dubious tradition the city is said to have been conquered by a certain *Othmānḡiğ* Beg, one of the commanders of the Dānishmend Malik Ṭāmā Bahzī, shortly before the latter’s death (Ḥusayn Ḥezārfeh, *Tanbih al-tawāirīḥ*, tr. A. D. Mordtmann, *ZDMG*, xxx (1876), 470)—a tradition which attributes to Kastamonu the former name of Askanos. A slightly different version is given by Kāṭib Čelebi, *Dīqān-numā*, 629. In 1101 the Lombards and Turks clashed near and at Kastamonu, but Dānishmend rule seems to have endured until the invasion of Paphlagonia by John Comnenus (7126 or 1123), by the winter of which latter year Kastamonu was again in Muslim hands. By the latter
part of the 6th/12th century, Kastamonu had passed under the control of the Seljuk of Rûm. Clearly Kastamonu belonged to the dynasty, which established there—possibly as early as 608/1211, and certainly by 625—the enigmatic figure of Husâm al-Dîn Çûpan (Çoban) as their beşlerbegi. The political role of the Turkomans during this period is a matter of conjecture; one possibility is a de facto division of authority between the provincial authorities of the Seljuk, controlling the town itself, and the Seljuk amirs, in virtual control of much of the hinterland of the province. At a lower level, it is clear that a Greek or Hellenized (and Christian) population continued to exist under Seljuk rule; the province was also a source for Greek slaves, obtained in razzias on the udî, and destined for the Seljuk army.

The history of Kastamonu during the period of the Ilkhâní and in eastern and central Anatolia is also not entirely clear. At first under the rule of one Yavatsah, as beşlerbegi, by c. 660/1262 the town was controlled by a creature of the Mongols, one Tâşî al-Dîn Mu'tâzî, to whom it was secured as an 8ârî. He died in 670/1271; his son Mu'dîr al-Dîn Amirshâh (d. 701/1302), succeeded to his offices. Also during this period, Kastamonu was held at times, and for short periods, by the son (Husâm al-Dîn Alî Yûrûk) and the alleged grandson (Müzaffar al-Dîn Yavâlk Arslân) of Husâm al-Dîn Çûpan. The grandson certainly founded the second oldest surviving Muslim monument in Kastamonu, the so-called Atabeg Dîâmî (672/1273), held political power before 679/1280, and died in the disturbances of 691/1292. Furthermore, before 677/1278 Kastamonu had been administered by a son of the perde ne Mu'nîn al-Dîn, whose son Mehmâd Beg once more reconquered it in 1295-9.

Cahan has argued that there was no connexion between the descendants of Çûpan and the family which, in the last years of the shadowy Seljuk sultanie of Rûm, founded the most notable of Kastamonu's dynasties, the Isfendiyar oghullarl./Candarids. By 715/1314 Candar's son, Sulaymân Paşa, was already imitating the Seljuk sultanes as a vassal of the Ilkhânî ruler Abû Sa'id. Certainly Ilkhânî coins were struck there in 725/1325 (Lame-Pooe, Cat. B.M., vi (uncertain); Yamanî, 105) and apparently as late as 740/1339 (Zambaur, Münzprägung, 195). Around this time Kastamonu was visited by Ibn Batûtah (winter of 1331/2 or 1332/3), who stayed there forty days and described it as one of the largest and finest cities [of Rûm], where commodities were abundant and prices low. Ibn Sa'id (apud al-Kalkashandî, Şebîb, v, 342) described Kastamonu as a stone-built town of medium size, possessed of mosques, markets and baths, but without walls, and situated in a region of streams and abundant gardens—terms which have been applied, grosso modo, by most Muslim travellers and their western successors down to the 20th century. Kastamonu was incorporated into the Ottoman state by Bayezîd I in 794/1392; restored to its native dynasty by Timûr after Ankara, and once more conquered, this time by Mehemmed II, in 866/1462. The suppression of the old dynasty was symbolised by the appointment of Dîm Sultân as provincial governor of Kastamonu in Sağhab 873/ January 1469, a post which he held until the middle of Sha'bân 937/late 1724. What seems to be the earliest (ca. 1469-74) notice of Kastamonu under restored Ottoman rule—the “Capitaneati dui di Castamina”—is given by the Genoese man of affairs Frumorto de Campen, “magis citta... prouinicia degna et utilissima”, with revenues of 14,000 ducats and the obligation of sending 2550 men into the field.

The geographical position of Kastamonu in relation to the Ottoman military and courier road network—it lay to the north of the great road of the orta ke knock from Üsküdar to the east, which, linking Gerede, Tosya and Oğmângiık (Osmancık), left Kastamonu relatively isolated on the far side of the lofty Ilgaz (Olygassus) range—perhaps explains in part its relative obscurity under Ottoman rule and the paucity of travellers to it until the 19th century. Evliyâ Çelebi's description of the town is lacking, and in the 12th/13th century Kastamonu seems to have been unvisited by any major traveller, although it is known that Ahmed Paşa Bonneval was briefly exiled there in the middle of the century.

The first report by a western visitor is that of J. M. Kinneir, who passed through in 1814. He computed the town to possess 30 mosques with minarets, 25 hamâmans, six khans and a Greek church. The baazars were well-supplied, but the inhabitants were described as being frequently exposed to famine, particularly after a severe winter had impeded local agriculture. A more detailed description was given by the French traveller Eugène Boré (1838), who was the first to give an account of the kabî, “élèvant hardiment dans les airs ses tours et ses remparts en lambeau”, and who found the local administration in the hands of the new men of the Tanzîmât. More scrupulous in his observations, in the year following Boré, was W. F. Ainsworth, who laid down a plan of the town and notes that it was briefly exiled there in the middle of the century.

The population of Kastamonu, in later centuries at least, was preponderantly Muslim. According to Ainsworth the Christian inhabitants were expelled ca. 1730 to a village on the Göklrmak, but were later permitted to return. Ainsworth speaks of 160 Greek and 20 Armenian households out of a total of 12,000, and a manifestly exaggerated population of 46,000; Kinneir, a quarter of a century earlier, had estimated 300 Greek and 500 Armenian families. The population of 12,000. At the end of the 19th century Cuiñet, working on published Ottoman statistics, estimated the population to be 13,200 Muslims, 1,793 Greeks and 572 Armenians.

By the early 19th century Kastamonu, like much of Ottoman Asia, had fallen into economic decay. Kinneir regarded the commerce as "trifling", and noted the lack of manufactures; Boré, likewise, "L'appauvrissement et la gêne" of the inhabitants, and the great decline in trade, with only tanning being carried on actively. Ainsworth, however, one year later, speaks of "the crowded and bustling city" of Kastamonu, with a large trade in wool of a quality almost equal with that of Ankara; in copper wares, and in cotton cloth. The cotton was brought up from Adana and worked up in the town.

The economic and political collapse of Turkey after the First World War reduced the fortunes of Kastamonu to a low ebb. Not lying on a railway, it had not shared in the opening up of Anatolia at the end of the 19th century. More recently, however, the rapid expansion of road transport in Anatolia has brought a new prosperity to the Kastamonu, which now presents an appearance reminiscent of Ainsworth's description, in a setting still little changed from those days.

KASTILIYA. I. A district, and originally, the chef-lieu of the kūra of Ilbīra in Muslim Spain, which should not be identified and confounded with Granada (Ilbīra). The Arab authors who describe Granada, Ilbīra and Kashtiliya (ḫādīrat Ilbīra) stress the fertility of its soil, comparing it to the Gūṭa of Damascus and mentioning the existence of marble quarries; these descriptions all apply to the zone including Granada and its sego, bounded on the north by the Sierra Elvira. The exact identification of Kashtiliya, the ḫādīrat Ilbīra of Ibn Hayyān, Ibn al-Khaṭṭāb, and before them, probably of al-Rāzī, has been a subject of sharp contention since the 19th century (see Fray Angel Custodio Vega, in España sagrada, iii and iv: De la Santa Iglesia Apostólica de Ilbīra [Granada], Madrid 1961, and especially the conclusions noted on pp. 63-4). We believe that Kashtiliya was an ancient fortress which became the first residence of the wāli or ʿāmil of the kūra of Ilbīra and which remained there from the conquest till 400/1010, when it was destroyed by the Berbers, causing the displacement of the political centre of the kūra to Granada. Its site must therefore lie between Atarfe and Pinos Puente, in any spot or spur of land at the foot of the Sierra Elvira.

The Kashtiliyas of Ifrīkya [see below, 2] and al-Andalus—not to be confused with Kashtilä, Kashtila or Kashtiliya, the Castle of the Christians (see Kashtilä)—must be connected with Latin castellum (pl. of castellum), since there existed strongholds in the Djurd, a land of ḫūṣr, just as in the Mūnicipium Florentinum Iliberitanum, which became the diocese of Iliberri (Granada); the Iberian etymology put forward by Dozy in his Recherches, i, 335, looks improbable.

Historical geography. The toponym Kastiliya is not found exclusively in Tunisia. Apart from the variant Kaštala for Castile, Yaqūt, iv, 347-8, cites Kastalla in Spain, and Kastiliya in the district of Elvira [see preceding art.]. He also mentions al-Kastal, a place name between Aleppo and Damascus. The ancient citadel of Mesralfa, between Tobna (Thubunae) and Biskra (Vescera) also bore the name of Kaštlla. We have here clearly a toponym of Latin origin, derived from castella, pl. of castellum "citadel", and the incoming Arab conquerors used it to denote first of all Tūzar (= Thusuros), the main fortress of the limes backed by the oasis, and then the whole region dependent upon it.

According to al-Yaḵšūbī (d. ca. 282-92/895-905), this region comprised four oases: "The main one is called Tūzar, and is the residence of the governors the second is Hāmmā; the third, Tāḵyūs; and the fourth, Naftu" (tr. Wiet, Les Pays, 212). Only Tāḵyūs (= Thiges) has now vanished today and given place to Dēgal. This division is given by most of the later Arab geographers, and especially by al-Bakrī and Yāḵšūbī. Ibn Hawḵalī, al-Muḵaddasī and al-Idrīsī merely give descriptions of the towns without giving information on the extent and boundaries of the region. But in later authors, Kaštīliya, now called the Bilad al-Djarld, spills over to include Kaʃa (= Kafisa) in the north and the region of Nafzawa to the south of the Shotts (Ibn Khaldūn, 'Ibar, vi, 199), and even Biskra, Gabēš and the island of Djerba (John-Leo Africanus, Description de l'Afrique, ii, 442-3). The place name Bilād al-Djarld ("Land of the Palms"), or simply al-Djarld, appears for the first time after the middle of the 8th/14th century, from the pen of Ibn Khaldūn, who henceforth uses it as much if not more than Kaštīliya to designate this region. The ancient term of Kaštīliya gradually disappeared, and is today completely unknown except to specialists. Already al-Tīḏānī (wrote in ca. 706/1306), Ibn Abī Dīnār (ca. 1110/1698) and al-Wazīr al-Sarrāḏī (1149/1737) only use it when citing material from earlier authors. John-Leo Africanus, who visited Tunisia in 1517, knew nothing of the term.

Until the 3rd/9th century, there was no appreciable Arab element in Kaštīliya. Al-Yaḵšūbī writes that "The inhabitants are non-Arabs, descendants of the ancient Romans, Berbers and Afārīkā" (loc. cit.), i.e. Latinised and Christianised Berbers. Ibn Khaldūn, speaking of the disturbances of 224/839, mentions Zuwagha, Luwata and Miknasa Berbers (Ibar, iv, 428). The ethnic map cannot have varied much till the middle of the 5th/11th century, sc. till the Hilālīan invasions which brought into the region the Suʾaym, and especially the Kuˈūb section of this latter tribe. From this moment, the ethnic picture began to change noticeably, and Christianity, which had maintained itself, began to disappear. In 706/1306 al-Tīḏānī noted a large number of ruined and abandoned churches (Rīkwla, 162), and he also commented with horror on the practice of eating dogs, which had not yet quite disappeared.

Mediaeval Arabic authors unanimously describe Kaštīliya as a rich and prosperous land. According to al-Bakrī, the tax-yield reached 200,000 dinārī in the middle of the 5th/11th century, compared with a mere 50,000 for Kaʃa. In the 8th/14th century, Ibn Khaldūn marvelled at the density of population there (mustabbirat al-ʿumrān, 'Ibar, vi, 199). There was there an ingenious irrigation system, which struck all observers, and the region produced a vast quantity of dates. Al-Yaḵšūbī mentions an important cultivation of olives, subsequently vanished. In the 4th/10th century, according to Ibn Ḥawḵalī, sugar cane was one of the richest products of the region, but by the next century, says al-Bakrī, was yielding only a mediocre crop, nor was the banana flourishing very well. On the other hand, citrus fruits (al-muḥammaddīt), and above all the citron (al-ulrūd), were of unsurpassed quality. Also cultivated were flax, henna, cumin and caraway, and the fennecfox, esteemed for its fur, was trapped. Ibn Ḥawḵalī further states that Kaštīliya was in his time an important commercial focal point, bustling with merchants from all countries. Its main import was corn, traditionally fetching a high price, and it exported dates, at the rate of a camel's load for two dirhams, says al-Muḵaddasī, and wool—implying the existence of extensive sheep-rearing—and all sorts of woolen products. Trans-Saharan trade to the countries of black Africa was certainly one of the reasons for the region's prosperity in the Middle Ages, and it is known that Abū Yazīd al-Nuḵkārī's father, who was originally from Tāḵyūs or Tūzar, took part in this (Ibn Khaldūn, 'Ibar, iv, 84).

Bibliography: i. Sources (classified chronologically): Ibn ʿAbd al-Hālam, Futāḥ, ed. and partial tr. A. Gateau, Conquête de l'Afrique du Nord et de l'Espagne, Algiers 1942, 64/65 and n. 66, p. 156; Ibn Khurdadhūbī, Masālik; Ibn al-Fākhl, Buldān, ed. and partial tr. of dates. Al-Yaḵubī mentions an important culti-
The leaves and the young shoots of this shrub contain an alkaloid, katin, which produces a euphoric, stimulating, exciting but finally depressing, effect when chewed or drunk in a decoction. It is widely used in Ethiopia, Djibouti, East Africa and the Yemen. The bunches of twigs or shoots (kilt, pl. kaltwit) of the kaf shrub can only be utilised a short time after being gathered, hence in order to transport them and to keep them fresh as long as possible, they are bound up in fresh, moist foliage. Kaf addicts choose young and tender leaves and branches, and chew them up to form a ball about as big as a goolnut; they then keep on chewing this for hours, especially during social gatherings. In this respect, kaf is a factor making for social cohesion and peace, but this is outweighed by its harmful effects. Whilst the state of euphoria induced may be accompanied by a certain feeling of intellectual expansion, this happy feeling is soon succeeded by a state of anxiety which is alleviated by drinking a decoction of coffee husks (kibhri); all reports state unanimously that the habitual use of kaf, being comparatively cheaper than today, this document also shows the fact that its use fell into the category of khibh which ought to be avoided (Tabaks xal-thibh min akl al-kafsa wa 'l-kaf, in al-Faladow al-kubr al-fihsuya, Cairo 1308, iv, 223-24).

The leaves, the raising of this shrub, which is propagated by means of cuttings, plays a great role and gives a considerable income to its cultivators on the plateau, and above all to the middlemen dealing in it. Some economists have put forward remedies which seem, however, hard to apply (see M. S. el-Attar, Le sous-développement economique et social du Yemen, Doc. APD/I27, Rev. I, 1964), and containing two decrees regulating the town in 1164/1748 and 1234/1819 respectively, shows that in the interval between these two dates, the price of a bunch of ca. 280 gr. and of the best quality went down by a half and corresponded at the beginning of the 19th century to one-quarter of a workman’s salary, i.e., it was comparatively cheaper than today. This document also shows that the consumption of kaf was officially authorised, although Ibn Haji al-Haythami (d. 1572) had written—in reply to questions about its use which had come from people in San'a and Zabid, and without taking up a definite attitude towards the contradictory opinions of reputable scholars on the effects of kaf—that its use fell into the category of khibh which ought to be avoided (Tabaks xal-thibh min akl al-kafsa wa ‘l-kaf, in al-Faladow al-kubr al-fihsuya, Cairo 1308, iv, 223-24).

KAT (A), cutting off. The Arabic verb kafa has been very widely used in a variety of literal and metaphorical senses; this diversity is often of interest for both religious and cultural history.

The infinitive kaf does not occur in the Kur’án, but the finite verb occurs both in the literal and in a rather metaphorical sense: Sura V, 42 (38): “Cut off the hands of the thief and the female thief”—the well-known prescription which has passed into jkk and is sometimes briefly designated as kaf al-liss; Sura VIII, 7: “and [Allah] may cut off the root of the Infliders”, i.e., extirpate them. Sura II, 25 and XIII, 25 (27) (“those who cut up what Allah has ordered to join”; Sura XXIX, 28 [29] “will you cut the road?”, i.e., commit highway robbery; Sura XXVII, 32 “I decide nothing”).

To the early reciters of the Kur’án (kurraj), kaf was the pause in reading, used on the sense or otherwise. Later a distinction was made between the short pause for breath, and the other pauses,
based on the sense; according to some, kaṭ̣ indicated only the first; according to others only the second.

The grammarians use alif al-kaṭ̣ for the disjunctive hama which, opposed to the so-called hamsat al-wasāl, cannot be elided [see ALIF]. Kaṭ̣ further indicates the deliberate cutting, for a special purpose, between elements of a sentence which syntactically are closely connected, e.g. instead of al-ṣamudu li ʿlāhi ṣamudī one might say al-ṣamudu li ʿlāhi ṣamudī (= wahhā wa-ḥamīdu), or . . . ḩamīda (= aš-šamīda).

In prosody, kaṭ̣ indicates cutting short the ending of certain metrical feet, e.g., the shortening of the metrical foot fāsil kun to fāṣil = faṣalun or of mustafīṣilun to mustaṣil = maṣilun. This shortened form is then called maṣūbi.

For mathematicians, kaṭ̣ al-maḥārīb, the conic section, is of importance; specifically kaṭ̣ al-ṭārīq is the hyperbola, kaṭ̣ ʿalḥiṣ the ellipse, kaṭ̣ muḥāfi the parabola and kaṭ̣ muḥāfi maṣūṣah the paraboloid.

In astrology, kaṭ̣ indicates scission = διαφοράς, specifically διαφοράς, climacteric. Kaṭ̣ (al-warārah), in the sense of format of paper, has had a certain importance in the history of official administration. The Arabic paper is of many different formats, but according to Grohmann the Arabic libraries to have assessed both the dominations and sizes from the Greeks. In any case, one can recognize a certain continuity in the dimensions of the format. An ordinary roll of papyrus of 20 leaves, about 5 metres long, was called kīrāṣ (from Greek χιτήσις, Aramaic בּשָׁלַח) and the sixth part of it, fīmār or fīmār kīrāṣ (τομή χιτήσις). In the papyrus texts parts of the roll are mentioned frequently, e.g., 2/3 roll (δισυλακτος kīrāṣ), 1/3, 1/6 (fīmār) and also 1/2 and 1/3 of a fīmār. The surviving documents emanating from the Egyptian provincial chancellery of Kurra b. ʿSharīj (90-96/709-714) [q.v.] are distinguished by an exceptionally large format and wide spacing between the lines. Documents emanating from the government chancellery of the Umayyads in Damascus have apparently not survived but it seems that as early as Muʿawiyah’s reign distinctions of format were known according to the rank of the addressee. This information comes from a lost Kitāb al-balām wa-l-dāgit of Muḥammad ibn ʿUmar al-Maʿdānijī, who is perhaps identical with Muḥammad b. ʿUmar al-Madinī (d. 581/1185, Brockelmann S I, 604, 10c). According to this work, caliphs were addressed on 2/3 fīmār (li ʿl-baḥūla) fi kīrāṣ min ṣuḥūsay fīmār, governors on 1/2, finance directors and secretaries on 1/3, merchants on 1/4, bookkeepers and geometers on 1/6. Apart from these distinctions, it is worth noticing that literary papyri have an almost square format whereas an oblong format, later on called maṣūṣah, was reserved for the Qurʾān. According to a statement by Ibn ʿAbdūs (d. 331/942), al-Walīd I (86-96/705-715) was the first Umayyad caliph who was addressed on fāṣil and who introduced a larger format and a more elegant writing (wa-amara bi-an tuʿażama kūtubhū wa-yudājallala ʿl-khafī). But ʿUmar II (90-101/717-720) was opposed to such extravagance and ordered the clerks to write closely (bi-dījām al-khaṭāf); his own writings were only one span wide (fa-kānāt kūtubhū inna mā hā yuḥbr). The state chancellery of the ʿAbbāsid had also a distinct format, described by al-Sūfī (d. 335/ 946); he mentions the sizes of the sheets (al-maḥādīr al-lābiʿ yuḥbr fikā min al-khafī). The formats are the same as those used under the Umayyads, to which was added a 2/5 format for special (khāṣṣ) documents, autographed or dictated by the vizier.

The Arab riots informant on this point was Abūmān b. Ismāʿīl b. al-Khaṣṣāb al-Anbārī, an intimate of the caliph of one day al-Muṭṭadād (296/908) = Ibn al-Muṭṭazz [q.v.].

From the Mamlūk period we have no less than three lists which show some development in the formats. The oldest is that preserved by Shihāb al-Dīn Ibn Faḍl-Allāh al-Umārī (d. 749/1349) in which he describes the sizes of the formats of the sheets (maḥādīr kaṭ̣ al-wārārah al-lābiʿ yuḥbr fikā). Here also there are five formats, which however include only three of the early ones: 2/3, 1/2 and 1/3. The largest is an in-folio (al-kaṭ̣ al-khāmi) used for treaties and the smallest is an ordinary format (kaṭ̣ al-sāda) used for decrees and appointments of the lowest rank. The latter was therefore the format most commonly used and corresponded with the two early formats 1/4 and 1/6. The author adds that the formats are thus sufficiently explained and that the rest may be inferred by analogy (tajāj ilāhī bi-ʿalaykh wa-bi ʿlāhi ʿl-tawfīq).

Al-Kalkashandī (d. 821/1418), the greatest authority on the secretarial art, also deals thoroughly with the formats and their history. His lists contain nine Egyptian and six Syrian formats. Besides the five ancient Egyptian sizes, he mentions three in-folios. One is from Baghdad, a larger and a smaller, and a third from Syria. He also adds a particularly small size for use with carrier-pigeons (al-kaṭ̣ al-saghīr min warāk al-lāy). The four Syrian sizes were intended for the chancelleries in the province of ʿkāmil, 1/2 hamawi, ʿdda and warāk al-lāy. From Al-Kalkashandī’s explanations, it is clear that he does not conceive the names of the format as indicating parts of the sheet, but as indicating the width in Egyptian ells as used for measuring cloth, e.g., 2/3 = ṣuḥūsay [Greek χιτήσις] bi-ḥdnah bi-ḥdnah al-ḥamād al-Misrī.

After Al-Kalkashandī, the number of formats increased still further and resulted in an excess of formats too numerous to systematize. An anonymous description of Egyptian chancellery procedure, dating from the end of the 9th/10th century, is preserved in a Paris manuscript under the title Dēdīkī al-imāk. Quatremer used this in his introduction to his Histoire des Mongols, while Karabacek used it to try and introduce some order into the scattered data. In assuming that the Egyptian textile ell was 48.886 cm. and that the relationship of breadth to height was on average two to three, he was able to calculate all the formats in centimetres. His findings are put together in a table comprising fifteen formats, including the classical five formats, and in addition, no less than seven folio formats. Despite the enormous effort involved, the findings are somewhat uncertain, and an edition of the text would be desirable. This Egyptian development came to an abrupt end with the Ottoman conquest in 1517. As an Ottoman province Egypt had no state chancellery.

Ottoman documents, according to Fekete, were always long and narrow, but the so-called Imperial Letters to foreign rulers had very varied and sometimes huge formats. The Arabic formats were apparently not known, but many styles of writing had names like sīlūs and ʿumrār. In the Mongol state chancellery also, paper was long and narrow, on the Chinese model. In the Arab east, kaṭ̣ as a format is still not entirely forgotten (cf. the dictionaries of Belot, Elias, Wehr), while in Turkish the word şaḥa is in common use (cf. Samy, Heuser, Ağakay).

In religious history, the expression kaṭaʿa yaṣmaṇa = “to swear an oath”, which Pedersen (Der Eid bei
The term KAT — KATA 743

den Semiten, 46 and 12 n. 5) compares with the Hebrew karat bet "to make a covenant". As in other Semitic languages, KATA acquires the meaning of "resolve", "decide". In logic, it means "to assert or, e.g. ^alima kafan karat bet = "to make a covenant". As in other... ghataf, (from its guttural cawing), the Large Pintailed Sandgrouse (Pterocles alchata, a taxonomic preservation of the

A small Shfi sect is known as the Kat'iyiya for they "cut off" the line of Imams with the death of Musa al-Kazim.

Astrology: C. A. Nallino, Del Vocabolo qat nell' astrologia araba, in RSO, viii Part 2 (1921), 729-43;

Arabic generic name). Its geographical distribution
is the same as that of the Black-bellied Sandgrouse
but extending also to Cyrenaica. As big as the latter,
the cata has a white belly with a broad bright red
band bordered by a black stripe across the chest.
In the female, this breast plumage is bright yellow
transversely crossed by a black streak like that
of the male Lichtenstein's Sandgrouse. Both sexes
have their eyes camouflaged with black.

The nomads could well be excused for having
differentiated only three species of sandgrouse out
of six, on account of the close similarity of the
plumage of each one. All are predominantly sandy-
yellow, with fine speckles giving a pearl-grey tone
(māriyya) which assures complete nilmisis, and
all the species also display identical behaviour.
With the added factor of sexual dimorphism,
only a skilled ornithologist could draw up an
inventory of this rather homogeneous family. On the
other hand, few observers other than these desert
people have known in detail the biology of the
sandgrouse which, placed between the Columbidae
and the Gallinaceae, are essentially granivorous and
live principally at ground level. On the ground they
look like little partridges with short legs, but in
flight they resemble pigeons (see above, the Touareg
names which apply to the Columbidae also). Bod. in
their habitat is the semi-desert regions they are
obliged to cover long distances (sometimes 50 km.
or more) in order to quench their thirst. For this
purpose they assemble in large flocks (sīrb, pl.
ṣarāb, rā'sa pl. rīḍāl) and reach the watering place
in a great turmoil of cries in order to keep in contact;
they cleave the air rapidly and some bathe while
the mothers gorge themselves with water so that
on their return they can regurgitate it into the
 parched gullets of their chicks. Their stop at the
water source is very short and the birds hurry to
get back to their own grounds.

From the earliest times in their life in solitary
places, the Bedouin have had the time to notice
all the details of the behaviour of the sandgrouse
and to incorporate them into the dicta which the
poets have turned to account (see al-Maydam,
fiyyawdn, v, 217, 287, 573-81 and index). The sand-
grouse. This extraor-
dinary instinctive ability to come straight back
to her nest, among the hundreds of nesting-places
of the colony, after each "watering party", and
then to recognise her own hatched chicks (djawāl
pl. djawād) in order to give them water, this maternal
solicitude joined with the attachment of the mate
which shares all the tasks of educating the young,
were such good examples that the admiration of
the nomad was expressed in the saying akhā min
al-ḥaṣā "with a better sense of direction than the
sandgrouse". Exposed and defenceless in a hostile
world, "the survival of the fittest" is the
rule, these little chicks of the sandgrouse are unable
do without the protection and experience of
their parents, from whom they have much to learn
in the art of self-preservation, amid the many
perils which threaten them; but in such a good
school, they soon manage to acquire this permanent
mistrust which is the secret of survival of the species.
The tent dwellers, in their laconic way, knew how to
crystallise all the wisdom to be drawn from this
contrast of powerful and weak in this saying:
layṣa ḫatān miṯl khatayy "Sandgrouse old and sandgrouse
young make a pair".

It is of course round these watering points that
man has at all times lain in wait for and captured
the sandgrouse as a source of food, using in the
process all the tricks and inuence born of his
ingenuity in the art of birdcatching. Nooses, trip
nets, snares and all kinds of booby-traps are set up
for them at the watering place, as a number of
pre-Islamic verses prove. Very few poets indeed of the
Diḥālīyya and the beginnings of Islam have
omitted to cite the sandgrouse and its daily visit
to the pool, which exposed it to the greed of the
stalker. There are, first of all, these verses pointing
with reality from the famous Lāmiyyat al-`Arab
(verses 36-42) attributed to Ṣhanfārā. The poet,
having returned to a life close to nature, overtakes
in the watering place the packed flights of sand-
grouse and contends with them for the vital ele
ment. Ḥumayd b. Ṭhawr knew how to present the
bird in its habitat (Diwashn, Cairo 1321/1905, 53 no. 6,
verses 16-27), while Zuhayr b. Ḥabīl Sulmā shows it
fleeing before the attack of the falcon (Diwashn, ed.
Ahlwardt, 36 no. 10, verses 13-24), a theme taken
up again by al-`Akwīl (Maṣahīn biḥaṭība, ii, 96).
Also touching is the composition variously attributed
to the Maṣūn of the `Amar, to Kays b. Dharīb
and to Tawba b. Ḥumayyir (al-Damlīrī, ii, 253;
Aqānī, iii, 40; Hayawān, v. 577), which is thus
conceived: (metre wafir, rhyme -dā): "My heart,
on the evening when it learned that he should
go away with Laylā of the `Amar on the morrow,
in the morning or in the evening, was like a sand-
grouse which had fallen into a snare and which
struggled ceaselessly throughout the night, but in
vain, its wing caught fast in the mesh."

The treachery of the nets did not escape Zuhayr
when, comparing the speed of his charger with that
of the sandgrouse in flight, he said (Diwashn, Tunis
1323/1905, 44 verse 13, metre bāṣī, rhyme -dā): "He is as
swift as one of these [untiring] sandgrouse of the
pools, but one which the drawers of water
have chased, and whose companion the snares
have ravished." In his turn, Ubayy (d. 90/709)
evokes the same picture in this verse (L.A, s.v.
SH-B-K, metre bāṣī, rhyme -dā): "Or a flight of sandgrouse of Fayhān which the snares and
stalkers chased from the watering place of Yaḥribt"

Another characteristic of the sandgrouse which
the poets have brought into relief is its embarrased
gait, caused by the smallness of its feet; it walks,
waddling along with measured step, head and tail erect and with its chest thrown out, evoking rather well the portly and majestic bearing of the woman of ample form, the ideal of feminine beauty for the Arabs. Al-Kumayt, among others, knew how to exploit this comparison (see Bayawān, v, 370); but it would not be possible to mention here all those who include the sandgrouse in their rhymes without making the list too long.

In the more concrete domain of the hunt, with the development under the 4 Abbásids of the sport of hawking [see Bayzara], an attempt was made to attract the goshawk to the sandgrouse, but without great success. Access to the grounds of this bird was already difficult, and the sandgrouse was little inclined to fly off individually. It was impossible to dislodge it from the dense thickets where it took refuge without recourse to a hunting dog (zaghārd); bustards, partridges and francolins were put to flight more easily. As for falcons, they were too noble for this low flying. On the other hand they perfected the methods of capture with the net by joining to the swinging trip net the contrivance of a live calling bird (da'āwa) with a young pigeon disguised as a sandgrouse. 'Isā al-Asadī (7th/13th century) indicates in his vast cmegetic encyclopedia (al-bayzara, ms. Escurial, Ar. 903, fol. 159b-160a) the way to transform this pigeon by dying its plumage with saffron or henna, and by docking its tail, to make it look like a sandgrouse. The stalker at the hut (Kawāqū) would set up his net upwind on days of high wind and place the pigeon a few metres in front, being able to make it move with the aid of a leash. When the flock of sandgrouse arrived flying very low in the wind, the hunter would make the calling bird jump about. To complete the resemblance, he would make the cry of the young sandgrouse by means of a decoy call made with a fine tongue of leather which vibrated between two wooden plates with the wind. The birds would begin their descent and would immediately see themselves covered by the clap net which dropped down. This method of hunting was very much in favour in the 19th century and "the mighty rampart of the Yemen mountains" towards the north. Although travellers can go from Aden to Ta'izz via Kaţaba, the main route swings westwards before reaching al-Dālīf and Kaţaba. The way north from Kaţaba towards Yarim and Sanā' is very difficult to traverse. Kaţaba's importance derives primarily from its position as a border stronghold.

Kaţaba is not mentioned by the older geographers such as al-Hamdānī, though they speak of the tribe of Dja'da [q.v.] as dwelling in this region. In the 12th/18th century Kaţaba was fought over by Yāfī [q.v.] and other peoples in the vicinity. After the opening of the Suez Canal in 1869, the Ottoman government reinforced its authority in the Yemen and stationed a garrison in Kaţaba. British influence having spread from Aden into the hinterland, a joint Anglo-Ottoman commission worked from 1319/1902 to 1323/1905 in demarcating a boundary line that left Kaţaba just inside Yemeni territory. This line still divides Northern Yemen from Southern Yemen.

During World War I, Ottoman forces advanced from the Yemen against Aden, which they failed to capture after a long siege. After the close of the war, the Turks withdrew from the Yemen, and the Imām Yābiyā b. Muḥammad Hamd al-Dīn [q.v.] acquired full sovereignty over the country. As Yābiyā claimed that the areas under British protection south of the boundary rightfully belonged to the Yaman, clashes took place along the line, with Kaţaba being one of the most sensitive spots. Although Yābiyā and Britain concluded the Treaty of Sanā' in 1352/1934, providing for the maintenance of "the situation existing in regard to the frontier [al-ḥudād]", the troubles did not cease. Yābiyā was assassinated in 1367/1949. When a revolution overthrew his grandson Muḥammad al-Badr in 1382/1968, the new Yemen Arab Republic adopted the old territorial claims of the imamate,
but the republican government was diverted by the civil war against al-Hadir and his supporters.

In 1383/1963 the National Liberation Front, a leftist party in Aden and its hinterland, began an armed struggle against the British in Diabat Radfan south of Ka’taba. This struggle culminated with the Front seizing power when the British evacuated Aden in 1385/1967 and establishing what is now called the People’s Democratic Republic of the Yaman. Relations between the two Yemeni states have been strained, and the Aden government has charged that Northern Yaman uses Ka’taba and other places as bases for subversive activities against its territory.

**Katabán,** a pre-Islamic people of southwest Arabia, for knowledge of whom we are dependent on the ancient native inscriptions. They were known to the Greek and Latin geographers, under the names Kāṭbān, Cattabanenses and other variants, but the data available from that source need to be controlled against the background of the primary epigraphic sources. Muslim writers had no knowledge of them as a people, though Yākūt records Kitābān as a simple place-name “in the region of Aden”.

The distinctive culture of pre-Islamic southwest Arabia was that of a settled farming population, having at the base of its social structure the village community. A plurality of such communities formed a social unit described by a term corresponding to the Arabic word ṣaḥāb; the cohesion of this unit was fundamentally economic, secondarily political and social, but it was not a kinship-group. At a third level of grouping we find cases where one ṣaḥāb gained a dominance or hegemony on its surrounding ṣaḥāb groups. Finally, there is a fourth level of differentiation within the culture area as a whole, based on linguistic criteria: the language of the inscriptions is classifiable into four main dialects, and when the Greek geographers tell us that there were four principal “nations” in the area, it is clear that they are using the linguistic criterion of differentiation.

The existence of these various levels of grouping has led to some confusion in the use of the term Katabanian, for scholars have not always been careful in distinguishing the levels at which the term is applicable. It is certain from the inscriptions that Kataban was a ṣaḥāb, whose territory consisted of the present-day Wādī Bayḥān [q.v.], and probably also the Wādī Harib [q.v.] parallel to it on the west; in ancient times, Bayhan had been the name merely of a group of a number of village communities which together constituted the ṣaḥāb Kataban. At certain periods in its history, however, the ṣaḥāb Kataban was the dominant element in a hegemony which extended over the highland plateau south of the Wādī Bayḥān (now the Yemeni province of al-Bayḍá’, 3rd century A.D.; and beyond that into Daqín [q.v.], the lowland area at the foot of the escarpment which forms the southern boundary of the plateau. The classical geographers tell us that the Katabanians extended as far as the Red Sea and Indian Ocean coasts; but in so doing they were probably referring to the linguistic “nation”, i.e. the ethnic group which used the same dialect as the ṣaḥāb Kataban, for there is no epigraphic evidence to show that the latter ever exercised real political control over so wide an area.

The most we can say is that there were certain social linkages between the Katabanian heartland and the isolated highland massif in the extreme southwest of the peninsula of which today Ta’if is the administrative centre, for the township of Ḥarbād in the Wādī Harib was founded by immigrants from Sawwa, not far from Ta’if.

There are some indications that, in the earliest phase of our historical records, it was the ṣaḥāb Awsan which was the dominant partner in a confederacy covering to some extent the same area as the later Katabanian confederacy. This is the most probable interpretation of the Sirwāḥ inscription (RES 3945), which records that Saba crushed Awsan and liberated Kataban from Awsanian domination. F. Hommel supposed this to mean that Awsan then vanished completely and finally from the map, which is certainly wrong, since mention of Awsan occurs again much later—probably when the Katabanian confederacy had in its turn broken up.

The chronology of Kataban is still in some dispute. An American school, of which the protagonists are W. F. Albright and A. Jamme, hold that its history stretches from the 6th century B.C. or even earlier, down to the early years of the Christian Era. A continental school, headed by J. Ryckmans and J. Pirenne, dates the whole process some two centuries or so later. The only certainty is that there is no mention whatever of Kataban in inscriptions from the 4th century A.D. onwards; and we are forced to believe that by this time Kataban had disappeared from the political and social map. This is why Muslim writers knew nothing of it as a social entity, for such knowledge as they had of pre-Islamic affairs extends only to the couple of centuries immediately preceding Islam. It could also be surmised that it was the disappearance of Kataban that paved the way for the rise of Bayhan from being a mere village community to an entity giving its name to the whole Wadi, but at the same time speaking of the king of Hadramawt as overlord: this suggests that Kataban may have been overthrown by a Sabaean-Hadrami alliance, which assigned the former lands of the ṣaḥāb Kataban to Hadhrami overlordship.

Apart from the uncertainty of the absolute chronology, a diversity of attempts have been made at establishing an internal relative chronology; but it is doubtful whether even the best of these can yet be regarded as definitive.

**Archaeology.** In this respect, the Wādī Bayḥān is better known than any other area of comparable size in the culture area, thanks largely to the intensive research campaigns of 1950-52 under the auspices of the American Foundation for the Study of Man. These concentrated much of their attention on a site now known as Ḥadjar Kūjān, 3rd century B.C.; and on the south-western badlands in the Wādī Harib, which are now engulfed in desert sands, was formerly a highly prosperous settlement. There was a rectangular walled town, one quarter of the area of which was an open market space, wherein stands a stela of ancient date containing the market regulations; a temple outside the walled town; and a burial ground at a small rocky outcrop now called Ḥayd Bin Ṣākil; a few kilometres north-east of the town. This site was the metropolis of the Katabanian confederacy in its
heyday; but it came to a violent end, being destroyed by fire. There are, however, indications that the original headquarters of the sha'b Kataban, before it emerged into paramountcy over the confederation, may have been at the site now called Hadjar Bin Ḥumeyyed, approximately halfway between Ḥāḍjar Kūḥlān and the present administrative centre at Baybān al-Ḳaṣāb, for the stratigraphic evidence here seems to indicate a very high antiquity indeed for the site.3

Three possible routes link the Wāḍī Baybān with the Wāḍī Ḥarīf. One can skirt the northern end of the mountain range separating the two wādīs, but this route must always have been insecure, exposed as it is to attacks from desert tribesmen. Somewhat further there is a pass known as Ḍakāl Markād, devoid of inscriptive records but having on the eastern approach two stone walls which start from the sides of the valley and gradually converge, as they ascend, to a narrow opening at the summit of the pass; this ensures that caravans could only cross the pass at that precise point, thus facilitating customs control. Further south again there is a much more impressive relic. Due west of Ḥāḍjar Bin Ḥumeyyed, the Wāḍī Mablaḵa strikes up into the dividing mountain chain. At the head of this, one ascends by a steep zigzag climb to the mountaintop (this last the name of a prominent mountain on the west side of the Wāḍī Baybān)—see Beeton, Qaṭḥān, ii.

Institutions. The titular head of the sha'b Kataban was a king, malīk; but he was by no means an autocrat. Legislative enactments were passed in the name of the king together with other functionaries having a variety of titles impossible to interpret with any precision, but who may have been grouped together under a name etymologically related to Arabic sayyid. The composition of the body probably varied according to the business in hand; in the market regulations a prominent role is played by the "overseer" (ḥr) of the market, in irrigation texts by the landlords. The king was not supreme legislator but rather chief executive. His functions were to register, promulgate and secure the carrying out of the acts of the legislative body; to initiate major public works; and to act as commander in war.

He had moreover a dual role. By virtue of being head of the sha'b Kataban he was also head of the confederacy in which the sha'b Kataban was the dominant member—in rather the same way that the Queen of England is also "head of the British Commonwealth". As head of the confederacy, he used formally the title mḥrb (vocalization unknown) of Kataban, i.e. in this context, the Katabanian confederacy. It must be stressed that a theory propounded by F. Hommel, and still unfortunately being given currency, has in the last few decades been proved conclusively to be unfounded and is not now believed by any expert: namely, that mḥrb was the title of the "priest-ruler" (Acadian ensi) of a theocratic state anterior to the establishment of a secular state headed by a king.

The crucial evidence on this point is the inscription at the head of the Mablaḵa pass. This is in two parts: in the first (RES 2550) the credit for sponsoring the work is claimed for an individual styling himself mḥrb of Kataban; in the second (Ryckmans 390, not published until 1949), the director of public works states that he supervised the work "on behalf of his lord the king of Kataban". King and mḥrb are the same individual. It is clear that, to a member of the sha'b Kataban, his superior was simply "king of
Katabān", but the latter, in sponsoring a major public work for the benefit of, and probably financed by, the whole confederacy, used the title *mḥrb* which stressed his position as head of the confederacy and not merely of the *shāb*.

While it is possible that every *mḥrb* may have been also a king, the reverse is not true. There are several instances of two brothers, or a father and son, being designated "joint kings of Katabān", but the title *mḥrb* never occurs in dual or plural. It would be safe to conclude, at least provisionally, that when there were two joint kings of the *shāb*, only one could be formal head of the confederacy.

Certain holders of the *mḥrb* office list and elaborate series of other formal titles, among which two phrases deserve note. The *mḥrb* is tax-collector (ṣqr, cf. ṭigirinya *ṣaq* al-dārī), chief administrator (ṣyn), and priest, of the tutelary deity of the confederacy, "Amm; he was therefore responsible for federal tax-collection and other administration, and for the maintenance of the federal cultus. Further, he is "first-born" (*ḥbr*) of that deity: this expression has to be evaluated in the context of the fact that all members of the Katabanian confederacy are collectively the "children of 'Amm", that is, under the special protection of the tutelary deity of the confederacy; there is no reason to think that "first-born" implies anything more than the primacy of status enjoyed by the head of the confederacy in relation to the other "children of 'Amm".

One institution which emerges with greater clarity in Katabān than elsewhere is the *corvée*. The maintenance of the great irrigational installations which served a number of properties was the responsibility of the landowners concerned, and the latter were obliged to provide for the corvée labour in each period of fifteen days (RES 354 as reinterpreted in Beeston, Calendars, 6-7).

Language. The dialects of the culture area constitute an independent language within the southern branch of the Semitic languages, as distinct from Arabic as is, on the one hand Aramaic, and on the other Ethiopic (albeit in the later, post-Katabanian, phase a good many Arabic lexical items begin to creep in). Of the Katabanian dialect itself, the most noteworthy features are: (a) the prefix of the causative verb-system, and the base of the third person independent and affixed pronouns, are sibilants, as they are in Minaean and Hadrami, whereas Sabaeans has h in these forms; (b) the imperfect indicative of verbs has a b-prefix, contrasting with absence of the prefix in subjunctive and jussive.

The script is the South Semitic alphabet used throughout the culture area (either directly ancestral to, or at all events closely related to, Ethiopic script), but with a fairly distinctive Katabanian ductus, which in the earlier phases resembles Minaean ductus and in the latter phases evolves its own characteristic style of great beauty. The alphabet contains 29 consonantal symbols, representing the 38 consonantal phonemes of Arabic plus an extra unvoiced sibilant phoneme.

**KATĀDĀ B. DI'ĀMA B. KATADA AL-SADūSĪ, ABU'L-KHATTĀB, A Successor,** who was blind from birth and who became proverbial (see, e.g., Ibn Bassām, *Dhakhira*, i, 1, 2) for his prodigious memory and his knowledge about genealogies, lexicography, historical traditions, Kur'ānic exegesis and the readings, and hadīth. Of Bedouin origin, he spent his life in Basra, where he said to have gone about without a guide. He was the pupil of al-Ḥasan al-Ḥasīfī and Ibn Sirīn, and also transmitted the *Ṣaḥīfa* of Dālib b. ʿAbd Allāh (Goldzahler, *Muh. Stud.*, ii, 10, Eng. tr. ii, 23). He was considered to be a proponent of the doctrine of free will (see *Kadāriyya*), and it was he who gave their name to the Muʿtazilīites, but it is also said that he reproached his Kadāri views. His exegetical teaching was written down by Saʿīd b. Baghīr (*Fīhrīst*, 51), who died in 168/784-5, according to Ibn ʿImād, *Shahrārī*, i, 265-6. He was supposedly born in 606/880, and died of plague at Wāṣit in 117/735, but the information on the place and date of his death is contradictory.

**KATĀDĀ B. IDRĪS,** usually known as AbūʿUzayyīz, the ancestor of the *ṣaḥīfs* of Mecca from the beginning of the 7th/13th century. He was born in the district of Yanbuʿ, probably soon after 540/1145-6. Yanbuʿ, a fortress, on the Mecca-Medina road, was then dominated by the Katada family, one of the ʿAlawi families which belonged to the branch of al-Ḥasan b. ʿAli. At the beginning of the 7th/13th century Mukhaṭhir b. Kāsam, *ṣaḥīf* and ruler of Mecca, died. He was succeeded by his son Muhammad, the last *ṣaḥīf* from the ruling family of the Hawāshīm. Katada b. Idrīs, who had earlier succeeded in uniting his tribe with the other tribes of the district of Yanbuʿ under his leadership, captured Mecca and killed Muhammad b. Mukhaṭhir. The last *ṣaḥīfs* of the Banū Ḥāshim had lived in an atmosphere of constant family strife and quarrels. Meanwhile, Katada had established himself in Yanbuʿ and extended his power southwards in the direction of Mecca, thus preparing his attack on the holy city.

(CH. PELLAT)
Katada was a man of political genius. He pursued the idea of founding an independent state in Arabia, recognizing the weakness of both the 'Abbásids of Baghdađ and the Ayyūbīds of Egypt and Syria. Since neither they nor the Zaydis of Yaman presented any real threat, he endeavoured to capture the whole of the Hijāz. After repairing the ruined walls of Mecca, he captured al-Ta'fi and brought the Ṭaḥṣīf tribes under his dominion. Katada rebuilt the fortress of Yanbu', organized his army and then tried to capture Medina, but Sālim b. Kāsim, the sharīf of Medina, and a member of the Husaynī branch of the 'Alawl family, thwarted his purpose.

Although Katada was a Shīfī, he acknowledged the suzerainty of the 'Abbāsīd caliph al-_NSīr. On the whole, however, his relations with the caliph were frequently strained and sometimes broke into open hostility. Nevertheless, the caliph, who was working to reunite the Muslim world under his leadership, once invited him to visit Baghdađ. It is said that Katada started on his journey to the capital, but returned to his own country when he was met by an embassy of the caliph which had in its train lettered lions. Be this legend or fact, this much is certain, that Katada embodied his idea of the "splendid isolation" in verses which are a typical illustration of his negative attitude towards foreign powers. Probably his encouragement of the Zaydis occupation of Yaman is to be viewed in the same light.

In 609/1212-13, the mother of Dīlāl al-Dīn, leader of the Assassins, lord of Alamūt and the ally of al-NSīr, the 'Abbāsīd caliph, went to Mecca on the pilgrimage. Her visit coincided with the murder of Katada's cousin. Katada, who greatly resembled his relative as candidate for the throne. His son Irlasan, who suspected him of favouring one of his relatives, put him to death. While Katada's cousin was sure that he himself was the intended victim and that the murderer was an Assassin sent by his cousin, was sure that he himself was the intended victim and that the murderer was an Assassin sent against him by the caliph. Greatly angered, he attacked and looted the Irlakī pilgrims and imposed a heavy fine on them, which was paid by the lady of Alamūt.

In his last days Katada undertook an expedition against Medina. Illness, however, induced him to return to Mecca, where he was killed in 618/1221 by his son Hasan, who suspected him of favouring one of his relatives as candidate for the throne. His descendants were ruling sharifs in Mecca until 1916, when Husayn converted the sharifate into a kingdom.

Rādīpūṭ ("Feroz Shāh Tughluḳ").

Katada was a man of political genius. He pursued the idea of founding an independent state in Arabia, recognizing the weakness of both the 'Abbāsīds of Baghdađ and the Ayyūbīds of Egypt and Syria. Since neither they nor the Zaydis of Yaman presented any real threat, he endeavoured to capture the whole of the Hijāz. After repairing the ruined walls of Mecca, he captured al-Ta'fi and brought the Ṭaḥṣīf tribes under his dominion. Katada rebuilt the fortress of Yanbu', organized his army and then tried to capture Medina, but Sālim b. Kāsim, the sharīf of Medina, and a member of the Husaynī branch of the 'Alawl family, thwarted his purpose.

Although Katada was a Shīfī, he acknowledged the suzerainty of the 'Abbāsīd caliph al-NSīr. On the whole, however, his relations with the caliph were frequently strained and sometimes broke into open hostility. Nevertheless, the caliph, who was working to reunite the Muslim world under his leadership, once invited him to visit Baghdađ. It is said that Katada started on his journey to the capital, but returned to his own country when he was met by an embassy of the caliph which had in its train lettered lions. Be this legend or fact, this much is certain, that Katada embodied his idea of the "splendid isolation" in verses which are a typical illustration of his negative attitude towards foreign powers. Probably his encouragement of the Zaydis occupation of Yaman is to be viewed in the same light.

In 609/1212-13, the mother of Dīlāl al-Dīn, leader of the Assassins, lord of Alamūt and the ally of al-NSīr, the 'Abbāsīd caliph, went to Mecca on the pilgrimage. Her visit coincided with the murder of Katada's cousin. Katada, who greatly resembled his relative as candidate for the throne. His son Irlasan, who suspected him of favouring one of his relatives, put him to death. While Katada's cousin was sure that he himself was the intended victim and that the murderer was an Assassin sent against him by the caliph. Greatly angered, he attacked and looted the Irlakī pilgrims and imposed a heavy fine on them, which was paid by the lady of Alamūt.

In his last days Katada undertook an expedition against Medina. Illness, however, induced him to return to Mecca, where he was killed in 618/1221 by his son Hasan, who suspected him of favouring one of his relatives as candidate for the throne. His descendants were ruling sharifs in Mecca until 1916, when Husayn converted the sharifate into a kingdom.

region's main avenues of approach were from Benguela via Bihé on the west, and from Lakes Tanganyika and Nyasa on the east. The principal highway of Islamic penetration in eastern Africa, however, from the coast to Lake Tanganyika, where by 1840 a permanent trading centre had been established at Ujiji, continued thence due east to Maniema and the Luapula valley, where Islam has struck its deepest roots in Zaire. Only a branch route turned southwards. Tippu Tip, the most outstanding of the so-called "Arabs" from the east coast of Africa, in the Congo, may perhaps for a time, about 1870, have operated in conjunction with Msiri, ruler of Katanga, against the Lunda of Kazembe; but later it was reported that Msiri had plundered one of Tippu Tip's lieutenants. Tippu Tip travelled through Urua, in northeast Katanga, early in his career, but found the area disappointingy sparse in ivory, the main export item, together with slaves, to the east coast, and his attention was finally diverted northwards. For these reasons, the story of Islam in Katanga remains but a minor theme in the general development of Islam in Zaire.

A state called Garenganze had grown up in the Katanga region under Mrsi, a Nyamwezi immigrant. Nyamwezi trade with Katanga may have begun as early as 1800; Msrí's father, Kalaasa, had often visited the region to buy copper. Msrí was once able, with the aid of a few guns, to render valuable help to the local Sanga chief, and became his heir. Both the Sanga and the Lamba over whom Msrí also became ruler, had been vassals of neighbouring Kazembe; Msrí successfully beat back an attempt by Kazembe to re-assert his authority. Msrí, strengthening his position by encouraging immigration, welcoming refugees, amassing slaves, and building up an armoury, came to rule an area the size of Great Britain, from the Luabalá to Lake Mweru and the Luapula, and from the Luvua to the Congo/Zambesi watershed.

Such a state was attractive to traders, and these came from all quarters, Zanzibar, Uganda, Nyamwezi country, the Zambesi, Lake Nyasa, Angola and the Congo basin. Some of the incoming traders Msrí tempted to stay on, with gifts of land and women. Ivory, salt, slaves, iron and copper were exported. Copper, crosses of which served as currency in the region, was particularly important. The Arabs introduced brassworking at Ujiji, one part of zinc from the coast to two of Katanga copper. Arab influence grew at Bunkeya, Msrí's capital; the "Arabs" had reception days at court, when their master traders presented Msrí with gifts. Msrí depended upon these traders, above all for his arms supply; but he was envious of their wealth and fearful of their power. When in 1886 the first Christian missionary, F. S. Arnot, arrived, Msrí welcomed him, in part as a counterweight to the "Arabs". At Arnot's first interview with Msrí, he was introduced to several "Arab" traders from Zanzibar. The "Arabs" had evidently promulgated infamous stories about the English, to prejudice Msrí against them, but he suspended judgment, remarking that he did not yet know the English while he did know the "Arabs". Arnot visited a camp of "Arab" traders at the capital, where he saw numerous slaves, mostly full-grown men and women. He watched a man being bought for ten yards of calico, and was told that a young man or a young lad might fetch from twelve to sixteen yards. Grown men, untameable and liable to escape, were less valuable. Slave sticks were in use. Slave babies were often killed. Arnot, of the Plymouth Brethren, was followed by other Brethren missionaries. Rivalry grew between the missionaries and the "Arabs": the latter ridiculed reading the Bible from left to right, the material poverty—in accord with strict Brethren principles—of the missionaries, and their failure to supply Msrí with munitions. The extent of Islamic religious influence in Katanga is hard to gauge, but was almost certainly very slight: Muslim written charms were evidently prized for healing; some immigrants from the east recommended that Msrí punish theft by amputating the hand, but he demurred, preferring the death penalty; he did prohibit smoking and snuff. But these are only scraps of evidence, and may not all even reflect Islamic influence.

Until the end of 1891, Msrí steadfastly refused to acknowledge the claim of the Congo Free State of King Leopold of the Belgians, to the territory, and in December of that year he was killed by a State agent. These events happened in relative isolation from the mainstream of Muslim development further north. There, in 1889, Tippu Tip accepted appointment as governor by the Congo Free State, placing his domains nominally under the State. This approachment did not last long: in 1892 war between the "Arabs" and the State and the "Arabs" broke out, and by 1895 the power of the latter was broken, their main leaders dead or fugitives. In Katanga, there was confusion, uncheckcd "Arab" slave-raiding and famine; Msrí's authority had begun to crumble even before his death, and the State was only very gradually able to impose control. The State introduced, incidentally, a new Islamic element, for some of the State troops were Hausa Muslims.

Following the consolidation of the Congo Free State, later the Belgian Congo, the natural links eastwards of Congolese Muslims were for a time dislocated. The Belgian authorities were generally more suspicious of, and hostile to, Islam than were French and British colonial governments in several other, more Muslim, part of black Africa. Contacts with East Africa recovered, partly as a result of German employment of coastal Muslims as government servants in the interior of German East Africa. In 1932-3, the Kádiriya íaríka was observed spreading among the Muslims of the Congo. The first national Muslim Congress met in Kasongo in March 1964.

(H. Fisher)

Katangiya [See šikilivya].

Katár, in the local pronunciation Gitar, a peninsula of some 4,000 square miles in area which juts out into the Arabian Gulf. It is about 115 miles long and 55 miles broad at its widest part. The discoveries of the Danish archaeological expeditions from 1956 to 1964 show that Katár had been inhabited since prehistoric times, the earliest object found, a pair of hand-axes, dating from about 4,000 B.C. The earliest Arabic source to mention it is the Kitáb al-masdlik wa 'l-mamalik of Ibn Khurádadhíb, who notes it briefly as one of the stops on the route from Basra to 'Umán; this despite the fact that it is believed to have provided the nizba of the Arab fishermen. Later the main shipping b. al-Fujjá'á. It is briefly mentioned by al-Handámáli in a list of Arabian place-names and elsewhere as a halt on a route. Even much later, neither Yákút nor Ibn Mánzũr gives significantly more information
on Katar. It is mentioned in Umayyad poetry; indeed, Yakût cites a reference from Dzhair. Ibn Hawkal makes an early mention of Katatari pirates, and Mas'udî mentions the waters of Katar as a source of pearls.

For such a prominent physical feature, it attracted strangely little notice from European travellers in the Gulf area. Early maps show Katar only as a slight bulge on the mainland and the first representation of it as a peninsula is on Arrowsmith's map of 1825. Although by 1825 two ships of the Indian Navy had surveyed this whole area, it was not until comparatively recently that the complete outline of Katar was accurately mapped.

Yakût mentions Katar as a settlement (karya) and Pedro Teixeira at the end of the 16th century calls it "a port of Arabia". Whether or not it was a "settlement" or a "port", much of the history of Katar does centre around settlements on or near the sea rather than round a country. It was only under the ruling Āl Thānî dynasty that the various city states were finally united.

In 1766 the Āl Khalîfah clan of the 'Oţub immigrated from Kuwayt and occupied Zubâra on the western shore of the peninsula. With their arrival begins the modern period in the history of the country and the only one for which we have adequate information. At this time there were already settled in Katar the Āl Musalam clan of the Banū Khâlid in Huwayla, the Ma'âdîd and other Āl b. 'All in Fuwayrît, and in Dawha (then called Bid') (cf. above), Suwaydî refugees (Sîdîdān) from that part of eastern Arabia later called Trucial Oman.

A little later, 'Uţub kinsmen of the Āl Khâlîfah, the Djalâhîmâ, joined them at Zubâra. Dissension arose between them, and the latter moved to Ruways where they took to piracy. Although they were later nearly exterminated by the Āl Khâlîfah and their allies, their piracies combined with their feud with the Āl Khâlîfah were an important factor in the history of the area.

The occupation of Basra by the Persians from 1722 and the influx of merchants to Zubâra and it became for some time the centre of the pearl trade and of trade in general in eastern Arabia. It successfully defended itself against a number of Persian attacks and after the failure of the 1783 expedition, the Āl Khâlîfah, together with 'Uţub from Kuwayt, mounted a successful expedition against Bahrayn and Abîmd b. Khâlîfah became the first 'Uţub ruler of those islands.

The Djalâhîmâ, by this time at Khawr Hassân (now called Khuwayr), began to play a dominant role in Katar and, by 1809, under the famous Rabha b. Djbâbîr, in alliance with the Wâhhabî power, they controlled even Zubâra. Indeed in 1810-11, through the alliance with the Djalâhîmâ, a Wâhhabî, 'Abd-al-Djabir b. 'Ufaysân, governed Qattîf, Katar and Bahrayn. In 1811 after a successful expedition by Sayyid Sa'id of Muscat against Zubâra and Khawr Hassân, the Wâhhabîs withdrew from Bahrayn and Katar and the Āl Khâlîfah returned to power. Rabha withdrew to Dammâm and pursued his feud with the Āl Khâlîfah from there and from other centres in the Gulf. During all of this time he was careful in his piracies not to attack British ships, and this policy gave him immunity from their reprisals.

In 1817 after a successful expedition against the Kawašim, the pirates of Ra's al-Khaymah and al-Shârîkâ, who so successfully harried the ships of the area, including those of the British.

Meanwhile Bid' (later Dawha) was destroyed by a British cruiser in 1821 as a reprisal for acts of piracy committed by some of its inhabitants, but by 1823, under the Āl Bû 'Aynayn, was still only the port in the peninsula to possess trading ships. Though still in this period and until 1840 nominally subject to the šaykh of Bahrayn, in fact, though not openly contested, his suzerainty was not accepted, though for a time šaykh 'Abd Allâh did indeed reside in Katar.

It is a feature of all of the earlier history of Katarr that the inhabitants of its city-states would remove or be removed within the area. Many of these migrations are of importance later when they are used as proofs in the kind of territorial disputes which were important to the area after 1918. Thus in 1828 the Āl Bû 'Aynayn were removed after a revolt to Ruways and Fuwayrît and the inhabitants of Huwayla were re-settled in Bahrayn after a revolt in 1835. More important for Katar, however, were movements of the Banî Yās from the area of Abû Zabi (q.v.). The Banî Yâs under Suwaydân, by their maritime depredations from Dawhâ, brought the then ruler of Abû Zabi close to war with Bahrayn. This raiding ceased when Suwaydân returned to Abû Zabi in 1828, but the Banî Yâs had fines for piracy laid on them in 1835 and many emigrated to Dawhâ al-'Udayd to avoid payment of these, leaving only in 1878. In this period this group was the cause of much friction between Katar and Abû Zabi.

The piracies of one of these emigrants, Djasîm b. Djbâbîr, continued despite energetic attempts to apprehend him. In 1841, however, his ship was seized and burnt at Dawhâ, although Djasîm himself escaped.

The Kataris were also involved to some extent in the hostilities of 1840-9 between the rival Bahraynîs shaykh, 'Abd Allâh and Muhammam. The Kataris went to the aid of Muhammam, who had seized Murayr and Fuwayrît in Katar, when he used them as a base for the successful attack on Mubarrâk in Bahrayn, which established him firmly there in 1843. But for the peace agreed in 1851 between the Shaykh of Bahrayn and the Su'dîs to ensure the safety of Katar from attacks by tribes within their sphere of control. However, late in 1867 Bahrayn and Abû Zabi launched a joint attack on Dawhâ and Wakra, totally destroying them and removing their population. From then to the present day, relations between Katar on the one hand and Bahrayn and Abû Zabi on the other have remained uneasy.

One of those who had fled from Dawhâ was Muhammam b. Thânî of the Āl Thânî of the Ma'âdîd. He was induced, because of his great influence, to sign an agreement in September 1868 with the British, by the terms of which he was virtually the only area to possess trading ships. From then to the present day, relations between Katar and Bahrayn have preferred this to the Bahraynî connection. Certainly, after this time the shaykh of Bahrayn paid a yearly tax to the Su'dîs to ensure the safety of Katar from attacks by tribes within their sphere of control. However, late in 1867 Bahrayn and Abû Zabi launched a joint attack on Dawhâ and Wakra, totally destroying them and removing their population. From then to the present day, relations between Katar on the one hand and Bahrayn and Abû Zabi on the other have remained uneasy.

driven out of al-Hasā began to use Kātar as a base for military harassment of the Ottomans. The Turks as a result landed troops and guns at Dawḥa in 1872 and stationed themselves nearby; but the Āl Thānī nevertheless remained the paramount ṣayḥah; in 1876 Djasim was appointed habīm-māḥām of Kātar, and in 1879, after the death of his father, governor of Dawḥa. Relations were no longer good, however. By 1880 Djasim had attempted to resign his responsibilities and there were outbreaks of hostilities between the big tribal alliances.

In 1878, however, Djasim was able to evict the Naʿīm from Zubārā, which they had settled some years earlier, their repeated piracies having provided adequate pretext. This action had far-reaching repercussions, since the Naʿīm were the last tribal group in Kātar to accept the writ of Bahrāyn consistently, and this acceptance of their suzerainty gave substance to Bahrāyni claims to rule all or part of Kātar. Zubārā remained an uninhabited place long after this engagement. This event caught the imagination of the Kātarīs and they have much oral literature on this theme and on the theme of the hostilities between Kātar and Abū Ṣabī in the years immediately following. (See Ibn Yāsīn and the Turks were also worsening, and in early 1893 Djasim refused a summons from the visiting wālib of Bāṣra. The Arabs were provoked into an engagement to the north of Dawḥa. In this, however, the Turks were forced to withdraw in poor order, although their losses were much lighter than those of the Arabs. Peace was soon restored, and a later rising in 1898 seems to have been a small affair in comparison. The jurisdiction of the Turks still extended not much beyond Dawḥa.

In 1895 two ṣayḥahs of the Āl b. ʿAll, Sulṭān b. Salāmah and Nāṣir b. Mūbārak, made an attempt to seize Bahrāyn. These ṣayḥahs had removed from Bahrāyn and gathered a sizeable armada in the north of Kātar. They had the support of the local Ottoman muṣāf and also apparently of Shaykh Djasim, though the latter claimed that he was not concerned. Peace was made only after a large number of ships had been seized or destroyed by the British.

Shaykh Djasim died in 1913, shortly after the conclusion of the convention by which Turkey renounced any claims to Kātar. Then during 1916 Britain’s relations with Kātar were regulated by a treaty on the same lines as those with Bahrāyn and Trucial Oman. Some of its clauses, however, were not put into effect at that time, and no resident Political Agent was appointed, responsibility falling to the Political Agent in Bahrāyn.

The status of Zubārā would still seem to have been a matter of dispute. Shaykh ʿAbd Allāh (1913-49) occupied it in 1937, and though this was not accepted by Bahrāyn, the matter has been left largely in abeyance. In 1949 Saudi Arabia raised a claim to a strip of land in South Kātar, but although these claims were discussed in 1952 they were not pursued. Boundary disputes in Eastern Arabia have assumed a different complexion since the discovery of oil in the area. Oil was discovered in Kātar in 1940, the discovery well having an estimated production capacity of 5,000 barrels a day. War shortages, however, inhibited further development. By 1960 output had however reached nearly 17 m. tons and there has been considerable development, especially off-shore, since 1969.

Meanwhile the population of Kātar, although it has increased greatly, is still relatively small (about 150,000 in 1970) and concentrated largely around the capital Dawḥa. The British role in Kātar after the end of hostilities in 1945 was related increasingly to specialist and technical aspects of external and defence affairs and the country has been since September 1971 an independent Arab country.

he was acclaimed "Caliph" of the Azrakis when the latter, defeated by al-Muhallab, was passing through a very serious crisis. Katari, endowed with tremendous energy and indifferent to danger, was able to arouse the enthusiasm of his partisans, and after leading back the remnants of the army into the mountains of Kirmân, reorganised them; he then went down again into 'Irák, occupied Ahwâz and threatened Bayra. Kept for a long time in check by al-Muhallab, he nevertheless succeeded in maintaining his position on the left bank of the Dudiayl even after 'Irák, as a result of the defeat of Mšûb b. al-Zubayr at Maskin (72/691), had fallen into the hands of 'Abd al-Malik. Finally al-Ḥaddîdî b. Yusûf, appointed governor of 'Irák, decided to reappoint al-Muhallab to the command against the Azrakis, in which he had been replaced without success by other chiefs. Al-Muhallab soon drove the rebels across the Dudiayl and assumed the offensive, pursued them into the very centre of their power, Kirmân. Katari nevertheless was able to hold out for a long time in his lines (it is to this period that a silver coin with a legend in Pahlavi and Arabic of the year 75/694 struck in the name of Katari as Amir al-Mu'minin, refers [see ZDMG, xii, 1858, 52, no. 993]. The dissensions that broke out within the Azraki army were short-lived and Masûlî resulted in a split: Katari had to leave the town of Djiruf which was the Azraki headquarters and take refuge along with the Arabs in Tabaristan, while the Masûlî continued to hold Djiruf under the command of their chief, 'Abd Rabbî or 'Abd Rabbîhi (there are two individuals of this name among the Masûlî, distinguished by the epithets al-Kâbr and al-Ṣâghîr, and the sources give the rank of commander sometimes to one and sometimes to the other, or even distinguish two groups of the Masûlî which separated successively from al-Ḵâṭarî and were led by 'Abd Rabbîhi the Great and the Less respectively). This division proved fatal, for al-Muhallab had no difficulty in routing the Masûlî and killing their chief; al-Ḥaddîdî sent the Kâblî warrior Sufyân b. al-Abrad against Katari: or rather the latter (according to a tradition recorded by al-Yaḥṣûbî) as governor of Kâtârî, to reappoint Katarî as caliph probably took place at the end of 69 A.H. and his death in 78 or 79.

Katari b. al-Fudjâ'â represents in striking fashion the type of Kharîjî intransigent and also that of Arab sayyâd, half-cavalier and half-brigand. Like the other Azrakis, as a result of his fanatical zeal, he proved the model army between the sources which say that Katari was in command for 13 or even 20 years are of no value. According to Wellhausen (see Bibl.), the election of Katari as caliph probably took place at the end of 69 A.H. and his death in 78 or 79.

Katari b. al-Fudjâ'â is the ancient capital of Khârazm [q.v.], situated on the east bank of the main channel of the Amû Daryâ or Oxus a short distance from modern Khâvâr. According to Yâqût, Bulguhr, iv, 221, Kâth meant in Khârazmian a wall or rampart within the steppe, even if it enclosed no buildings, but there is nothing in what we know of Khârazmian to confirm this; it is conceivable that there is some connection with Sogdian kâth, kath, "town," though this is wholly conjectural. The site of Kâth was affected by changes in the channels of the river, and was accordingly moved at various times. Little is known of Kâth beyond the discovery of the type of Kharîjî intransigent and also that of Arab sayyâd, half-cavalier and half-brigand. Like the other Azrakis, as a result of his fanatical zeal, he proved the model army between the sources which say that Katari was in command for 13 or even 20 years are of no value. According to Wellhausen (see Bibl.), the election of Katari as caliph probably took place at the end of 69 A.H. and his death in 78 or 79.

Like several other illustrious Kharîjîs, he had a real talent as orator and poet. One of his alleged orations is recorded by Dîkhâ, Bayân, ii, 126-9; 'Ībâd, ii, 195-6, Fîhirî, 125, but R. Blachère (Hist. de la Lit. arabe, iii, 734) thinks that it might have been written in the 3rd/9th century. A few pieces in which he celebrates his wife Umm Hâkîm, who was also a convinced and brave Kharîjî, have been preserved. But amongst the most famous of his poems is the fragment given in the Hamasa of Abû Tammâm (i, 333, see also i, 44, 286), and often cited with numerous variants. His poems of a politico-religious character are remarkable for the elevated style and a heroic contempt for death and place their author in the first rank of Kharîjî poets.

KATH — KATIB

Malfdisi, 287-8, calls it Shahristan, i.e., the capital of the province, and describes its splendid bazaars and Friday mosque and its community of scholars, whilst commenting unfavourably on the filthiness of its streets, which were probably often waterlogged because of the numerous canals or arlfs. The city had been dominated by the ancient citadel, with its triple enceinte and palaces, of the Afrighids called Fil or Fir (the latter form in Biruni), but this fortress and the older city itself were gradually undermined by the river waters and in the early 4th/10th century had to be abandoned. The vestiges were, however, still visible in 384/994 to Biruni [q.v.], himself a native of the būrān or envoirs of Kath (al-Aṭṭār al-bāḥtīya, ed. Sachau, 35). A new town had therefore to be built further eastwards, away from the encroaching river. The Ḥudād al-Islām (completed 732/942), tr. 121, cf. 370-1, spells the city's name as Kāth and calls it "the gate of the Turkistān of the Ghūz and the emporium of the Turks, Turkistān, Transoxania and the Khazars". The author mentions amongst its products textiles and mailed or quilted coats, and names one of its exports as snow; its people, he says, are celebrated for their warlike qualities and their zeal as ghāzis or fighters for the faith against the pagans.

The end of Kath’s great days as the political centre of Kharaizm came in 385/995 when the Afrighids were overthrown by the Ma’mūnīd amirs of Gurgandj [q.v.], long the political and commercial rival of Kath; Kāth was now eclipsed and sunk into a subordinate position (on these events, see Kharaizm and Kharaizm-akins). Ibn Batṭūṭa passed through al-Kāth, as he calls it, in 732/1332-3, and describes it as a small place and as being the only settlement on the road from the city of Kharaizm (sc. Kunya-Urgenç, older Gurgandj) to Bukhārā (Ribka, iii, 20, tr. Gibr, iii, 549-50). During the early 8th/14th century, Kāth and Khīwa, one day’s journey from it, fell within the Čaghatayid Khanate; and in 773/1372 Kath was devastated by Timur during his warfare on the Kaṭi family’s materials and other sources written and oral in compiling the Tarikh al-fatḥāsh some time after 1073/1664.

The Tarikh al-fatḥāsh may have been begun by an earlier Kaṭī (also called Māhmūd) in 925/1519, but Levzioni has argued that the attempt to link the work with the reign of Askia al-Haḍīḍī Muhammad I arises from the 19th-century manipulation of the text by (or at the behest of) Ahmadu Lobbo [q.v.]. The historicity of the earlier Māhmūd Kaṭī and the precise history of the text itself remain problems as yet unsolved.

Bibliography: The Tarikh al-fatḥāsh was published with a French translation by O. Houdas and M. Delafosse, Paris 1913-4 (Publ. de l’Ecole des Langues Orientales Vivantes, V série, vol. X). Problems of the work’s authorship and textual history have been studied by J. Brun, Notes sur le Tarikh el-Fattash, in Anthropon, ix (1914), 590-6; J. O. Hunwick, Studies in the Tarikh al-Fattash: (1) Its authors and textual history in Research Bulletin (Centre of Arabic Documentation, Ibadan) v (1969), 57-55; N. Levzioni, A seventeenth-century chronicle by Ibn al-Mukhdhir; a critical study of the Tarikh al-fatḥāsh, in BSOAS, xxxiv (1971), 571-93; idem, Māhmūd Kāṭī fut-il l’auteur du Tarikh al-Fattash?, in Bull. IFAN, xxxvi/l (1971), 665-74. (J. O. Hunwick) KATI'A, pl. kaṭa'ī', a Muslim administrative term designating, on the one hand, those concessions made to private individuals on state lands in the first centuries of the High Caliphate (pāya'), and, on the other hand, the fixed sum of a tax or tribute, in contradistinction to taxation by proportional method or some variable means. The verb kaṭ'a' is also used to mean “to impose”, normally followed by kaṭ'a'um'. (C. Cahen) KATIB (a.) pl. kūhitb, secretary, a term which was used in the Arab-Islamic world for every person whose rôle or function consisted of writing or drafting official letters or administrative documents. In the Middle Ages this term denoted neither a scribe in the literary sense of the word nor a copyist, but it could be applied to private secretaries as well as to the employees of the administrative service. It can denote merely a "book-keeper" as well as the chief clerk or a Secretary of State, directly responsible to the sovereign or to his vizier. The use of kāṭib is therefore essentially allied to the institution of the diwān [q.v.], which mainly derives from the administrative traditions of the Sasanid and Byzantine empires.

i. In The Caliphate

There were probably already secretaries in Arabia at the time of the Prophet. A "merchant republic" could not do without its accountants, and the function of "documents" in the Kūrān confirms that writing was used. The recension of the Kūrānic text could not have been effected without the help of men capa-
ble of writing down the message conveyed by the Prophet. This explains why the lists of kātib which had been handed down to us generally begin by referring to the secretaries of the Prophet. Finally, the lists of fighting men with the right to an allowance, which were instituted from the reign of Caliph ʿUmar, could have been drawn up only by secretaries.

However, it was only after the first conquests and after the establishment of the capital at Damascus that administrative services, chancery and finances developed, as much in the capital itself as in the provinces controlled by the central authority. It is known that in the first years of the Umayyad caliphate they continued to use the language of the conquered country; Greek in Syria and Pahlavi in ʿIrāq and Iran. This implies that the secretaries working in these offices, whether converted to Islam or not, were autochthonous. Moreover, the rôle played by the Christian administrators in Damascus at the time of the first Umayyad caliphs is well known; Sādūn, the father of John of Damascus, was in all probability chief of the Treasury in the reign of ʿAbd al-Malik.

When the diwān were arabicised at the time of the caliph ʿAbd al-Malik, the secretaries were still recruited from the local population, among whom the Muslims were becoming more numerous. This Arabicising and Islamicising movement, far from pushing the indigenous peoples out of public service, confirmed their position. The development of bureaucracy in its different aspects compelled the Umayyad rulers and then the ʿAbbasids to use the manāḥil. They most certainly had an excellent knowledge of Arabic, but had picked up from their forefathers a whole administrative tradition connected in particular with calculating the taxes due from the different types of land, irrigated or unirrigated. The land tax (see ʾkharāj) instituted by Muslim law seems really to have been very closely inspired by the previous financial system and the administrative practices adapted by the nascent Muslim state were also inherited from the states which had supplanted it.

Only when a scribe made a career on account of other qualities and capabilities did his functions begin to gain in importance which was independent of his person. Such a kātib was, e.g. Ziyād b. Abīhī. His high intelligence and great talent for organisation had drawn people's attention to him as scribe and registrar (Tabārī, I, 2655). When later he made himself responsible for the security and the government of ʿIrāq, he introduced there, with the help of a group of kātib whom he himself taught and controlled (Dihāshīyār, Wuzaraʾ Cairo 1357/1938, 22), a system of administration which was considered exemplary. As in Sasanid times, the rank and position of the secretaries begin to be marked by certain privileges, and discernible in a certain standard of dress, residence and food and also in social intercourse. This improved situation, however, was mostly acquired through the relationship of dependency. The kātib had to submit himself to his master and comply with his moods. A beautiful hand, a faultless orthography and a correct text after dictation were postulated. In accuracy, offences against the language, errors in writing or understanding might result in loss of position (J. Latz, Das Buch der Weisheit und Staatssekretäre von Ibn ʿAbdās al-Ghāṣīrī, Anfänge und Umwandlungen, Bonn 1958, 38–46). The scribe as such played a subordinate rôle.

In reality, little is known of the secretaries who were the direct ṣaʿīd of the Umayyad caliphs. During the Umayyad period the caliphs, who had no viziers in their employ, administered the central services directly by means of secretaries of state. Certain of these had the privilege of presenting the letters to the sovereign and of thus playing a political rôle. Of these the one about whom most is recorded is the mawdūd Sālim, the secretary of the caliph Ḥishām [q.v.], to whom is attributed a treatise about the muqaddima, which is probably the oldest one of its kind written in Arabic and proves the strength of the Iranian political traditions. But the personal secretary of the last caliph, Marwān II [q.v.], called ʿAbd al-Hamīd [q.v.], is equally well-known for his literary activity and is thought to have been one of the founders of Arabic prose.

Out of this situation two types of clerks and secretaries began to develop, according to function, talent and character: on the one hand there was the secretary who, in his quality of expert official and linguist, gave the written documents the form as required by the orders received; on the other hand there was the secretary who, on top of that, exerted on his own account an influence on the contents, being his master's adviser and right hand. While the latter was preparing the way for the functions of the later vizier, the former became the main representative of literary culture (adīb). Already during the period of the first ʿAbbāsids this public secretary was considered the adīb par excellence. The undeniable subtle sense of linguistic expression and its nuances, already natural to the Arabs, had found a vast field of activity in the governmental and administrative correspondence, continuously increasing with the growth of the chanceller's activities within a complex system of government. Official documents were increasingly often judged by the elegance of the wording and the allusions and references hidden behind this. Peculiar distinction was thus imparted to the writings because they presented instructions, enactments, orders or notices in a form which aroused surprise and admiration in the receiver. It is evident that specialists in this branch were called upon, and also that the kātīb needed the qualities not only of a diplomatic stylist but also of an encyclopaedist in order to cope with these and similar requirements. It was essential for him to possess what was later formulated and commented upon by the well-known critic, vizier and head of a chancellery Diyarʾ al-Dīn Ibn al-ʿAḥīr (d. 657/1259) [q.v.] in eight concise phrases at the beginning of his al-Maḥāf al-sāʾir (2nd fasl): 1. a thorough knowledge of the ʿarabiyya, its grammar and 2. its vocabulary; 3. a familiarity with the proverbs, the accounts of the Ayyād and similar stories; 4. wide reading in all branches of prose and poetry; 5. sound knowledge of the theory of state and administration; 6. absolute familiarity with the Kurʾān and 7. the traditions going back to the Prophet; 8. command of prosody and poetry (see G. E. von Grunebaum, Der Islam im Mittelalter, Zürich-Stuttgart 1963, 123 ff.).

In the ʿAbbāsīd era, when the seat of central administration had been moved to ʿIrāq, the secretaries of Iranian origin undeniably played an ever more important rôle. The typical example of these Iranian mawdūd who, according to certain accounts, thronged the courts of the first ʿAbbāsids caliphs, was the famous Ibn al-Muqaffāʾ [q.v.]. He did not have a position in the central administration, but at the caliph's wish drew up a memorandum in which he showed his
perfect knowledge of the problems of government which prevailed at that time of change. He also composed a treatise for the courtiers on the art of pleasing the sovereign, a treatise directly inspired by Iranian or Indo-Iranian literature and one which highlighted the personal nature of relations existing at that time between the secretaries and the sovereign.

If in the 'Abbasid era (as indeed already in the Umayyad one) the kutāb were for the most part non-Arab, they did not form a closed corps. The kātib needed a solid training as much in the art of letterwriting as in the art of finance. At an early stage, families of kutāb began to arise, although it was not necessary to be the son of a kātib to practise this profession. Thanks to their own intelligence and aptitude, sons of merchants and land-owners appeared as directors of important services in central administration and even as viziers. Yet the kutāb in the 3rd/9th and 4th/10th centuries had a class-consciousness which could be seen in their costume (the gown called a durrā'sa) and also in a certain intellectual orientation. Al-Dhābiṣ, in particular, in a famous risdla stigmatizes the arrogance of secretaries and their sympathies towards Iranian traditions; he even accuses them of lukewarmness towards Islam. In this discussion on the secretaries, in spite of the obscurity surrounding the question, were certainly supporters of the ḥārāṣiyya movement [q.v.]. Brought up on Iranian literature and admirers of the Mu'tazili thinkers, they were apt to consider that their culture did not need the Islamic "leaven" in order to develop, and, ought, on the contrary to be inspired by ancient (notably Persian) models.

Despite this tendency to restrict the influence of the religious message of Islam, they were none the less faithful servants of the caliphate. It seems that no real accusations of treason could be brought against the famous Barmakids [see BĀRAMIKA]; they were guilty only of having too great authority and of having practised a policy of conciliation with regard to certain opposition factions, which soon the caliph thought would be dangerous. But from the end of the 3rd/9th century onwards, the kutāb had financial responsibilities which grew as treasury difficulties were increasing for the caliphs. At the same time they often belonged more or less secretly to the Shi'i movement which used them to control the caliphate. Their loyalty was not as great as it was before, state secretaries of Christian religion or origin being excepted.

Nevertheless they played a large part at the end of the 3rd/9th century in working out the formula of government by the caliph which was then put into practice, but not without many risks, and which could never be finally worked out in detail. If the kutāb of Shi'i views were trying to diminish the might of the caliph with the intention of seizing power for themselves and disposing of the resources of the treasury, the others were striving to strengthen the authority of the caliph, while at the same time subjecting it to the control of the chiefs of the departments.

In the era of the great amirs, the kutāb were eclipsed by the military chiefs who virtually laid hands on the government. They were no less indispensable to the running of business and to the administration of finance, which demanded technical knowledge, than to the drawing up of official documents such as letters. In the epistolary field, where in that time there was the most excessive affectation of mannerism, the secretaries drew up documents which were useful propaganda instruments. There are thus preserved different collections of official correspondence which appeared as examples of baldāja and are often precious documents for historians. The most famous is one left by the Sabian secretary Ibrāhim al-Šābī [q.v.], and see also 12666. But there were also among the secretaries genuine specialists in financial affairs, whose merits were often compared with those of the "drafters of documents" [see in particular, al-Tawhīdī, Kātib al-Imām, i. 96-7].

The rôle of secretaries in Baghdad in the Saljuq period is not very clear. What at least is known is that the central services were, for the early part, under the control of the sultans, just in the same way as it was before, during the Buwayhid period. But the caliph had in his service his own team, more or less important, of secretaries, as in the Buwayhid period. These secretaries were always predominantly Iranian in origin, yet in the period of the Saljuqs the function of the kutāb tended to merge with that of the 'alamād insofar as all officials of the state were formed in the same establishments, the maṭrāṣas. The taste of the former kutāb for Iranian literature and the sympathies of the secretaries in the Buwayhid period for Mu'tazili thought faded away and from the 5th/11th century onwards, the secretaries, confronted with foreign elements of Turkish origin, belonged to the same social sphere as the men of religion but had slightly different preoccupations. During this period, the kādīs came to fulfil functions previously reserved for the kutāb, to become involved in governmental affairs and to draw up chancery documents. At the time of the Mamluks, this tendency to unify the two spheres became much more accentuated; secretaries and men of religion constituted what were called 'the men wearing turbans'.

There is an abundance of literature referring to the secretaries, and this is of three distinctive types: the didactic treatises on the training required for secretaries; the collections of anecdotes relating to the secretaries; and the polemical treatises. It is clear that in certain works, these three types could exist together.

The didactic treatises are the most important. The oldest is probably the Risāla išā 'l-kutāb of 'Abd al-Hamid [q.v.]. Later came al-Risāla al-'aḍm, attributed to Ibrāhim b. Muḥammad al-Šaybānī and written in the middle of the 3rd/9th century (published by. M. Kurd 'All, Rasā'îl al-balāgha, the Kitāb al-Kutāb wa-ṣīfat al-dawād wa-l-balām, composed in the same period by 'Abd Allāh al-Baghdādī [see D. Sourdel, Le "Livre des Secrétaires de 'Abdalāh al-Baghdādī", in BEO, xiv (1952-4), 128-92] and the Adab al-kātib of Ibn Kutayba [q.v.], which, although it contains solely philological advice, has a very instructive introduction (G. Lecomte, L'Introduction du "Kitāb adab al-kātib" d'Ibn Qutayba, in Mélanges Louis Masugnon, iii, Damascus 1957, 45-64). As for the Kitāb al-kharāj wa-sīmat al-kitāb of Kūdāmā b. Dja'far [q.v.], this is a good work which deals with the various technical questions, a knowledge of which was essential for the secretaries. The different treatises on the land-tax and the first geographical works were also intended for secretaries. The Adab al-kutāb of al-Šīr (d. 335/946), edited in Cairo in 1341/1923, specially teaches calligraphy, and the formulae of protocol; the Kitāb al-kutāb of Ibn Durüstāwī, edited in 1327, deals only with orthography and calligraphy whilst the Risāla fi ʿilm al-kutāb of Abū
Hayyan al-Tawla'i [q.v.] is equally concerned with calligraphy. Among the collections of anecdotes, besides the *Kiābd al-Wasāra* wa'l-*kultūb* of al-Dījahbīyār [q.v.], edited in Cairo in 1357/1358, the *Īdāb al-*kultūb* of Ibn al-Abbār (d. 688/1289), edited in Damascus in 1961, deals with circumstances in which the secretaries of different periods were out of favour. One polemic treatise against secretaries was written by al-Dījahīs (see C. Pellat, *Une charge contre les secrétaires d'État attribuée à Gāhis*, in *Hespéris* (1956), 29-50.

Finally, in a later period encyclopaedic works appeared, intended in the first place for chancery secretaries. The model is the famous *Ṣubh al-'aṣrā fi ṣinā'at al-*insāb* of al-Kalājahṣandī (d. 821/1418).

**ii. In Persia.**

From the fall of the Il-Khāns to the end of the Safawids.

A characteristic change of the kātīb's position, already noticeable under the Il-Khāns, took place in the successor states of Mongol Persia. The Mongolian and Turkish terms remained to some extent the same as before, although not necessarily with the same meaning. New terms were of course also introduced, partly for institutions that continued as such or were slightly modified. Fluctuating usage, in which obsolete and current expressions were used simultaneously, makes understanding of the technical terminology difficult. It goes without saying that here only the most important outlines can be sketched of a development which has not yet been studied sufficiently.

The great number of secretaries in the Dījālārid administration should be related to two different facts: the tripartite division of the administration into a military, a civilian and a religious section on the one hand, and the specific ethnic composition of the army, most of the soldiers being Turks or Mongols, on the other. Following the Il-Khānid tradition, there thus existed, especially in the military administration, a class of secretaries especially knowledgeable in Turkish or Mongolian. It was their task to translate into these two languages original documents probably written in Persian, and in Īrāq also in Arabic. Though counted among the kuttāb, they were called by the Turkish term bīkīfī, probably to distinguish them from the Persian-speaking secretaries. The most important secretaries in the military administration was called bīkīfī-yi aḥkām-i muğulū or kātīb-i muğulūn-nīwās. But the continuance of Il-Khānid usage brought about the fact that even the secretary of the governmental financial administration, who served under the *mustauffi al-mamālīk* or state treasurer, was counted among the bīkīfīyān, with the title of sūlāh bīkīfī. However, the local financial secretaries who served under him did not belong to the bīkīfīyān. It is still dubious whether the last-mentioned were in fact of Turkish or Mongolian origin, or whether they were local inhabitants who has mastered Turkish or Mongolian. The first place among the Persian-speaking kuttāb was held by the *muṣnūg al-mamālīk*, who was in charge of the dār al-inṣāb (the "State Chancellery"), a subsection of the Great Dīwān (dīwān-i ʿālā, dīwān-i bursur) directed by the grand vizier. In the different sections of the *muṣnūg al-mamālīk*'s chancellery, two classes of kuttāb were employed: the *muṣnūg* were the main task for them was to draft documents, and the so-called muḥārīrīn charged with preparing fair copies; among the latter very skilled calligraphers were found. The archives formed a separate department of the dār al-inṣāb.

The nomination of secretaries was probably reserved to the grand vizier. The *kuttāb* in general, and the *muṣnūg al-mamālīk* specifically, were expected to be trustworthy, to be masters of protocol and to possess both stylistic and calligraphic qualities. In the religious administration, mainly concerned with the maintenance of the religious law and the interests of pious foundations, a number of kuttāb were also to be found, e.g. the kātīb-i dār al-ḥādī (secretary of the supreme court) and the muʿarrīkī-bī ṭuḥādī wa-ḥalālāt, an archivist who kept a permanent register of legal evidences and contracts of sale.

We may draw conclusions about the organization of the chancelleries in Timūr's time from the situation under his successors. In their time, specific linguistic expressions continued to indicate the difference between the various groups of kuttāb. Under Ḥusayn Bāyqarā, the secretaries of the so-called "Turkish dīwān" had the title of bākhšī or nissāsānān-i ṭurk. This dīwān dealt with affairs concerning the army and the Turkish subjects. Distinct from them were the vaṣīrān or nissāsānān-i tāḏīk, the Persian speaking kuttāb, who were the secretaries of the dīwān-i māl, the "Persian dīwān", responsible for finances and the affairs of the non-Turkish population. On no account could a kātīb of the Turkish dīwān be called vaṣīr. It seems that relations had been similar under the Turcoman dynasties, as may be deduced from a remark of Ḥasan Rūmī, a bīšābūkīhīhī chronicle, who says that one of his ancestors had served as bākhšī under the Ak-Koyunlu.

Under the Safawids also, the head of the State Chancellery was called *muṣnūg al-mamālīk* (under the Timūrids, as well as having this title, he is said to have also been called sāḥib-dīwān-i inṣāb). The Safawid administration was characterized by a duality in the civil service—the State Chancellery and the Treasury—, which had already existed before. Each single department of the Safavid treasury (*daftar-i khanā*), which was headed by the *mustauffi al-mamālīk*, consisted of the financial section proper and a chancellery. The *laḵšāniyāt*, head of one of the most important subdivisions of the daftar-khanā, corresponded to the Il-Khānid and Dījalārid *ūlāk bīkīfī-yi mamālīk*. He was the paymaster of the troops of the provincial governors and also of the court and provincial officials, and had an imposing chancellery at his disposal. On the other hand, the dār al-inṣāb, the State Chancellery of the *muṣnūg al-mamālīk*, was in charge of the state correspondence such as diplomatic letters and all kinds of charters. When under Abbās I a special royal administration (the *sarkār-i kāha-yi shāhī*) was set up at the side of the already existing governmental administration, a special chancellery had of course to be created.
for this purpose. A number of duties were transferred from the munshi al-mamlik to the head of the new chancellery, the madilis-niwis. In the course of the 11th/12th century, the madilis-niwis surpassed the munshi al-mamlik both in rank and sphere of competence. Moreover, the madilis-niwis enjoyed to a much greater extent the confidence of the ruler. Only in so far as the number of the subordinate khattāb was concerned was the munshi al-mamlik superior to the madilis-niwis.

A handbook of administration, the Tadhkirat al-mulūk, shows that in the early 12th/18th century, 28 khattāb were subordinate to the munshi al-mamlik who prepared drafts, and 27 munshi-yi dlwdn were subordinate to the head of the new chancellery. The latter was assisted by three assistants. In this chancellery a further six khattāb were also employed, among whom was a registrar and a nāma-niwis, who was most probably responsible for the fair copies of the diplomatic letters (nāma or makhūb). Thus ten khattāb were subordinate to the madilis-niwis. The daftar-khdna too was influenced by the division of the administration into a governmental and a royal demesnial sector. Although the division within the daftar-khdna was not complete, the interests of state and crown were assigned to different sub-

...
of 'umdat al-mulk also suggests that it was given to him on his appointment to the office of the chief 'abdar. (Insha'-i Mahrū, 192-3). However, the title of malik al-umara? attached by Mahrū to the name of this dabir need not be taken seriously, for he does so in the case of several other high officials.

It is remarkable that when Iltutmish had to issue an important proclamation nominating his daughter Radilya as his successor, he assigned the task to his mudkhir (Tabāqāt-i Nāṣirī, ed. Nasṣūn Lī, 185). This means that the Correspondence Department was for some time called the dīwān-i ishrāf (as Ḥabibullāh, Foundation of Muslim Rule in India, Lahore 1945, 223, suggests), or indicates the continuation of the tradition of the Ghāznawīs under whom the mudkhir (as stated by Bosworth, 94-6) later varied after a variety of matters connected with the king's affairs.

The dabir-i khas had many dabirs, calligraphers and clerks under him. Some who performed specific duties had corresponding designations, e.g. the khāṣṣa-nisīs and the shab-nisīs (Insha'-i Mahrū, 160, 164, 166). The khāṣṣa-nisīs was the secretary attached to the court or on court duty (cf. the muñshi-badrat of Uthbī, in Qureshi, op. cit., 86n). The shab-nisīs was evidently the secretarial officer on night duty in the palace. The dāwāddār was the keeper of royal inkpot and ink-stump (Tabāqāt. Nāṣirī, 242). The relationship of the dāwāddār with the dīwān-i inshā? is not clear. The dabir-i sarā' has been described by Qureshi (op. cit., 65) as the registrar of the palace. The dabir-i sarā' invites comparison with Ibn Baṭṭútā's kutūb al-bāb in his account of the sultan of Delhi's court (Rihla, iii, 219), rendered by Gibb, Travels, iii, 659, as "the scribes of the door", and by Māshhūr, 153, as "the gate secretaries".

It seems that the chief dabir and his staff were highly paid (as they had been in the Ghāznawī days). The following statement in the Masālik al-ḥāḍīr fī mamālīk al-amṣār of Shāh Bihār, the secretary of the sultan of Delhi's court (Rihla, iii, 219), rendered by Gibb, Travels, iii, 659, as "the scribes of the door", and by Māshhūr, 153, as "the gate secretaries", is true:

The princes had their own dabirs (Āmr Khusraw, Famīliyād al-Furāt, 127, cited in K. A. Nizami, Some aspects of religion and politics in India during the 13th century, London 1961, 214). The same practice obtained during the Mughal period, see below.

During the period of the sultanate of Delhi, the dīwān-i inshā? was counted as one of the four principal ministries of the central government (Barani, Tārīkh-i Firād-Shāhī, 153). The duties of the chief secretary and other officers of this ministry were the same as under the Ghāznawīs. They composed fath-namas, royal letters addressed to other kings, important letters or proclamations issued in the king's name, and the like. Important documents received at the court, such as a letter from a foreign dignitary or an 'ard-dāght from a minister or a high noble, were read out to the sultān by the dabir-i khas or one of the dabirs (Affl, 223-4). The practice common among the Mughal emperors of having important documents drawn up by any high minister (not by the chief secretary alone) was unknown in the pre-Mughal period. Thus 'Ayyu al-Mulk Mūltañī, who was a great muñshi but never an office-holder in the dīwān-i inshā?, drafted numerous state documents during the reigns of Muhammad b. Tughluq and Fīrūz Shāh; particular mention may be made of the manifesto issued by Fīrūz Shāh to the religious classes, the officials and nobles, and the common people of Lakhnau (Bengal) when launching an invasion of the territory (Insha'-i Mahrū, passim; for the manifesto, see pp. 15-17). Similarly Āmr Khusraw, one of the greatest masters of style in Persian inshā?, appears never to have occupied a position in the dīwān-i inshā, but one may assume that his services were utilised in drafting important documents by contemporary sultans from Kaykūbād (accessed 868/1270) to Ghīyāth al-Dīn Tughluq Shāh (died 725/1325). The fath-nama written by Āmr Khusraw on the occasion of Balban's victory over a rebellious governor of Lakhnau is given in Ḥāfiz-i Khusrawī (v, 4-14); Āmr Khusraw claims this as his first fath-nama, and since he was not till then in the service of the court of Delhi, it is not clear if he was commissioned to draft the document.

The Indian Mughals followed a more active foreign policy than did the sultans of Delhi, and sent out and received many more embassies than their predecessors. It is therefore all the more surprising that for a long time they did not have a proper chancellery and a secretary of this free rank. We do not come across frequent mentions of munshīs (e.g., Ḥān-i Akbarī, 1, 4; Tūzuk-i Diwāngīrī, Aligarh 1862-64, 185; 'Abd al-Hamīd Lāhāwī, Pādhān-Nāma, i, 148, s.v. dabir), but for a long time there is no mention of a correspondence department. (The position has been recognized both by I. H. Qureshi, Administration of the Mughal Empire, Karachi 1966, 82, and by Momin Ibrahim, The Mughal contribution to Persian epistemology, Edinburgh University Ph.D. thesis, 1956 (unpublished), chapter 1). From the time of Shāh Ẓahār wanders "frequent mention is made of the dār al-inshā?" (Momin Ibrahim). Ibrahim also opines that the bureau of correspondence was attached to the office of the baḥshāh which "handled the administrative side of the secretariat only".

This lack of concern for a correspondence department becomes to some extent understandable when we consider the fact that it was common practice with the Mughal emperors to assign the drafting of important documents to ministers and dignitaries other than the official muñshīs. Thus Akbar's royal letters were drafted mostly by Abu 'l-Fadl, who did not occupy an official position as a secretary, and occasionally by other distinguished personages attached to the court (e.g. Akbar's letter to Shāh 'Abhās I, drafted by Āsāf Kháñ Mirzā Dījā'far, see Bayāt 1905, Oriental Public Library, Bankipore, fol. 133b; for other sources and a full discussion see Riazul Islam, Calendar of Documents on Indo-Persian Relations (unpublished), Document no. A.41). In one instance, two drafts were prepared for Akbar's reply to 'Abd Allāh Kháñ Uzbek, one by Abu 'l-Fadl and the other by Hind Hāzn 'l-Fath Gīlānī (see Bhagland, Dārs-i Inshā?, B.M. Or. 1702, fols. 201a-202a; for a full discussion see Calendar of Documents on Indo-Persian Relations, Document no. TX.330). The practice of having important letters drafted by high officials other than the muñshī continued under Shāh Ẓahār, even though by this time a dār al-inshā? had come into being. Shāh Ẓahār's letters to foreign potentates were drafted mostly by Sa'd Allāh Kháñ, chief dīwān (i.e. the wazir) of the empire (Māskhābd-dīs Sa'd Allāh Kháñ, ed. Nāzir Husayn Zaydī, Lahore 1968, passim; Riazul Islam, Calendar of Documents on Indo-Persian
Relations, section on Shah Jahan, passim). Indeed there is a petition from Shaykh Abu l-Fath Kabil Khan, munshi of Awarzgib 'Alamgir, complaining that this work was being appropriated by the imperial diwan (Addb-i 'Alamgiri, ed. Abd al-Ghafur Cawdhr, Lahore 1971, 834).

The head of the dár al-insād was known variously as mir munshi, dārāghā-i dár al-insād and munshi al-mamlākī. As the same officer, Muhammad Sharif Kābil Khan, is mentioned in the Ma'āthir-i 'Alamgiri, (Bib. Ind. 1872) as dārāghā-i dár al-insād on p. 140 and mir munshi on p. 190, it can be assumed that the two designations stood for the same post. It is remarkable that Shaykh Abu l-Fath Kābil Khan, though generally called munshi al-mamlākī (see the MSS of his Addb-i 'Alamgiri) is nowhere alluded to as such in the Ma'āthir-i 'Alamgiri or the Alamgiri-Nāma; nor indeed is his brother Muhammad Sharif Kābil mentioned as munshi al-mamlākī in the Ma'āthir-i 'Alamgiri.

Some idea of the status and emoluments of a Mughal mir munshi may be had from the fact that the annual stipend given to Abu l-Fath Kābil Khan on retirement was Rs. 5,000 (Ma'āthir-i 'Alamgiri, 26), and that his brother Muhammad Sharif Kābil Khan, who became dārāghā-i dár al-insād in 1685/1675, had the rank of 1000/70 (i.e., 1000 personal rank, 30 troops) when he was dismissed from the office in 1685/1670 (Ma'āthir-i 'Alamgiri, 190). Thus neither the rank nor the salary of the post seems to have been high. But the post, with its privilege of tabarrub ("proximity") to the person of the emperor, gave an immense influence to the incumbent, so that Muhammad Sharif was able to amass twelve lakhs of rupees in cash alone in five years—a circumstance which eventually brought about his fall (ibid.).

As pointed out earlier the Mughal princes used to have their own official munshis. Indeed, Abu l-Fath Kābil Khan made his career as the wālsūkhā munshī (a prince's secretary) of Prince Awrangzīb; he served the Emperor Awarzgib 'Alamgir for only a very short period (Ma'āthir-i 'Alamgiri, 140, 190, for some other instances, see ibid.; Khāt Khan, Muntakhab al-Lubāb, I, 259). The Hindus produces many munshis and Hindu munshis wrote numerous insād books, the well-known being the Inshā-dī Hīkarān of Dīhāngīr's reign. From the period of the Afghan Sūrs onwards they attained increasing proficiency in Persian epistolography, and soon came to occupy a strong position in secretarial and clerical cadres. The most celebrated of the Hindu munshis were Candr Bhan Brahman whom Shāh Dīhāngīr gave the title of Rāy-i Rāyān, and Ānand Rām "Mukhlīs", mir munshī of the Emperor Muhammad Shāh (Jadunāth Sarker, Mughal Administration, Calcutta 1935, 227-9; Momin Ibrāhīm, op. cit.; Riazūl Islām, Calendar of Documents on Indo-Persian Relations, Intro., 56).

(Riazūl Islām)

KĀTĪB CELEBI, appellation of Mūṣṭafā b. ʿAbd Allāh (1017-67/1609-57), known also (after his post in the bureaucracy) as wālsūkhā shāhī (Khalfā, historian, bibliographer and geographer, the most conspicuous and productive scholar, particularly in the non-religious sciences, of the 11th/12th century Ottoman Empire. He was born on Dhu l-Ka'da 1027/February 1609 in Istanbul, his father being a soldier. He began his education at the age of five or six, and at 14 was apprenticed to the Amadul Mūhāsēbe's office, where he learned accountancy and siyāsāt [i.e. in 1633]. In 1634 he went with the army in the campaign against Abaża Pasha (Fedleke, ii, 55), and two years later was present on the Baghdad campaign (Fedleke, ii, 83), his father dying at Mawsīl on the way back. In that year he was appointed to a post in the Sultan's Mughal office. Returning to Istanbul in 1638/1628-9, he attended
the lectures of Kâdi-zâde, which greatly impressed him (Fedhelike, ii, 182). In 1038-40/1629-30 he was present on Khusraw Pasha’s campaign against Baghdad; and in 1043/1633-4, when the army wintered at Aleppo, he took the opportunity to make the Pilgrimage. In 1044-5/1635 he took part in the campaign against Erivan. After these ten years of service with the army, a legacy enabled him to settle in Istanbul and devote himself to study, attending the lectures of various scholars, principally âırâdî Muştafa Ef. (Fedhelike, ii, 392). Having failed to receive promotion, he resigned from his post in the Finance Department and spent three years in retirement, until in 1058/1648 his writing of the Takwîm al-tawdrikh (no. 4 below) and the intervention of his patron Ābd al-Rahmân Efendi, then Shaykh al-İslâm, procured him the rank of şâhidî muallî. Many of his works were composed in the ensuing years, among them translations made from Latin texts with the help of a French convert, Shaykh Mehmed Iğlaş. He died suddenly, on 27 Dhu ‘l-Hijja 1067/6 October 1657, and was buried by the Zeyrek Djaâmi‘î (photograph of his gravestone, since renewed, in Kesef-el-zunun (no. 12 below), i, introd., between cols. 18 and 19). His contemporaries described him as good-tempered, taciturn and philosophic, leading an unambitious life with no pretensions; he would mix both with ascetics and pleasure-lovers, and he neither smoked nor drank. Naturally grave, he disliked satire and there is little humour in his works. One of his hobbies was growing flowers. He is always measured in his criticisms and his relation of events; and his prose style is simple, unencumbered by grandiloquent similes and clichés.

1. Fadhlakat al-akhdar fi ilm al-tarîkh wa’l-âhkâm, or Fadhlakat al-tawdrikh, a universal history in Arabic, to 1049/1639. The muhaddîma is in four fâsiqî, of which the second deals with the significance, the scope and the uses of history; the third, which was to list the 1300 sources, is lacking in the unique MS.; the fourth deals with the rules which the historian must follow. Unique MS. (author’s draft); Bayezit 10318 (dated 1052/1642). Summary of scope in Incelemeler (photograph of his gravestone, since renewed, in Kesef-el-zunun (no. 12 below), i, introd., between cols. 18 and 19). His contemporaries described him as good-tempered, taciturn and philosophic, leading an unambitious life with no pretensions; he would mix both with ascetics and pleasure-lovers, and he neither smoked nor drank. Naturally grave, he disliked satire and there is little humour in his works. One of his hobbies was growing flowers. He is always measured in his criticisms and his relation of events; and his prose style is simple, unencumbered by grandiloquent similes and clichés.

2. Fadhelike, ii, 182. In 1038-40/1629-30 he was present on Khusraw Pasha’s campaign against Baghdad; and in 1043/1633-4, when the army wintered at Aleppo, he took the opportunity to make the Pilgrimage. In 1044-5/1635 he took part in the campaign against Erivan. Bahram u Gul-andam. Towards the end of his life he undertook to compose a khamsa in imitation of Nizami of Gandja, but did not complete it.

Notwithstanding Nawá’s lavish praise of Káštibí, and the lengthy accounts of him given by Dawlàtsháh and Browne, he is a mediocre poet. DiamÍ rightly describes (in his Baháristád) his verses as šútur gurba, “camels and cats”, i.e., uneven and unequal in quality. His poetry is characterized by excessive use of rhetorical artifice, imitation (mainly of Amír Khusráw and Hasan of Díhil), commonplace and bizarre ideas, and clumsy and immature diction. Perhaps because of these failings, very few of his verses have been published.

**Káštibí (A.) “shoulder”; *ším al-káštib or al-akáštib* denotes scapulomancy or omoplastoscopy, i.e. divination by the use of the shoulder-bones. This art forms a part of the practices of physiognomy. It is universal in scope, inasmuch as it provides for the foretelling of what will happen in the different regions of the earth. The points of which the bones or parts of the bones are girded are pointed according to the signs revealed by it. From this point of view the *ším al-akáštib* is to be linked with the practice of cleromancy of the *dífr* (q.v.) and the *maláthím* (cf. T. Fahd, *La divination arabe*, 219 f.).

How was this skill practised? Three methods are known to us. The first is to lay the *scapula* on the ground before cooking it, to examine it and to deduce from it indications of future events (war, fertility, drought) according to the shades of colour on it. It may be yellowish, leaden, red or greenish and the meanings of these colours are applied to the regions of the sun. The special lines and shapes which then appear are examined by the physiognomists and they deduce from them signs of universal events, but rarely of individual cases (cf. Y. Mourad, *La physiognomie arabe*, Ar. text, 12). “Neither the age nor the sex nor the colour of the sheep are important... There is no fixed moment for the ceremony of divination. It is performed at any time and in any place.” (Letter from P. Anastase al-Karmali to Alfred Boisnier, *Manique babylonienne et manique hittite*, Paris 1935, 51). No writings of *‘Alí b. Abi Tálib*, thought to have been the originator of scapulomancy, have yet come to light.

Finally, according to P. Anastase, “To-day there is no family or tribe which knows this science, but it is studied in specialist books. There is”, he writes, “a special terminology which is not found in Arabic dictionaries, even the most extensive” (ibid.).

**Al-Káštibí**, a large oasis in Saudi Arabia on the southern shore of the Persian Gulf.

1. Geography and demography. The oasis fronts on Táfrût Búy, named after the island facing its centre. Although Al-Katif was for centuries a seaport of considerable importance, it is now, due to the shallowness of its waters, used only by small craft. Most of the maritime traffic had been diverted to the oil-shipping port of Ra’s Tannura (Ras Tanura) on the narrow peninsula which forms the north side of the bay and to the commercial port of al-Dammám (q.v.) at the southern extremity of the bay.

The oasis stretches about 22 km. from north to south along the coast of the bay. In the far north the town of Sa’wá and its girdle of date palms are cut off from the bay by Śábkhát Díwán (śábkhá = “salt flat”), from the main body of the oasis by Śábkhát Sa’wá and the sands of al-Djâbdjâb, and from the inland village of Um’m al-Sáhik by the sands of al-Dawâghér. In the centre of the oasis is the town of Al-Katif proper, popularly called Al-Káštibí after the old Ottoman (not Portuguese) fort razed in recent times. The more important villages in its vicinity are al-Kudayh and al-Diishsh, and from the south with the flourishing town of Sayhát on the coast.

The sands mentioned above and other sands hem in the oasis on its inner side from north to south and in many places are encroaching on the palm groves. A remarkable string of *‘ayns or springs lies along the north-south axis just west of the eastern edge of the sands. Many other *‘ayns* are scattered throughout the groves between the sands and the bay.

The island of Táfrût fronts the five villages, the largest of which are Táfrût near the centre and Dárín at the southern tip of the island. Dárín, mentioned in a verse by al-’Ashár, was the name commonly given to Al-Katif (ms. Nurussamaniye 2412, 42 fol.; Şéhid ‘Ali Paşa, 1812, 51 fol.; Bursa, Hasan Celebi, 282 fol. 84*89*; cf. M. Plessner, *Deux manuscrits d’Istanbul attribués à Al-Katif*, in *Islamica*, iv (1931), 557). The introduction states that Al-Katif translated this treatise from the Greek; it was attributed to Hermes the Sage.

Apart from this risâla and the anonymous one from Cairo, no other writings on scapulomancy have appeared, despite the affirmation of P. Anastase that “there is an entire literature on the science of scapulae which would require deep study” (apud Boissier, op. cit., 53). He himself had only a copy of the risâla attributed to Al-Katif (ibid., 51). No writings of *‘Alí b. Abi Tálib*, thought to have been the originator of scapulomancy, have yet come to light.

There is no fixed moment for the ceremony of divination by scapulomancy. It is performed at any time and in any place.” (Letter from P. Anastase al-Karmali to Alfred Boisnier, *Manique babylonienne et manique hittite*, Paris 1935, 51). No writings of *‘Alí b. Abi Tálib*, thought to have been the originator of scapulomancy, have yet come to light.

Finally, according to P. Anastase, “To-day there is no family or tribe which knows this science, but it is studied in specialist books. There is”, he writes, “a special terminology which is not found in Arabic dictionaries, even the most extensive” (ibid.).

to the island in ancient times. A causeway now joins the island to the mainland.

The great majority of the people of al-Katif consists of Di'a'ari Shīʿa. The suggestion, sometimes made, that traces of Karmatian doctrines survive there seems to be completely baseless. It is to be hoped that ampler details of the history of this ancient Di'a'ari community and the related Di'a'ari community of al-Bahrayn [q.v.] can some day be uncovered.

2. History. The finding of ancient South Arabian and Aramaean inscriptions bears witness to the great antiquity of al-Katif as an inhabited oasis. Unfortunately, the extensive use of the land by the current dwellers impedes the carrying out of thorough archaeological operations. H. von Wissmann has argued persuasively for the identification of al-Katif as the site of the renowned city of Gercha described by Strabo and other classical sources, but this identification is not yet proved beyond doubt.

In the early 4th century A.D. the Persians under Shāhārū II established themselves in al-Katif and along the adjoining Arabian coast, the hinterland of which was then known as al-Bahrayn. This occupation, interrupted at times by the Lakhmids, did not end until three centuries later. For a sketch of the events of that time see the article on ʿAbd al-Kays, then the dominant tribe in al-Bahrayn. The subtribe of Djaḥīlma b. ʿAww inhabited the oasis of al-Katif but kept its capital at nearby al-Zāra, the location of which is uncertain. The population also included Magians, Jews, and Christians (many members of ʿAbd al-Kays were Christians before Islam). The persistence of Christianity is illustrated by the fact that a Nestorian synod was held at Dārīn as late as 56/767.

As Islam spread eastwards in the Peninsula, al-ʿĀli? b. al-Ḥaḍramī reached al-Bahrayn in 8/629-30, and ʿAbd al-Kays sent an embassy to the Prophet in Medina. During the ridda some of ʿAbd al-Kays rebelled; in 11/632-3 Abu ʿl-Huṭam b. Dūbayʾa seized al-Katif, but in the next year he was defeated and killed by the forces of al-ʿĀli? The Muslims then forced the Karmatian garrison of al-Zāra to capitulate, after which they crossed over to the island of Dārīn (Tāʾrīt). The rebellion against the caliphate continued until 19/640, but it is not known whether al-Katif was involved in the later stages.

In 67/886-7 the Khāridjī Naḍja b. ʿAmir al-Ḥaḍramī won a victory over ʿAbd al-Kays at al-Katif and made the oasis his headquarters, only to be overcome not long afterwards by his fellow-Khāridjī Abū Fudayk.

The history of al-Katif for the next two centuries is not free from obscurity. In 286/899 the Karmatian Abū Saʿīd Ḥasan b. Bahram al-Djaḥnābī [q.v.] invaded the oasis and put many of the inhabitants to the sword, thereby inaugurating an independent Karmatian state in eastern Arabia with its capital in the oasis of al-ʿAbs? to the south. The Karmatians suffered a temporary setback four years later when Ibn Bānū, the governor of al-Bahrayn, inflicted severe losses on them in a battle at al-Katif, but they soon recovered the oasis and regained power.

The tribe of ʿUkayl, which in the late 3rd/9th century was moving into the region, in time took over supremacy there from ʿAbd al-Kays. In al-Ḥamdānī's time (early 4th/10th century), however, the inhabitants of al-Katif were still described as beings that time see the article on ʿAbd al-Kays, a chief named Ibn Miṣmār, Ibn Ḥawkal (mid-4th/10th century) lists al-Katif as one of the Karmatian cities.

In 378/988-9 al-ʿAšfar and his tribesmen of al-Muntaṭik waged war against the Karmatians and plundered al-Katif, carrying off abundant booty to al-Ḥasra.

The Persian traveller Naṣīr-i Khusrū in 433/1041 met an Arab dignitary in al-Katif whose ambition was to drive the Karmatians, "men without religion", out of their capital al-ʿAbsa. Seventeen years later Abu ʿl-Bahlīl al-ʿAwwānī b. al-Zadjiḍānī, master of the islands of al-Bahrayn, who was loyal to the ʿAbhāsids, defeated the Karmatian adherents among ʿUkayl in a naval battle off al-Katif. The final destruction of Karmatian power in this region came at the hands of the ʿUYūnīds [q.v.] of ʿAbd al-Kays, whose base was in al-ʿAbsa.

Rabbi Benjamin of Tudela, who visited Jewish communities in the East between 554/1159 and 569/1173, gave the number of Jews in al-Katif as 5,000, a figure no doubt exaggerated (the Rabbi does not seem to have reached al-Katif itself). He also reported that the pearl fisheries there were controlled by a Jewish official.

About 988/1201-2 Abū Bakr b. Saʿīd, the Salghurid Atāšeg of Fārs, took over al-Katif and al-ʿAbsa. By the first half of the 7th/13th century the ʿUYūnīds were yielding to pressure from the Salghurids and by the new dynasty of the ʿUsfurids of ʿUkayl, which was usurping authority in al-ʿAbsa.

From the 9th/14th century, Hormuz on the Persian side of the Gulf rose to prominence in trade and politics. In 731/1330-1 ʿUbūd al-Din Ṭahāntān, King of Hormuz, is said to have occupied al-Katif and other places on both sides of the Gulf. In the following year, however, Ibn ʿAbdītūtā found that al-Katif was ruled by a family founded by one Ḍarawān of ʿUkayl, a family described by al-Salīḥī in the 11th as "remnants of the Karmatians". Ibn ʿAbdītūtā characterized the various clans of Arabs living in al-Katif as "extremist Rāṣīdīs" (the common term among Sunnis in the Gulf for Shiʿīs).

In the mid-9th/15th century the Djaḥrids, a branch of the ʿUsfurids, became dominant in al-ʿAbsa. The Djaḥrids were helped by the fugitive prince Salghur of Hormuz secure the throne of his homeland, in return for which Salghur granted Adiwa, on payment of tribute, control over al-Bahrayn and al-Katif, whose profits from trade made them the richest possessions of Hormuz.

After the Portuguese conquest of Hormuz in 913/1507, the Djaḥrids kept their hold on al-Katif for a time. The Djaḥrid Mukriḳ made the pilgrimage in 926/1520, bringing with him pearls, amber, aloes wood, and other costly products; he is said to have distributed 50,000 dirhams to the poor in the Holy Cities. On his return he discovered that the Portuguese were invading the islands of al-Bahrayn, and he met his death in resisting them. The King of Hormuz, subject and ally of the Portuguese, sent an underling to besiege al-Katif. The final blow to the Djaḥrids came from Shaykh Rāshīd b. Muḥammad of al-ʿAbsa in 931/1524-5.

The chief of al-Katif swore allegiance to Sulaymān the Magnificent in Baghdad in 941/1534, and in 958/1552 Ottoman forces built a new citadel in al-Katif. After Portugal lost Hormuz to the British and Persians in 1301/1622, al-Katif became a more important centre for Portuguese trade in the Gulf. The finest Arabian horses were exported from there to India, being brought to the port by Bedouins from the interior. Large quantities of pearls from the waters of al-Bahrayn were shipped from al-Katif, as many of the fishers came from the oasis. The Portuguese paid for the horses and pearls with cloth from Sind
and Cambay and with silver money. Another item for export was dates, inferior in quality to those of al-Basra, but better and more lasting when dried. In 1036/1627 the Portuguese admiral Ruy Freges came to the rescue of al-Katif when it was threatened by Persia.

The Ottoman grip on this distant part of Arabia proved weak, particularly as the Al Humayd, the paramount chiefs of the tribe of the Banū Khālid, gained strength and expanded their dominion. The Banū Khālid had special ties with al-Katif, where nomads of the tribe owned date groves at Ṭānik and numbers of them came there to camp during the harvest season. Barrāk b. Ḡurayr Ṭāl Humayd expelled the Ottoman governor from al-ʿĀhsa' in 1074/1664-5. As one of the principal seaports for the Banū Khālid (the other being al-ʿUmayr farther south), al-Katif won favour from merchants for its moderate customs duties and the protection it provided for their persons and property.

In 1202/1788 the Banū Kaḥb of southern al-Ṭrāk plundered al-Katif, which was just recovering from a devastating plague that had made its way south from al-Baṣra.

The Banū Khālid could not withstand the onslaughts of the Al Suʿūd (q.v.), the paladins of the reform movement of the Wahhābiyya (q.v.), who routed the army of the tribe in the battle of Ḡurayr-ml south of al-Katif in 1204/1889-90. Two years later Suʿūd b. ʿAbd al-ʿAzzīz Āl Suʿūd captured the strongholds of Sayhāt and Ṭānik in al-Katif and meted out harsh treatment to the Shiʿī inhabitants, whom he looked upon as the worst of heretics. The payment of many pieces of gold induced Suʿūd to spare the port (al-furda) and the people who had taken refuge there. In this fashion, the Al Suʿūd subdued all this part of eastern Arabia and incorporated it in their realm. During the reign of Suʿūd, the ḥādīh he assigned to al-Katif was an immigrant from Persia (a Shiʿī converted to Sunnism?).

The Sublime Porte delegated Muhammad ʿAll, its Viceroy in Egypt, to deal with the threat to Ottoman suzerainty posed by the Al Suʿūd and the Wahhābiyya. The Viceroy's son, Faysal Pāsha, took the Al Suʿūd's capital, al-Dirīyya (q.v.) in 1233/1818, after which Ibrāhīm sent a detachment on to al-Katif in search of supplies. When Captain Sadleir, the emissary of the British government in coming to congratulate Ibrāhīm, reached al-Katif in 1234/1819, the detachment was preparing to pull out. Accompanying it on its way westwards, Sadleir became the first Western explorer to traverse the whole breadth of Arabia.

Although the chiefs of the Banū Khālid were in charge once more, the most striking figure in the region of al-Katif in the next few years was the celebrated seadog Ṭāḥā b. Ḍāibār, who finally lost his life in 1242/1826 in a naval battle off al-Katif against the Al Khālīf of al-Bahrāyn, against whom he had long been waging war.

After the Turco-Egyptian evacuation of central Arabia, Turki b. ʿAbd Allāh reintroduced the rule of the Al Suʿūd, and the chiefs of al-Katif gave him the ḥālima in 1245/1829. Four years later he ordered his son Faysal to al-Katif to suppress dissident elements in Sayhāt supported by the Al Khālīf. While there, Faysal received news of his father's assassination in al-Dirīyya, and as the new Imām he hastened back to the capital.

Muḥammad ʿAll again adopted a forward policy in Arabia in 1254/1838. Faysal was defeated and carried off to Egypt as a prisoner. A Turco-Egyptian force was quartered in al-Katif. Ibn Bīshār describes the administration as "[benevolent] rain at first, but in the end hail and thunderbolts". The force, however, stayed only two years. The new head of the Al Suʿūd, ʿAbd Allāh b. Ṭūhunayyān, appointed Faysal's slave Bilāl b. Sālim al-Hārṣ as his first representative in al-Katif in 1258/1842. In the following year, Faysal escaped from Cairo and returned to Arabia, where this second reign of his lasted for the next twenty-two years. The probably of his government was illustrated by his anger over what he at first considered the unjustified action of his Amir of al-Katif in having the leading Shiʿī there beaten to death, though he later pardoned the Amir. Faysal in at least some of his campaigns was joined by levies of the people of al-Katif.

In 1288/1871 Midhat Pāsha, the Ottoman Vālī or governor of Baghādā, dispatched an expedition that landed at Ra's Tannūra and quickly moved on to al-Katif. During this final Ottoman occupation, al-Katif formed one of the three ḥālimā of the misnamed Sandjak of Najd (the Sandjak, with its capital at al-ʿĀhsa', consisted of territory lying east of Najd proper). But ʿAbd al-ʿAzzīz b. ʿAbd al-Rahmān, who was restoring the fortunes of Al Suʿūd, swooped down on the Sandjak in 1331/1913 and drove out all the Ottoman garrisons, including the one in al-Katif. Since then the oasis has belonged to the domains of the Al Suʿūd.

In 1357/1938 oil was first discovered in Saudi Arabia at al-Zahrān (Dhahran) not far south of al-Katif. With the expansion of operations a new oilfield was found straddling the oasis, after which it was named the Qatif Field. Large numbers of the towns and villages there worked for the oil company or in business connected with the oil industry. With production and revenues from oil soaring, the oasis is enjoying new prosperity and undergoing a reshaping of its economic and social life. It still lies half-hidden by its cloak of millions of palms, which produce abundant harvests of dates, a crop supplemented by fruits and vegetables, the variety of which has been diversified by great improvements in the irrigation and drainage systems and by the introduction of modern agricultural techniques.

son of Ahmed Agha called kattrdlj (the muleteer) on account of his profession. Kattrdlj Mohammed spent his childhood on the family farm in Aglasun and when he was 19, in 1029-30/1620-21, he joined his father’s caravan journeys. He later separated from his father to operate his own caravan between Ayfön [q.v.] and Civril and later, after his father’s death, he took over his business (Hikmet Turhan Dağlıoğlu and Nurı Katircioglu, Katircioglu kimdir?, in Isparta Tarihi Un Mecmuasi, iii, no. 25 (Isparta 1936), 356, 357). Katircioglu kattrdlj came to be known in the region as the muleteer and the people of Isparta sent him to relay their complaints and wishes to a tax-collector who had perpetrated great injustices and irregularities. The tax-collector, however, instead of taking an understanding attitude inflamed the people further by throwing Katirdjl-oghl into prison. Thereupon the people rebelled, freed him from goal, removed the tax-collector and took the administration into their own hands. Katirdjl-oghl let the course of events carry him along. For a while he disappeared and then, in 1057/1647, appeared again operating with the brigand Kara Haydar (Ewliya Celebi, Seyhâlat-nâme, Istanbul 1314/1867-6, ii, 416 ff.). After Kara Haydar’s capture in 1059/1649, he gathered around himself the scattered groups of brigands and, joining forces with Gürdlj ‘Abd al-Nabi, marched on Üsküdar with the intention of procuring his pardon. However, in the clash with government troops, ‘Abd al-Nabi’s hesitancy led to his defeat. He was compelled to retire first to Söğüt (Na’imâ, iv, 428) and then in the direction of Isparta. Through the medium of İsâ Agha who was at that moment in the town of Çay, he sought a pardon; and through him he received a conciliatory letter from the Grand Vizier Kara Murâd Paşa indicating that he would be pardoned on condition of procuring his pardon. He came to Istanbul towards the end of 1059/1649 and, after an audience with Mehemmed IV, he received the long-desired pardon and, moreover, was appointed sadîq begi of Beyşehir (Wedjîl, Ta’rîkh, Süleymaniye, Hamidiye Library 917, f. 36; Kara Celebi-zade ‘Abd al-Aziz Efendi, Dîyâ-ı rwatıfî-ı abarî, Istanbul University Library, Turkish manuscripts, 3272, f. 38; Na’imâ, iv, 452). He was later appointed beglerbegî of the people of Isparta and sent against Abaza Hasan Agha. In 1061/1651 he was appointed governor of the eyallet of Shahrizur, but refused the post and stayed in Karâmân. Although this was an act of disobedience, the Grand Vizier was more concerned with the removal of his rival Ispîrî Mustafâ Paşa and did not worry him, pretending not to have known of his actions. Shortly afterwards Katzîrdjl-oghlî was appointed to the governorship of his native sadîq of Hamîl. However, the intervention of Murâd Paşa, who was kapudan-i derya [q.v.], prevented a clash between the two men. After this, Katzîrdjl-oghlî approached the Grand Vizier and, tendering his obedience, received a pardon (ibid., vi, 17, 32). In 1065/1655 he was ordered to the Crete campaign and achieved great distinction in the fighting there between 1065/1657 and 1069/70/1659. In addition of procuring his pardon, he was given the title of beglerbegî of Karâmân. He was appointed beglerbegî of Anadolu on 3 Rabî’ al-Akhîr 1078/22 September 1667 and died in action at the siege of Candia on 13 Rajab 1079/17 December 1668 (‘Othmân Dede, Ta’rîkh-ı Fâdîl Ahmed Paşa, Süleymaniye, Hamidiye Library 909, ff. 44, 45, 62; Râşîjîd, Ta’rîkh, Istanbul 1282/1665, i, 179, 216; Silâbdar Mehmmed Agha, Ta’rîkh, Istanbul 1528, ii, 447, 492, 493). Katzîrdjl-oghlî had a son called Shapîrî-Bâshı Husayn Agha, whose descendants still survive today.

(Cemâlzı Orholu) KATL (a.), killing, putting to death, used in the two principal meanings of the word, sc. the crime of murder and the punishment of execution.

1. AS A CRIME

(i) In the Kur’ân unlawful slaying is forbidden in a series of verses, which date from the second Meccan period to nearly the end of the Medina period. The passages may be arranged chronologically as follows (cf. Th. Nöldeke-Dr. Schwally, Geschichte des Qorâns, i, and H. Grimme, Mohammed, ii; when the exact order in the particular periods cannot be ascertained, the passages are here arranged in the order of the sûras and verses):—XVII, 33, 35 (second Meccan period; according to ibid., iv, 452); XVIII, 94, 4, later than VI, 152): “Kill not your children for fear of being brought to want; We will provide for them and for you; verily the killing them is a great sin . . . Neither slay the soul which God hath forbidden you to slay unless for a just cause; but whosoever shall be slain unjustly, We have given his soul to him as a (third Meccan period; similar to XVII, 33, 35); IV, 152 (second Meccan period):—(and the servants of the Merciful are those) “who slay not the soul, which God hath forbidden you to slay unless for a just cause; but whosoever shall be slain unjustly, We have given his soul to him as a . . . .” "Kill not your children for fear of being brought to want; We will provide for them and for you; verily the killing them is a great sin . . . Neither slay the soul which God hath forbidden you to slay unless for a just cause; but whosoever shall be slain unjustly, We have given his soul to him as a (third Meccan period; similar to XVII, 33, 35); IV, 152 (second Meccan period); (and the servants of the Merciful are those) “who slay not the soul, which God hath forbidden to be slain unless for a just cause . . . for he who does this commits sins (or: will bring retribution upon himself); his punishment will be doubled on the day of the Resurrection and he shall remain in it covered with ignominy for ever; except him who does this commits sins (or: will bring retribution upon himself); his punishment will be doubled on the day of the Resurrection and he shall remain in it covered with ignominy for ever; except him who...
look upon him again . . . ; but if anyone kill a believer deliberately ('amd) his reward is hell in which he shall remain for ever and Allâh wrathful against him and curse him and shall prepare a great punishment for him". (The true interpretation is undoubtedly this, that every Muslim who kills another Muslim with 'amd is condemned to eternal hell-fire and that Allâh will not accept his repentance, a view which is ascribed to Ibn 'Abbâs, Ibn Mas'ûd, Zayd b. Thâbit and al-Dhahîk). The view held by the majority of the traditions was to be cast off, which tones down the literal wording of the passage, either by adding with Mujâhid "unless he repents" or by holding, as has become usual, that Allâh will not leave a Muslim eternally in hell, and can even remit entirely the threatened punishment of hell-fire; but this is only the result of speculation and combination with other passages in the Korân (e.g. XI, 108-10; XXXIX, 54) and is therefore to be rejected; IV, 33 f. (from about the same time; similar to IV, 93); LX, 12 (probably dates from soon after the treaty of al-Hudaybiyya; similar to XVIII, 33; 3).

There are two further passages, in which it is asserted that Allâh forbade the Jews to kill: II, 78 ff. (from about the first half of the year 2 A.H.) and V, 35 (probably of the year 6 or 7; according to Grimm, to be dated before the battle of Badr).

There are also a number of verses in which killing is not exactly forbidden but is more or less strongly deprecated and represented as a mark of the unbeliever, just as committing no murder is a sign of the believer, e.g., LXXXI, 8 f. (first Meccan period); II, 28 (probably third Meccan period; according to Grimm, Medinan, before the battle of Badr); VI, 138, 147; XVI, 61; XL, 26 (same time); VIII, 30 (after the battle of Badr); V, 33 (shortly before the capture of Khaybar). In numerous passages in this connection the unbelievers are reproached with the slaying of prophets, e.g. II, 58, 81, 85 (from the first half of the year 2 A.H.); IV, 154 (after the outbreak of open war with the Jews of Medina); III, 177, 180 (probably soon after the battle of Uhud); XX, 108 (shortly before the war with the Banû 'l-Nadir?); V, 74 (later Medinan period).

(2) Supplements to the Korân passages from the Sîra, accounts of the life of Muhammad. In the so-called ordinance of the community, which dates from the first Medinan period, it is laid down that no believer may kill a believer on account of an unbeliever; in another passage it is said: "If anyone kill a believer and is convicted, then vengeance for bloodshed must be done, unless the wali of the man slain waive it". In all probability Muhammad had in mind in the murderer a non-Muslim member of the community (Froechsch, op. cit., 73): this agrees with the development given above. In the bayâ'a, the initiation into the community, the initiate had to pledge himself, among other things, not to commit an unlawful act of slaying (cf. Korân, LV, 12). Once Muhammad cursed a murderer [see kisâs]. In the so-called first Ka'ba oration (of the year 630), the genuineness of which is not absolutely certain, however, on every point and which seems doubtful on this particular point, there appears the by no means exactly defined conception of Katl shabah 'amd (see below, 5c); Muhammad is also said to have declared that all blood-guilt attached to a Muslim dating from the period of paganism was to be cast off, which extends the corresponding passage of the ordinance of the community. Finally, it is to be mentioned that the Sîra knows of several cases of deliberate and of unpremeditated slaying; so far as they are liable to be punished, they are dealt with in the article kisâs.

(3) Comparison of the views of authoritative circles in the Muslim community in the older period as preserved in Hadîth. It is obvious that in the Hadîth also the slaying of a Muslim is strictly forbidden; by the adoption of Islam (and of monotheism at all) life and property are inviolable. The life of a Muslim is to Allah like the cessation of the world or the cessation of the world is even less to Allah than this"; "if someone is killed in the east and another in the west approves of it, he is guilty of the person's blood"; "man is a work of Allah; cursed be he who destroys Allah's work". The first murder which introduced killing into the world is the subject of special condemnation: Cain is accessory to every later murder. Murder is punished in the next world as well as on earth; on the Day of Judgment cases of the shedding of innocent blood will be judged first. As to the punishment itself, a whole stratum of hadîths reflects the already mentioned view of Ibn 'Abbâs and others regarding the eternalness of punishment in hell for slaying with 'amd; e.g. "whoever sheds blood in an unlawful way, for him there exists no way for escape"; "whosoever contributes, though only by a word, to the slaying of a Muslim must despair of the mercy of Allah". In several passages the deliberate murder of a Muslim is considered equivalent to unbelief (hadîth in which a warning is simply uttered against murder being a sign of the unbeliever are, of course, not dealt with here). It is even said: "if two Muslims attack one another with swords and one kills the other, both go to hell (unless it was a case of legitimate self-defence), the slayer for his deed and the slain because he wished to kill the other" (see e.g. al-Bukhârî, Diyâî, bab 2); and: "if all the inhabitants of heaven and earth together had killed someone, they would all go to hell". In these two passages it is not exactly demonstrable that eternal punishment in hell is meant, but it is very probable. In several of the traditions mentioned, Ibn 'Abbâs appears as the authority. Such hadîth were naturally rendered harmless by "interpretation" by the representatives of the other view, if they were not entirely suppressed, which did happen to not a few. Thus the description of deliberate murder as unbelief is sometimes interpreted to mean that it is a very grievous sin and sometimes taken as a reference to the refusal of the protection of Islamic law, which occurs in both cases, to the life of the slayer or of the unbeliever. This was not found sufficient, however, but traditions were put into currency to prove the contrary, namely that Allâh would accept the repentance of a murderer,
even if he had committed several murders; one of these traditions is provided with a grotesque story, the object of which is quite apparent, as corroboration. In one tradition the hadāfa, especially the liberation of a slave, is represented as a means to save the murderer from the merited punishment of hell, obviously by someone who demanded it even in the case of kātīl with *ṣamīd* (see below sub 6a). It is even asserted in public controversy against the views of the other side that after the Day of Judgment no Muslim will go to hell and that, on the contrary, all sins will be forgiven them. The killing of a muṣḥad, a non-Muslim under the protection of the Islamic state, is threatened with punishment in the next world (e.g. al-Buṣāri, Diyālitā, bāb 30; al-Dārirmi, Siyar, bāb 60; the Kurān is silent on the question); but, as might be expected, the view is very rarely expressed that this punishment is eternal. The prohibition of suicide, which we do not find laid down in the Kurān, is given in the Haddith, and the suicide is threatened with eternal punishment in the next world.

As an appendix to the above we may briefly mention the connection of several kinds of animals with kāl, which is also dealt with in tradition. Muḥammad had, as is related, recommended the slaughter of dogs but later withdrew the order, although the dog always remained subject to certain exceptional regulations (cf. Kāl); the sunna further orders the killing of the saṣag, a kind of lizard, but if possible it should be done with one blow: on the other hand the killing of ants and of cats is forbidden (among the authorities for this last tradition is Abū Hurayra); on the killing of snakes cf. Guillaume, *The Traditions of Islam*, 116 f.

As regards the value of the traditions just quoted, the genuineness of none of them can be proved; while the falsity of those, which seek to save the murderer of a Muslim from hell, is apparent, it is also probable of those which hold the contrary view.

(4). The controversy regarding the punishment of the murderer of a Muslim centres round a passage in the Kurān, which in itself could and must form a foundation for it, and is in part at least independent and original. The passage is: (fi 'l-fi'l). A statement of the prevailing Hanafi views

rise of the Fikh-schools; therefore there is no ikhkād of the mādhkhād on this question; this view has found its way into all textbooks of Fikh and of doctrine.

(5). A statement of the prevailing Ḥanafi views on killing. Katīl in the fikh is the act of a man whereby the life of a fellow-man is brought to a close (the death need not immediately follow the act). It may be qualified by any of the five "legal categories": duty or necessity (adwātib), e.g. the killing of the murtad; recommended (mādāhib), e.g. when the gāhī kills his unbelieving kinsmen if they insult Allāh or his Prophet; permitted (muṣāhib), e.g. when the Imām kills the unbelieving prisoner of war, in the case when the reasons for killing him exactly balance those for granting his life; killing in self-defence is also allowed, i.e. in defending oneself against an illegal attack on one's life, person or property, in defending oneself or someone who comes to help, if the attack cannot otherwise be averted (on further questions there is ikhkād, also on the question whether a man who surprises another in adultery with his wife or endeavouring to see into his harem, and kills or mutilates him, is acting legitimately or not; one tradition on the subject is interpreted in different ways); disapproved (mahārīb), e.g. when the gāhī kills his unbelieving kinsmen without the same intention, the manner, and the interval as in the above; prohibited (haraḍ), e.g. when the Imām kills the unbelieving prisoner of war, in the case when the reasons for killing him exactly balance those for granting his life; killing in self-defence is also allowed, i.e. in defending oneself against an illegal attack on one's life, person or property, in defending oneself or someone who comes to help, if the attack cannot otherwise be averted (on further questions there is ikhkād, also on the question whether a man who surprises another in adultery with his wife or endeavouring to see into his harem, and kills or mutilates him, is acting legitimately or not; one tradition on the subject is interpreted in different ways); disapproved (mahārīb), e.g. when the gāhī kills his unbelieving kinsmen without the same intention, the manner, and the interval as in the above; prohibited (haraḍ), e.g. when the Imām kills the unbelieving prisoner of war, in the case when the reasons for killing him exactly balance those for granting his life; illegal killing as the result of actions in themselves legal may take place in five ways:

(a) as *ṣamīd*, i.e. someone wilfully makes another the direct object of an action in general fatal, so that the other dies as a result; according to one view, the intention of killing is necessary for the conception of *ṣamīd*, which, however, is always presumed in the case of any act generally fatal in its result, which is illegally inflicted on another. Thus for example, any one, who strikes a blow at the hand of another with an instrument adapted in general for killing, but inadvertently hits his neck and kills him, is ceteris paribus unanimously regarded as equally guilty with the man who strikes another in the neck with the same instrument, wilfully intending to kill him and slays him. The killing is a sin (mādāhib), and in general is punished by kisād, or else the slayer is bound to pay the heavier diya and to lose any possible legacy from the deceased to himself;

(b) as ḥabī (or ḥaḍā), i.e. there is no intention of committing an act illegally on the other as in the case of (a), while the action itself is premeditated: two kinds are distinguished, according as the ḥabī (mistake or misadventure) which shows that the killing is not wilful, is in the intention of the doer (fi 'l-ḥaṣa) or in the carrying out of the action (fi 'l-fā'il). The former is the case when someone treats another as a wild beast or a harki, (an infidel not enjoying the protection of the Islamic state, against whom the ḥidād is to be waged) the killing of whom is not illegal, and kills him; the latter when someone unlucky hits another, while shooting at a target or at a harki, so that he dies, or strikes at the hand of another person but inadvertently hits the neck of a third person and kills him; this killing is not sin but brings with it (without kisād) the obligation upon the ḥabila of the killer to pay the smaller diya and to lose any claims to any inheritance from the deceased as in (a); besides the obligation of the killer to perform the hadīfā;

(c) as ḥabb (or ḥab) *ṣamīd* = similar to *ṣamīd*, i.e. someone intentionally makes another the direct object of some action, not always but sometimes fatal, and death results. Actions which experience has
shown not to be fatal at all are thus quite excluded, such as striking the head with a reed pen; if anyone dies as a result of such an action as this, it is an unfortunate accident, which is not followed by any penal consequences. This killing is a sin and brings with it (without *kiṣās*) the obligation upon the *ādkila* of the slayer to pay the heavier *diya* and to lose any possible inheritance from the deceased as in (a), and in addition the slayer is bound to perform the *kaffāra*. This category only exists in cases where death actually results; in cases of bodily injury, which by the way, are similarly classified, the action is regarded as *ṣawīd*.

(d) as *dāri madāra 'l-khaf* (or *madad ārā 'l-khaf* or *qā'im maḥām al-khaf*) “equivalent to *khaf*”, i.e., the factor of deliberation is lacking in the action (and also the intention of directing the action illegally against another) in the circumstance of (b) and (c), for example: someone falls upon another in his sleep or falls from a roof upon him and kills him; the legal results are the same as in (b);

(e) as *batil bi-sabab* “indirect killing”, i.e. someone brings about the death of another without doing anything directly against him; e.g. he digs a well and someone falls into it and dies as the result; sometimes this category is treated as a subdivision of (d); but it is a matter of indifference, whether the act, which indirectly results in the death of another, is deliberate or not, intentional or unintentional; even if the action has been planned in some very cunning way, such as setting a savage beast on another person with the intention of causing his death, it does not alter the situation. The legal consequences are in any case limited to the obligation upon the *ādkila* of the doer to pay the lighter damages, larger if the killing *on *fiṣāh* usually discuss very fully the question what acts are to be considered direct causes of death and which are *batil bi-sabab* and in which there can be no question of a causing of death so that no legal consequences result.

Two cases are especially dealt with in the *fiṣāh* books: (a) The causing of a premature birth or abortion and (b) killing through giving false evidence.

(a) If in causing an abortion or premature birth, the embryo—which must be sufficiently developed to be of human form—is brought into the world dead or dies after the birth or the mother dies, it is not a case for the application of *kiṣās*; there is in any case no *batil bi-sabab* in the mother whose killing is dealt with under the above rules and the embryo before completion of birth is legally not in full possession of its powers but is usually regarded as a limb of the mother. Hence we have the following law: if the head of a child appears out of the mother's womb at birth and the child cries (and is therefore certainly alive) and then someone cuts off its head, it is not a case for *kiṣās* and only the punishment prescribed for producing an abortion is to be inflicted. Different amounts are to be paid for the embryo according to the different cases, and if it comes alive into the world and then dies the person who causes its death is liable to *kaffāra*; he, also loses any inheritance that might have come to him.

(b) If anyone is killed on evidence which shows that a crime deserving death has been committed and then the witnesses recall their evidence or in other ways it is proved that their testimony was false, *kiṣās* cannot be executed on the person; instead of *diya* must be paid, the heavier if the false evidence was deliberately given, the lighter if otherwise.

(e) Different views also prevail as to the amount to be paid for the killing of an embryo.

(f) On causing death through false witness: if the false evidence was deliberately given, according to al-Ṣāḥīfī and the better-known opinion of Mālik, *kiṣās* can be executed on the witnesses.

Notes on the question of the *diya* in general: it is not a case for the application of *fiṣāh*; it is considered the better by the Ijāla. The qualification of the various actions generally differs considerably and the Hanafis often make use of *ṣīhsan*, exercise of discretion. In the Mālikī and Hanafi view no *kaffāra* is to be performed for *ṣawīd*; al-Ṣāḥīfī, on the other hand, demands it if the *kiṣās* is not executed and both views are given on the authority of Ahmad b. Ḥanbal.

(b) On *khaf*: that *khaf* is not a sin is more exactly meant to mean that it is neither permitted nor forbidden, but that this killing is rather *ʃ̣aʿl al-ṣāḥīfī*, “action of a thoughtless person”, and is to be judged in the same way as the act of a mentally defective person or of an animal. Except in the Hanafī *madhhab*, categories (d) and (e) [sub 5] are not distinguished from *khaf* which also was the earliest Hanafī view (ZDMG, lvii, 358) and *batil bi-sabab* has generally the same legal consequences as *khaf*; we thus have three kinds of *batil: batil bi-sabab* and *khaf*, of which *shabah* *ṣawīd* is considered to be composed of *ṣawīd* and *khaf*.

(c) On *shabah* *ṣawīd*: this category is also called *ṣawīd khaf*, *khaf* *ṣawīd or khaf* *shabah* *ṣawīd*; in contrast to it, *ṣawīd* is also called *ṣawīd maḥām* and *khaf* also *khaf* *maḥām* (pure *ṣawīd* or *khaf*); the application of *kiṣās* is said to be permissible by al-Ṣāḥīfī if the killer, for example, repeats the blow with an instrument not normally adapted for killing so frequently that the person attacked dies; the act is then considered *ṣawīd*; one of the two opinions handed down on the authority of Abū Yūsuf and al-Shaybānī is to the same effect while the view that became predominant in the school was to the contrary. Mālik allows *kiṣās* in *shabah* *ṣawīd* in general.

(d) On *batil bi-sabab*: Mālik, al-Ṣāḥīfī and Ahmad b. Ḥanbal demand *kaffāra* in addition, if the placing of the cause of the death was illegal.

(e) Various views also prevail as to the amount to be paid for the killing of an embryo.

(f) On causing death through false witness: if the false evidence was deliberately given, according to al-Ṣāḥīfī and the better-known opinion of Mālik, *kiṣās* can be executed on the witnesses.
(b) No definite punishment is laid down for the case of a request to kill someone; such a request does not mean the exculpation of the slayer; only if the person requested is a minor or a slave claims may be made from the 'ażila of the minor, or from the proprietor of the slave.

c) A forces B to kill C; then, according to Abū Hanīfa, the kisās is executed on A, according to Mālik and Ahmad b. Hanbal on B; as to al-Shāfi‘ī’s view, there is no doubt that A is liable to kīfā; as regards B both possible views are transmitted, of which the one that ultimately became predominant in the school makes him also liable to kisās. Mālik further makes A also liable to kīfā if the compulsion comes from a person having authority, or from a master to a slave.

d) A holds B and C kills him while he is held; in this case Abū Hanīfa and al-Shāfi‘ī make C liable to kisās and A to ta‘ṣīr, which is more definitely defined as imprisonment. According to Mālik, both are to be regarded as culprits and therefore liable to kīfā if the holding was necessary to facilitate the slaying and B was not able to escape after being held. Ahmad b. Hanbal’s opinion is given in two versions; according to the one, kisās is executed on C and A is punished with imprisonment for life, according to the second opinion, A and C are both liable to kīfā.

ii. AS PUNISHMENT

The punishment of death may be described quite generally as ḥatl; in the following account cases in which it is applied are given seriatim; in contrast to ṭaţal and ṣalb (cf. below) ḥatl is also used in the narrower sense of execution with the sword.

1. In the cases of illegal killing described in detail above, the nearest relative of the dead man, who in this capacity is called wâli al-dam, is entitled to kill the culprit in retribution if certain definite conditions are fulfilled. This punishment is called kisās or ḥawād, names which also cover retribution exacted for wounds which are not fatal; for further information, see kīfā.

2. There are special regulations regarding sorcerers (sāḥir), about whom there are also various traditions. Mālik, al-Shāfi‘ī and Ahmad b. Hanbal recognise sorcery (ṣīhr) as an actual force. Abū Hanīfa disputes this; but there is a consensus of opinion that it is forbidden to study it; it is even held. Atunad b. Iljanbal’s opinion is given in two versions; according to the one, kisās is executed on C and A is punished with imprisonment for life, according to the second opinion, A and C are both liable to kīfā.

The more important laws of the Shari‘a are the following. Only such persons as are adults in full possession of their faculties and who are able to be dangerous to travellers are to be considered highway robbers. According to Abū Hanīfa, highway robbery can only take place in the open country, according to Mālik, al-Shāfi‘ī and Ahmad b. Hanbal in the town also. Mālik gives the Imam—and this is certainly the correct interpretation of the passage in the Kur‘ān, which is also found in the commentaries—absolute freedom in the choice of punishment, even in the contingency of a cumulative application, whatever form the robbery may have taken; but if the person concerned has killed someone (in this connection killing implies a murder to which kīfā might be applied), he must at least be executed with the sword. The other Imāms grade the punishment to fit the different forms of robbery on the highway; according to Abū Hanīfa, the criminal is put to death if he has caused the death of his victim; if he has also robbed him (and in such a way, it must always be understood, that the hadd for theft can be carried out; see sāriq), he may be further punished by cutting off his hands and feet on alternate sides and with crucifixion (ṣalb) which in that case takes the place of killing with the sword; if he has only committed a robbery, we have only the cutting off of hands and feet on alternate sides; according to al-Shāfi‘ī and Ahmad b. Hanbal, he is killed, if he has killed his victim; if he has also committed a robbery, he is crucified after being put to death; if he has only committed a murder, he is punished by cutting off his hands and feet on alternate sides; if he has only made the neighbourhood unsafe, then, according to Abū Hanīfa, al-Shāfi‘ī and Ahmad b. Hanbal, he is put in prison; whether this must be done in another place is a debated point. In Abū Hanīfa and Mālik (also in some Shāfi‘is, but their view is rejected by the school) crucifixion consists in the criminal being tied alive to a cross or a tree and his body ripped up with a spear so that he dies, and this is certainly the more original form; according to al-Shāfi‘ī and Ahmad b. Hanbal, he is first killed with a spear, then his corpse is ignominiously exposed on a tree or cross. All these punishments are hadd and a right of Allāh; therefore any renunciation by the wâli al-
dam of the šiğas is of no avail even though it is he who has the right to carry out the ũadī. If the criminal refuses the zakāt before or after the battle of Uhud), 487 (soon after the battle of Uhud), IV, 136 (of the same period) threaten the eternal punishment of hell for all those who apostatises and the consensus of opinion excludes the minor; a woman (and also a minor) is imprisoned and punished by adopting Islam; on the whole of this cf. Goldziher, *Muhammedanische Studien*, ii, 215 f., Eng. tr. ii, 199 ff.

How exactly one becomes an unbeliever and therefore a murtadd is disputed in particulars, especially the question how far this is the case with irreverent utterances regarding Allah or one of His prophets; there are various specific statements regarding the latter, which threaten the death penalty to non-Muslims and in part allow a Muslim no remission of punishment if he recalls the words.

For further information, see MURTADD.

(6). There is no law in the Kur'ān for dealing with a man who omits the salāt (ritual prayer) (tarīkh al-salāt), where its performance is, on the other hand, often strictly enjoined and the local hadith on the subject can be found—quite apart from any question of genuineness. The Sharī'a lays down the law as follows. Anyone who does not perform the salāt, as in duty bound, without denying its obligatoriness (anyone who does this is a murtadd) and has no—even invalid—excuse for this, then according to Mālik, al-Shāfiʿī and the more popular of the two views credited to Ahmad b. Hanbal, if he does not alone, i.e. makes good his omission and says he will never commit the fault again, he is to be executed with the sword. This punishment is also sometimes described as hadīd. According to Abū Ḥanīfa, the culprit is imprisoned till he again performs the salāt. In all these views he is considered a Muslim, while the other view attributed to Ahmad b. Hanbal deals with him entirely as an unbeliever, i.e. a murtadd; but these regulations are modelled on those for apostasy (cf. the remarks on the Aḥī al-Ridda above).

There are two more cases in which the suppression (bišdā) of the enemies of orthodox Islam is prescribed; killing, of course, plays the main part and therefore we must discuss this aspect of the process here.

(7). Firstly, the fighting of the bugāṭ is prescribed. It is said in Kur'ān, XLIX, 9 (late Medinan period): "If two parties of the believers contend with one another, make peace between them; but if one oppresses the other (bugāṭ—from which bugāṭ is the plural of the active participle), fight against the party which oppresses until they again obey Allah's command; and if they do this, make peace between them with equity and act with justice" (this refers to a quarrel among the Anšār). Opposition is often forbidden and disapproved of elsewhere. But Muḥammads at, 15, rate did not now the latter conception of bugāṭ, although its development begins at a point closely connected with this. Some traditions on the
bughāt are in agreement with the legal enactments. The Shari'a understands by bughāt, who are guilty of breaches of the law are punished like them—on the one hand, and unbelievers on the other). If they do not attack the orthodox community, they need not be attacked; otherwise their suppression is a duty of the Imām (the head of the Islamic community) and a fard al-kifāya for the Muslims (see FARD). This punishment is also sometimes called badd. In general, the rule is that only participants in the actual battle can be killed during the fighting. Fugitives, wounded, those who surrender and prisoners, as well as women and children, cannot be put to death. According to Abū Ḥanīfa, the Imām may kill a prisoner if he knows that he would again join the bughāt if spared; according to him, a captured slave who has been fighting by the side of his master can also be killed.

(8) Regarding Dīhād [q.v.], there are also traditions regarding the following regulations. If the unbelievers with whom war is being waged are not among those from whom the dīżaya can be taken—and this directly in all these cases by the Imām). Anyone who kills a prisoner without authority is only punished with iṣlaḥ.

Every unbeliever who does not pay the dīżaya or does not belong to a people which has a treaty with the Muslim community or is not a musta'min [see gīżas] is khalāl al-dam (to be killed with impunity) and may at any time be killed by any Muslim without his being liable to kīfas or to pay any dīya or perform haffāra. This enactment is only the natural consequence of the dīhād law and Muhammad himself not infrequently made use of it.

The views of the Shi'is on all the points dealt with above agree almost entirely with one or other of the Sunni views.

(10) The infliction and execution of the death penalty was in practice very often in strong contradiction to the regulations laid down in the Sharī'a [see 'adilā; Snouck Hurgronje, Verspreide Geschriften, ii, 200, etc.]. The historians afford many examples for the actual practice and do accounts of European travellers; on the conditions in the empire see Polak, Persien, 1, 328 ff.; on those in the Ottoman empire of the 18th century see Mouradgea d'Oppsson, Tableau Général de l'Empire Ottoman, esp. vi (1854), 244 ff.; for Turkey the Känûnûms [q.v.] are also useful (cf. M. Ullmann, Mitteilungen zur osmanischen Geschichte, i, 13 ff.). Among the published sources quoted there are of special importance: Digeon, ii, 245, 262; v. Hammer, Staatsverfassung, i, 125, 133, 143-50; TOEM, iii (1328), Appendix i, 27 ff., i, 1-4, 7, 9; MTM, i/4, 341 ff. and from the Känûnum itself (edited there; 19-21, 32-4).

Bibliography: The fiqh-books, the works given in the article Kafādā, especially Juynboll, Handbuch des islamischen Gesetzes, 284-905, etc., and the literature there given; the articles MURDER and EXECUTION in T. P. Hughes, A Dictionary of Islam. Besides the articles already referred to, the article Qafād and those dealing with the Arabic expressions not explained above should be consulted; and see further Bahnasl, al-'Uţšābā fi 'l-fikād al-islāmi, Cairo 1961; L. Bercher, Les délustes et les peines de droit commun prévues par le Coran, Tunis 1926 (excellent work); R. Rechtswiss., lxxi (1957); 83-122; A. Törki, Stellung des "Religionskrieg", insbesondere des Islam, in Stud. Isl., xxx (1969), 39-71; J. Schacht, An introduction to Islamic law, Oxford 1964, ch. xxiv; R. Brunschvig, Justice religieuse et justice laïque dans la Tunisie des Deys et des Beys, in Stud. Isl., xxiii (1965), 27-70. (J. SCHACHT)

KATRÁN (bāran, katrān) is 1. tar obtained by dry distillation (lias'id "vaporisation") of organic substances; 2. the residuum left after the distillation of tar, i.e., liquid pitch; 3. cedar-oil (in Dioscorides xelīs, Ar. kādriya) extracted from cedarwood. The substance is obtained from several kinds of coniferous trees, especially the Cedrus Libani (Ar. shadīdar al-sharbīn), but also from the Oxycedrus L. and various kinds of cypresses. The substance was already widely used in antiquity for many technical and therapeutic purposes and was not unknown in ancient Arabia; scabby animals were smeared with kārand (see the references in M. Ullmann, Die Médizin im Islam, 1970, 217). On the mention of kārtān in Kurān, XIV, 50, see A. Jeffery, The Foreign Vocabulary of the Qur'an, 241 ff. Katrān smells strongly; as a medicine, it is hot and dry in the third degree; applied to the skin it kills lice and ticks, and is beneficial against scratches, itching, leprosy, and dropsy. It is also of value against the sting of venomous serpents and promotes the growth of flesh in ulcers.

Katran, a Persian poet. The recorded details of his life are meagre. 'Abdi gives his full name as Ḥakīm Ṣāraf al-Zāmān Katran al-'Adudī al-Ṭabrīzī. History refers to him as Ṣūfī. Katran dated his death by Hidayat and others is wrong). Nafisi suspects that Adudi is a corruption of Azdi (p. 473). Two more Katsinas emerge with Leo Africanus (ca. 1513) "Cases", a rather poor country, and "Gandjarayi" (Wangara), identified with Katsina-Laka (N.W. of Zaria) and associated with Muslim learning. Katsina attracted the celebrated ʿālīm, al-Maghli (d. 916/1504), who taught Kūrān and fiqh: Muhammad al-Tāzkhīt (known as Ayda-Abdāh, d. 935-6/1529); and Makhluf ... al-Bībālī al-Marrākushi (d. 939-40/1533).

The coming of the Wangara (especially under Muhammad al-Koray, d. 946-7/1541-2) signalled a shift in succession (matrilineal to patrilineal), leadership (Wangara Muslims displace Durbawa pagans), in religion and in ethnic composition. Bīrnī-Katsina (the walls of which date from 926/1518) was distinguished for its tobacco and leather; it contained over 800 principal quarters (each of which generated its own peculiar artisan and ethnic quality), a circuit of about eight miles, stretching to nearly 14 miles (1853), and a metropolitan population of 300,000. Katsina waxed and waned within the shadow of stronger powers (Mali, Songhay, Bornu, Sokoto), achieving its pinnacle of power in the 17th and 18th centuries. Here, in Barth's phrase, "... that state of civilisation which had been called forth by contact with ... Arabs seems to have reached its highest degree ... the Hausa language ... attained the greatest richness of form and the most refined pronunciation, and the manners of Katsena were distinguished by superior politeness from those of the other towns of Hausa". During this "golden age", Katsina emerged as the entrepôt of Hausaland and gave birth to some of the most renowned scholars of Sūdānī Islam: Shāykh al-Shuyūkh al-Bakrī of Yandoto (ca. 900/1600); the poet Muhammad al-Kashnawī ( Ibn al-Sabbāgh, Hausa: Dan Marīna, d. 1665); the jurist Ṣūfī ... al-Barnāwī (Hausa: Dan Masanī, d. 1678/1669); the numerologist and astrologer (who entered the learned circle of the Egyptian historian ʿAbd al-Rahmān al-Jabarti) al-Hāj Muhammad b. Muḥammad al-Fulānī al-Kashnawī (d. 1154/1741); the astronomer, mathematician and astrologer Muhammad b. Muḥammad al-Kashnawī (ca. 1145/1732); and al-Tāhir b. Ibrāhīm al-Fulānī, who wrote a scholarly treatise on the treatment of haemorrhoids (d. 1190/1776?), and seems to have emanated from the long line of scholars in the Yandoto tradition of al-Bakrī.
With the rise of Sokoto and the submission of Katsina (1807), the ruling lineage sought refuge in a new city, Katsina-Maradi (Niger Republic). The abandoned city, which became an imārat in Sokoto's gift, underwent a rapid decline. The British administration (from 1906) encouraged an economy of groundnuts and cotton. The scholarly tradition of Katsina, though but a shadow of its former brilliance, gained fresh impetus with the establishment of Katsina Training College (1921), and through its walls passed two of Nigeria's most famous sons, Sir Ahmadu Bello and Sir Abubakar Tafawa Balewa.

J. R. WILLIS

KATTĀN, Arabic word denoting both flax and linen.

The Arabs already knew and esteemed linen fabrics in pre-Islamic times. In this early period these were usually khudāfī, i.e. Coptic stuff, since they were imported from Egypt. Until the later Middle Ages Egypt remained famous for its flax and its linen fabrics. The Geniza documents, which mainly date from the 5th/11th century, contain copious documentation on the flax trade. From these documents it appears that flax was mainly grown in Upper Egypt. There were many kinds of flax: S. D. Goitein has found no less than 22 varieties, mostly called after particular localities, mentioned in Geniza documents. Consequently, the prices of flax varied a great deal. In Fāvūm times the price of 1 kufur of flax varied a great deal. In this period Egypt exported great quantities of flax to Tunisia and Sicily and even to southwestern Persia.

The Muslims inherited from the Byzantines a flourishing linen industry, which was located in Lower Egypt. The most important centres were Tinnsa, Damietta, Dabik and Shata, but linen was also manufactured in many small towns and villages surrounding these places. In all these towns, Coptic weavers produced white and coloured linen, hayab and qharb, two kinds of very fine linen, and dibb, brocaded linen; Arab writers also mention gold-embroidered linen. The fabrics, and garments made from them, were exported both to Muslim and to non-Muslim countries. The Egyptian linen industry began to decline in the first half of the 7th/16th century, when the factories of Tinnsa, Damietta and Dabik were closed; their decline was probably the consequence of the increasing import of European textiles.

Another region which produced flax and had a linen industry was the Persian province of Fās. There the towns Shīrāz, Kāzarūn and Tawwadj had in the 4th/10th and 5th/11th centuries linen factories which were famous for their products. Shīrāz, Djjānnabā and the small towns of Dariz and Furdj exported linen fabrics to other provinces of Persia. In Egypt linen was the staple textile for many centuries, as is borne out by hundreds of inventories of trousseaux found in the Cairo Geniza. During the flourishing period of the Egyptian linen industry its products were used not only for making garments, but also as table-cloths, for tents and even for the covering of the Ka'ba.

(E. ASHTOR)

AL-KATTĀNī, the name of an important and celebrated family of Fās, belonging to the Sharifian branch of the Idrisids [q.v.]. The Kattāniyyūn are descended in effect from Muhammad, the son of Idrīs II, the one who shared out his kingdom amongst his brothers. They accordingly held power in Fās until they had to flee, but returned in the 10th/16th century. Their family house was situated in a quarter named after a certain Ibn Šawwāl, and fronted a steeply-sloping street; for this reason, one of their first biographers, Muhammad al-Tālib Ibn al-Hādījī (d. 1273/1857), who was a ḥāfi in Marrakṣīg and in Fās, gave to his work on them the title Naṣm al-durr wa ḫaṣaṣṣat Ibn Šawwāl.

Morocco owes to this family a remarkable succession of scholars, jurists and literary men, the latter mainly distinguished in the biographical field. Above all, the family attained its greatest fame at the end of the 19th century and the beginning of the 20th century, notably through the intellectual and moral influence which it exercised in the region of Fās, in Meknès and in other large towns of Morocco as the founder of a religious order.

Amongst the best-known members of the family one may mention: 1Umār b. Ṭāhir al-Kattānī (d. 1309/1892-3), author of a work on the families of Fās converted to Islam. Abu ʿAbd Allāh Djiṣār b. Idrīs al-Kattānī (1240-1323/1824-1905), known both as a scholar and also for his disinterested conduct, of numerous works on his family.

Muḥammad b. Djiṣār, son of the preceding, b. at Fās 1275/1858-9. Drawn to the east, he went to live in Medina ca. 1910 after having twice made the pilgrimage; he then returned to his native town in 1926 and died there ca. 1927. He threw special light on his family by his Salwat al-anfās wa-muhādāhat al-akhyās bi-man ubbirā min al-ʿulamāʾ wa ṭ-sulāhā bi-Fās. This work, a model of its kind, is a far-reaching survey of the ʿulamāʾ, ʿulāmāʾ, teachers and holy men of the city of Fās. It is at the same time a treatise on the cult of saints and a source of prime importance for the religious history of Fās, its development, its topography and its topography.

The last of the great and well-known Kattānīs, who had to shoulder the responsibilities of head of the family during the years in which Morocco came to independence, is the Šaykh ʿAbd al-ʿĀṣad Muḥammad ʿAbd al-Haṣy. Like his predecessors, he was an erudite scholar and the possessor of a fine library. He had travelled in the east and studied there. He wrote a great number of books and articles, amongst which may be mentioned a family history al-Maṣāḥīr al-sāmiyya fi ʾl-nisba al-ṣāliḥa al-kattāniyya and a Fihris al-šahāris, published in 2 vols. at Fās in 1346/1927-8. He was Keeper of the Library of the Karawiyīn before the Protectorate, and he took part in compiling the first catalogue of the books scattered about the various places of this ancient city when an inventory was decided upon in 1915. However, Muḥammad ʿAbd al-Haṣy not only kept up his noble family tradition of Islamic scholarship, but he
also retained with them, as an Idrisid sharif, a violent hatred of the reigning Alawi dynasty. He was imprudent enough to be involved with el-Glaoui in the plot which in August 1953 ended in the deposition and temporary exile of Sidd Muhammad. When the latter returned to power and Morocco received its independence, Muhammad 'Abd al-Hayy had to go into exile in France, where he died on 28 September 1962 at the age of 77.

Bibliography: In addition to the references in the article, there is a description of the flag in A. Christsen and, Sasanides, 502-4; see also idem, Kayanides, index; Carrara de Vaux, Histoire des rois de Perse, ed. and tr. Zotenberg, Paris 1900, 38 f.).

AL-KAWAKIBI, 'ABD AL-RAHMÂN B. AHMAD B. MAŠûD, a pioneer in the theory of Panarabism, was born in (?) 1849 into a family of notables long settled in Aleppo, and died in Cairo in 1902. Orphaned at an early age, he was brought up by an aunt in Antioch, where he became a pupil of his mother's maternal uncle, said to have been sometime tutor to Prince 'Abbâs Hilmi (1874-1944) [q.v.]. He also attended al-madrassa al-kawakibiyya in Aleppo. He perfected Turkish and Persian as well as Arabic, and acquired some knowledge of secular subjects but not of a European language. He led an active literary and political life, editing the official Aleppo paper Furat in its Arabic and Turkish sections from 1875-1880 [q.v.]. In 1883 he was acquitted. His property was confiscated, however, and he was forced to emigrate to Cairo in 1898 or 1899. From Egypt he toured various Muslim countries and went as far as Karâfü; his sudden death stopped another planned tour into the heart of Arabia. In Cairo he is said to have received the monthly salary of 50 guineas from the Khedive 'Abbâs Hilmi in order to win for him the suffrages of the skylâs of Aden and the Nine Provinces for the caliphate which he wished to assume.

Al-Kawakibi published two books, drafted while he was still in Syria, both of which have been convincingly shown to derive from Western models. He used two pseudonyms: al-Sayyid al-Furatî and al-Râbîlâm K. Umm al-Kurâl, which echoes the views expressed by W. S. Blunt in The Future of Islam (1882), was written in the guise of the proceedings of a secret society and was first published under a pseudonym in 1899, almost certainly clandestinely, the place of publication being given as Port Said. It was not until Rașîd Ridâ [q.v.] serialised it in al-Manâr [q.v.], April 1902-February 1903, that the book became widely known. The book makes the first sure and permanent transition in Arabic from Panislamism to Panarabism. It discusses the caliphate and argues that the problems of Islam are best solved by transferring the caliphate from the house of 'Ummân to Kurayší. An Arab caliph would be installed in Mecca and would exercise, with the concurrence of a special council of consultation (gûra), political authority over the Hidîjâ only. This caliphate would be devoid of all other political and military powers; its spiritual nature, as well as its political position of the Arabs within Islam, is of late, Sâsânid origin.

Whatever the truth, the Arabic historians frequently reproduced the legend, especially as the drafş-i Kâwûyân is associated with a glorious episode in the history of Islam. The tale goes that the emblem of the Iranian rulers fell into the Muslims’ hands at the celebrated battle of al-Kâtîsîya [q.v.], although an author like Masûdî, who calls the blacksmith here Kâbû, has the honesty to cite equally the capture of al-Ma’dâlîn or even of Niğâwûn [q.v.] (Tanbîh, ed. Saâdi, 76).

The drafş-i Kâwûyân involved here cannot have been the blacksmith’s apron, which must have become worn out in the course of the centuries, but a flag which is described by the historians differently. According to al-Tabarî, i, 2175, it was 12 cubits long and 8 wide and made out of panther skins, and Masûdî, Murađî, iv, 224 = § 1555, cf. Balâsamî-Zotenberg, iii, 395, adds that it was encrusted with precious stones and mounted on poles fitted one into the other; al-Jâhîz, Farûk, Mafâthîh, 115, says that it was made from a bear or lion skin, and al-Mâkidî, Bâdî, v, 184, from that of a kid or lion, and later, from brocade and gold; and Ibn Khaldûn, Mubaddîma, ed. Quatremère, iii, 135, tr. Rosenthal, iii, 168-9, adds that a talismanic device of numbers was woven on the flag.

There emerges from these few references that no author had been able actually to see the flag, for the simple reason—that it had long before ceased to exist. According to one tradition—to be regarded with caution—it was Dîrâ b. al-Khâẖâbî [q.v., and add the capture of the drafş] who got hold of the flag and who received in return for it 30,000 dînârs, when it was in fact considered to be worth 200,000 (Murađî, loc. cit.; cf. Tanbîh, loc. cit.). Sa’d b. Abî Wâḳâsh then sent it to ‘Umar b. al-Khâẖâbî, who had it cut up into pieces and divided amongst the Muslims (al-Thûlîbî, Histoire des rois de Perse, ed. and tr. Zotenberg, Paris 1900, 38 f.).

articles in al-Mu'aṣṣad of ʿAli Yūsuf in 1900. It is to a large extent a faithful rendering in Arabic of Della Tirannide (1800) by Vittorio Alfieri. Notes for other publications were destroyed or lost.

**KAWALA, Kawa, port on the Aegean Sea coast opposite the island of Thasos, on the frontier between Macedonia and Thrace.** In classical times, it was on this site the town of Neapolis, which served Philipps (P. Lemerle, *Philippines et la Macedoine Orientale,* Paris 1945, 529, 544). In the Byzantine period, the town was known as Christopolis, but the Ottoman sources always refer to it under the same name Kawa the Turkish I'a reign at a date which is difficult to determine; in August 1373 it was still in the possession of the grand prinicus Alexis, who had just repulsed an attack by Turkish pirates of unspecified origin and obedience (*Diplomatarium Veneto-Levantinum* sine acta et diplomata res veneto-graece alque Levantis illustrantius, ed. R. Predelli, ii, 164-6; Lemerle, *op. cit.,* 209 ff.). It was captured by the Venetians fairly promptly after the fall of Serres in 1383, since it was situated on the route of penetration into Macedonia.

At the time of Meḥmed II, in ca. 883/1478-9, the district of Kawa comprised the town and 11 villages, with 546 non-Muslim hearths, 23 Muslim hearths, 25 unmarried persons and 28 widows; its revenue was 34,136 aspers. The town itself was made up of 75 non-Muslim hearths, 12 Muslim hearths, 8 unmarried persons and 8 widows. The district's natural resources included cereal cultivation, silk worm rearing, and above all, silver mining, the town was made of silver. In the 12th/18th century there was a French vice-consulate at Kawa, which belonged to the viliyet of Salonika. At the end of the 19th century it was conquered by the Turks, but this was never put into practice, and a few years after the First World War, the town could not be used as anchorage for warships.

After the administrative re-organisation of 1864, Kawa was constituted a kādāt of the sanjāk of Drama, which belonged to the vilayet of Salonika. At the end of the 19th century its population increased and reached well over 10,000, the Muslim and Greek elements being predominant. In ecclesiastical administration, Kawa was subordinate to the bishop of Xanthi.

In the 18th and 19th centuries, the cultivation of cotton, and above all tobacco, constituted the district's main source of wealth (E. Beaujour, *Tableau du commerce de la Grèce et de l'Asie Mineure,* Paris Year VIII, 89, 92); under the name Kawala it was conquered by the Turks in 1912, but during the Second Balkan War, the Greek fleet seized it (July 1913); by the Treaty of Bucarest (10 August 1913), the town was ceded to Greece (Nicolai-des, *Griechenlands Anteil an den Balkanhiegen,* Vienna-Leipzig 1914, 367 ff.; E. Z. Karal, *Osmanlı tarihi* i, Ankara 1970, v, 125 ff.). He built there a school (mühendis-khane-yi khayyritte), a madrasa, a mosque, a library and a soup-kitchen ('imārāt), and assigned the revenues of the island of Thasos for the upkeep of his pious foundations (Kāmīs al-aʿlām, Istanbul 1314/1896, v, 3094-5). Today, his house is a museum.

One of the clauses of the Treaty of San Stefano (March 1878), made at the end of the Russo-Turkish War, envisaged the cession of Kawa to the Bulgarians, but this was never put into practice, and a few months later the treaty was replaced by that of Berlin (15 July 1878). At the time of the First Balkan War, Kawa fell into Bulgarian hands (November 1912), but during the Second Balkan War, the Greek fleet seized it (July 1913); by the Treaty of Bucarest (10 August 1913), the town was ceded to Greece (Nicolai-des, *Griechenlands Anteil an den Balkanhiegen,* Vienna-Leipzig 1914, 367 ff.; E. Z. Karal, *Osmanlı tarihi* i, Ankara 1970, v, 125 ff.). KAWAR, a group of oases in the southern Sahara, in the Republic of Niger, situated between the Tibesti Mountains in the east and the Air in the west, halfway between Fezzan in the north and Lake Chad in the south. The administrative centre is Bilma, which lies at 18° 41' N and 12° 55' E. Kawar is a chain of oases 75 km. long from north to south, but only one to five km. wide, where water flows in abundant springs on the eastern edge of the Ténéré. It has naturally been utilised by the caravan route from Fezzan to Chad. Its 3,000 to 4,000 inhabitants, who are divided into 14 frequently victimised the inhabitants.

These oases do not seem to have been known to classical antiquity, despite the proximity of Fezzan and the representations of chariots engraved on the rock at Djado and Latouma.

The history of Kawar is obscure. Ibn 'Abd al-Hakam mentions it first, telling of its conquest in 4966/1065 by 'Uqba b. Nafi'. Al-Iṣṭaphānī, in 549/1154, devotes a whole passage to it but his description is so confused that, with the exception of Ankalala = Kalala, the toponyms cited cannot be identified. He lays stress chiefly on its important alum mines, whose produce, he says, was exported to the Medi-

The very important Chad-Fezzan caravan route through which slaves from Hausa territory were ex-

France and of the United Arab Emirates. The Kawasim, who claim to be ghariifs, are an offshoot of the Huwala, Arabs long established on the Persian side of the Persian Gulf, some of whom have returned to their original home-

References to the Kawasim in the historical records become frequent in the 12th/13th century. In 1131-

When the German explorer C. Niebuhr passed through the Gulf in 1178/1765, he learned that Rāshid b. Maṭar al-Kāsimī of Ra's al-Khayma built a port at Bāṣīdū on the island of Kīghm which drew trade away from the British factory at Bandar ʿAbbās, whereupon the British Agent in Persia in 1139/1727 forced this ruler to make good the loss suffered by the East India Company. In 1149/1737 Nādir Shāh's forces launched an amphibious invasion of Umān, and a Persian garrison stayed in Ra's al-Khayma (still often called Djlufār) for over a decade afterwards, but by 1176/1763 the Persian admiral in the Gulf was reported to have exhausted his resources in paying subsidies to the ruler of Ra's al-Khayma.

When the British consolidating their control of India, the Persian Gulf became one of the main avenues for communications with the home country, and the transit of British vessels over its waters grew more frequent. In 1192/1778 the Kawasim seized a small British ship and held it for ransom, an incident that helped to touch off a long conflict between the

al-ΚΑΨΑΙΜ (sing. Kasiim), the ruling family of al-Shārika (Sharjah) and Ra's al-Khayma (qq.v.), two of the member states of the United Arab Emirates. When the German explorer C. Niebuhr passed through the Gulf in 1178/1765, he learned that Rāshid b. Maṭar al-Kāsimī of Ra's al-Khayma built a port at Bāṣīdū on the island of Kīghm which drew trade away from the British factory at Bandar ʿAbbās, whereupon the British Agent in Persia in 1139/1727 forced this ruler to make good the loss suffered by the East India Company. In 1149/1737 Nādir Shāh's forces launched an amphibious invasion of Umān, and a Persian garrison stayed in Ra's al-Khayma (still often called Djlufār) for over a decade afterwards, but by 1176/1763 the Persian admiral in the Gulf was reported to have exhausted his resources in paying subsidies to the ruler of Ra's al-Khayma.

When the British consolidating their control of India, the Persian Gulf became one of the main avenues for communications with the home country, and the transit of British vessels over its waters grew more frequent. In 1192/1778 the Kawasim seized a small British ship and held it for ransom, an incident that helped to touch off a long conflict between the
two parties in the Gulf. The British were prone to
describe an act such as this as simple piracy; the
Kawasim were inclined to regard it as consonant with
the Islamic precept for waging dhūḥād against the in-

fidel.

In the early 13th/late 18th century Wahhābī
influence burgeoned along the coast where the
Kawasim were based. Rāshīd b. Maṭar’s son Ṣaqr
acquired the title of Amir of ‘Umān under Āl Su‘ūd,
the religious and secular chiefs of the Wahhābīyya.
After his victory over the Trukids of ‘Umān, Ṣaqr’s
son Sultān turned over a fifth of the spoils for
dispatch to the Wahhābī capital al-Dir‘īyya.

Further British commercial penetration into
the Gulf brought about clashes, in a number of which
British merchantmen were captured. The British
took to using the name Kawasim in the corrupted English
form Joasnee as a generic term for all Arabs in
the Gulf who harassed their shipping. Su‘ūd b. ʿAbd
al-ʿAzīz Āl Su‘ūd deposed Sultān b. Ṣaqr for reasons
that remain obscure, but Sultān’s successor continued
harrying the British. In retaliation, a British fleet
in 1224/1809 sailed to Ra‘s al-Khayma, burned many
Kāsimī craft in the harbour, and sent troops to oc-
cupy the town for a day, during which they plundered
it and set it on fire. This British blow did not long
deter the Kawasim, who proceeded to add an Ameri-
can merchant steamer and some French ships to their
prizes. A new British expedition took Ra‘s al-Khayma in
1235/1819, and a detachment of sepoys under a
British officer held it for three months before turning
it over to Sultān b. Ṣaqr, who, having incurred the
displeasure of Āl Su‘ūd, was in the good graces of
the British. The British then imposed a general
truce for six months, covering the season
for pearl diving in the summer. This truce was re-
newed repeatedly, and the stretch of coast to which
it applied, formerly called by the British the Pirate
Coast, came to be known as the Trucial Coast. The
last limited truce, which was good for ten years,
was superseded in 1269/1853 by a treaty of peace in
perpetuity, which provided for “a perfect maritime
truce... for evermore”, which was to be watched
over by the British government.

British control over the Trucial States was strength-
ened by the exclusive agreement of 1309/1892, signed
by the Kāsimī rulers of al-Sharīka and Ra‘s al-
Khayma among others, which bound the Arab signa-
tories not to enter into any agreement or correspond-
ence with any power other than Britain.

In 1322/1904 Persia, which not long before had
taken over the former Kāsimī possession of Lindja
on the Persian side of the Gulf, tried to annex
the island of Abū Mūsā and one of the two islands named
Tunb, which the British regarded as belonging to
al-Sharīka. Thanks to British intervention, this
attempt was thwarted.

After the death of Sultān b. Ṣaqr in 1282-3/1866,
the position of leadership long enjoyed by the
Kawasim on the Trucial Coast slipped away into
the hands of their southern neighbours, Dubayy and
Abū Ṣābī [p.n.], Dubayy became the foremost
Trucial port for trade, and Abū Ṣābī under its
energetic ruler Zayyid b. Khalfā (d. 1326/1908)

built up substantial political and military strength.
Abū Ṣābī then declined somewhat during the
period when Zayyid’s four sons followed each other
as his successors, but under his grandson Shakhbūt,
oil was discovered in its territories in commercial
quantities in 1379/1959, the first such discovery
on the Trucial Coast. As the oil industry developed,
Abū Ṣābī outdistanced its sister Trucial States in
an almost incredible fashion, achieving thanks
to its small population the highest per capita income
of any country in the world. In 1386/1966 oil was
found off the shore of Dubayy, which took second
place as a Trucial Coast producer, though still far
behind Abū Ṣābī.

Towards the end of 1391/1971 the British rein-
ished the dominance they had maintained over the
Gulf for well over a century, withdrawing all their
military forces and giving up the RAF base at al-
Sharīka. Just before they left, Iran occupied
the islands of Abū Mūsā and Greater and Lesser Tunb
inside the mouth of the Gulf. The occupation of Abū
Mūsā was carried out in agreement with al-Sharīka,
but Ra‘s al-Khayma attempted to resist the Iranian
landings on the Tunbs. In 1392/1972 oil was struck
in the waters off Abū Mūsā, with the profits from
its exploitation to be divided equally between al-
Sharīka and Iran.

As the British moved out, the seven Trucial States
banded together in the new United Arab Emirates.
Abū Ṣābī and Dubayy, the richest members, acquired
respectively the presidency and vice-presidency of
the union. Sultān b. Muhammad b. Ṣaqr al-Kāsimī,
the ruler of al-Sharīka, and his distant cousin Ṣaqr
b. Muhammad b. Šālim al-Kāsimī, the ruler of Ra‘s
al-Khayma, joined the Supreme Council. Other mem-
bers of the Kāsimī family received portfolios as
Minister of Labour and Labourers, Minister of
Electricity and Water, Minister of Justice, and
Minister of State for Supreme Council Affairs.

British terminated all its existing treaties with
the Trucial States and concluded a new treaty of
friendship with the United Arab Emirates.

KAWKAB [see nūqṭām].

KAWKAB AL-HAWA, the Compass Dial,
mediaeval fortress in Palestine whose name
has been corrupted into “Coquet” by the Frankish
authors who also cite it by the name of Belvoir.
Construced not far from Mount Tabor (al-Tār)
on a monoponty 297 m above the Valley of the
Jordan and situated 4 km to the south of the Lake of
Tiberias and 14 km to the north of Baysan [p.w.], a
watchpost in the Ghawr, it controlled the province of
the Jordan and guarded the fords into Galilee, notably below the confluence of the Yarmuk, the Dijr el-Madjarīf (Bridge of the Confluence).

The castle presents a plan of Byzantine type; it consisted of a rectangular keep enclosed in a surrounding wall 160 m by 120 m flanked by square towers, with a salient and door let into it in the midst of each front (Deschamps, 121-3), and there are ramps at the base of the openings. The northern front dominates perpendicularly the Wadī Bīrā, the three other fronts are bordered by ditches cut twenty metres into the rock.

It was reinforced in 534/1140 by the King Fulk. The Hospitallers acquired it in 563/1168 and added to the defences. In 578/1182, the troops of Saladin were repelled by the Franks on the neighbouring plateau of Kawkab, but after his success at Hittin (q.v.), the Kurdish prince contemplated the conquest of Galilee, and on the 15th Dhu'l-Kaḍa 584/5th January 1189, aided by the contingents of his brother al-ʿAdil, he approached to seize Kawkab, bastion of the Crusaders' resistance in the Holy Land.

In the reign of al-ʿAdil, Kawkab was occupied by the amir ʿṢārim al-Dīn Kāyman al-Nāṣirī; then Ilī al-Dīn Usāma received it as an inherit. He kept the castle until the day when al-Muʿazzam ʿIyaʿ, younger brother of al-Kāmil and prince of Damascus, took it from him (609/1212). In 616/1219, the Franks occupied Damietta, and al-Muʿazzam gave the order to dismantle Kawkab; the work was suspended during the diplomatic discussions between the Sultan al-Kāmil and the Legate Pegasos, then resumed, and al-Muʿazzam completed the dismantling of the place in 624/1227, so that the Franks of Frederick II might not eventually take advantage of it. At the beginning of 638/end of 1240, the Hospitallers recaptured the castle from the Ayyūbids. At the end of 638/beginning of 1241, with peace restored, Kawkab was confirmed as Frankish territory, but at the beginning of 645/summer of 1247, when al-Śāliḥ Ayyūb resumed operations, the Franks, who had not been strong enough to defend the place, had to surrender it. Under the Mamlūks, ʿAḍār al-Kawkab was part of the province of Saṣāf. In our time there is a village near the ruins of the castle which bears its name.

Kawkab, the name of several places in South Arabia.

1. The name of a sanctuary mentioned in the inscription Halāvy No. 866, 3-4, copied from a building in ʿAdeḥ by J. Halévy (mirabān Kaw-
A stone bridge with huge arches led across the Wādī Nabhān to the Bāb al-Hadīd but it was blown up by the Arabs in 1572.

Kawkābān is an ancient city dating from the Himyar period, as inscriptions found there show. Al-Hamdānī mentions a stronghold of Kawkābān on the summit of the Djabal Dhūlqār which is certainly identical with the old town of the modern Kawkābān. In troubled times its strength made it a desirable place of refuge—in 1569 the Turks burned the stronghold in vain—and for centuries Kawkābān has been important as a capital and residence of the Imāms of the principality of the same name. The latter comprised in addition to Kawkābān the towns of Shibām, Ijadja, Tawila, the Khabt Mirwāb (between Kawkābān and Harrār), the lands of Miswar, Sāri, Hofās, Milhān, Ādhir, 'Ārus, Banū Khayyāt, al-Shahihiyā Lā'a, a part of the Banū Hubaysh, the Banū Nashir and of al-Afṣam. The old dynasty of the country, which traced its descent from the Imām Ḥāḍīf of Sa'da, was able to retain its imamate even during Turkish rule and to maintain its independence from the Imāms of Sa'nā' after the Turks were driven out in 1630. C. Niebuhr (Beschreibung, 256; see the Bibliography) has given a genealogical survey of the princes of Kawkābān. When the Turks again invaded Yaman in 1733 and subjected the old town for a seven months' severe siege also passed to the Turks but only after capitulation. The last ruler of Kawkābān, Sayyid Aḥmad b. 'Abd al-Rabīm, who had bravely defended the town against the Turks, afterwards lived in Sa'nā' on a pension given to him by the Sublime Porte. At Glaser's visit in 1883 his brother Seyyid Yaḥyā still lived in the old ancestral home in Kawkābān, which is remarkable for the splendid stucco-work of the interior and the rich ornamentation of its façade. The windows and doors had all sorts of varied shapes, colours and ornaments.

Kawkābān was in the early 20th century almost depopulated; although the houses, which in spite of much destruction were still standing, afforded accommodation for some 30,000 people, there were then barely 100 in the town. One gets a splendid view over the fertile fields and valleys of the country around, especially the plain of Shibām, a part of the plain of Sa'nā' and the surrounding hills.

5. Kawkābān al-Sba'a is in Ma'bīd, west of the town of Kawkābān (4), but belongs to Tawila, a small place of no special importance.

Kawm (a.), plural akwām, akwāmin, akwāymin, people. The word occurs also in Nabataean, Palmyrene and Safaitic inscriptions in the name of the deity Šayyā' al-Kawm "support of the people", see Lidzbarski's Epithemis für semitische Epigraphik, i, Index s.v. According to some lexicographers, the word applies in the first place to men; evidence for this opinion is afforded by passages from literature where Kawm is used in opposition to ṭīṣa (women). The term does not primarily suggest the meaning of nation. A man's Kawm are his āṣa'a and his ʿašīra. In this limited sense, the word occurs also in the well-known tradition: "Who clings to a Kawm without the permission of his father (Ṣabā'a), is cursed by Allāh, the angels and the prophets" (Buḥārī, ʿAdā'í al-Madīnūn, bāb 1). Used without the article, it has the same meaning as English "people", French "gens" and German "Leute", e.g. Sūra V, 63: "People who do not understand"; cf. IX, 61 (also with the article, XII, 87). The plural has the same meaning. In a tradition it is said: "There will be people (akwām) in my commuinity, who will proclaim licentiousness regarding women and wine" (Buḥārī, ʿAqībā, bāb 6).

In the Kurān the term is chiefly used in connection with the prophets, Muhammad's predecessors: the people of Ibrāhīm, Lūt, Nūh (e.g. VII, 116; II, 91; XXII, 43; XXVI, 105, 160; XXXVIII, 11), i.e. their unbelieving contemporaries. In this sense it is also used in connection with Muhammad himself: "Whyme declare Him a lie, though He is the Truth" (VI, 66). The same use of the term is to be found in the Ḥadīth, e.g. Buḥārī, Anbiyyā', bāb 3, 9, 31, 54 etc.

Kawm is, however, also used in a sense that comes nearer to the modern conception of "people", e.g. in the tradition referring to one of the festivals: "Every Kawm has its festival, and this is ours" (Buḥārī, ʿIdayn, bāb 5). Al-Kawm with this sense has sometimes an emphatic meaning, e.g. Aḥmad b. Hanbal, Musnad, vii, 72, where Ṭūfayl, one of
Aisha’s brothers, relates a dream which he had. He dreamt that he passed by some Jews and said to them: ‘Verily, you would be the people of one language, but you pretend that ‘Uzayr (Ezra) is the son of Allah’. They answered: ‘And you would be the people, it was not that you say: Mad sha’ Allah wa-ma sha’ Muhammad’, etc.

In Atchin (Atjeh) the term has acquired a peculiar form and use: kawm has here the genealogical meaning of “all those who descend from one man in the male line”, see Snook Hurgronne, The Achkenese, Index s.v. kawm.

For special meanings of the word see Dozy, Supplément, s.v.; and see also GÖM. (A. J. Wensinck)

KAWMIYYA (A.), nationalism.

1. In the Arab world east of the Maghrib.

The term derives from kawm, a term of tribal provenance used to denote a group of people having or claiming a common ancestor, or a tribe descended from a single ancestor. One’s kawm is simply one’s people, either genealogically determined or mythologically and folklorishly depicted. In this century, kawmiyya refers to the movement of nationalism among the Arabs of the Ottoman dominions in the Fertile Crescent that were conquered by the Allies in the Great War. The use of the term has spread since the Second World War to other parts of the Arabic-speaking world. After the mid-20th century, kawmiyya became the expression of a purported economic, political and social Arab revolution. Essentially, though, al-kawmiyya al-’arabiyya is the term widely used for the movement of Arab nationalism. Arab intellectuals since the last war have tried to formulate theoretical and philosophical foundations as well as historical and ideological premises for this nationalism. Most active among them were Syrian, Lebanese and Iraqi politicians, teachers, journalists, writers and publicists. Prominent among the more recent exponents and advocates of Arab nationalism have been the Ba’th (Baath) party, founded in 1943, and its antecedents among smaller radical Arab youth movements in Iraq and Syria in the nineteen-thirties. In 1955, Djamal Abd al-Nasir (Nasser) of Egypt took up the banner of kawmiyya in connection with his drive for hegemony in the Arab Middle East.

Briefly, the advocates of Arab nationalism argue the existence of an Arab nation (umma ‘arabiyya) which, though actually divided into separate states, ought to be united in a single, organic sovereign political entity. What binds the members of the Arab nation together is a common faith, Islam, a common language, Arabic, a single culture, Islamic, and a shared history. Economic and other practical grounds for unity have, until recently, rarely been formulated or proposed. Religious sentiment, common identity and an aspiration to political unity, that is, have been the fundamental ingredients of the movement of Arab nationalism, Arabism and Pan-Arabism—all aspects or variants of kawmiyya—in this century.

In a “Memorandum respecting Pan-Arabism” to the then British Foreign Secretary Anthony Eden, dated May 27, 1936, Gilbert Mackereth, HM Consul in Damascus, opined:

There is no doubt of the existence of an Arab movement, but there is considerable doubt regarding its potentialities. (F. O. 377/1936, Public Record Office).

Even in 1936 one of the movement’s objectives was Arab unity, the creation of an Arab state which would comprise the whole of the Arab nation. But its exponents at that time were confined to Iraq, Lebanon and Syria, all of them new states under British or French mandate. It was also a period when advocates and leaders of the movement were engaged in defining the Arab nation geographically and ideologically. Egypt was still distant from the concerns of kawmiyya, occupied as she was with the question of her relations with Britain. The Arabs in the Peninsula were strongly anchored in an Islamic perception of things political and in a basically tribal social ethos, neither concerned nor particularly interested, nor in need of a secular national identity.

However, 1936 provided a fresh external stimulus to the Arab movement of kawmiyya in the form of the Palestine problem, involving an Arab-Jewish antithesis in Palestine under the British mandate. Yet, forty years later today, the movement’s aspiration of unity remains unfulfilled, and the same ambivalence regarding the meaning, importance and existential form of kawmiyya continues to plague it. Instead of one Arab nation-state, there are several Arab states.

As elsewhere in the world, the only definition basic to the several existing Arab states is a territorial one. Kaumiyya, as an all-encompassing concept of Arab nationalism, is a self-contradictory, unrealistic doctrine. Not only because the Arab nation is dispersed in several states, but also because it is difficult anywhere in the world to have a complete, or perfect, nation-state, i.e. one where the state is co-extensive with one nation. Nor is there a satisfactory criterion of nationality based on race, language and religion, or culture and history. Yet kawmiyya, like nationalism elsewhere, remains a potent doctrine and a powerful political myth. Even though the only absolutely clear division between countries is territorial, there is some substance to the “idea of the nation” to the extent that there is a deeply felt urge or need to identify with a group. To this extent also, kawmiyya must be viewed as a psychological concept.

The most powerful basis of kawmiyya among the Arabs in the last thirty years has been an emotional one, deriving from an idealised religious culture, Islam, and a more recent historical experience under Ottoman rule and European influence. In societies where for many centuries identity was religiously determined or based, and ethnically distinguished in a mosaic of co-existing religious and ethnic communities, corporate loyalties are scarce and difficult to develop. Kaumiyya may be viewed as a compensatory movement among the Arabs on two levels. Firstly, as a reaction to prolonged Ottoman domination, under which the question of national identity within the umma—community of believers—did not arise. Secondly, as a response to territorial-political arrangements that were imposed by European powers upon the dissolution of the last Muslim empire in 1920, kawmiyya provides a potential integrative force against the fragmentation of political reality.

Because Arab societies did not experience a movement for the secularisation of political identity, life and perceptions comparable or parallel to that of Europe beginning in the Middle Ages, the very concept of the nation-state and the movement of nationalism remained an extrapolation, the transposition and extension of an essentially religious-based political culture. Their members have always
been conscious of their Islamic identity. Kawmiyya has been an attempt to make them conscious of their Arab identity. The tradition of communal, ethnic and religious differentiation has been an obstacle to the integrative assumptions and aspirations of kawmiyya. More recently, the proliferation of sovereign independent territorial Arab states has been a powerful trend. Consequently, nationalist ideology drifted into being a rationalisation of primordial Islamic sentiments and became particularly useful as a rallying sentiment against external threats or enemies. Kawmiyya, in short, has so far failed to give the Arabs, politically organised in several states, a secular identity separate from their Islamic-based one.

One precondition of kawmiyya emerged in the 19th century, namely, the historical consciousness or recognition of a difference, an exclusiveness, from others, i.e. from non-Arabs. This occurred with the rapid, forceful European military, economic and political penetration of the East, and the impact of the political ideas and institutions which this brought with it. The revival of the Arabic language, notions and schemes of religious reform, the over-apologetic and intellectually weak defence of Islam against the onslaught of European modernity were all consequences of this re-awakening of the shahada. It provided the requisite mythological and other justification for first, Islamic, and later Arab, opposition to alien rule, preparatory to demands for self-determination. Modern reform in the Ottoman State itself, leading to the adoption of nationalist doctrines by the Turkish ruling classes—a radical departure from the integrative universalism of the ummah—eventually provoked movements of Arab separatism, culminating in the British promotion of an Arab Revolt in the Hijaz against the Ottoman sultan-caliph in the First World War. More important was the development of fairly modern state administrations in several of the Arab provinces, providing the foundations of and habituation for local-national autonomy. The rise of native élites concerned with the development of secular institutions of government, administration, legislation, adjudication, education and the economy, gave added impetus to this trend. The experience in several Arab states was not, however, uniform, giving rise to disparities and differences between them, which in turn, rendered the unity aspirations of kawmiyya more difficult to realise.

Kawmiyya presupposes the existence of an Arab nation, its solidarity, exclusiveness—and its unity. But all these assumptions are founded on an essentially religious basis; on Islam the faith, on Arabic, the language of its Holy Book, on the sharī'a, its revealed sacred law, and on the history of its glorious conquests and empire. It also overlooks the ethnic and sectarian diversity that existed under an Islamic universalism. The particularism of modern nationalism therefore remained opposed to the universalism—and tolerance—of its source of inspiration, so that the efforts of the advocates of kawmiyya have been mainly directed at reconciling the difference and seeking (unsuccessfully so far) a symbiosis between 'urūqa (Arabism, which is at the heart of kawmiyya) and din (religion). The best they have been able to achieve has been to translate the solidarity of the Islamic umma into the unity of the Arab nation. But in order to do that they had first to construct a special role for the Arabs in Islam in counter-distinction to that of other, non-Arab, Muslims. This was the major preoccupation, for example, of 'Abd al-Raḥmān al-Kawākiḥī [q.v.] (d. 1902) and Shaykh Muhammad Rāghil Rīḍā [q.v.] (d. 1935) earlier in this century. More recently, 'Abd al-Raḥmān al-Bazzāz (d. 1971) tried to argue that there was no contradiction between Islam and Arab nationalism. Theoretically, the relation between religion and state did not constitute a particular problem in Islam. As a religious movement, Islam founded a state and acquired an empire by conquest. The modern fusion of Islam and Arabism therefore is not surprising. Moreover, just as the unity of Islam and the solidarity of the faithful has been a doctrinal tenet but only a political myth, so also Arab unity today is a potent myth of kawmiyya though politically non-existent. It is a prescriptively ideological, substitute reality. The urūqa of kawmiyya's Pan-Arabism has been as elusive and problematic as the ideal of Pan-Islamism before it, or for that matter, the ideal of other, non-Muslim pan-movements, e.g. Pan-Germanism, Pan-Slavism or Pan-Hellenism.

Nationalism is, by definition, a secular concept or idea. Behind it, in Europe at least, lay a formid-able array of philosophical speculation about secularism and authority in the state, from the Middle Ages to the Renaissance, the Reformation and the Enlightenment, and all of it supported, distorted and confused by a pre-Christian classical tradition. Kawmiyya, on the other hand, has not managed to free itself from its Islamic antecedents and foundations because there has been no comparable philosophical, speculative basis to Arab secularism. Elements and manifestations of the latter have, however, struggled through the surface of Arab societies, and have become discernable in the conduct of their public affairs by powerful rulers or chiefs who were able to command the traditionally-perceived personal loyalty of their subjects or followers and had centralised administrations at their disposal.

Even though the concept is arbitrary, and despite its limited scope, one can argue that kawmiyya in the sense of a feeling of Arabness within the wider Ottoman-Islamic dominion first expressed itself in the rejection of the Ottoman caliphate some seventy-five years ago. It suggested not only that the Arabs were different from the Turks but, more significantly, that they were entitled to have an Arab caliph. This was accompanied by incipient secret organisations among Arab officers in the Ottoman army before and during the Great War, demanding the recognition of Arab rights to decentralisation and local autonomy within the Ottoman empire. These early agitations culminated in the dynastic, separatist revolt led by Sharif Husayn of Mecca in the Hijaz (1916-18) in the First World War. His son Faysal's short-lived Arab Kingdom in Damascus (1918-20) constituted the basis of the myth of modern Arab nationalism and a justification of kawmiyya. The mandate arrangements imposed by Britain and France in the Fertile Crescent, however, transformed the movement for a time into one of the newly-created Arab states demanding a greater measure of and, ultimately, full, independence from, those two European powers.

The unity-variant of kawmiyya re-emerged after 1936, but remained the preoccupation of Arab nationalists in the Fertile Crescent, dependent on external circumstances, i.e. Europe, affecting British and French control in the region, and events in Palestine, provided the impetus for the adumbration of regional schemes of Arab unity (e.g. the
Fertile Crescent, and Greater Syria of the Hashimites). At the same time, Christian and Muslim Arab intellectuals sought to define the Arab nation and formulate a nationalist ideology. The writings of Costi (Kuşṭaţin) Zurrāy, Edmund Rabbath, Abd Allāh al-‘Alāyīlī and others were all in this vein. But it was the Second World War and its consequences that accelerated the movement of kawmiyya and inflated the number of its advocates as well as followers. With all the Axis powers and Allies on account of the strategic importance of their territories, the Arab countries were encouraged by Britain at one point to strengthen their ties in some form of union. The Arab League, an organisation of sovereign independent Arab states, was the result in 1945.

Whereas the stimulus for kawmiyya in the First World War was dynastic and non-ideological, in the Second World War and after it became ideological and, purportedly, secular. The leading writer on the question, Sāti‘ al-Huṣrī, became the main exponent of a romantic, idealist conception of kawmiyya in an attempt to exorcise religion from the nationalist idea. Borrowing from Rousseau, Hegel and Mazzini, he promoted the spiritual conception of the nation as a moral and psychological construct, the independent personality of the state, its sanctity and moral obligation for every Arab. In effect, however, the superimposed alien, European conception of the nation on the Islamic umma, and made the romantic feeling of kawmiyya the embodiment of the sanctity of the national personality. Islam was rendered the “national culture” of the Arabs rather than just their religion. It incorporated the real Arab spirit, and at the same time provided a substitute for the old religiously or communally-based identity of the Arab rulers, regimes and societies.

Others also wrote in a similar romantic vein in trying to define kawmiyya. ‘Alāyīlī, for instance, emphasised an internal consciousness among the Arabs of their “complete social existence”. Al-Bazzi asserted there was no contradiction between “true nationalism and true religion”. In the nineteen-fifties, Abd al-Latif Sharara called kawmiyya an emotion. The nation, he argued, is a human not a geographical reality. It is a wider concept than the state, the people or the fatherland. The feeling of being an Arab therefore transcends territorial boundaries, particularly since man is “mind, soul, or spirit more than he is body”. Michel ‘Alfāq, the Christian co-founder of the Baath party, declared kawmiyya “is love above everything else!”. Its revolutionary variant is a “psychic current”; and the Arab nation therefore constitutes one political, economic and cultural entity, regardless of its existential divisions.

After 1948, the Arab-Israel conflict radicalised and at the same time divided the movement of kawmiyya. By 1949, old Arab régimes were being overthrown, mass movements with ideological pretensions like the Baath and Nasserism from Egypt proclaimed the inevitability of wīda, Arab unity. Subsequent parallel events in Iraq and the Sudan in 1958, in the Yemen in 1962, in South Yemen in 1967 and in Libya in 1969, brought fresh adherents to radical kawmiyya, which became prominent for its opposition to the West and its projection of the economic and social reform of Arab society. While the rejection of and struggle against the state of Israel in the region provided a common foe for kawmiyya, the radicalisation of its aims by military régimes in several Arab states purporting a new kind of Arab socialism polarised their rulers. For a decade at least (mid-1950s to the mid-1960s), kawmiyya was re-defined to exclude conservative, reactionary Arab rulers, régimes and societies.

The practical manifestations of a radical kawmiyya in this period was greater inter-Arab conflict and a struggle for Arab leadership between its protagonists, Egypt, Iraq and Saudi Arabia. Nevertheless, new and older Arab states enshrined the Islamic-Arab identity of their nations or peoples in their formal constitutions. A period of inter-Arab subversion and civil war (e.g. the Lebanon, 1958; the Yemen, 1962-67) heightened the struggle for the leadership of kawmiyya. All the same, the traditional divisions beneath the sentiment of Arab nationalism persisted in their tribal, ethnic and communal form, as they erupted in the Yemen and South Yemen, Iraq and the Lebanon.

Nasser failed to integrate the Arab nation by propaganda, revolution or force. Likewise, the Baath party failed to achieve unity or socialism in its homogenous territory of Syria, in Iraq or in Jordan. The Arab socialism of both Nasserism and Baathism as the new expression of kawmiyya failed to unite the disparate and far-flung parts of the Arab nation; its foremost champion, Nasser of Egypt, suffered a humiliating defeat at the hands of the umma’s arch-enemy, Israel, and ended up a totally-dependent client of the communist Soviet Union.

The disappearance of Nasser from the Arab scene and the concatenation of events leading up to the October 1973 war against Israel, together with the emergence to prominence of very rich though otherwise weak oil-producing Arab states, have all given kawmiyya a new lease of life but with a different emphasis. Gone are the Pan-Arab illusions of the Baath and the Prussian pretentions of an Egyptian leadership. The solidarity of the Arab nation as constituted in several independent states on the basis of mutual interest, the perception of a common economic-political-cultural threat of a common enemy, Israel, and the prospect of an Arab regional economic bloc to rival that of the industrial West, are now the more prominent and vaunted features of kawmiyya. A concerted policy against the “other”, the “outsider”, seems to be its practical expression whenever possible. But since the richest of the Arab states, the financiers of this new edition or version of kawmiyya, are also socially and politically the most traditional, socialism is no longer the current policy of Arab nationalism. Even if it were, it and kawmiyya are once again the expressions of the solidarity of the umma, the Arab-Islamic nation, whose prospects of power, prestige, dignity and glory will vindicate the righteous and virtuous universalism of the Islamic tradition and heritage. The re-fusion of ‘umma (Arabism) and din (religion) has been made more effective by the infusion of māli (wealth). The use of the latter in the struggle against Israel and Imperialism, and for the restoration of the rights of the Palestinians, is now the quintessence of the solidarity of the Arab nation and of kawmiyya. The struggle, however, between the latest protagonists of this new version of Arab nationalism for leadership and hegemony will continue; the complex economic, social and communal problems will persist. But the sentiment of kawmiyya in its latest form will be mobilised in the confronta-
nation with alien intruders in the umma's territory, e.g. Israel, foreign exploiters of the Arab nation's wealth, and those who seek its political subjugation. Intercne strugles which may foreshadow and cause the annihilation of particular groups, as in the case of the Jordanian crushing of the Palestine guerrillas in 1970-71, or the communal clashes in Lebanon in 1958 and 1975-6, or the ethnic conflict between Kurds and Arabs in Iraq, or the tribal-cum-ideological civil wars in the Yemen, South Yemen and 'Umân, will persist or occur from time to time; distrust between rulers and subjects or between Arab régimes may not disappear, but the sentiment of *kawmiyya* is not a doctrine or ideology that relates to the social, economic or political order of the Arab nation, the rights and duties of its citizens, or the relations between governments and their subjects. Rather it is a psychological need of those who still find it difficult to accept the burden of a corporate loyalty to their respective states when other primordial loyalties exist to project a comforting collective difference from the outside world. It has a soothing modernising effect that glosses over the reality of the fundamental distinction and dichotomy in political behaviour of the Muslim versus the non-Muslim. Minorities subscribe readily to it because it affords them the living in urban centres. New financial power may hardly give it a thought, for the time being at least—or need it.

Modern media and communications have decidedly enhanced the sharing in the sentiment of *kawmiyya* among greater numbers of Arabs, especially those living in urban centres. New financial power may well lead to the kind of cooperative economic endeavour—which has so far eluded the Arabs—that may reduce and finally abolish social, economic and political differences between Arab states and societies, thus inducing an organic integrative unity between them. Like Consul Mackereth forty years ago, however, one must still conclude that there is no doubt of the existence of an Arab movement, i.e. *kawmiyya*, but there is still considerable doubt regarding its potentialities in the directions suggested here.

In the Maghrib the term *kawmiyya* occurs as a plural of *kâumi* (goumi, "goumier"), a member of a *kawm* (goum), to mean a contingent of cavalry levied from a tribe (Dozy, *Supplément*, s.v.), a practice continued by the French. In the sense of nationalism, nationality, its use has been affected by the common employment of French as the language of politics. This gives "nationalisme" as a term in place of both *kawmiyya* and *walamiyyin*, whose translation as "patriotisme" tends to be reserved for an earlier, more traditional sentiment (cf. Ch.-A. Julien, *Avant-propos to B. Slama, L'Insurrection de 1864 en Tunisie, Tunis 1967, ix*). On the other hand, in Morocco the term *Haraka al-kawmiyya* founded by el-Ouezzani (al-Wazzânî) in 1937 is translated as "Le Mouvement populaire" to maintain the distinction from its rival, *al-Hisb al-walami* (or *Hisb al-Walamsîyin*), "the 'nationalist' party", founded by Allal el Fassi ("Allâl el-Fâsî") (R. Le Tourneau, *Evolution politique de l'Afrique du Nord musulmane, 1920-1962*, Paris 1962, 209-10). The specific distinction achieved here in Arabic, however, is indicative of a more fundamental distinction between the two terms, which might be represented as the familiar distinction between Arab nationalism as the nationalism of a people without a national state, and the nationalism of each Arab country. It must nevertheless be seen in its North African context. In Tunisia and Morocco it has been fairly straightforward: both these countries could claim to exist independently of France. In Algeria on the other hand, the country and the nationality of its peoples were both French. Instead there was discrimination on the grounds of religion. The Senatus Consulte of 14 July 1865 decreed that Algerian Muslims (and, until the Décret Cré- mioux of 1870, Algerian Jews) should be French subjects and therefore of French nationality, but, because of the religious law under which they lived, not French citizens unless and until they renounced that law for the French civil code. The distinction thus made for the Muslim population on the basis of its Islam became the starting-point not only for a separate treatment but also for an attitude on the part of the European population, which by 1900 considered "nationalisme musulman" the equivalent of "Islamisme" and even of "cléricalisme" (Ch.-R. Ageron, *Les Algériens musulmans et la France, 1871-1919*, Paris 1968, 918-20). That this should be considered nationalism at all was seen by Ferhat Abbas (Farhat 'Abbas) in the 1930s as an obstacle to the political and economic emancipation of the indigène in a French society (Ch.-A. Julien, *L'Afrique du Nord en marche*, 3rd ed., Paris 1972, 99-100). At the same time, however, it was elevated to the dignity of a word under the name of *kawmtiya* in the writings of Ben Badis (Ibn Badîs [q.v.]), the leader of the Salafîyya in
Algeria between the two world wars, drawing upon the thought of Muhammad ʿAbduh and the ideas of Arab nationalism represented by Ṣaḥib ʿArslān. For Ben Badis the Muslim population of Algeria was distinguished by its kawmiyya, its "national identity", based upon Islam but including equally the Arabic language and the Algerian homeland. This gave rise to a ḍīnissiya kawmiyya, an "ethnic nationality" to be distinguished from the ḍīnissiya ʿ statiyya, the "political nationality" of France. (cf. M. M. al-Diazaʿīrī, Les Algériens musulmans en Algérie de 1925 à 1940, Paris and the Hague 1967, 396-9). The active expression of this national identity was nationalism under the name of waṣāniyya, "patriotism", a sentiment never extinct (cf. Ageron, Les Algériens musulmans, 920-2), now on a par with the waṣāniyya, the nationalism, of Algeria's neighbours. This formula, adopted in principle by ʿAllāl Ḥadjī, ultimately became that of the FLN (Front de Libération Nationale) (cf., e.g. M. M. al-Diazaʿīrī, Taʿrīḥ ʿal-Dījasʿīrī, Jerusalem n.d., 453), being developed in the sense of the New Left in the French writings of Frantz Fanon (cf., e.g. L'An cinq de la révolution algérienne, Paris 1959, trans. A Dying Colonialism, London 1970). Since the independence of Morocco, Algeria and Tunisia it has survived into the argument over historical and cultural identity, for the adjective kawmi, culturally rather than the political sense, in which its "national identity", ultimately became that of the FLN (Front de Libération Nationale) (cf., e.g. G. Ayache, Le sentiment national dans le Maroc au XIXe siècle, in Revue Historique, cccl (Oct.-Dec. 1968), 393-410; M. Lacheraf, L'Algérie, nation et société, Paris 1965; Y. Lacoste, A. Nouschi and A. Prenant, L'Algérie, passé et présent, Paris 1960; M. Sahli, Décoloniser l'histoire, Paris 1965; also J. Berque, Le Maghreb entre deux guerres, 2nd ed., Paris 1970, 421-48, with reference to a geographical area. British Museum, Ms. Add. 11745, p. 289). In modern times waṣāni means exclusively fatherland or motherland, in which sense it is synonymous with mīkān. Niẓḥād merely defined race, not nationality, and in modern times the compound niẓḥād-parastī is used in a pejorative sense to mean racialism; aḥl (and its plural aḥlīl), "people", meant those dwelling in a defined area but not specifically a nationality, though aḥliyyat is used in modern legal language to mean nationality. Lastly there is the term mīlāt, which was first used with reference to a religious group or community, and later people, and finally, in the 19th and 20th centuries, came to be used to denote a political nation (cf. ġāmiʿa-i milāt, "League of Nations", and milāt-i mutāfaqī, "United Nations"). The term, however, is not entirely free from certain ambiguities. In colloquial Persian milāt also means "the people" (i.e. the lower classes); this presumably is connected with the late 19th- and 20th-century usage of mīlī to mean "popular", in phrases such as ʿulūmat-i mīlī, "popular government", and ʿāḥābā-i mīlī, "Popular Front". It also, however, means "private" as opposed to "governmental", but in contemporary Persian mīlī hārdān means "nationalise". The supporters of the Persian constitutional revolution were known as milīyān, "nationalists" (i.e. those who supported "popular" government). The term, however, was not generally applied to nationalists outside Persia and is now virtually obsolete. Milīyāt was used by Mirzā Husayn Khān Sipahsālār Muṣḥīl al-Dawla in the second half of the 19th century to mean "nationalism", which he alleged had been brought into existence by the French Revolution (see F. ʿAdamiyyat, Fikr-i ʿAsād, Tehran 1961, 60), but it did not achieve widespread currency in this sense and normally means nationality.

Although there was no term to express nationality in the early centuries or in mediaeval times, there was a concept which did imply a consciousness of...
distinct identity, defined historically and geographically, which can be described by the modern term *irānīyya*, "being a Persian". This was associated with and experienced in a sharing of a common cultural and literary background. It did not imply a consciousness of political nationality or a territorial and ethnic nation, although it carried with it the memory of the old Persian empire. This memory, after the decline of the Shīʿaʾibiyā movement [740–838], was kept alive by the poets, but in the modern period the details became blurred and historical accuracy was lost, legend triumphing over history. The literary tradition expressed in and through New Persian, the emergence of which as a literary language had been one of the achievements of the Shīʿaʾibiyā movement, in no small measure held together the Persian people during long years of political decay. It constituted a common bond and kept alive their common feeling and pride in their heritage. Linguistic frontiers, however, did not coincide with ethnic frontiers. Arabic continued to hold an immensely important place as the language of religion, and large numbers of those within the geographical frontiers of Persia spoke Turkish, Kurdish, or some local dialect.

Under Muslim government Persia became part of a wider world in which Islam was the bond. Under the Abbāsids the concept of the universal empire was revived, but in a new guise. So far as an identity was recognised, it was the world of Islam. With the fragmentation of the caliphate, the minor dynasties did not foster the rise of national feeling since they were hostile to the centralisation of government. Slave armies, too, were a bar to the growth of national feeling. Even where political organisations had a wider scope, as they did under the Šāhīds, Mongols and Timūrids, they meant little to their subjects, and the nomadic tradition of their leaders constituted a new obstacle to the development of national feeling. There was thus little opportunity in medieval Persia for the development of nationalism based on a more or less defined territory, inhabited by a group of persons in close contact with each other, inspired by the idea of a common government, holding certain interests in common and possessing a certain degree of common feeling and common characteristics. On the whole, government had been "unrighteous" and so far as aspirations of future good government united the people these were of messianic and universalist not nationalist character. As for common interests, these too, so far as they transcended the craft, the quarter or the tribe, tended to be religious, while as for common characteristics, the reality was that there was more to divide than to unite. First there were ethnic differences, which did not coincide with territorial or provincial boundaries: the dichotomy between Arab and *Aḏjam* (non-Arab), which had prevailed in the early centuries had been succeeded by that between Turk and *Tādžik* (non-Turk); secondly there were religious and sectarian differences, between Muslims and non-Muslims and between Twelvers and Shīʿis; thirdly there was a separation between the settled population and the semi-settled, the rural population and the townspeople, the military classes and the rest. These lines of cleavage, so far as they were not religious, were social and economic, not political. The nearest approach to political difference was, perhaps, to be found in the intellectual field, between those who were influenced by the old Persian theory of state as against those who subscribed to Islamic conceptions. But even in this field the position was not clear-cut. After the Islamic conquest the former ruling classes, so far as they were not wiped out, were converted to Islam and many of them entered the bureaucracy and served the new rulers (a pattern to be repeated after later conquests). The desire to get rid of alien rule was, therefore, if not absent, at least weaker than might otherwise have been the case.

With the rise of the Šāfawīs in the 10th/16th century, Persia emerged for the first time since the Islamic conquest as a territorial state. A sense of separateness from the rest of the Islamic world and of national unity vis-à-vis the Ottoman empire was deliberately fostered by the adoption of ʿĀshari Shīʿism as the official religion. The conflict between the two empires was nevertheless largely expressed in terms of religion: in terms of Sunni-Shīʿī strife rather than of Turko-Persian hostility. What was new was the broad territorial segregation of the two sects, which was not, however, paralleled by a separation of ethnic groups. Under the Šafawaii, Shīʿism, which had earlier largely been the refuge of the dispossessed and under-privileged, became the banner of Persian nationalism; but since for the Shīʿa the true king was the Hidden Imām, and temporal rulers, so far as they were "unrighteous", were usurpers, this nationalism could not easily be associated with a sense of national identity. The attitude of the Shīʿa towards the government was thus ambivalent and opposition movements tended to be of a messianic nature. Popular Shīʿism however retained some of its former functions: the Muharram plays still offered the people an outlet into which they could project their own sufferings. Although the Šafawi period to some extent paved the way for the rise of political nationalism, it was not until the late 19th century that patriotism began to be separated from religious sentiment and national loyalties began to take the place of the older religious loyalties.

By the turn of the 18th century, British progress in India had begun to give rise, in some circles, to apprehension lest British commercial activity in Persia might lead to political domination (cf. Rustam al-Ḥukamāʾ, *Rustam al-Tawḥīḍ*). At the same time, unfavourable comparisons began to be drawn between conditions in Persia and those in other countries (cf. *ibid.*, 395). By the second decade of the 19th century the danger of foreign domination was clear for all to see, and the intrusion of western European countries and Russia was intuitively felt as a threat to Muslims and the lands of Islam. As in Turkey, modernisation began in response to military pressure. The Russian advance in the war temporarily concluded by the Peace of Gulistān (1813) brought home to the Persian government that the Persian army could not withstand Russian attack unless it was modernised (though none of the subsequent attempts at modernisation were pushed with vigour or persistence). Nationalism, patriotism and modernism in Persia thus became closely interwoven. Meanwhile, government officials who visited foreign countries as representatives of the government, merchants, and others who travelled abroad began to ask the reasons for Persia's backwardness. Some came to the conclusion that this was due to a lack of justice and orderly administration, and that it was respect for law which guaranteed the modernism and progress of western Europe. As these opinions spread among a wider circle, a movement of protest against corruption and injustices gradually developed. This movement, which took its inspiration from the example of western Europe, had overtones of
patriotism and nationalism, but it was not, in the beginning, anti-foreign, though it was to become so later partly as a result of the events connected with the Tobacco Régie and Nāṣir al-Dīn Shāh's attempts to bolster up the finances of the country by the grant of concessions and the contraction of loans. As the movement became anti-foreign, so its Islamic colouring became more marked—patriotism was still largely a religious sentiment. Nevertheless, so far as it was a protest against bad government and demanded, as a remedy administrative reform, it was modernist and its supporters were nationalists in the sense that they aimed at some measure of self-government or government by the people, though they saw this primarily in terms of restrictions on the arbitrary power of the shah and not in the exercise of responsible power by elected representatives of the people.

In 1811 Abābas Mīrzā sent two students to England "to study whatever would be beneficial for him and his country". Five more were sent in 1815 to study engineering, medicine, artillery, mathematics and natural sciences. Two of these attained to high office: one, Mīrzā Dī'ātār Mūshār al-Dawlā, who studied engineering, became head of the council of state set up by Nāṣir al-Dīn Shāh, and the other, Mīrzā Muḥammad Šāhīb Shīrāzī, who studied English, French, Latin, natural sciences, history and printing, became official translator to the government and subsequently a minister. He wrote a diary in which he described British parliamentary government and institutions (Safar-nāma, ed. Ismā'īl Rā'īn, Tehran 1969-70) and appears to have had a great admiration for freedom and liberty as he saw it in England. He also visited Russia and Turkey. Writing of the tanzimāt, he castigates obscurantist mulūdīs, who opposed them. Abū'l Ḥasan Shīrāzī, who was sent to England by Fath 'All Shāh, wrote in his Haṣrat-nāma of the justice and security prevailing in England, and compared conditions in his own country in unfavourable terms with what he had seen in England. Khusraw Mīrzā, the son of Abābas Mīrzā, who was sent with a mission to Russia in 1829 to apologise for the murder of the Russian envoy Grebulevsky in the previous year by a fanatical mob, wrote in his diary, "It would be a pity if when we see with our own eyes the progress and order which our neighbour has achieved in a short time, we should not think [how we could achieve similar progress], but go about with our eyes closed in foreign parts." (See further, Fikr-i Azadī, op. cit., 21 ff.) Another Persian to describe in his diary British parliamentary institutions was Mīrzā Khānlār Khān Pīqām al-Mulk, who went as a secretary to the Persian mission in England in 1864-5 (see Dimukhrāšī-i Inglīstān in Sulṭān, i/2 (Bahman 1323/1944), 96-104).

It was not, however, until the reign of Nāṣir al-Dīn Shāh that modernism and nationalism began to make strides. The Amir Niẓām Mīrzā Taqī Khān Amir Kābir, his first sād-i ʿāpam, who had visited both Russia and the Ottoman Empire, initiated various military, financial and administrative measures designed to strengthen the power of the central government. He founded the Dār al-Fumān, which was the first school to teach modern sciences, in order to train officials for the new army and the new bureaucracy. He also attempted to decrease the power of the religious classes. His reforms proved largely abortive. More important in the spread of modern ideas was Mīrzā Husayn Khān Sipahsālār Mūshār al-Dawlā. He studied in France, and served in the Ministry of Foreign Affairs in Bombay, Tiflis, and Istanbul. From 1871 he held various ministries in Tehran including that of sād-i ʿāpam for some three years from December 1871. His letters from Turkey discuss European politics, freedom movements in the Ottoman Empire, the spread of education and civilization in Europe, and governmental reform in Persia. He considered an assembly composed of representatives of the people, freedom, the rights of the individual and equality before the law prerequisites for life in the modern world. Writing of the Greek revolution, whose nature he recognised, he wrote, "The nationalist principle established by the French empire that every nation should be governed by its own people and not be a prisoner to the government of another people has spread to these parts." (Fikr-i Asādī, op. cit., 60.) In another letter he wrote that foreign states measured a nation's progress, education and power (isbahād) by four things: (i) the existence or otherwise of a well-ordered press carrying full reports of foreign and internal news; (ii) its encouragement of crafts, industries and trade; (iii) the quality of its foreign representation; and (iv) its possession of a powerful, disciplined army equipped with modern weapons able to defend the country against any eventuality (ibid., 69). He believed that the backwardness of a country brought about foreign intervention, and both his father and Amir Kabīr in their advocacy of modernisation were concerned to prevent foreign intervention. But they were in a difficulty: modernisation was, in existing circumstances, hardly possible without foreign capital and expertise. This, indeed, was the justification of the abortive Reuter concession (see Mahmūd Farhād Muṭtāmid, Sipahsālār-i ʿāpam, Tehran 1947, 151 ff.). There was at the same time another and contrary trend and, also inspired by a kind of nationalism, which was opposed to modernisation. Many believed that development would involve foreign influence and that as long as the country's resources were not developed Persia would be left to manage her own affairs. The attitude to the spread of communications was also ambivalent because of a fear that it might facilitate external attack.

Among those who were associated, or in contact, with Husayn Khān and who played an important part in fostering the demand for modernisation were Mīrzā Yūsuf Khān Mustaṣḥār al-Dawlā, Majd al-Mulk Sinākī, Malkam Khān, and (through him) Djamāl al-Dīn Afghānī [q.v.], and Mīrzā Aḥā Khān Kirmānī. They were concerned both to forward the strength, liberty and prosperity of Persia and to ensure that the people had a greater share in the government of the country. Majd al-Mulk in his Risāla-i majdīsiyya, written in 1871-2, attacking the negligence of the shah and the state of the administration, states that the power of great nations was based on the people (ed., Saʿīd Nafīsī, Tehran 1941-2, 11), and demands an assembly to assure the prosperity and order of the kingdom (37). Mustaṣḥār al-Dawlā, who became chargé d'affaires of the Persian legation in Paris, and Amir Kabīr in their visits London during the three years he spent in Paris, wrote in 1888-9 to Muṣaffar al-Dīn, then wali ʿādī, stating that Persia could only escape disaster by the promulgation of reforms and new laws; only this would enable her to regain respect among civilized nations. In his essay Yāh halīma, which achieved wide circulation, he describes the strong and orderly military administration, prosperity, wealth, industry, education, security and freedom prevailing in France and England. He cites the old
Islamic tag, "No government (sulān) without wealth (māl), no wealth without development (′imārāt), and no development without justice", and asks why Persia was so backward in spite of the fact that Islam was based on justice. His conclusion is that the secret of European progress was the supremacy of the law and that this was lacking in Persia. He then discusses the French constitution and the benefits deriving from it, and finally argues that whereas the ġarī'āt of Islam had been forgotten by the Muslims in their political conduct, the rights of man guaranteed by the French constitution were, in effect, the very rights which any Muslim should enjoy (Tabriz 1907, reprinted in Raḥt 1909).

In the latter years of the reign of Nāṣir al-Dīn Shāh, disgust at the abuse of power by the ruling class and the obscurantism of sections of the religious classes spread and the reaction to Persia's humiliations at the hands of European powers grew (though this was not to be a major factor in Persian nationalism until after the grant of the constitution). Unfavourable comparisons were increasingly drawn between Persia and Western European states while a small minority questioned the exercise of unfettered power by the shah. Many believed that Western Europe held the secret of progress (though few had any clear idea of what this might be); they believed that the adoption of western systems of government would both secure this "secret" and ensure reform and thus enable Persia to resist the encroachment of foreign powers, which the corruption of its government was facilitating. Malkam Kān = Nāṣir al-Dawla, a Persian Armenian from Džulf (Iṣfahān), educated in Paris and minister in London from 1872 to 1889, was the great exponent of this point of view. His writings, influenced by John Stuart Mill and Mirabeau, became more radical as time passed. In tracts and essays and in the Persian paper Kānān, which he founded and edited in London in 1890, he inveighs against internal disorder, corruption and despotism and the external pressure exerted on Persia "from St. Petersburg and Calcutta": The only answer to these evils in his view was political progressive and constitutional reform (which he was at pains to show were not contrary to the ġarī'āt). At first Malkam Kān appears to have believed that reform "from above" was possible. He presented an early essay, Kīābā-i khābīb, probably written between 1859 and 1860 in imitation of the Turkish lânsūlmāl, to Mirzâ Dža'far Mūḥār al-Dawla (who, as stated above, had been one of the first students to be sent abroad by the government) and urged him, as an elder statesman and because of his knowledge of foreign countries, to show it to Nāṣir al-Dīn Shāh and explain the truth to him. He goes on to assert that the Persian state was down-trodden by neighbouring states and afflicted by various miseries, especially corruption. He warns that conditions in the outside world would not remain static: the Indian Mutiny would not go on for ever and Russia would not always remain preoccupied with the injuries she had suffered in Europe: claimants to the Persian provinces would arise. Two waves, one from St. Petersburg and the other from Calcutta, were advancing on Persia. Ministers, Malkam Kān alleges, considered the antiquity of Persia to be a protection against all calamities: however much they were warned that the advancing waves would submerge them, they would say, "we have been thus for 3,000 years and we shall survive this flood also". But, Malkam Kān points out, conditions had changed: Persia could no longer withstand the power of neighbouring states. Europe had made important technical advances of which Persia had been deprived and great progress especially in financial administration, while Persia lagged hopelessly behind. He then sets out his ideas for reform based on a separation of legislative and executive powers (Madžīmā-i ʿalārā-i Malkam Khān, ed. Muḥammad Muḥīṯ Tabāštānī, Tehran 1943-9, 1 ff.).

In another essay, Dastghā-i divān, devoted mainly to the need for financial reform, Malkam Kān warns his readers of the fate of Turkey and states that "The Persian government in the face of the encroachment of foreign conquest was in no way different from the Ottoman government. Protection of the Christians was a secondary problem: the essential problem was that the ebullience of European power had made impossible the survival of uncivilised states" (ibid., 74 ff.). In a later essay entitled Tānsīm-i lāshkār wa madžīm-i ʿidārā-yā intīṣām-i lāshkār wa madžīm-i lānsūlmāl, Malkam shows himself to be one of the few writers who realised that reform of one branch of the administration could not be carried out in isolation. He pours scorn on the idea that it would be possible to have a European arsenal without a European tax administration and reiterates the need for a government based on law (ibid., 98 ff.). By the time of the assassination of Nāṣir al-Dīn the threat to Persian independence was seen by Malkam to be increasingly serious, and he appealed to all, whether Persians, Āḏarbāyjānīs, Kurds or Afghans, to sink their differences and unite to base the rule of the shah on a new unity (ibid., 182 ff.). In an essay entitled The call to justice, presented to Muṣṭafār al-Dīn in 1905, Malkam Kān again warns of the threat to Persian independence posed by the progressive states of the world and urges the establishment of a legislative assembly, freedom of speech, and freedom of the press. Distinguishing between freedom and licence, he seeks to interpret freedom in terms of the Islamic principle of "enjoying the good and forbidding evil" (ibid., 194 ff.).

Mīrzâ Akā Kān Kirmānī (1853-87), who spent a great part of his life abroad, was a prodigious reader, among others, by Rousseau and Montesquieu. He uncompromisingly rejected Islam and saw Mazdak as the prototype of European socialists, anarchists, nihilists, and communists (Ṣīh Makteb, quoted by F. Ādāmiyyat, Andīḡah-ye Mīrzâ Akā Kān Kirmānī, Tehran 1967, 238). Like Malkam Kān he regarded the adoption of Western sciences, industry, and political structures as a fundamental condition to progress. He held that the Persian people must forget their past and lay completely new foundations for their national life if they wished to retain their independence and enjoy power and respect in the world. Pointing to the example of the Caucasus, which had been lost to Russia, India, "which was held prisoner by five thousand English soldiers", and Turkey, "which was forced to submit to the slightest whim of the English ambassador", Mīrzâ Akā Kān warned that Persia would be made into a colony if she failed to advance in knowledge or to develop her own resources. "Today", he wrote, "we, the subjects of Persia (raʾīyāt-i Īrān), are trampeled underfoot by internal tyrants and criticised, blamed and despised by foreign governments and civilised peoples. Tomorrow we shall be trampeled on by the hoofs of the transport animals of their military forces and captives of their soldiers and we shall be in danger for 5,000 years and we shall survive this flood also". While he was in favour of the adoption of European learning
and technical skills, he condemned the aggression of European powers against other nations (Hasht bihisht, quoted by F. Adamiyyat, op. cit., 231-2). He, like Mankind Khan, aimed at a national awakening and advocated modernisation in order to stem the encroachment both of foreign powers against the national frontiers and of the shah and his government against the freedom of the people. Influenced by earlier writers, especially Ebrahim al-Din Mirza-yi Khurshid Khan and Mirza Fatih 'Ali Akhundzada (Akhundov), who, although he spent the greater part of his life in the Caucasus in the service of the Russian government, was an ardent Persian patriot, the nationalism of Mirza Akka Khan Kirmani looks back to pre-Islamic Persia, and tendencies towards anti-Arabism as well as anti-Semitism in general are to be found in his works (see further F. Adamiyyat, op. cit., 252 ff.).

The themes of Mankind Khan and Mirza Akka Khan Kirmani were taken up by others, including Mirza Akka Fursat Shahrza, who in a series of essays describes freedom, equality and knowledge as the key to progress and attributes the miserable condition of Persia, which he compares unfavourably with India, to ignorance and despotism (Ma'salik al-ilm wa 'an siyasat, Bombay 1904-5, ii, Tehran 1907-8), Malik al-Mutakallimin, who emphasises the need to develop Persia's resources and, pointing to the example of Japan, advocates the establishment of factories (see M. Malkizada, Zinadgani-i Malik al-Mutakallimin, Tehran 1946, 91 ff.), and Persians living in the borderlands such as Mirza 'Abdi al-Rahim Nadjiirzhada (Tilbaev) in his Ma'salik al-Mu'khhimin, and Zayn al-'Abidin Maraghah in his Safar-nama-i 'Ibrahim Be. All of these made a significant contribution to the intellectual ferment culminating in the movement for constitutional reform in the early years of the 19th century (on the nature of this movement see further A. K. S. Lambton, The Persian constitutional revolution of 1905-6, in Revolution in the Middle East, ed. P. J. Vatikiotis, London 1972, 173-84. See also Kam'iyiya, Persia and Dastur, Iran).

Those who prepared the way for the constitutional revolution were drawn largely from the upper ranks of the bureaucracy, the religious classes and the merchants. As the movement spread, it became articulated largely in a demand for "equality" and "liberty", neither of which was defined in legal terms. Both were seen broadly as freedom from tyranny and envisaged by the majority within a temporal framework designed to permit the unhindered operation of the Islamic ethic and the living of the good life in accordance with the sacred law. The underlying intention was to seek to ensure justice and to limit extortion. The shah's neglect of abstract principles of justice was felt to have led to an impoverishment of the people and a growth of foreign influence and intervention in the affairs of the country. Largely for this reason the movement became a nationalist movement in that it was a demand by the people for a greater share in the government of the country and a protest against the placing of the material resources of the country under the control of foreigners (which, in view of the interpretation placed on freedom, was inevitably seen as an attack as much on Islam as on Persia).

The situation, however, was complex: both sides looked to foreigners: the constitutionalists to Britain (though the 1907 convention with Russia was a great surprise and disappointment to them), and the reactionaries to Russia, with the ruling classes of which they felt, perhaps, a greater affinity than with the mass of the Persian people. Although the support which the reactionary party and Muhammad 'Ali Mirza as wall 'Abd and later as shah received from Russia in their attempts to frustrate the efforts of the revolutionaries inevitably gave an anti-Russian aspect to the constitutional movement, it was predominantly a "popular" rather than an anti-foreign movement. Among the anjumans, the popular political societies, it was a movement of resistance to oppression and a demand for the right of the people to manage their own affairs (see further A. K. S. Lambton, Secret societies and the Persian revolution of 1905-6, in St. Antony's Papers, No. 4, Middle Eastern Affairs No. 1, London 1958 and The political role of the anjumans 1906-11, in St. Antony's Papers, No. 16, Middle Eastern Affairs No. 3, London 1963). The bond which united them was not a concept of territorial or ethnic nationality or memory of "good" government but rather Islam: the true king was, for them, the Hidden Imam.

With the humiliations suffered by Persia after the suspension of the constitution in 1911 and the disorder prevailing during the Great War, there was a swing away from "popular" nationalism towards nationalism coupled with anti-imperialism and socialism and also "romantic" nationalism. Abu 'l-Kasim 'Arif (d. 1934), the poet of the constitutional revolution, extolled patriotism and freedom, but Abid Pishawari (1844-1930), who had been one of the first poets to write in praise of patriotism and nationalism, wrote increasingly against anti-imperialism, while Muhammad Ibrahim Farrukhi (1888-1939) linked patriotism with socialism. In general poets and writers turned increasingly towards a glorification of pre-Islamic Persian. A literary movement to deepen national thought and pride (in stimulating which the writings of orientalists played a considerable part), began in Berlin, where a number of Persians had taken refuge during the 1914-18 war and founded a literary magazine, significantly called Kawa after the legendary blacksmith (see Kawa). I'shqi (1853-1924), Pâr Dâvíd (1889-1956) and others reminded their readers of the spirit of ancient Persia. Sayyid Muhammad 'Ali Djam'alzâda (born circa 1895), at one time co-editor of Kawa with Sayyid Hasan Takžîda (d. 1959), and others wrote essays extolling the Persian past; and Ahmad Kasrawl (1888-1945) published a large number of political and religious tracts of a nationalist and anti-Islamic nature (see further B. Alavi, Geschichte und Entwickelung der modernen persischen Literatur, Berlin 1964).

During the war of 1914-18 and in the years immediately afterwards, there were uprisings of a quasi-nationalist nature led by Mirza Kûsî Khan in Gilân (1915-20), Khâyâbânî in A'zharbâyjân (1920), and Muhammad Ta'âl Kûhân in Khurâsân (1921), but none of them was nationalist in the wider sense or spread to the whole of the country. After the coup d'état in 1921, power was concentrated in the hands of Rûdâ Khan, who proceeded to build up the armed forces. By 1925 he had reasserted the authority of the central government over most of the country and on 31 October of that year he assumed the crown. Measures were also taken to restore Persia's position vis-à-vis foreign powers and to limit their intervention in Persian affairs. The capitulations were abolished in 1920 (see Imtiyâzât). Determined to make Persia a modern state, Rûdâ Shâh pressed forward industrial expansion and economic development and extended the scope of government. Requiring more funds to finance these developments, he turned to
the oil industry to satisfy his need. The post-war depression had brought down oil prices and with them royalty payments. In 1932 the Anglo-Persian Oil Company concession was denounced and a new agreement was negotiated in 1933 under which royalty payments were increased. Islam was deliberately weakened, and westernisation forced. The memory of pre-Islamic Persia was fostered. The traditional provincial names were replaced by numbers as a device to obliterate "the memory of the historic provinces with their persistent traditions of diversity and autonomy" and to create unity and uniformity. An attempt was also made to "purify" Persian of Arabic words and weaken the memory of her cultural debt to the Islamic empires of the past. In the beginning Rıdâ Şah's nationalism was influenced by the example of Turkey, which he visited in 1934. Later, however, he turned rather to the model of the dictatorial régimes of Western Europe, especially Hitlerite Germany. The new nationalism, which developed during his reign, appealed mainly to the military leaders, who found the ideal of the self-sufficient police state seductive, those intellectuals who provided the personnel of the bureaucracy, the younger generation brought up in the new schools, and those merchants who benefitted from his commercial policy. It was very different from the nationalism of the constitutional period (see further A. K. S. Lambton, *The impact of the West on Persia*, in *International Affairs*, xxxii/3 (Jan. 1957), 21 ff.).

In 1941 Rıdâ Şah abdicated as a result of events connected with World War II. In the ensuing years Persia suffered new humiliations. Foreign troops were stationed in the country. Their presence did not technically constitute a military occupation, but Russian troops in the north and north-west prevented orderly administration by the Persian government and did not evacuate the country after the conclusion of the hostilities until recourse was had to the United Nations. There was once more a feeling that national unity was menaced, and coupled with this there was a growing sense of frustration at the failure of successive governments to use itself a feeling of revolt against the "establishment" grew. Various groups, at one extreme the Fıdâ'iyân-ı İslâm [q.v.] and at the other the Tûda Party (who were communist-inspired), were active. Their common desire was for power and control over the sources of national wealth, but their positive policies were less clearly defined, and in any case sometimes in conflict. Finally, under the leadership of Dr. Muşaddık cohesion was given to the discontent. The movement of protest was focussed on the Anglo-Iranian Oil Company and was transformed into a campaign for liberation from supposed foreign domination. Nationalisation of the oil industry (achieved in 1951) became the immediate goal. With the alliance of Dr. Muşaddık and the religious leader Sayyid Abû'l Kâsim Kâshânî, who interpreted the protest movement in terms of Islam, it spread throughout the country as a popular movement for the defence not only of Persia but of Islam. After the reassertion of the monarchy following the overthrow of Dr. Muşaddık by a military coup d'état in 1953, "popular" nationalism once more declined to be replaced in due course by a new self-styled "positive" nationalism imposed from above, one of the manifestations of which was the celebration in 1971, after several years of planning, of what was regarded as the 2500th anniversary of the foundation of the Persian monarchy by Cyrus (see further *Iran*, History; *Hizb*, Persia; and also J. M. Upton, *The history of modern Iran*, an interpretation, Cambridge Mass. 1950).

(A. K. S. Lambton)

iv. IN OTTOMAN TURKEY.

This word was used in Ottoman Turkish to express the new idea of nationalism which originated in Central and Eastern Europe during the 19th century. This new nationalism was not the older patriotism of Western Europe founded in a citizen's loyalty to his country, his state and its mode of government and in which a degree of individual liberty was usually involved. It was an ethnic, linguistic, and sometimes cultural nationalism, romantic and subjective in its appeal, and often illiberal. When it reached the Ottoman Empire this brand of nationalism quickly vitalised the independent ambitions of the non-Muslim religious communities (*millets*), and more slowly those of the non-Turkish Muslims.

The Ottoman Turks were not much affected by this new form of nationalism for two interconnected reasons. In the first place, the Turks of the Empire, despite a vigorous flowering of Turkish "national" self-consciousness in the 9th/15th century, had subsequently submerged themselves in Islam and assy, and were very different from the nationalism of the constitutional period (see further *IRAN*, History; *HIZB*, Persia; and also *International Affairs*, Cambridge Mass. 1960).

The Ottoman Turks were not much affected by this new form of nationalism for two interconnected reasons. In the first place, the Turks of the Empire, despite a vigorous flowering of Turkish "national" self-consciousness in the 9th/15th century, had subsequently submerged themselves in Islam and assy, and were very different from the nationalism of the constitutional period (see further *IRAN*, History; *HIZB*, Persia; and also *International Affairs*, Cambridge Mass. 1960).
influences awoke a slow response among the Turks. It was only as the non-Muslim peoples obtained independence, and when there were national stirrings among the Muslim subjects of the Empire, that a truly Turkish nationalism based on a common race, language and culture became more feasible. Among Ottoman Turks who took up the theme were the historian Abmad Wafif Paşa (1823-91) and Süleyman Paşa (1858-1932), the first Ottoman historian to write about Ottoman Turkish history. Attention was also given to the Turkish language: the first modern Turkish grammar appeared in 1851, the Kawkâdî-ı ʿOṯmānîyya of Fâlîd and Djiwedet Paşa. The first Turkish turcologist in any real sense was Nedîlj Âsim (1861-1935).

It was not, however, until the Young Turk period, and with the diminution of the Empire, that a more general interest could be aroused. A Turkish Society (Türk Dernâş) was established in 1908 to study Turkish culture in its many aspects. From this initiative shortly emerged a journal, Türk Yurdu, ("Turkish Homeland") which began to develop a political Turkishism, notably under Akçuraoglu Yusuf [q.v.]. Numerous Turkish societies, Türk Oğlukârlar, ("Turkish Heirs") were also founded to study and promote Turkish culture. Closely associated with Türk Yurdu was the greatest exponent of Turkish nationalism, Divâ (Ziya) Gökalp [q.v.]. In some of his writings he went so far as to envisage the political union of all Turks in a new Türan, but the international situation, notably the strength of Russia, gave little prospect for the realisation of this Pan-Turkist dream, save for a brief period of confusion in Central Asia following the Russian Revolution of 1917. Nevertheless, Turkish nationalism continued to develop, markedly affected by two factors, firstly the Armenian massacres of 1916, and secondly, the defection of Arab Muslims to the Allied side in the First World War.

By 1918 it was clear, however, that attempts to promote an Ottoman, Pan-Islamic or Turanian unity were either irrelevant or impracticable. Yet some basis for a national unity had to be found if what was left of Turkey was to be defended against Allied claims. National feeling was now concentrated on the rescue of the Anatolian homeland from the occupying Christian powers, particularly from the Greeks. Whilst religious feeling was still obviously important in this situation, a new emphasis appeared in Turkish nationalism—the territorial. It had obvious impact: the Turkish peasant's hearth and home, his village was at stake.

After the War of Liberation the Republic sought to justify this new nationalistic attachment by promoting historical enquiries to show that Anatolia was in fact the ancient land of the Turks. This might be interpreted as a return, in a new context, to the less romantic patriotism of earlier European inspiration, but the attachment to the land, to national folklore, popular traditions and national solidarity was romantic to a marked degree. For the Atatürkist élite, nationalism was also firmly secularist, as the abolition of the caliphate and the disestablishment of Islam in 1924 testified.

The secular, cultural and territorial nationalism of the Atatürkist period has remained the predominant form of nationalism in Turkey since the Second World War, but it has not been universally accepted. Whilst it is difficult to make clear divisions among the different schools of thought, it may be said that the secular nationalists have divided into two groups. There are those who support the liberal democratic, and strictly territorial, political system as representing the national spirit, and others who would qualify their support by insistence on the need for a greater degree of socialism to allow the full expression of national feeling. This latter group attaches itself to the left-of-centre Cumhuriyet Halk Partisi (Republican People's Party). One school of thought has attempted, however, to define nationalism to include Islamic, as well as pre-Islamic, Turkish history. This group thought provision of nationalist thought organized a ready audience among the new professional, commercial and industrial middle classes, and actual promotion through the Türk Ocakları, revived in 1949 after their abolition in 1932. This modification of nationalism has appealed to many members of right-of-centre political parties, notably the former Demokrat Partisi (Democrat Party) and the Adalat Partisi (Justice Party). Important elements in the Turkish intelligentsia have sought, however, to give greater weight either to Islam or to Turkish nationalism (and to Pan-Turkism) than the usual compromises envisage. An Islamic trend which nevertheless accords a place to nationalism is represented by Necmettin Erbakan's Millî Selâmet Partisi (National Salvation Party) which in 1973 won 48 seats in the elections for the 450-member National Assembly. The party, under Alparslan Türkeş, which accords a place to Islam, is the Millîyeti Hareket Partisi (Nationalist Movement Party) which, however, won only 3 seats in the 1973 National Assembly. Territorial nationalism, Islam and Pan-Turkism are not easy to combine. This is evident in the writings of the influential Dr. Riza Nur (q.v. (1897-1942), who advocated inter aliya Turkish Republican form of government, restoration of the caliphate, and the reunion of all Turks under the leadership of those of Anatolia.

A number of nationalist associations have been established recently in Turkey, particularly in the 1960s, partly in response to increased leftist activity. Large general congresses of nationalists were held in 1967 and 1969. One association of particular significance which has emerged is the Kümüştâle Mücadele Derneği ("Friends for Opposing Communism"), which has been active in demonstrations against left-wing groups. Reviews which in recent years have supported secular nationalism include Varlık ("Existence"), Dost ("Friend"), Yeni Ufuklar ("New Horizons") and Yedi Tepe ("Seven Hills"). Turkist and Islamic nationalism have been represented inter alia by Türk Kültür ("Turkish Culture"), Türk Birliğ ("Turkish Unity") and Tökm ("Seed"). The strength of modern Turkish nationalism is difficult to assess, since every political association claims to be nationalist. Certainly, for many Turks a wholly secular nationalism is not proving to be satisfactory. [See also Hürriyya, İstiklal (Independence), İstirâkiyya and Türan.

The great Turkestan rebellion of 1916 has been called "a national liberation movement". It was certainly directed against the Russian presence, but it was unco-ordinated and had no specifically political aims. Its ruthless repression by the Tsarist government had the temporary effect of favourably disposing the Muslims to the Revolution of 1917, which they imagined would mean the end of Russian rule; and the hope thus engendered gave rise to several small movements aiming at some kind of independent state or states. Such aspirations were, however, strongly opposed not only by the new Soviet régime, but by the 2-million strong element of Russian settlers who, whether they supported the Revolution or not, were not prepared to hand over the region to Muslim rule. The Djadlds, too, always at loggerheads with the "ulamâ", now found themselves equally opposed to the new régime. By 1921, any prospect of an organised national movement with clearly defined political aims had receded, but guerilla Muslim resistance to the Soviet government continued in the shape of the so-called Basmaçı [q.v.] movement. Although violent and widespread, this movement lacked cohesion, competent leadership and the necessary resources, and by 1922 it had virtually collapsed.

By the end of 1920, complete Soviet control over the region was a foregone conclusion, and since the new régime was fundamentally opposed both to Islam and to the idea of nationalism, any chance of the emergence of a Central Asian state or states based on Muslim principles became even more remote than it had been in Tsarist times. The constitution of the so-called Bukhurân Peoples' Republic formed on the overthrow of the khanate in 1919 declared that "no published laws of the Republic may contradict the foundations of Islam", but this constitution was abrogated on the absorption of the republic into the Soviet Union in 1924, and the whole concept of Islam was thus finally removed from the Soviet political fabric. Some Central Asian intellectuals had participated to a limited extent in an attempt to achieve Muslim solidarity made from within the Communist Party by Mir Sayyid Sultan (Sultangaliyev), a Tatar Communist from Kazan. But the movement ended with his arrest in 1923 and subsequent disappearance.

As a means of combating nationalism and of solving the "national problem", the Soviet Government adopted a "nationalities policy". As applied to Central Asia this involved the classification as "nations" of the larger Muslim communities, most of whom had not previously thought of themselves as such. In 1924 the former administrative borders were abolished and the whole territory, including that of the erstwhile khanates, was divided into "republïcs" bearing the names of these "nations". Although described officially as "fully sovereign", they have never been so by any standards recognised elsewhere in the world of Islam, since the overriding authority in all matters relating to policy, justice and, indeed, every human activity rests with the Communist Party of the Soviet Union centred in Moscow. An attempt has been made, so far with only partial success, to remodel the cultures of all the Muslim peoples in the region, now numbering about 22 million, on lines described as "national in form and socialist in content". There is much evidence of passive Muslim resistance to many social and cultural institutions of the Soviet régime, but none of any organised or active opposition to it. The facts about the alleged unmasking of a nationalist plot in the Özbek Republic in 1937 have never been established.
It is hard to say how far the Soviet nationalities policy has succeeded or will succeed in the future in excluding or holding in leash the national sentiment which has contributed towards the freeing of so many non-Soviet Muslim communities from foreign or non-Muslim rule. During the past fifty years none of the features characteristic of nationalist movements elsewhere have been present in Central Asia: namely, competent and easily identifiable national leaders with some freedom of speech and action; religious and cultural freedom; aid and encouragement from abroad; native military formations trained in the use of modern weapons; and support from liberal opinion in the metropolitan country. On the other hand, by artificially creating nations and stimulating the growth of those which had previously only existed in embryo, the Nationalities Policy has brought into being organisms which, far from remaining static, seem to be gradually acquiring a real national identity. It can be said that while nationalist movements of the kind which convulsed the Muslim peoples of the Middle East and North Africa are, in the present circumstances, highly improbable, national consciousness and the desire to dispense with alien rule are still very much alive. But what kind of state or states towards which this national consciousness may be tending is still uncertain.

vi. IN MUSLIM INDIA AND PAKISTAN.

The growth of Muslim nationalism, or Muslim separatism as it is usually called, was one of the most striking developments on the Indian subcontinent under British rule. It stemmed from the Aligarh movement, an educational and political campaign aimed mainly at protecting the power of the Muslim service elite of northern India, which developed around the Muhammadan Anglo-Oriental College founded in 1875 by Sir Syed Ahmed Khan at Aligarh in the United Provinces. In the early 20th century, men associated with this movement made Muslim separatism a significant factor in Indian politics. In 1906 they founded an All-India Muslim League. Then, using the League as their platform, they first persuaded the government to introduce separate electorates (with special weighting to take account of their "political importance") in the Morley-Minto reforms of 1909, and soon afterwards persuaded the Congress, the organisation of Indian nationalist politicians, to accept the same principle for the next package of reforms in a pact made at Lucknow in 1916. By this time Muslim separatism would appear to have been an established fact in Indian political life, but it would be quite wrong to see its development from this point to 1947 as an ever-ascending line on a graph, because for the twenty years after 1916 it was a declining force. First, Muslim Leaguers agitated with Congressmen against the government in the Khilafat non-co-operation movement of 1919-23, then in the 1920s and 1930s many lost interest in League politics altogether: some preferred the class-based politics of the United Provinces' Zamindar Party or the Punjab Unionist Party, others the Islamic politics of the Khilafat Party, and yet others the Indian nationalism of the Congress itself. So weak did Muslim separatism become that the Muslim League held no annual sessions between 1933 and 1936. And it was not until the 1937 elections, after the 1935 Government of India Act had considerably extended the franchise and had given Indians virtual autonomy at the provincial level, that Muslims again began to support separatist politics in large numbers. From then on, the Muslim League went from strength to strength till, in part because of the rapid change in circumstances brought about by World War II, in part because of the political failures both of the Congress and of the British, and in part because of both the political skill of Jinnah and its own success as a political organisation, it succeeded in establishing a separate Muslim state on the Indian subcontinent when the British transferred power in 1947. An important point to note about Muslim separatism is that at no stage did it receive equal support from all Muslims. Their condition and their interests varied greatly in the different parts of India. There were differences of background; some, particularly in northern India, were descended from invaders or adventurers who had come from Arabia, Afghanistan, Persia and Central Asia to make their fortunes from the fabled wealth of Hindustan, but the majority were descended from Hindus who, during the period of Muslim supremacy, had been converted to Islam. There were differences in their level of islamisation; the humble Muslim villager in Bengal or Madras, who spoke the local vernacular and who followed most of the local social and religious customs, had much more in common with his Hindu neighbour than did his co-religionist living in a town in northern India whose culture and whose customs were much more distinctly Islamic. There were also differences in their distribution throughout the subcontinent; in the Punjab and in Bengal (after 1911) Muslims were a majority of the provincial population, but in no other province for most of British rule did their numbers exceed 20%. Finally, there were differences in their economic and political position; traditionally the Muslims of Bengal or Sind or Madras were cultivators with little economic strength and less political power, but the Muslims of north India, in particular those of the United Provinces, were not only wealthy, holding much land and many positions in government service, but were also accustomed to being the dominant political group in the area. These differences dictated a variety of responses to the challenges presented by the modernising tendencies of British rule to their livelihood, their religion and their political power. Indeed, for most Muslims under the British a political stance based on their faith made no sense in the context of local or provincial politics. Muslim separatism found support mainly in the United Provinces. Men from this area founded Aligarh College and the All-India Muslim League. They chiefly organised this League throughout its existence and used it to win Muslims elsewhere in India for their separatist politics. When separatism, as strong as it was because it suited their interests; when it was weak, as it was in the 1920s and 1930s, it was because it did not.
Why some Indian Muslims should have organised for politics on a religious basis has been hotly debated. Four main lines of argument have been put forward to explain this phenomenon: that the Muslims were backward in taking advantage of western education, had therefore fallen behind in the competition for jobs and economic advancement, and therefore organised as a community to protect their interests; that the British deliberately divided and ruled, encouraging Muslims from time to time to organise as a separate group in order to strengthen their imperial position; that Indian nationalism was too strongly associated with a frequently aggressive Hindu revivalism to allow Muslims to play a full and unreserved part in it; and that the Muslims had always been a separate community on the Indian subcontinent which fact was expressed in the separatist tendency of their politics. There are grains of truth in all these arguments, but as they stand they are too simple by half.

Of course, the fact that Muslims had some common religious experience must lie at the base of any explanation of why some Muslims organised for politics on a communal basis; but it is not the sole or even the chief cause of why they did so. The threats which British policy in education, in bureaucratic reform, in local self-government levelled at the Muslims in the United Provinces, making them fear that they might become backward, played a part; they lay behind the foundation of Aligarh College and the All-India Muslim League. A Hindu revivalism, which aimed to promote the Nagari script and the Hindi language and to protect the cow, was also important; early responses to the massive changes which government was bringing about in north Indian society were organised by Hindus and Muslims working in concert, but Hindu revivalism in the late 19th century helped increasingly to divert these responses into communal channels. Moreover, throughout its existence the close association of Hindu revivalism with the Congress made it hard for Muslims to join the Indian nationalist movement. This type of revivalism was not restricted to Hindus; it also developed amongst Muslims and helped to harden their consciousness of being Muslim. It found powerful expression in the writings of Hāflī, Şhībīl and şibāl, and it infused aspects of the movements for a Muslim university, for the preservation of the Turkish Khilāfāt, and for the establishment of Pakistan. Crucially important was the tendency of the British to see their Indian subjects primarily not as members of different races, nor as speakers of different languages, nor even as representatives of different interests, but as followers of different faiths. They shared out patronage along religious lines, particularly to Muslims in northern India, whom at one time they saw as the greatest threat to the empire and at another as the most important supporters of it. Such perceptions of Indian society and such policies played a vital role in the development of separatism; without them Aligarh College would never have survived its early years and the Muslim League would never have won separate electorates. Crucially important too was the fact that for much of the time the Muslim platform was a particularly rewarding one for Muslim politicians from the United Provinces to adopt; up to the second decade of the 20th century because of the attitudes of the government, and later, in the age of mass agitation and growing electorates, because these politicians had in the ʻulāmāʾ a tremendously powerful, if double-edged, weapon for mobilising mass support. They introduced the ʻulāmāʾ into politics in 1918 with the aim of making capital out of the Khilāfāt issue, but were overwhelmed by the agitation which followed. They introduced the ʻulāmāʾ again in the campaign for Pakistan, and the ʻulāmāʾ, this time subordinate to the politicians, played an important part in winning over to the Muslim League Muslims in provinces where they were a majority of the population (sc. Bengal, Sind, North-West Frontier Province and Punjab). Without the support of these Muslims there could be no Pakistan.

Such were the factors which encouraged some Muslims to organise on a communal basis in Indian politics under the British. Such, in sum, were the causes of Muslim nationalism. If, for those who followed, Muslim nationalism was mainly a religious matter, for those who led, it was a matter less of the desirability of separate Muslim political organisation or of a separate Muslim state in which they could live according to the Šārfī, than of the need to ensure that they continued to wield the power in northern India which they had wielded for hundreds of years.

Kawn wa-fasād, "generation and corruption". The expression is frequently found in the vocabulary of falsafa as the translation of the two Greek words γένεσις and φθορά, and it is also how Aristotle's De generatione et corruptione is rendered in Arabic. The references entail an analysis of cosmology, a measure of psychology and some metaphysical developments of the Fatāsīfā. The ideas in question acquired various nuances of meaning, by measure of the system and theory of each ḥaylāt, but they always harked back to the Aristotelian meaning. The term is most frequently met with in the phrase "world of generation and corruption", ʻilm al-kawn waš l-fasād, as a designation of the sublunary world, which is subject to change; by contrast, the worlds above are free of this. A few quick references are sufficient here: al-Brāhī speaks of the corruptible elements placed within nature, "the corruptible facts" (al-ḥayyāt al-mudakhawanī al-fassādā; see Commentaire sur le Peri Hermeneicus, ed. W. Kutsch and S. Marrow, Beirut 1971, 75, 191); and Ibn Sīnā, in his treatise on "The branches of the speculative sciences" (Kashīm al-ʻulām al-ḥālīyya) considers a study of kaun wa fasād as one of the objects of "natural science" (see Tis' rasāʾil, Cairo 1326/1908, 106).

First and foremost kawn evokes the idea of exist-
entalisation. This is the principal meaning it acquired in the vocabulary of *ilm al-kalām: kawn is the advent in nature of the existential thing (*kawn, plur. *kāwīn), which makes it, for the Mu'tazilī (e.g. al-`Alīfā) as well as for al-Āsh'arī, to some extent synonymous with *wujūd. But for the advocates of the (philosophical) atom (dū'ur [q.v.]) in particular, an existentialisation of corporal beings and *wujūd of all existence, superreceptible as well as perceptible. For the Falsāsī, kawn (plur. *akāwīn), the customary translation of *wujūn, was more precisely applied to beings subject to growth, without losing its primary meaning of existentialisation, with its reference to the dimension of bodies. According to Ibn Sinā, for example, *kawn can either be a synonym for *wujūd or can designate a being in *fāsād, depending on the context. M. Jean Jolivet (L'Intélectricité selon Kindī, Leiden 1971, 123; cf. Rasā'il il-Kindī, ed. Abū Rida, Cairo 1369/1950, i, 204) suggests that for Kindī *kaun, linked to *fāsād, was already defined as substantial change, "changing existence". One of al-Kindī's main texts on the subject is the brief *risāla on "The efficient proximate cause of generation and corruption" (*al-itīla fī al-falāsiyla al-harbiyya it 'kaun wa'l-fāsād'; ibid., i, 208-13).

Yet there is a noticeable difference between the ideas of al-Kindī and those of his successors. The latter's vision of the world is emansipic; *akūn are therefore the last necessary effect of *fāsād, the productive flow of being, necessarily emanating from the prime Being. For al-Kindī, *kawn, however much a matter of becoming it may be, depends for its first efficient cause on a free creation *ex nihilo, thereby being linked with the Kur'ānic meaning of *kwn *fā-yāhūn, (God said) "So be it! and it is so" (Kūrān, II, 177); cf. Rasā'il il-Kindī, i, 373-4. But whether it is a question of the creativity of al-Kindī, or the emanationism of his eastern successors, or the eternity of the world of Ibn Rūḥān, the idea of becoming, generation, (substantial) change remains linked to *kawn. Even if *akūn depend in the last resort (freely or necessarily) on the prime efficient Cause, their coming into being is nevertheless linked to the interaction of secondary causes. By this token, the heavenly bodies, subject to local movement but not to becoming, are not answerable to *kawn. Falsāsī vocabulary does not consider them as *akūn. Therefore, in his *risāla on "The prostration of distant (heavenly) bodies and their submission to respect for God", al-Kindī (op. cit., i, 253 ff.) faithful to his creativism, affirms the direct creation *ex nihilo of the Heavenly Bodies because they are not subject to generation and corruption (cf. Jolivet, op. cit., 107).

In fact *kawn, and its opposite correlative *fāsād, taken as a whole, are the object of the fourth sort of movement which Aristotle calls "substantial movement". Such is the status of the beings composed of matter and form belonging to our sublunary world, which are destined to die, to be transformed, and to reappear in new forms. The word *fāsād belongs to the Kur'ānic vocabulary, where it signifies a state that is radically bad, in contrast with good. It can be rendered as (moral) "corruption", occasionally as "état de violence" (tr. D. Masson) or as "scandale" (tr. E. Blachère). Thus "Corruption (or "scandal")" has appeared on the land and on the sea because of what men's hands have done". The moral vocabulary of *ilm al-kalām contrasts *sāliḥ with the adjective *fāsiḍ, whatever is healthy with whatever is corrupt, often using them synonymously with ḥasan/ḥabīb. In law (*fīk), *fāsād signifies the invalidity of a juridical act (see *rādo). The cosmology of the Falsāsī procedes from these moral and juridic meanings to a physical one and employs *fāsād to render the Greek φθορά. In this case, the corruption of the compound matter and form depends on an intrinsic coming into being (kawn). Therefore *fāsād, like *kawn, also belongs to the fourth sort of movement, which, says al-Kindī, is "movement which transfers a thing from its own essence (*sān) to another" (Rasā'il, i, 217; tr. Jolivet, op. cit., 121). This definition, with slight variations, is found in the works of his successors. It is because of its "intrinsic power to decay" (*kwmt fāsādah), says Ibn Sinā, that a physical compound decomposes, and this power resides in matter (e.g. Naṣīrī, Cairo 1537/1938, 188).

The problem of "generation and corruption" was linked to the production of all beings in the sublunary world, and for Ibn Sinā was especially related to the problem of a separate Intellect which acted as a "giver of forms", *wādhī al-sūwar, as well as to that of "enacting" and "receiving" causes (*kabīliyya). When later kalām (e.g. al-Ghazālī in Mabāsiya and Tahāsī, Fakhr al-Dīn al-Rāzī, al-Ṭijjī, al-Dūrāšī) set forth and discussed the theses of falsāsī, they employed the expression *kawn wa-fāsād and the definitions elucidating it.

Bibliography: given in the article. References to the topic in the writings of the Falsāsī are very numerous, both in original, systematic expositions and in commentaries on Aristotle. (L. Gardet) *KAWs (s.), bow (noun of uncertain gender). The numerous types of bow attested at various times in the Islamic world are designated by expressions which include this word, in a very general sense, together with adjectives (kahs *hidjāsī, *fārisī, etc.) or nouns in annexation to it (kahs al-*hūsān, kaws al-*ridjī, etc.). Furthermore, one often finds qualities inherent in the weapon used to designate various types of bow (al-kalām, al-rāhīq, al-sūwar, etc., see below, § 3). 1. Generalities and origins

In classical antiquity and the Christian west, gallantry was especially displayed in close combat, so that the short sword and the straight sword were regarded as the noble weapons, as the poet Lucre clearly states: *Ensis habet uires, et gens quaecumque *wiorum bella gerit gladiis (Pharsalia, viii, 385-6). Arms involving the hurling of projectiles (bows, arbaleests and slings) were regarded as treacherous arms whose use was left to mercenary soldiers (Cretan archers and slingsmen from the Balearic Islands in the Roman army, Genoese crossbowmen in 14th century France). On the other hand, in the sphere of the martial arts in Islamic lands, the bow held the outstanding place, as the abundance of technical literature devoted to *rimāya (q.v.) shows. The information which we possess is only fragmentary, and comes from studies and published treatises stemming from the latter half of the last century; the principal ones are given below, in chronological order.

Hammer-Purgstall, Über Bogen und Pfeil, Vienna 1853 (a work based on the treatise of Muṣṭafā Kānī, which stresses religious and social aspects and leaves unexplored technical considerations); Schwarzlose, Die Waffen der alten Arabern, Leipzig 1886 (a lexicographical study devoted to the weapons of the pre-Islamic Arabs and based on a systematic analysis of ancient poetry); Fries, *Das Heerwesen der Araber, Tübingen 1921 (a study of the Umayyad army,
based on al-Ṭabarī, but with comparatively little information on archers); Hein, Bogenhandwerk, in Tfd., iv–v (1925–6) (a study of archery among the Ottomans made from the points of view of construction and of sporting use, and based on the Taḫkīs rasā’il al-rumūd of Muṣṭafā Kāndī); Klopfstei, Turkish archery, 1934 (deals with certain developments out of the preceding study, with more exact technical details); Faris and Elmer, Arab archery, Princeton 1945 (the first critical edition of a treatise on archery dating from ca. 1500); Zajacek published at Warsaw in 1956 a Mamluk treatise on archery of unknown authorship and included in a treatise on arms and the care of horses; Boudot-Lamotte, Contribution à l’étude de l’archerie musulmane, Damascus 1968 (the section on archery from a treatise on arms composed for Saladin by Mardī); Latham and Paterson, Saracen archery, London 1970 (a treatise by the Mamluk Taḫbūḏā, with commentary and illustrations).

The traditional items of information given in the treatises on rīmāsya generally agree that the origin of the bow goes back to a heavenly gift bestowed on Adam through the intermediary of the Archangel Gabriel. Adam then used with great profit this divinely-hallowed weapon, with its miraculous character, in order to preserve his crops from birds' depredations, and he passed it on to his descendants, amongst whom Abraham, "father of the Arabs", apparently had a great reputation as an archer. Little is known about the archers of the pre-Islamic period, or about what kind of bow they used (see below, § 3). It seems that certain tribal groups especially favoured this weapon, such as the B. Sa’d of Tamīm, whose skill at shooting was praised by various poets, including al-Kalīkh b. Ḥam. The Prophet is said to have been a skilled archer whose mastery of the bow was revealed at the battle of Uhud, and he had several bows whose names are preserved by tradition. Al-Ṭabarī, ed. Cairo, iii, 184–5, mentions three of these, taken from the B. Kaynūqā, sc. raḥiḏ, ṣawwāḥat (also called al-bayyād) and saḥīd, this last made from nabūd wood. `Abd Allāh Elendi (apud Hein) numbers the Prophet’s bows at nine, adding to the above those of al-Mukaddā and kāltām. The existence of these bows is attested, but without precise references, in LA, iii, 208. The most famous archer of the period of the Islamic beginnings is undoubtedly, according to tradition, the "Paladin of Islam" Sa’d b. Abī Wāḳqāsh, whom the Turkish archers' guilds later made their patron. Sa’d distinguished himself at Uhud with a little group of archers, whose names are preserved in the K. al-Maḏkūlī of al-Wāḳkīlī.

It is somewhat surprising to note that the word bawṣ appears only once in the Kurān, in S. al-Nāṣrīm (LIII, 9), in which it only figures, however, as a measure of distance: fa-hāna kāba bawṣayni aw adnā “[the angel] was two bow-lengths off or nearer". S. al-Anfāl (VIII, 62) nevertheless implicitly emphasizes the essential part assigned to the bow in the fight against the unbelievers: a’lādī lāhān miṣtāra bawṣayn shapes against them whatsoever force you are able to gather”. The word kawwa is here often glossed by the authors of the treatises on archery as “the force of bows”. This somewhat restrained information of the Kurān is on the other hand amply compensated for by the numerous traditions to be found all through the ḫātībī literature. From the main corpora, one may cite: Abū Dāwūd, Dīḥkād, 23; al-Buḫkārī, Dīḥkād, 75, 80; Anbāyā’, 16; Manāḥīsh, 4; al-Dārimī, Dīḥkād, 14, 23; Ibn Ḥanbal, i, 92, 124, 137, 264, iv, 50, 144, 146, 148, 154, 368, v, 32; Ibn Mādīq, Muḥaddīma, 11; Tijārāt, 67; Dīḥkād, 19; Muslim, Imārāt, 169; Faddān al-Sakha, 64, 2; al-Nāṣrī, Dīḥkād, 26; Khayvī, 8; al-Tirmidhī, Dīḥkād, 1; Manāḥīsh, 26 (see Boudot-Lamotte, Contribution, 40–5).

It is unnecessary to point out that these pieces of information contain no precise technical details which would enable us to reconstruct with any sureness the types of bow used at the time of the maḏkūlī. One possibility might be by means of the makers of bows, concerning whom no research has yet been done. One finds many times in Islamic onomastic the laḥab of "al-Kawāsīya". According to a piece of information in the Aṯḡānī, xiv, 36, al-Dīḥābī mentions (Ḥayawān, v, 233–5) two famous bow-makers, Uṣūfūr al-Āzīfī and Māṣīhā, the latter having been, according to tradition, the first man to make bows. Ibn Ṭabīḥī, ‘Umāda, ii, 222, repeats this information in order to explain the adjectives sāfāfīyya and māṣīḥīyya applied to bows. Amongst these uncertainties, one fact seems incontrovertible: that unlike the Persians, amongst whom archery had long been an ancient tradition and was one still living in Islamic times, the ancient Arabs used the bow more for hunting than for warfare. On one hand, archery was little practised from horseback, and on the other, the weapon on to the bow of the Ayām al-Ṣārāb did not require it [see Dīaysh, i]. Hence it was in Iran, and more precisely, in Khorāsān, where Abū Muslim organised his army, that new techniques, unknown to the Umayyads, were introduced in the domains of siege warfare as in that of archery. These Khorāsānians were themselves progressively replaced under al-Mu’taṣīm by Turks brought from Central Asia, accustomed to fighting on horseback, as al-Dīḥābī remarks in his well-known Risāla fit manāḥīsh al-Turk wa-ṭammāmat ḥiṣn al-khulūd, ed. Van Vloten, Leiden 1903. The coming of the Saljūqs intensified the employment of the horse-archer, whose astonishing successfulness came from the union, born in Central Asia, of the horse and the bow, whose symbolic forms may well have inspired the graphic shape of the ḫāṭr al-bayyād, these bows assumed, once need hardly point out, an extremely-mobile light cavalry force which contrasted sharply with the heavily-armed cataphracti which were used at that time in the west.

The counter-crusade begun by Saladin caused a florescence of treatises on ḥṣāḥād and ḥurāfisya in which there were treated, for the first time systematically, the techniques pertaining to each branch of weaponry (see Cahen, Tresīt, and on bows, Boudot-Lamotte, Contribution). In the Mamluk period this literature devoted to arms—often didactic in aim and utilising the form of the maghdūs—developed considerably, and amongst the topics dealt with were the manufacture and use of weapons, with archery occupying a prominent place (see Latham and Paterson, Saracen archery). After Baybars' defeat of the Mongols at ‘Ayn Ḫalīl, there was created the maṣyān, a training-ground for horse-archers. The introduction of firearms did not lead to the sudden disappearance of the bow. Indeed, the handling of the arquebus, slow and cumbersome, left the archers with a superiority in the field, at least at the outset; moreover, as Ayalon has noted [see Sārūn, iii], "To equip a soldier with an arquebus meant taking away his bow and, what was to the Mamluk more distasteful, depriving him of his horse, thereby reducing him to the humiliating
status of a foot soldier, compelled either to march or to allow himself to be carried in an ox-cart." Thus there speedily succeeded to the foot archers of the first Arab gijuns Persian mounted archers and then Turkish ones, whose participation in Islamic battles only ceased with the dawn of the modern period (the arquebus was introduced among the Mamluks in 895/1490 under Sultan Kā'ītbāy, some 125 years later than in Europe; see Ayalon, loc. cit.).

2. The treatises

The fundamental work, to which most of the authors of treatises on rimāya refer, is that called al-Wādigh by a certain Ṭabarī, whom Muṣṭafā Kāññ states is "the father of all the books written about the bow". For Kāññ, this Ṭabarī had to be the famous historian, but Ahlwardt believed, no doubt correctly (apud Ritter, 136), that it must be someone of the same name, whose complete designation was Ahmad b. Ḥādī Allāh Muṣṭīb al-Dīn al-Ṭabarī, d. 694/1295.

The intensification of gīdhād under the Ayyūbidīs stimulated the development of technical literature on archery. The oldest treatise is by a certain Murdā, or more likely, Mardī (see Brockelmann, I, 495), whose nasab is only partly known, Ibn ʿAllāh b. Mardī, and his nisba, al-Tarsusi, apparently meaning that he-originates from Tarsus. It was composed for Saladin ca. 570/1174 in collaboration with a celebrated arms manufacturer of Alexandria, Hasan b. al-ʿAbrakī, and is called Ṭabarī al-rabāḥ al-albāb fī kaysīyyat al-nāṣiḍā fi ʿl-hurūb min al-aswād wa-nashr ʿl-dām al-ʿādām fī ʿl-ʿudād wa ʿl-ʿādāt al-muʿsīna ʿalā lāb al-ʿādāt. Amongst the different weapons studied (see Cahen, Traité), bows occupy the favoured place (see Boudot-Lamotte, Contribution). Later in time (end of the 8th/14th century) but rich in its subject-matter and enjoying a wide diffusion is a didactic poem in 149 verses and the rajīs metre, accompanied by a technical commentary, attributed to Ṭaybūghā al-ʿAshrafi al-Baklamishī al-Yūnāni and called K. Ghunyat al-ṣulābī fī maṣraṣī ramm al-muṣālib (on the different manuscripts of this treatise, in various recensions, see Latham and Paterson, Saracen archery, xxvi-xxxviii). The catalogues of Arab, Turkish and Persian manuscripts further mention treatises on rimāya, so far unedited; but so far as is yet known, none of these is earlier than that of Mardī or richer in information than that of Ṭaybūghā. Accordingly, our information on the teaching of rimāya remains fragmentary and limited for the period between the Ayyūbidīs and the Ottomans. We know little about the master-archers whose teachings are handed down in the treatises, apart from the fact that, on the evidence of their nisbas, they stemmed from Khurāsān and Transoxania. One might conclude that most of them lived in the middle years of the 9th/15th century, since it was from this date that the "Abbasīs started raising large numbers of troops from Khurāsān and Transoxania. Three great figures are constantly cited, and it seems that their techniques (as will be explained in § 3 below) corresponded to three main technical methods. They are Abū Ḥāǧīm al-Bāwdārī (sc. from Ahlwardt), Tāhir al-Bakhlī and Isbāk al-Raffā. Furthermore, certain techniques are attributed to masters cited more irregularly, sc. Abū ʿAbd Allāh al-Tirmīḏī, Muḥammad b. al-Ḥasan al-Ḥarawī, Abū ʿl-Fath Saʿdī al-Samarkandī, Muḥammad b. Ṭārākī al-Samarkandī, Abū ʿl-Ḥasād al-Kāshī, Abū Mūsā al-Harrānī, Hayaṭwayh al-Bakhlī, and Abū Mūsā al-Kharrāz. For a detailed consideration of these, see J. D. Latham, The archers of the Middle East: the Turco-Iranian background, in Iran, viii (1970), 97-103.

The treatises show a certain resemblance in their structure, and one can broadly distinguish an introduction made up of traditions, followed or preceded by considerations on the origin of the bow and lexicographical information; a central core containing an enumeration of the basic principles (uṣūl) and secondary ones (jāmāʿ) laid down by the master-archers; whilst the close is often made up of various tactical considerations.

3. The various types of bow

The various kinds of bow are described with a great variety of names, often composed of two vocables, under the influence of lexicography; whence the oppositions kaws biğidā/kaws fārisī; kaws al-ṣuḏā/kaws al-riḏī; filk/fālis; etc.

Kaws biğidā. The type of bow used by the pre-Islamic Arabs was that of the simple, wooden bow, either short on long, depending on the cross section adopted; there is abundant evidence in the Arabic sources for this. In one passage, Herodotus seems to refer to the Arabs' use of composite, reflex bows: ʿArāzīnī ... ṭṣṣ dè pāliotona ʿeṣbīn ḫībā dāzā ṭṣṣ dhīxā maṭrakh, in which pāliotona ("stretched towards the rear") aptly describes reflex bows (see Hein, 357). It is quite possible that composite bows were known in parts of Arabia, and Herodotus may have been correct as far as he went; the composite bow was well-known in the Iranian world, and eventually became the standard weapon of the Sassanid archers. The requisite horn may have been imported, if long-horned cattle or goats were not available within the peninsula. But Herodotus is a very early source to cite for the position of the Arab bow in 8th century AD; by that time, as remarked above, the Arab bow was essentially the simple wooden one. The Arabic sources state repeatedly that the Arabs made their bows from nabī (Grewia tenax), which was apparently perfectly suitable for this; to this day, the primitive peoples of Somalia make effective bows, up to a length of 2 m, out of Grewia procera. This was regularly imported into Arabia; Persian caravans loaded with it used to leave al-Madīn/Česiphon via al-Ḥira and Yamāma for the Yemen (Agrabī, xix, 110, 116), and Mount Kasr was famous for its nabī. Further mentioned in the construction of the pre-Islamic bow were shawāb (corpus mas.) and nasāh (chāda solutina).

Kaws wāṣīfiyya. Apparently the Arab composite bow. The adjective stems not from the town of Wāṣīf on the Tigris but must be understood in its proper sense of median, intermediate, probably with reference to the components of this bow (see Saracen archery, 10).

Kaws al-ṣuḏā. "Hand-bow", as opposed to the kaws al-riḏī or arbalest (see below).

Between these two comes the Kaws al-bundūk "pellet- or stone-bow", the archetypal of the arbalest used solely for shooting birds and already known in the Prophet's time. The projectile used was a ball of hardened clay (djulāhī or bundūk). However, it should be noted that projectiles like balls or pellets can be shot from a hand bow as well as from a crossbow, and we know that hand bows were used thus from the time of Tutankhamun onwards, see JESHO (1972), 226; it was merely a matter of fitting a suitable pocket on to the string, and such pockets can be seen in Islamic miniature paintings.

Filk (also sharidī). A bow consisting of a single
Kaws al-ziydr. This was no longer a portable siege-engine, like the stone-hurler or tarrida [q.v.] and the mangonel or mangeianī [q.v.], but a siege- -machine mounted on a fixed chassis. It was used during the warfare between Saladin and the Crusaders, and corresponds to the “grand arbalest with a wheel” used in Europe for sieges and described by Viollet le Duc (see fig. 1).

**Fig. I.**

Siege-engines [see ʿiṣār], of a more or less static nature, like the stone-hurler or tarrida [q.v.] and the mangonel or mangeianī [q.v.] were, according to their importance, set up on mountings or even manufactured on the spot (as did the Ottomans later with their cannons). This necessitated the presence of specialist corps, mainly of carpenters (these last being also used to make supports for the galleries in mine-shafts), as well as the besieging troops. One should also note that certain of these siege-engines could be used to hurl pots full on incendiary naphtha or naft [q.v.].

4. The terminology of the components of the bow (see fig. 1)

**Fig. 1.**
The sources frequently liken the composite bow to the human body, and most parts of it take their name from parts of this last (e.g. šahr, baṣn, rubbs, ušukh (šahr, sur, etc.), thus the arc of the bow has as its centre or focal point the habid (lit. “liver”), and the term dimakha/daymukh is used for “arrow-pass”, sc. the side of the handle continuous with the wadīḥ (“face”), the part facing the archer as he shoots; it derives from Persian dima “cheek”.

Once the bow has been strung and held in a recurved position, each of its limbs delimits, together with the bowstring, a sector or “house” (basyā). Thus we have, with the upper limb, an “upper house” (basyā ašfāl), also called “house of shooting” (basyā al-ramy), because the shot is made according to this plan. The lower limb determines the “lower house” (basyā ašfāl) or “house of perpendicularity” (basyā al-šād), i.e. that which falls away towards the ground. At 3/4 of the way along its length, each limb makes a sharp angle of return, at ca. 60°, in the backwards direction; this bend has to be very resistant, since it bears the thrust of the recurved limb. Marḏī calls this part dustār (Persian “twisted cord, turban”), i.e. the torus, which corresponds to the Arabic terms tāšīf “edging, that which skirts the edge” and umūk. However, Ṭaybughā uses dustār in a quite different sense, sc. that of “the working part of the limb”, and this gives better sense, see the diagram of the terminology of the bow in Sasanian archery, 162.

Since each “house” has its torus, there is in effect an “upper torus” or “torus of the house of shooting” (dustār basyā al-ramy), and a “lower torus” or “torus of the perpendicularity” (dustār basyā al-šād). The torus is followed by the rigid, straight end of the limb, the “end-piece” or siya, whose extremity has a bone or ivory ferrule, abāštāf/al-wafra = “cover, or cap”. In this ferrule there is gouged out the groove or “nock” (faqr), where the loop of the bow-string (ṣayn al-watar) fits. When the string is in place, the end-piece appears like the neck of a violin; at its base and just before the bend of the torus, there may be a string-bridge whose function is to keep the bow-string constantly within the plan of the bow. As with the other parts coming in pairs, one speaks of an “upper end-piece” for that of the “house of shooting” (siya sūlā or siya basyā al-ramy) and a “lower end-piece” for that of the “house of perpendicularity” (siya sulā or siya basyā al-šād).

5. Arrow and quivers

The three main words denoting the arrow seem to convey the following distinctions: sahm (arrow made from a reed; but Ṭaybughā, in Sasanian archery, 24, says that this was of hard, solid wood)—nūskāh (Persian arrow).

Sahm is the most general term if one believes Herodotus, for whom the Arabs as well as the Persians originally used arrows made from reeds (apūd Hein, 26). According to Ibn al-Tiktaka, the Persians called the Arab arrow (generally made from wood) nabī (Fries, 53), whilst the word continually used in the accounts of battles fought in the eastern provinces of the Umayyad empire to indicate the Persian arrow is nūskāh, of whatever material it may be made (ibīd.). Leaving aside the divergencies found in certain manuscripts, the constituent elements of a wooden arrow, as they appear in the relevant treatises, are as follows (see fig. 2).

The wood (of the shaft) (šād), whose forepart (towards the head) is called the Šadr or foreshaft, and whose rear part, of wider section, is the main. The šād includes a socket (ruʾs) meant to take the head. This delicate end of the wood of the shaft is reinforced by a binding of sinews (djalz or rišāf). The part of the main which receives the fletchings (riš) is the section which is somewhat constricted and is called the waist (haḵw); it terminates in an enlargement where is made the nock (faḵ) which is meant to be embedded in the nocking-point of the bow-string (maḏin al-watar). The base of the main, which is situated just above the nock, undergoes, at the moment of release, a violent thrust which might tend to break the arrow at this point; hence it has a ligature of sinews (utra “cuticle”) which is the counterpart of that of the upper part of the šād (the djalz or rišāf). The arrow is, in this way, reinforced at both of the ends of least resistance. The two sides of the nock are called sharkeš al-fūḵ. The head (našl or zudidj), which may have two edges (ghirāḏān), has a pointed tang (sinkh) which is embedded within the ruʾs.

In the treatises on rimāya, quivers are given various, sometimes contradictory names. Thus we find: diʿba, a fairly large, leather quiver having a lid fixed by means of a cord (miyḏāhā). There are two Persian terms: tīhaḵt, a quiver made of horsehair and used by archers from the province of Gilan, and nīm, a quiver made of various skins sewn together and analogous to the preceding one.
a cylindrical quiver in which the arrows are placed with their heads downwards, as opposed to the procedure with the *dghab. Concerning the *kināna, a quiver made from skins, the lexicographical evidence is somewhat contradictory. *Lā, xiii, 321-2, gives the two senses of quiver made from skin and quiver made from wood, and Ibn Durayd, *Istihbāb, Cairo 1958, 27-8, notes that "if [the quiver] is made from skin, it is called *kināna, if made from wood, *dghaf, and if made from two pieces fastened together, *karan. The term *kināna comprises all these nuances". *Dghaf, according to *Lā, iv, 143, "resembles the *kināna, but is bigger and can hold a large number of arrows. A *hadīth seems to show that this quiver was of purely Arab origin: "Whoever takes an Arab bow and its quiver (*dghaf), God will keep poverty away from him" (*ibid.). *Kabd, a quiver made from the *nab' wood (* enorme tenax). *Karan, a quiver made from pieces of leather put together so that the air can circulate through interstices left so that the fletchings of the arrows do not deteriorate. *Wafda, a quiver made from skin entirely, with no wood in its construction (the wood originally denotes a shepherd's leather bag). Finally, one should note a metaphorical phrase for "quiver" connected with its capacity, *umma *thālūbīn (al-Suyūṭī, *Muzhir, Cairo n.d., i, 590). Another pointer to the capacity of certain quivers is provided by al-Wākidī, who in his account of the battle of Ubūt notes that an archer called Abū Ṭalḥa spread out in front of the Prophet, as a sign of his faithfulness, the contents of his quiver (*dghab), amounting to 50 arrows (*apud Fries, 54).

6. Gauntlets and thumb-rings

The very strong pressure of the bow-string on the fingers and the thumb at the time of the draw necessitates some protection here, provided by a leather gauntlet with the fingers reinforced with horn, bamboo or other hard material and held on the wrist by a thong or strap. According to the technique adopted for locking the bow-string (*abd), this gauntlet can have 2, 3 or 4 fingers, but is never a complete glove. It may be designated by the arabised Persian word *hughsīb (*hīghsīb, a doublet of *uguhsīb (*anguhsīb (*angushtāngushtān), s.v.); however, this is also the normal word for "thumb-guard", "drawing-ring", see *J. D. Latham, *Keshbēn: a Persian loan-word in Arabic, in *JRAS (1968), 65-7. The modern archer's gauntlet is a copy of this. The so-called "Mongolian" method of taking the bow-string with the thumb requires the use of a thumb-stall, *hāshīna (sometimes, but incorrectly, *khasīya'a). Good archers seem especially to appreciate rings made from hard substances like bone or ivory and corresponding exactly to the shape of their thumb, carefully carved and sometimes decorated with great artistry (see *Arab archery, 123-4; *Hein, in *Isi, xv, 18-22; Klopsteg, 67-70; Latham and Paterson, *Saracen archery, pl. 7 A-B).

7. The phases and principles of shooting

The act of shooting can be broken down into a certain number of phases, each of which is developed with detail and precision and with reference to the practice of the main master-archers, in the treatises on *ristsya. It is not possible to enter into detail here (see for this, Latham and Paterson, *Saracen archery, and Boudot-Lamotte, *Contribution), and only a brief review of these phases, treated chronologically, is given here.

(a) *Fār, act of stringing or bracing the bow. This operation needs special care, as much to avoid damaging the bow as to avoid injury. Certain particularly powerful bows require the intervention of a helper or of special contrivances, bracing mechanisms, such as the *kharkhumān "bracing-board" (from Pers. *bhar + *humān?).

(b) *Kabba, grasp, sc. the position of the left hand (for a right-handed person) on the grip or handle (mabīd) of the bow. In order to distinguish this technique from that of the *abd (see below), the authors sometimes call this more precisely *al-kabba bi 'l-chamāl.

(c) *Abd or *bafla, the ok, locking, sc. the position on the bow-string of the fletching of the right hand, and especially that of the thumb in the "Mongolian" technique of locking (al- *abd bi 'l-shām *sad 'l-watar). In order to achieve a concise and clear exposition of this, the authors of the treatises generally refer to counting by means of the fingers (see *HISĀB AL-ʾAKD). In effect, the thumb in the locking position and the fingers which, in various manners, come to lock the position in order to ensure a good draw of the string during the whole process of the draw, form a figure which is expressed by the corresponding numeral in the system of digital computation. Three locks seem to be especially favoured, sc. 63, 69 and 83.

(d) *Tafwīd, nocking. This consists of bracing the arrow's nock (fūk) on the binding of the bow-string. There must be no play there, so that when the archer draws back the arrow, together with the bow-string, he accompanies the latter in its rearwards path to the chosen anchorage-point (see below).

(e) *Madd, the draw, drawing (also nas' al-watar). This consists of bringing the bow-string back towards oneself. This technique varies in terms of the anchor-point selected, which can be at different levels: eyebrow, ear-lobe, moustache, chin, sternum, or even on the chest. This has various techniques according to the corrections which must be made in height and direction.

(g) *Iśāb or *śliā, the loose, loosing. This is the last and certainly the most important phase of shooting, which demands the archer's entire concentration, an "emptying of the heart" (*laḫāliya yi *kūhū) and a setting-aside of all other thought (mid *siwād). The master-archers insist in this attitude, which is like that of the supplicant at the time of the *takbir al-šāmā, which is expressed by the corresponding numeral in the system of digital computation. Three loose seem to be three basic išāb. In the first, called muḫqāṭlas "snatched", the archer draws rapidly and looses immediately without any break in time. In the second, called sākin "held", he draws slowly, holding the draw in order to verify that the position of the shot is good and then looses calmly. The third is called māfrūk "twisted", and involves a light, partial draw—a brief moment at rest—and then a sudden end to the draw followed immediately by the loose.

Like the religious lawyers or *fubākā, the authors of the treatises distinguish five arkhān, sc. the bow, the string, the arrow, the thumb-ring and the archer, and in the manner of *išāb, they divide the phases of shooting which have been surveyed above into *uṣūl and *fūrā'. It is thus possible to draw up the following table from the information of the chief master-archers: Abū Hāshim—4 *uṣūl, sc. *kabd, *abd, *madd, *sišāb. *Tāhir—to the 4 *uṣūl given above is added an asl called *šimād which consists of holding firmly in the left hand the grip or handle of the bow whilst the right-hand fingers make a good locking of the string, the two hands exerting equal forces.

Abū Mūsā al-Kharraz—4 usūl, sc. 'abd, khabīda, nasār, iflāt, and 6 furū', sc. 'tār, tafwīb, shooting from beneath a shield, shooting with a breastplate, knowledge of weapons for their use in combination, ways of changing weapons in the course of a battle. He also adds two moral qualities, khasla: not to shoot at anyone or anything contrary to the will of God, and to show patience.

Muhammad al-Harawi—7 usūl, sc. itdr, tafwīb, fīuffling, kabbāda, maddir, nasār, iflāt.

Finally, one may note that all these different techniques seem to come down to three main physical types, those of the three Imāms of rimāya, sc. Hashim (tall), Tahir (short and stocky) and Ishāk (medium height).

8. Training and tactical use

The proceeding considerations concern shooting mainly on a horizontal plane. The Mamluks especially developed two forms of practice shooting in a vertical plane, one up into the air (ramy al-kabak) and one downwards (kīghādī). The archer familiar with these techniques could use his weapon to maximum advantage in the various circumstances arising during battle.

Ramy al-kabak "shooting at a gourd" (Tkish. khabāb "gourd"). A pole approximately 25 feet high was erected in the maydān, with a gourd or other spherical or oval object at its end, which the mounted archer must reach when his galloping horse passed by the pole. Little is known about the origins of this shooting exercise, which must have come from Central Asia and Turkmen practice. This exercise was very popular under the Mamluks, and reached its apogee between 638/1260 and 694/1295 in the sultanates of Baybars I, Khalil, and al-Ashraf Khalil, often giving rise to splendid festivities. A description is given in the Mamluk historians Ibn Taghrībirdī, Nuḍjam, viii, 6, and al-Makrizī, Khitāt, iii, 180. On ramy al-kabak, see especially Latham and Paterson, Saracen archery, 77-8, 172, and Hassanein Rabi', The training of the Mamluk Fāris, in War, technology and society in the Middle East, ed. V. J. Parry and M. E. Yapp, London 1975, 153-83.

Kīghādī (< Tkish. bigāc "slope, incline"); the faulty transliteration of J. T. Reinaud kīghadj gives the word as it must have appeared after the passage of Tkish. ǧ to Ar. ǧ). In Ṭayybugha (Saracen archery, 78-9, 172-3) this term denotes either an exercise in which the archer, shooting parallel with his left thigh, shoots at a ground target, or else any kind of downwards shot made from horseback. According to Morier, Second journey through Persia, London 1818, 169, the word denoted shooting rearwards by a group of cavalrmen at full galop.

In open country, the archers whose function was to break, from a distance, the charge of the enemy were normally placed in the front rank. (Crossbowmen were also used for this aim, but with varying effect. If the arbalest gave an advantage of greater precision and a more powerful shot, it had serious disadvantages: heaviness, cumbersomeness and above all, a distinctly slower frequency of shooting, since a good crossbowman could only with great difficulty let off two bolts in the time during which an archer could shoot off twelve arrows. Hence the crossbow was primarily used for the defence or attacking of fortresses.) In the second rank came infantrymen sheltered behind shields and provided with weapons for cut-and-thrust in close combat (lances, swords). In the third rank were placed detachments of cavalry meant for hurling in at decisive moments [see Ḥarb. ii. The caliphate]. The Turks, and then the Mongols, gave pride of place on the battle field to cavalrymen armed with short and very powerful reflexed, composite bows. The tactic of these horse-archers consisted of drowning the enemy under a hail of arrows whilst one or both of the wings moved round to envelope the enemy's wings or rear [see Ḥarb. iv. Persia].

The "Scythian" method of shooting over the shoulder. This was a tactic stemming from the nomadic peoples of Central Asia, who were trained from childhood in riding and archery. The tactic must have been adopted, as Rostovtseff showed (see Bibl.), by the Scythians of the 8th-2nd centuries BC, and then passed to the Tatars; it made a vivid

Fig. 3. Encyclopaedia of Islam, IV 51
impression on classical authors, in whom the expression “Parthian shot” became a synonym for treachery (on the Scythians’ tactics, see Herodotus, iv, 120; Xenophon, Anabasis, iii, 3, 10). This archer avoided close combat by making a series of attacks and retreats which had a definitely demoralising effect on the enemy. Greek and Latin authors often refer to this, and especially significant in this connection is the verse of Propertius, iv, 3, 65-6, describing “the cunningly-contrived bow which lets fly against the fleeing cruppers”, plumbo cum iorlae spargatur pondera fundae| Subdolus et uersis incerpat arcus equus.

It is moreover the concept of nomadic steppe cavalrymen which is at the bottom of mediaeval representations of Centaurs galloping along and shooting arrows behind them; see on this Z. Kadar, L’influence des peuples cavaliers sur la formation des representations medievales des Centaures, in Acta Archaeologica, ii/4 (Budapest 1952), 307-18.

This method of shooting, more “Scythian” than “Parthian”, considering its ultimate origin, recurs in Turco-Mongol military traditions and is perfectly illustrated in the famous 15th century miniature of the Top Kapu Saray, 2163 Istanbul (see fig. 3). Its persistence over the course of centuries is remarkable, and is illustrated in the case of it during the modern period (long after firearms and crossbows were avoided close combat by making a series of attacks and retreats which had a definitely demoralising effect on the enemy. Greek and Latin authors often refer to this, and especially significant in this connection is the verse of Propertius, iv, 3, 65-6, describing “the cunningly-contrived bow which lets fly against the fleeing cruppers”, plumbo cum iorlae spargatur pondera fundae| Subdolus et uersis incerpat arcus equus.

Kaws Kuzah, the Arabic term for the rainbow, formed from kaws "bow" (Kaws in the inscriptions of Jordan; Kaws in the inscriptions of Tigrath-Pileser, Esarhaddon and Assurbanipal; Kaws in Babylonian inscriptions of the time of Darius and Artaxerxes I; Kaws, Kaysh, Kūsh, Kūsh, in the Old Testament; Kaws, Kaws, in the Nabataean; Kaws, Kaws, in Arabia), an Edomite deity known during the first millennium and later venerated by the Nabataeans (cf. Vriezen, *The Edomite deity Qaws*, 330 ll.). He was a war-god, symbolized by the bow, just as Adad berut, god of the tempest, was symbolized by lightning (D. van Buren, *Symbols of the gods in Mesopotamian art*, 165, 67), and as Dhu 'l-Khalasa, the archer-god of the Arabian pantheon, was symbolized by arrows (see T. Fahd, *Le panthéon de l'Arabie centrale avant l'hégire*, 62 ll.).

After the manner of Dhu 'l-Sharri which eclipsed him, Kaws acquired other prerogatives, those of most of the gods of the desert regions, such as the protection of the vegetation by ensuring rain, a prerogative symbolised by the rainbow. Hence in the Arabic milieu, the name Kaws was followed by kusah in order to define his specialty. Kusah, pl. of kusah, "a coloured band of yellow, red and green" (Yākūṭ, iv, 86 ll. 3-4; TA, ii, 209, l. 11 from foot) denotes the successive appearance of bands of colour in the rainbow. As the divine symbol became substituted in general usage for the divine name whose attributes it was eventually to determine, kusah sometimes came to designate the god himself. Hence it is attributed to Muhammad the saying "Do not say Kaws Kuzah, because Kuzah is the name of a demon (shayd), but say Kaws Allāh" (Yākūṭ, iv, 85-6), and Dāhib adds, "just as one says the House of Allāh, the plurals of Allāh and the lion of Allāh" (Hayyūn, ii, 28-9); here, the symbol is taking the place of that which was originally symbolised. This is confirmed by the fact that this shayd (a term applied to the pagan idols) became, in Islamic cosmological tradition, the angel in charge of the rainbow (Yākūṭ, iv, 86 l. 4).

Furthermore, Kuzah, the abridged form of Kaws Kuzah, still denotes at Muzdalifa the pick placed at the right of the imām when he occupies the place reserved for him for the Pilgrimage ceremonies; before Islam, this designated, in the same spot, the pyre where the sacred fire of Muzdalifa was kindled (cf. Fahd, *op. cit.*, 10). When considered together with Kaws Kuzah, this fire could have been one of roation or isāsah [q.v.].

In short, Kaws Kuzah is the Arabic variation of the name of a divinity whose importance is attested by a number of theophoric names found among the peoples moving round the region between Central Arabia and the Jordan, such as Kaws-malakū and Kaws-gabrī, two kings of Edom in the times of Tigrath-Pileser III (744-27 B.C.) and Esarhaddon (680-66 B.C.); Kawsbr, Kawsmlk, amongst the peoples of Libyân; Sīmiks amongst the Mineans, Kaws 'nī, Kawsy in the inscription of Tell Khulayfa (7th century B.C.); Kusadja, Kusudjahabi, Barkusu, in the Babylonian period; and Kosdaru, Kosnatanos, Kosmalachos, Kosbanos, etc. in the Hellenistic period.

The absence of such theophoric names composed with Kaws in Arab onomastics is striking and unusual, given the fact that there exist names compounded with Kaws, such as Imru' al-Kaws and 'Abd al-Kaws (explained in *Ṭamāša*, ed. Freytag, i, 85, and Batal-yūs, *Sharḥ dīwān Imri* al-Kaws, Cairo 1308, 3, as being connected with an idol called al-Kaws, on analogy with the type of theophoric names fairly common in Arab onomastics).

This god is Kaws and not Kays, for the following reasons: (1) the absence of the name Kaws from the Arab pantheon as described by Ibn al-Kalbi in his *Kitāb al-Āṣām*, the source of all writings on the question; (2) the absence of theophoric names composed with Kays in the inscriptions gathered in Arabia and in the vast region traversed by Arabs to the north of the peninsula (cf. Lancaster Harding, *An index and concordance of pre-Islamic Arabic names and inscriptions*, 921, in which only theophoric names with Kaws are attested); (3) the isolated position of the two theophoric names composed with Kays in comparison with the large number of those composed with Kaws; and (4) the existence in
Minian of a theophoric name Kysmwn (cf. Jamme, in Oriens antiquus, vi, 183-2, text no. 1211), in which kays occupies the place of imru and of *abd and not that of a divine name.

Should one therefore deduce from this transformation of Kaws into Kays, in the kingdom of Kinda, an attempt to appropriate the ancient Edomite deity by the powerful tribal confederation of the Kaysa?

(T. FAHD)

Independently of kaws kusah, other expressions are used in Arabic to denote the rainbow: Kaws Allâh, K. Rasûl Allâh, K. al-sama', K. al-ghamâm, K. al-mun, *alâ'lam al-sama', K. Kâzî. The words *husân (dust), *husânî, *husânî, and *husânîya have quite different origin. Muslim scholars include the rainbow among the *ahdâr al-uloiyya, the superior phenomena. The rainbow is usually opposite the spectator, while the sun is at his back and there is a dark cloud or wall behind drops of water; the drops may be in a cloud or formed at springs, water-wheels, in turbulent rivers where spray is formed, in the steam of baths or in water which is ejected from the mouth in a spray (see Beitr. V). Frequently reference is made to a description by Ibn Sînâ (see E. Wiedemann and M. Horten, in Bibl., among others) who was on the top of a very high hill at the foot of which lay a vast bank of mist; the sun was above the hill and Ibn Sînâ saw a rainbow on the mist below him.

Numerous descriptions of rainbows occur in literature, e.g., in the Šamásâ (F. Tuch, ZDMG, 1899, 529), who also by the Hâjjî Kâhitî and by the poet al-Wâdî (see F. Dieterici, Menâlîbî und Saîf al-Dawla aus der Edelperle des Thâ'dlibi dargestellt, Leipzig 1847, 129, 175).

The more or less strictly scientific studies of the rainbow are also numerous. Hâjjî Kâhitî (iv, No. 9,640) quotes a special *Îhim Kaws Kuzah concerning which he deals with all questions that can arise. According to him, “it investigates how the rainbow is formed, the reason why it is formed and why it is circular; further the reason for the difference in its colours, why it appears after rain at the end of a day and why it is often seen by day but only rarely at night by moonlight. It further investigates the astrological significance (al-ahdâm) of its appearance”. Descriptions on similar lines are found, for example, in the works of al-Kawsâni (*Îláâb al-Mukhâlîdî, ed. Wüstefeld, 98; Kostümchronik, tr. Ich, 201); in the Rasûlî-Îkhân al-Sâñî, Bombay 1305, ii, 52 ff. (cf. F. Dieterici, Die Naturanschauung der Araber, Berlin 1861, 87); also by al-Kârîfî in his Kitâb al-listiîbî fîmâ tadrikihi *l-ahdâm; and in the Risâla fi Kaws Kusah of al-Tukâtî (see Berlin Catalogue by Ahlwardt, No. 5691); two anonymous works have been published by Chelîko (al-Machîrî, xv (1911), 756-44). A considerable section in a meteorological work (Ahlwardt, Berlin Catalogue, No. 6054), and no doubt many other passages, deal with our phenomenon. The most important and most comprehensive work, however, is from the pen of Ibn Sînâ in his Sâfi'û (see Bibl.).

The descriptions of the rainbow are in general very accurate. Not only the simple rainbow but also the double and even triple are described. The first is said to be produced by the sun’s rays themselves, the second by the rays shining through the rays from the first and the third by the rays from the first two; the bows therefore are successively weaker. It is emphasised that the rainbow is not always composed of the same colours, a phenomenon which has been fully investigated by M. Pernter. It is also mentioned that the rainbow is particularly beautiful when the sun is on the horizon.

The older treatment of the theory of the rainbow goes back to Aristotle, with whose meteorological works the Arabs were acquainted. Thâbit b. Kurra is said to have translated a commentary by Alphérédus (= Epaphroditos (?) on Aristotle’s essay on the rainbow (Ibn al-Kiftî, 59). Aristotle is followed by Ibn Sînâ, Ibn al-Hayîâm, al-Karâfî etc., although in many details they make additions and corrections to his views. It is always assumed that the rainbow is produced by beams of light or visual rays which are regularly reflected on the raindrops, on very minute reflecting surfaces. Kamâl al-Dîn al-Fârîsî (1300) gave a brilliant exposition of the colour explanation, as far as was possible in the general state of knowledge in his day, when the dispersion of light was unknown. Like us he says that the light is once or twice reflected in the interior of the globule of water and then radiates out from it; thus we have the main and secondary rainbow. He also endeavours to investigate the cause of the colours although, of course, not satisfactorily. By experiment he proves the correctness of his results, which are on a much higher level than those of Theodoricus of Freiburg (about 1300).

From kusah comes a word takâsî, meaning “showing the colours of the rainbow” or briefly, “the colours of the rainbow”. It is defined by Kamâl al-Dîn as “different graduated colours in the region between blue, green, yellow, red, smoke-coloured white, that is, as regards visual perception”.

The rainbow is also given an astrological significance according to the zodiacal sign in which it appears. In the Ram it means plague and death (Ahlwardt, Berlin Catalogue, No. 5906, al-Kaws *alâ'lam al-Sâñî). In another manuscript, (No. 5915, 1) it is said that in September a rainbow indicates great tyranny and oppression.

**KAWS KUZA—KAWTHWAR**

**KAWSARAH** is a little island on the coast of Tunisia, being a deformation of Cossyra, more easily discerned in the form attested and favoured by Bakri, sic. Kusaha. It must have been generally pronounced Küshra, then Arabised in the written texts, by assimilation to an Arab form, as Kawṣaра.

Lacking any great strategic or economic value, Kawṣaра figures little in the historical sources, and only a few of its items of information on it can be found in the Arabic sources. At the time of the invasion of Ifrikiyā in 276/474-8 by Abū Allāh b. Sa’d b. Abī Sarb [q.v.], the inhabitants of Djazirat Şahrī (Capo Bon) gathered at Cyperna and took refuge temporarily on Kawṣaра. Half-a-century later, in ca. 317/730, ‘Abd al-Malīk b. Kāţan—who ended up as governor of Spain—devastated the island, probably operating from Egypt as his base. Kawṣaра doubtless suffered further from attacks by the Muslim fleets which began to rove the Mediterranean. In the 10th/16th century Christians and Muslims wore the same garments and spoke the same language. According to Bonnet, a Provençal merchant enslaved at Tunis, whence he had managed to escape, this language was in fact the same as that spoken in Malta. It must therefore have been an Arabic already much transformed.

The island’s resources have always been fairly slight. Its woods provided wood of excellent quality, and wild goats are said to have been hunted. In mid-17th century, according to Bonnet, “the island’s trade consists entirely of wine, charcoal and wood which the people export to Sicily and Malta” (P. Grandchamp, *Un marchand provençal*, 14).

**KAWTHWAR**, a word used only once in the *Kurān* (CVIII, 1: “Yes, we have given you al-kauṭhawr”); the short Sūra CVIII is given the name surād al-kauṭhawr. The word comes from the root K-TH which is “to be abundant” in the Rasāʾil Iḥlāṣ al-Safāʾ, which is not rare (e.g. naafal: other examples in Brockelmann, *Grundriss der vergleichenden Grammatik*, i, 34). The kauṭhawr which occurs in ancient...
poetry (see quotations in Ibn Hishām, ed. Wiistenfeld, 261, and Noldeke-Schwally, Geschichte des Qorāns, i, 92) means "abundance". Some ancient writers of tafsīr interpret kawāthar in Kurān, CVIII, 1 as "abundant goodness" (al-khāyār al-kawāthir; cf. Ibn Hishām, op. cit.; al-Ṭabarī, Tafsīr, xxx, 180-1). This etymological meaning, however, although it did not totally disappear, gave way to a traditional interpretation. According to this the Prophet himself regarded al-kawāthar as the proper name of a river in Paradise (cf. Ibn Hishām, 261 in fine, and specially al-Ṭabarī, Tafsīr, xxx, 179), or as a pond which was shown to him at the time of his ascension to the Throne of God, and which was designated for him (al-Ṭabarī, ibid., 180; cf. A. J. Wensinck, The Muslim Creed, Cambridge 1932, 231). This last explanation is considered most credible by al-Ṭabarī; al-kawāthar was, then, becoming something almost synonymous with baḥd (q.v.), "the Prophet's pool", at which believers quench their thirst when entering Paradise. Its existence is affirmed in several "professions of faith". But more frequently al-kawāthar will be the river which feeds the pool. According to a subsequent idea (cf. Aḥwāl al-aqāma, ed. Wolff, 107), all the rivers of Paradise flow into the baḥd al-kawāthar, also called nahr Muḥammad, as specially belonging to the Prophet.

The most ancient Sūras already mention "the spring" (ṣawār), "the living spring" (ṣawār jāriyya) which waters Paradise (LXXVII, 41; LXXXVIII, 12 and passim); the Medinan Sūras describe in more detail the "rivers" (al-anhr). In XLVII, 15, for example: "There will be rivers there, the water of which is incorruptible, rivers of milk which never sour, rivers of wine sweet for those who drink of them, rivers of clear honey. This description suggests the rivers of Paradise of Judaeo-Christian eschatology, flowing with oil, milk, wine and honey. It is of note that oil is replaced by "incorruptible water" (ghayr āsin), so precious in the deserts of Arabia (cf. J. Horovitz, Das koranische Paradies, 9). Ḥadīths and tafsīrs delight in describing al-kawāthar on this same model. But taking into consideration the general meaning of "abundance", the "river of the Prophet" presents itself as the quintessence of the rivers of Paradise. In certain versions quoted by the Tafsīr of al-Ṭabarī it is said: "Its waters are whiter than the snow and sweeter than honey", or, "And its waters are of wine". Surpassing the Kurānīc description are others endowing it with "banks of gold" or a bed of "rubies and pearls" with a perfume "more penetrating than musk" (cf. Soubhi El-Saleh, La vie future selon le Coran, Paris 1972, 36 and ref.). Rationalising or modern tafsīrs easily lend a metaphoric sense to these details.

Bibliography: given in the article. The principal traditional references to al-kawāthar are (cf. Soubhi El-Saleh, op. cit., 36, n. 6 and Annexe I): Bukhārī, viii, 201; Rīdāh, 119; Musnad of Ibn Hanbal, ii, 112; Tirmidhī, ii, Tafsīr, to CVIII, 240; Ibn Mādhja, Zuhd, 307; later, Baḥgawād, Musāb-wal-iṣām, ii, Hadīd, 145; Rasd, 248; Kāyim al-Dhau-xiyā, Ḥādī l-arrāhīā ilā biḥlī n-afrah, 131, etc. (J. Horovitz - L. Gardet).

KAWUKLU, Turkish "the man with the Kaivos", a character of the Turkish Orta oyunu theatre. Turkish kaivos indicates a rather high, variously-shaped cap, with a headband, serif, which rounded it (Ağakay, Türk dilsözlük, sans serif sanrih başlık). Such caps of varying shape, and colour according to rank were worn by officers of the Janissaries (cf. Maḥmūd Shawket, "Qīnānīlī teşkilāt ve biyālet-i ʿaskerîsîyesi, Istanbul 1935, i, 29 ff.). Other professionals too had their own special ha 모습, the writer, wezir, molād, kāšif and paşāğlıh kaivos, some with specific names: kallâwi, ḥorâsâni, midişwezes, selim, Çerf (cf. Emin Cemken, Osmanlı sarayı ve biyâifleri, Istanbul 1948). In official language, even an Arabic plural ha 모습 was formed. However, the popular mind conceived of the Kaivos wearer in a different fashion: ha 모습 büyük ama alımsız sıfırdı yok, "an imposing cap but no gentleman underneath it"; ha 모습 salâmah, "to wave one's cap", i.e., "to say yes and amen to everything"; kaivos or dakkaivos, "coaxer or wheedler"; kaivos giydirmek, "to put on a cap", i.e., "to impose upon someone".

A special kaivos appears as one of the two main characters of the Turkish popular theatre Orta oyunu (q.v.). Such theatres had existed previously, but so far as we know, the term Orta oyunu occurs for the first time in 1833. The heyday of the Orta theatre was towards the end of the 19th century; it then became known in Europe through Kūns's descriptions. The hero of the comic play was the Kaivoslu, just like Karagoz (q.v.) in the shadow-plays. The other main character, Peşkekâr, was a kind of theatre-director, corresponding somewhat to Hağfeldvâ in the shadow-play. The Kaivoslu's dress, including a colban (aşlıbe) and trousers (şahvûl) was red, even the cap (see the plates in Kūns and Gerek's publications). Often appearing as a pedlar, artisan or servant, the Kaivoslu was a clown whose comedy lay in his misunderstanding the words of the other actors, his mindless execution of orders, which he twisted and exaggerated, his moderate bragging, slyness and ready wit, and his imitation (tafīl) of foreign voices and dialects, especially those of the non-Turks in the Ottoman Empire. Dextrous juggling was also part of his performance. Only the main lines of the action were known; the Kaivoslu had to improvise all the jokes, so that his performance was a demanding one. About 40 titles of plays, some identical with those of the shadow-play, are known, and 25 names of famous Kaivoslus have come down to us. Special mention should be made of Hamdî (d. 1917), Kel (d. 1917), Kel Hamdî (d. 1914), Kel Hasan (d. 1929) and Nâşit (1899-1938) (see Gövsa, Türk meşhurları anı silahînedd, with plates). Performances by these and other Kaivoslus are still remembered by the populace. Hamdî, when asked by Kūns where he had learnt his art, answered significantly that his uncle and comrades had been his teachers. In origin, the Orta theatre was probably influenced by foreign elements; Bombarci has suggested influences from Jews, Greeks and perhaps Gypsies.

During the Reform period, this type of theatre met with serious competition from the European theatre, and many modernists wanted to forbid it outright. At the time when modern-type stages were set up, Hamdî made an attempt with the so-called saflîrî oyunlar, but without real success. Kel Hasan was more fortunate and died a rich man. In recent times, the Orta theatre has almost completely disappeared and endeavours to revive it are only occasionally heard of.

KAWUKLU — KAWURD

807

KAWURD b. Čağırı Beg Dawud, called also Kara Arslan Beg on his coins and by authors like Mirkhāt and Gurg, was the founder of an independent Saldıjk amirs in Kirmān which endured for some 140 years until the irruption into the province of Oghuz from Kūsrān. The origins of Saldıjk rule in Kirmān are obscure: there are discrepancies in the accounts of the sources, and the opening pages of Muhammed b. Ibrāhīm’s local history of Kirmān are missing. Kirmān had been recovered by the Būyids after the Ghaznavid occupation of 422/1031-2 (on which see E. Merçil, Genezilerin Kirmān hâkimiyeti (1031-1034), in Tarih Dergisi, no. 24 (1970), 35-44) and formed part of the amirate in southern Persia of ʻImād al-Dīn Abū Kālidār Marzubān. After the collapse of Ghaznavid power in Kūsrān, Saldıjk bands began raiding southwards through Kūşistān and Ṭabās to Kirmān. A raid on the chief town, Bardasr or Kirmān, was repulsed by Abū Kālidār’s viceroy Muhābahdībīh al-Dawla Hībatallah al-Fasawī in 434/1048-9. Saldıjk autonomy was therefore restored, and the Būyids were able to retain their hold on the main centres of Kirmān, Kufšt, Rayy, and Bāburq. Sanjar, son of Gurg, was defeated by the Khurāsānī governor in 439/1049 and the Būyids were able to establish a new amirate, which lasted until 456/1064. The origins of Saldıjk authority are obscure, but there is evidence for a separate line of Saldıjk amirs in the province from the time of ʻImād al-Dīn Abū Kālidār Marzubān. After the fall of Ghaznavid power in Kūsrān, Saldıjk bands began raiding southwards through Kūşistān and Ṭabās to Kirmān. A raid on the chief town, Bardasr or Kirmān, was repulsed by Abū Kālidār’s viceroy Muhābahdībīh al-Dawla Hībatallah al-Fasawī in 434/1048-9 (Ibn al-Athir, ix, 349); whether Kāwurd or Ibrāhīm Ināl was the leader of this foray is unclear. However, shortly before the Būyid amirs’ death in 440/1048-9, the rebellious Daylamī commander in Bāhār, Lāshkārtān, delivered the capital into Kāwurd’s hands, and Būyid rule was thus ended (Ibn al-Athir, ix, 349-50; Muhammed b. Ibrāhīm, 2-3).

Kāwurd now began a reign of over a quarter-century in his amirate, acknowledging the supreme suzerainty of Toghrīl Beg and then, somewhat grudgingly, that of his own brother Alp Arslan. Muhammed b. Ibrāhīm gives considerable information about his internal policy. Over the ensuing years, he proved himself an energetic and capable ruler in Kirmān. He behaved as an almost independent prince, with such insignia of royalty as the ceremonial emblem on documents (incorporating the Saldıjk bow and arrow motif), and the adoption of honorific titles such as ʻImād al-Dawla, found on his coins together with his fūghra. Like the Saldıjk amirs in other parts of Persia, he took care to win over the Persian official and religious classes, assigning them administrative and judicial positions and marrying several of his daughters to local ʿAlids. He retained in his service many of the local Daylamī soldiers, but his reputation also attracted to Kirmān considerable numbers of Turkmen, to whom land grants or iṣād’s were assigned. He established a high degree of public security, taking draconian measures against those notorious brigands, the Köfūs or Kuufs [q.v.], and was active in the charitable and public works expected of the wise Perso-Islamic ruler. He built caravanserais and baths, set up markers on roads through the desert, and built guard posts at strategic points (Muhammed b. Ibrāhīm, 10). One of his guard towers, still standing on the road from Bām to Sīstān at a point between Farsīs and Gurg, was identified as such by Sir Percy Sykes, Ten thousand miles in Persia or eight years in Iran (London 1902), 416. He maintained a high standard of coinage, according to Muhammed b. Ibrāhīm, 4, a piece of information confirmed by his extant coins, comprising dinārs and dirhams, and minted at Bardasr, Lāshkārtān and Shīrāz (see on these, C. Alptekin, Selçuklǔ paralar, in Selçuklǔ araştkrlarları dergisi, iii (Ankara 1971), 440, 554-60) and the transit trade across Kirmān to Sīstān, Iran and the Persian Gulf was also encouraged.

With regard to external policy, Kāwurd mounted an expedition across the Gulf from Hormuz and seized the former Būyid dependency of ʿUmān; he sent a force under one of his sons to Sīstān; and he came, together with Alp Arslan, to succour Toghrīl Beg during the Turkmen rebellion of 451/1059 led by Ibrāhīm Ināl. The situation in Fars, where the last Būyids were clinging to the vestiges of power, was his special concern. In 454/1062 he marched against the Shabānkārā’ī Kurdish leader Faḍlīya, defeating the latter and bringing about the final crumbling of Būyid rule in Shīrāz, though it was several years before Faḍlīya’s defiance was completely crushed and Faḍlīya himself killed by Alp Arslan’s forces in 461/1069.

Kāwurd had recognized Alp Arslan’s succession to their father Toghrīl Beg as Saldıjk ruler in the east, and in 456/1064 he recognised him as supreme sultan after Alp Arslan had appeared in Kirmān. Kāwurd was nevertheless restless under this subordination to his brother, and withdrew his allegiance from Alp Arslan in 456/1067 and only restored it when the latter came again with an army. On Alp Arslan’s death in 465/1072 he determined on a definite bid for power, basing his claim to overlordship in the Saldıjk family on his long experience as a ruler and commander, combined with his rights under the old Turkish principle of seniorate, the succession right of a senior, capable male member of the ruling family or clan, as against the young Malik Shāh’s claim to succeed his father. The armies of Kāwurd and Malik Shāh met near Hamadān in Dimādā I 466/January 1074 (thus in Husaynī; in Bundārī and Ibn al-Athir, in Shābānī/April). Many of the more traditionalist Turkmen elements in Alp Arslan’s old army inclined to Kāwurd’s side, and Kāwurd counted on wholesale defections; but Malik Shāh’s slave commanders and his Kurdish and Arab contingents held firm, and Kāwurd was defeated and captured. Malik Shāh was inclined towards mercy for his uncle, who at one point offered to retire to ʿUmān; it seems to have been the vizier Niẓām al-Mulk who connived at Kāwurd’s execution by strangling, or, according to some accounts, by poisoning (the fullest account of Kāwurd’s rebellion and death is in Husaynī, 56-8; see also Bundārī, 48, Rāwandi, 126-7, and Ibn al-Athir, x, 53-4). Malik Shāh nevertheless preferred to leave the isolated province of Kirmān as an autonomous unit, and restored it to Kāwurd’s son Rūk al-Dawla Sultan Shāh within a few months.

Bibliography: the salient events of Kāwurd’s career are to be found in the general sources on Saldıjk history, see Husaynī, Ahār al-dawla al-saldıjkīyya, Bundārī’s Zubdat al-nusaha, Rāwandī’s Rāhat al-sudr, Zahr al-Dīn Nīḥāpurī’s Saldıjkānāma, Ibn al-Athir, Barhebraeus, etc. Muhammed b. Ibrāhīm’s Taʾrīḫ-i Saldıjkīyyān-i Kirmān, ed. Houtsma in Recueil de textes relatifs à l’histoire des Seloucides, i, Leiden 1886, ed. M. Bāstānī Pārlīzī, Tehran 1964, cf. Houtsma, Zur Geschichte der Seljuven von Kirmān, in ZDMG, xxxix (1889), 362-402, is supremely important as a special history of the dynasty. Information from the local histories of Kirmān is given in the text and notes of Muhammed Bāstānī Pārlīzī’s edition of Ahmad ʿAll Khān Wazīrī’s Taʾrīḫ-i Kirmān
KAWURD — KAYALIK

(SAADARIYAH), Tehran 1340/1961. Of secondary literature, see Sykes, A history of Persia, London 1915, ii, 102, and Bosworth, in Cambridge history of Iran, v, ch. 1. For Kawurd’s coins, see the monograph of Alptekin mentioned above.

(C. E. BOSWORTH)

KAWUS, BANU, an Iranian dynasty which reigned in the districts of Rayyán and Rustam-dar, the coastal plain and the mountainous interior respectively, of the western parts of the Caspian province of MazaNDARAN [q.v.] in the second half of the 9th/15th century and in the 10th/16th century. The dynasty was in fact one of the two branches into which the ancient line of the BÁDUSPÁNIDS [q.v.], whose genealogy went back to SÁSÁNID times, split in the middle years of the 9th/15th century.

The BÁDUSPÁNIDS had been confined to the fortress of Núr by the Caspian campaigns of Timúr in 794/1392, but the amir Kayúmarth b. Búsútún (807-57/1404-53) later regained control of Rayyán, where he forcibly introduced amongst the previously Sunnî population there the Shi‘í faith which he had acquired during exile in Shíráz. On his death after a 50 years’ reign, his eldest surviving son Káwús (857-71/1453-67) seized power, but had to agree to a partition of the BÁDUSPÁNID territories with his brother Iskandar. Káwús kept Núr and other parts of the piedmont of Rustam-dar, whilst Iskandar received the mountainous inland districts of Kúdiúr and Láridjian. The two lines continued in parallel down to the Safawid conquest. The adhesion of the Banú Káwús to the Shi‘í traditions of much of the Caspian region was strengthened by Káwús’s own marriage to a daughter of one of the Sayyids of Amul and by later alliances with the family of Máriṣášt Şayyids.

This inaccessibility of the dynasty's policy was largely one of local warfare against rival potentates in MazaNDARAN, often with help from neighbouring rulers in Gilán; thus in 910/1504 Búsútún b. Džihángür b. Káwús (904-13/1498-9 to 1507) succeeded in taking over all Rustam-dar and Kúdiúr, with the exception of the fortress of Kúdiúr itself, from the fraternal branch of the Banú Iskandar. The line of the Banú Káwús expired through a combination of internecine strife in MazaNDARAN and of outside intervention by the Safawid Shí‘í ʿAbbás I., determined now to assert the central government’s authority in the Caspian provinces. After bringing Gilán under control, the shah charged Farhád Kháñ in 1560/1064 with the subjugation of all the principalities of MazaNDARAN. Bahman b. Kayúmarth of the Banú Iskandar, at this time master in Láridjian and Amul, was removed and his death procured by a rival, after which his territories were granted to one of the shah’s Khalíbášy amirs. Džihángür b. ʿAzíz of the Banú Káwús was besieged in Kúdiúr, captured and executed, and his territories granted to the Kúrši-Bághi Alláh-Kúlí Beg. Both these lines of BÁDUSPÁNÍD epigoni were thus extinguished.

like Balasaghun [q.v.] it was destroyed at some time during the first half of the 8th/i4th century. 

**Kaykâns**, Iranian dynasty, for the most part mythical, which owes its name to the title of kavi (see *Gr. J. Ph.*). ii, s.v.) > Pahlavi kavi (pl. kayd, or in Arabic, akâydn) born by several persons, with some variants, in both the religious and the national tradition. A. Christensen has devoted to the dynasty a monograph, *Les Kayanides*, Copenhagen 1931, to which reference should be made for all the problems raised in regard to ancient Iran. 

The main source for all the Islamic historians and writers concerned with the dynasty is the *Kitâb Siyar muluk al-Ajam* the Arabic translation made by Ibn al-Mukatta* [q.v.].* of the *Khuday-nama*, but the earliest Arabic authors give only somewhat confused information on the more or less mythical rulers who preceded the Sasanids, leading one to think that they must have used other sources, especially oral ones (see, e.g., Ibn Kutayba, *Ma'ârif*, 652 ff.). Ibn al-Kâli, cited in *Mas'ûdî*, *Murâdî*, ii, 133-4 = § 558, even considers that the Kayanids were the first kings on the earth. *Mas'ûdî* himself, without instancing the Pishdâdids [q.v.], to whom he erroneously gives the name of Khudâhân (ii, 237 = § 659), in fact makes the Kayanids the second dynasty, to be followed by that of the Ar-saids (*Aškhân* [see *Mulûk al-Ta'awif]*) and finally that of the Sasanids [q.v.]. *Tabarî* before him, and then the later historians and writers, all follow the same classification without mentioning the Achaemenids as such. Firdawswi, for his part, devotes ca. 27,000 distichs to the Kayanids. 

In the religious tradition, a dozen personages bear the title of Kay, but the dynasty proper comprises, according to Islamic authors: 

**Kay Kубâd** (Kavi Kavata), the founder. The religious tradition (Christensen, *op. cit.*, 70-1) gives no information on his ancestors and confines itself to retelling the legend of the adoption by Uzâv (Arabic, Zaww/Zab), the last Pishdâdîd king, of a newly-born child abandoned on the waters. The national tradition (Christensen, 107-8) is unaware of this story and provided a genealogy making Kay Kûbâd a descendant of Manûshchîr and, through the false reading of the presumed name of his father, the son of Zaww/Zab himself. After this latter's death, Rustom [q.v.] was deputed to search out Kay Kûbâd, who was found in a palace in the Alburz Mountains. His reign was filled with prosperity, but was partly devoted to defending Iran against the Turkomans (see *Tabarî*, i, 533-4, 597; Bal'ami-Zotenberg, i, 407; *Dinawarî*, *Tawîl*, 14; *Thâ'âlibî*, *Hist. des rois de Perse*, 150-2; *Birûnî*, *Chronology*, 104; Ibn al-Balâgh, *Fars-nama*, 14; Firdawswi, *Shân-nama*, ed. and tr. Mohl, index). 

His successors were **Kay Kà'ûs** [q.v.], in whose reign there took place the epic fights between Siyavush and Afrasiyâb [q.v.], and then **Kay KURSÅW** [q.v.], who took vengeance on Afrasiyâb. There then followed: 

**Kay LûhRâb** (Lûrâsp), descendant of a brother of Kay Kà'ûs. He founded or enlarged the town of Balikh [q.v.], and it is said to have been he who sent against Palestine Nebuchadnezzar (Bukht-Nassar [q.v.]), who destroyed Jerusalem, dispersed the Jews and carried them off into captivity (however, Ibn Kutayba, *Ma'ârif*, 652, places these events in the reign of Bahman, contemporary of Moses). LûhRâb was killed by the Turks who came to besiege him (see Christensen, 117-18 and index; *Tabarî*, i, 620; *Mas'ûdî*, ii, 121-3 = §§ 544-6; *Dinawarî*, 26; *Makûdî*, *Badr*, on *Ma'ârif*, iii, 149; *Thâ'âlibî*, 244; Hamza al-Isfahânî, 36; Firdawswi, iv, 379-537). His son and successor **brûrsâb** (Kavi Vîhtispâ, Vîhtispâ, Bûhtîsâb, Kushtîsâb, Hystaspes) quarrelled with his father, so he went to Rûm, where he married the king's daughter and accomplished various exploits before returning home, where his father passed on to him the crown. He had reigned for 30 years when Zoroaster [see ZARADUSHT] converted him to his new religion. He had to face an attack from the Turks who finally carried off his two daughters, but his son Isfandiyâr (Sandyâd) rescued them, provoking however Bûhtîsâb's jealousy over his exploits, so that he sent his son to his death in charging him to attack Rustam, who was judged to have become too independent. Although legend dwells at length on this personage, Christensen considers it justified by the non-origine historique (see *Les Kayanides*, 119-24 and index; *Tabarî*, i, 416, 645-9, 657-8, 691, 813, 869, 1053; *Mas'ûdî*, ii, 123-7 = §§ 547-50; Hamza al-Isfahânî, 36-7, *Thâ'âlibî*, 255-377; Ibn al-Balâgh, 48-52; *Birûnî*, *op. cit.*, 105; *Makûdî*, *op. cit.*, iii, 149 ff.; Firdawswi, iv, 359-751). The throne then passed to his grandson 

**Bahman** (Vahman, son of Isfandiyâr, who was also called later Ardashîr or Kay Ardashîr in order to make him the ancestor of the Sasanîd dynasty. The history of his reign is influenced by outside traditions. Al-Mas'ûdî asserts that the return of the Jews to Jerusalem took place during his reign, and according to Dinawarî, Bahman had a Jewish wife who converted him for a while to Judaism; despite this, he is considered to have strengthened the Zoroastrian faith. He was a great builder, and was also a warrior-king who killed Rustam and avenged his father (see Christensen, index; *Tabarî*, i, 649-54; *Mas'ûdî*, ii, 127-9 = §§ 550-2; Hamza al-Isfahânî, 37; *Birûnî*, *op. cit.*, 105, 111; Bal'ami-Zotenberg, i, 501; Ibn al-Balâgh, 52 ff.; *Thâ'âlibî*, 379 ff.; Firdawswi, v, 7-19). Bahman is represented as the father and the spouse of 

**Kumây** [q.v.], who gave him a son, **Dârây/Dârây** [q.v.]. Darius I, whose successor was **Dârây/Dârây** II. In this fashion, the national tradition bridges the gap which separates the reign of Bûhtîsâb from Alexander's conquests, with the Achaemenids being mixed up with other lists of rulers. Humây, also called Cîhrázâd, is mixed up with a daughter of Bishtasb, and it was for a Humây that the kernel of the Thousand and one night was put together (see *Alf Layla wa-Layla*), a point which poses difficult problems. The descendants of Bahman form a fairly confused ménage; another son is attributed to him, Sâsân, who was set aside from the succession, but the Sasanîd dynasty is attached to him by a forged genealogy and the legitimacy of the line thereby assured. 

**Bibliography:** Given in the text. (Ed.)

**AL-KAYD**, name of a fictitious star, defined in the *Mafzûl* al-Sûlûm (ed. van der Tooren, Leiden 1805, 29) as nadîm makâs fî 1'ammâm la 'yûda wa-l-šâhad bi-yûda ma'ârif bi-yûda wâdil, "an ill-
Al-Kayd

The mentioned invisible star in the heavens, having a known ephemeris from which its position can be derived. It is not mentioned in LA and TA. Although occurring in at least one oriental text printed in Europe (Anonymous Persa de Sigillis Arabum et Persarum, ed. and tr. J. Gravius, London 1648), it seems to have escaped the attention of historians of astronomy, and was rediscovered independently by Hartner [390] and Kennedy [397]; see Ruska-Hartner [1], Hartner [1], and Kennedy [1].

The earliest mention of al-Kayd so far known is found in Ibn Hibintâ’s al-Mughni (Suter, No. 31), written in 214/829 (Bayer. Staatbibl., Munich, Cod. ar. 822, fols. 67v. and 71v.), where five of al-Kayd’s six companions (see below) are also listed. According to this work, al-Kayd is “one of the stars with a tail; it appears once every hundred years and travels retrogradely, like the lunar nodes, through the zodiac, making one sign in 12 years”. Its position is found in the following way: “Subtract 90 from the number of complete (Persian) years which have elapsed since the epoch of the Yazdagird era (17 June, 632). From the remainder subtract in turn the highest multiple of 144 which it contains. Multiply the second remainder by 360 and divide the product by 144. The result will give the longitude of al-Kayd measured backward from the first point of the zodiac. Subtract it from 360° to obtain the longitude as usually expressed” (Kennedy [1, p. 45]). Thus al-Kayd has a retrograde motion of 21°/4 per Persian year. It passed through the vernal point at the beginning (1st Farvardin) of the years of the Yazdagird era 91 (25 May 722), 235 (19 April 866), 379 (14 March 1010), 523 (6 Feb. 1154), 667 (1 Jan. 1298), etc. This rule is corroborated by a number of other manuscripts containing references to al-Kayd and tables of it. Others, however, are based on slightly divergent parameters. In the case of tables computed for the Islamic calendar, the divergencies, which concern the initial longitude in year 91 of the Yazdagird era as well as the mean motion, might be due to errors of computation, but since there are tables expressed in the Yazdagird calendar which are based on a defective initial longitude, various traditions concerning the motion of al-Kayd must have been in existence.

Thus Mîram Çelebi’s table in his Commentary on the tables of Uling Beg (Aya Solya Ms. 2697, fol. 241v.) gives the longitude of al-Kayd on the first day of A.Y. 655 as 29°52′47″, while according to the rule it should be 30′ straight (cf. Hartner 1, Pl. 5 and p. 21, where the last passage, caused by misreading 600 for 655, is to be cancelled). This implies that al-Kayd passed through the vernal point some 17 days before the beginning of A.Y. 91, on Asfandarmed 14 of A.Y. 90.

Kennedy [1, 50] gives a list of al-Kayd’s yearly and daily motions as well as of its longitude at A.Y. 91 according to various Islamic authors. Now the table of Shihâb al-Dîn al-Kûm-Râshî’s K. al-lum’â fi bal al-kawakhir al-sab’a, apparently copied from Ibn al-Shâ’î, to whom the author refers, operates with the same yearly motion of -2; 29, 59, 18° (sexagesimal fractions) and the same initial longitude as Ibn Yûnis’ Hâkimî sidjî, which proves that this value for the yearly motion, corresponding to a complete revolution of al-Kayd in 144 Persian years, 4 days, has a long tradition. Accepting that this was not accidental, Hartner [1, 14] has shown that al-Kayd passed through the point of summer solstice on 8 November 324 B.C., a day very close to the one accepted by numerous Islamic authors (al-Farghani, 1, 1, 22; al-Mas‘ûdî, al-Birûnî, Ibn Yûnis, Kûshyâr al-Dîhî) as the beginning of the era of the death of Alexander the Great: Thoth 1, 425 of the era Nabhâsrat b. 12 November 324 B.C., the Indian emperor actually died on 13 June 323 B.C.); this era, also called Aera Philippic Arrihiae, operates with vague years of 365 days, as does the era of Yazdagird. Certain particulars of the Islamic version of the Romance of Alexander seem to confirm this hypothesis of an actual connexion. Here above all the figure of Khâdir [42] has to be mentioned, which has a striking similarity with the Hindu demon Rûhû. Both are put to death after having sipped from the fountain of life (in India the amrita drink), but both survive because immortalised by the drink. Khâdir, having become a maleficent demon, is fettered with heavy chains to the bottom of the sea, while Rûhû’s head, severed from his body, and his tail, now called Ketu, become the intransigent enemies of the luminaries. In astrology (see Dawzahr) those two parts of the eclipse monster are identified with the lunar nodes. As these nodes behave like planets, making (a retrograde) revolution along the ecliptic in the course of 18.6 years, they are treated as such, with their exaltations (șiî̂îqî, askî̂̄fî) in Gemini and Sagittarius, and figure in horoscopes as maleficent stars; see Hartner 2, pp. 120-131.

According to another Indian tradition, however, Ketu takes the shape of a comet (dhîmâkêtoî, “smoke-ketu”) appearing at irregular intervals as a threat to the superior world and to mankind. Obviously, it is this manifestation of Ketu from which the Arabic al-Kayd was derived, semantically as well as etymologically. This is also attested by the fact that the only information to be drawn from Islamic authors is that al-Kayd is of Indian origin. At a time not yet definable on the basis of our present knowledge, the irregular cometary Ketu was incorporated into the system of astrology and, for this purpose, had to be regularised by ascribing to it planetary qualities and a uniform motion, retrograde along the ecliptic, in accordance with its closest relatives, the nodes of the lunar orbit. Thus the Indian Ketu found its way twice into Hellenistic astrology. It is evident that various traditions concerning the motion of al-Kayd must have been in existence. The recollection of the cometary origin of al-Kayd is clearly alive for Islamic authors, as is shown by the fact that al-Kayd is often listed together with six companions called kawakhir dhamst al-adnhb, “stars with tails”, travelling the ecliptic retrogradely with the same velocity, and thus at a constant distance from al-Kayd. According to the best extant manuscripts, among which the sidjî of Djamâl al-Dîn Abîl-Kâsim b. Maḥfûz (Paris, Bib. Nat. 2486,

KAYDU, the son of Kshiti, the fifth son of the Great Khan Ögedey, was born according to Djamál al-Karšál ca. 633/1235-6. The statement, still sometimes repeated, that he took part in the campaigns in Eastern Europe in 637-8/1240-1 is due to a confusion with his uncle, Kadan. Upon the accession of the Great Khan Môngke, he was ordered to reside in the region of Kayallí [q.v.]. Upon the election of Kubilay [q.v.] to the Khánate, he took part of the latter's brother Argh Böke in the civil wars that followed. When Argh Böke surrendered to the Great Khan, Kaydu continued the struggle, remaining in open or latent hostility to Kubilay and his successor Temür Öljeytú throughout the remainder of his life. He opposed Burák [q.v.]. Kubilay's nominee to the Caghatay Khánate [q.v.] but they afterwards reached an agreement with each other and for thirty years the Houses of Ögedey and Caghatay worked in harmony under the leadership of Kaydu. The accounts of his death are contradictory. He appears to have been wounded in a battle with the Great Khan's forces and to have died shortly afterwards. His death occurred, according to Kšāhnā, in Rājab 702/February-March 1303, at a place called Kulan Bashl in the vicinity of Karakorum.

KAYGHUSÚZ ABDÁL (?-818/-819), Turkish mystic poet and writer of the 8th-9th/14th-15th centuries, generally considered the founder of the Bektaşi Darüşşüle literature. The little which is known about his life is half legendary and based on traditional writings of the order. Ahmed Sirrí Baba, the only author who gives exact dates for his life, does not mention his sources (al-risála al-ahmadíyya fi ta'rib al-tariqa al-bektashíyya, Cairo 1352, quoted by A. Gölpınar, *Türk tasavvuf Şírî anklojiyesi*, Istanbul 1972, 174). Kayghusúz seems to have been a disciple (muriç) of Abdal Mâş (whose shrine is in Elmali near Antalya), a follower of Hádîdî Bektaş of Khurásân (d. 660/1220), the patron of the Bektaşíyya, who himself was a
disciple of Bâbâ İshâk, the leader of the famous religio-social Bâbâ'î revolt of 638/1240 against the Seljuks. Kayghusuz spent several years in Egypt, at the beginning of the 9th/10th century, where, according to tradition, he founded the Bektâşî convent, which became one of the most important centres of the order. His ideological formation can be traced to Bâbâ'î and Bektâşî influences and his literary personality, particularly in language and style, owes much to Yûnis Emre, the great mystic poet of 7th-8th/13th-14th centuries, who also seems to have been exposed to the influence of the heterodox Bâbâ'î movement (q.v.).

Subtle irony, satirical humour and a strong joie de vivre characterize Kayghusuz' poetry, and his fluent, vivid, powerful prose created popular mystic works (Risâle-i Kayghusuz, Kitâb-i Maghla, Kiîb-i Dilgûşhî â Budalî-name) which are among the masterpieces of early Ottoman Turkish literature. Kayghusuz' works have not been edited. Lithographic editions are not reliable. His poems are frequently confused with those of Kayghusuz Vizeli 'Alî d- Din, a 10th/16th century popular mystic poet of the Malamatiyya order. For comparatively reliable Ms. texts of Kayghusuz Abdal see the medimnu, Nuru Osmanîye, no. 4904; Ankara General Library, Ms. nos. 169, 824 and 867, and Istanbul Belediye Library, Cevdet section Ms. no. 216. For selections, see Bibliography.

**Kaygılı, Öthmân Djamâl** (modern Turkish Osman Cemâl Kaygîli), Turkish novelist, short story writer and humorous essayist (1890-1945). He was born in an Istanbul suburb outside the city walls, the son of a local grocer. He lost his parents at an early age and, after finishing the neighbourhood high school, he was trained as an army clerk and worked in various departments of the General Staff (1906-13). Following the assassination of the grand vizier Mahmûd Şewket Paşa in June 1913, he was arrested together with many "suspects" of the opposition and banished to Sinop on the Black Sea, where he wrote his long short-story Çumâlî Şeyhînîn Khâlefi (published later in Alay, 5, February 1920). Some of his short stories, particularly Refik Kâmil Karay (q.v.), who was already a celebrity, encouraged him and induced him to become a professional writer. Released from Sinop, he continued to serve, during World War I, as an army clerk in various military units in Anatolia. Following a serious illness he returned to Istanbul in 1917 and was discharged because of disability in 1918 at the age of 28. He devoted the rest of his life to his literary work, making his living by odd jobs and later by teaching in various schools. He died in Istanbul in 1945.

Öthmân Djamâl Kaygîli began his career as a humorous writer and from 1920 onwards contributed to a great number of dailies (e.g. Şabîh, İhdâm, Aşkâm, Wâbi, Aflâbî, etc.) and periodicals, particularly Alay, Aydede, Aâbâba and his own shortlived Ayine (Ayna, 1921-23). Most of these writings, including some short stories and novels and his memoirs (Aşamcîlar serialized in Aşkâm 1936-37), have not been published in book form.

Kaygîli belongs to the school of Turkish writers and novelists who, during the last decades of the 19th and early 20th centuries, produced works which were inspired by the technique and style of traditional Turkish folklore and popular story-tellers, and were addressed to and enjoyed by larger audiences than the works of the elitist writers of the same period. Kaygîli adopts on the one hand the informal technique, free and easy style and familiar digressions of Ahmed Mîdhât, with his sympathy and understanding for the way of life of simple folk, and on the other follows Hüseyin Rahîm Gûrpinar and partly Ahmed Râsim, in their concentration on observing and describing Istanbul lower and lower-middle class life in the suburbs. He himself belonged to this world and spent most of his life in its midst. He is, however, a less brilliant and more limited and modest successor of his outstanding masters. But his emphasis on details of Istanbul folklore and the study of certain types (particularly gypsies, refugees from the Balkans (muçaris), street children, popular singers and musicians, etc.) characterise his work, which contains invaluable documentary material for Istanbul suburban life for the period between the two World Wars.

Kaygîli's main published works are: 1) Eşkıya Gûzeli, Istanbul 1925 (collection of short stories); 2) Sandalim Gelyor Yvardî (two long short-stories), Istanbul 1938; 3) Çingeneîn (a novel on the life of gypsies outside Istanbul city walls, considered his best work), Istanbul 1939 and 1943; and 4) Aşgîr Fatma (a sentimental love story), Istanbul 1944. He wrote several plays, in which he himself acted, produced puppet plays and tried to revive the Karagöz and Orta Oyuncu theatres (q.v.). His only published play is Üfârînî ("The Curer by Breathing"), Istanbul 1935. His remarkable contributions to research into Istanbul folklore have been published in articles or serialised in various Istanbul dailies. Only his studies on Istanbul slang (Istambul Argosu Lügâti, Istanbul 1936) and on the coffee-houses where popular poets-singers performed (Istambul Semai Kâşeleri ve Meydan Şairleri, Istanbul 1937), have been published in book form.

**Kâyi**, one of the Oghuz tribes to which, as claimed by some Turkish chroniclers, the Ottoman dynasty belongs. The Kâyî were considered as the noblest of the Oghuz tribes. The high prestige which they enjoyed seems to have rested on the fact that most of the rulers or şahbûs of the Oghuz people living along the Syr Daryâ (Sayyûn = Jaxartes) during the period between the 9th and 11th centuries were from this tribe. Some of the names of these kings are mentioned in the chapter of Djamâl-ı tawârîxh dealing with the legendary history of the Oghuz Turks. However, the Kâyî tribe appears to have played a major rôle in the conquest and settlement of Anatolia, and consequently there are more place-names in Anatolia called after this tribe than any other tribe. What is really remarkable, however, is that in addition to the abundance of such place-names, there were in Turkey large Kâyî organizations living a tribal existence in the Denizli, Menteşe
A small branch of the Kayl who had not emigrated to the west was left behind among the Transcaspian Turkomans, but these people surprised some European travellers when they told them that the Ottoman dynasty had originated from their tribe. The earliest chronicler to claim that the Ottoman dynasty belonged to the Kayl tribe was Yaziği-oghlu Ali, who wrote his work during the reign of Murad II (824-55/1421-51). Although this claim can be questioned, it has some probability. The use of the Kayl emblem as the official emblem of the Ottomans begins with the reign of Murad II. The Kayl emblem is seen on coins struck during his reign, as well as on the weapons belonging to his successors; many weapons on display in the Topkapı Museum bear this emblem, and such emblems are quite similar to those given in e.g., Diżmiş al-tawāridh. Through its connection with the Kayl, the son of Gün Khan, the eldest son and successor of Oghuz Khan, the Ottoman dynasty considered itself superior in nobility to other Turkoman dynasties, and to the sons of Çingiz Khan.

KAY KÄ'US, mythical second king of the line of Kayânids [q.v.] whose name contains twice over the royal title kay (Kay Õş > Kā'ūs). His history has been delineated by A. Christensen from the Iranian religious tradition and from the national tradition echoed by the later Muslim historians (Les Kayanides, Copenhagen 1931, 73-90, 108-14). This Islamic historical tradition makes him the son of Kay Ablweh > Abih (except for Bal'ami, Firdawsi and al-Tha'labi, who make him the son of Kay Kubdî [q.v.].) He was a warrior-king who, according to Firdawsi, led a coalition with the help of Mazandaran, which was inhabited by demons and protected by the white diy (diy-i sefid), who caused a hail of stones to come down on the royal army during the night. Rustam son of Zāl [q.v.] set out to deliver the king from imprisonment, and on his way became the hero of seven adventures which have become celebrated in poetry; the white diy was overcome in his sleep and the blood from his heart restored their sight to the king and his army.

This ruler protected his country, and was clement towards the weak but severe against the powerful. He enjoyed the divine favour and the heaven, the masterpiece of which was dangled pieces of meat fixed on spikes.

KAYKÂUS, name of two Saljukid sultans of Kûn (Asia Minor). KAYKA'US i. Succeeding his father Kaykhusraw I [q.v.] after the battle in which the latter perished (608/1211), he at first had to ride himself of the rivalry of his brothers Kayferldun and Kaykubadh [q.v.]. After that he had no further internal difficulties. His reign is particularly marked by the combination of a policy of peace towards the Greeks of Nicaea with interventions on the southern, northern and eastern frontiers. In the south, where Kaykhusraw had taken Anšāliya, he tried to combine interventions against the Armenians of Cilicia, carried out in favour of the Latin prince Bohemund IV of Antioch and his ally al-Ẓâhir of Aleppo, with trade treaties with the Cypriots and the Venetians. In the north, the great success of his reign was the acquisition of Sinop, a new maritime outlet, this time for the Black Sea; this port had the advantage of not belonging clearly either to Nicaea or Trebizond. There he collected a fleet, to be directed specially against the Crimeans. But when Kaykâus, after the death of al-Ẓâhir in 613/1216, tried to conquer Aleppo on behalf of his vassal of Samosata, the exiled Ayûbîd al-Afdal [q.v.], he was defeated by the Ayûbîd of Mesopotamia al-Asbaf [q.v.]. He tried to take revenge by organising an anti-Ayyûbîd coalition with the help of Mawsil, but he died before this project could be realized (618/1220). He had kept up good relations with Bahramshâh of Erzindjan and al-Mughîb of Erzurum, his neighbours in Asia Minor, and also with the caliph al-Nâşir [q.v.] whom he conciliated by adhering to his reformed futuwwa [q.v.]. He may also have encouraged the expansion of literature written in Persian, which was then beginning in his territories, and showed an interest in Şî fís in the person of Ibn 'Arabî [q.v.]. The same period is by and large the one in which began the real development of cities, architecture, mosques, madrasas, caravanserais, etc., a list of which cannot however be given here.

KAYKA'US ii. Izz al-dîn, son and one of the successors of Kaykhusraw II, who had left in Asia Minor three minor sons: the eldest, Izz al-Dîn, son of a Greek woman; the second, Rûkân al-Dîn Kilîôg Arslân, son of a Turkish woman, and the youngest who was ailing, 'Aliâl al-Dîn, son of a Georgian woman. For several years the high dignitaries, in particular the freedman Karatay, who exercised the real power, tried to maintain a kind of condominium of the three brothers, and then of the two remaining after the suspicious death of the youngest during a mission to the Mongols. But when Izz al-Dîn and Rûkân al-Dîn had attained their majority, this policy has been repelled by Kay Kā'ûs' son Siyâwûsh [q.v.], but she now spread calumnies against him in the king's presence; he had to flee for refuge with Afraşîyâb, but the latter finally killed him. Kay Kā'ûs is said to have reigned 50 years; he was stripped of the throne by Kay Khusraw [q.v.] and imprisoned till his death.
proved to be impossible. In fact, the opposition of the two princes was based on the attitudes which they represented and on the milieus which supported them. Rukn ad-Din, who exercised his prerogatives in the eastern part of Asia Minor, relied upon the Mongols with whom he was in contact, and upon their trusted official at his court, the *Parasüdna Mu'n ad-Din Sulaymán* [q.v.]. *Izzi ad-Din*, who reigned in western Asia Minor and was allied with his Greek family and the Turkmen groups on the frontier, represented the latter. A series of complicated episodes marks this struggle: at the death of Karatay (652/1254), Rukn ad-Din revolted at Kayseri and was taken prisoner, but two years later the Mongols invaded again Anatolia under the command of Bayduq. This invasion was in a way more dangerous than the one of 641/1243, because its aim was the very settlement of a part of the Mongols in Asia Minor, by which their exactions would consequently increase. *Izzi ad-Din*, defeated in a battle in which they had fallen together, was exiled at Nicea (1256), and Rukn ad-Din was proclaimed sultan at Kayseri. But when he left to pay homage to the supreme Khan, *Izzi ad-Din* reappeared at Konya (655/1257). The Khan Mongke, who wanted their common collaboration or at least peace between the Mongols and the Latins, adopted the latter's anti-Mongol attitude. But when the latter had left, they started their struggle again. *Izzi ad-Din*, menaced by the Mongols, had to flee, this time for good, to Constantinople, which his old friend Paleologus had reconquered from the Latins. But this flight turned out unlucky for him. The new Emperor, desirous to turn all his forces against the Latins and the Mongols of Russia, tried to make peace with the Mongols of Iran and Asia Minor, who in turn had just broken off relations with those of Russia. Imprisoned on the northern borders of the Byzantine state, *Izzi ad-Din* was freed by a Mongol raid, but he was only able to withdraw to the Crimea, from where he could observe the events in Asia Minor. Without having tried to recover his throne, he died there in 678/1279-80.

A certain number of Turks who had followed him remained in Dobrudja, where they still carry his name, deformed into the Gagauzes [see Dobrudja]. In Asia Minor his popularity among the Turkmen was attested by revolts made in his name and by the support which his sons were to find there later on. It is certainly not by chance either that the great Turkmen epic of the *Dânsûmdânâmâ* was in its first form dedicated to him.

**Bibliography:** Anticipating the article *salûqûdos*, the essential bibliography relative to the 7th/13th century before 1243 and to the period of the Seldûk-Mongol condominium is given here. For a larger, descriptive bibliography, see C. Cahen, *Pre-Ottoman Turkey*, London 1968, 427-40.

a. From the end of the 6th/12th century to 1243.

Muslim Anatolian sources were only written down during the second period (in Persian), but go back to the first. The most important is Ibn Bibi, *al-Awâmîr al-Âlîyya*, facs. edn. of the unique ms. by Adnan Erzi, Ankara 1956, critical edn. started by the same and Necatî Lugal,—Vol. 1, the only one published, 1937; a somewhat abridged version was published in 1902 by M. Th. Hoursima in *Recueil de textes relatifs à l'histoire des Seldjoukides*, iv; German tr. of this, with additions from the original, by H. Duda, *Die Seldschuken-geschichte des Ibn Bibi*, 1959. For this period see also in second place the anonymous *Tarîkh-i al-Seleuk*, facs. edn. with Turkish tr. by Nafiz Uzuluk, 1952.

The Arab sources are those of the *Ayyûbîd* period; see *Ayyûbîd*. Important for the present purpose is the * Zubâdî of Kamâl ad-Dîn b. al-Adîm of Aleppo*, ed. Sâmi Dahân, iii, and the *Ta'rikh Manşûrî* of Muhammed b. Nazîf ad-Hamawl, facs. edn. by P. Gryaznevitch, Moscow 1960 (unpubl. German tr. at the University of Vienna).

Use should also be made of the Christian sources in Armenian, Syriac, Greek, and occasionally even Latin. The Armenian sources include those of Armenia proper and those of Cilicia. For the period under consideration only the latter are really important, the main being the *Historien Royal* (perhaps = Sempad the Constable, ed. Akellan 1956, partial English tr. by S. Der Nersesian, complete French tr. by G. Dédéyan, doctoral thesis, Sorbonne, Paris 1973 (to be published). The Georgian sources have been sufficiently collected in M. F. Brosset, *Histoire de la Géorgie*, 2 vols., i, 1849. The contributions of the Byzantine sources (above all Nicetas Akropolites, Pachymeres) have conveniently been gathered in B. Lehmann, *Die Nachrichten des ... über die Seltschuchen*, 1939.

Important is the *Chronography of Bar Hebraeus* [*see IBN AL-ŠUʕEB*] in Syriac (which is better than the Arabic version), ed. and tr. E. W. Budge, 1932. An anonymous Syriac chronicle reaching the year 1235 has been published by J. B. Chatot in the *Corpus Scriptorum Orientalium*; a translation of the part dealing with this period is still awaited.

Of special interest for the transition between the two periods are the lengthy extracts from the Latin missionary Simon de St. Quentin in *Beauvais*’ *Speculum Historiale*, recently grouped and translated by J. Richard under the title *Histoire des Tartares*, 1966.

The majority of the inscriptions which have been published in various publications have been brought together, with a bibliography, in *RCEA*; many coins have been described in S. Lane-Poole, *Catalogue of the oriental coins in the British Museum*, viii, and in Ahmed Tevhid, *Catalogue des anciennes monnaies islamiques du musée d'Istanbul*, iv, 1904. Acts of *wâls* of various periods of the 7th/13th century have been published, especially by Osman Turan in *Belleten* (1947-8). For archaeology, see articles on the various cities.

b. From 1243 to the beginning of the 8th/14th century.

To Ibn Bibi (extending to 1280) and to the anonymous *Ta'rikh* can now be added Karîm ad-Dîn Mahmûd Aşkârây, *Musâmeret til-ahkhâr*, ed. Osman Turan, 1947 (German analysis by Fikret Işiltan, 1943). Among the many Arabic sources of the period of the first Mamlûk, special attention should be given to Baybars al-Manşûrî (unpublished) for the middle of the 7th/13th century and to the *Life of Baybars* of *Izzi ad-Dîn* b. Shâddâd. The second part of the latter, the only one to be found so far, is still unpublished but a Turkish translation has been published by Şarafuddin Yaltkaya (*Baybars Tarîhi*, Istanbul 1941); the first part is extensively used
by various authors, especially by Yunmi, ed. Hyderabad 1954-5. Several Armenian authors from Greater Armenia mention the Mongols of eastern Asia Minor, but only the Historien Royal pays attention to Anatolia proper. The Greek historians to be consulted are again Pachymeros and Nicephoros Gregorais, ed. with Latin tr. in the Bonn Corpus.

To the recent general bibliography can now be added Paruk Süméns, Anadolu'da Şogunlar, in Selçuklu araştırmaları dergisi, 1 (1969-70), 1-147; Necat Kaymaz, Perdına Mu'ti'inden Sülleyman, 1970; S. Vryonis, The decline of medieval Hellenism in Asia Minor and the process of Islamization in the Xith-XVth century, Berkeley and Los Angeles 1971.

(C. I. CAHEN)

KAY KÃ‘ÜS b. ISKANDAR, prince of the Ziyârid dynasty in Persia and author of a well-known "Mirror for Princes" in Persian, the Kãbas-nãma.

Ünûr al-Maâlî Kay Kã‘üs was the penultimate ruler of the line of Ziyârîds [q.v.] who ruled in the Caspian provinces of Tabaristan or Mâzandaran and Gurgân in the 4th/10th and 5th/11th centuries. His main claim to fame lies in the Kãbas-nãma, written in 475/1082-3, when he was 63 years old, for his favourite son and intended successor, Gîlân-Shãb. The little that we know of his life must be gleaned from historical sources like Ibn Isfandiyar's Ta'rikh-i Tabaristân and from the Kãbas-nãma itself. We know that he spent eight years as a boon-companion of the Ghaznavid Sultan Mawdûd b. Masûd (reigned 433-40/1041-84), accompanying him to India, and some time also with the Shaddâsid Amir Abû '1-Aswar Shawur (413-49/1022-57) in Gurgân. His claim to fame lies in the Kãbas-nãma, written in 475/1082-3, when he was 63 years old, for his favourite son and intended successor, Gîlân-Shãb. The little that we know of his life must be gleaned from historical sources like Ibn Isfandiyar's Ta'rikh-i Tabaristân and from the Kãbas-nãma itself.

The Kãbas-nãma is an early specimen of the Persian andarz-nâmã genre, i.e. it gives counsel for rulers. It speaks of duty to God and the necessity for counsel for rulers. It speaks of duty to God and the necessity for cultural recognition of the practical basis for government. The title derives from Kay Kã‘üs's grandfather, the celebrated Kãbas b. Wushmagîr [q.v.], whom the author clearly admired for his ruthlessness. The book's introduction and 44 chapters range over the topics of kingship, leadership in battle, and administration, but much space is also allotted to more mundane and intimate matters such as the buying of animals. We know that he spent eight years as a boon-companion of the Ghaznavid Sultan Mawdûd b. Masûd (reigned 433-40/1041-84), accompanying him to India, and some time also with the Shaddâsid Amir Abû '1-Aswar Shawur (413-49/1022-57) in Gurgân. His claim to fame lies in the Kãbas-nãma, written in 475/1082-3, when he was 63 years old, for his favourite son and intended successor, Gîlân-Shãb. The little that we know of his life must be gleaned from historical sources like Ibn Isfandiyar's Ta'rikh-i Tabaristân and from the Kãbas-nãma itself.

KAY K Õ U S — KAY K HUSRAW
him the devastations caused by the Turanians, and he swore to undertake a war of retaliation against them. With the help of all the nobility, he launched various expeditions, of which the first ones, despite the prowess of Gudarz, failed because of the cowardice of Burzfarrah/Fariburz. The second ones, however, were crowned with success. Kay Khusraw fitted out four armies, the main one of which was given to Gudarz, who secured a decisive victory over Turan, whilst the other ones surrounded the enemy; Afrasiyab himself took to flight, but was overtaken and killed by Kay Khusraw, who thereby avenged the death of his father.

After Afrasiyab's death, peace reigned and the king soon retired from power, handing on the crown to Luhrasb. He set forth on a great journey and disappeared mysteriously after having washed himself in a spring, whilst a group of his companions perished in a snow storm.

KAYKHUSRAW, name of three Saljûqid sultans of Rum.

KAYKHUSRAW I, son and one of the successors of Kilij Arslân II [q.v.]. When the latter, at the age of about seventy, decided ca. 583/1187 to divide his territories among his ten sons, a brother and a nephew, Ghiyâth al-Dîn Kaykhûsraw got Sozopolis or Uluborlu, on the borders of the Byzantine territory, perhaps because he was the son of a Byzantine mother. He thus came in contact with Greek Christians on one side, with groups of Turkmen frontier warriors (îdâd) who were pushing forward in that direction on the other. When jealousy arose among the brothers and one of them, Kûtb al-Dîn, laid hands on their old father, the latter appealed to Kaykhûsraw, who restored him to his throne in Konîa. But after Kilij Arslân had died (588/1192), Kaykhûsraw proved incapable of having his supremacy recognised by his brothers. Some of them even began to conquer for themselves parts of the other's heritage. Rûkûn al-Dîn, heir to Kûtb al-Dîn who had died in 593/1197, reconquered Konîa and restored to his own profit the unity of the paternal heritage, while Kaykhûsraw withdrew to his original base near the Byzantine feudal lord Maurozomos. However, when Rûkûn al-Dîn directed his policy towards conquests to the east of Anatolia, certain Turkmens became discontented. With their help Kaykhûsraw, after the death of Rûkûn al-Dîn, who left only a minor son, reconquered, this time definitively, the whole of the reunified state of Rum (601/1205). Kaykhûsraw had locally intervened in various directions in the quarrels which were then devastating the Byzantine Empire. In 1204 the Latins had captured Constantinople and a limited Greek kingdom under Theodore Lascaris had come into existence in Asia Minor with Nicea as its capital. Lascaris was on bad terms with Maurozomos, whom Kaykhûsraw first took with him to Konîa but for whom he later obtained the cities of Khunas and Laodicca (the later Denizli) that were contested between the two states. Maurozomos is probably the personage whom Ibn Bibi calls the "Commnenos amir", who for twenty-five years played an important part in the Saljûqid state.

Lascaris and Kaykhûsraw both had a common interest in peace, but the latter's attention, in opposition to his predecessor's, was no less attracted to the interest the Saljûqid state might have in expansion in western Asia Minor. He tried to expand his territory at the expense of the remains of the Byzantine Empire, which had no defenders left between Nicea and Trebizond or Armeno-Cilicia. If he could not secure again a foothold on the Black Sea at Samsun, recently occupied temporarily by the Turkmen, he obtained on the other hand a very important success by acquiring, on the southern coast of Anatolia, Antalya, which was the first real maritime outlet the Saljûqid state had ever possessed. Shortly afterwards, however, the relations between Kaykhûsraw and Lascaris again became strained. The Latin or Greek enemies of the latter, together with the insubordination of the Turkmen, frontier warriors had undoubtedly something to do with this development. In 608/1211 the two rulers were opponents in a battle near Antioch of the Meander; Kaykhûsraw remained victorious, but was killed under obscure circumstances. There was never more to be any considerable war between the two states.

Kaykhûsraw, who had received from his father a name derived from Iranian mythology, gave analogous names to his two sons, sc. Kaykûhûs and Kaykubûd. In his time interest in Persian literature was growing, and since the Saljûqids of Iran had disappeared, their Anatolian relatives had become the representatives of the former's Iranian tradition. Hence when the Persian author Râwandi wrote the history of the Iranian Saljûqids, he dedicated his work to Kaykhûsraw.

Bibliography: see KAYKHûS's.

KAYKHUSRAW II, son and successor (in 634/1237) of Kaykubûd [q.v.].

The very power of his father was at the root of some of the difficulties that manifested themselves under his reign. Together with the Mongol invasion that took place in his days, they led to the catastrophe from which the Saljûqid state was never to recover.

He was not the successor-designate of Kaykubûd, who for political reasons had chosen as such one of the two sons he had had by his Ayyûbîd wife. But Kaykhûsraw II was the eldest son and the only one already to possess real power. His "usurpation" resulted in a series of executions which accentuated the anti-aristocratic policy of Kaykubûd. Not only his half-brothers and their mother were strangled, but many amirs and high dignitaries were put to death and the Khâdżamians who had settled in Asia Minor were forced to flee. Even Sa'd al-Dîn Köpek, his counsellor in all this, was done away with. This policy, in order to be acceptable, had to be accompanied by military successes. Like his father at the end of his reign, Kaykhûsraw II tried above all to drive away his Ayyûbîd rivals from his southeastern frontiers and perhaps to build up a bulwark in the east against the Mongols.

The death of the two powerful Ayyûbîds al-Kâmîl and al-Asrâfîravoured him. Aliyng himself with the many enemies of al-Kâmîl's son al-Sâlih, who attacked the latter in Mesopotamia and Syria, Kaykhûsraw II succeeded in taking possession (639/1241) of Âmid, the strategic key to the upper basin of the Tigris. He married a Georgian princess and, with the obligation of military help, obtained a certain suzerainty over the Ayyûbîds of Aleppo, the Armenians of Cilicia, the "Empire" of Trebizond
and even to a small extent over that of Nicaea (while negotiating with the Latins of Constantinople about a marriage), Friar Simon of St. Quentin, a missionary who was staying in Rûm at that time, where he was well received by the sultan, never tires of giving high praise to the latter's richness and power.

However, signs of interior weakness appeared among the decimated aristocratic groups and even more among the Turkmen. From the very beginning, there had been differences of attitude between the officials of the régime who were urbanised, islamised and semi-iranised, and the semi-nomad Turkmen who were much closer to their ancestral traditions than to the exigencies of a civilized state. Their number and problems had increased by the drive of the Khârazmians and Mongols. They were ripe for propaganda, which normally took a religious form, such as the maddâs [q.v.] movement which kept the best Saldjukid troops occupied for three years in central Asia Minor before being ostensibly crushed by the interventions of Frankish mercenaries. The real root of the problem remained, however, untouched.

Shortly afterwards there appeared on the frontiers of Rûm the first real Mongol army ever to be seen there under the command of Tugji.

In the winter of 1243-4, helped by treacheries previously prepared, the Mongols captured Erzûrûm and in spring they started conquering Asia Minor proper. As a matter of great urgency, Kaykhusraw II asked his Muslim and Christian neighbours, reconciled by the common dangers, for reinforcements of all possible means. The impatience of some and the panic of others induced Kaykhusraw II to face the Mongols without waiting for all these contingents to arrive, but with an already very heterogeneous army. He was utterly defeated (6 Muharram 641/26 June 1243) by the Mongols at Köse Dağ, between Erzindjian and Sivas. A few days later they took Sivas and Kayseri. The sultan, having hastily collected his treasures, fled at once to Antaliya in western Anatolia. In a certain way, he momentarily outlived his power, his vizier Rukn al-Dîn Kilidj Arslân, he always remained a puppet, first in the hands of Muhammed al-Dîn, and after his death (1277), in the hands of vizier Faḫr al-Dîn ʿAll. At his majority, he put himself personally under the protection of the Mongol Khân Abâka. But when one of his cousins, Masʿûd, son of Izz al-Dîn Kaykâdūs, disembar ked in Asia Minor from the Crimea, Abâka granted Kaykhusraw, at least theoretically, suzerainty over the Karâmanîd territory. After the death of Abâka, Kaykhusraw III compromised himself in the revolt of Kangîrây against the new Khân Ahmad. The latter, whose policy was totally opposite to that of his predecessor, then conferred the sultanate on Masʿûd and ordered Kaykhusraw to be strangled (1284). The unfortunate sultan's widow and minor sons, however, soon obtained the western half of the former sultanate from Ahmad's successor Arghun, but the only result was that Masʿûd ordered them in their turn to be put to death (1285).

Bibliography: see Kaykâdūs.

Kaykûbâd, name of three Saldjukid sultans of Rûm.

Kaykûbâd 1, ʿAlâʾ al-Dîn was the most distinguished of the Saldjukid sultans of Rûm, to whom many later sovereigns would connect themselves. Removed from power by his brother and predecessor Kaykâdūs I [q.v.], he succeeded him in 628/1230. His foreign policy made his dynasty one of the most powerful of his time. In the south he enlarged his maritime frontiers, in particular by conquering Kalkan-Oros, renamed ʿAlâʾîyya, which he made his winter residence and the place of safe keeping for his treasury. On the Black Sea, he disputed the domination of Trebizond and organised, under the command of amîr Čupan of Kastamonu, the memorable maritime expedition which assured a Saldjukid protectorate over the Crimean harbour of Sughdâk. In the east, taking profit from rivalry among the Ayyubids, he annexed with the help of one of them, al-Šâfî, the Artûkîd possessions on the right bank of the Middle Euphrates. Forging ahead of the reinforcements requested by Dâwûd-Šâh, the Mangudjaḏid of Erzindjian, he annexed the latter's principality and made it an appanage for his eldest son Kaykhusraw [q.v.]. If it had not been for the invasion of the Khârazmians, the Saldjukid principality of Erzûrûm would have undergone immediately the same fate. The Khârazmians had conquered for their prince Diaľâl al-Dîn Mangubîrt [see Diaľâl al-Dîn Khârazm-Šâh] an ill-defined empire in Iran and Georgia. But further to the west they were continuously in search of a refuge against the growing Mongol pressure. They had just taken Akhlât, the key to Asia Minor, from al-ʾAshraf and were now about to attack the whole region. Kaykâbûd, who had not been dissatisfied at seeing his rivals weakened, urgently summoned to his aid both his former enemies and his friends. The main contingent, consisting of various Syrian troops, was brought to him by al-ʾAshraf. After hard fighting the Khârazmians were crushed at Yasi-Cumen, to the west of Erzindjian. The principality of Erzûrûm was taken away from its prince, Diaľân-Šâh, who had taken the side of Diaľâl al-Dîn. Under the pretext that a Mongol raid had taken place through the territory of the Georgians, Kaykûbâd took away from them several frontier strongholds (thence, in order to restore peace, the wedding-project of Kaykûbâd with the Georgian heiress [see Kaykhusraw]), and occupied in his turn the ruined Akhlât, in which al-ʾAshraf had lost interest. The territory of the Turks now reached in the west the frontiers of the 12th century Byzantine Empire. On the other hand, with Diaľâl al-Dîn having died and with his troops fleeing before the Mongols, Kaykûbâd thought that he could realise a
profitable operation for the defence of his enlarged territories by settling the *Khir*Azarmians there.

But the Ayyūbids, favoured by the defeat of the Kh*Ir*Aramians, had intensified their grasp on Upper Mesopotamia and the two ambitious powers were from now on facing each other without any bufferstate left. Al-Kāmil, the suzerain of the Ayyūbids, to whom the Syrians had given the impression that he could obtain an easy conquest, invaded Asia Minor but was defeated (631/1233) because contingent who were opposed to the expedition served him badly in the mountain passes of the Taurus. Kaykūbād was then able to set out on a policy of penetration into the upper Tigris region. He was lucky to die (634/1237) before the Mongols had sent his infant son ʿĀlam al-Dīn Kayunmār upon the throne; but ʿAlā al-Dīn Fīrūz Khaḍījī retained possession of the young Sultan and the capital, and was shortly afterwards to ascend the throne. Meanwhile, Kaykūbād, starved for three days, was attacked by the son(s) of a Turkish *malik* whom he had put to death, wrapped in a rug, beaten and thrown into the river Jamūna to drown.

KAYKUPIYA, a palace built by the Rūm Saldjūq ruler ʿAlāʾ al-Dīn Kaykūbād I (616-34/1221-37) in the years between 1224-26, ca. 4 miles northwest of Kayseri. The place is now called Kaybūd Çiftliği, at the foot of the Kaybād Dağ; nearby is the plain of Mağbard (Mağhadīyā), where reviews of the troops took place. The road Kayseri-Boğazköprü, on which the palace was situated, was in use from pre-Roman times down to the Ottoman domination. Situated northeast of Konya in the heart of the Rūm Saldjūk territory, Kaykūbādiyya was one of the favourite residences of ʿAlāʾ al-Dīn Kaykūbād I. He stayed there quite often, received at Kaykūbādiyya the submission of Malik al-Dīn Dāwūdshāh, the lord of Erzindjan, in 625/1228, and died in this palace in 634/1237. His son and successor Ghiyāḥ al-Dīn Kaykūsraw ascended the throne at Kaykūbādiyya. The palace belongs to the series of foundations and monuments erected by ʿAlāʾ al-Dīn Kaykūbād I, one of the most brilliant Rum Saldjūk rulers, at Konya, Alanya (*ʿAlāʾiyā), Kūbābādībīb, Sivas and Erzindjan. Excavations of the site were undertaken in 1961.

KAYL is recorded by Naghwān b. Sāfī (Die auf Südostasien bezüglichen Angaben Naqshān’s im Sans-Salīm, ed. A. Ahmad, Leiden-London 1916, 89) as a title of pre-Islamic Yemeni "kings". It is well...
attested in Sabaean-language inscriptions from around the beginning of the Christian era onwards; their status, however, seems to be mostly characteristic of the 5th-6th centuries A.D., while earlier it appears mostly as qul, plural *qul* (and Nashwan himself says that ḥayl derives from ḥayyl and is a derivative of the root with median w). Inscriptional evidence shows that the ḥayl was in fact subordinate to the malīk “king”. In Sabaean social organisation of the relevant period, the grouping called a ḍqṭ ḍk (cf. ḏqṭ ḍk) was constituted of a number of clans, one of which occupied a dominating position, with other clans subordinate to it. The dominant clan was the hereditary stock from which the leader of the whole ḍqṭ ḍk was drawn: as Ibn Khalidīn says (Muḥammad ibn al-Qalqashandī, ed. Quatremerre, i, 240, tr. Rosenthal, i, 270), “leadership over any group always passes from one individual to another within a single stock” (fi mansūbin wakhdin); the dominant clan was the mansib to which was restricted the potentiality of furnishing the leadership (raẓas) over the whole group. This leader was the ḥayl. In warfare, the members of the subordinate clans fought under the immediate command of the ḥayl of their ḍqṭ ḍk, though he himself was under the orders of the king as commander-in-chief.

**Kayl, *Luhraisb** [see Kaynids].

**Kaymak** [see Kimaṟ].

**Kayn,** from the Arabic root *k y n* which has the basic meaning of “to adorn, embellish”, comes by extension to denote artisan, workman (*sānī*), although current usage reserves it above all for blacksmith (*L.A., s.v. kyn*). It does not occur in the Kurān; on the other hand, it occurs in many hadīths, generally in its particular sense of “iron-smith”. The feminine *kayna* means “singing girl”. However, since the men working at this trade usually belonged to the lowest stratum of the population, *kayn* became a deprecatory term applied to sīlahīr. In the satirical poems of Dādir, his antagonist al-Farazād is sometimes called ibn al-*kayn* (Aḥḏāni, Beirut 1956, xix, 37, 41, 84), and this was regarded in the desert as such an insult that al-Aqīṭal, intending to eulogise Simāk al-Asadī, satirised him involuntarily by mentioning that one of his ancestors had been a blacksmith.

This unfavourable view of the *sānī* has continued to be current amongst the Bedouins (H. Wahba, Djastrat al-ʿArab fi ‘-l-barn al-sīhīr; R. Uzayyi, Kāmas al-ʿādat . . . al-urdunniyya. Amman 1973-4, ii, 177). They consider the artisan as an outsider, even if he and his family have lived amongst them from time immemorial; he can never be integrated into the tribe, and no Arab nomad, of however low birth, would consider marriage links with him (R. Montagne, Vie sociale et politique de l’Arabe du Nord, in REI (1932), 74).

The *kaddādīn* (pl. of *haddād “blacksmith”) are often originally oasis dwellers (Montagne, op.cit.), and sometimes belong to outcast tribes like the Nāǧīr (A. Jausser, Coutumes des Arabes au pays de Moab, 104 n. 2) or the Ṣulaba. They form a separate caste (Doughty, Arabia deserta, index s.v. Ṣānī), and consider themselves as unrelated, bānū *’amm* (A. Musil, The manners and customs of the Rwala Bedouins, New York 1928, 281). Their lowly status protects them from the consequences of raids, and they accordingly enjoy an almost total immunity here. During an attack on a clan in which they have chosen to reside, they stay apart from the fighting, doing nothing to defend their goods, because of the right of protection which they enjoy. If goods of theirs are carried off by mistake, they can be confident of recovering them rapidly. In each clan they have in practice a brother (*aḏḥāf*), the blacksmith of the group, who has the duty of restoring any goods seized by mistake (Musil, op. cit., 281).

It is worthy of note that *kayn* in Sabaean is free of any pejorative sense such as is found in North Arabia. It seems to be agreed that its meaning here is “the one who arranges something”, which is in accord with the etymology in Arabic. It would therefore appear to be used for a high official, superintendent or minister, whose duties are concerned with religion and the sacred. There is a sense of this supernatural aspect in the Kurān when it says “We sent down iron, in which there is violent force and also benefits for the people” (LVII, 25), and it attributes the invention and manufacture of mailed coats to David, after receiving instruction from God Himself (XXIV, 10-11, XXI, 80).

The divine origin of iron is confirmed in several hadīths. Thus according to Ibn ʿUmar, “God brought down to earth four elements: iron, fire, water and salt” (al-Ṭabarānī, Maḏjmaʿ al-bayyān, liii, 400). Finally, in the hadīṯ concerning the general prohibition of cutting down plants in the Meccan haram, an exception is made for the *sakhir*, a fragrant plant used to decorate houses and tombs, but also used by blacksans (al-Buḫārī, Saḥīḥ, ii, 2. Al-Ḍīmaʿ al-bayyān, xxvii, 185; ʿAbdīl, Bulāgh al-ʿarab, iii, 400). In each clan they have in practice a brother (*aḏḥāf*), the blacksmith of the group, who has the duty of restoring any goods seized by mistake (Musil, op. cit., 281).

The *kayn*’s position is thus ambivalent. Although an object of scorn, at the same time he enjoys certain privileges associated with sacred personages. As in the so-called primitive societies, amongst the desert Arabs the smith is a being apart. According to the Rwala beliefs, God created the first smith at the same time as the first Bedouin (Musil, op. cit., 281). The taboos surrounding him are not solely explicable by mere contempt for mechanical activity; another factor must be taken into consideration: the superstitious fear of being contaminated by the impurity of the artisan-magician, of coming into contact with this formidable power, the secret of whose divinity he holds, and which made the Sabaean *kayn* an intermediary between man and the sacred.

Was the blacksmith’s art taught to the Arabs of the North by those of the South, as alleged by the chroniclers (al-Baladhuri, Anṣāb al-ʿarabī, i, Cairo 1930, 467)? This hypothesis may be acceptable in that in Yemen today, the blacksmith is not regarded with any particular disfavour, the most despised class being that of the *anāḏīl* (barber, butcher, cupper, etc.).

**Bibliography:** In addition to references in the text, see also J. Chelhod, Le monde mythique arabe, in Jnal. de la Soc. des Africansistes, xxiv (1954), 4 ff.; Idem, L’organisation sociale au Yémén, in L’Ethnographie, N.S. no. 64 (1970), 75 ff. (J. Chelhod)

**Al-Kayn** or bānū ‘l-ʾkayn, often contracted
to Bal-Kayn (cf. Bal-Harith, etc.), the name of one or more Arab tribes. The best known is part of the tribal group of Kedā'a, and al-Kayn is here interpreted as the nickname of al-Nu'mān b. Djasr, so that the tribe is known as al-Kayn b. Djasr. The word kayn means “worker in iron”, “smith”, or possibly “slave”, and is used as a term of contempt in the Naḥṣād Diārīr u'll-Farasa'dā. There is no evidence, however, of any connexion of Bal-Kayn b. Djasr with smiths. They act as a normal Bedouin tribe, and indeed are specifically proud of their achievements (cf. verse in Ibn Khallākin-de Slane, i, 40). Among the tribes against whom they fought were the Kalb (Abū Tamānm, Ḥamasa, ed. Freytag, i, 77; Yākūt, iii, 241, iv, 49; Ibn Sa'd, iii, 27 f.; Ibn al-Aḥṣār, Usd al-Ḡāba, ii, 224; Ibn Ḥadžar, Iṣāba, ii, 45; Bahārī) (Baala'dhūrī, Ḥudūd, 283, Ghaṣṭāfān (Agdānī), ii, 194). The names of various places in their tribal grounds are known (see Yākūt, Index of tribes). One (Thādir) is between Wādī ‘l-Kurā and Taymā; most of the others appear to be further north. Among neighbouring tribes were the Kalb, Ball and Umhra. Some of the tribe may have been friendly with Muḥammad, since at the expedition of Dḥāṭ al-Salāsī in 6/629 the Muslims hoped for help from them (Wādīkī, ed. Marsden Jones, ii, 770 f.), but a contingent of Bal-Kayn fought against the Muslims at Mu'ta about the same time, and also at the Yarmūk and perhaps Fīhl (Ibn Ḥishām, 792; Tabarī, i, 1611, 2347). There is no record of their having sent a deputation to make an alliance with Muḥammad, and so the report of Sayf b. ʿUmar (Tabarī, i, 1872) that they had an ʿumūl and that some joined in the Ridda presumably refers only to a small section. The majority probably became Muslims after the conquest of Syria.

In the Second Civil War (fīna of Ibn al-Zubayr) they supported Marwān (Tabarī, ii, 478; Masʿūdī, Tantīb, 308), but a little later ʿAbd al-Malik decided against them in a dispute with the Kalb about a place called Kurākīr (Yākūt, iv, 49). There was a contingent of 600 of them in the Umayyad army sent against the Kārījīrīd rebel Bahlul in 119/737 (Tabarī, ii, 453; al-Aḥṣār, i, 50). The last that is heard of them is as being involved in intertribal fighting in Damascus in 176/792 (Ibn al-Aḥṣār, vi, 87 f.).

Two brothers from the Bal-Kayn, Mālik and ʿAṣālī, are said to have been the boon-companions of Diāḥlima al-Abrāsh of Ḥira [q.v.] and were noted for being inseparable (Ibn Khallākin-de Slane, iii, 653; Muṣafadālisyl, i, 535, 2, poem 67, 21). The best-known member of the tribe was the poet Abū ʿl-Tāmaamān, who in pre-Islamic times had been friendly with Muḥammad's uncle al-Zubayr b. ʿAbd al-Muttaṣib and also with ʿAbd Allāh b. Diḥḍān (Ibn Kūṭayba, Shīr, 229 f.; Ibn Khallākin-de Slane, i, 40; Gausins de Perceval, i, 131, ii, 232).

Al-Kallakshandī (Nihayat al-arab fī ansāb al-arab, Cairo 1958, 71) has two tribes called Banū ʿl-Kayn. Besides the one described above there is a part of Asad (ibid. Khuzayma); but it is possible that there is confusion with Asad, the great-grandfather of al-Kayn b. Djasr, since little is recorded of this tribe except the name. A group of Bal-Kayn, perhaps actually smiths, were found at the mines of Banū Sulaym at ṹārān and may have been part of the Bal (Yākūt, iii, 865). The suggestion has been made that the Bal-Kayn are descended from the Kenites of the Old Testament, e.g. by Th. Noldeke, Die Χάινα, xli, 187, but there is no convincing evidence to support this.

**KAYNA, pl. ḥaynāt or ḥyān “female singing slave”**

The Arab lexicographers do not completely agree on the primitive meaning of the term (see LA, TA, etc. s.v.), the real origin of which is unknown to them. They tend to apply it in the first place to a female slave (ama, ḡuṣriya), charged in general with various tasks; secondly, and more specifically, to the female singer who had a servile status (ama or ḡuṣriya mughammiyya). Some lexicographers are inclined to connect ḥaynā with a Vth form ḥayyān “to embellish oneself” (al-Waṣḥābī, Muwāṣṣālāt, 164, uses the expression al-imād al-muḥsamaynād “in a sense close to al-muṣafarrfīl “the elegant, the refined ladies”), others want to see it as the feminine form of ḥaym “workman”, more specifically “smith” and to give it the primitive meaning of “working woman” or “woman hairdresser”. Naṣīr al-Dīn al-Aṣad (al-Kīyān wa’l-ghaynā fī l-ṭaṣāfi al-ḥayyāh, Cairo 1968, 15-24) has devoted a thorough study to this term. Starting from a bilateral *bn*, he points out the semantic affinity of the “radicals” ḥyn, ḏn, ḥyn, and remarks the existence of cognate words in various Semitic languages. He sees a phonetic and semantic relation between ḥaywā and ḍn on one side, and ḥyn on the other, and concludes that these are loanwords from Arabic. We allow ourselves here to underline the rightness of these conclusions, without being decisive about the direction of a possible borrowing and without following P. Anastase (al-Ilkil, viii, 163) who considers ḥyn to be a derivative of ḥaywā or ḍn, while considering at the same time the Arabic ḡhāna “to sing” to be the origin of either verbs. What can be stated with near certainty is that the Assyrian kūlu has very probably become Arab ḥyn (see ḫūn). At an early period also other words are attested to indicate the female singer: kārina (Ibn Khurṣadādibīhībīb, Kūṭāb al-alwā wa’l-ma-lātā, ed. I. A. Khalīfī, Beirut 1969, 20), musīmā (which is perhaps Islamic, ibid., 17), muddīnīm and muddīnā (Asad, op. cit., 27), sa’dūb and sa’dīnā (ibid., 28) and finally ḡurāda “locust”.

According to a well-founded tradition, the first female singers among the Arabs are reported to have been two slaves called al-Djaradātī or Djaradātā fī. They are even given individual names the spellings of which take all the form CCA (al-Ṭabarī, i, 234-6; see al-Masʿūdī, Murādī, ed. Pellat, index). The name of the mythical person to whom they allegedly have belonged is also known: Muṭawīya b. Bakr al-Imlā. The continuity of the tradition is assured by the affirmation that the inhabitants of Yathrib inherited the use of ḥyān from the Ādites who had disappeared from history, (Ibn Khurṣadādibīhīb, op. cit., 20). The sources also attest female singing-slaves in the future Medina at the end of the Diāḥlima (e.g. Agdānī, ed. Beirut, xv, 34, about Ubayyī b. al-Dūlah). Mecca, which had remained outside the alleged Ādite influence, is said to have known music and singing thanks to al-Ḥārīth b. Kalada on his return from al-Ḥira (see al-Masʿūdī, Murādī, index, s.v.; Asad, op. cit., 115, 116, 118, 131, discusses this tradition). This detail confirms the origin of the ḥayna as proposed above, the more so because the sources report many traditions on the ḥyān of the Nasrids, as they do on those of the Ghassānids. According to Ibn Khurṣadādibīhīb (op. cit., 36), Djaradātī (al-Aṭham al-Masīrīn, [q.v.]) is said to have had ten ḥyān, five of whom, apparently Byzantine, sang in rumāniyya.

In Arabia, outside the main towns, some ḥyān
were living among the Bedouins, if the poets are to be believed, whose works can, however, not be credited with perfect authenticity.

As far as can be judged, the female slave singers may have been divided into two main categories, the role of one group, owned by a town or Bedouin person of standing, was to entertain their master, alone or in the company of guests, without prejudice to their preferences or the role they could have with him. The other group, quite inferior in rank, were attached to taverns or followed wandering wine-merchants, and one can easily imagine that they could give themselves to a form of prostitution. The poets (e.g. Tažaf, vv. 49-52 of the Mušalla; al-Ašša, in Rawd, No. 31, 26-7; Labīd, v. 61 of the Mušalla) associate these women with drinking-bouts, and describe them so as not to leave any doubt about their marginal activities. Nasīr al-Dīn al-Asad (op. cit., 163-253) has thoroughly studied the influence exercised by these two pre-Islamic groups of kiyān on the social and literary fields, and more particularly on al-Ašša.

From the period shortly preceding Islam, we have detailed information on some kiyān, in particular on two new "locusts", the Djaradatan of Abū Allāh b. Djal'ān (q.v.) who was engaged in the slave-trade in both sexes. Shortly afterwards, female slave-singers apparently served in Mecca as instruments of propaganda against the Prophet who had migrated to Medina, namely Fartanā and Kārib/ Kūrāyba, who were owned by Abū Allāh b. Khaṭṭāl (see al-Dūhāṣ, Tarbī, index, s.v. Fartanā; Sīra, ii, 410; Nasāb Kurāyba, 442-3; op. cit., 86-7). They are said to have been sentenced to death by Mūhammad after the conquest of Mecca for having proposed satirical songs against him (the traditions diverge however on the actuality of their punishment). Another kiyā, Sāra by name (see Asad, op. cit., 88), and owned by Abī Šayfā (Nasāb Kurāyba, 90-1), was sent to the Kūrāyba by Hāšāī b. Abī Balta'at to announce the Prophet's intention to seize Mecca (Sīra, ii, 398, 410, 411). Sentenced to death, she escaped momentarily the supreme penalty. A certain ancient kiyān can be found in chapter xv of the Hāṣ 1-funān wa-sulāwat al-mahzān of Ibn al-Ṭabbān, an author of the 5th/11th century (ms. Dār al-kutub no. 539, Fine Arts) published by Asad, op. cit., 269-72.

At the same period there existed certainly many other anonymous kiyān who were engaged in their usual activity. These slaves were surely of non-Arabic origin (e.g. the kānsa of Hashān b. Thābit was called Shīn, Ibn Khurraḍāḏibih, op. cit., 360). Thus there were probably white slaves among them, but the majority must have been black or half-caste. In some cases were perhaps still singing in a foreign language, like those of Diabāla b. Ayyaham, the others had been brought up in an Arab environment and knew perfectly well the language of the poets whose works they interpreted. The absence of reliable documents prevents however any decisive affirmation.

The information becomes less unreliable when in the 1st/7th century the development of music and singing (see Gūnā) in the holy cities of the Ḥijāz brought about a zeal for collecting traditions which we know, to be sure, only from later sources. On the other hand, however acute the later juridical disputations on the admissibility of these two pursuits, they fact paradoxically developed, in spite of some attempts to stem their spread, in Mecca and especially in Medina, where one would have expected stronger puritanical feeling. This problem is further connected with those of love-poetry [see Sufa] and humour [see al-ğayr wa'-l-ḥā'īn].

While the prohibition of wine must have entailed the disappearance of a great part of the female singers of the lower reaches of the profession, real schools can be seen growing around musicians and singers who were instructing pupils of both sexes. Among the females, free and freed women appeared, but mainly slaves who were considered that sort of education to be a means of increasing the commercial value. In order to be chosen among the young slaves, whose number was now increasing, due to the conquests, the future kiyān had of course to be beautiful and to have a melodious voice, but to be at a premium on the market they also needed talent and skill, i.e. a fairly advanced musical education and intellectual culture. From the 1st/7th century onwards the famous stories of kiyān, bought at huge prices (thousands of dinārs are mentioned), have been adopted into adab-literature, often with somewhat embellished details. Sallāma (q.v.) and Hāṣāb (q.v.) belong to them, but several others could be mentioned. Iṣbāk al-Mawsill pretends (Aḥānī, v, 150) that the singers who had thus been educated, were originally black (sud) or "yellow" (nūr), white, who did not stand out for their beauty. For, he says, his father Ibrāhīm was the first to consider the physical qualities of the kiyān important, in view of the increase in their value in the eyes of those interested. This information is belied by traditions going back to the 1st/7th century.

Aṣza (q.v.) and Djamila (q.v.) gave concerts in honour of personalities of Medina, and the latter was surrounded by a circle of her admirers, called kiyān, who constituted the choir. It was under the direction of these two artists, famous in the history of the Arabs, that the great singers of the 1st/7th century were formed [see Gūnā]. Out of these one needs only to mention Mābād (q.v.), who in his turn taught kiyān, both female musicians and singers, who were very much in demand. The best pupils of the Medinese school, like Kīmīyān, were in particular at Basra where a new school, competing with the one of Medina, was quickly to come into existence and which produced some of the most famous female singers of the court at Badādd. There were formed Badīl (Aḥānī, ed. Beirut, xvii, 32-7), kāysa of Ḥādis al-ʿAzm, ʿArūb (Aḥānī, xxi, 58-102) whose career reached from the reign of al-Maʿāmin to that of al-Mutawakkil, Mutayyam al-Ḥāshimīyya (Aḥānī, vii, 280-93) and Shāriya (Aḥānī, xv, 320-8) who was adopted by Ibrāhīm b. al-Mahdī and whose biography Ibn al-Muṭazz did not judge himself unworthy to write. Al-Dūhāṣ (Rasāl, ed. Hārūn, ii, 288-90), gives a detailed list of Basran kiyān, whom he prefers to the Kūfān. From that time onwards it is not always easy to make a distinction between the slaves who had become famous for having given birth to caliphs (those born from a mother who was a free woman are very few), those who had distinguished themselves as poets (like Inān (q.v.) or Fadā) and the singers proper who could at the same time share the caliph's couch or that of a very high personality, compose verses, sing their own or those of other poets and play a musical instrument (like Māḥūba). In fact, many kiyān were capable of writing short poems and of improvising occasional pieces; competing in this field with the court poets, they rivaled them in virtuosity, especially in the classical game of the
KAYNA

In an unpublished thesis (Recherches sur la poésie des qiydn, Paris-Sorbonne 1970), A. Chirane has brought forward the name of more than a hundred qiydn to whom verses are attributed, without counting several dozens of anonymous poesesses, whose preserved works represent only a tiny part of the compositions and improvisations. In general, this kind of poetry cannot be called exemplary, but is has the merit of being spontaneous and unusually refreshing. Love (qāh [q.v.]) is largely celebrated, while amorous reproofs (qāh) and lamentations over forced separations also abound. On the other hand, one finds eulogies of high-ranking personalities, elegies on the death of the master and pieces in which the qiyd, far away from their native land, express their nostalgia. Wine and descriptions find their place also, next to epigrams which were held in high esteem in these refined milieux.

These women had received a thorough education. They had to give proof of talent and vast knowledge of Arabic language and poetry. We are told that al-Rashîd, before taking a decision, instructed al-Asma‘î to examine one of them; she answered her examiner with such assurance that she “seemed to read the answers from a book” (al-Anbâ’î, Nasba, ed. ‘A. ‘Amîr, 72-3). It was due to the erudition of another qiyd, pupil of the grammarian al-Ma’ânî, that the latter had the honour to be admitted to the court (see Pellat, Milieu, 250). These slaves knew a great number of verses by heart, which was in itself normal; some, however, although everything in their daily life removed them from religion, were well-versed in the traditional sciences and had studied the Qur‘ân, as suggested by the story of a hâdî related by al-Mas‘ûdî (v, 412 = § 218-5), who gives a beautiful example of tarab [q.v.]. Besides, it is known that the Holy Book was chanted and that the hira‘â bi l-‘alâhn, favoured by the development of singing in Medina (see M. Talbi, in Arabica, v/2, 1958, 83-90), spread afterwards to other areas of the Muslim world, in spite of the hostility of the fuwahâd (see, e.g., M. Talbi, Emirat aghlabide, 307). The women who went to the schools, and who dressed in vividly-coloured robes made of dyed fabrics, as well as those who wore, on the forehead, on the palm of the hand, etc. one or several pieces in which the mukayyin, whose existence is attested with certainty. To be sure, there came into existence, first at Baṣra, then in other cities as far away as Cordoba, the very profitable profession of bayyân or mukayyin, the germ of which had already existed much earlier. It consisted in acquiring young qiyd, in forming them under strict rules and in hiring out on various circumstances their services to private persons. The bayyân organised also musical sessions in the hope that such a passion would arise among the guests that they would not hesitate to pay the most exorbitant prices in order to obtain the object of their ardour. In particular, there is mentioned the case of a certain Umâr (ed. al-Fâdî) b. ‘Abd al-Malik al-‘Asîrî, Abu ’l-‘Nafîd/Abu ’l-‘Asîrî, who dressed in vividly-coloured robes made of dyed material, while the free women wore only natural fabrics. There are also many details on the customs of these milieux, on the phrases written on the foot, on the forehead, on the palm of the hand, etc. (ibid., 136 ff.).

The monographs devoted to the qiyd and cited for instance by Ibn al-Nadîm and Ya‘kît were
probably far from having the same literary value as the works of al-Djahiz and al-Washsha3, for they were likely to contain exclusively anecdotes and verses in the same way as the Kitāb al-Aghānī, the notices of which have been usefully gathered together by F. al-Amrūsī, al-Djawādī l-muğhammānīyāt, Cairo 1945. The following titles have been brought to light: K. Kiyān al-Ḫīṣājī and K. Kiyān of Ṣbrāk b. Ṣbrākīn al-Mawṣīl (Fiṣṭīrī, 202; Ḫudābādī, vi, 50); K. Kiyān of Yūnas al-Muḥṣanī (Fīṣṭīrī, 207); K. Kāyda al-Madārīn (Ḫudābādī, xiv, 133); Aḏkār al-zawāˈdī of al-Muḍafdhā (Fiṣṭīrī, 123; Ḫudābādī, xvii, 194); K. Kiyān al-Ḫīṣājī and K. Kiyān Makha of Sulaymān b. Ayyūn (Fiṣṭīrī, 212; Ḫudābādī, xi); K. Aḥbār al-kīyaν of Abū l-Faɾaḏī himself (Ḫudābādī, xii, 99; Brockelmann, S I, 226).

To this list of works which do not seem to have been preserved, should be added, apart from the chapter K. al-Kiyāν of al-Muṣḏarī, the sections of Kiyāν, for it is said there that the Ḫidrī was trained on the spot, while the Ḫidrī, who acquired a lasting reputation moving scenes (see H. Peres, L'histoire de l'Arabie, Paris 1912, 345-51). The description de l'Afrique, being and calligraphy, and then sold them at a very high price (in one case for 3,000 dinār). The Andalusian kīyaν played also conjuring tricks and even executed exercises of skill with weapons, and formed orchestras called shīkāra after the name of the curtian which in the Orient separated in the caliph the singers and musicians (Mez, op. cit., 479).

After the fall of the Umayyads in Spain, the Mūlāk al-xawālī in their turn disputed among themselves for the most talented singers. The coming of the Almoravids and Almohads did not put an end to their activities, but from the 6th/12th century onwards, Seville had robbed Cordoba of the monopoly it had enjoyed before. A reliable evidence of this is to be found in a text of al-Tīḥāthī (d. 951/1543), Muʿattal al-xawālī fi ḫīm al-samā′, quoted by H. F. Abd al-Wahhab in his Waraḥāt, ii, 231-2, where is given a detailed account of the training of the Sevillian female singers who were sold in North Africa. In the north of the peninsula the kīyaν served to a certain extent as a link between Muslims and Christians, who both kept them in their entourages. Some still sang in Arabic, and Ibn Bassām describes in this respect moving scenes (see H. Peres, op. cit., 356-7).

On another plane, the Andalusian kīyaν are probably no strangers to the insertion of Romance words in the khārdīa of the mucamīd celebrated by al-Azdi (Ḫiḥāyat Abī l-Kdsim, 70 ff.) were also from al-Muṭaffī, or also those devoted to poetesses but which have also been lost. Useful information can finally be found in: Nisāʿ al-khulafāʿ, attributed to Ibn al-Sawī (ed. M. Dījāwād, Cairo n.d.), and in Muṣṭaqaf min aḥbār al-dawārī of al-Suyūṭī (ed. Š. al-Munajjād, Beirut 1963).

Even if some kīyaν are still mentioned occasionally after the 4th/10th century but then almost always anonymously, the tradition, judging from the sources available, is essentially based on those of the first centuries of the hidrīa who acquired a lasting celebrity. After Medina and Basra, Baghdād was the centre of the Muslim world in this respect. Al-Tawḥīdī Ṭamīdī, ii, 183 counts 480 slave (and 120 free) female singers at al-Karjāḥ (q.v.), giving the names of about 20 of them and citing the pieces of 19 of them. The Anda-

After the fall of the Umayyads in Spain, the Mūlāk al-xawālī in their turn disputed among themselves for the most talented singers. The coming of the Almoravids and Almohads did not put an end to their activities, but from the 6th/12th century onwards, Seville had robbed Cordoba of the monopoly it had enjoyed before. A reliable evidence of this is to be found in a text of al-Tīḥāthī (d. 951/1543), Muʿattal al-xawālī fi ḫīm al-samā′, quoted by H. F. Abd al-Wahhab in his Waraḥāt, ii, 231-2, where is given a detailed account of the training of the Sevillian female singers who were sold in North Africa. In the north of the peninsula the kīyaν served to a certain extent as a link between Muslims and Christians, who both kept them in their entourages. Some still sang in Arabic, and Ibn Bassām describes in this respect moving scenes (see H. Peres, op. cit., 356-7).

On another plane, the Andalusian kīyaν are probably no strangers to the insertion of Romance words in the khārdīa of the mucamīd celebrated by al-Azdi (Ḫiḥāyat Abī l-Kdsim, 70 ff.) were also from Baghdād. He describes, like al-Tawḥīdī (ibid.), scenes of tarāb, i.e. of that delicious joy to which persons who are otherwise self-controlled and conscious of their dignity have often surrendered themselves. Thus Baghdād supplied the most appreciated female slave singers (see in particular the history of the Fāṭimid Tamīm al-Muṭāzī (d. 628/978) in Mez, Renaissance, Eng. tr. 401), whatever their land of origin may have been. The passage of Ibn Buṭlān (d. 145/1062) brought forward by Mez (op. cit., tr. 161; text in Ristla fi šīrā ta-rābī wa-tāhīb al-ʿabd, ed. Hārūn, Cairo 1954, 374; taken up again by al-Šāḵṭārī, Ḫisba, 50, Spanish tr. by Chalmeta on the literary plane the kīyaν also contributed to the development of the so-called "modernist" (mudājād) poetry, both by their own contributions, the value of which was by its very nature quite varied, and by their function as inspirers of the poets. At the zenith of "Abdās civilization some of
them kept real literary salons where the participants, while listening to music and songs, vied in wit and improvisation. Countless are the poets who, inspired by biyān, celebrated their seduction or complained of their cruelty. In this respect almost all great names of mushādh poetry should be cited, whatever may be the opinion of Ibn Kutayba who, in the introduction of the Adab al-kālib, fulminates against the secretaries of the administration whose ideal it was to write "trashy verses" in praise of a kayna (see G. Lecomte, in Mélanges Massonign, iii, 51).

In the *Thousand and One Nights*, biyān are quoted in the 334th, 383rd, 436th and 896th nights. On the status of slaves, see ʿABB; on their position in society, B. Lewis, *Race and color in Islam*, New York-London 1971, and bibliography; see also SĀLIMA (R. Fellat).

**KAYNUKĀ** is a town in central Tunisia. It stretches over an area of 680,000 hectares. Its population of 34,000 inhabitants in 1956 had become unfriendly to the Prophet. From this we may infer (with Watt, *Muhammad at Medina*, 226 f.) that the document in its present form belongs to the period after the elimination of the Kurayya (end of 5/ April 627).

After the battle of Badr (Ramadān 2/March 624) Muhammad’s relations with the Jews of Medina became troubled. The Jews as a body had adopted an unfriendly attitude to the Prophet. From the religious point of view they became inconvenient; and from the political angle, as a powerful foreign body within the newly converted town, they were a great danger. When Muhammad felt his position strengthened by the battle of Badr, he must soon have determined on expelling his enemies. The Kaynukā, as they lived in the city itself, were the first he wished to be rid of. Regarding in this light, his attack on the Kaynukā (in all probability as early as Shawwāl 2/ April 624) is sufficiently explained. Special reasons for the attack given by Muslim writers have no more than anecdotal value. Sometimes this reason is said to have been a jest that a Muslim made to a Jewish woman, sometimes the Kaynukā are said to have behaved with particular arrogance. Sūrat III, 12 f. is said to refer to these incidents; according to Wākīdī (277) and Ibn Saʿd (ii/1, 19) Sūrat VIII, 58, does too. Sūrat III, 13, refers to the victory at Badr as an example of warning, and VIII, 58, speaks of vengeance against people from whom treachery is feared.

After 14 days’ siege, the Kaynukā surrendered without striking a blow; the men were bound and seemed to have feared the worst. The energetic intervention of ʿAbd Allāh b. Ubayy [q.v.], chief of the Khazraḍ and leader of the Muhāemmād, however, brought an improvement of their lot. They were allowed to settle of the relations between believers and the Khazraḍ [q.v.]. They possessed no land there but lived by trading. That their known personal names are for the most part Arabic says as little regarding their origin as the occurrence of Biblical names among them; but there seem to be no valid reasons for doubting their Jewish origin.

In Yathrib they lived in the south-west part of the town, near the *Makālā* and close to the bridge over the Wādī Buṭḥān, where they occupied two of the strongholds (dāmān) characteristic of Yathrib. They were goldsmiths, among other trades; Bukhārī (Fard al-Khams, 1, Maghāfīl, 12) incidentally mentions a goldsmith of the Kaynukā. On their expulsion they left behind them arms and tools, which were divided among the Muslims after Muhammad had received (for the first time) his fifth share. The number of their fully equipped fighting men varies between 400 and 750 in references to it.

After the dominating power in the old Yathrib had passed from the Jews to the Banū Kayla, the Kaynukā were allied to the Khazraḍ [q.v.]. They possessed no land there but lived by trading. That their known personal names are for the most part Arabic says as little regarding their origin as the occurrence of Biblical names among them; but there seem to be no valid reasons for doubting their Jewish origin.

47,000 during the census of 3rd May 1966, and then 56,000 in 1972. Temperatures vary considerably, ranging from a few degrees below zero in winter to 40°C and over in summer. The sirocco blows there for an average of 21 days per annum. The rainfall varies from an average of 250 mm. or 300 mm. in the town and its surrounding area to 500 mm. and over in the regions west of the governorate. It changes considerably from one year to another, ranging from drought to catastrophic floods; the flood in 1965 was particularly devastating. Work is soon to begin on the damming of the Wadi Zéroud, which will store 80,000,000 cubic metres of water, and also on that of the Wadi Merguellil, for which plans are even more advanced. This is bound to avoid these dangerous floods and it will increase the irrigable area, which at present extends to 14,000 hectares, but of which only 8,000 are actually cultivated.

Al-Kayrawan is essentially involved with agricultural pursuits and the efforts of the last two decades have resulted in a considerable development of arboriculture. In 1972 there were 3,500,000 olive-trees, and 3,800,000 almond trees were counted in the governorate; in third place came apricot trees. The areas sown with cereal crops vary much from year to year according to the promise of autumn rains. From 58,000 hectares in 1968 they rose to 95,000 in 1972; they were only 75,000 hectares in 1956, but they had reached 225,000 in 1959. The livestock in 1972 amounted to 260,000 sheep, 14,000 cattle, 20,000 goats and 11,000 camels. The industrial sector is still embryonic, but it has a group of about ten small enterprises (dyeing, spinning, woodwork, confectionery and food preservation) which employ about 1,000 people; it seems unlikely that these will be greatly expanded.

By contrast, the artisan sector continues to occupy the first place in the town’s activities. Working with wood, copper and alfa, the production of jewellery, lanterns and sieves, as well as the traditional dyeing and weaving, brings employment to 1,200 craftsmen. But what makes al-Kayrawân’s reputation is the handproduced “long-wool” carpets. Recently the National Office of Craft Industry has been created, and it has been notable for allowing newly-qualified female workers into its workshops. It has modernised the designs to a certain extent without changing the family and essentially feminine character of the craftwork. In 1972 4,500 home-craftsmen (saddâya) were counted. The production of carpets rose from 35,000 m² in 1962 to 130,000 m² in 1972, and it is likely to develop further. Yet all these enterprises do not succeed in assuring full employment, because of the high birthrate. A third of the active male population is underemployed or on short-time working.

The actual town of al-Kayrawân is composed of the native quarter, with its narrow winding streets and souks, which roughly preserve the general appearance given to them in the 18th century. This native quarter is still surrounded by its crenellated ramparts, which are built of solid brick. They are flanked at intervals by round buttresses and measure a little over 3 km. In the east and the north-east the suburbs of Gueblia, Djeblia and Zlass. In the South, between Bab al-Djallâdîn (Skinners’ Gate), which since independence has been renamed Bab al-Shuhada’ (Martyrs’ Gate) and which leads to the native quarter, and the Railway Station, the modern town is situated; here are found the administrative services, the banks, the hotels, etc. A working class district, Sîdi Saḥmân, has been built in the east and another, a group of 400 villas belonging to the more prosperous classes, is called al-Manşûra.

One of the principal monuments of the town, apart from the Great Mosque, is the Djâmi‘ al-thalâthat bîbân, the Mosque of the Three Doors, the façade of which is a beautiful example of Aghlabid architecture. It was founded in 252/866 by the Andalusian Muhammad b. Khayrun al-Ma‘ârifî, but was altered in the 9th/10th century. There is also the Aghlabid cistern at the Tunis Gate; the Zawiya of Sidi ‘Abd al-Ghayrîn of the 8th/14th century; the Zawiya of Sidi al-Šâhîb, which was first of all a simple and very old mausoleum covering the tomb of a Companion of the Prophet, Abû Zam‘a al-Balawi, and on the site of which the Murâdî bey Hâmîmât erected the present building in the 11th/12th century; and the Zawiya of Sidi ‘Umar ‘Abdâ, built in the 13th century.

1. Foundation

All the Arab invasions, which culminated in the conquest of Byzacena, were initially careful to avoid the coastal route. The invaders penetrated into the country by the region of Kaštîliya [q.v.], from where they attempted to reach the centre and the north. Avoiding the shore on the east, which was dangerous for conquering forces who were not yet adequately experienced in seamanship, and the mountains on the west, which were well suited for ambushes and surprise attacks, they had no alternative but to use the corridor which ended naturally in the region of Kâmûniya, that is, the corridor of al-Kayrawân. This town, which was first of all a military base, owed its origin to the strategy dictated by the relief of the country and from the fighting tactics of the invaders. Traditionally its foundation is attributed to ‘Alî b. Nâﬁ‘, but in fact it took place by easy stages and several military leaders contributed to its.

The battle of Sufetula (27/647-8) had practically delivered Byzacena to ‘Abd Allâh b. Sa‘d b. Abî Sarb, the Byzantines being driven back behind their second line of fortification defending the Proconsularium. It is neither impossible nor improbable that the conquerors pushed their raids on this occasion right into the region of al-Kayrawân, for they had to evacuate the country when they were charged a heavy tribute. Ibn Nâdîj (Ma‘âlim, Tunis 1320/1902, i, 30) points out that at al-Kayrawân there is a mosque dedicated to Ibn Abî Sarb which in some way commemorates his sea journey.

Later, events begin to take shape when Mu‘âwîya b. Hûdayîj led three campaigns in succession to Ifrikiya, in 34/654-5, 41/661-2, and 45/665. Three times, in fact, he made use of the same route as his predecessor and ended in the region of Kâmûniya or al-Kayrawân, where he set up his camp. In 34/654-5 Ibn ‘Abd al-Ḥakam declares that Ibn Hûdayîj “seized several fortresses and took considerable booty. He set up a garrison camp (kayrawân) near al-Karn” (Futûh, partially ed. and tr. by A. Gateau, Algiers 1948, 57). He reappears still established at Kârn in 41/661-2 (Ibn ʿIṣârî, Bayân, ed. Colin and Lévi-Provençal, Leiden 1948, i, 175). Finally, in 45/665 he reappears yet again at Kârn (al-Mâlikî, Riyād, ed. H. Mu‘nis, Cairo 1951, i, 17-28; Ibn ʿIṣârî, Bayân, i, 16; Ibn Nâdîj, Ma‘âlim, i, 39-40). In this connection al-Mâlikî notes: “Ibn Hûdayîj had laid the foundations of a town at al-Karn (ikhlâṣa madinatu ‘ind al-Karn) before ‘Ukba had founded (al-asîs) al-Kayrawân and he settled there during the period that he spent in Ifrikiya”. Ibn Nâdîj states for his part that “on his return to Kâmûniya, Ibn Hûdayîj built dwellings in the region of al-Karn.”
to which he gave the name of Kayrawan, when the site of the actual Kayrawan was not yet inhabited or urbanised (khayr masākun wa-lā matāる māmār; Maʿālīm, i, 41). The site named al-Karn ("hill, peak") by Ibn Hudayyīt owes its name to its relief. It probably refers to the hill 171 m. high which is called today Batn al-Karn and which is situated in a tourist region 12 km. north-west of the actual town of Kayrawan on the road to Djailū (M. Solignac, Recherches sur les installations hydrauliques, in AEO x, (1952), 12, n. 10).

The primary reason for the foundation of al-Kayrawan was its elevated position, which gave it protection from surprise attacks and floods. The Kayrawan founded by Ibn Hudayyīt did not maintain its rôle as capital of Ifriqiya but it was never destroyed again; however, when it ceased to be the capital it no longer bore the name of al-Karn. In 124/742 the Khāridīī Ī'ab b. Saʿdīt was beaten there by Hanzala b. Saʿdīt, governor of Ifriqiya. Al-Karn is mentioned again at the end of the 2nd/beginning of the 3rd century (Abū ʿl-ʿArab, Tabākāt, ed. Ben Cheneb, Paris 1915, 67; al-Mālikī, Riyāḍ, i, 18). Afterwards all trace of it disappears. Neither al-Bakrī nor al-Īdrīsī cite it, and for Yākūt (Buldān, Beirut 1957, iv, 333) al-Karn was no more than a mountain in Ifriqiya.

In 596/707 the founder of the Umayyad dynasty, Muʿāwiyya, while keeping Ibn Hudayyīt as the governor of Egypt, took Ifriqiya from him and entrusted it to ʿUqbā b. Nāfiʿ. On rejoining his post he was not very satisfied with Kayrawan which was built before his time by Muʿāwiyya b. Hudayyīt (Ibn ʿAbd al-Hakam, Futāḥ, 65). The modern site. Ibn ʿAbd al-Hakam, Futāḥ, 64-6; al-Mālikī, Riyāḍ, i, 57, 59, 79; Ibn ʿIdhārī, Bayān, i, 19-20; Ibn Nāḍīl, Maʿālīm, i, 7-9), however, tell us forcefully the details (verging on the miraculous) of how ʿUqbā b. Nāfiʿ, followed by his most illustrious companions, including a large number of the Ṣāḥiba, was left to search for a new site. His choice fell on a plain which was then covered with vegetation, the haunt of reptiles and wild beasts. There the new Kayrawan was founded ʿUqbā immediately donated two institutions indispensable for its spiritual and temporal progress, sc. a mosque and a government house (dār al-imāra), built opposite each other. He spent the five years of his first governorship watching over this building without undertaking any other expedition.

Abū ʿl-Muḥādīr Dinār who succeeded him greatly disliked the idea of settling where ʿUqbā b. Nāfiʿ had built it (Ibn ʿAbd al-Hakam, Futāḥ, 68/69). We are told (Ibn ʿIdhārī, Bayān, i, 22; Ibn Nāḍīl, Maʿālīm, i, 42-3) that he set fire to the foundations of his predecessor and moved the capital two miles further along the road to Tunis, to a region inhabited by the Berbers. The new capital, of which the remains have been recently located, received the name Takīrwan (Ibn Nāḍīl, Maʿālīm, i, 42). The choice of this Berber-sounding name as well as the town's position were most probably inspired by the choice of the site chosen for the foundation of al-Kayrawan they found a hydraulic construction system which they named Kašr al-Māʾ ("the Water Castle"). This system was fed from an aqueduct which gathered the waters of the Mams, 33 km. to the west, and today called Hanghār Dwīnīs (M. Solignac, op. cit., 19-21, 126-61). ʿUqbā stopped there (Ibn ʿAbd al-Hakam, Futāḥ, 68/69, on his return to Damascus in 53/657, and afterwards the place became an assembly point for caravans heading for the east (Abū ʿl-ʿArab, Tabākāt, 25; al-Mālikī, Riyāḍ, i, 30, 69-70; Ibn Nāḍīl, Maʿālīm, i, 52, 147; Ibn ʿIdhārī, Bayān, i, 34, 44, 259). The Arabs lifted the region out of its ruined state and gave it back prosperity by pursuing
and extending the irrigation policy of their predecessors. The wells and cisterns with which (almost without exception) all the mosques and houses were provided (Ibn Nāḍījlī, Maṣālim, i, 13; 25; al-Bakrī, Masālik, 23/53), made an appreciable contribution to the great works for which the Aghlabids are justly famed. Hence until the middle of the 5th/11th century, all the geographers boast of the fertility of that region. In all, the area chosen for the foundation of al-Kayrawān, apart from the strategic advantages it offered, was amenable to development and to the provision of an economic infrastructure necessary for the development of a large town. Only human error made this region into a steppe.

ii. HISTORY

Scarce was al-Kayrawān founded when it had to be evacuated. The disaster of Tāhādī to the south of Biskra cost the life of its chief foundér ʿUkba b. Nāfīr, and all his companions were killed to the last man. This marked the beginning of the exodus towards the east. The conqueror was the Berber Kūṣaylāy [q.v.], and he took up residence in the town, which had not been abandoned by all its Arab-Muslim population, and made it the capital of his short-lived kingdom (64-9684-9). Zuhayr b. ʿAlay al-Balawi, and especially Ḥassān b. al-Nuʿman came back later to recover it.

Four decades of peace then passed before the capital of the Maghrib was seriously threatened by the Berbers. In 124/742 it was about to be submerged by waves of Khāridjīs, but it was saved in extremis by the two unexpected victories of al-Kān and al-ʿAṣānām. Fortune failed it in 140/757-8 when the Warāṣdūmā Khāridjīs, of Šufi tendencies, seized it with the complicity of certain of its inhabitants, and for more than a year held it under their domination. They massacred in particular the Kūrašī elements of the population, who were the Arab aristocracy. It was liberated in ʿĀṣār of the following year (June-July 758) by the Ībādī ʿAlī b. Ḥāṣṣātī working from Tripoli. He took there as governor ʿAbd al-Raḥmān b. Rustam, the future founder of the kingdom of Tāhādī. But this was not for long; in Dhuʾ al-Qaʿdād 144/August 766, Muḥammad b. ʿAbd al-ʿAsānām came to bring it back into the bosom of the east, and he proceeded to fortify it under directions from the caliph al-Muṣṭaṣir. For the first time he provided it with a surrounding wall, which was begun in Dhuʾ al-Qaʿdād 144/February 767 and finished in Rādāb 146/September-October 765.

But these measures, which were imposed after the events just reviewed, did not save al-Kayrawān from further troubles. In 154/771 it was besieged by a coalition of Šufī and Ībādī Berbers. Its inhabitants were reduced to eating “their beasts of burden, their dogs and their cats” (Ibn ʿĪdārī, Bayān, i, 76). Resistance was in vain; the town was stormed after its gates had been set on fire and a breach made in its walls. This was the last ordeal to which the Khāridjīs subjected it. Yāṣīd b. Ḥāṭim al-Muḥallabī (155-71/772-88) was despatched from the east with impressive resources, and came to take it in hand again and to put an end to the convulsions of Khāridjism in Ifriqiyah.

But there arose another danger, that of the diwān. Al-Kayrawān became the gambling-stake of the rebel military leaders. In 194/810 Ibrāhīm I (181-96/800-12), in order to punish it for having treated with the army rebels, had the raujāts taken down and removed its gates. But it was guilty of the same offence again. In the meantime the gates had been put back, and in 209/824 the inhabitants opened them to Maṣṣūr al-Tunbūḥī. This time their punishment was a disgraceful one; Ibrāhīm b. al-ʿAbī (Ibn 917-38) “razed the walls of the town until he had made them level with the ground”, (Ibn ʿĪdārī, Bayān, i, 100). His successors were able to reign quite peaceably until the Shīʿī propaganda extended to Ifriqiya. The citadel of Sunnism did not support its sovereigns when they were in danger, but adopted towards them a passive or even hostile attitude. The last of the Aghlabids left his capital secretly at night, and the commander of his armies had to follow him under a hail of stones.

The reign of the Fāṭimids accentuated the differences between the city of ʿUkba and the power henceforth to be indisputably exercised by heretics. On 20th Shaʿbān 299/11th April 912, the storm broke. A rabble set the over-arrogant Kutāma against the exasperated tradesmen, and several hundred prisoners were taken (Ibn ʿĪdārī, Bayān, i, 166; Ibn al-ʿAṣārī, Kūmil, Beirut ed. 1966, viii, 53). ʿUbayd Allāh was able to calm men’s minds, but it did not prevent the people of al-Kayrawān from supporting the insurrection of the Khāridji Abū Yazīd al-Nūkkārī (332-943-7). They were deceived by him, and finally abandoned him, but it did not exempt them from punishment. Al-Muṣṭaṣir, once the rebel had been defeated and killed, seized a group of them and had them tortured and executed.

The reign of the Zīrīds before the rejection of the Shīʿī heresy, was no more readily accepted. The very arrival of al-Muʿīzīz (407-1054; 1062-6), when he carried out his first official visit to al-Kayrawān, was greeted by an attempt on his life and by a dreadful uprising (15 Muḥarram 407/3 March 1017). The people of al-Kayrawān massacred indiscriminately all whom they should be spared of being Shiʿī. The bodies of the victims were burned and buildings set on fire at will. The disturbances spread as far as al-Maṣṣūrīyya, which in turn was sacked and pillaged. Despite the efforts of the authorities to restore calm, a fresh riot broke out several months later on the occasion of the ceremonies of ʿĪd al-Fīr (1 Shawwāl 407/3 March 1017) presided over by al-Muʿīzīz. Again blood flowed freely, and the reaction of the authorities was brutal. Al-Kayrawān was delivered into the hands of the troops of al-Maṣṣūrīyya. Not a single shop escaped being pillaged and they set fire to the main business thoroughfares (ḥbār as-adwād). This was but the prelude to greater woes. The Banū Ḥilāl, although they did not devastate every town of Ifriqiya, nevertheless made a complete ruin of what remained of the grandeur of al-Kayrawān. The town was besieged from 446/1054 onwards and it was abandoned to them by al-Muʿīzīz, who retreated to al-Mahdīyya in 449/1057.

After that it is little heard of. Unlike Kāblīs, Kaʾṣaʾa, Tūẓīr, al-Mahdīyya, Sūsa or Sāfākīs, al-Kayrawān caused no concern to the Ḥaḍīdīs. No local dynasty seized power there under their reign. The nomad Arabs of the region, meanwhile, played a certain role on the political stage. They attempted, a little late, to oppose ʿAbd al-Muʿūn b. ʿAlī, the founder of the Almohad dynasty and already master of the whole of Ifriqiya. They were hewn to pieces, and their leader the Rīyāḥī Mūṭrīz b. Ziyād was defeated (556/1161, Ibn Khāldūn, ʿUbar, vi, 494). In 582/1186-7 the Almohad al-Maṣṣūrī, who had come from Morocco to suppress the danger of the Banū Ghāniyā, moved from Tunis towards al-Kayrawān where he set up camp before taking the offensive in the direction of al-Ḥamām, thus making good the first losses sustained by his army (Ibn Khāldūn,
Some years later Yāhūyā b. Ghānīyya seized the town, and with it, all Ḥiḍāyiyya. His success was as resounding as it was short-lived. Al-Kayrawān quickly returned to Almohad and then Hafsīd administration. In 669/1270 the landing of Louis IX at Carthage threw the whole country into a state of turmoil. The holy city founded by Sīdī ‘Ukba vibrated with enthusiasm for diṭḥād; al-Mustaṣṝr, thinking that Tunis was under too great a threat, even intended to move his government there (Ibn Khaldūn, Ḥabar, vi, 670). But the epidemic which raised an end to the conflict robbed him of this honour.

Several years later it again had the opportunity of playing a definite political rôle by favouring the accession of "the impostor", Ibn Abī 'Umāra (681-3/1282-3), to the throne. In bestowing on him the bay′ā it assured him, we are told (Ibn Khaldūn, Ḥabar, vi, 691), of the support of Ṣafāfīs of Ṣūsā and of al-Mahdīyya.

Its name again comes into prominence in the course of the struggle of the Sultan Abū Yāhūyā Abū Bakr against Abū Darbā (718-24/1320-24). But the most important event occurred in Muharram 749/April 1348. Abū ʿl-Ḥasan al-Marīnī, who had just occupied Ḥarfīyya, was beaten by the nomadic Arabs near al-Kayrawān, where he was later hemmed in (Ibn Khaldūn, Ḥabar, vi, 946, 814-6, 819). He was in fact able to get free and reach Tunis again, but this defeat was a sure mark of his decline and gave rise to the evacuation of the country.

After this al-Kayrawān did not achieve notice until the end of the reign of the Ḥafṣīds, which closed in the shadow of discredit. So it was without difficulty that Khāyar al-Dīn Ḍarbārānṣa, already the master of Algiers, stormed Tunis (18th August 1534), proclaimed the downfall of the dynasty, and among other things placed a garrison at al-Kayrawān. The following year (14th July 1535), Charles V reinstated Mawlā y al-Ḥasan on his throne under a special Spanish protectorate, but the whole of the south of the country escaped him. At that time al-Kayrawān became the capital of an independent principality governed by a marabout, Sīdī ʿArāfā, of the tribe of the Ṣuḥbīyya. In 1542 Mawlay al-Ḥasan, son of Husayn b. Muhammad al-Suhbī, held a conference with the Banū Zid, the Hamāma, and the Frāshīṣ. But it was a conference from which no concrete action emerged. Later, in 1581, just when the French protectorate of Tunisia was being established, al-Kayrawān again achieved honourable status; it became one of the most active hotbeds of the uprising led by Abū Ḥadhāḥum. It was within its bounds that the Zīs of the region, led by al-Suhbī b. Muhammad al-Suhbī, made a decision to intervene at the side of the Pasha of Tripoli. When this intervention produced no result, and any isolated army action was thought worthless, the town was finally occupied without resistance on 26th October 1581. Only the Zīs continued limited operations for some time.

iii. Historical geography

According to the vows of its founder, al-Kayrawān was supposed to "perpetuate the glory of Islam to the end of time" (Ibn ʿIdhrī, Bayān, i, 19; Abū ʿl-ʿArabī, Tabākhī, 8). To a certain extent it has fulfilled this mission. It is still a holy and venerated town, but over the centuries it has lost its rôle of a great metropolis. As described above, it has known both the peak of splendour and the depths of disaster.

ʿUkba had begun his work by marking out the site for the Great Mosque and the Government House (dīr al-imāra). The space around and within a perimeter of 13,600 cubicits, about 7.5 km. (Ibn ʿIdhrī, Bayān, i, 21), must have been apportioned out by tribes as it was in Baṣra and Kūfā which were founded in similar conditions. But there is no precise information on this matter, only a few indications. We learn, for example (al-Bakrī, Sīrāfī, 23), that the Fīhr, the Kurāṣhī clan of the founder of the town, had settled to the north of the Great
AL-KAYRAWAN

Mosque at the time of Hishām b. ʿAbd al-Malik (105-107/724-726). Again, in the 3rd/9th century, the districts had preserved distinct ethnic or denominational characteristics. This is indicated by Hārāt Yaḥyūb (ʿIyād, Madārīk, partial edition by M. Talbi under the title Biographies Aglabides...), Tunis 1968, 71), Raḥbat al-Kurāṣhīyyin (ʿIyād, Madārīk, 369), Darb al-Fīrāshīyyin (ʿIyād, Madārīk, 359), and a Sūk al-Yahūd (ʿIyād, Madārīk, 359).

From the outset, al-Kayrawān was built in stone, thanks to the re-used building materials which were found on the site. Its perimeter indicates that it was planned as a large city designed to group together all the Arabs of Ifriqiyya, primarily the warriors who would often then be followed by their families. Its initial population could hardly have fallen below 50,000.

Like Baṣra and Kūfah, originally it had no defensive wall and it remained an open city for nearly a century. The vicissitudes of history forced it, as we have seen, to be enclosed, from 144/762 onwards behind ramparts ten cubits thick (al-Bakri, Masālik, 24).

The reign of Yazīd b. Ḥātim al-Muhallābī (155/772-778) was particularly beneficial to it. It was he who organised the town souks and specified the type of activity within them. (Ibn ʿIṣbah, Babāris, 26). He was a man of wealth and attracted to himself poets and men of science. Al-Kayrawān was itself in process of becoming one of the most important centres of Muslim civilisation.

The town reached its zenith in the 3rd/9th century when it became the capital of an independent kingdom. A fortified chief residence for the prince, al-ʿAbbāsīyya [q.v.] was built nearby (184/998). Another, more luxurious and spacious, Raḵkāda, followed (263/877). The city had become too important, and began to disturb the authorities. It no longer needed to be defended, but it was necessary to take precautions against it, so it was deprived of its ramparts in the circumstances already described.

What were its dimensions then? Al-Bakri (Masālik, 25-6) tells us that the main street (al-Simdt), which ran along the east side of the Great Mosque, measured, from the Abū ʿl-Rabīʿ in the south to the Tunis Gate in the north, two and a third miles, that is (allowing 1,600 m. to the mile in al-Bakri) a little less than 4 km. It can be assumed that the town had the same dimension in the opposite direction. Such an area assumes a population of several hundred thousand people. This estimation is confirmed by other evidence. Again according to al-Bakri, the town numbered 48 hammāms, and a count was taken once on the occasion of the feast of al-ʿAḍḥarāʾ of 950 oxen slaughtered for the needs of the inhabitants, which represents a minimum of 200 tons of meat. Even if this is an exaggeration, it indicates a not inconceivable number. Al-Yaʿqūbī, who wrote in the second half of the 3rd/9th century, says for his part, that one rubbed shoulders with all kinds of peoples: Arabs from Kurāṣh, from Mudar, from Raʿbīʿa, from Kaḥṭān and from other tribes too; Persians from Khurāsān; finally, Berbers from Rūm (Latins) and still others (Les Pays, tr. G. Wiet, Cairo 1937, 210). Alongside the Muslim majority there were also to be found Jews and Christians. Al-Fadl b. Rawḥ (1778/779-34) had authorised the building of a church there (Pseudo-Ibn al-Raʾṣīb, Taʾrīkh..., ed. M. al-Kāḥib, Tunis 1968, 185). In the middle of the 3rd/9th century, the church in al-Kayrawān had several heads (ʿIyād, Madārīk, 132), and epigraphy shows us that until the 5th/11th century, Christians had kept the use of Latin in their funerary inscriptions.

Because of all these people, the water system organised from the reign of Hishām b. ʿAbd al-Malik (105-107/724-726) onwards was no longer sufficient (al-Bakri, Masālik, 26). The population had certainly continued to grow under the Aghlabids, which explains the construction of new water reservoirs to meet the growing needs. The immense cistern built at the Tunis Gate by Abū Ḫabīṯ Ahmad (242-9/856-63), the remains of which may still be admired, was the most grandiose construction among the fourteen similar works.

The Great Mosque, the oldest and most prestigious religious building of the Muslim West, also followed the pattern of expansion and assumed a new aspect. It was in the 3rd/9th century that it took on its present form and proportions, except for a few details. It was Ḥāsān b. al-Nūmān [q.v.] who had renovated it. Afterwards it was enlarged towards the north and probably provided with the present minaret in the reign of Hishām b. ʿAbd al-Malik. Yazīd b. Ḥātim reconstructed it in 157/774. In the end, Ziyādat Allāh I had it completely demolished, but probably kept the minaret and had it reconstructed (221/836), having regard for the outline, drawn up by ʿUkbā b. Nāfīʿ, of the wall of the šibā, even though it was badly orientated, having a deviation of 31° towards the south. Al-Ḥāmid al-Muḥammadī b. al-ʿAṣirān Ahmad enlarged it and embellished it again (248/862-3).

From this moment onwards, the work of its restoration and decoration changed nothing of its general appearance. The Zirid al-Muʿtāzī b. Bāḍīṣ (407-74/1017-62) endowed it with the present molūsīra replacing that of the Aghlabids and making it into a library. Other restoration and decoration works were carried out under the Hafsids and in the 17th, 18th and 19th centuries. The last restoration dates from 1970-2.

The development of the town favoured its intellectual advance. In the 3rd/9th century al-Kayrawān became one of the principal cultural centres of Islam. “Malik (d. 179/795) considered it, together with Kūfa and al-Madīna as one of the three great capitals of the Muslim sciences” (Ibn Nāḍīr, Malā‘īm, ii, 38). Well before al-Ṭabarī, Yahāyā b. Sallām al-Ḥāṣibī (124-200/741-815) was writing there and taught his Taṣfīr which has been partially preserved (two mss. at Tunis BN 7447, and collection of H. H. Abdul-Wahab); this was the first great monument of Muslim exegesis. Asad b. al-Furat (ca. 144-213/759-828), after following the lectures of Mālik, of the Ḥanafi Muhammad b. al-Ḥasan and a host of other oriental masters, entrusted to his Asādiyya a personal synthesis of the different teachings he had received and made many disciples who continued his tradition. His attempt would have led to a specifically al-Kayrawān school of fiqh if only his prestige had not been eclipsed by that of Saḥḥān (ca. 160-240/777-854), who was undoubtedly the grand master of the epoch. His monumental Mūdawwana, which conveys to us the teaching of Malik according to the version of Ibn al-Kāsim, became the breviary of the men of al-Kayrawān. Students from all quarters flocked to his lectures, including some from Muslim Spain, where no less than 57 students were authorised to spread his teaching. Philological activity has left us no great work, but it was sufficiently important for Abū Bakr al-Zubayrī to devote a special chapter to it in his Taḥābūt al-nabawīyyin wa-l-ṣaḥḥātayn (Cairo 1954, 254-72). Medicine was well represented by Ziyād b. Khāfūn, Iṣbāḥ b. ʿImrān and Iṣbāḥ b. Sulaqīmān (al-Bakri, Masālik, 24; Ibn Abī Usṣamīyya, ʿUyun al-anbāʿ, ed. and tr. A. Noureddine and H.
The reign of the Shi'ī Fātimids was certainly not favourable to this citadel of Sunnism. The triumphant Kutāma claimed the right of sacking this opulent city as a reward for their effort. In actual fact, it suffered little. Despite the construction of a rival city, ʿṢabrā al-Manṣūrīyya (336/947-8) near it, towards which commercial activity tended to shift, it maintained its prosperity and was able to triumph over certain natural disasters: an earthquake (299/911-2); a flood in the souls (13th Dhu 'l-Hijjah 306/17th May 910); famine and an epidemic (317/929). The positive statements of two contemporaries, Ibn Hawkal (Ṣūrat al-arḍ, Beirut n.d., 94) and al-Muqaddasī (Āhsan al-tabāsīm, ed. and partial tr. Ch. Pellat, Algiers 1950, 14-7), agree that the reliability of the water supply was actually better assured. The Fātimid al-Mu'izz actually had "a system of canals constructed which came down from the mountain and filled the reservoirs after crossing his palace at ʿṢabrā" (ibid., 15). The town was at that time crossed by 15 main thoroughfares (darb), the names of which have been partly preserved (ibid., 17) and its area had grown even larger, "a boundary of a little less than three miles"; according to al-Muqaddasī (ibid., 15), the basis of 1900 m. to the mile in al-Muqaddasīs, about 5.5 km.). It is evident that its population had considerably increased, and this was the peak of its expansion.

From that point onwards, an era of stagnation began for al-Kayrawān as for the rest of Ifrīqiya, which was followed by inexorable decline. There were several bursts of revival which just enabled it to keep a foot on the ladder of a country definitely in decline, but they could not retrieve for it its former glory. The transfer of the caliphate to Cairo (361/972) came as a severe blow to Ifrīqiya. The reserves of precious metal followed the Fatimids to Egypt and al-Kayrawān lost for ever its rôle as a capital. The first Zirids hardly ever lived there, but exhausted themselves with the interminable battles in the central and more distant Maġrib. Although it was prosperous at the beginning of their reign, it was brought under severe pressure to satisfy the demands of the master of Egypt. The vice-regent ʿAbd Allāh al-Kātib extracted no less than 400,000 dinārs in 366/976-7 from 600 of the leading citizens; some of them had to pay as much as 10,000 dinārs each (Ibn ʿIdhārī, Bayān, i, 230); this brought ruin for many.

Some decades later in 395/1004-5 the town experienced famine and a dreadful epidemic, concerning which Ibn ʿIdhārī (Bayān, i, 250-7), following Ibn al-Raḍīq, has preserved an interesting description. Each day they buried their dead by hundreds in common graves; the dwellings were empty and the services, the ovens, hamāms etc. were paralysed. The city was depopulated and a helter-skelter flight of refugees sought shelter far away, even as far as Sicily. Some years later, in 405/1014-5, the merchants were again forced to transfer their trade to ʿṢabrā. The Ṣanḥādja were also involved. Everything seemed to have conspired to stifle the Sunnī capital which, struck by so many misfortunes, saw its prosperity fade and its population dwindle. The perimeter of the city-wall, linked by a corridor to ʿṢabrā (which al-Mu'izz built in great haste when he was the hands of Arab nomads who levied taxes on a poor and wretched population. As for Raḍdāda and ʿṢabrā, they simply disappeared completely. It was the nadir of its fortunes.

The reign of the Almohads, and especially that of the Hafsids, brought back to it a relative peace and allowed the town to rise a little from its ruined state. In the 7th/13th century private enterprise gave it better ramparts. With the rise of the Marabout movement it also began to fill with ʿaṣāyiṣ (Ibn Naḍīlī, Ṭabāṣīm, iv, 227). But the population, mostly composed of urbanised bedouin elements, was henceforth much less refined. Yākūṭ (d. 620/1228) wrote: "Today all one sees are worthless bumpkins (ṣuʿūlāḥ)" (Buldān, Beirut 1957, iv, 420). The impression received by al-ʿAbdārī (al-Riḥlah al-Maqṣūriyya, ed. M. al-Fāshi, Rabat 1688, 64, 66, 82), who went there on pilgrimage in 668/1270, was not much better.
In fact, a new life at a much more modest level had begun for al-Kayrawân. In a general context of continuous regression it was, however, able to preserve a certain status, but without any measure of its past grandeur. Even so, it was respectable enough among the other towns of the kingdom and adapted itself to its new economic rôle, that of being a market town and commercial centre for the Bedouin. Its souks, although very much reduced, with their goods carried off towards the west, continued to offer indispensable products: leather, cloth and metal. It received in exchange the products of pastoral activity. Leo Africanus who visited it in 1526, that is at the end of the Ḥafṣid period, describes it in this way: “At present only poor workmen are to be seen there, for the most part tanners of sheepskins and goatskins. They sell all their leather garments in the towns of Numidia where there is no European cloth” (De description de l’Afrique, tr. A. Epaulard, Paris 1936, ii, 398). Later on, particularly at the beginning of the reign of the Ḥusaynids, al-Kayrawân recovered and gained second place in the country. Al-Wazir al-Sarrâdî (d. 1149/1736-7) noted at the beginning of the 18th century: “At this moment, after Tunis, no larger town than al-Kayrawân is known in all of Ifriqiya. Among its inhabitants are the best scholars, the most skilful people and the most astute business men” (Hualî, ed. M. H. al-Hilîa, Tunis 1970, i, 244). The impression is confirmed by J. A. Peyssonnel, who wrote: “al-Kayrawân is one of the largest towns in the kingdom. It is situated on a brackish plain, half a league in circumference, is very well populated and very commercial. It has been ruined several times but was well repaired under the Bey Hassem ben Aly . . . Much woolen cloth was made there, besides sufficient textiles and other materials special to the country . . .” (Relation d’une voyage sur les côtes de Barbarie, fait par l’ordre du roi en 1724 and 1725, ed. M. Dureau de la Malle, Paris 1838, i, 113; see also i, 160). L. R. Desfontaines, who visited al-Kayrawân in January 1784, for his part, notes that it was “the biggest in the kingdom after Tunis; it was even better built and cleaner than the latter . . . The trade of al-Kayrawân consists principally of animal skins which the inhabitants know how to put to different uses. Here are made bridles, saddles and shoes according to the fashion of the land. They also made woolen clothes called barakan. The people there have a happier life than anywhere else, being exempt from taxes in recompense for the services which they rendered to the grandfather of the present Bey” (Fragment d’un voyage dans les régences de Tunis et d’Alger fait de 1783 à 1786, ed. M. Dureau de la Malle, Paris 1838, ii, 61). V. Guérin, who spent three days there from 18th to 20th August 1861, thinks also that it was, with barely 12,000 inhabitants, “after Tunis one of the most highly populated towns of the regency”. (Voyage Archéologique dans la Régence de Tunis, Paris 1862, ii, 334). It came before Sfax, which scarcely numbered more than 10,000 inhabitants, and before Sousse, Monastir and Mahdiyya, whose populations did not exceed 5,000 or 8,000. It was, however, situated “in a real desert, almost entirely deprived of trees and even of bushes” (V. Guérin, Voyage . . . ii, 326). All told, the city founded by Sidi ‘Ukba, despite the ruining of its hinterland, showed, at least until the days of the protectorate, that despite everything it was more viable than other centres which were apparently better situated.

Its religious prestige was certainly not irrelevant to its survival. With “about 50 zaouïas and 20 mosques” (V. Guérin, Voyage . . . ii, 328), it was indubitably the 15th century capital of the country. It was then considered to be a holy town and in principle forbidden to non-Muslims. Today it has no such sacred character, and tourists have free access to its sanctuaries. As for its population, the city of Sidi ‘Ukba occupies only the fifth place in the country, but is also the chef-lieu of the most under-developed governorate of the country. It still, however, maintains a certain aura of sanctity and attracts the most illustrious visitors. And when the point of the unification of the countries of the Maghrib is brought up, there are those who find that “the capital of this federation of independent states ought to be Kayrawân, the spiritual capital of the Moslems since many centuries and thus appropriate to symbolise the return to the glory of the past of the World of the Islam” (La Presse, a Tunisian daily, of 21 Sept. 1973).

KAYS, also known by the Persian name Kish, one of the most important of the commercially-relevant islands in the Persian Gulf (Bahr 'Umán), especially following the ruin of Siraf. The island was some four farsakhs from the coast opposite the port of Huzú, and was four farsakhs in circumference; it contained a residence of the ruler of 'Umán, and was characterised by garden areas and splendid constructions. Water was supplied by means of wells, and by rain water which was collected in cisterns. Kays was famous for its pearl fisheries, as were also the surrounding islands. Yāḵūt indicates that its ruler was held in great respect owing to the size of his fleet, and he seems to have exercised a monopoly over various commercial concerns. Some intellectual activity was also observed.

( J. LASNER)

KAŠĀN, now well-known as a centre of Persian poetry. Its famous poets include the royal poet of the Safavids, Ṣādūqī, and Ḥabīb al-Din Ṣafarī, whose treatise on the theory of poetry, Masta' al-nafās, is still highly regarded. Other notable poets include Ḥabīb al-Dīn Abū al-Ḥaswāʾ, who wrote the famous quatrains on the subject of love and separation, and Ḥabīb al-Dīn Abū al-Ḵāliq, who wrote the famous quatrains on the subject of death and grief.

KAYS B. ‘ASIM — KAYS ‘AYLAN

KAYS B. ‘Asim, a descendant of ‘Ismail, was the son of ‘Abd al-Malik b. Abi ‘Amr and the father of ‘Abd al-Malik b. ‘Abd al-Malik. He was born in the year 68/689 and died in 134/750. He was known as a scholar and a poet. He was a prolific writer, and his works include a number of poems and other literary works. He was also known for his political and military activities. He was a member of the Banu ‘Amir tribe, and he played a significant role in the early Muslim rulers of the Islamic state. He was a close friend of ‘Abd al-Malik b. Marwan, the first Umayyad caliph, and he was appointed as the governor of several provinces.

KAYS ‘AYLAN, a descendant of ‘Abd al-Malik b. ‘Abd al-Malik, was born in the year 833 and died in 293/906. He was a scholar and a poet, and he was known for his works on Arabic literature. He was a prolific writer, and his works include a number of poems and other literary works. He was also known for his political and military activities. He was a member of the Banu ‘Amir tribe, and he played a significant role in the early Muslim rulers of the Islamic state. He was a close friend of ‘Abd al-Malik b. Marwan, the first Umayyad caliph, and he was appointed as the governor of several provinces.

Encyclopaedia of Islam, IV
Kays 'Aylān does not appear to have functioned as a unit before Islam, and in the accounts of "the days of the Arabs" only the individual tribes are named. In Umayyad times, however, the alleged genealogies became a convenient basis for bringing together groups of clans so as to constitute something like a political party. This process began when small contingents from different tribes were lodged together in the cities of the empire; for Bayṣra cf. C. Pellat, Le milieu baṣrī, Paris 1953, 23 and passim. Eventually, but probably not until after the death of Muʿāwiya in 60/666, two main groups are found to be taking shape. One is known as Kalb or Yemen or the Southern Arabs, while the other is Kays 'Aylān or simply Kays, less often Muṣāwar. Because Muʿāwiyah had relied on Kalb, and his son Yazid I had a Kalbī mother, many Kaysīs supported Ibn al-Zubayr. While at first other groups are mentioned, such as Rabiʿa, gradually the polarity of Kays and Yemen came to dominate Umayyad politics. Nineteenth-century historians spoke of this as if it were primarily a continuing and expanding tribal feud, based on such facts as the great loss of life at the battle of Marj Rāḥit in 684; and it was the inability of the Umayyad rulers to reconcile the two groups which eventually led to their collapse. Recently, M. A. Shaban (Islamic History, A.D. 600-750/4.A.H. 132, Cambridge, 1971) has forcefully argued that the Kays came to be identified with the expansionist policy followed by 'Abd-al-Malik and al-Ṭadhībīdīdī, while the Yemen stood for stable frontiers and the assimilation of non-Arabs. He sees the reigns of Sulaymān and 'Umar II as an attempt to reverse the policy of expansion, and likewise that of Yazīd III. In these reigns, Kaysīs were replaced by Yemenis, but the successors of 'Umar II and Yazīd III turned back to the Kays, and the disintegration of Umayyad rule proceeded. A point in favour of Shaban's view is that after the establishment of the 'Abbāsid 'Abbāsid little is heard of the hostility between Kays and Yemen.

**Kays and Yaman in the Ottoman Period.**

The reader will find under Kalb b. Wābah some information on the rivalry of the North and South Arabs (represented respectively by Kays and Kalb) before and after the birth of Islam, and especially in Spain. In the course of the centuries, this hostility diminished considerably, but there was a resurgence of it, in a somewhat artificial way, in the course of the factional conflicts in Lebanon and Palestine during the Ottoman period.

In the course of the struggle for power among dominant families, coalitions were formed which used the names of Kays and Yaman to denote the political identification of the rival camps. This division preserved a kinship connotation, and kinship—real or imagined, original or adopted—was a legitimate reason for schisms and wars in Arab society. The political character of the Kays-Yaman conflict in Lebanon and Palestine during the Ottoman period is revealed through two crucial facts: (a) many adherents of each of these parties (and even some of their leading families, such as the Abū Ghosh family in Palestine) were not Arabs at all, but Circassians, Turkmens, or Kurds (b) families of allegedly Arab origin changed sides with little regard to actual descent, such as the 'Alam al-Dīn family in Lebanon (Shidyāk, i, 129), or a family split in two parts supporting opposing factions. Only powerful clans which managed to maintain their position for a long period were consistent in their factional adherence.

During the Mamlūk period, the Yaman faction in Lebanon was led by the 'Alam al-Dīn family, in opposition to the ruling Bubūts who were considered Kays. The latter faction supported the Maḥsūns when they succeeded the Bubūts in 922/1516. In 933/1528 a Yaman conspiracy against the Maḥsūn Amir Korkmaz almost succeeded, but his son Faḥr al-Dīn II re-established Yaman supremacy.

A second short tenure of power of the Yaman 'Alam al-Dīn family occurred after the downfall of Faḥr al-Dīn II in 1042/1633. This resulted in a great massacre and in civil war, but from 1045/1635 to the end of the century the Kays Maḥsūns had the upper hand. Under the Shāhābids, the successors of the Maḥsūns, the Yaman party, with Ottoman support, succeeded in gaining power once more for a short time in 1121/1709, but in a fierce battle at the village of 'Ayūn Darā, which took place in 1372/1752, the Yaman forces were utterly routed and their leaders, the 'Alam al-Dīn family, were slaughtered to a man. Thus Yaman power in Lebanon was completely crushed, and the Yaman Druzes who survived were expelled from Lebanon and sought refuge in the Hāwrān, with the exception of the Arslāns, who were allowed to retain the lower Ghārib, which was a part of their original maḥkāma. New political divisions emerging in the Lebanon after the battle of 'Ayūn Darā no longer adopted the nomenclature of Kays and Yaman; from then onwards, the factions were called after their leading families.

In Palestine, the division into Kays and Yaman is of long standing. According to al-Nā'im (i, 59) the Mamlūk Sultan al-Nāṣir Muḥammad b. Qalādūn (1293-1340) allocated the region of Dībaj al-Nābulus to the Yaman faction and the south to Kays. In the 10th-11th century again, the population of various regions of Palestine was divided into these two factions, and fighting frequently erupted (U. Heyd, Ottoman documents on Palestine 1352-1625, Oxford 1960, 85-6). In the 18th and 19th centuries factional wars under the banner of Kays and Yaman were fought primarily in the Nābulus and Nablus areas. The Dībaj al-Nābulus witnessed an open fight between the Tūkāns and the Nīmrs families between 1794 and 1823, and perpetual conflict, including incessant armed clashes, between the 'Abd al-Hādīs and the Tūkāns in the 1840s and 1850s. Throughout this period the rival camps, townsmen, fālāḥīn and Bedouin, were identified with the Kays and Yaman factions, and even families whose descent was unclear felt the need to adhere to one of them. Thus the Tūkāns, at the start of their rule, declared their affiliation to Yaman (qālān yaʿmaniyiyatāh) in order to win support from the ḥāqīqs of the nāḥiyās (al-Nā'im, ii, 415-16). At the same time, the Judaean hills were also the scene of clashes between fālāḥīn divided into Kays, led by the Samīḥān family, the Lāḥūans, the 'Arūs, and the Bāshirīths, and Yaman, led by the Abū Ghosh clan. Most of the inhabitants of the Christian villages were Yaman, while those of Christian Bāṣṭ Jālā, as well as the...
Muslims of the Hebron area, were Kays. The adherence of the Bedouins to one faction or another was determined mainly by the affiliation of the neighbouring fallâhûn or by internal division among the Bedouins themselves.

However, factional ties between the Diabal Nâbulus and the Judean hills were minimal, and in the principal engagements the parties of one region were not assisted by their counterparts from the other region. Inter-regional ties between members of the same faction were found particularly on the fringes of the two regions, and more on the Kays than on the Yaman side. Moreover, there were differences between the two areas. The Nâbulus notables led the factional war and took an active part in it, and fighting sometimes even occurred in the city. The town quarters were split along factional lines and city-dwellers joined in the village skirmishes. As against this, Jerusalem was never the scene of fighting in the factional wars, and the city notables neither led the fighting nor did they play an active part in it. Yet when there was a weak Paşâ, Jerusalem’s notables were able to turn the factional strife to their own advantage, and the leading rural families of both camps had their allies in the magâlis of the town. In general, only when a strong Paşâ ruled, an area was taken as a trace in that factional strife. However, both in Palestine and in Lebanon, the Ottomans used to support one faction (often the weaker one) against the other in order to further their own political aims. With the growing centralisation of Ottoman rule during the second half of the 19th century, factional wars in Palestine gradually subsided, although identification with Kays or Yaman and some of the customs connected with this division persisted among parts of the rural population.

The fact was usually referred to as a saff, but also as an ‘îsábâ, farîb, jâfîfa, or biwb. Affiliation to a faction was termed na’ra,  ‘âsâbiyya, shakwa, or nîkla. A member of the same faction was called  ‘âsibh and an enemy kaumâni; a one-day battle was a barâba, and if it lasted longer than one day, it was called a kaww. The head of the faction used to make an annual tour of villages loyal to him (yakhtâ ‘as-şuﬁf). These visits served as points of time in their chronology.

Each faction had its colour—Kays red, and Yaman white—which distinguished its flag and its members’ clothes, women’s veils and especially the bride’s clothes, women’s veils and especially the bride’s clothes, women’s veils and especially the bride’s clothes, women’s veils and especially the bride’s clothes, women’s veils and especially the bride’s clothes, women’s veils and especially the bride’s clothes, women’s veils and especially the bride’s clothes, women’s veils and especially the bride’s clothes, women’s veils and especially the bride’s clothes. Kays was involved in polemics with this faction, and also in those who would place Kays above the Qaisi and Yemeni, the most important poet of Yathrib. He was a member of the B. Zafar (Ibn al-Kalbî-Câskel, Tab. 181) of the Aws [q.v.], whom he defended both by words and by the sword in contests with the Khazrajî [q.v.]. Apart from some late and very dubious pieces of information, very little is known of his life, but it is known that he exacted vengeance for the murders of his father and grandfather, and this gave him a great reputation amongst posterity; these actions were, however, later subject to all sorts of legendary accretions and motifs which sometimes recall the legend of Cyrus and form a parallel to the story of Perzival (see Singer, Arab. und europa. Poesie im Mittelalter, in Abh. Pr. Ak. Wiss., phil.hist. Kl., xiii (1928), p. 7 of the reprint). In regard to the active part which he took in the political and military activities of his tribe, we have constant reference in his Dâwân to a whole series of ayyâm of the Aws, but he did not take part, apparently on account of a wound received previously, in the decisive battle of Bu’âWait [q.v.], so much celebrated in later song. He was treacherously murdered some time before the hidîra, and tradition relates that he was avenged even before he himself had breathed his last gasp. Kays was involved in polemics with almost all the Khazrajî poets of his time, notably with Hassan b. Thâbit and ’Abd Allâh b. Rawbâ, who both survived him by a considerable period of time. Although he was still alive at the time when the Prophet began his preaching, his Dâwân shows no traces of a knowledge of it, and all the later sources describing a meeting between him and the Prophet seem to be pure invention.

The oldest manuscript of his Dâwân, dated 419/1028, is the Top Kapu Saray one, and forms an appendix to the Dâwân of Hassan b. Thâbit. The recension of the poems goes back to Ibn al-Sikkit, but the definitive editor of the Dâwân seems to have been al-Suktâr. What has survived is clearly only a fragment of the original. It was published by T. Kowalski, Der Dâwân des Kais b. al-Khâtîm, Leipzig 1914; by I. Sâmârî and A. Matânî, Baghdad 1831/1962; and by Nâşir al-Dîn al-Asad, Cairo 1831/1962.

Kays is reckoned amongst the authors of the mudhâhabâtî chosen by Abû Zayd al-Kurâshî who, in his Dâmârîa (123), places him in the fourth tabâba; but Ibn Sallâm (Tabâbî, 190) does not go along with those who would place Kays above Hassan. His poetry, both in his ghazals and also in his fâhîr poems and his hikâm, reveals the two sides of life, the sedentary and the nomadic, which was characteristic of the oasis dwellers in his time. His descriptions of war and portraits of women are celebrated. What is typical of real Bedouin life, sc. the description of the riding camel, the ride through the desert and the chase, are almost entirely lacking in his poems. One might say that if Kays was highly esteemed by later generations, it was more for his chivalric character than for his poetic gifts. His poetry is nevertheless a very important source for our knowledge of conditions in Yathrib just before
the coming of Islam and for certain customs there, in particular, those concerning the blood-feud.

(T. Kowalskip)
after their leader Abu Karib (Kurayb) al-Darlr, though al-Nawbakhtl mentions, the Karibiyya as a separate group who stated that they did not know the whereabouts of Muhammad b. al-Hanafiyya. According to al-Nawbahgl, Hamza b. 'Umara al-Barbarl in Medina was an extremist originally belonging to the Kariibiyya. He then claimed to be an imam and prophet, asserted the divinity of Ibn al-Hanafiyya and taught antimonalism. Hamza’s activity cannot, however, have begun until long after the death of Ibn al-Hanafiyya if he is identical with the homonymous secretary of 'Abd Allah b. Mu'awiya. A prominent role in the introduction of the theory of metempsychosis and other extremist ideas is ascribed to one of their chiefs, Abu Riyah, who decided in 736/118 that he was the party of Muhammad b. al-Hanafiyya. Abd Allah therefore joined the Khidashiyya. He then claimed that before his death Abu Hashim had appointed as his successor. They later continued the imamate after Abu Hashim, affirming that the imamate continued after his death Abu Hashim and finally to Ibn Harb, who thus had become the imam until the reappearance of Muhammad b. al-Hanafiyya. When his followers discovered, however, that his claim to be the Mahdi was unfounded, the bulk of them renounced him and accepted 'Abd Allah b. Mu'awiya as their imam in succession to Abu Hashim. According to some sources, Ibn Harb was converted to Sufi Kharidjism and died holding Sufi beliefs.

The party tracing the imamate through the 'Abbasid Muhammad b. 'Ali and his son Ibrahîm to the 'Abbasid caliphs is commonly called the Rawandiyya [q.v.], though some heresiographers restrict the name to those who asserted that the first imam after the death of the Prophet was his uncle al-Abbas and that the imamate continued among his descendants. This doctrine, however, probably originated only during the reign of the caliph al-Mahdi (158-69/775-83), while the name Rawandiyya already appears in historical reports of events before the year 120/738. According to al-Nawbakhtl the name is derived from a sectarian group called Harbiyya or Hârîjiyya already appears in historical reports of events before the year 120/738. Another groupmainly in the mountains of Raqlwa. Another group affirmed that Muhammad b. al-Hasan, the latter's son al-Hasan, affirming that the imamate belonged exclusively to the descendants of Muhammad b. al-Hanafiyya, after the death of Abu Hashim had handed the appointment to Salih b. Mudrik. The appointment had passed to Khidash. After the execution of Khidash in 119/736 they affirmed that he was alive and had been raised to heaven by God.
After the execution of Abu Muslim [q.v.], the leader of the Abbasid movement in Khorasan, by the caliph al-Manṣūr in 137/755, from some of his supporters it was maintained that the imāmate had been transferred from the caliph al-Saffāh, al-Manṣūr’s predecessor, to Abu Muslim and that Abu Muslim was alive. They were called the (Abū) Muslimiyya.

Opposed to them were the Rizāmīyya, named after their chief Rizām b. Sābīḥ, who upheld the succession of al-Manṣūr to the imāmate, though they refused to repudiate Abu Muslim, and affirmed that the imāmate would remain in the Abbasid family until the resurrection, when a descendant of al-Abbas would be the Mahdi. Rizām is mentioned as a leader of the Rāwandī extremists in 141/758 when a riot by a group of them in the court of the palace of al-Manṣūr was bloodily suppressed. In the ensuing persecution of the extremists, Rizām sought refuge with the caliph’s son Diyaʾ al-Muʾmin and was granted amnesty.

A further schism in the ‘Abbasid ghīṣa occurred in 147/764 when al-Manṣūr deferred the succession of his nephew ‘Īsā b. Mūsā, who had been named by al-Saffāh to succeed al-Manṣūr, and appointed his own son Muhammad al-Manṣūr as his immediate successor. One party considered the action of al-Manṣūr as illegal and recognized ‘Īsā b. Mūsā as the imām of the descendants as his imāms. The other party asserted that the action of al-Manṣūr was legal, since the order of the living imām should supersede that of a dead imām and since ‘Īsā had agreed to sell his rights. They recognized al-Manṣūr as the imām after al-Manṣūr.

After his accession (158/775) al-Manṣūr induced the ‘Abbasid ghīṣa to repudiate the imāmate of ‘Abbās and his descendants and to recognize a purely ‘Abbasid imāmate beginning with al-Abbas and based on the right of inheritance. The partisans of this doctrine were known as the Hurayrīyya after their leader Abū Hurayrā al-Rāwandī (rarely al-Dīmashkī). By denying the imāmate of Muhammad b. al-Hanafīyya and Abū Ḥāšim this group left the fold of the Kaysāniyya. Extremist doctrines, such as deification or belief in their omniscience, and dispensation from the religious law for those knowing the (azilla), initiated by seven Adams. They also held that the imāmate had been transferred from Abu Muslim to the imāmate of ‘Abbās and based on the accounts of the Kaysāniyya movement. Their adoption by these Karmatī groups evidently reflects a spontaneous development in the Ismāʿīlī movement rather than a survival of Kaysānī beliefs.

In Irāk the mass of the adherents of the Kaysāniyya was absorbed by the rising tide of Imāmī Shiism. A substantial part of the religious doctrine first elaborated in the Kaysāniyya, e.g., on bādaʾ [q.v.], raddaʾ and important aspects of the theory of the imāmate, was adopted by orthodox Imāmīsm. Other Kaysānī doctrines were passed on among the ghulūt adhering to Imāmī lines of imāms. In Persia and Transoxania the Rāwandīyya and the Djanatīyya-Ḥarbīyya groups were largely merged into various syncretist sects often generically termed Khurramiyya [q.v.].

**Bibliography:**

In early Islam. — The usual name in Arabic for the Roman and Byzantine emperor. The word represents the Greek Καίσαρ and came to the Arabic through the intermediary of the Aramaic (see Fränkel, Die aramäischen Fremdwörter im Arabischen, Leiden 1886, 278 ff.). The borrowing must have taken place at quite an early period, as the word in Syriac later appears almost in the form καίσαρ (see Payne Smith, Thesaurus Syriacus, s.v.). The Arabs, centuries before Muhammad, had relations with Roman and to a greater extent with Byzantine emperors. As early as the Πρίγιπους, a Roman Καίσαρ is mentioned as conqueror of Εδοράκιν (probably Caracalla, from 198 A.D. co-regent of Septimius Severus, see F. Altheim-R. Stiehl, Die Araber in der alten Welt, I, Berlin 1964, 44). In A.D. 244 an Arab from Ḥawrān reigned for five years under the name Darius Julius Philippus. In Syria at the beginning of the 6th century A.D., the Banū Ghassān replaced the Banū Sallāh as Arab allies, σύμμαχοι, of Byzantium. The chief Ghassānīd phylarch was accorded high honours and a title like patricius (bitrifrio) and allowed to wear the crown of a client king of the Byzantine emperor (see ghassānī). For the Ghassānids and all the inhabitants of north-western Arabia, Kaysār, the Persian for the Persians, for the Lakhmids and all the inhabitants of north-eastern Arabia. Among the old Arabic poets, Imra' al-Kays (q.v.) more than once mentions Kayṣar, who, indeed, played a great part in his life. For later poets also, Kayṣar—alongside Kīṣrā—is still a current symbol of power and wealth.

The word Kayṣar is used in the Kur'ān, but it occurs quite frequently in the biography of Muhammad in Hadīth collections, in commentaries on the Kur'ān and in general historical works. It is always used without the article, like a proper name, and cannot be followed directly by a genitive, from which too it is clear that the word was considered as a proper name. Heraclius, the famous Byzantine emperor of the time of Muhammad, Abū Bakr and 'Umar, is therefore called Ḥiraḫi or Kayṣar 'azīm (or malik) al-Rūm. The word Kayṣar is often omitted for example in a list of "the kings of the Romans/Byzantines (malik al-Rūm) from Augustus to Heraclius (Tabari, i, 1741-744), in a report of the capture of Amurian (838 A.D., Tabari, iii, 1234: Tafṣīl ibn Mālikī, sīḥah/malik al-Rūm), and in a report of the battle of Nakazgerd (1071, Ibn al-Aḍḥīr, x, 448-46: Armānūs [= Romanus], malik al-Rūm).

According to Ibn Sa'd (i, 43, 45 f.), Ḥighām b. 'Abd Manāf, great-grandfather of Muhammad, received from Kayṣar a letter of safe conduct for merchants from Mecca visiting Syria (see M. J. Kister, in JESHO, viii (1965), 116 f.). A great number of texts mention the letter which is said to have been sent by Muhammad through Dhiyā (q.v.) to the governor of Boṣrā and through him to the emperor Heraclius. In many versions, the emperor interrogates Abū Sufyān regarding the new prophet, and (in contrast to Kīṣrā) appears to be inclined to Ḥīṣām; only fear of his subjects prevents him from openly protesting the new religion (for references see below). 'Umar contrasts the neediness of the Prophet's existence with the luxurious living of Kīṣrā and Kayṣar (Buḫārī, Tafṣīl, 66, 5; Ibn Maḍja, Zuhd, 11). During the affair of Ḥudaybiyya, 'Urwa ibn Mas'ūd, having visited the Prophet in his camp, tells his Meccan compatriots that though he has travelled as an envoy to the kings, to Kayṣar, to Kīṣrā and to al-Nadjīfāshī, he has never seen any king so greatly honoured as Muhammad is by his Companions (Buḫārī, Ṣaḥīḥ, 15; cf. Ibn Ḥighām, 745). The following utterance of Muhammad is reported as a kind of prophecy: "If Kīṣrā perishes (variant: Kīṣrā has died), there will be no Kīṣrā after him. And if Kayṣar perishes, there will be no Kayṣar after him. By Him in whose hand my soul lies, you will spend their treasures in the way of God" (Buḫārī, Fard al-Rūm, 8, Aymān, Tafṣīl, 157; Muslim, Ḥṣāf, 75; Wākīḍī, 460). Cf. the critical remark of Mu'attīb ibn Kuṭbāy during the siege of Medina by the "Allies", "Muḥammad promises us the treasures of Kīṣrā and Kayṣar, whereas it is not safe for one of us to go to the privy" (Wākīḍī, 459 f.; Ibn Ḥighām, 357). Another prophetic utterance ascribed to Muḥammad is: "The first troops of my community who will assault the city of Kayṣar (i.e., Constantinople) shall be forgiven (their sins)" (Buḫārī, Tafṣīl, 93). 2. In Islamic history.—In the Meccan period, Muḥammad's sympathies were with Heraclius against Kīṣrā and echoes of the struggle between the two are recorded in Sūrat al-Rūm (Kūr'ān, XXX). But in the Medinan period this attitude was reversed, the basis of the reversal being religious, since Islam is the true religion of the "straight path" and has universalistic claims, Byzantium and its Kayṣar become the enemy of Islam and the Islamic state, which must eventually triumph and capture Constantinople itself. On this is based the new Muslim conception of Kayṣar. His dominion is part of Dār al-Ḥarb (the Abode of War), he is an infidel, and war against him is džiḥād (holy war). This hostile and contemptuous attitude towards Kayṣar was strengthened by the military victories of the Arabs over the Byzantines. Thus, the religious and military bases on which Arab respect for Kayṣar had rested in pre-Islamic times disappeared in the first century of the Muslim era; the new attitude was reflected in such designations for Kayṣar as jāḥiyā, "tyrant", or such expressions as kūl al-Rūm, "the dog of the Romans", used by Ḥūrūn al-Rashīd in addressing Nicephorus.

The image of Kayṣar among the Arabs in the four centuries or so after the battle of al-Yarmūk in 636 naturally fluctuated with the military fortunes of the two states over which Caliph and Kayṣar ruled. The first part of this period, Umayyad and early 'Abbasīd, was, generally speaking, one of Arab successes against Byzantines; but the tide turned against the Arabs with the coming of the Macedonian dynasty, and the striking successes of the Ḥāmidānīs proved ephemeral.
The Turks opened a new chapter in the relations between Islam and Byzantium, one that lasted for some four centuries from their victory at Manzikert in 463/1071, until their capture of Constantinople in 857/1453. Under the impact of Turkish military victories, the image of the Byzantine Kaysar reverted to what it had been before the period of the Macedonians. The basic factor was the conquest and Turkification of the Byzantine heartland, Anatolia, and the diminution of the dominion of the Kaysars. The Seljuk sultan Alp Arslan defeated the Byzantine emperor Romanus Diogenes at Manzikert and took him captive in 463/1071, setting the tone for two centuries in Seljuk relations with, and attitude towards, Kaysars of the Comneni, the Angeli and the Lascaris.

The Ottomans presided over the last phase of Kaysar's humiliation; their attitude to him and his dominion was the classical Islamic one, confirmed by their series of astounding victories in the Balkans. The final chapter in this drama of the Muslim-Byzantine conflict, which had lasted for some eight centuries, was written by the sultan's victory over the last of the Palaeologi, Constantine XI. Muhammad the Conqueror captured Constantinople, and added to his titles of Ghazi and Khan that of Kaysar itself, which he was able to do, since he was not caliph but sultan; the title proved unattractive for his imperial designs for the reconquest of the Byzantine territories lost by the Kaysars in Europe and Asia.

**KAYSÂRÎYYA (also KAYSÂRIYYA)**, plur. kaysârsîn, the name of a large system of public buildings laid out in the form of cloisters with shops, workshops, warehouses and frequently also living-rooms. According to de Sacy, *Relation de l’Égypte par Abd Allah*, Paris 1810, 303-4, the kaysâriyya was originally distinguished from the sâkî probably only by its greater extent, and by having several covered galleries around an open court, while the sâkî consists only of a single gallery. At the present day in any case, the term kaysâriyya is not infrequently quite or almost identical in meaning with the Persian word kârâvânâsârâ (or kârâvân), which first came into use in western Asia in the 16th century, or the likewise modern analogous names, kâbân, wakhâla (o kelele), funduq (see), and beisân. An **origin.** In the Islamic world, the term kaysâriyya is certainly of Greek origin: *kaisarîn* ("imperial", an abbreviation for ἡ καίσαρÎη ἀγώνα, the "imperial market"). As H. Thiersch has shown, the old quadrangular court (with or without cells around it) of the agora inspired the kaysâriyya, which was used on the one hand as a warehouse for goods (whence developed the marketplace) and on the other hand, without any doubt, usually also as lodgings. The expression ἡ καισαρισσία recalls the fact that the oldest of these public buildings were imperial, i.e., state institutions, while in the Muslim period they were mainly due to private initiative (foundations of royal families or high officials). Thiersch thinks (Pharos ..., 233) that the place where the idea of these buildings originated—like many other things in the new Muslim period—seems to have been Alexandria, which was especially rich in covered market-places and halls. Whether we should actually consider the Kaisarîyya (Caesareum), the temple of Caesar in Alexandria, to which the marketplace and warehouses were attached (Strabo, vii, 794), as the original in name and fact of the kaysâriyya (as does Volders in *ZDMG*, li, 302), is uncertain. A derivation of the word kaysâriyya from the name of the Palestine town of Kaysariyya (q.v.), which de Sacy (op. cit.) upheld, can hardly be supported with sound arguments. The word in any case was originally used only in those districts which, like Syria, Palestine and parts of North Africa had been under Byzantine rule. The idea was only transferred later to other lands, especially to Spain and the east. In Spanish, **alecasceria** (casceria, casceria), and in Portuguese, **alecârças**, are loanwords (cf. Dozy-Engelmann, *Glossaire des mots espagnols et portugais dérivés de l’arabe*, Leiden 1869, 73-79; D. Leopoldo de Eguilas, *Glos. etim. de las palabras españolas... de origen oriental*, Granada 1886, 126).

On the usage of the word in the Islamic world, the following references may be given. In Egypt we have especially good evidence of its use in Cairo. Al-Makrizî (d. 845/1444) in his description of the city gives a large number of kaysâriyayyus (cf. al-Khatîb, Bölûk 1270, ii, 86-91; E. Reitemeyer, *Die Städtegründungen der Araber im Islam*, 1912, 117). Later its place was gradually taken by the word wâkâla (ohâle, ohâle) and in Niebuhr’s time (1761) only the market-place in the suburb of Bölûk was still called Kisârîe. In Fâs by kaysâriyya one understands the central market (for cloth, carpets, jewels, etc.) shut off by gates and walls from the other parts of the town, and at night occupied only by watchmen (see Dozy, op. cit., ii, 432; R. Le Tourneau, *Fas*, 274, 529, in *Reisen in Marokko, etc.*); in Irbil (Yakut, i, 186); in Baghdad (see *ibid.*); in Istambul (see *ibid.*); in Edirne (see *ibid.*); in the town of Kaysariyya (op. cit.) which de Sacy (op. cit.) understands the central market (for cloth, carpets, jewels, etc.) shut off by gates and walls from the other parts of the town, and at night occupied only by watchmen. In Spain, the kaysâriyya was, as in Morocco, the centre for trade in luxury articles and cloth (see L. Torres Balbás, *Alcacerías*, in *al-And.,* iv (1949), 431-35. P. Chalmeta, *El seíor del zoco*, index). In Syria and Lebanon we have evidence of the use of the word kaysâriyya as the "name of the shops of the wholesale dealers" in Beirut (see Niebuhr, *op. cit.*, ii, 469, and K. Müller, *Die Karawanenrei, 7*, in Damascus (see Ibn Djubayr, *Rûtba*, ed. Wright and de Goeje, 288, and Seetzen, *Reisen durch Syrien etc.*, Leipzig 1854-9, ii, 269) and also in Aleppo (see Ibn Djubayr, 252; Yâkût, iii, 307; Ibn Baţûta, i, 151; J. Sauvaget, *Alep*, 79-80, 221-2). In al-Hasâ in Eastern Arabia, the quarter of the town that contains the shops is called el-Gaysâriyye (see *Der Islam*, viii, 32). In Iرک we find a square called Kaysâriyya in Mösul (see Ibn Djubayr, 235) in al-Salâmiyya near Mösul (Yâkût, iii, 113); in Irîb (Yâkût, i, 180); in Baghûd (see *Mission, 92* (the present bazaar centre); in Karbarâ (see *Mission, op. cit.*). In Persia, if, in Esfâhân (see Ritter, ix, 49; Volters, *Lexic. Persico-Lat.,* ii, 752a; and cf. also (Ispahan) Pietro della Valle, *Viaggi* (Brighton 1843), ii, 8, German tr. (Ghent 1674), iii, 5; [Dupré], *Voyage en Perse*).
accounts of its conquest exceed in number and detail those relating to Jerusalem. The numbers of its defenders were highly exaggerated in order to magnify the achievement, and one tradition goes as far as to put the figure at 930,000 of the besieged as against only 17,000 Muslim besiegers (Baladhuri, Futuh, 141, but see Barhebraeus, Chronographia, ed. Budge, 37 v, who puts the number of defenders at 7,000). The siege was begun by 'Amr b. al-'As, till he left for Egypt, and by 'Uyayn ibn Ghamm, who was probably the original commander on the spot, but whose rôle was later minimised by tradition, seeking to glorify either 'Amr or Mu'awiyah. The latter eventually took over from his sick brother Yazid and captured the city in Shawwal 9/Sept.-Oct. 640 after a siege of probably seven months, inflated in most of the Arabic sources to seven years, calculating the beginning of the siege from the opening of the Syrian campaign as a whole; 4,000 captives were taken (cf. Baladhuri, Futuh, 140-1, 212; Ibn 'Abd al-Hakam, Futuh Miṣr, 57-8; Ya'kubib, Ta’rikh, 172-3; idem, Badānī, 329; Tabari, i, 2396-7, 2399, 2579; Ibn 'Abd Rabbihi, lHd, ed. Amin et ali, i, 124; Baki, Muḍjam, 757; Ibn 'Asakir, Ta’rikh, iv, 395; de Goeje, Mem. sur la conquête de la Syrie, 166 ff.; Caetani, Annali, iv, 31-2, 156-62).

In face of the normal tendency of the eastern Mediterranean by the Byzantine fleet (despite periodic Umayyad successes there), Islamic Kaysariyya was held essentially as a defensive position against Byzantine descents on the coastline. During the revolt of 'Abd Allāh b. al-Zubayr, the Byzantines seized the opportunity of Umayyad distraction to attack both Kaysariyya and Aṣkalan (Ascalon) and damage them: but once secure in power (Abāl Malik rebuilt and refurbished the two places, along with other coastal points such as Acre and Tyre (Baladhuri, 142). But on the whole, the Arab inclination towards seafaring (cf. Ibn al-Djawz, Mawḍalāl, Medina 1966, ii, 227) made it difficult for the Umayyad caliphs to persuade Arab warriors to settle in the coastal towns.

Kaysariyya went through a period of deterioration under the 'Abbasids, who tended to neglect Syria in favour of their eastern provinces. Ahmad b. Tūlūn (254-70/868-83) fortified again the Palestinian shore, but nothing is mentioned in the sources specifically about Kaysariyya, whose harbour had by this time filled up with sand. The Arab geographers in the 3rd/9th and 4th/10th centuries, as well as Nāṣir-i Khusraw in the 5th/11th, describe its fertile district and the abundance of its agricultural products, but make no mention of its harbour (Mukaddasī, 35, 154; Nāṣir-i Khusraw, Safar-nāma, ed. Schefer, 18; Idrīsī, in ZDPV, viii (1885), ii; Le Strange, Palestine under the Moslems, 474, 475). In 364/975, the Byzantine offensive launched a year previously against the Islamic territories by the Emperor John Tzimisces reached as far south as Kaysariyya (Runciman, A history of the Crusades, i, 31). The renewed Byzantine rule, however, was short lived. But the old danger to the wealth of the city came at that time from the Bedouins of Banū Diarrāb (a clan of Tāyyī), led by their chief Mufarrīd b. Daghfal, who succeeded around 360/971, during the disturbances which marked the end of the Khshildids, in establishing himself in the coastal plain mainly around Ramla. Bedouin power continued to grow throughout the first half-century of the Fatimid rule. Between 402/1012 and 404/1014, Mufarrīd laid siege to the coastal towns and even installed in Palestine an anti-Caliph of his own (Yaḥyā b. Sa'id...
al-Anṣārī, ed. Cheikhho, 160, 201). In 414/1024, the Fāṭimid Caliph al-Zahir nominated Muntakhab al-Dawla, governor of Palestine with the special assignment of ridding the country of Hassān b. Mufarridī, who had succeeded his father as the leader of Banū Dārābī (Maqrīzī, Khitaṭ, Cairo 1270, i, 354). Although Kayṣāriyya was never famous as a great Islamic centre of learning, some names of ‘ulāma’ who lived or studied there can be found in the sources (Yākūt, Buṭṭālīn, iv, 214, 778; Ibn Taqārī Birdī, Nūdūm, ii, 204; Ibn ‘Asākir, iv, 185, 232, 460, vi, 212).

The First Crusade did not threaten Kayṣāriyya seriously. Only in 494/1101, after Baldwin I had established himself as king of Jerusalem, did the Crusaders attack the city, with the help of a Genoese naval force. After the fall of Arsurf on 27 Dūmādār Ilī/29 April, Kayṣāriyya was besieged and fell on May 17. The male population was almost completely wiped out, and the women, the bāḏī of the town and its governor were taken prisoners. Among the booty the Genoese found a green vessel which they decided was the Holy Grail; later, they brought it to Genoa, where it is still preserved in the Cathedral of San Lorenzo. As a prize for their participation in the conquest, the Genoese received a third of the town with permission to call the second cathedral of the city after their patron San Lorenzo. (On this conquest, see Ibn Khaldūn, ‘Ibrar, vi, 186, and Runciman, ii, 73-4). After the conquest Kayṣāriyya became an independent Signoria (which belonged to the Garnier family), one of the first to be established in the country (Runciman, ii, 93, 191).

The Crusaders built in Kayṣāriyya a small harbour within the borders of the large ancient one, and its Frankish population grew to about 5,000 people, a considerable size in terms of Crusader towns.

In 583/1187, after the battle of Ḥattīn [q.v.] and the occupation of Acre, Kayṣāriyya was easily conquered by Šahlī ad-Dīn’s generals, Bābral ad-Dīn Dālīrī and Gharas al-Dīn Kīliṣī (Abu Shāma, K. al-Rawdatayn, ii, 87; Ibn al-Athlī, xi, 356; al-Kāfī, Sulḥ, i, 513), but the final campaign headed by Baybars took place in 594/1198. In the Muslim sources). Under the heavy bombardment of Baybars’ ballists, the Crusaders had to enter into negotiations. On 5th March 1265 they were evacuated by ship and the sultan ordered the destruction of the fortress.

The occupation of Kayṣāriyya enabled the Mamluks to move both southwards against Jaffa and Arsurf and northwards against ‘Abīlībīh and Acre (Yāfī, Mirīd, iv, 161; Maqrīzī, op. cit., i, 526-8; Khalkashandī, Sūhī, iii, 434; Mufaḍḍal b. Abī ‘I-Fadāhī, in Pair., xii, Paris 1918, 123-32; Ibn Ḥabīb, Durrat al-Aslāḥ, in Orientalia, ii, 250; Ibn Khaldūn, op. cit., v, 385).

Instead of the coastal line of fortifications, which were ultimately completely demolished, Barbar's resolved upon establishing a new line of defence along the foothills deep in the country, more defensible by the Muslim forces. The fortress of Kākūn was, therefore, rebuilt to replace Kayṣāriyya and Arsurf (Maqrīzī, op. cit., i, 557).

The site of Kayṣāriyya remained deserted for about four centuries, cf. Kalkashandī, iii, 237. In the 11th/12th century, some fishermen briefly tried to settle there. Its ruins became a source for building material, especially when Diāzār Pāšā built his mosque in Acre at the end of the 12th/13th century.

In 1884, in the wake of the Austrian occupation of Bosnia, the Ottoman government brought Muslim refugees from there and settled them in Kayṣāriyya, but the endemic malaria reduced them to a miserable condition, and during the Arab-Israeli war of 1948 the place was deserted.

The first archaeological survey of the site was carried out in 1873 by the Palestine Exploration Fund, but systematic excavations were made during the 1950s and 1960s by Italian and Israeli archaeologists. Parts of the town have been reconstructed, notably part of the Crusaders’ wall and the Roman theatre, which is used today for musical performances.

name Caesarea for this town was rendered Kayşariyya in Arabic, Kayseriye in Ottoman, and Kayseri in modern Turkish.

1. History. Even before the Hittite empire, the area was a mercantile centre with a thriving Assyrian trading colony named Kanesh. As Mazaka, the site was the capital of the kingdom of Cappadocia, later of the Roman province of Cappadocia. Caesarea was first in precedence among the Christian bishoprics of Asia Minor, and as the seat of the Cappadocian fathers, Basil, Gregory of Nyssa and Gregory of Nazianzus, a centre of Christian thought and monasticism. Pillaged and devastated by the Sasanids and then rescued by Heraclius in A.D. 611, the town was again beautiful and wealthy when Mu'tawiyah forced it to pay tribute in 26/647. (Michael the Syrian, tr. Chabot, ii, 490, 441; Abu 'l-Faraj, tr. Bridge, i, 97). In the reign of Hishām (105/2572/43) Maslama led two raids on Kayşariyya and perhaps occupied the town temporarily; two of Hishām's sons also led campaigns there. In the 5th/11th century Byzantine policies and the Turkish invasions precipitated a migration of Armenian Gregorians into this Greek Orthodox area (Michael the Syrian, iii, 133).

Kayşariyya was sacked by Turkmen in 459/1067 (see Caesarea, Le premier penetration turque... in Byzantion, xviii (1948), 25). Some time after the battle of Manzikert the town, perhaps then in ruins, became part of the Dānishmend state (Michael the Syrian, iii, 173; Abu 'l-Faraj, i, 229). Chroniclers of the First Crusade who passed through Kayşariyya do not describe it. Malik Muhammad, the son of its conqueror Ghaç Dānishmend, finally restored the town (Michael the Syrian, iii, 237; Abu 'l-Faraj, i, 258). In 563/1168 Kılıç Arslan II took it from the Dānishmandids (Abu 'l-Faraj, i, 293). Frequently a royal residence for the Seljuqids. Kayşariyya again became a leading centre of trade and culture. In 641/1243 Mongol armies under Baygū massacred thousands, carried off the young into captivity, and plundered and destroyed the royal treasury and many splendid houses and buildings (Abu 'l-Faraj, i, 407; Ibn Bibīl, tr. Duda, 230 f.). In 675/1276 Baybars occupied the town without resistance, but he withdrew south of the Taurus when his appearance failed to produce the anticipated uprising of Turks against their Mongol rulers; the Mongols then took vengeance on the city (Abu 'l-Faraj, i, 457). From 747/1343 to 763/1381 Kayşariyya was under the Ereglis dynasty, and eventually became their capital; Ibn Baṭṭuta calls the town one of the largest in Anatolia. The Ereglis were overthrown by a native of Kayşariyya, Kādū Burhān al-Dīn, who ruled from Sivas. The Ottoman sultan Bayzayid took the city in 800/1398, but after Timūr defeated him, Kayşariyya fell to the Karāmān dynasty. For almost a century, the Turkmen of Karāmān and the Dhu 'l-KadrīIDS contested for this prize. The Mam líks helped the Dhu 'l-KadrīIDS to take the city from the Karāmānids in 827/1421; in 839/1436 the Ottomans helped the Dhu 'l-KadrīIDS to regain it once more. Although the Karāmānids recovered the town in 869/1465, Mehemmed II restored it to the Dhu 'l-KadrīIDS in 875/1467. The Ottomans finally brought Kayşariyya under direct rule some time after they took Kara Hisar Develi in 879/1474, but before the Mam líks-Dhu 'l-KadrīIDS attacked the city on 893/1490. The town lay exposed to Mam líks and Safavid ambitions until Selçuk I removed the threat from both these powers.

In the early 11th/17th century the region of Kayşariyya was infested by Džaládí rebels; Kara Yazidi won a victory over an Ottoman army on the plain of Kayşariyya in 1088/1670, and twice shortly thereafter, brigands dared to besiege the walled town. The urban population suffered considerably; many villagers were killed or abandoned their lands in fear, temporarily dislocating the system of land taxation. In 1027/1618 Simeon of Poland found the town quite ruined in appearance because its people so feared the Džaládí that they would not do any reconstruction work (Polonyali Simeon, tr. H. Andrews, 138 f.). In 1034/1624 the rebel forces of Abāza Hasan were scattered near Kayşariyya by the vizier Čerkes Mehmēd. In 1059/1649 Ewliya Čelebi stated that its wheat and barley were famous and perhaps occupied the town temporarily; two of Hishām's sons also led campaigns there. In the 5th/11th century Byzantine policies and the Turkish invasions precipitated a migration of Armenian Gregorians into this Greek Orthodox area (Michael the Syrian, iii, 133).

Kaysariyya under direct rule some time after they took Kara Hisar Develi in 879/1474, but before the Mamılıüs-Dhu 'l-KadrīIDS attacked the city on 893/1490. The town lay exposed to Mamılıüs and Safavid ambitions until Selçuk I removed the threat from both these powers.

Kaysariyya under direct rule some time after they took Kara Hisar Develi in 879/1474, but before the Mamılıüs-Dhu 'l-KadrīIDS attacked the city on 893/1490. The town lay exposed to Mamılıüs and Safavid ambitions until Selçuk I removed the threat from both these powers.
tragacanth, madder, blue dye made from lees of wine and sultana raisins (ii, 267, 255, 263; cf. Ainsworth, 309). Mordtmann added to these potatoes and maize as well as wine, brandy and beer (p. 142, 143).

From Saldırg times onwards, cotton and coarse cotton cloth were among the most important industrial products of Kaysariyya. Kinneir found merchants from all over Syria and Anatolia gathered there to buy cloth and raw cotton (p. 100; cf. L. G. C. Lucas, 173). Kaysariyya horses were famous; sheep, cattle, and buffalo were given particularly for the sausage and pastirma industry for which Kaysariyya was famous; in Ewliya Celebi’s time these meats were so much in demand in Istanbul that they could not be procured even in Kaysariyya itself. Hides, used particularly for the yellow morocco leather for the yellow morocco leather pastirma industry for which Kaysariyya was famous; bedestans and that tradesmen made excellent profits (iii, 180 f., 184). Inciciyan reported that for the yellow morocco leather pastirma industry for which Kaysariyya was famous; the bazaars, and Kinneir called it the trade emporium for Anatolia and Syria (Simeon, 159 n.; Kinneir, 100). Lucas called the bazaars extensive, especially the ones for cotton (i, 173) and Hamilton reported them to be extensive and rich, and full of cheap imports (ii, 267 f.). Von Schweinitz, admiring the fine bazaars, judged Kayseri to be the most important town in inner Anatolia (pp. 116 f.) and Mordtmann called it one of the most important trading places in Anatolia (p. 492); he says that trade ca. 1850 was completely in the hands of local “Cappadocian Christians”. However, in the 11th/12th century, Muslims were also active in trade in Kayseri.

The salt lake at Pelas and salt mines at Hacımuğla were in 1935 made the city a major rail centre. Of late there have also been constructed good road connections. In 1935 a huge state textile mill (currently engaged in the production of cotton and silk) was opened with 1,500 workers.

### Four Ottoman tax registers (daftar-i khadijü) have preserved roth/16th-century population statistics. In 905/1500, the town had 2287 nefer (tax-paying males), of whom 86 % were Muslims and 14 % were dhimmis (1601/1626). Early in Sulaymān’s reign there were 2367 nefer, of whom 81 % were Muslims and 19 % were dhimmis (1907/1927). Later in Sulaymān’s reign there were 3530 nefer, 81 % Muslims and 19 % dhimmis (2670/2690). In 991/1583 the town had 8251 nefer, 78 % Muslims and 22 % dhimmis (6435/6456). The urban population grew in less than a century and the rural population also grew rapidly. The anarchy of the 9th/10th century helps explain both the small population of 1500 and the capacity for rapid growth once security was restored (Başbakanlık arşivi tapu defter nos. 33, 387 and 976; cf. no. 38; Ankara tapu hadasi direstis, no. 136). In 991/1583 the city had 6015 khânes or households at 5.5 persons per khâne or 33,082 inhabitants (4 x 8251 is 33,004, so perhaps multiplying the nefer by 4 gives the numerical population of the town). The proportion of non-Muslims increased from 14 % in 1500 to 22 % in 991/1583. Armenians, who made up 82 % of the non-Muslim population in 905/1500, rose to 89 % in 991/1583, increasing at much faster rate than the Greeks. No Jews are registered in these surveys but in 1595-1596 Ewliya Celebi mentions a synagogue (iii, 183).

Official statistics cease in 991/1583. Simeon of Poland estimated that there were 500 Armenian khânes in 1626/1628; either he underestimated or the punishments for being a 16th-century city. The salt lake at Pelas and salt mines at Hacımuğla in 1935 made the city a major rail centre. Of late there have also been constructed good road connections. In 1935 a huge state textile mill (currently engaged in the production of cotton and silk) was opened with 1,500 workers.

The railway line from Ankara reached Kaysariyya in 1927, and connections to Samsun in 1930 and to Ulukışla in 1933 made the city a major rail centre. Of late there have also been constructed good road connections. In 1935 a huge state textile mill (currently engaged in the production of cotton and silk) was opened with 1,500 workers.

The salt lake at Pelas and salt mines at Hacımuğla in 1935 made the city a major rail centre. Of late there have also been constructed good road connections. In 1935 a huge state textile mill (currently engaged in the production of cotton and silk) was opened with 1,500 workers.
houses (of 10,000 in the city), i.e., ca. 40,000 people, a substantial increase in the decade (p. 58). Cuinet in 1907 estimated 50,000 inhabitants in 1904 (including 20,000 Christians, of whom three-quarters were Armenians (p. 129). The Ankara viayet endemek of 1909 estimated a population of 54,011 for the town (17,536 Muslim men, 17,168 Muslim women, 9,521 non-Muslim men, 9,786 non-Muslim women (p. 209). The population apparently doubled between 1813 and 1907.

The 10th/16th-century Muslim population of Kayseriyya included nomadic, settled and sedentarising Yörüks, Turkmen and Kurds. Afgâr nomads were numerous on the rich pastures of Uzun Yayla; in the mid-19th century they were joined by a large immigrant group of Çerkes in Turkey. Since the earliest tax records of the late 9th/15th century, the majority of the population of both the town and province of Kayseriyya have been Muslims. Large numbers of Orthodox and Gregorian Christians have inhabited the town and the neighbouring villages, often mixed with Muslims and with one another. In the town Kayseriyya, Gregorians outnumbered Orthodox by three or four times in both the 10th/16th and 19th centuries. Greek and Armenian were spoken only in a few villages; most Christians were turcophone even after efforts towards hellenisation and armenisation began under outside stimulus in the 19th century (see R. M. Dawkins, Modern Greek in Asia Minor; Inciciyan, quoted in Simeon, 161 n; Simeon, 158 and n; and Ewliya, iii, 183: "Kürdçede presumably is an error for "Ermenice". See also the periodical Mikraatika Kronika). In 1922 a congress of Orthodox Christians of Anatolia, meeting in Kayseriyya, asserted that they were Anatolian Christians of Turkish national identity, repudiated the "Greek" hierarchy, and established a Turkish patriarchate; their effort miscarried, however, because Orthodox Christians of Anatolia were included in the compulsory Greek-Turkish population exchanges (Teoman Ergene, Eski Kardiki türk ortodoksi, 18 fl., 23-42).

After the Armenian débâcle and the Greek population exchanges, the first republican census revealed that Kayseriyya's population had declined to 39,544; only 1277 Armenian Gregorians and 6 Greek Orthodox remained in the town. The population increased to 46,181 in 1935 (up 23 %), 52,467 in 1940 (up 21 %), 57,863 in 1945 (up 15 %), 65,488 in 1950 (up 34 %), 82,405 in 1955 (up 26 %), 102,596 in 1960 (up 25 %), 126,533 in 1965 (up 22 %), and 167,696 in 1970 (up 33 %). The population of the town has increased four-fold in less than half a century, a rate of growth faster even than that of the 10th/16th century (Kayseri il yılığ, 122, 124-7).

4. Culture. A Library made up of 1210/1796 by the Reis ül-kuttab Râşid Efendi preserves the original collection of 943 works (926 manuscripts, 17 printed volumes), and additions have been made (see Ahmet I. Okutan, Kayseri Ünumi Kütüphanesi Râşit Efendi kitimi Üstülâ: hadis ve hadis ilmine ait avrupa elyazma eserler kataloğu, Istanbul 1964). The town also has an İk Halk Kütüphanesi and a small museum, filled mostly with pre-Islamic artifacts.

The ancient site of the town (Eski Şehir) is located on the southern edge of the city, near the Bağtal Gâzî tomb, whose plain meets the lowest foothills of the Erdjiyas. Kayseriyya is rich in architectural monuments, which have been well listed by H. Edhem and A. Gabriel. The inner castle and a large section of the former wall have been preserved, as well as several madrasas, mosques, tombs, and kâms dating from as early as the Seljuk period. Most notable of these are the Ulû Çami, Çifte madrasa, Hamid-i evvel Camii and the complex, Hâmid Kılıç mosque, Dönür Kumbet, Kırshunlu mosque (built from a plan of Sinân), and the Vizier bâhn. A vigorous programme of preservation and restoration is under way.

A reputed tomb of Bağtal Gâzî, located beneath the courtyard of the recently rebuilt Bağtal Gâzî mosque, is visited by local pilgrims. The tomb of Djâlâl al-Dîn Rûnî's teacher, Sayyid Burhân al-Dîn, is also noteworthy. For other Muslim, Christian and mixed places of pilgrimage, see Ewliya, iii, 134-9, and Carnoy-Nicolaides, passim. Seven madrasas were reported in Kayseriyya in Seljuk times, as many as in Konya and more than twice as many as in any other Anatolian town (see A. Kuran, Anadolu medreseleri, i). In Sulayman's time, the city had 3 Friday mosques, 26 madrasî, 10 madrasas, 17 sâriyât, 3 baths, and 107 shops.

The living pattern of winter in the town and summer in vineyards on the foothills of Erdjiyas plays a significant role even today in the economic and social life of Kayseriyya. It has frequently been a theme in local poetry (see A. Satoglu, Kayseri Şairleri, and also Erciyes halkâv dergisi). The climate was considered healthy (Ewliya, iii, 182; Hamilton, ii, 268; Mordtmann, 141; and Kinneir, 104). Several 19th-century travellers called Kayseriyya filthy, and a town containing slaughtering, meat processing, leather and tanning industries could hardly have been otherwise. Some travellers called the stone houses of the town tasteful, and Moltke and von Schweinitz considered it beautiful. The beauties of Erdjiyas, with its luxurious gardens and clear streams, were obvious to those who saw them.

The people of Kayseriyya have been noted for their religious orthodoxy and for their business acumen. Hasluck maintained that the town had a "black Sunnî" tradition (513, 23n.). Carnoy-Nicolaides related a legend that no Jew could live in Kayseriyya, a reference to the supposed commercial acumen of its inhabitants (226-6). Ewliya Çelebi explained that the local people were hardworking because of the cold climate (iii, 182). Simeon of Poland was aware that they were considered "dyers of asses" (160; Carnoy, 247 f.). It is widely believed in Turkey today that the people of Kayseriyya have a special propensity for business and are hardworking and diligent.

The Kaytak are being culturally and linguistically assimilated by the Dargin. According to the census of 1926, ethnically there were 14,470 Kaytaks, and 14,469 claiming Kaytak as their mother tongue. In 1930 (estimation by Grande) there were 14,470 Kaytaks. The Kaytaks inhabit ten auls in the Kaytak district, and the southern (mountainous) part of the Dağhâdav district, in the valley of the Ulu-Chai, in the Dağhîstan A.S.S.R. Kaytak territory lies between the Dargin and Tabasaran areas.

The first mention of the Kaytak was in the 4th/10th century, by Arab authors. According to Muḥammad-Rafi, the Kaytaks paid tribute to the ghamkhal of Kazikumukh in the Lak [q.v.] country. At the end of the 8th/14th century the Mongols penetrated Kaytak territory and there is evidence that there was a strong Mongol influence on the Kaytaks. A large proportion of the Kaytak population was destroyed by Timur.

With the fall of the Golden Horde, the feudal principality of the utsmiyât of Kaytak arose as a major power in northern Dağhîstan (dubious etymology of the word utsmi from isim, “the renowned”). Its territory was larger than the area inhabited today by the Kaytaks and its population was composed of many tribes besides the Kaytaks—Laks, Dargins and Southern Kumyks. As legend has it, the utsmiyât descended from the Arab governors of Kala’ Kuraysh, who had islamised the area in the 2nd/8th century, and Kaytak was one of the first regions of central Dağhîstan to be islamised. The Kaytaks are Sunni of the Shafi'i School. In the 10th/16th century the utsmi was one of the strongest rulers in Dağhîstan, and in the 12th/18th century was economically and politically very significant, carrying on complex foreign policies, supporting at different times Turkey and Persia.

In 1802 a Russian protectorate was imposed on the utsmi Adil Khân. Direct Russian administration came to the lower Kaytak in the pre-Caspian area in 1820, and to the Kara-Kaytak in the mountain area in 1862. In 1844 the utsmiyât was suppressed.

The social structure of Kaytak utsmiyât was similar to the structure of the Avar [q.v.] society: a rather complicated feudal hierarchy—begs, lanba, u aden (free peasants), and non-free classes: qâsar (peasants submitted to servitude), rayâis (serfs), and kul, which coexisted beside the system of the “free societies” based on the joint family (tukkum). There existed an endogamous marriage system.

The dâdî of Kaytak were collected in written form in the 17th century by the utsmi Rustam Khân. The Arabic text was translated into Russian in 1868 (Sbornik Svedenii o Kavkazskikh Gortsakh, Tiflis 1868).

Due to the lack of good agricultural land, agriculture played a minor role in the traditional economy. Sheep and goat raising, with some horses and cattle, was the predominant economic activity. Handicrafts were well developed, especially the weaving of wool and silk. Kaytak women from Barghamai and Čabakhni were renowned for their embroideries. The present economy still stresses sheep raising with a transhumance system in the mountainous areas, and the raising of cattle and horses in the lower mountains and foothills.

Kaytak is a vernacular language, consisting of two dialects: Mağalis-Kaytak (in the north) and Kara-Kaytak (in the south). Dargin is used as the first literary language and second (sometimes first) spoken language. Russian is the second written language.

AL-KAYYAL (also IBN AL-KAYYAL), AHMAD B. ZAKARIYAY, Shi’i gnostic from Daskarat Bayt al-Nar near Bayhaq active around the turn of the 3rd/9th century. According to al-Shahrastani, he was originally a da‘if of some Isma‘ili imam. Having been disowned by the imam for his heretical views, he first claimed the imamate for himself and then asserted that he was the kātib [q.v.]. He gained some adherents and left writings in Arabic and Persian which were still extant in the time of al-Shahrastani (d. 458/1553). Abu ‘l-Ma‘alli states that al-Kayyal “appeared” in the year 295/907-8, perhaps referring to his arrival in Transoxania. He claimed that he was entrusted with abrogating the law of Islam and proclaiming a new law. He composed a scripture in Persian which he called his Kūth and invented an alphabet which only he could read. At the Sāmānī court in Bukhārā he gained the favour of the vizier Muḥammad b. Muhammad al-Diyāhānī [q.v.]. If the name is correctly given, al-Kayyal was still alive after 326/937 when this al-Diyyāhānī became vizier. There may be, however, a confusion with the latter’s father, Muhammad b. Ahmad al-Diyāhānī, who was vizier from 304/916-23. Al-Diyāhānī at first encouraged him to propagate his doctrine in Kishsh. When he failed to win adherents there, the vizier directed him to the countryside of Marw, where he gained a numerous following. He died after appointing a butcher as his successor. When al-Diyyāhānī died (Muhammad b. Muhammad died in 330/941-2), the movement disintegrated. Ibn Fundūq al-Bayhākī (d. 365/1170) states, however, that in Samarkand when this al-Diyāhānī became vizier. There may be, perhaps referring to his arrival in Transoxania. He claimed that he was the kātib [q.v.].

KAYTAK — KAYYIM 847

Neophytes (muridi) were in evidence in his day and his books were available there. Al-Kayyāli’s gnostic doctrine as described by al-Shahrastani elaborated correspondences between a higher, spiritual world, a lower, corporeal world, and the human body and relied on hurūf [q.v.] and allegorical interpretation of the Qur’an. It shows distinct affinities with Isma‘ili gnosticism, though no traces of the Neoplatonic cosmology introduced in Isma‘ili ism about the beginning of the 4th/10th century [cf. ISMA‘ILVIYA, Doctrine]. Indian as well as Manichean influences on his thought have been suggested. His doctrine on the imamate was refuted by the philosopher Muḥammad b. Zakariyay al-Rāzi (d. 313/925 or 320/932-3).

The term, hurūf by some modern scholars that he may be identical with Ahmad, the son of the alleged founder of Isma‘ili ‘Abd Allāh b. Maymūn al-Kaddāb [q.v.], is no longer tenable. The account of the late Isma‘ili author Idrīs b. al-Ḥasan (descendants of some Isma‘ili founds such as ‘Abd Allāh b. Maymūn al-Kaddāb [q.v.]), according to whom al-Kayyāl was a dā‘i of the Isma‘ili imam ʿAbd Allāh b. Muḥammad b. Isma‘ili, is fictitious and based solely on the statements of al-Shahrastani.

KAYTAK (a.), 1. “who stands up right”, then with bi, šāl li or the genitive lī, he who takes something upon himself, takes care of something or someone and hence also has authority over them. Thus we find the pre-Islamic poet al-Kūtāmī (Diwān, ed. Barth, Leiden 1902, no. 26) already speaking of a “kāyym of water”, i.e. apparently the man in charge of it, the supervisor, and the poet Bā’ b. b. Sūrāyī (Ittāsās of Abū Tāmāmā, ed. Frewy and Inge) speaks of a man who stands up right, i.e. he who provides for his, her husband. The first mentioned meaning, (supervisor etc.), is then found in all possible applications, administrator of a pious foundation, of baths, superintendent of a temple, caretaker of a saint’s grave, etc.; indeed, in al-Bukhārī, Saḥīh, Da’wūd, bāb 10 (ed. Kreifl Juynboll, iv, 189), in Muhammad’s night prayer, the expression is even applied to God as the director of heaven and earth, and this application seems also to be present in Umar b. Abī Rabī’a, ed. P. Schwarz, no. 91, where the poet swears by the “religion of the Kayym”. Here, of course, it is most probably a question of an inversion (perhaps caused by the metre) of the Kur’ānic expression al-dīn al-kāyym (see below) on the model of Bayt al-Mubaddas, etc. (cf. Wright, Grammar II, §§ 95-6, and al-Ḵastālānī, comm. on Bukhārī, Saum, bāb 67, end).

The meaning “provider, husband” of a woman is frequently found in the eschatological traditions, in which it is said that with the approach of the last day the number of women will increase in proportion to men, so much that there will only be one kāyym for every 50 women.

The adjectival meaning “commanding” (a branch of knowledge) perhaps arises out of the same sphere of conceptions as “provider”, “master”; it is found in a biographical notice of a scholar in Yāḳūt, Mu’ṣjam, ii, 225. On the other hand, kāyym, also an adjectival meaning “correct, right”, repeatedly found in the Kur’ān in the expression al-ｄīn al-kaṣāyym and similar combinations, may have to be semasiologically separated from the former meaning.

Bibliography: KAYIM — KAYIM

al-Bukhārī, al-Sabhī, Wasayyā, bāb 32 (ed. Kreifl Juynboll ii, 196), and al-Kaṣṭālānī, s.v.; Yāḳūt, iii, 856; al-Maṣkari, ii, 547; al-Ṭabarī, i, 814.
KAYYIM KAZAK

(Â. SCHAADE)

KAYYUM NÂŞIRI (1825-1902), born in the village of Yukari Şhîrdanî in the canton of Sviâzskî in the government of Kâzân, was one of the first and greatest modernist reformers amongst the Tatars of the Volga. After studying at the madrasa of Kâzân, where he learnt Arabic, Persian and Russian, Nâşirî founded at Kâzân his own school where, for the first time, such secular subjects as history, arithmetic, geography and Russian language were taught—these being at this time novelties and innovations which bordered on heresy. Kayymm Nâsiri wrote over 50 works in Tatar, Turkish, Arabic and Persian; as the possessor of an encyclopaedic mind, he combined the skills of the philologist, folklorist, historian, geographer and ethnologist. His supreme merit was to have created a Tatar literary language, based on the dialect spoken in Kâzân, which replaced the Çaghâtay or Eastern Turkish previously used by Tatar writers and which now permitted the extraordinary flowering of Tatar literature towards the end of the 19th century.

His most famous works are the Ferâûkh ul-diïlesä (Kâzân 1884), the Emnûsédî (Kâzân 1895, on the syntax of the Tatar language), the Lëhe-tiû dâdî (Kâzân 1895-6, 2 vols.) and above all, his famous Kûzân kâlindârtî, an annual publication which appeared from 1870 to 1897 and which represents the best source of information on the origins of djâdîd reformism amongst the Muslims of the Russian Empire.

In Russian language, his two basic works are Obrâtsîl narodnoy literatury Kasanskikh Tatar (“Examples of the popular literature of the Tatars of Kasan”), in collaboration with N. F. Katanov, in Investitsii Obshch. Âkadem. Nauk, Istori i Étnografii, iii (Kâzân 1896), 377-27, and Posyov’a i Obryadi Kasanskikh Tatar trosesvâkhiesya pomomo Viyânya na nîkh sunnîskogo Magometanstva (“The beliefs and rites of the Tatars of Kasan formed outside the influence of Sunni Islam”), in Zapiski Imperatorskogo Russkogo Geograficheskogo Obshchestva, vi (Moscow 1880), 243-70.

Bibliography: There have been numerous books and articles dealing with Kayyum Nâsirî in Kâzân Tatar, Turkish, Russian and French. In Russian, the most important is Kayyum Nasiri (1825-1945. Materialy nauchoy sessii posvâshcheno 120 letiyu so dnya rodeniya (“Materials of the scientific session devoted to the 120th anniversary of his birth”), Acad. of Sciences, Kâzân Division, Kâzân 1948, pp. 136 (also published in Tatar). In Turkish, there is the important study of Saadet Çâgaytâ, Abd-ul-Kâzâm Nasîrî, in Avâtçî, x/3-4 (Ankara 1952), 147-60. Finally, in French there is Ch. Lemercier-Quelquejay, Un reformateur Tatar du XIX siècle, ‘Abdul Qâyyûm al-Nasyri, in Cahiers du Monde Russe et Sovietique, iv/1-2 (Paris 19 ), 117-42 (with a complete bibliography). (Ch. Lemercier-Quelquejay)

KAZ [see KABK].

KAZAK [see KAZ].

KAZAK. The word kazak in the Turkic language can be first documented in the 8th-14th century in the meaning “independent; vagabond”. These and similar meanings, such as “free and independent man, vagabond, adventurer, etc.” are known in the modern Turkic languages too. During the turmoil under the Timurids, the word signified the pretenders in contrast to the actual rulers, and also their supporters, who led the life of an adventurer or a robber at the head of their men. At the same time, the word began also to be applied to nomad groups which separated from their prince and kinsmen and so came into conflict with the state; later it had also the meaning “nomad”, in contrast to the stationary Sart population in Central Asia. The status of kazak is also regarded as a very old social institution of the nomad Turkic peoples. The word became the name of a political unit and later an ethnic designation by having been applied in the former meanings to those groups of the Òzbek tribal confederacy that had abandoned the Kâhân Abu’l-Khayr and migrated to the north-east steppes of Turkistan. These ethnic groups formed the core of the population of the present Kazaâkstan (Kazakhstan), retaining later this name. However, it is probable that other Turkic, and probably Mongol, elements were also involved in the ethnogenesis of the modern Kazak people. The struggles with the Kalmuks in the 11th/12th century forced the three Kazak hordes to make an approach to the Russian state; in the 19th century, their name changed into the Russian казак and this in turn was incorporated into the Kazakh language to become the base of the word kazakh. Kazakh has yet been given an inner-Turkic etymology, from kas- “to flee, to escape” + suffix (nom. act.) ab, is not well documented in the linguistic sources and does not find universal acceptance. The recent etymology of the Turkic ethnic name kaz (<= qa) + the Iranian ethnic name sak, i.e., saka, is a vague hypothesis which can hardly be confirmed by historical facts.

KAZAN, a town on the middle Volga, now the capital of the Autonomous Republic of Tatarstan in the USSR, and in the 15th and 16th centuries capital of the Khanate of the same name. According to legendary accounts, the town was founded by Batu Khan in a Turkish and Muslim region which had been part of the ancient kingdom of Buhara before the Mongol invasions.

The Khânate of Kazân was founded in the first half of the 13th century by a Cingid descendant, Ulu Muhammad, son of Djâlal al-Dîn and grandson of Tòktaînîsîr, at the time when the Golden Horde was breaking up. From the start, the Khânate took an active part in the internecine wars of the Russian principalities. In 1438 Muhammad besieged Moscow and destroyed Kolomna. In 1445, his son Mahmûdîde defeated and took captive the Grand Prince of Moscow Vasili II, whom he released shortly afterwards. In the same year, Mahmûdîde seized the town of Kazân, where a prince called 'Alî Beg was ruling. In the following year, Ulu Muhammad was put to death by Mahmûdîde, and at the same time, two of his sons, Kâsim and Ya'âkîb b. Ulu Muhammad, took refuge in Russia. Kâsim remained at Kazân as an apanage of the town of Gorodok, which in his honour assumed the name of Kâsimov and became the capital of a vassal Khânate of Moscow (see KÂSIMOV) whose rulers were the aides of Russian policy. Mahmûdîde reigned till 1462; his successors were then his sons Kâhîl (1462-73) and İbrahim (1467-79). The latter waged war against Moscow, at first with success and in temporarily captivating Viatka, but in 1469 the Russians went over to the offensive and came to besiege Kazân. They compelled İbrahim to set free all the Russian prisoners in Kazân, without however managing to place their protégé Kâsim on the throne there. After his death in 1479, İbrahim was succeeded by his son 'Alî (according to certain sources, İlîkîn). In 1487, the brother of this last, Muhammad Amin, sought refuge in Russia and then appeared before Kazân at the head of a Russian army. After a three-weeks' siege, the town surrendered; 'Alî was exiled to Vologda and Muhammad Amin installed as Khân. In 1495 he was expelled from the town by an incursion of Tatars from the Khânate of Sibir, led by their Khân Mâmîk b. İbîk, who ruled in Kazân for a year, until in 1496, defeated by the Russians and at the wish of the local populace, he made over the throne to 'Abd al-Laţîf, younger brother of Muhammad Amin. In 1502 'Abd al-Laţîf was summoned to Russia and the throne given back to Muhammad Amin. The latter was at first faithful to the Russian alliance, but soon rebelled against the tutelage of the Grand Prince of Moscow, and put to death and confiscated the goods of the Russian merchants who had come to the annual fair at Kazân. He carried on the war against Moscow with success, and in 1506 the Khân even defeated a Russian army near Nîniy Novgorod. A peace agreement made in 1507 established a state of equilibrium between the two rival principalities.

Muhammad Amin died in 1518, and with him the line founded by Ulu Muhammad became extinct, 'Abd al-Laţîf being driven in the preceding year.

The Khânate now entered upon a period of anarchy marked by unceasing warfare between the partisans of an orientation towards Russia and those of a "nationalist" policy backed by the Crimean Khânate and the Noghay Horde. For more than thirty years, various Russian-supported candidates succeeded to the throne—the Khân of Kasimov Shâh 'Alî and his brother Dîjân 'Alî (sons of Awwîlîr Khan of Astrakhân)—and the Girî princes Şâhib and Şafâ, supported by their cousins of the Crimea.

The Russians were the first to take advantage of the unsettled conditions in Kazân. In 1519 the Grand Prince Vasili III placed on the throne Shâh 'Alî (first reign, 1519-21). The latter was expelled in 1521 by the Tatar nobles who asked the Crimean Khan Muhammad Girîy to appoint his brother Şâhib (half-brother through his mother of the last Khan Muhammad Amin) over Kazân. In the same year, the two Tatar princes led a grand expedition against Muscovy and advanced right to the walls of the Russian capital. The regions of Moscow, Nîniy Novgorod and Riazan were totally laid waste, and hundreds of thousands of prisoners were taken and sold at Kefe in the Crimea, but the Tatars, victorious in open warfare, failed in their attacks against Moscow and Riazan, and their great expedition ended in a half-success.

In 1524, on the death of his brother Muhammad, Şâhib Girîy returned to the Crimea as Khan there, leaving in Kazân his thirty-year-old nephew Şafâ Girîy. From now onwards, the Russian pressure became more acute, not in the shape or reprisal raids, but in that of a slow and systematic advance. In order to ruin his rivals, the Grand Prince of Moscow forbade Russian merchants to trade in the Tatar capital and founded an annual fair at the monastery of St. Makarii which soon became the successive rival of that at Kazân. Also, with the beginning of the construction of the great walls of Volsksärk at the confluence of the Volga and Sura in 1523, there began the occupation of the Middle Volga region by the Russians.

Şafâ Girîy was chased out in 1530 by the pro-Russian party and replaced by Dîjân 'Alî, but the latter perished in 1535 in a rising stirred up by the partisans of the Girîys. Şafâ Girîy was recalled and maintained himself in Kazân till 1546, despite Russian efforts to re-assert their suzerainty, until in that year he was once more driven out and briefly replaced by Shâh 'Alî. As soon as the Russian forces accompanying Shâh 'Alî withdrew, Şafâ Girîy returned to Kazân and retained the throne till his death in 1549. His successor was his twelve-year-old son Şahînumî, who in 1551 was deported to Russia, where he was baptised under the name of Alexander and lived till 1566. Shâh 'Alî was reinstalled in Kazân for the third time. In 1552 he was overthrown by a popular revolt, and the Tatars summoned to the throne Yadîgâr Muhammad, of the line of Khâns of Astrakhân. But shortly afterwards, the Russian armies of Tsar Ivan IV appeared before Kazân and took it by assault on 2 October 1552. The Khânate was then annexed to Muscovy.

The conquest was followed by the systematic occupation of the whole country by the Russians. The Tatars were expelled from Kazân. The best lands in the river valleys and round the towns were confiscated and distributed to the Russian nobles and the monasteries. Colonies of Russian peasants were settled in the most fertile areas, and, in order to prevent popular risings and incursions of the Crimean Tatars, the land was covered by a network of Russian fortresses. Because of this, from the 17th century onwards, the population of the ancient Khânate became very mixed, the Tatars forming only 40% of the people there.

Encyclopaedia of Islam, VI
Christian evangelism was actively pursued. After 1555, Kazan was the seat of an archbishopric and then a metropolitan see. Already by the end of the 16th century there was an important group of indigenous converts, Tatars, but above all, Finnic peoples, the Kryashens (in Tatar, Kryash), who although Christian conserved their usage of the Tatar language.

The Russian conquest led to a profound upheaval in Tatar society. The ancient nobility was stripped of its lands, and in order to survive, had to transform itself to a merchant oligarchy, which in turn gave rise in the 17th century to a mercantile bourgeoisie. From the time of Catherine II onwards, this class became the guiding one amongst the Tatar nation, and in the second half of the 19th century, out of all the Turkish and Muslim peoples of the Russian empire, it was from the Tatars of Kazan that the intellectual and political leaders of the Pan-Turkish movement in Russia arose.

The modern town of Kazan retains little from the time of the ancient K̄hânate. One of the towers in the citadel still today has the name of the Princess Süyümübî, wife of Şafâ Girây (she had previously been the wife of Dîn 'All and was later to be that of Şâh 'All), but the manner and date by which her name was applied to this tower is unknown, and it is equally difficult to decided in what in Tatar and what is Russian in the fabric of the tower.

From the 18th century, Kazan no longer had any military importance, and was occupied without any difficulty (with the exception of the citadel) by Pugaĉev in July 1774; at that time, the town had 2,867 houses. Even at this date, it was of more importance as an administrative and cultural centre than Nîfniî Novgorod. Kazan's university, founded in 1804, became famous above all for its Oriental Faculty (more exactly, the oriental section of the Historico-Philological Faculty). In 1855, as a result of the opening of the Oriental Faculty of the University of St. Petersburg, teaching of oriental languages was stopped at Kazan, and the library and other teaching equipment largely transferred to the capital. After 1861, the teaching of oriental languages began again at the University of Kazan. According to the 1897 census, the town had 131,508 inhabitants, and in 1911, 182,477 of whom 30,781 were Tatars.

Today, Kazan is the capital of the Tatarstan ASSR, with a population in 1970 for the republic of 3,531,258 of whom 1,526,431 were Tatars, 1,328,738 Russians, 153,493 Cuvash, 30,963 Mordvins and 24,533 Udmurts. The urban population is largely Russian: 934,387 Russians against 593,665 Tatars. The Tatars [q.v.] of Kazan now represent a people of the diaspora; 75% of a total population of 5,930,670 live outside their national territory.

**KAZARUN (Kāzirūn; lat. 29° 37' N., long. 51° 38' E.), town and district (shahristsân) of Fârs (7th uslân of Iran), bordered by the shahristsâns of Behbâhân, Shirrâz [q.v.], Firûzâbâd [q.v.], and Bûshâhîr [q.v.]. Situated on the edge of the Southern Zagros (orientation N. — S.E.; alt. of 2 to 3,000 m. to the north, of the River Fahlîyân; below 2,000 m. to the South), the shahristsân has, due to its altitude and the proximity of the Persian Gulf, a warm to very warm climate in summer, temperate to cold in the other seasons, the variations being largely due to altitude. The town is situated in a vast plain, at about 800 m. altitude, amongst chalky ridges, on the route of famous vignelous passes (Kutâl-i pr-zan, Kutâl-i-duughtâr, in the direction of Shirrâz, about 120 km. to the E.; and those of Khišt and Kumârîdî, in the direction of Bûshâhîr, about 180 km. to the S.W.). With its palm and orange groves, the bâhk of Kazarun is particularly verdant and fertile (cereals, rice, dried fruits, citrus fruit, tobacco, opium, sesame, cotton, flax, products of stock-farming, etc.); the water comes from kanâds and wells: its horsebreeding was renowned, as well as its green pasturage covered with narcissi in spring time. The tribes (Kâshkâ, Mamâsân) wander in the region and its peripheries.

According to the legend, Kazarun was founded by the mythical king Ţahmûrâ and results from the union of three villages, Nórd, Darist (Darbast), and Rûshâhân (Rûshân). Rûshâhân was founded by the Shabankara chief Abu Sa[k], founded in 858, and was later to be that of Şâh 'All, but the manner and date by which her name was applied to this tower is unknown, and it is equally difficult to decided in what in Tatar and what is Russian in the fabric of the tower.

From the 18th century, Kazan no longer had any military importance, and was occupied without any difficulty (with the exception of the citadel) by Pugaĉev in July 1774; at that time, the town had 2,867 houses. After 1861, the teaching of oriental languages began again at the University of Kazan. According to the 1897 census, the town had 131,508 inhabitants, and in 1911, 182,477 of whom 30,781 were Tatars.

Today, Kazan is the capital of the Tatarstan ASSR, with a population in 1970 for the republic of 3,531,258 of whom 1,526,431 were Tatars, 1,328,738 Russians, 153,493 Cuvash, 30,963 Mordvins and 24,533 Udmurts. The urban population is largely Russian: 934,387 Russians against 593,665 Tatars. The Tatars [q.v.] of Kazan now represent a people of the diaspora; 75% of a total population of 5,930,670 live outside their national territory.

jarība—which had ramifications as far as India and China—played a great role in the Ottoman empire in the 9th/15th century and in pre-Safavid Iran—was rich and influential (protection of sailors and merchants in the Indian Ocean; political and economic role). Because of its Sunni obedience, the order was persecuted by the Safavid Shāh Ismā'īl (q.v.).

Despite having suffered divisions between Zand pretenders at the end of the 12th/18th century, the town profited from the development of the port of Būshahr, which assured an outlet for its exports in the 19th century (Curzon, Fārs-Nāma-i Nāşiri, 247). Ouseley estimates its population at 4,500 inhabitants in 1811, Curzon at 2,500 inhabitants (1892); reports and later censuses indicate an increase (12,000 in 1915; 36,659 in 1956; 39,902 in 1966). Apart from the Sāsānīd remains and a Kāḡārān bas-relief, one may see in the region and the town numerous Islamic mausoleums and tombs of descendants of Salmān-i Fāris (Iklīm-i Fāris, 108, 110; Fārs-Nāma-i Nāşirī, 249). The plain is adorned with the small lake of Fāmnūr, full of fish, to the east, and of the orange groves of Bāgh-i Nāzār (Fārs-Nāma-i Nāşirī, Iklīm-i Fāris, 110). Apart from its mausoleums, the town has no remarkable historical remains. It is divided into four quarters, remarkable historical remains. KAZARONI — KAZDUGHLIYYA

KAZYBEK (see SIKKA).

KAZDUGHLIYYA, the third of the great neo-Mamluk households of Ottoman Egypt. The Kazdughliyya differed from the Dhuʿl-Faqāriyya and the Kāsmiyya (qq.v.) in that it was founded and maintained in its first decades by officers of the Seven Corps of the Ottoman garrison, not by beys. Its eponym, Muṣṭafā al-Kazdūrī, is described by Dībarī as being Rūmī by origin, i.e., he was Rūmī by blood, hence free-born, and not of Mamluk origin (cf. Stanford J. Shaw (ed.), Ottoman Egypt in the eighteenth century: The Niẓāmname-i Miṣr of Cezzār Ahmed Pasha, Cambridge, Mass. 1962; 23-6 of English text, 7-8 of Turkish text). He took service as a bodyguard (sarrād) to Ḥasan Bāltīyya (the reading B. Iğhis occurring in the printed text of Dībarī is not sound), who was ʿāsīy of the Ṭabāzīn corps in 1085/1674-5, and of the Gûnûlīyya in 1093/1682, and rose under his patronage to be ḥākīy of the Janissaries. In this position he clashed with Ḥūṭūk Mḥmēd, a Janissary bāḥḥadāḥāshī who dominated the corps between 1086/1776 and 1086/1764. Returning to Egypt after two years of exile in the Ḥijāz, he procured the assassination of Ḥūṭūk Mḥmēd, and thereafter held considerable political power until his own death in 1156/1742-3. Ḥūṭūk Mḥmēd was added to the Dhuʿl-Faqāriyya (the head of which faction, Ismāʿīl Bey al-Kabīr al-Fākārī, had married his daughter), and this political connexion was continued by Muṣṭafā al-Kazdūrī and the household that he founded.

The fractional struggles of the early 12th/18th century resulted ultimately in the victory of the Dhuʿl-Faqāriyya and Kazdughliyya over the Kāsmiyya (1143/1730). This did not mean that hencforeward a united Mamluk group controlled Egypt. Rival households continued to dispute for power. Among these, the most important was the Kazdughliyya, of whom the leading amīr was Ibrāhīm al-Kazdūrī, later briefly ḥākīy of the Janissaries. He had been emancipated in 1148/1735-6, and his first important post was that of serdār in the Pilgrimage of 1151/1739. On his return, his influence grew in Cairo, and he began to build up a party against ʿUṯmān Bey Dhuʿl-Faqārī, who had been commander of the Pilgrimage. Essentially the rivalry between the two was a struggle for the riyāsā (riʿāsā), the supreme position among the Mamlūk amīrs. An attempt by the leading amīr of the Djufliyiya household, Rīḏwān, ṭākār of the Ṭabāzīn Corps, to mediate was unsuccessful, and he became a supporter of Ibrāhīm. Ibrāhīm’s faction attempted to assassinate ʿUṯmān. He was only wounded, but the houses of his party were attacked and plundered. ʿUṯmān fled to Upper Egypt, where the governor of Dijrjā was a mamlūk of his household. They made their headquarters at Asyūt, where they were supported by remnants of the Kāsmiyya and others. Defeated there, and in a second battle in the Sinai peninsula, ʿUṯmān made his way to Istanbul, where he was well received at court (ca. 1157/1744-5). He never returned to Egypt, but died in Istanbul in 1190/1776.

The allied amīrs, Ibrāhīm Kāḥīy al-Kazdūrī and Rīḏwān Kāḥīy al-Djuflī, proceeded to place their followers in key positions. For some years there were troubles with rival Mamlūk groups, but these ceased by 1161/1748. Ibrāhīm thus attained the riyāsā, nominally in association with Rīḏwān, but the latter had no further interest in affairs of state. He occupied himself with magnificent buildings, luxurious living and the patronage of poets. Both Ibrāhīm and Rīḏwān appointed three of their mamlūks to the beylık—the first entry of the Kazdughliyya into this order, which they were subsequently to monopolise. Ibrāhīm laid his hands on the revenues of Egypt and purchased numerous mamlūks, some of whom he provided with establishments and fortunes by marrying them to the widows of former amīrs. For about seven years he held unprecedented authority, during which time Cairo was quiet and free from revolts, while there was public security in the provinces. He died in his bed in Safar 1168-Nov.-Dec. 1754. Rīḏwān survived his colleague, but his power soon crumbled. The senior Kāẓdūrī amīr, ʿAbd al-Raḥmān Kāḥīy, stirred up the household of Ibrāhīm against him. One of Rīḏwān’s own mamlūks, in league with the Kazdughliyya, tried to assassinate him, and Rīḏwān died of the wound while fleeing from his enemies. This event, about six months after the death of Ibrāhīm, marked the end of the Djuflīyya as a political force.

The Kazdughliyya now controlled Cairo and appointed ʿUṯmān al-Dijrjāwī, the senior bey of Ibrāhīm’s household, to the riyāsā. About this time two others of their number were promoted to the beylık, Ḥusayn al-Ṣāḥbānī and Būlāt Kāḥānī, usually known as ʿAlī Bey al-Kabīr (q.v.). ʿUṯmān Bey soon offended his colleagues by his harsh behaviour, and in 1170/1756-7 he was removed from the riyāsā, which was conferred on al-Ṣāḥbānī. The new shāykh al-balād, i.e., holder of the riyāsā (riʿāsā) now sought to attain plenary power with the support of Nṣf ʿArām, the section of the populace traditionally allied with the Kāsmiyya. He set to work to weaken and disperse his ṣhāyḫ-dāḫīyya, but his plan miscarried, and he was assassinated in Safar 1171/Oct.-Nov. 1775. The riyāsā was now conferred upon another of Ibrāhīm Kāḥāy’s former mamlūks, ʿAlī Bey al-Ghzāzāwī, sometimes called (rather confusingly) ʿAlī Bey al-Kabīr, either because of his seniority, or because the terms kāḥīr al-balād and kāḥīr al-bāṣam were used as synonyms for shāykh al-balād. In 1173/1760 al-Ghzāzāwī went to the Ḥijāz as commander of the Pilgrimage. Before leaving, he had set on foot a plot to dispose of ʿAbd al-Raḥmān Kāḥāy, who was still a power among the Kazdughliyya. ʿAbd al-Raḥmān learnt of this and made an alliance with Būlāt Kāḥānī ʿAlī Bey. At a meeting of the grandees, ʿAbd al-Raḥmān reminded them of his position as head of the Kazdughliyya household, and nominated ʿAlī Bey as shaykh al-balad. While the latter was in promising to obey him, he was, in this, al-Ghzāzāwī handed over the command of the Pilgrimage caravan, and fled to Gaza. Three months later he
returned to Cairo, where he died shortly after-

'All Bey was now in control. 'Abd al-Rahmān Kāhyā, who had hoped to use him as a compliant tool, was soon undone. He was banished to the Hijāz in Dhū 'l-‘Adhā 1178/April 1765, and only returned to Egypt, a dying man, in 1190/1775, after the death of 'All Bey. The despotic ascendency of the shaykh al-balad and his dubious loyalty to the Ottoman sultan are reflected in his inscription in the mausoleum of al-Shāfi‘ī, where he assumes the ambiguous but challenging style of 'Azīz Mūsā [q.v.]; ‘All was ousted from Egypt (Muhārram 1186/April 1775) by his own mamlūk, Muhammad Bey Abu‘l-Dhahab, who succeeded to the position of shaykh al-balad, but who himself died during an expedition against Shaykh Zāhir al-Umar (Rābī‘ II 1189/June 1775).

Thereafter no single Kāzdughlī amir dominated, but three grandees competed for power: Ismā‘īl Bey, the khudayr of ‘All Bey, and two of Abu‘l-

Dhahab's mamlūks, Ibrāhim Bey al-Kābir [q.v.] and Murād Bey. In 1200-1/1786-87 the presence in Egypt of an Ottoman force under Djeza‘irli Ghāzī Hasān Pasha [q.v.] temporarily reinforced the position of Ismā‘īl Bey, who was appointed shaykh al-balad. He died of plague in 1205/1791, whereupon Ibrāhim and Murād established an uneasy duum-
virate. The disorders of the period produced a new political development—risings of the civilians of Cairo, supported and even led by members of the 'ulamā‘. The French occupation of Egypt (1798-1801) struck a fatal blow at the Kāzdughliyya, as at the entire neo-mamlūk regime. Murād Bey died during the occupation (a house of Abu‘l-Dhahab, i, 417-20; Ismā‘īl Bey, ii, 219-20); Murād Bey (iii, 167-71); ‘Uthmān al-Bardisi (iv, 42-44); Muhammad al-Alfi (iv, 42-43). For ‘All Bey al-Kābir and Ibrāhim Bey al-Kābir, see the articles (above, I, 391-2; III, 992). See further P. M. Holt, The career of Kucük Muhammad al-Kāzdughlī (1676-74), in Studies in the history of the Near East, London 1973, 231-51; W. Livingston, The rise of Shaykh al-balad ‘All Bey al-Kābir: a study in the accuracy of the chronicle of al-Jabarti, in BSOAS, xxxiii (1970), 283-94. (P. M. Holt)

KAZI-ASKER [see tyard ‘askar].

KAZI-KUMUKU [see kūmūk].

KAZIM KADRI, HUSAYN (in modern Turkish Huseyin Kâzîm Kâdri), 1870-1934, Turkish writer and lexicographer. His father, Kâdi Bey, the son of the vizier Edhem Pasha, was a civil servant and the unpopular but colourful governor of Trabzon for ten years (1892-1902) under 'Abd al-

Hamid II. After attending various schools, Husayn Kâzîm graduated from the English School of Com-

merce in İzmir. He taught in schools, briefly tried journalism after the promulgation of the Constitution of 1908 and later served as a governor in the provin-
ces, notably in Aleppo (1920) and Salonika (1921). He was elected to the Ottoman Parliament in 1912. During World War I, he returned to Beirut, where he compiled his great Turkish dictionary. He was again elected to the Ottoman Parliament in 1920 and served successively as Minister of Agriculture, of Commerce and of Wafîs, and in the same year joined Ahmed 'İzet Pasha’s unsuccessful mission to the nationalist government in Ankara. Husayn Kâzîm is the author of a great number of works of uneven value, whose topics range from language, literature, religion and politics to law, commerce and agriculture. During the ideological struggle of the post-colonial period, he joined the “Islamists” and made remarkable contributions to the move-

ment, i.e. İstiḥbâle doğrû, Istanbul 1329, Felâka doğrû, Istanbul 1331, Yurîmdî şafrâda İslâmîyyet, Istanbul 1339, 10 temmûs inâklâbinâ netâği, Istanbul 1336. He published, for the first time in Turkey, the poems of the Persian poet Ḥāfiz: Mâhâdâm Kuli Divânî, Istanbul 1340. An interesting contribution on the linguistic and literary problems of the Turkish-speaking peoples is his series of articles Turkish içânlarının teşkîlî (“The unification of the Turkish languages”); Iğîhâd, nos. 31-33, September-November 1327 rûmî/1921), where he points out the growing influence of Ottoman Turkish on the Azərî and Kazan written languages and suggests that an academy should work out a “lingua franca” for all the Turkish-speaking peoples based on Ottoman Turkish. Husayn Kâzîm published a number of booklets and articles on improving the methods of agriculture in Turkey. Of particular importance is his series of 17 articles published in Iğîhâd (nos. 155-174, July 1923-February 1925), where he expounded his theories of land reform and agricultural education in Turkey.

Husayn Kâzîm’s major contribution, however, is his comprehensive Turkish dictionary, Büyük Türk Lughâtî, in four large volumes (vols. i and ii, Istanbul 1927 and 1928, in Arabic script, vols. iii and iv, Istanbul 1943 and 1945, in Roman script: transcribed from the compiler’s manuscript by his daughter Rıkkat Kunt). In the introduction the author gives a survey of the development of “classi-
cal” Turkish written languages such as Uyghur, Çağatay, Ottoman, Kazan and Azerbaijani, with the elements of grammar. The dictionary itself covers the vocabulary of the main Turkish written languages and “words of the Koybal, Yakut, Çuvash and Kirghiz dialects with supporting examples” as stated in the sub-title. Completed during World War I, Husayn Kâzîm’s dictionary, which reflects the contemporary state of research in the field, was a landmark in turcorological studies in Turkey up to the period of the 1930s, when more up-to-date research in the universities and by the Turkish Philological Society (Türk Dil Kurumu) superseded it, although the “Turkish Radloff”, as it is sometimes called, can still be at times a useful work of reference.

Bibliography: given in the article. (F. I.)
schools in Istanbul, graduating first in his class from the Harb Akademisi in 1905, one year after Mustafa Kemal (Atatürk). He served in several important actions in Thrace, and took part in the movement to crush the counter-revolution of Sultan ʿAbd al-Hamid in 1909. Later he worked in the intelligence section of the German Advisory Group, and in World War I served as Chief of Staff to General von der Goltz on the Îrāk front. He then became commander of the 2nd Corps in the Caucasus, and fought successful battles at Erzurum and Erzincan. At the end of the war he commanded the 14th Corps in Tekirdağ. Early in 1919 he was appointed by the sultan's government to command the 5th Corps in Erzurum, but soon became instrumental in organising Turkish nationalist forces to fight the War of Independence, becoming one of the first important figures to espouse the nationalist cause. He was quickly appointed commander of the eastern front by the nationalist leadership under Mustafa Kemal, and invitations to the Erzurum Congress of the Association for the Defence of Rights of Eastern Anatolia were sent out over Karabekir's name. One of his major military successes was the defeat of the Armenians at Kars and Gönü in late 1920. In the same year he took a seat in the first Grand National Assembly as deputy for Edirne.

He resigned from the army in October 1924, when Atatürk insisted that all officers either choose a military or a political career, and the next month became a chief founder of the Republican Progressive Party (Terakkiperver Dümührüyvet Fırbaşı). The Progressives generally advocated slower and less drastic reform and secularisation than did Atatürk's Republican People's Party, and differed from Atatürk on a number of matters of political organisation, although the Progressives' programme resembled that of Atatürk in many aspects of economic, financial and foreign policy. Karabekir played an important role in it because he was considered one of the major potential rivals of Kemal, and the Progressives were opposed to the principle of an Assembly without an organised opposition. The party was dissolved in June 1925 coincidentally with the uprising of Kurdish tribes in the eastern provinces. The Progressives' urging of moderate treatment for the rebels was one factor which led to Karabekir and several others being brought before an Independence Tribunal in 1926. He was acquitted, but retired from politics and public life till after Atatürk's death in 1938. In 1939 he came out of retirement and entered the 6th Assembly as an R.P.P. deputy for Istanbul. In 1946 he was elected President of the Assembly, an office which he held until his death in 1948.

KAZIM RASHTI. SAYYID, leader of the Shaykhī sect after the death of its founder, Shaykh Ahmad Asbâhī, in 1242/1826. Born in 1213/1798, Sayyid Kāzīm Rashtī evinced deep religious feelings while still a child, and had been raised in a series of visions of increasing intensity. In the course of one such vision, at the age of fifteen, he was instructed to seek out Shaykh Ahmad Asbâhī, then resident in Yazd, and to become his pupil. Having reached the presence of the Shaykh, he soon became his most favoured disciple, and Asbâhī is reputed to have said to him, "No one understands me but you". After Asbâhī had been declared a kâfir by the 'ulūmah of Kazwîn, he went to Kirmānshāh and then left for Arab Îrāk. Kāzīm Rashtī followed him, settling in Karbalā, where he spent the rest of his life. He fell heir not only to the following of Asbâhī, but also to the polemics and hostility that certain of the Shaykhī's doctrines had aroused. Much of his activity was devoted to the defence and further elaboration of these doctrines, in particular the resurrection of the "Hurkâyan body (dâ'im-i hûrîhâyî)," the denial of the corporeal ascension of the Prophet, and the description of the ímâms as the efficient cause ('illât-i qudrî) of creation. Although in the course of oral debate with the 'ulūmah of Karbalā, led by Sayyid Ibrāhîm Kazwînī, he was obliged to admit that the apparent meaning of Asbâhī's teachings was contrary to the faith, he vigorously defended Shaykhī doctrine and defended its opponents in his many writings, Dâ'ilî al-mu'tahāyirîn being the most notable. He enjoyed good relations with Nadjîb Pâshâ, governor of Baghdad, and his house was spared when an Ottoman army sacked Karbalā in 1259/1843. After his death later in the same year, he was succeeded as Shaykhī leader by Hâdîji Muhammad Karim Khān Kirmānī. Another pupil of Kāzīm Rashtī, Sayyid 'Ali Muhammed Shârâžî, declared himself to be the "Bâb" and had his claim accepted by many former Shaykhīs.

KAZIMAYN, a town and one of the most celebrated Shi'i places of pilgrimage in Îrāk. It is a little over one km. from the right bank of the Tigris, which here describes a loop, being separated from the river by a series of gardens. Kazimayn itself is prettily situated among palm-groves. It is connected with the west side of Baghdad, about three miles away, by regular bus and taxi services, replacing the horse-tramway laid down by the governor Mîdhat Pâshâ (1869-72), who did a great deal for Baghdad. Kazimayn is now also a station on the Baghdad-Samarra railway, which runs along the right bank of the Tigris. It forms a kâdafî belonging to the muhafaza of Baghdad and administered by a kâfīm-makâm. Its population grew rapidly from 169,993 in 1947 to 235,745 in 1957; most are Shi'is. Unfortunately there are no official figures for the number of Persians among them. However, according to the 1957 census the number of Persians in Baghdad was 5,156, and in Îrāk as a whole 23,783. Access to the sanctuaries is strictly forbidden to non-Muslims as well as to all unveiled women.

The name Kāzīmāyn, i.e. "$\text{the two }\mathcal{K}\text{âlm}$", refers to the two cAlids buried here, the Imâm Īmām (Terakkiperver Diumhuriyyet Flrkasi}.
b. Dīyaʾr al-Sādik, nicknamed al-Kāzīm (d. 186/802) and his grandson the Imam Muhammad al-Djawad (d. 219/834), the seventh and ninth Imāms of the twelve Shīʿa (Iṣnāʿ Ashariyya [q.v.]). The town is also called Kāzimiyah in reference to the nickname of the Imām Mūsā b. Dīyaʾr al-Sādik. It is also known among the common people as al-Kāzīm, i.e. the city of al-Kāzīm. Finally, the name Imām Mūsā is also found. However, all these names have come into use only recently, for the town was originally called al-Mashhād al-Kāzīmi and Mashhād Mūsā b. Dīyaʾr.

There is evidence of pilgrimage to these ‘Alīd tombs as early as the 7th/13th century (Ibn Khallikān, iv, 395). At the present day Kāzīmayn is one of the four greatest sanctuaries of the Shīʿa. Its favourable position at the junction of the road to the three other Shīʿa places of pilgrimage, Samarrāʾ in the north and Karbalāʾ [q.v.] and Najaf [q.v.] in the south, accounts for the fact that many thousands of pilgrims pass through it annually, especially during the first ten days of the month of Muharram (‘Aṣkrāt Muharram), which are exclusively dedicated to the memory of the martyrs of al-Ḥusayn b. ‘Abbāl and his family. One of the four majallāḥahs, the principal spiritual leaders of the Shīʿa, lives in Kāzīmayn. The present city of Kāzīmayn was originally a part of the Kassite Empire during the reign of Kurigalzu; he built a new capital called after him Dūr-Kurigalzu, whose remains are still in existence at ‘Aḵār Kūf, about ten km. to the west of Kāzīmayn. During the Sasanian period the name Tāṣṭū Ḫurṭābūl is mentioned as denoting what was later called Maḥābīr Kuraysh. Prior to the building of Baghdad by the al-Mansūrīs, called al-Mansūr (362/974-5/75-7) [q.v.], the place was called al-Shūnū. When Baghdad was built, al-Maṣūr detached the cemetery of al-Shūnū al-Saghrū and it made a private cemetery for his family (though later non-Kuraishi were also buried there), calling it Maḥābīr Kuraysh. This cemetery is also called Maḥābīr Bāb al-Tībn, because of its proximity to that gate. His son Dīyaʾr al-Akbar (d. 1509/769) was buried there. It was only when the “two Kāzīms” were buried there that the name Maḥābīr Kuraysh was changed in later times to al-Mashhād al-Kāzīmi and Kāzīmayn. In Yākūţ’s time (623/1226), Maḥābīr Kuraysh was a fairly populous suburb surrounded by a wall. About a century later, Ḥamd Allāh Mustawfi found that this place, formerly reckoned a suburb of Baghdad, was now an independent township.

The sanctuary of Kāzīmayn is one of the exceedingly splendid and rich monuments which ‘Ibrāhīm owes to the Shīʿa, and for which Persia and the Shīʿa of India supplied the necessary funds. With its domes and the pinnacles of its minarets covered with gold, it is visible to the traveller from a long way off. He who first built the ‘Alīd sanctuary at Kāzīmayn is unknown. All we know is that in 365/974, by the order of the Buwayhid Muʿizz al-Dawla [q.v.], two wooden boxes were put over the two graves, two wooden domes were erected above them, and a surrounding wall was built. The present faience-covered building is due to the Safawī Ismāʿīl I (908-30/1502-24), whose family claimed descent from the Imām Mūsā al-Kāzīm (see above). The inscription published by Massingham (Mission, 99) of the year 925/1519, refers to the complete transformation of the old building by the shāh. The restoration not quite completed by Ismāʿīl was finished by the Ottoman sultan Sulaymān I, who occupied Baghdad in 941/1534. The covering of the domes with golden tiles was done, according to the inscription, in 1211/1796 by the command and at the expense of Shāh Ağa Muḥammad Khan [q.v.], the founder of the Kāḏjār dynasty. On the occasion of his pilgrimage in 1870, Shāh Nāṣir al-Dīn had the gold plating on the principal dome and on the roofs of the minarets renewed (cf. Buquet). The double cupola flanked by four minarets shows that two saints are buried beneath it. Close to this mausoleum stands an isolated pavilion under which are shown the graves of Dīyaʾr (formerly supposed to be that of Ismāʿīl) and Ibrāhīm, sons of the Imām Mūsā. The cupola of the building is modern and a gift of Salīm Pāsha (cf. Massingham, op. cit., 100). It may be noted here that there is at Hādīthā the Euphrates (between ‘Aḥnā and Hit) a small sanctuary which is said to contain the tomb of Muhammad, son of Mūsā al-Kāzīm (see Hersfeld, in Sarre-Herzfeld, ii, 321). On the tomb of a certain Ḥamza b. Mūsā al-Kāzīm in Karyat al-Bāshīya (in ‘Irāk), cf. Massingham, op. cit., 60. In the vicinity of Astarābād [q.v.] there is also an imāmīsīde (tomb chapel) where a descendant of the Imām Mūsā named Imām Kāzīm is said to be buried (cf. Melignou in ZDMG, xxxi, 352)."
KAZIMAYN — AL-KAZIMI

(M. Streuck-A. A. Dixon)

KAZIMI [see sinka].

AL-KAZIMI, ABD AL-MU‘MIN B. MUHAMMAD, Shī‘ī poet of ‘Īrāq, born in Baghdād in 1285/1865 (but according to his daughter Rabāb al-Kāzīmī, in 1286/1872), who died in Cairo on 1 May 1935. He received elementary instruction in Arabic and Persian and then continued to study Arabic literature on his own initiative. In 1308/1890 he met Dījāmāl al-Dīn al-Afghānī [q.v.] in ‘Īrāq and was influenced by his revolutionary ideas. Soon afterwards he left ‘Īrāq, but whether for reasons of political, business or poetic ambition is unclear. He travelled to Persia, India (1897) and finally to Egypt (1899), where he was welcomed by the leading literati. He became a close friend of and received financial aid from Muḥammad ‘Abdūh [q.v.] and Sa‘d Zaghīl [q.v.], and dedicated panegyrics to them during their lives and elegies after their deaths. For some time al-Kāzīmī tried in vain to obtain a pension from the Khedive ‘Abdābīl Hīlī al-Dīwānī [q.v.]; this apparently was foiled by the jealousy of Ahmad Shawkī [q.v.]. From 1919 onwards al-Kāzīmī dedicated many poems to the Central Committee of the Syrian Unity Party, and panegyrics both to Sa‘d Zaghīl and to the Ḥāǧimīte kings in Transjordan. He was an avid supporter of Arab nationalism and consequently became best known as Shī‘ī al-‘Arab (the poet of the Arabs).

The poetic diction, images and metaphors of al-Kāzīmī’s poems are derived from Bedouin life, while their structure is thoroughly rooted in classical poetic models. His panegyrics reveal him to have had a proud and forceful personality as well as being a talented poet. He tended to boast of these qualities in his poetry at times, stressing his ʿAlawī descent and panegyrics both to Sa‘d Zaghīl and Ahmad Sha‘bīl, a biographical dictionary of transmitters of Shī‘ī hadith, based on al-Amīr Mustafā al-Taḏrīsī’s Naḥd al-ridād; an abbreviation of a work on the summa, al-İbāl by Muḥammad b. Taḏrīs, and al-Ḥakī al-hakī, a refutation of teachings of the Aḥğārī school concerning hadith. Only the first of these has been printed, and manuscripts of al-Kāzīmī’s other writings are rare. Two of his sons, Shawkī Dī‘ār al-Kāzīmī and Muhammad Ṭabī‘ al-Kāzīmī, were also ‘ulamā‘ī of some note.

AL-KAZIMI, HAYDAR B. IBRĀHĪM, an ʿĪmāmī Shī‘ī of the early 19th century. Born in Kazimayn
in 1205/1790, he spent his entire life there, dying in 1265/1849. He was the ancestor of the Al Haydari, a celebrated learned family of Kazwin. Among his works may be mentioned al-Birha al-Haydariyya, concerning usul (the principles of jurisprudence), and al-Maṣūliyya al-Haydariyya, consisting of scenarios for the ta'ṣīya, the so-called Shīʿī passion play.

**AL-KAZIMĪ, MEHMED SĀLİM** (1868-1914), a Turkish political journalist of the late Hamidian and early constitutional period. Better known by his *nom de plume* ʿĀwn Allāh Kāzimī, he was born in Istanbul in 1868. He was the son of Hūsān Begg Beg, who was private secretary (mubayyin kalibi) to the sultan. His family came from Erzurum in eastern Anatolia where al-Kāzimī’s grandfather, ʿĀlī Beg, had been a derebe (q.v.). He was given a traditional education, though he learned French as well as Arabic and Persian. Finding no suitable position in the stratified bureaucracy of the period, like many well-to-do, educated young men of his day he turned to journalism. In 1889 he and his brother Sulaymān Tāwīl began to publish *Mûrûwet*, which is described as ‘an Arabic newspaper dedicated to the benefits of property and in the service of the state’ (menāfiʿi al-muhk al-dawâl garnetidir). He left the country, fearing that he was about to be arrested for an article he had written, and returned to Istanbul some time later using the alias ʿĀwn Allāh Kāzimī. He was arrested in 1901 on account of his alleged involvement in the Muṣṭafā Pāsha Faṣaḥa incident, in which ʿĀbd al-Hammād II’s secret police, suspecting Muṣṭafā Faṣaḥa of conspiracy, clashed with the general’s men. Meḥmed Sālim was sentenced to penal servitude for life and exiled to the town of Sivas. He was caught attempting to escape, and transferred to the fortress at Sinop.

Meḥmed Sālim returned to Istanbul after the Young Turk revolution of July 1908 and became the president of the Fedākhân-ī Millet Dējmīyyet, one of the many ephemeral political clubs which sprang up following the revolution. On 16 September 1908 he began publishing the *Ḥubk-ī ʿUmāmīyye* as the organ of this association. The stated aim of this paper was “to serve the constitutional administration and national unity” (ṣīrāt-i -mehrūštâyaya te ʿutkūk-ī millette khidmet etmek). The association seems to have been composed of much the same elements as the *Īṭihād see Terrâbī Dējmīyyet* (q.v.), that is to say people who had opposed the old régime, but who, feeling that their earlier sufferings had gone unrecompensed, now turned against the government. They are alleged even to have indulged in blackmail of some members of the old régime.

The government suspected Meḥmed Sālim’s organisation of illegal activities, so that on 14 January 1909 the premises of the *Ḥubk-ī ʿUmāmīyye* were raided by the police. Meḥmed Sālim was arrested, and the *Fedākhân-ī Millet Dējmīyyet* was disbanded. He was acquitted by the court, and appointed mutasarrīf of Kirkkūk (Irāq). When the counter-revolution of 31 March 1912 (o.s.)/13 April 1919 broke out he was suspected of involvement and arrested. A court martial found him innocent, and he was again acquitted. Soon afterwards he left for Kirkkūk and died there in 1914.

Apart from his journalistic writings, Meḥmed Sālim wrote about his adventures in Son Miiddfa, and San Miiddfa, Salim wrote about his adventures in 

**Bibliography:** E. G. Browne and R. A. Nicholson, 1910-13, 830, French tr. Barbier de Meynard, *Description historique de la ville de Kazvin*, in *JA* (1857). Its population according to the census of 1966 was 81,000.

### i. Geography and History

Kazvin guards the passes to the north leading through Tabaristan to Rasht and the Caspian Sea, and is situated at the junction of the roads from Rasht to Tehran and Tabriz to Tehran. From Kazvin roads also lead off to Hamadān and Kūrm. In the 19th century there were four roads leading from Kazvin to Tehran, two by muleteers and the other by those riding ʿāpūr (Safarname-ī Mīrzā Husayn Farahānī, ed. H. Frarna-Farman, 1964, 9-10). The climate is temperate with a mean maximum temperature in summer of 34.5 °C and a mean minimum temperature in winter of -5.4 °C. The annual rainfall is 399.1 mm. with frequent snowfalls in January and February. In spite of its favourable situation as regards communications, Kazvin never rivalled Ray, Nābāpur or Isfahān in the Middle Ages. The reason is partly to be found in lack of water, which placed a severe limitation on its growth. Istakhrī states that Kazvin had enough water for drinking purposes only; this was provided by rainfall and the water of one *kanāl* (*Masālik al-namalīh, Leiden 1927, 201*). Until recently the plain of Kazvin was irrigated entirely by *kanāls* and four small streams (see further Muḥammad ʿAlī Gulriz, *Mināda al-dīn al-īmāmī al-Gīlānī*). Ḥamd Allāh Mustawfī states that these streams flowed in spring; in a good year their water reached the gardens of Kazvin, but rarely flowed into the town in summer, the water being used by the estates situated upstream (*Nchea, Persia* text, 222). In 1963 the Kazvin Development Authority was set up to develop the water resources and agriculture of the area (see further A. K. S. Lambton, *The Persian land reform 1926-1966*, Oxford 1969, 282).

Kazvin lies in the earthquake belt and has been

---

**AL-KAZIMI — KAZVIN**
KAZWIN

Kazwin was damaged by earthquakes on several occasions. Earthquakes in the town were recorded in 249/863-4, 858 KAZWIN, 360/963-4, and 513/1119-20 (Gulriz, 873). A second town at Kazwin was built by Musa b. al-`As, who succeeded al-Walid b. `Ukba as governor of Kufa, still held them some two hundred years later and had title deeds for them from the government. From Kazwin al-Bara` carried out raids into Daylam and Gilan and also took Zandjan. Sa`di b. al-`As, who succeeded al-Walid b. `Ukba as governor of Kufa, also made raids into Daylam, and built a town at Kazwin, Haddaij, after he became governor of most of Persia on behalf of the Umayyads, appointed his son Muhammad governor of the frontier regions. Yazid b. Mu`allab, Kutayba b. Muslim, and Naṣr b. Sayyār also appointed governors over Kazwin, as did the early `Abbāsids.

A second town at Kazwin was built by Mūsā al-Hādi beside the one built by Sa`di b. al-`Āṣ and called Madina Mūsā. He bought the nearby Rustamābād and constituted it a wāqf for the benefit of the town. Mūbarak al-Turk, a freedman of al-Hādi, also built another town at Kazwin in 176/792-3 and called it after himself. When Hārūn al-Rashīd passed through Kazwin on his way to Khurāsān, he was impressed by both the
tribulations which the local people suffered on account of the Daylamites and their efforts to combat them. Accordingly, he remitted the ta'addu of the town and substitutes instead an annual payment of 10,000 dirhams, and ordered a wall to be built round Madina Mūsā and Mubārakābād. This was not, however, completed until the caliphate of al-Mu'tazz, when Mūsā b. Būghā finished it in 254/868 (see also Gurlīz, 103 ff., who quotes a manuscript history of Kazwīn, the Kūthāb al-ta'dīn wī fī ʾaḥkām Kazwīn) by Rāshīdī, who died in 623/1226, for further details concerning the walls of Kazwīn. Hārūn al-Rašīd also built a Friday mosque in Kazwīn and constituted various khāns and other buildings into a waḥf for its benefit. During al-Kāsim b. al-Rašīd's governorship of Kazwīn, Djūrđjan and Tābaristān, it appears that there was an increase in the land held by the government, a number of local landowners placing their estates under al-Kāsim's protection by a ta'addu contract, by which they paid ʿaṣur to the public treasury and a second ʿaṣur to him for his protection. In this way they retained possession of their estates, while the ownership passed to the government (Balādḥuri, Futūḥ, 310-11, Ibn al-Fakhri, 282-3, Taʾīrīš-i gūzīda, 480 ff., Nuẓūṣ, 38). The anonymous Muḥnūnī al-tawdīlī mentions a rebellion by Kawkabi, an 'Alid, who put down Mūsā b. Būghā during the reign of al-Muʿtazz (ed. Malik al-Shuʿarāʾ, Tehran 1940-1, 365).

The population of the town at this time appears to have been mainly Arab. After Mūsā b. Būghā completed the town wall, the population increased. It consisted of various tribes or families, most of whom traced their origin back to the first Arab settlers. Among them were the Sādāt, the majority of whom, according to Hamd Allāh Mustawfī, were characterised by their humility, knowledge, piety and courtesy. He states that they supported themselves by their own work and did not demand pensions, thus implying that they held aloof from the temporal power and retained their independence. Khiṣānī, writing later, states that the people of Kazwīn were noted for their chivalry (murūʾaṣuṣ) and humanity (in-sāmniyyāt) (Taʾīrīš (in-ṣāmniyyāt) (Taʾīrīš-i gūzīda, Tehran 1959-9, iv, 654).

Kazwīn retained its importance as a frontier town during the struggles between the caliphate and the 'Alids in the Caspian provinces. When al-Muṣṭaṣim became caliph he determined to bring the Daylamis into subjection. Fakhḵr al-Dawla (thus in Mustawfī) Abū Mansūr Kūṯī, whom he sent to Kazwīn as governor, together with his sons occupied himself against the Daylamis for nearly twenty years from 223/838. In all, Fakhḵr al-Dawla appears to have held the post of governor for some forty years on behalf of the caliphs, except for two years when he governed on behalf of Ḥasan b. al-Bāḳīr, the 'Alid, who took possession of Kazwīn in 251/865-6. For a brief period Kazwīn came under Šāmānī rule when Šāmān b. Ahmad became governor in 233/845-6. In the following year, however, Fakhḵr al-Dawla Abū ʿAlī, Hamd Allāh Mustawfī's forefather, became governor on behalf of the caliph and held the town for twenty-seven years, though in 301/913-14 it was placed together with Ray, Ḏinawar, Zāndjān, Abhar and Tārum, under the general charge of ʿAlī b. Muktadir (The eclipse of the ʿAbbāsid caliphate, ed. H. F. Medlicott and J. D. S. Margoliouth, Oxford 1921, 1, 33). In 304/916-17 ʿUṭb b. Abī ʿl-Sādī (see Sāgīra) made an abortive attempt to claim Kazwīn (ibid., i, 45 ff.), but was put to flight by Asfār b. Shīrūyān [see Asfār b. Shīrāwūyān], who made himself master of Kazwīn and of an area stretching from Ṭabaristān and Gūzīda to Kūm and Ḏarāndīn. In 315/927-8 Asfār routed an army sent against him by Abī Muktadir outside Kazwīn, although it was aided by the people of the city. Asfār then seized the citadel, killed many of the inhabitants, did much damage to the city, and imposed a vast contribution of money on the inhabitants. He was later dispossessed by Mardāwīḏī and killed (ibid., i, 161-2; Masʿūdī, Murūǧ al-dhakab ed. C. Bahrīb de Meynard, repr. Tehran 1970, ix, 6, 9 ff.). Kazwīn subsequently fell to Rūḵ al-Dawla, and the district remained in Būyid hands for upwards of a hundred years. In 358/968-9 there was an outbreak of disorder in the town and Abī ʿl-Fāth ʿAlī b. Mūḥammad b. Ḥusayn, Rūḵ al-Dawla's ʿawārīn, who was sent to put it down, imposed a fine of 1,200,000 dirhams on the people (Taʾīrīš-i gūzīda, 837).

In 421/1030, Kazwīn passed into Ghazzānī hands. Up to this time Hamd Allāh Mustawfī's forefathers were apparently still governors of the town, but at this point no suitable member of the family was available for the post of governor and they became instead mustawfīs. About 424/1033-4 ʿAlī Abī Mūḥammad Đaṯfarī succeeded to the government, which he and his sons held for about sixty years. The last of this line, Fakhḵr al-ṣāfī Abī ʿAlī Shārāsṭānī b. Đaṯfārī, was very wealthy and he and his followers held much property in the neighbourhood. He died in 484/1091-2 and was survived by one daughter (Taʾīrīš-i gūzīda, 837 ff.).

The first contact between Kazwīn and the Ghuzz appears to have been in 430/1038-9 when the inhabitants, with a payment of 7,000 dinārs, bought off the Ghuzz and Fānā Khūsravī, the Daylamī, who had taken Ray in 428/1037, slaughtering many of its inhabitants (Ibn al-Āthīr, al-Kāmil, i, 269-71). Nāṣīrī Khūsravī visited Kazwīn in 438/1046, and describes it as follows: "It had many gardens, without walls or thorn hedges or any obstacle to prevent entry into them. I saw it to be a good city. It had a strong wall and embattlements. It had good bazaars, except for its chivalry and humanity (in-sāmniyyāt) (Taʾīrīš-i gūzīda, Tehran 1959-9, iv, 654)." In spite of the proximity of Kazwīn to the ʿIsāmīs stronghold Alamūt (q.v.), the Sādīqūs do not appear to have regarded it as an important governorship to be given to a powerful amīr or mašīḥ. Soon after the ʿIsāmīs were established in Alamūt, Abū ʿl-Māḥāsīn Rūyānī persuaded the Kazwīnis to decree death to anyone coming from the direction of Alamūt lest mingling with the ʿIsāmīs should give rise to disaffection within Kazwīn (M. G. Hodson, The Order of the Assassins, The Hague 1955, 83). There were also many fortresses in the mountains of Rūbdār held by the ʿIsāmīs, whence they were able from time to time to assault and trouble the Kazwīnis, as they did in 523/1129 when they killed some 400 persons in revenge for an ʿIsāmī envoy who had been lynched in Iṣfāhān whither he had gone to see Maḥmūd b. Mūḥammad (ibid., 102). During the period when Mūḥammad b. Buzurg Umīd was grandmaster (532-7/1138-62) there were raids and counter raids against Kazwīn from ʿIsāmī strongholds (ibid., 145). Somewhat later, in 560/1165, the ʿIsāmīs of Rūbdār built a fortress outside Kazwīn, whence they were able almost to lay siege to the town (ibid., 158).
During the late Seljuk period Kazwin was disputed by various maliks and amirs, including Tughril b. Muhammad, to whom it was assigned by Sandjar (Bundesarz, Zubdat al-musrara wa-nukhbat al-usra, ed. M. Th. Houtsma, Leiden 1889, 134). Under the Khwarzmshahs, renewed attacks were made from Kazwin on the Isma’ils. When Djinal al-Din Hasan succeeded his father Muhammad as grandmaster of the Isma’ils in 607/1210 he professed Islam and was known as Djinal al-Din Naw-Musalman. The people of Kazwin, knowing all too well the dissimulations and tricks of the Isma’ils, accepted his claims and demanded proof. He went to great lengths to win them over and induced them to send some of the leading men of Kazwin to Alamut and burn Isma’iili works in their presence (Diuwanyi, Ta’rikh-i Diahdngushd, ed. Mirza Muhammad Kazwini, GMS, London 1916, ii, 243-4).

During the struggle between the Khwarzmshahs and the Mongols, Kazwin from time to time changed hands, until finally the Khwarzmshahs were defeated. In 617/1220 the Mongols are alleged to have carried out a massacre of the people of Kazwin (Hamd Allah Mustawfi, Zafarnama, quoted by Browne, iii, 96-8). Many left the town, so much so that the capital was abandoned. It continued to hold this position until Shah Shihab ad-Din built a new capital in Isfahan (408 Hij.). Although Kazwin ceased to be the capital, it did not become an independent province but was administered by a waizir, darughah, haizantar and mustawfi appointed by the central government. Towards the end of the reign of Shihab Sultan Husayn it was made into a province, under a begishegii, and a certain Tahmasp Khan, a military slave (ghulam), was appointed over its A suma for his remuneration (mutadhilli) on the taxes (wujugha) of the surrounding districts and Rukn-kh, and in return he was required to keep 300 soldiers (Mirza Rafii, Dashtar al-Muluk, ed. M. T. Danishpazhuh in Rev. de la fac. des lettres et des sciences humaines, Tehran University, xvii,1-2 (Nov. 1968, 75). From the size of this contingent, it would seem that Kazwin was not one of the more important provinces.

Like various other towns, Kazwin became divided in Safavid times into two factions, the Haydari and the Ni’matt. Alessandi, who visited Kazwin during the reign of Tahmasp, mentions them, and states that four districts belonged to one faction and five to the other, and that enmity and frequent bloodshed had prevailed between them for over thirty years (Narrative of the most noble Vincento d’Alessandi, Hakluyt, first series, xlii, 224). The participation of these factions in the Mubarram and Safar ceremonies in the early 20th century is also recorded (Gulriz, 386-7).

In the Mongol and pre-Mongol period Kazwin had been a centre of orthodoxy, in spite of, or perhaps because of, its proximity to Daylam and later Alamut. Nevertheless, there was a Shi‘a quarter in Kazwin in Seljuk times as, for example, Iskandar Munshi (a hostile witness), he was “a low-class fellow” from the Darb-i Kushk quarter. He abandoned the craft of his fore-fathers, who had been mukarnis, and became a kalandar. After a period of travel and association with Nukkawis, he returned to Kazwin and became a kalandar. After a period of travel and association with Nukkawis, he returned to Kazwin, where a following gathered round him. The ‘ulama’, apprehensive at his growing popularity, charged him with heresy and he was forbidden to sit in the mosque where he had taken up his quarters. After the death of Tahmasp he resumed his activities and people again assembled round him. He was
eventually put to death as a heretic in 1002/1593-4 (‘Alamdrd, i, 473-6; see also Gulrlz, 444 ff.).

Little damage appears to have been done in the town. Don Juan, who was there shortly afterwards, describes Kazwln as follows: “The country round is most fertile: it has great orchards and extensive gardens. Its population numbers above 100,000 householders [or 450,000 souls], and, that one may know its greatness, I have for curiosity, counted many times over its mosques, and of these there are more than 500. The royal quarter and the palace both are most sumptuous, and so extensive that you may go in a straight line through the purlieus for over a quarter of a league”. (Don Juan of Persia, 40). The account given by a gentleman in Sir Antony Sherley’s suite, who arrived in Kazwln in December 1598, when it was still the capital, is rather less favourable. He states that there was nothing remarkable about the town except a few mosques and the doorway of the palace of the king, which was well built. According to him the town was a little smaller than London (Sir Antony Sherley and his Persian adventure, ed. E. D. Ross, London 1933, 153). Antony Sherley’s brother, Robert, died in Kazwln in 1627, as also did Sir Dodmore Cotton.

Father Paul Simon, the first superior of the Discalced Carmelites in Persia, writing in 1607, states that Kazwln, which was by this time no longer the capital, was a very large city, not smaller than Isfahan. There were good buildings and an abundance of commodores for subsistence and entertainment, and “everything to be found as in any of these our [Italian] cities” (A chronicle of the Carmelites in Persia, London 1930, i, 119). Pietro della Valle, who was in Kazwln in 1618, found in it “nothing to satisfy the expectations of residence, and only two things worthy of observation, the gate of the king’s palace, and the grand maidan or square”. Sir Thomas Herbert, on the other hand, reported of Kazwln in 1627 that it was “equal for grandeur to any other city in the Persian Empire, Spahauw excepted”. He states that its walls were seven miles in circuit and estimates its population at 200,000 (see Curzon, i, 36). Olearius, however, some ten years later put the population at only 100,000 (The travels of Antony Jenkinson, in Early Voyages and Travels to Russia and Persia, Hakluyt, first series, lxxii, 1886, repr. New York n.d., i, 134 n. 1), while Chardin, who was there in 1674, describes its walls in ruins, and the town as having “lost all those perquisites that set forth the pomp and grandeur of a sumptuous court”. It contained, according to his account, 12,000 houses, and 100,000 inhabitants, its chief feature being the palaces of the grandees, which, he alleged, had passed for generations from father to son (see further Curzon, i, 35-6).

Kazwln’s importance in Safawid times was due not only to its becoming, for a period, the capital but also to the attempts to increase trade with Europe through southern Russia. Antony Jenkinson mentions the attempt to manufacture velvets and other wares in Kazwln of the 1560s (The travels of Antony Jenkinson, i, 149). Arthur Edwards, who made several voyages to Persia on behalf of the Muscovy Company, wrote in 1567 that velvets and other wares were made in Kazwln but not of as good quality as could be obtained in Europe, and in 1569 that many also several artisans, such as goldsmiths and cobblers, who made the best shoes in the whole country out of segrin [shagreen], in green, white and other colours. There were also some master craftsmen who made gilded and coloured bows with arrows to match, and others who made richly gilded horse-saddles with gilded and coloured saddlebows (Sir Antony Sherley and his Persian adventure, 153). Father Paul Simon records that Kazwln was much frequented for trade, because there was an abundance there of silks, carpets and brocades (A chronicle of the Carmelites in Persia, i, 119).

The disorders which took place at the end of the Safawid period brought a temporary halt to Kazwln’s prosperity, and there appears to have been a considerable decrease in the population, due in part, presumably, to the decline in trade. Maimud, the Afghan, after he had taken Isfahan, detached a force of some 6,000 men under Amân Allâh Kân to take Kazwln, which surrendered in 1722. In January 1723, however, there was a popular uprising (lâîdätâr) led by the kalântars [q.v.] of the city against the Afghans. They were attacked in every quarter and retreated to Isfahan. They are reported to have lost some 2,000 men (Sir John Malcolm, History of Persia, London 1829, i, 443-4; J. Hanway, An historical account of the British trade over the Caspian Sea, London 1762, ii, 188). In 1726 Kazwln submitted to the Ottomans on condition that the governor sent to the city was not accompanied by troops. The agreement was not kept; 12,000 men under ‘Ali Pâshâ were sent, only to be driven out shortly afterwards. Kazwln then declared for Ashraf (Hanway, ii, 245; Malcolm, i, 443-4). Hanway, writing in 1744, quotes a Persian merchant as saying that whereas formerly Kazwln had had 12,000 houses, it had then only 1,100 (i, 156).

At the beginning of the 19th century Kazwln still manufactured velvets, brocades, and cotton cloth (J. Morier, A second journey through Persia, Armenia, and Asia Minor to Constantinople in the years 1820-1826, London 1818, 203) and was beginning once more to flourish. One of the royal princes, Muhammad ‘Ali Mirzâ, then still a boy, was appointed governor by Fath ‘Ali Shâh in 1213/1798-9, and retained this post until 1221/1806-7 (Bâmdâd, Sharb-i hâl-i râdâ-i Irân, Tehran 1966, iii, 430). Kazwln’s position, at the juncture of roads from the new capital Tehran, Tabriz, the second city of the empire, and Enzeli on the Caspian Sea, gave it a new importance, both strategic and commercial. Fath ‘Ali Shâh recognized the first when he placed his governor under the orders of ‘Abbâs Mirzâ [q.v.] in 1818 with a view to facilitating his march on Tehran from Ashârbâyân in the event of his accession to the throne (Great Britain, Public Records Office, F.O. 60/13, Willock to Castlereagh, no. 9, Tehran, 7 May 1818). The main reason for the recent flourishing of Kazwln, however, was the growing importance of the trade routes through Trebizond and over the Caspian Sea. Malcolm notes its prosperity in 1801 as “the mart of all the commerce
of the Caspian" (quoted by C. Issawi, The economic history of Iran, 1800-1914, University of Chicago 1971, 262) and Consul Abbott, reporting on the trade in Persia in 1841, states that Kazvin ranked equally with Tehran in the extent of its commerce and contained perhaps as many thriving and wealthy merchants from all parts of the country as any other city in Persia (Great Britain, Public Record Office, F.O. 60/92, Report on trade for 1841. Document (with omissions) in Issawi, op. cit., 118). Mirzâ Husayn Farâhâni, who passed through Kazvin in 1884, states that it had 600 shops, 8 caravansarais, 40 mosques, 9 madrasas and 12 ice-pits (yâkghâdsî) (Safarnâma, 14 ff.). The importance of Kazvin as an entrepôt for trade is also shown by the fact that in 1890 the Imperial Bank of Persia opened a branch there, taking over the agency of the New Oriental Banking Corporation (Issawi, 346). Communications were meanwhile improved. By the 1880s single wire lines belonging to the Persian government connected Kazvin to Tehran (ibid., 153-4). Metalled roads from Kazvin to Tehran in 1899 and from Kazvin to Hamadân in 1906 were completed under a concession granted to a Russian company in July 1893, and in 1913 a contract for a service of motors till the end of 1919 on the roads from Kazvin to Rasht, Tehran and Hamadân was obtained by a Russian subject, and some cars were put into service (ibid., 201).

In spite of the commercial importance of Kazvin in the 19th century, there does not appear to have been any appreciable growth in population, though it is difficult to compare the figures given for different periods since the estimates are not necessary based upon the same criteria. Morier, writing in the early part of the century, puts the population at 25,000 (A second journey, 203), as does William Ouseley (Travels in various countries of the East, particularly Persia, London 1819, iii, 377. Cf. also G. A. Olivier, Voyage dans l'Empire Ottoman, l'Egypte et la Perse, Paris 1801, iii, 49). A later report dated 1868, gives the same figure (United Kingdom, Parliament, Accounts and papers 1867-68, Thomson to Allison, Tehran, 20th April 1868. Document on the Persian question (with omissions) in Issawi, 28), but the census taken in 1298/1880-1 and 1299/1881-2 puts the population at 64,362 (Gulriz, 391 ff.). Mîrza Husayn Khâmsî, who passed through Kazvin in 1909 and advanced from there to Tehran (Gulriz, 861 ff.), in July, with a view to exerting pressure on the nationalists, Russia sent troops to Kazvin. Most of these were withdrawn in March 1911, but in December more Russian troops were sent (Gazetteer of Persia, Simla 1914, ii, 310). In the troubled years after the suspension of the Assembly in 1911 and during World War I there was a general break-down of law and order in the province of Kazvin as elsewhere. In June 1918 the headquarters of the "Dunsterforce" was established in Kazvin, whence operations were undertaken against the Djangalls. During the reign of Rîdâ Shâh Kazvin declined. As communications improved it ceased to be an important entrepôt and many of the merchant community and considerable numbers of the population in general moved to Tehran.

ii. MONUMENTS

Most of Kazvin's mediaeval mosques have disappeared, including the early mosque of Râbi' b. Khuthaym (possibly identical to the Dîmâ'î al-Thawr or Dîmâ'î al-Tût of Muhammad b. al-Hâdîjlâdî), the Great Mosque founded by Harûn al-Rashîd, and four others mentioned by Zakariyyâ al-Kazwînî. In the 4th/10th century Kazvin consisted of an inner and outer city with two Friday mosques. The town walls, begun by Harûn al-Rashîd, eventually comprised 206 towers and 12 gates. They were rebuilt in 572/1176 by the vizier Şâd-dîn al-Manârâghî; mud brick was used throughout except for the battlements and the huge gates.

The earliest surviving Islamic building yet identified in Kazvin is the Hâdârâh or inner city, a member of the Masjîd-i Dîmâ'î, which possibly rests on a pre-Islamic structure. Its long awbâf inscriptions (a rarity in Iranian architecture) date it to between 500/1106 and 508/1114, and mention the patron, the amîr A'bî Manûr Khutamârshî b. 'Abd Allâh al-'Imâdî. This dome chamber adjoined a pre-existing madrasa built in the 4th/10th century by the Şâbîb Ismî'llî b. 'Abbâd. According to Zakariyyâ al-Kazwînî, the size of this dome was unparalleled anywhere. He relates how the masons despaired of vaulting such a huge space until a passing boy suggested that they fill the interior with straw. Although the dome chamber's ground plan, with its double openings on all sides but the kibla, resembles those of major Saldjûq mosques in central Iran, the elevation is markedly different. The model may perhaps have been a large-scale fire temple. The internal zone of transition avoids the complex trilobed squinches of central Iran in favour of a broad simple squinch with a superposed hexadecagon of similar form. The ratio of width to height is less than in other Saldjûq dome chambers. Hamd Allâh Mustawfî records that the mosque was given two faâns in 548/1153; if the north faân dates from this time (its decoration is certainly Saldjûq) one would expect a matching southern faân preceding the dome. Possibly the Saldjûq mosque even had four faâns. The present mosque is unusually large; among religious buildings in Iran, only the
The so-called mausoleum of Hamd Allah Mustawfi, which was recently restored, is of Mongol date. It has a square base, a square zone of transition with bevelled corners and a conical roof over an internal dome. The similar tomb towers in Māzar dar. The complete Šafawī monument in Kazwīn is the much-restored palace of Šahid Khumartash, now a museum; a heavily restored pīshkūh and a kiosk with some faded wall paintings survive. The last two centuries are represented by the Masjid-i Šāh, the Shāhzāda Husayn and an extremely rich and varied network of vaulstedd bazaars and caravanserais now being demolished.

**AL-KAZWINI**

**ABU HĀTIM MAHMUD B. AL-BASAN**

**AL-TABARĪ, A SHAFITE JURIST, TEACHER OF AL-SHIRAZI.**

He belonged to Āmul in Tabaristan where he began his studies. In Baghdad he studied under Abū ʿAllām al-Īsfarāʿī (d. 460/1071-2) and the usul under Ibn al-Ḥākkīn (d. 401/1012-13). He taught in Baghdad and Āmul in 440/1050. Al-Shirāzī describes him as his best teacher. Of his works the following are mentioned: 1) Kūh Tadhkīra al-Tadhkīra, a synopsis of the legal work of the same name by al-Mahmūdī (d. 415/1024-25). 2) Raunak, a synopsis of the Lubāb al-Fīkh of al-Mahmūdī (Hādijī Khuṭṭaṭ, Kāfī al-Zunnūn, no. 5702). 3) Kūh al-Ḥiyal fiʿl-Fīkh (ed. J. Schacht, Hanover 1924), the only one that has survived and is one of the oldest works of the scanty Šafīite literature on legal quibbles (ḥiyal). The book, unlike the Ḥanafī works of the same name by al-Shaybānī, al-Sharrāfī, etc., was very little used for the practical purpose of getting round the Šafīite, but was rather primarily intended to point out legal quibbles which were forbidden or disapproved of, in keeping with the stricter Šafīite standpoint, which regards the ḥiyal used by the Ḥanafis as questionable.

**AL-KAZWINI**

**SHAFT ISMAIIL, HIJAAZ AL-DIN ABU 'AMD ABD ALLAH MUHAMMAD B. AL-RAMĀN B. 'UMAR**

(666-729/1268-1338), Chief Kāfī in Syria and Egypt and author of two famous compendiums on rhetoric. Almost nothing is known about his early life. Most biographers mention that he was born in Mosul and that his elder brother, Imām al-Dīn 'Umar, was born in Tabrīz in 655/1255. If it is true that the two brothers were related to 'Abd al-Karīm al-Rāfi (d. 632/1235), see Brockelmann, i (d. 393, s. 167), then the Hexacop: have tapering bases which fill the spandrels between the arches of the octagon, an imaginative integration of the two levels. The exquisite decoration, mainly in brick and plaster, is notable both for a masterly floriated Kufic inscription and for a very early use of glazed ornament. A distinctive architectural and decorative style was developed in Kazwīn during the Sāljuq period and influenced buildings in the surrounding areas, such as the mosques of Kurwa and Sudjās.

The book, unlike the Īlānafi works of the same period and influenced buildings in the surrounding areas, such as the mosques of Kurwa and Sudjās.
handwriting was famous), on which he based his urduza (the ‘Ufrud al-diumdn; see the ed. published in Cairo in 1358/1399, 3, and SuyyT, Baghaya, Cairo 1326/1908-9, 66). Other indications of his literary talents come from a takrid by him on a work by Djamal al-Din b. Nubata [q.v.] and the praise bestowed by biographers and poets on his eloquence (see Matlub, 116-8, 139-52), which may have earned him the title Khafi3 Dimagh (Talqazdni, al-Share’ al-munadi, Istanbul 1330/1312-13; 3, Hadji3 Khalifa, i, 210; Mehren, 7; this title does not appear as part of his name in any of the biographies known to the author of this article though the fact that he held the office of Khafi3 is mentioned). Some assert that Kazwln knew Persian and Turkish in addition to Arabic. His competence in fitah was, according to Ibn al-‘Imad (Shahkarhd, vi, 123), reflected in a work on the usul.

In sharp contrast to the scarcity of information on Kazwln’s early career, and the isolated data on his activities as a man of letters, are the many details on his official career, the most important of which are the following: He held various teaching positions and deputised for his brother (who had been appointed kadi in 696/1297) and Nadim al-Din b. Sapr (in 705/1305, and became kadi and imam of the Mosque of the Umayyads in 706/1307, and Chief Kadi and Kadi of the Army of Syria in 724/1324, having received the appointment in person from the Mamluk sultan al-Nasir during a visit to Cairo (in 711/1312) he had distinguished himself by his personal courage in resisting the imposition of heavy taxes by one of al-Nasir’s lieutenants, but this opposition had apparently not met with disfavour from al-Nasir, who had his lieutenants imprisoned; see Ibn Hadjar, al-Darar al-kamina, iii, Hyderabad 1373/1954, 235-6). Soon afterwards, in 727/1327, he was appointed Chief Kadi in Cairo, succeeding Badr al-Din Ibn Dimama [q.v.]. This appointment marked the height of his career. No kadi was said to have gained an influence over a Turkish ruler comparable to Kazwln’s. Unfortunately Kazwln’s position was adversely influenced by the absolute life of his sons, who were charged with corruption. In the end al-Nasir was unable to ignore the numerous complaints (Makriti, Suluh, ed. M. Ziyada, Cairo 1941, i, 439-42; according to Ibn Hadjar, al-Durar, iv, Hyderabad 1350/1931, 4, he had been advised of these complaints as early as 724) and felt himself compelled to dismiss Kazwln and appoint him to his former position in Damascus, where he died soon afterwards on 15 Djamad al-Asr 739/30 November 1338.

Of Kazwln’s writings only the Talkhis al-miftah and the Idah fi ‘ulum al-badga3 appear to have survived. The Talkhis is a digest of the third section of the Miftah al-‘ulum by Sakkaki [q.v.], which in turn is based on the Asrar al-badga3 and the Dalalat al-‘idria of Abd al-Kahir al-Durjani [see ISTI]. The Idah is an enlarged version of the Talkhis. Both works, though not free from dryness and some casuistry, gained wide circulation, as is evidenced by the numerous manuscripts and commentaries that have come down to us; and their popularity to this day is shown by the existence of various printed editions (lists of manuscripts, printed editions, and commentaries in manuscript or in print in Hadji3 Khalifa, 210-11, 473-9; Brockelmann, II, 22, s ii, 15; Matlub, 169-82; 184-90). They completely superseded not only the two books by Durjani, but also the work by Sakkaki. At the same time, however, they secured a firm place for the methodical approach that had been initiated by these two authors and influen-

ced the older, unsystematic method of discussing literary theory in collections of chapters on the figures of speech (badi‘) which continued to be practised. The main differences between the presentation of Kazwln and that of Sakkaki are: (a) Kazwln’s classification of the madjda badi‘ as part of the ‘ilm al-ma‘dni (see Mehren, 30; Sakkaki classifies this group of figures under the ‘ilm al-bayin); (b) the addition of a section on the badi‘; (c) the addition of chapters on sariba, ibtidad, takhallus, and isti‘da [q.v.]. Kazwln also consulted and discussed the two books by Abd al-Kahir al-Durjani and the Kadi al-Makrzi of Zamakhshar, and borrowed from some of his other predecessors, often without acknowledging his borrowings (Matlub, 191-243). The oldest manuscript of the Talkhis carried the date 724 (Matlub, 164). The Idah, which was intended as a supplement to the Talkhis, cannot have been written before the Talkhis, but nothing further is known about the date of composition of these books or the circumstances under which they were written.

Biography: Biographies appear in all the chronicles and collections of biographies dealing with the end of the 7th/13th and the 8th/14th centuries. The most important have been quoted in the article, but reference should also be made to Tashkopi3zade, Miftah al-‘alwa3, Cairo 1968, i, 209-10. Abstracts from the Talkhis in A. F. Mehren, Die Rheterik der Araber, Copenha-

A. BONEBANKER

KAZWINI, HAMD ALLAH [see HAMD ALLAH MUSTAWFI]

AL-KAZWINI, NADM AL-DIN ‘ABD AL-GHAFAR B. ‘ABD AL-KARIM, a Shafi jurist and Sufi who died in Mubarram 665/October 1266. The most important of his writings was a work known either as al-Hawi fi ‘l-farid or al-Hawi fi ‘l-jadwa3, or simply as al-Hawi, which became a widely used textbook of Shafi’s fitah, and was the subject of nu-

merous commentaries and glosses: seventeen are listed by Hadji3 Khalifa (Kashf al-yunun, ed. Yaltkaya and Bilge, i, cols. 625-7). A versified paraphrase of the work, al-Bahdijat al-wardiyya, by Zayn al-Din ‘Umar b. Mu’affar al-Wardi (d. 749/1348) became especially popular. Al-Kazwln also wrote al-Lud5 bi ‘l-fitah, a briefier work than al-Hawi, and himself composed a commentary on it, al-‘Idah fi sharh al-ludah, and a book on mathematics is also attributed to him. In addition to his accomplishments as a jurist, he was celebrated as a Sufi possessed of wondrous powers. While travelling to Mecca for the hadj, he was seen to be working on al-Hawi in the depth of the night, with the paper illuminated by a mysterious light from his fingers. During this journey, he is related to have met Abid Hafs ‘Umar al-Suhrawardi (d. 632/1234), founder of the Suhrawardi order or Khafibi, who encouraged him to complete the writing of al-Hawi. He spent most of his life in Kazwln, where he was celebrated for his luminous fingers as well as other karimds.
AL-KAZWINI, Muhammad b. Mahmūd, the famous Arab astronomer and geographer. He was probably born at Kazwīn, probably towards 600/1203 and has been his mother tongue.

He was born at Kazwīn, probably towards 600/1203 and seems to have received there his legal education. At a moment difficult to establish he left his native town, went to Bagdad and stayed there some time in Damascus where he met, probably towards 630/1233, the well-known philosopher and mystic Ibn al-'Arabi (d. 638/1240 [q.v.]). It was apparently at this period that he visited al-Mawsīl where he met Dīn ibn al-Askarī al-Kazwīnī, and perhaps also the town of Sīnār. Al-Kazwīnī travelled also in Persia and paid a visit to the town of Dīnārāb. According to Ibn Tağhibirdī, he stayed for a long time in al-Wasit and at al-Hilla, where he fulfilled the function of kādī under the reign of the last 'Abbāsid caliph al-Muṣṭa'sin (640-56/1240-58). We do not know where he met the Arab philologist and geographer Ibn al-Gharnātī [q.v.] who went to the East in 648/1250. From al-Kūfī, one of his nisbas, it would follow that he lived for a certain time in Kūf. After Bagdad had taken by the Mongols in 656/1258, he retired from public life to devote himself entirely to scientific activities. It is quite probable that he found a Maecenas in the Persian historian and statesman al-Dūmayrī (d. 681/1282) [q.v.], from 661/1262 governor of Bagdad on behalf of Hūlugū and his successor Abākū. It is perhaps because of his presumed protection that he dedicated his cosmographical work to al-Dūmayrī. He died in 682/1283. (On his name and life, see his Cosmography; ii; 'Adīdib, ed. F. Wustenfeld, Götttingen 1848, 121, 232, 263, 293, 310, 334, 34, 389-407 and 'Adīdib al-makhlūqāt, in margins of al-Damlīr, Hayāt al-Hayānūn, Cairo 1319/1901-2; 3; S. de Sacy, Christomatia arabae, iii, 447, 448 ff.; F. Wustenfeld, in Göttinger Gelehrte Anzeigen, i (1848), 349 ff.; M. Reinaud, Geographie d'Abou'fida, tr. i, Paris 1848, pp. cxiii-cl; Brockelmann, GAL I, 481; M. Streck, Al-Kazwīnī, in ETI; I: Yu. Kraccovsky, Arabische geografische schriften, in iден., Izbrannye soch., Moscow-Leningrad 1957, 359-60.)

Al-Kazwīnī is the author of two works, a cosmographical one and a geographical one. The first, commonly named Cosmography, has the title 'Adīdib al-makhlūqāt wa-gharā'īb al-mauḏjūdāt "Prodigies of things created and miraculous aspects of things existing". This work is divided into two parts, the first of which treats of supraterrrestrial things, and the second of terrestrial ones. In the first part the author describes the celestial phenomena, i.e. the moon, the sun, the stars, and speaks three of the inhabitants of heaven, the angels. At the end of this part he explains the problems of chronology and of the Arabic and Syrian calendars. The second part begins with a treatise on the four elements, the meteorites and the winds, and ends with the division of the earth into seven climates and gives a description of all the known seas and rivers. Having explained the causes of earthquakes and of the formation of mountains and wells, he passes in review the three kingdoms of nature: the mineral, the vegetable and the animal. The description of the animal kingdom is preceded by that of man, his character and anatomy, and by a characteristic of human tribes. The other living beings are discussed after djims and ghals have been dealt with.

Al-Kazwīnī's Cosmography, the first systematic exposition of cosmography in Muslim literature, enjoyed great popularity in the whole of the Islamic world, as is attested by a great number of manuscripts representing several Arabic versions, by Persian and Turkish translations and by the revisions of the work. J. Ruska (Kazwini-Studien, in ISL, iv (1913), 14-66, and 236-62) has shown against Wustenfeld (see the latter's edition of the 'Adīdib, Kosmographie i. Götttingen 1849, pp. vii-xii) that there were four different Arabic versions of the Cosmography, the second of which, represented by Cod. Monac. 464, the oldest manuscript known so far, and by many others, seems to be the best. Wustenfeld however, for his edition of 'Adīdib (1848), only the most recent version (iv) which is only an 18th century recast of al-Kazwīnī's original work. This recast is represented by ms. Gotha 1508. Besides, Wustenfeld has greatly complicated his edition by rejecting several fragments of version (iv) and replacing them with fragments taken from manuscripts belonging to other versions of the 'Adīdib. Thus he has fabricated a completely new text which does not represent any of the existing versions of the work. Besides Wustenfeld's edition, there is also a Cairo edition (n.d., 8°, 416 pp.), based on a manuscript related to Cod. Monac. 464 and analogous to the edition of the Cosmography published in the margins of the edition of al-Damlīr's Hayāt al-Hayānūn (Cairo 1319/1901-2).

The manuscripts of the Cosmography are often illustrated with i.a. geometrical tables and miniatures representing plants, animals and various monsters, which have sometimes a high artistic value (on the Arabic versions, the Persian and Turkish translations and the manuscripts of these versions, see al-Kazwīnī, Kosmographie. i, ed. Wustenfeld, iii-xii; Streck, op. cit.; A.M. 'Akkād, al-Fusul, i, 123-7; Brockelmann, GAL I, 883; Krakovský, op. cit., 362-5; M. Kowalska, Eine unbekannte Handschrift Al-Kazwīnīs Kitāb 'Adīdib al-makhlūqāt, in Folia Orientalia, i, 2 (1959), 326-32).

The sources of the 'Adīdib al-makhlūqāt have not yet been studied (see on this problem Persich, Kat. d. arab. Handschr. zu Gotta, iii, 431). Going through Wustenfeld's edition one can discover some twenty odd authors whose works have been used, from al-Dībīzīs and Ibn al-Fāqīh down to Ibn al-Āthīr, the most often-quoted being the one by Abū Hāmid al-Andalusī and the anonymous treatise entitled Tuhfat al-gharā'īb (see M. Kowalska, Remarks on the unidentified Cosmography Tuhfat al-gharā'īb, in Folia Orientalia, ix (1967), 11-8). The connexions between the Cosmography and Yākūt's MaʿāDIM al-buldān are still to be established. From what has been said above, it is evident that there does not yet exist any critical edition of the Cosmography. Wustenfeld's edition stimulated a translation by H. Ethé (Leipzig 1868) which...
comprises, however, only the first part. At the beginning of the 19th century A. L. de Chezy translated the chapters on the minerals, the vegetables and the human being (see S. de Sacy, op. cit. iii, 385-316). In his Über die Ursprung und die Bedeutung der Sternnamen (Berlin 1809), L. Ideler published an annotated edition of the chapter on the stars. Of the partial editions, translations and studies of the Cosmography the following are mentioned here by way of example:

Al-Kazwini’s second work, commonly called Geography, is known from several manuscripts belonging to two different versions. The oldest, entitled ‘Adhâr al-abbâd “Prodigies of the Countries” (see Hâdîdî Khalla, iv, 186) was composed in 661/1262-3 (see Reinaud, op. cit. cxiv). The second complete and revised version is attributed to the 12th century. It is called the title ‘Adhâr al-abbâd wa-ahhâr al-abbâd “Monuments of the Countries and History of their Inhabitants” (see Hâdîdî Khalla, i, 154).

The four manuscripts of the second version served Wüstenfeld as the basis for his edition of the Geography (Cosmography, ii: ‘Adhâr al-abbâd, Göttingen 1848. Another edition, Beirut 1892, is in fact only a reproduction of Wüstenfeld’s edition.

The description of the earth in the ‘Adhâr al-abbâd follows the Ptolemaic division of the oikoumenes into seven climates. The cities, countries, mountains, rivers etc. situated in each of these climates are described in alphabetical order. The description of each city or country contains geographical and historical facts and also biographical data on famous personalities originating from them. Thus the Geography resembles the Mu’jam al-abbâd of Yâkût so far as the disposition of the material is concerned (except that in al-Kazwini’s work the material is distributed over seven different dictionaries according to the division in climates). Certain articles of the Geography, concerning e.g. various mountains, rivers etc. can also be found in the Cosmography, often with exactly the same tenor. Besides the two Arabic versions, several Persian revisions and Turkish abridgements of the Geography are known. Towards 808/1403 al-Bâkûwi gave a new version of it, which is independent of the two Arabic versions mentioned above (on the various versions and translations of the Geography and on the manuscripts of this work, see Wüstenfeld, Kosmographie, ii, pp. iii-x; Steck, op. cit., Brockelman, S I, 882-3).

As opposed to the sources of the Cosmography, those of ‘Adhâr al-abbâd have been object of some studies. Already F. Wüstenfeld had compiled a list (very incomplete, however) of the sources used by al-Kazwini (Gött. Gelehrte Anzeigen, ii, (1848), 351).

He returned to this problem in his edition of Yâkût’s Mu’jam al-abbâd (Leipzig 1860). In his preface he propounded the opinion that al-Kazwini made extensive use of this work, without mentioning this use. W. Jwaideh (The Introductory Chapters of Yâqût’s Mu’jam al-Buldan, Leiden 1959, 44, n. 1) has shown that al-Kazwini borrowed from Yâkût the preliminary descriptions of all seven climates. In 1967 M. Kowalska published the first serious study on the sources of the Geography in an article entitled The Sources of al-Qazwini’s ‘Adhâr al-Buldan, in Folia Orientalia, viii (1966), 41-88, in which she gives a detailed analysis of those sources. From this it appears that nearly 360 articles out of the ca. 600 which form the total of al-Kazwini’s geographical dictionary contain data borrowed from the Mu’jam al-buldan, and that a very considerable part (viz. 157) of these 360 articles contain nothing else but extracts from Yâkût’s work. Thus the Mu’jam al-buldan forms the principal source of the ‘Adhâr al-buldan. M. Kowalska’s study shows also that all quotations from al-Yâkûbî, Ibn al-Fakîh, Ibn Fa’dîn, Ibn Hawkal, al-Mukaddasi and from the two risâlas of Abû Dulaf to be found in al-Kazwini’s Geography, have been borrowed by the latter not from the original works of the geographers in question but from the Mu’jam al-buldan. She has also established a complete list of the fragments of al-Kazwini has extracted from other Arabic sources, from which are cited here the works of Ibrîhîm b. Ahmad al-Turtüshî (= Ibrîhîm b. Ya’qûb al-Turtûshî; see T. Kowalski, Relatio Ibrahim ibn Ya’kub de itinere slavico, Cracow 1946, 21-35), al-Bîrûnî, al-’Udrî, Abû Hâmid al-Andalusî and an anonymous cosmographical treatise of the 12th/18th century. Due to Dulaf’s Narrative, she has compiled a list of all-Kazwini’s oral informants. The author of the ‘Adhâr al-buldan owes his knowledge of West Africa to two of these informants (see M. Kowalski, Zwei wegen behaftete muslämische Reisende in West-Sudan im 13. Jh., in Folia Orientalia, iii (1961), 231-4). Although rather uncritical and lacking an index, Wüstenfeld’s edition of the Geography is nevertheless the starting-point of several partial editions, translations and special studies on the various chapters of the work. These studies are: G. Jacob, Studien in arabischen Geographen, Berlin 1892, ii, 38-9, 60-1; idem, Arabische Berichte von Gesandten an germanische Fürstenhöfe aus dem 9. und 10. Jahrhundert, Berlin-Leipzig 1927, 21-33; A. Seippel, Rerum normannicarum fontes arabici, 24-5, 44 and Adnot. crit., pp. XII-XIII, XX; G. Ferrand, La Tuhfat al-abbâd de Abû Hâmid al-Andalusî al-Garnâfî, dans JA, (1925), 235-9; M. C. Lyons, Some Aspects of Al-Qazwini’s ‘Adhâr al-Buldan, in Glasgow Univ. Or. Soc. Trans., xx, (1963-4), 63-76; M. Kowalska, Namensregister zu Qazwini’s ‘Ajqar al-buldan, in RO, xxix, (1963), 99-115, xxxi (1966), 119-34; idem, Al-Qazwini’s ‘Adhâr al-Buldan and the quotations from Abû Dulaf’s Narrative, in Atti del III Congresso di Studi Arabi e Islamici, Ravello 1966, Naples 1967, 427-35.

Al-Kazwini was the greatest of Arabic cosmographers. He was at the same time astronomer, geographer, geologist, mineralogist, botanist, zoologist and ethnographer. Like all his predecessors (who appeared already in the 6th/12th century), he was only a good compiler who neither produced a new fact nor created any new theory. Being, however, very learned and very cultivated at the same time, he succeeded in synthesizing all the facts known...
in his time about the above-mentioned sciences. His principal merit lies in his having accomplished the raising of cosmography to a literary genre of extremely high level. He was also a talented vulgariser who knew to express himself clearly and realized that erudition should not exceed certain limits, in order not to discourage the general public. His language is clear, simple and varied, although he often does not give anything but a mosaic of extracts from sources, arranged nevertheless in a skilful way. Highly appreciated by certain modern Arabists who sometimes compare him to Herodotus and Pliny (Reinaud, op. cit. p. exilv; see also Streck, op. cit. and Krackowsky, op. cit. 358-9), al-Kazwini has been judged far too severely by other scholars. V. von Grunebaum (Medieval Islam, Chicago 1947, 301-2, 304) quotes two passages from the ‘Adda‘ al-mahkamat to illustrate the decline of critical science in the 7th/13th century, and G. Wiet (Introduction à la littérature arabe, Paris 1966, 210) looks upon al-Kazwini’s Cosmography as a work “devoid of critical mind” and “lacking originality”. Accordingly, M. Kowalska (The Sources, 87-8) calls him “an amateur geographer … [who] selected the available data rather uncritically often in a quite accidental way”. She also insists that he “has plagiarized the writing of the older geographers and historians”. Indeed, the impression cannot be resisted that al-Kazwini surpassed all the other Arabic cosmographers and geographers in plagiarism. This results clearly from the way in which he unscrupulously plundered the Mu‘aqjam al-buldan as his main source.

Al-Kazwini exerted a great influence on the Arabic cosmographers and geographers of later periods. His two works have been turned to account by authors like Shams al-Din al-Din al-Majshki (d. 727/1327), Ahmad b. Hamdan al-Harrani (writing ca. 732/1332), Hamd Allah Kazwini (d. towards 750/1349), al-Damiri (d. 808/1405), Ibn al-Wardi (d. 861/1457) and several others, down to Mahmud b. Sa‘id al-Safakusi (d. after 1233/1818). On this question, see inter alia, A. M. Mehren, Manuel de la cosmographie du moyen age, Leipzig 1874, 165, 168, 179, 186-91, 198 and passim; Krackowsky, op. cit., 365, 385-6, 493, 598, 618 and 748-9.

Bibliography: Given in the article.

T. Lewicki

AL-KAZZAZ, Abd ‘Abd Allah Muhammad B. ^A‘MAR AL-TAMALT, was born in Kayrawân and spent most of his life there. Attached to the Fatimid caliphs, who held him in high esteem and loaded him with gifts, he followed them—probably for a very brief time—to Egypt and then returned to Kayrawân, where he devoted himself to teaching the linguistic sciences until his death in 412/1022-2, aged about 90. Respected by the great and loved by the people for his powerful personality, his exemplary life and his great liberality, he was venerated by his students, most of whom became prominent men of letters, such as Ibn Rashîq, Ibn Sharaf and Ibn al-Barr, whose teaching of language and grammar was authoritative in Spain, and also al-Hâtîmi, the celebrated detractor of al-Mutanabbi.

Although considered by critics an excellent poet of verses “at once natural and studied” and often referred to by Ibn Rashîq for problems of literary criticism (see refs. to al-Umdâ’s in the bibliography below), it is chiefly for his numerous and voluminous works on grammar and lexicography that al-Kazzâz seems to have commanded attention in his lifetime. The following titles are cited: (1) Kitâb al-hurar, which seems to be the same as al-Difma‘, is a vast compilation bringing together the meaning of each particle, harf, its use, its value, and its role in the sentence; (2) Kitâb al-Sagârat (published Sidon 1344/1925-6), a lexicographic work on words carrying ten or more different meanings; (3) Kitâb al-bukhâra ‘l-siyâra, published Sidon 1344/1925-6, on the anatomy of the human body, for the use of scribes and slave dealers; (4) Kitâb adab al-sultân wa ‘l-tasrifr, on patterns and triple vocalisation; (5) Kitâb al-fad wa ‘l-fâd, (6) Kitâb al-ta‘rid wa ‘l-tasrifr; (7) Kitâb ma‘yûdâ li ‘l-bashar li ‘l-darura, on poetic licence; Éd. M. Ka‘bi, Tunis 1971; (8) I‘râb al-Duraydiyya, a commentary on the poem called al-Mâshâra by Ibn Durayd; (9) Sharh Risâlad al-balâsha, on a work of rhetoric; (10) Kitâb abyût al-ma‘ânî, on the riddling verses of al-Mutanabbi; (11) Kitâb ma‘lûthiya ‘l-Dir al-Mutranabbi min al-lahw wa ‘l-ghala, on the criticisms arising from certain instructions in the poetry of al-Mutanabbi; (12) Kitâb adab al-sulâhan wa-l-‘irâda’addab lahu, in 10 volumes, probably a work on the rules of conduct for princes and those to be observed towards them. (For the mss. of these works, see Brockelmann in the Bibliography below.)

By the nature and worth of his teaching and his writings, al-Kazzaz seems to have played a determining role in the philological orientation which characterises the “Literary School of Kayrawân” under the Zirids.

KECE. [see LIBÂS].

KECEPÎ-ZADE. [see pu‘AD PASHA; ‘IZZET MOLLA].

KECIBOYNUZU IBRAHÎM HÎLMÎ PASHA (b. 1760/l 747, d. 1340/1825) Ottoman Grand Vizier, November 1806-June 1807. The son of a Janissary officer, he rose through various posts in the corps to the chief command (hence he is sometimes referred to as İbrahim “Agha”). Upon the dismissal of Hüfîz İsmâ‘îl Pasha (14 November 1806), provoked by the attempt to use the troops of the Nişâm-i Dîdî (q.v.) in Rûmeli, he was appointed Grand Vizier. As sâdir against Russia (war having been declared by the Porte on 22 December), he led a refractory army of Janissaries and volunteers to Silistre (May 1807), where, however, no military
activity ensued. When news of the final rising against Selim II (the “Kabakci wakasli”), 29 May) reached the camp, the Janissaries rose in sympathy and Ibrahim fled into hiding at Rusçuk. He was dismissed on 18 June. The various governors he held thereafter are listed in SGO, ii, 154. For the context of these events and full bibliography, see S. J. Shaw, Between old and new. The Ottoman Empire under Selim III, 1789-1807, Harvard Middle Eastern Studies no. 15, 1971, and SELIM III. (ED.)

**KEFA, KAFFA, the old name of the town of modern Theodosia (Russian Feodosia), on the southeastern coast of the Crimea. In classical times its name was Theodosia, and it was founded in the first half of the 7th century B.C. as a colony from Miletus in Ionia. It is first mentioned in 390 B.C., and according to the sources, the town derived great profit from exports to Greece, having a port with a capacity for 100 ships. However, the town’s trade was harmed by attacks of the Scythian tribes living in the steppes to the north of Kefe. Kefe is recorded by Constantine Porphyrogenetus in the form Kapka as the place where the people of the Chersonese fought with the king of the Bosporus. In the following centuries, Kefe was founded. This place was known as Capkum in Roman days, and the Byzantines erected a column which bears an inscription with the date 819 A.D. (E. H. Minns, Scythians and Greeks in South Russia, repr. New York 1965, ii, 555-8; Pauly-Wissowa, Real-encyclopadie, v, 2, cols. 1921-2; for the other accounts concerning the name Kefe, see J. Buchan Teller, The Crimiea and Transcaucasia, London 1876, i, 74). With one or two exceptions, the name Kefe is not mentioned in other sources before the 13th century.

Geographical conditions linked the Crimea, and naturally Kefe, to the Kipchak steppes, and also via the Black Sea to Anatolia, and especially to Istanbul. In the development of the East-West and South-North transit trade, Kefe played a great role. Like other Crimean ports, it was dependent on Byzantium, but autonomous in its internal affairs. When the Latins captured Constantinople in 1204, it became dependent on the Byzantine kingdom of Trebizond. From the 13th century onwards, the Saldiköy of Rum became concerned with the Crimean peninsula; there were some Turkish traders active at that time in Kefe, and the Kefe-Sinope-Istanbul route was the most used in the Black Sea (G. I. Bratianu, Recherches sur le commerce génial dans la Mer Noire au XIIIe siècle, Paris 1929, 228). When Genoa and Venice obtained permission to trade in the Byzantine lands, the Genoese assumed the more active role in the Black Sea and in the region of Crimea. The Crimean ports benefited from the peace established within the steppes by the Mongols, and the Genoese, probably ca. 1266, received permission to trade and to live in Kefe with the consent of the Golden Horde Khans Mengü Timur, as well as from Urani Timur, grandson of Djold, who was the ancestor of the Crimean Khans and who had been granted the land as an appanage (Bratianu, 198 ff.; W. Heyd, Histoire du Commerce du Levant au Moyen-Âge, repr. Leipzig 1939, ii, 163 ff.). The Genoese built city walls around Kefe and also founded some other trade colonies near it. At the time when Ibn Baṭūta visited Kefe, it could accommodate 200 ships (Rībţa, tr. Gibb, i, 142-3). Kefe had a cosmopolitan population, and was nominally dependent on the Golden Horde Khan ( decree of Timur Kuttugh dated 868/1368, cf. A. Nimet Kurat, Topkapı Sarayi Müzesi Arşivi ndeki İtalyan ve Türkistan hanlarına ait norsk ve bitikler, Istanbul 1940, 149-9). Apart from the many Muslims, there were also Genoese, Greeks and Armenians and it was estimated that in 823/1420 the population in the city was ca. 40,000 (Schiltberger, Travels and Bondage, London 1879, 49, 50). Pero Tafur says that the city was as big as Seville, but twice as crowded; and since the slave-trade was important there, there were agents of the Mamluk state dispatching slaves from the Crimean to Egypt (Travels and Adventures, 1435-1439, London 1929, 132, 133 ff.). In Kefe there was a ṭudān whose task was to look after the Muslims on behalf of the Golden Horde Khān, and also a customs officer to collect the duties on commerce (Kurat, op. cit., 64, 149; Heyd, op. cit., ii, 370).

After the Giray Crimean Khānate came into existence, it began a continuous struggle with the Genoese. With the support of an Ottoman force, Hādjiđi Giray (d. 860/1456) besieged Kefe; the Genoese bought them off by agreeing to pay a tribute of 3,000 gold pieces (Heyd, ii, 383), although Hādjiđi Giray continued to exert pressure on the town.

Attempts by the Genoese to impede Ottoman trade in the Black Sea determined the Ottomans to move against Kefe. Gedik Ahmed Paşa conquered Kefe with 300 ships of varying tonnage at the beginning of Safar 880/June 1475 (‘Ashk-paşhażade, Ta‘rikh, Istanbul 1332, 213-15; Ibn Kemal, Tāvārikh-i ʿAli-i ʿOthmān, ed. Şerafettin Turan, Ankara 1954, 421-3; Heyd, ii, 401 ff.). Kefe and other Genoese strongholds were now taken directly under Ottoman sovereignty, whilst the landward parts and high plateau of Crimea were left to the Crimean Khānate. In the time of Bayezid II (886/1481-1512), Kefe became a princely sandjak and first the prince Mehmed, and then after his death, Suleyman son of Selim I, became the governors of this sandjak. During his struggle for the throne, Selim had had to stay in Kefe for a while (Topkapı Sarayi Müzesi Arşivi, N.E. 95; Çağatay Uluçay, Yavuz Sultan Selim nasil paşığı oldu, in TD, ix (Istanbul 1934), 81, 89-90).

The trade of Kefe was now in the hands of Turkish Muslim traders, following the Kefe-Sinop-Istanbul and Kefe-Trebizond routes, and according to the Kefe customs record book, dated 892/1487, trade was brisker than before (see Başbakanlık Arşivi Genel Müdurlüğü, Kefe mukataası defteri, No. 5280 mukerrer).

The internal condition of the town is known from a takbir register from the reign of Suleyman I; according to this, Kefe was divided into three sections, the Ic Ka‘le (Inner fortress), the Frenk Hişarlı (the European castle) and the Ka‘le altı (the lower side of the castle); Muslims resided in Ic Ka‘le and Frenk Hişarlı, and Christians (such as Greeks, Armenians, Russians), Jews and Circassians used to stay in Ka‘le altı (Kha‘k-i-Ka‘le) (Başbakanlık Arşivi Genel Müdurlüğü; Tapu-Takbir defteri, No. 370, pp. 481-3).

In the quarters where Muslims lived, there were 17 small mosques and 2 large ones. The taxes collected from Kefe included hemp, dyestuffs, various kinds of thread, cotton cloth, beeswax, oil, fat, rice, cheese, hardware, etc. (Kefe mukataasi defteri, No. 5280 mukerrer). Exports included various kinds of fruits, olives, and dried fruits, wheat, corn, barley, chickpeas, lentil, flour, honey, olive oil, horses, cattle, various kinds of leather, dried fish and caviare (Kânînâmâ-ı iskele-i Kefe, Taputahbr defteri, No. 370, p. 479). Above all, slaves captured in South Russia and the Kipcak steppes were sent to Kefe, which was a traditional centre of the slave-trade. The annual customs income of Kefe was 620,000 akças (Kânînâmâ-ı iskele-i Kefe, pp. 479, 483; for the pesidük duty (sc. that which was used to be taken for each slave) in 1178/1766, see Kamil Kepeci Tasnifi, No. 5277, p. 70b). In 1523-1642 there were 4,000 houses in Kefe; 3,200 of these were occupied by Muslims and the rest by the minorities, especially by Armenians and Greeks (Chardin, Voyages, Amsterdam 1701, i, 104). When Eyliyâ Celebi visited the city, the Muslims used to live in 50 districts, and Christians used to live as 120 local groups. Within the town there were 9,060 houses, 200 fountains, 105 sebils, 9 inns for ballars, 1,010 shops, 160 flour mills, 50 smaller mosques, 60 big mosques, 9 dervish tekkes, 45 schools, 10 public baths and 43 traders’ caravanserais. Among the 167 different craftsmen, the most notable were tailors, jewellers, shoe makers, and prayer-rug weavers; most of the population in the second half of the 16th/17th century were involved in the slave trade or the export of honey (Seyhadnâmâ, vii, 673 ff., 678-9, 682). In the town of Kefe, which now acquired a characteristic Turkish appearance, the most prominent buildings included the mosque of Sultan Selim I; the mosque of Prince Süleyman; the Kule Kapisi mosque, built in 1483; the Wezir Khan; the mosque of Prince Amur and the mosque of Sultan Selim I; the mosque of Prince Amur; the mosque of Prince Ece. (Kdnun-ndme-yi iskele-i Kefe, 1861, p. 31). The first half of the 11th/17th century the eyâlet of Kefe consisted administratively of the beylerbeyi of Kefe, Sughdak and Menkub, and there were 3,200 households paying the poll-tax or dijâya. This last was collected by a muhassil instead of the defterdar. The annual customs income of Kefe was 4,238,500 akças. Trade was no longer in the hands of Muslims, but in the hands of traders looking to Russia (Başbakanlık Arşiv Genel Müdürü, Halkiyeden Müdever Defterleri, No. 3722, pp. 51, 52). In the following century, the customs of the port of Kefe, plus the 1⁄3 of other taxes coming from Gökzeve, Taman, Balâkli, Kafe-i Hdid, Kef and Khâtilash in 1181/1769 produced 4,738,500 akças. Trade was no longer in the hands of Muslims, but in the hands of traders looking to Russia (Başbakanlık Arşiv Genel Müdürü, Halkiyeden Müdever Defterleri, No. 3722, pp. 51, 52). The Turks used to call Kefe “Istanbul the Lesser” or “Half of Istanbul”, because of its ethnic diversity.

During the Ottoman-Russian War of 1149-51/1736-9, Kefe in Muhabram 1149/1736 narrowly escaped attack by a Russian fleet. (Kirim tarihi veya Necati Efendi’nim Rusya sefernamesi, ed. Faik Reşit Unat, in Tarih Vesikaları, xv (Istanbul 1949), 226). The military command (Seraskerlik) of Kefe was first instituted during the above-mentioned War, and later the Seraskerlik of the Crimea, with this office held by the beylerbeyi of Kefe. The last beylerbeyi of Kefe was Abaza Mehmed Pasha who was appointed in Shawwal 1184/February 1771 (for the beylerbeyis of Kefe, see Başbakanlık Arşiv Genel Müdürü, Halkiyeden Müdever Defterleri, No. 16, p. 42). At the end of the war beginning in 1182/1768, Kefe and the Crimea were both captured by the Russians. The Muslim Turkish population started even in the opening stages of the war to migrate into the interior of the Crimea and also left by ship to other Ottoman territories. At the same time, the population of Kefe was reduced. The last beylerbeyi of Kefe was Seyhadnâmâ, vii, 673 ff., 682; Başbakanlık Arşiv Genel Müdürü, Ali Emiri Tasnifi, I. Mahmud kismi, No. 1522, III. Osman kismi, No. 563).

In the face of pressure from the Cossacks and Russians from the 11th/17th century onwards, the fortress of Kefe was strengthened in the second half of that century (ibid., vii, 674 ff., viii, 31).

Kefe, though normally a sandjak, was sometimes treated as an eyâlet also (Başbakanlık Arşiv Genel Müdürü, Kamil Kepeci Tasnifi, Ruus defteri, No. 256, p. 217, see also Mühimme defteri, No. VII, pp. 19, 22-3 and various other places). It was finally erected into an eyâlet in 1080/1670 (C. Orhonlu, Osmanlı tarihinin ait bâgâleri, Tekshiser (1593-1603), Istanbul 1970, 78), and it remained as such till 1191/1777. There was no organisation of timars in the eyâlet, but instead it had an administration which consisted of a mîl defterdar and the deputy clerks of the Dâsin; a customs superintendent with a staff of 50, an Agha of Janissaries, a dâbêğî aghâsil, and a Topçu aghâsil. There was a fleet of 5 ships under the command of the Admiral of Kefe (Eyliyâ Celebi, vii, 668). When the beylerbeyi of Kefe was occupied elsewhere, his deputy was the sandjak kâmil of Kefe (Findikli Mehmed Agha, Nusretnâmâ, simplified version by Ismet Parmak, istanbul 1963-6, i, 145, 167, ii, 417). In the
Turks [see Karaites ii] (G. Matthew Jones, Travels in Norway, Sweden, Finland, Russia and Turkey, also on the Coasts of the Sea of Azof and of the Black Sea, London 1827, ii, 219-20, 222; for the state of Kefe in 1836, see E. Spencer, Travels in Circassia and Krim Tartyar, London 1837, ii, 234-5). Although the Russians called the city Fodossia, the name of the town was still Kefe to most of its population, even as late as 1856 (E. Spencer, Travels in Circassia, ii, 235). At this period, Kefe was in the transitional stage between being a Tatar and a Russian town, but gradually gained the characteristics of a summer resort, and in the latter part of the 19th century it was a city with a population of 10,000, with an additional 3,000 to 5,000 summer visitors every year (Telfer, The Crimea and Transcaucasia, ii, 142, 144 ff.). In 1897, only 3,200 of the whole population of 27,358 were Crimean Tatars.

The present form of the name derives from Greek xókaia). The Arabic geographers and historians usually refer to it as Kâmeh (thus in Ibn Hawâkil, 192, 195, tr. Wit, 188, 190-1; al-Sulami, 39/678-9, and this time the fortress capitulated; the occupation by the Musulmans was, however, short-lived (al-Baladhuri, Futâh, 184 ff.). The Greeks lost it once again, this time to Maslama b. 'Abd al-Malik [g.c.], and it continued to change hands between the two sides. In 149/666 the caliph of liquorice-fibre, are laid five bars of hazeb-wood 6-10 cm. thick and about 7 m. long. On these are put diagonally, at intervals of 40 cm., 30 bundles of reeds each consisting of two parts. Seven bars, each 15 cm. thick, cover the bundles diagonally and over these are laid 8 cross-bars consisting of 2 parts. When persons are transported, reeds are spread plentifully on this construction and one or two small shelters, made of wood and covered with mats (therge), are erected on it for the travellers. Depending on its size, the kelek has two to six oars. On arrival at Baghdad, the cargo is unloaded, and the wooden construction removed: the bags are taken out, deflated and dried; they can then be kept for about 2 years. The kelekk then loads them up on a donkey and returns home. The journey down the river Tigris may be hampered by the wind, which drives the kelek to the bank, where the traveller may have to wait several days for better weather.

Several passages of the Thousand and one nights show that the kelek was not always such a complicated raft. Just like the janof (pl. alawaf), it could be constructed of wood only; Sayf al-Muluk builds a kelek of long trunks tied together with cords (ed. Habicht, iv, 245, 246 ff., tr. Littmann, Wiesbaden, 1953, v, 265 f.). He even (ibid., 264, tr. v, 279) utilises doors of aloe and sycamore, which he ties together with cords of silk. In the manuscripts of the Thousand and one nights, the word kelek has on the other hand not always been understood by the copyists, who have often substituted for it fulk, which graphically comes near to it, although the context requires the meaning "raft". The conounding of kelek with fulk "Noah's Ark" (in the Kur'an) may have led to the assumption that kelek has the same meaning, even though this is as wrong as relating janof [lit. faltan] "deluge".

**KEMĂK, Armenian Gunmmkh or Ani, usual Syriac form Kama, modern Turkish Kemâk, a small town in eastern Anatolia on the Karâ Şû or upper Euphrates, now the centre of a kaza of the same name within the vilayet of Erzincan, and a station on the railway connecting Sivas with Erzincan. The present form of the name derives from Greek xókaia. The Arabic geographers and historians usually refer to it as Kâmeh (thus in Ibn Hawâkil, 192, 195, tr. Wit, 188, 190-1; al-Yâkâbî, Historiae, ii, 447), although Yâkût, iv, 479, confirms that Kâmeh was the more usual form.

During the Umayyad and Abbâsid periods, Kemâk was a frontier fortress, possession of which oscillated between the Arabs and the Byzantines. The first Arab attack under Habîb b. Maslama [g.c.] was a failure. A second attempt by Şâfân b. Mu'âjal was also unsuccessful, but he made another attack together with 'Umar b. al-Hubâb al-Sulamî in 59/678-9, and this time the fortress capitulated; the occupation by the Musulmans was, however, short-lived (al-Baladhuri, Futâh, 184 ff.). The Greeks lost it once again, this time to Maslama b. 'Abd al-Malik [g.c.], and it continued to change hands between the two sides. In 149/666 the caliph of
al-Mansur despatched against it a successful force under al-Abbas b. Muhammad and ordered its fortification as a frontier post against the Khazars (al-Ya`kbî, loc. cit.). The Byzantines recaptured it in 177/993-4, and apart from a period during the caliphate of al-Ma'mûn, it remained nominally subject to the Emperors until the Battle of Manzikert.

On the first Turkmen raids on Kemakh came in 449/1057-8, and shortly after the Battle of Manzikert or Malâzgerd (q.v.) in 463/1071, it was in the hands of Mengüджek Ahmad, who apparently had received the area round Erzindjan, including Kemâkh, as a grant from Alp Arslan. Inscriptions on the Great Mosque at Divrîgî state that Mengüджek Ahmad had captured Kemâkh from the infidels. He made his capital and was buried there on his death in 512/1122. In 536/1142 the Mengüджek principality was divided amongst three heirs, the capital falling to Malik Mahmûd. In 622/1225, the Saljûq sultan ʻAlâ al-Dîn Kaykûbud (q.v.) annexed Erzindjan, and the last Mengüджekid Dâwd Shâh sought an alliance against him by offering Kemâkh to the amir al-ʻUmur of Erzurum al-Aghraf and to the Khârazm Shâh Djiâl al-Dîn Mankûbîrî. Both of these refused to intervene, and the Saljûq ruler annexed the region including Kemâkh (Ibn Bibî, Ed. Lugal and Sümmer, 33, 35, 69-71). It seems to have at first formed part of the domains of the Eretnâ dynasty (q.v.) and then to have enjoyed a semi-independence between the rival factions of Kâdî Burhân al-Dîn (q.v.) and Mutâhharîn, the “capital” was the Ak Koyunlu Uzûn Hasan who established Selim I; henceforth, it remained part of the Ottoman empire till the collapse of the latter. The Ottoman Kânûnî-nâmé of 922/1516, based on the Ak Koyunlu laws, gives the impression that the town derived much of its wealth from the transit trade through the Euphrates valley (O. L. Barkan, XV or XVI asırda Osmanlı imperatorluğunda ieval ekonomiinin hukuk ve mali esasları, Istanbul 1943, 184-5). In the mid-11th/17th century, according to Ewliyâ Cebeli, there was a garrison in the Kemâkh fortress of a Janissary chief and 500 soldiers, and the economy of the town depended mainly on the salt mined nearby and sold in the town and on a fine-quality cloth woven there (Seyhâhat-nâmé, ii, 375-6). In 1830, J. Brant recorded a population there of 400 Turkish and 30 Armenian households (Jnul. of the Geogr. Soc., 1836), and in 1892, V. Cuinet registered for the whole kaza of 14,547 Muslims, 3,692 Armenians and 633 Greeks (La Turquie d'Asie, Paris 1892, i, 220 ff.). After its definite incorporation into the dominions of Selim I, Kemâkh was well within the Ottoman frontiers and hence lost much of its earlier strategic importance; however, during the First World War it again became an important defensive position in the fighting against the Russians.

KEMAL [see ATATÜRK].

KEMAL, ʻAli (1867-1922), Turkish writer, journalist and politician. His father Hâdîdî Ahmed Efendi had come home as a young man from a village near Çankırî and had made a fortune as a wax-maker and had become the warden of his gild. ʻAli Rıdâ (as ʻAli Kemal was called until his student days, see below) was born in 1867 in the Suleymaniye district of Istanbul, to his father's second (Circassian) wife and grew up in a traditional conservative family atmosphere. After attending the local schools, he entered the School of Political Science (Mekteb-i Müllikîe), where he particularly enjoyed the courses of Murad Bey (known as Mîzânî Murâd, 1853-1914, the future Young Turk leader in exile, who later made his peace with ʻAbd al-Ḥamîd II, see B. Lewis, The emergence of modern Turkey, index). The Tercüman-i Habîbat was his favourite newspaper, where he admired the poems and articles of Muallim Nâdir, the leader of the literary opposition against the modernists, particularly against ʻAbd al-Ḥakk Hâmid and Redja’î-zade Ekrem. He also began to contribute to a student magazine Gûlşen under the pen-name ʻAli Kemâl, which gradually replaced that of ʻAli Rıdâ. While a student at the Müllîkîe, he in 1886 went to Europe, where he spent over a year in Paris and Geneva and improved his French. On his father's death in 1888, he returned to Istanbul to attend to family affairs and complete his studies. Inspired by what he saw in European universities, he attempted to set up, together with a number of his university friends, a students' association (for details see his article Mekteb-i Müllikîe dîne-i müslûmînsel cemiyetler, in İbâdâm, 20 August, 1908). The authorities became suspicious and the konak where they held their meetings was raided by the police. The students were rounded up and ʻAli Kemâl and four others (including ʻAbd al-Halîm Mendîb, a future Young Turk writer) were sent to prison, where they spent several months. Eventually ʻAli Kemâl and a poet friend of his (Farhî of
Kastamonu) were banished to Aleppo. He spent five years there, where he was officially attached to the office of the vali with a salary and was also allowed to teach literature and French in the local high school (mekteb-i ʿiddāt). Interesting details of his life and literary activities in Aleppo are given in his autobiography (see below). In 1894 he managed to escape to Paris and became a regular correspondent of the Istanbul daily İkādām, in which he published a highly popular series of letters and articles (for the controversy over the doubtful originality of some of his letters, see Hüseyin Dibahid, Cəwəoğulərəm, Istanbul 1326 rāmī 1910, 37-92). This occurred at a time when no political refugee could get anything published in Istanbul under his own name, and this privilege has been taken as an indication that ʿAll Kemāl was by no means persona non grata in the capital. While in Europe he was in regular contact with the Young Turks, but never became one of them; he disagreed with most of their ideas, and his sympathies lay rather with ʿAbd al-Hamīd to whom, as later evidence showed, he offered his services as adviser and informer (copies of his reports (jurnals) and letters to the Sultan and his agents, some in facsimile, have been published; see Ahmet Bedevi Kuran, Osmanlı imparatorluğu nda inkişaf hareketleri ve milli mücadele, Istanbul 1955, 302-9, and Asaf Tugay, İbro, Abdülhamid'in hizmeti, istanbul jurnalları, Istanbul n.d., 200-17). In 1897 he was appointed second secretary in the Brussels Embassy, reportedly as a reward for his rôle in Murād Bey’s defection (Yahya Kemal [Bayraktar], Siyası ve edebi portreler, Istanbul 1968, 78), but the Ambassador, Munir Pasha, who disliked him, never let him take up his appointment. However, ʿAll Kemāl was allowed to use the title and to draw his salary for several years (Taʿzin of 20 July 1324 rāmī 1908 and Sulayman Nazif’s biographical notes used by İbnülmin M. K. İnal, see Bibliography). From Paris he moved to Egypt and became the superintendent of the estates of two Egyptian princesses, Ahmed Djelāl ed-Dīn Paša’s step-daughter and Muhāmmad Muḥīṭār Paša’s wife. He contributed to local Young Turk papers and founded the newspaper Türk (which was Ottomanist, in spite of its title), by speculating on the stock exchange, but went bankrupt following a crash in the market. When he returned to Paris in 1908, the revolutionary officers in Macedonia, in contact with the Young Turk organisation in Europe, had begun to prepare their move against the Sultan. ʿAll Kemāl corresponded with the Palace and arrived in Istanbul a few days before the revolution of 23 July 1908. He was in the Sultan’s presence when the crisis was being discussed (Yahya Kemal, op. cit., 79). ʿAbd al-Hamīd rewarded his advisory services with a purse containing 450 gold pieces (Taʿzin, 25 July 1324 rāmī 1908; ʿAll Kemāl admitted this, but corrected the sum to 260 pieces, İkādām, 27 July 1324 rāmī 1908). The conservative journalist Ahmad Djewdet (1862-1933), who had no sympathy for the committee of Union and Progress (CUP) now getting ready to seize power, wrote ʿAll Kemāl to be the leader-writer of his İkādām. His first article Müddetên Âliye (“From the Past to the Future”) appeared on July 30 1908, one week after the Revolution. A flood of articles followed daily on politics, history, education, literature, language, etc. After an absence of twenty years from the country, he wrote with great zeal and enthusiasm, in a somewhat didactic but entertaining and very personal style which soon made him one of the most popular journalists of the period. At the same time he taught diplomatic history in the Faculty of Letters and at the Muḥākîye. His dislike of the CUP, which by the meantime employed everything (including political assassination) to influence and control the new régime, soon developed into a bitter hatred, and he began to attack daily the Committee’s policy and methods. On 12 March 1909 ʿAll Kemāl handed over his column to Dr. Riḍā Nūr, deputy for Sinop, who published his famous article of warning which was greeted as a manifesto interpreting all the grievances of the opposition: the CUP was accused of oligarchic tendencies, komplot tactics, bribery, favouritism, intolerance of opposition, etc. ʿAll Kemāl was a candidate of the Ottoman Liberal Party (ʿƏlmānîl Âhrār Fīhrāsī) in the by-election of April 1909, but was defeated by the CUP candidate. He became more violent in his accusations. Outstanding Unionists such as Hüseyin Dibahid and Bahāʿ ed-Dīn ʿAshkār attacked him in equally violent terms in CUP organs like Taʿzin and Şəbdə-yī Ummet and exposed his ambiguous relations with ʿAbd al-Hamīd. The disturbing atmosphere created by the relentless campaign of the opposition press like İkādām, Mīṣān, Serbesti, ʿƏlmānîl and particularly Voltān, led on 13 April to a mutiny of the soldiers, incited by fanatical and disgruntled elements (for a good analysis of the mutiny and its background see Sina Aşkin, 31 Mart 1908, Istanbul 1968, 22). ʿAll Kemāl hid in the house of an English friend and fled to Europe as the army sent by Young Turk headquarters in Salonika (Hareket orduusu, originally Harekât Orduusu “Operations Army”) marched on the capital. In Paris he contacted unionist leaders like Fethi (Okyar) and Dījāwīd in the hope of a compromise with the CUP. When this failed, he contributed articles to Mekhribiyet, Şerif Paša’s anti-Unionist organ abroad. He had already employed a member of the Liberal Union (Hurreyet ve ʾItiḥād) founded in November 1911. In July 1912 the group of “Saviour Officers” (Khâldskdr Dâbişan Grup) brought down the Unionist government, and the Liberals assumed Power. ʿAll Kemāl returned to Istanbul and resumed his leaders in the İkādām. But on 23 January 1913, the Unionists carried out a violent coup d’état (Bâb-ı Ali Bâskıni) and exposed his ambiguous relations with ʿAbd al-Hamīd and his son Behcėt Cemal, Istanbul 1959, 22-26). He returned to Istanbul in May 1913. The assassination of the grand vizier Muhāmmad Şewket Paša on June 11 1913 gave the CUP the opportunity to crush the opposition completely. ʿAll Kemāl, who had promised Djemal Pasha to keep out of politics, was however safe. With his support, he was allowed to publish the same year a daily paper, the Peyām, to which some leading young writers contributed (Reilik Hali Karay, Mīnâbâb Ilimshār, Istanbul 1964, 63-64) but which was suppressed on the outbreak of the World War I. ʿAll Kemāl spent the war years completely secluded from public life on the island resort of Bûyûkâda and along the Bosporus shores. He collected manuscripts and rare books and concentrated on the study of classical literature and history. After the signing of the armistice of Mudros (30 October 1918), which sealed the fate of the Unionist régime, Mihran Etendi, the editor of the daily Şəbdə invited ʿAll Kemāl to
be a leader-writer of his paper, and he eagerly accepted. By this time the three CUP Leaders Enver, Talat and Djemal had fled the country. He immediately began his violent attacks against the Unionists, daily enumerating the mistakes and misdeeds they had perpetrated before and during the War. The Allied fleet reached Istanbul on 13 November; the whole city was put under allied control, and hundreds of Unionists were arrested. The Greeks, supported by the Allies, had landed in Izmir and were advancing towards the interior. All Kemal joined the first cabinet of Damad Ferdi Pasha as Minister of Education (4 March 1919). He acted with moderation for a while, and resisted the partisan pressures of the Liberal Union (Yahya Kemal, op. cit., 87-8). In the meantime, the nuclei of the national resistance movement were being set up all over the country and the first guerrillas began to combat the Greek invaders on the Aegean coast. "All Kemal, who became Minister of the Interior in the second Damad Ferdi Pasha cabinet on May 19 1919 (the very day of Mustafâ Kemal's landing at Samsun), soon completely espoused the polity and strategy of Sultan Mehemmed VI, his Grand Vizier and their associates: sc. to ignore the violations of the armistice terms; to follow the instructions of the Allies and in the hopes of winning; to offer no resistance to invading foreign armies, although this amounted, in the eyes of the nationalists, to collaborationism. All Kemal was convinced that Mustafâ Kemal's movement in Anatolia was nothing but a resurgence of Unionist ambitions, organized and supported by the survivors of the CUP (see particularly his article Ithidâd ve Terakkî öldü, paşâmın Ithidâd ve Terakkî'yi "The CUP is dead, long live the CUP!", in Peyâm, 20 December 1919). This fundamental misjudgment of the national ferment in Anatolia caused him to mislead many of his readers and eventually sealed his own fate. On 18 June 1919, All Kemal, as Minister of the Interior, sent out to the provinces a circular against the formation of militia units and preparations for national defence, and assured the British authorities that every office and government building would be open to you at any time" (Ghâzi Mustafâ Kemal, op. cit., 487b; Rida Nûr, op. cit., 341-42; Yahya Kemal, op. cit., 94-99; Rida Nûr, op. cit., 478b; Istanbul Ansiklopedisi, Istanbul 1961, s.v.). İsmet Paşa (İnönü) then foreign minister, who with his party arrived on the very day of the incident at Izmir on his way to the Lausanne Peace Conference, publicly showed his strong disapproval of Nûr ed-Din Paşa, commander of the first army, interrogated him briefly in his headquarters. A big crowd was waiting outside. All Kemal met his death in the square where he was being taken away. The circumstances of his death, a mob lynching according to the received version, are variously reported in the sources. According to some, his death was arranged or precipitated by Nûr ed-Din Paşa for reasons of personal prestige (see Fâlî Reftî Atay, Çankaya, Istanbul 1969, 315-16; R. H. Karay, op. cit., 138-139; and Jaeschke, Türk hurûtsûs saûsâs ilkîlîsî insîlieti belgelere, Ankara 1971, 130-31). He complained of these "colleagues of the Sultan who answered: "Your loyalty has been a great consolation and a source of great hope to me. The Palace will always be open to you at any time!" (Ghâzi Mustafâ Kemal, op. cit., 22-5, English tr. 28). On 3 August 1919, All Kemal revised his Peyâm and continued his campaign, with daily attacks on the leaders of the resistance movement in Anatolia and their supporters in Istanbul. Later Peyâm was amalgamated with Mîhrân Efendi's Sabûh, becoming Peyâm-1 Sabûh (1st January 1920), with All Kemal as permanent leader-writer. All Kemal's activities and writings unified and strengthened the Liberal Union which had shown signs of disintegration. He became one of the two most enthusiastic supporters (the other being Reftî Djevdâd of the Açêmürâ) of the collaborationist policy of the Sultan and of Damad Ferdi Paşa, which was to obey the instructions of the occupying forces and to try to suppress the resistance movement. Following this line of policy, All Kemal welcomed the reinforced allied occupation of Istanbul (16 May 1919), praised the successes of the Sultan's "disciplinary" troops dispatched to fight the Nationalists, and wrote a jubilant leader (25 May 1920) on the publication of the famous fetûh (11 April), followed by the death sentences in absentia on Muşafâ Kemal and his associates. News of the Nationalists' successes made him vacillate occasionally; he would praise the bravery of the Turkish soldiers, but soon would relapse into his usual tirades with the leitmotiv of "false nationalism and the dangers of ignoring world opinion", etc. His vitriolic articles continued till as late as the end of August and early September 1922, when the Nationalists won a decisive victory and the routed Greek army was heading back towards İzmir. Only in his last three articles (8, 9, 10 September), when the Nationalist armies had reached the Aegean, did he admit his errors and terms; to follow the instructions of the Allies and in the hopes of winning; to offer no resistance to invading foreign armies, although this amounted, in the eyes of the nationalists, to collaborationism. All Kemal was primarily a journalist. His early articles in the İhdâm (from 1894 onwards), which he forwarded from Paris as a "special correspondent", are mostly compilations from the French press, with occasional personal or autobiographical digressions (see below). Some of his articles published in Young Turk papers abroad throw light on contemporary ideological differences (e.g. his answer to Açêmürâğhî Yûsûf's famous essay, both published in the Türk, Nos. 24-34, Cairo 1904, reprinted later with the same essay, Açêmürâghî Yûsûf, Ul Tars.
Siyadet, 1327 rủm iy 1911, 33-45). The thousands of articles which he published first in the İkhām and later in his own paper (Peydam which have not been collected) are of great documentary importance for understanding the atmosphere of the period and for following the development of political, social and cultural problems during the 1908-1914 period; but they should be read together with the articles of his great opponent Hüseyin Dāhid [Yaşın] in the Tanrı, the organ of the CUP. His articles of the last phrase, published in the renewed Peydam (August-December 1919) and in the Peydam-i Şahāb (1920-1922) typically reflect the frame of mind and the psychology of the Sultan’s government and its supporters in occupied Istanbul during the time of the resistance movement in Anatolia. Apart from translations from the French, serialised in newspapers or published in book form and various minor publications, ʿAlī Kemal is the author of the following works: (1) Fāris muṣḥabāhīl (a selection of his articles and letters published in the İkhām in the 1890s, 2 vols., Istanbul 1329/1913, 1331 r./1913, 1915); (2) Fitret (written in England in 1895, published in Istanbul 1329/1913). Intended to be a novel, this book consists of a series of loosely-connected essays around his hero Fitret, the product of a mixed marriage, in which the author expounds his ideas on modernism, westernisation, literature, history, and culture, and explains his views on his opponents of the Therawī-i Fünūn literary school, particularly his main adversary Hüseyin Dāhid; (3) Iki hemsīhre (Istanbul 1315/1899, 1329/1913), a long short story, with much autobiographical material from the author’s exile years in Aleppo; (4) Cóle bir şerğüzešt (Istanbul 1316/1900; 2nd ed. of Nos. 3 and 4 published together under the title Bir şerğüş-šaие keşkik, Istanbul 1329/1913); (5) Rüşdi-i İlahi (Istanbul 1329/1913), a study of the French Revolution and its impact on France and other European countries, consisting mainly of detailed biographies of Condorcet, Saint-Just, Danton and Robespierre; (6) Edibiyayat-i haksıhyye dersleri (Istanbul 1330/ 1914), a collection of 12 essays, originally serialised in the İkhām, based on a course “Realism in Literature” given at the Sorbonne in the 1890s, with occasional remarks on contemporary Turkish literature; (7) Rüşdh muṭ̄rurrih mi shārīr mi? (Istanbul 1334/1918), an informal study on the 18th century chronicler Rüşhd, prompted by Ahmed Refik’s enthusiastic article on Ahmed III and his grand vizier and son-in-law İbrahim Paşâ (Sultan Ahmed-i ‘Ebih see Dāndār), in Yeni Mejdūmu, No. 34 (1918), 149-53), in which ʿAlī Kemal compares the method and techniques of oriental historiography with those of modern western history-writing, mercilessly condemning the former. After a long exposition on Oriental and particularly Ottoman classical poetry, he concludes that Rüşhd was a mediocre historian but a remarkable poet of the Nabi school. This work is particularly interesting since it is, in a way, a recapitulation of the themes and leitmotives which ʿAlī Kemal elaborated and repeated in his previous writings, adopting all the negative judgments passed on the Turks and the Ottoman Empire by European writers and observers, and thus developing a deep complex of inferiority vis-à-vis Europe and Europeans. Here we have the clues to his cosmopolitanism, his anti-nationalism and his feeling of helplessness in face of the West, his recurrent claim that it is futile to challenge the Great Powers (Diyāl-i Mu’āṣama), and finally his constant advice for an acquiescent foreign policy and his a priori admission of the superiority of everything western (see also his articles of 12, 15, 17, 21 and 23 January and 23 March 1909 in the İkhām); (8) Omrûm, ʿAlī Kemal’s memoirs about his childhood, his school years and his exile period in Aleppo, were first serialised in the Peydam in 21 instalments from December 1329/-1913. A revised version was serialised in 32 instalments in the revived Peydam from 14 July 1335/-1919. They have not been published in book form, but a critical edition in roman script was prepared by Berna Kazak in 1954 (Istanbul University Library, unpublished No. 9976). When he was not involved in politics or in personal quarrels with his rivals, ʿAlī Kemal wrote essays on diwān-poetry, articles on contemporary literary problems, and occasionally poems which he published in the Peydam-i Edebi, the literary supplement of his paper, to which many outstanding writers (Riḍā Tewfik, Ahmed Refik, Yaḥyā Kemal, Yaṣīl Kādī, etc.) contributed. In poetry and literary criticism, ʿAlī Kemal was a disciple of Muṣʿallim Nāṣīr (1850-93), a neo-classicist and an ardent opponent of the modernist school. He admired the diwān-poetry, had a very low (and wrong) opinion of classical Turkish prose (about which, like most of his contemporaries, he knew very little), and utterly despised the three generations of literary modernists: the Tanṣi̇māt, the Therawī-i Fünūn and the “National Literature” (Millī Edebiydt) schools. He explained his views on Turkish literature in detail in a long letter which he sent in 1918 to Rüşhd Eshref (Unaydīn), who had been interviewing the leading writers of the period (Rüşhd Eshref, Dıyarır ki, Istanbul 1918, modern Turkish ed. by Şemsettin Kütûlu, Istanbul 1971). In spite of the personal cachet of his style (surprisingly much praised by the purist poet Yaḥyā Kemal, op. cit., 71-2), ʿAlī Kemal’s writing was awkward, anachronistic and empty of historical knowledge. Following the tradition of the classical Ottoman munqīš, he filled his essays with copious cliché quotations from the Arabic, Persian and Turkish verse. Like a few “recallitant” contemporary writers (e.g., Dıḥāb ed-Dīn, Shīhāb Sūleymān Nazif, ʿAlı Ekrım, etc.) he took a hostile stand against the language reform movement of the post-1905 period and completely ignored the attempts towards the turkification of the written language. His hair-splitting concern with grammatical rules did not much help to improve his style, as stated by the great contemporary stylist (and his friend and colleague) Refik Kālid (op. cit., 63). A prolific writer of great vitality, with a remarkable encyclopaedic knowledge, ʿAlī Kemal lacked the sense of history and reality. He wasted his talents in endless futile arguments, and ruined his career and himself by following his unbounded ambition, his blind obstinacy and his violent partisanship to the very end.

KEMAL, MEHMED, NAMİK one of the most prominent figures of Turkish literature in the second half of the 19th century, whose fame is due to his works in various fields, including his patriotic and political life.

I. Life. Kemal's mother was Fatima Zahrâ Kâhînân, the daughter of 'Abd al-Laçif Paşa and Mahdûme Kâhînîm. His father Mustafa 'Aşim Bey, who was well versed in history, mysticism and especially in astrology, had many a poet, scholar, and statesman among his ancestors. His ancestry goes back to Şehîd Topâl 'Oğhmân Paşa of the Mora (Morea or Peloponese), who had been Şadr-i Aşâm in the 18th century and was famous for his acts of heroism; Kemal was particularly proud of him. Kemal was born on 26 Shawwâl 1256/21 December 1840 at Tekirdağlî (Tekirdağ) and spent his early years with his grandfather. Together with his grandfather, who in Istanbul held the offices of Miḥlâdûr and Kêsdêr (M. Salâh al-Dîn, Bir Türk diplomatînlî evrâ-i siyâsîyesi, Istanbul 1306, 11) and in the provinces those of mütesellìm, muhassîlî and mumastarîf, he stayed in Gelîbûtû, Tîrkhalâ (Tîrkalâ), Afyon Karâbîşrâl (1846), Kutahanî (1848), Kars (March 1853-July 1854) and Şofya (May 1855-September 1856). When Kemal was 8 years old, his grandfather lost his life in Afyon (30/31 August 1848), and he stayed in Gelîbûtû, Tîrkhalâ, Ahvât (1848), and he married in Şofya Nesîme Khanım, the daughter of the bâdiî of Nîshâ, when he had reached the age of 16. Shortly after that he returned to Istanbul in the company of his grandfather, who was dismissed from his office of Kâyâmâm of Şofya. Following the deaths of his grandfather and grandmother, Kemal had to settle down in his step-mother Dürriyeye Kâhînîm's house in Kûhâbîyân, as the mansion of 'Abd al-Laçif Paşa had to be sold in order to pay his debts.

Since 'Abd al-Laçif Paşa was resident in Istanbul in between two appointments, Mustafa 'Aşim was able to deal with the spiritual upbringing of Kemal during these periods; another important influential factor was his grandfather, whose virtues are praised by the poets of Afyon and who was a member of the Mawlawî convent next to their house. It is probable that Kemal was instructed in sâné and in Persian whilst resident in Afyon. All the sources seem to agree on the fact that he attended the Dâr al-Mawârîf in Istanbul for about a year and a half when he was 12-13 years old (Mâhmûd Oývâd, Ma'ârîf: 'Umâmiyye Nâzâreti târîhî-ye tashkildât ve 'efkdrâtî, Istanbul 1338, 40, 97; 'Omar Fârîk Aḵûn, Namîk Kemâlî, in İ. ix, 55b). Kemal, whose spiritual life was nourished with poetry and music as well as with mystical knowledge, was schooled in the works of Muhîl 'l-Dîn Ibn al-'Arâbî when he was apprenticed to the müdrîs-poet Sayyîd Mêhem Hâmîd (1777-1854), under whose guidance he started reading Turkish diwân poems such as Nâbi and sections of the Maḥâna, while resident in Kars (Bâni Çiçek Kirzîqîğû, Namîk Kemâlî'un Karsîsî hikayesi müdrîsîn büyûk Hâmîd Efendi, in Türk Kültûrû, no. 2/2, August 1964; for this were used the works of M. F. Kirzîqû, 1835 Kasr Zafêrî and Kars Târîhî). During the time he spent in Kars he was also busy with sports like hunting and horse-riding.

We are not able to trace back the exact date of the beginning of Kemal's official career; however, we know that already in the year 1859 he was a secretary to the Bâbî-Şîrî. When Leskoştâlî Şâhîlî was appointed to be Chief Secretary of Customs (Emîlnâ Gümûşkûz'un Taşrîrât Başkâhîlî) (March 1860), Kemal was his assistant, and following the former's appointment to Tripoli as the Director of Customs (Gümûşkûz Emîlnâ) in September 1861, Kemal became a member of the Chamber of Translation of the Sublime Porte, where he stayed until March 1867, when he was appointed to be the Assistant Governor of Erzurum. Meanwhile, he was giving voluntary lessons in orthography and composition at the Dîrîmîsîyye-i Têrîsîyye-i İslâmîyye, of which he was a founder; he kept up these lessons until his departure for Paris (M. Çevîk, op. cit., 97; zbûhâr-ı Şîrîf, Türkiye müsallî tarîkî, Istanbul 1910, ii, 336; Taşwîr-i efhäuser, nos. 208, 285, March 13 and 30 1865, nos. 365, 400, 402, 403, February 13, June 28, July 6 and 10 1866). The early years of Kemal, who returned to Istanbul from Şofya at the age of sixteen, were the most exciting period of his life, on account of the reforms introduced during the Taşmirînî period. The programme of reforms was announced by the Imperial Edict of 18 Feb. 1856; on 22 Oct. 1860 Ağâ Efendi, together with Şinâslî, started to publish the first non-official newspaper, the Terdîmûmân-î akâlî, and the first non-official newspaper, the Taşwîr-ı efhäuser, which was a real step in the extension of Kemal's intellectual horizon. He took lessons in French with the bhûlâq (of the Office of Translations at the Porte (Terdîmûmân Oda), Mânûf Efendi; he moved in such literary and political circles as the Endûmân-î Şûlîr (1861), which comprised old and new style poets, the printing office of the Taşwîr-ı efhäuser, and the Sarafim Kîrîtâkhânîsî (public reading room). The alteration of the Succession Law for Egypt (Mîsr Werâîyeti Kanâna), which was decided upon at the beginning of May 1857, ordained that the Khedive should pass from father to son and not to the eldest of the khedivial family. But before this, Mustafa Fâdîl Paşa, who was by this to lose his right of succession, was advised by the Porte to leave Istanbul for some time, and had left for Europe in April 1866. In his letter to 'Abd al-Ţazlızî, which was printed in French and separately in Turkish (1866), he declares that in order to make possible the realisation of the reforms it was necessary to replace the Ministers, and in his answer to an article in the newspaper Le Nord on 1 Feb. 1867, he declares the persons having the new ideas (efhäuser-i jîddî şabîheleri) to be of the same opinion. In addition to the Turkish translation of this answer, published in the Taşwîr-i efhäuser, Kemal makes the statement that the Türkistanîn erbîb-i şabîhâbi ("Youth of Turkistan") who support M. Fâdîl, put the interest of the nation before personal interest and are ready to realise in the near future their ideals, will astound the Europeans, who accuse the Ottomans of backing down (No. 461, 23 Feb. 1867). His article on the Europeans, who accuse the Ottomans of backing down (No. 469, 24 March 1867). His article on the
Society of Young Ottomans, like Diya3, Su’awi, Agah and others, he fled to Paris. All these young men, who were together with their families, supported in their daily needs by M. Fàdid and partly by Prince Muràd assembled in Paris on 30 May. Their aim was to strive for the rights of the people, as well as to make known to them their duties, for the opening of the National Assembly and the enthronement of the Şahzâde Muràd. When on 30 June 1867 4'Abd al-

Aziz came to Paris on a state visit, he proposed to M. Fàdid that he should return to Istanbul; this he did, not in the company of the Sultan, but on 20 September. At that time, Kemàl and his colleagues started from 31 August onwards to publish the Mukhbir. But on account of the writings of Su’awi against M. Fàdid and in favour of 4’Abd al-

Aziz, they announced by way of a letter, written in April or May 1868, that the Mukhbir did not represent the Society of Young Ottomans. In this way, the Society split into two. Beginning on 28th June 1868, Kemàl and his associates started to publish the Hiirriyyet (“Freedom”) as a counterweight to the Mukhbir. But they were threatened with the discontinuation of the financial support, and were told that an amnesty and permission to return to Istanbul would no longer be a possibility if they continued to write against 4’Abd al-

Aziz and 4’Ali Pasha. Thereupon Kemàl and some of his colleagues declared in a letter dated 7 Jan. 1870 that they had no share in the writings printed in the Hiirriyyet and that they disassociated themselves from its contents. In a letter from the Ministry of Public Security dated 10 Aug. 1870, they were permitted to return to Istanbul. On October 25, Kemàl and his friends arrived back in Istanbul.

Since the articles which he published at the time of his return in the Diyozen (whose first volume came out on 12 Nov. 1872) and in the newspaper of 4’Ibre (which began publication on 15 June 1872, and of which he found himself the editor-in-chief) were regarded as against common decency, first Kemàl was appointed mutasarrif of Gelibolu (Gallipoli) (11 July 1872), and a little later the newspaper was closed (19 July 1872). On 31 July Midhat Pasha was appointed Grand Vizier and on 26 Sept. Kemàl set out for Gallipoli. When the suspension of the newspaper had been lifted, Kemàl, in a letter sent from there (No. 20, 30 July 1872), held forth on the unjustifiable suspension of this newspaper and the pressure which he and his friends had suffered to accept an office in the provinces. On 6 December came the news that 4’Asim Pasha had been appointed mutasarrif of Gallipoli (Dieridc-i hawddith, no. 2056), while Kemàl was discharged from office on 11 December (M. C. Kuntay, Namk Kemal, i, Istanbul 1944, 234; ili, Istanbul 1949, 126, 134). Returning to Istanbul (Hadika, no. 28, 22 Dec. 1872), he continued his publications in the 4’Ibre.

On 6 April 1873, the day on which the 4’Ibre was closed because it supported the demonstrations at the first performance of his play Wusat yahud Silistre at the Gedik Pasha theatre on 1 April, Kemàl and his friends were arrested and by a fermân of 10 April sent into exile. After he had lain in a narrow cell in the barracks of Maghosa at Famagusta in Cyprus, he was later transferred to a more spacious room, and, under the protection of the mutasarrif of Cyprus, he was enabled to communicate with the outside world through his visitors, whom he was free to meet. Through the help of his friends, and specially that of the Şahzâde Muràd, he and his family in Istanbul could live a comfortable life. Being granted an amnesty soon after the accession of Muràd V (31 May 1876), he and his friends set out for Istanbul on 14 June; whilst being guests in İzmir, they received the news that the General Assembly had decided to return to Istanbul. On 20 June they arrived in Istanbul. His exile in Famagusta, which lasted 38 months, was in fact his most productive period.

On 11 Sept. 4’Abd al-Hamàd came to the throne, after having taken the oath on 31 August, because of Muràd V’s illness, and Kemàl was appointed firstly on 18 Sept. a member of the Council of State (Şura-yi davul) and later on 2 Nov., a member of the General Assembly (Medjlis-i umumi), which was working on the framing of the Constitution (Kânûn-i esâsi). The Terdiyé djiemyeyeti was dissolved at its first meeting in November because it did not accept Su’awi, and the 4’Askir-i milliyye djiemyeyeti, because of the great increase in the number of its members, which worried the government. He opposed the article, added later to the Constitution, by which the Sultan was authorised to expel from the country anyone whom, as a result of a police investigation, he suspected. Shortly after the issue of the fermân dated 23 Dec. 1876, promulgating the Constitution, he was arrested on 12 Jan. 1877 on the pretext that he had disturbed the public order. From his letters, the real reason must have been the fact that he had written a verse making an allusion to the dethronement of 4’Abd al-Hamàd; there was also the search for evidence to justify the exile of Midhat Pasha from Istanbul, and fear of his possibly lending himself to causing some disturbance or of his being elected a deputy. During his detention, the Parliament was opened (19 March 1877). The inquiry into his case was closed on 10 July and on the 19th of that same month he left for Midilli (Mytilene), where he was ordered to reside. He followed closely the phases of the Turco-Russian war that broke out on 23 April, the Treaty of San Stefano concluding this war on 3 March 1878, the event of Su’awi on the 20th May, the Congress of Berlin, which opened on 13 July and the discussions in the Ottoman Parliament, which was adjourned sine die in 1878. For the realisation of constitutional government, he gave instructions by letter to his close friends about subjects they should speak during the debates in the Assembly; they accordingly made speeches and introduced bills (lâykas). His exile on Mytilene continued for about two years and a half; then on 18 Dec. 1879 he was appointed mutasarrif of the island. His struggle against the Italian fishermen, who were causing injury to local fishermen in their sponge-fishing; the fact that the Greeks, who wanted autonomy, were not paying the tax levied in lieu of military service (hödel-i askeri) with impunity; and also opposition from his adversaries among the Turkish officials—all these were reasons for his temporary dismissal (Feb.-May 1881). Having been restored to office, he held it for more than four years, after which the newspapers dated of 17 Oct. 1884 brought the news that he was to change places with the mutasarrif of Rhodes, Ağh Efendi (Tarikh, nos. 203, 207; Dieridc-i hawddith, no. 6323), and on 20 October it was made known that he had gone to Rhodes.

By the continuous efforts of 4’Azîl Pasha, who was on 5 Nov. 1885 appointed governor of the province of the Aegean Islands (the Dıenâyir-i Bahr-i Şeff), the seat of the provincial administration was transferred from Chios (Saklz) to Rhodes (Mehmed Thürreyya, Sidiill-i ’Omnân, iii, 297). So for that reason, Kemàl was transferred to Chios to be mutasarrif there. From one of his letters it appears that he took up his duties there on 6 Dec. 1887.
KEMAL, MEHMED NAMIK

During his occupation of these posts as mutasarrif, his struggles against public disorder and administrative neglect. In his capacity as a muhafer, he had the task of organizing smoke and sponge workers, and he spent much effort to strengthen the Muslim population, who were in a minority compared to the Christians. He recommended to Abd al-Hamid and to high officials, by his lâykas (memoranda), tarih (petitions) and letters, the means that had to be applied in order not to lose the Mediterranean islands. He was awarded the Riddah rubies and twice the Othmanlı nakts in 1881, 1883 and 1886. Kemal, who was first taken ill with malaria and suffered later from pneumonia, was exhausted by his tiring official duties, and especially by the shock of the seizure of the first volume of his Ottoman History ("Othmanlı tarihçesi"). He died from a combination of bronchitis and gastric and abdominal complaints, on 2 Dec. 1888 at Chios where he had lived alone since he had sent his wife and son to Istanbul. By the time of the arrival of his wife, he was already buried. By an Imperial rescript his mortal remains were transported the next day to Bolayir, in accordance with his last injunction to Ebû-İ-Diya Tewfik. The design of his tomb, which was erected on behalf of the Khaasî-i khâs, was by Tewfik Fikret.

2. Works. Kemal, like so many other personalities of the Tanzimat literature, with their intentions of spreading new ideas and introducing new genres of writing, produced works in nearly every field.

(a) Poetry. Kemal started his literary life with the writing of poetry. In one of the poetry magazines he wrote some 8 or 10 ghazels while he was fourteen years old, and he wrote for another one until his return from Soiya; in the last-mentioned periodical, we find religious, mystical and moral poetry, or that concerning his surroundings, as well as a bîfâ which he wrote at the age of sixteen and in which he satirises the banknotes affair; this bîfâ was taken over by Diyâ Paşa in his Kharabât. Only a few of these works from his childhood were included in the six poetry collections compiled later, because he was dissatisfied with them. There exists also a collection of nazîres of his. His pseudonym of Namîk was given to him by Eshref Paşa, who highly praised his merthiyes and eulogised him as the Kemâlâ bë'îmin (Saladin). It was printed, together with the Othmanlılar Dîräk-î zâtîli, as the first volume of the Dîräk-i hâkî, under pseudonyms like Khîlân-i 'Adilîn and al-Dîn Kemal. His articles concern all kinds of events taking place in his surroundings, with a rich variety of subjects. The most effective and influential were those with a political content. In these writings, remaining faithful to the principles of the Yeni Othmanlılar Dîräk-î zâtîly, he put forward the ideas which were to become the cause of the Constitution, and he strove to show the defects of nearly every institution as well as the means for its improvement. His most severe criticisms can be found in the writings he produced and published in the Tsa'îvar-i efkar and the 'Ibret at the time when he was contemplating fleeing to Europe and was in no need of an official post, but which were the cause of his being banished to Famagusta. Compared with his works in other genres, he achieved great fame by these various articles, especially those reflecting his political struggles.

(b) Historical works. His works in this field are monographs about the great men of Ottoman and Islamic history, the Tarih-i 'aşerî and the Othmanlı tarihçesi. — 1. Babirka-i şafir ("The Sword of Victory") concerns the conquest of Istanbul by Mehmed II the Conqueror, and was written in one day. He used artistic prose here, and was convinced that no one adhering to the dinâm literature could write a "parallel" to it (Istanbul 1289, 1305). — 2. Devlet-i 'Aliyye'nîn dev-i sûlûsîna dârî bir mubâledîr. In this work he treated of the conquests of the Ottoman empire since its establishment up to the end of the reign of Süleyman the Magnificent. Shortly after it was published in instalments in the Tsa'îvar-i efkar, it was printed in book-form from Jan. 1867 onwards (Istanbul 1289, 1301, 1304). — 3. Sahâb al-Dîn Eyyübî. This is a monograph about the life of the founder of the Ayyûbs and Muslim hero Sahâb al-Dîn (Saladin). It was printed, together with the Devr-i sülûlî, as the first volume of the Evrâk-i perîşân (Istanbul 1289/1872, 1894). — 4. Sî/slîre mukâsa'arî. He published this under the name of Ahmed Nâif'dî, a man who had himself taken part in the battle of 1853, and on whose mediation Kemal relied for his communications with Istanbul while in exile in Famagusta (Istanbul 1290, 1946). — 5. Kanîsîfe: this was written to recall the praise-
worthy victories of the Turkish soldiers, and contains the conquest of Kanizhe during the reign of Mehmed III, as well as the acts of heroism of Tiryaki Hasan Pasha, and was published under the name of Ahmed Nafidh (Istanbul 1297, 1299, 1304, 1335, 1942). — 6. **Onhane-i hâlâ** Emir Nevruz. This contains the life and the struggles of Emir Nevruz, who, at the time of the Mongol conquests fought for the sake of Islam and humanity; it was first published under the abbreviation **nân-bâh**, while he was in exile in Famagusta (Istanbul 1298; Mathâ-i Ebûzziya, 1302, 1305). Of the above-mentioned works, the **Devr-i istilâh** and **Saleh al-Dîn Eyâyêh**, to which were added the biographies of Mehemmed the Conqueror and Sultan Selim, were printed as one volume and published under the name **Erâkî-i perîkhân** (Istanbul, n.d. [Istanbul 1301]). — 7. Apart from the works mentioned up to here, he prepared, while in Famagusta, his **Kullîyyât-i Kemal** in a part—that up to the reign of Mehemmed the Conqueror—was published in four volumes in the **Kemal-î Kemîl** series (Istanbul 1326–7). *(K) Plays. Kemâl, who regarded the drama as a school for the improvement of morals, held the view that, because the Turkish language was not yet possible to write dramas in syllabic metre; hence all his six plays are written in prose. — i. In his foreword to his **Icli kiz**, which was published shortly after his being granted pardon under the new name of **Ali Bey**'in sergizeshtini, no permission was given for publishing this work of his was translated into French. His second novel, **Djezmi**, for which the subject matter was extracted from Ottoman, Crimean and Persian history of the 16th century, was written in parts at Mytilene and finished in 1881. Under the influence of Romanticism, Pan-Islamism is the leading idea, and is defended in **Djezmi** (Istanbul 1297, 1299, 1304, 1335 1969). *(f) Criticism. Most of his criticism, in general reflecting his ideas about diwan and western literature, and the simplicity of the language, is composed in epitary form, because it was written when he was in exile. — 1. In his foreword (mukâsadîme) to the **Bakhâr-i dâniş** he wrote that during the **Tanzîmât** period, people had refrained from translating works from Persian, because of the strong influence of Western literature, and he gave a translation of one of the famous stories written by Shaykh İnâyat Allâh in the Urdu language (Istanbul 1291, 1303, 1311). — 2. **Tâhirî-i hârarât** is a criticism of the first volume of Diya' Pasha's anthology (publ. Istanbul 1874), including examples of the best poetry of Arabic, Persian and Turkish diwan literature. It was first published as an article in instal-
ments (Medmu'a-i Ebuzziya, nos. 11, 19, 24, 17
January, 15 May and 17 July 1882), and it was later printed in book-form (Istanbul 1301, 1304). — 3. His
critical reviews of the second and third volumes of
this same work, after having been printed as
magazine articles (ibid., nos. 30-36, 24 January-
23 April 1883), published separately also (Istanbul
1301, 1312). — 4. *İfran Paşa*ya mektub was written with reference to *İfran Paşa*'s blaming the young
generation, in the preface to his work Medmu'a-i
*İfran Paşa* (Istanbul 1299), for not appreciating the
distinct literature (ibid., nos. 18, 19, 23, 24 Nov.
1884-12 Nov. 1885). — 5. *Mualla*’a-nâme, was
written with reference to R. Ekrem's Ta'lim-i ede
bîyyâbî, and was printed according to a defective
manuscript, which has been subsequently found (N.
Halil Onat, Namik Kemal'in tâlimî-i edebiyat iizerine bir risalesi, Ankara 1950); from his letters it seems
that he wrote it at Mytilene in 1878. — 6. In his
Muhâdditse-i Dielâlî, finished at Mytilene in 1878,
he expressed his opinion with regard to the new forms
of literature, which had developed after the Tânzimât,
namely the political article, the novel and the drama,
as well as his thoughts about whether some features
of his play *Dielâlî al-Din* Khâramgâh were in
accordance with the historical facts or not, and about
simplicity of the language (publ. as an article in
*Šarh*, nos. 1 ff., 1897; *Medmu'a-i Ebuzziya*, nos.
38-44, 2, 24 Nov. 1884-12 Nov. 1885). — 7. His Renan müddâlâ-nâmesi, which he finished at Mytilene in
Sept. 1883, is his criticism of a lecture called *L'Islamisme et la science*, delivered by Ernest Renan at the Sorbonne on 29 March 1883
The information given by Ahmed Midhat in his
*Uzî-i inâlabî* about his opinions on the Constitution
was criticised by Kemal (Istanbul 1385, 1397, 220) in
his letters dating 24 Aug. and 13 Sept. 1878 (*Edib-i
a'şâm Nâmîk Kemal Bey'i ğayrî-i maftûlî ahkârîndan
Ahmed Midhat Efendi*’ye yâdâlgî iki mektub, İzmir
1324). — 8. Apart from these works of his, he wrote
other pieces of criticism, which was published in
magazines but were never printed in book-form; these
include *Mes prions mu'âhddahi* about the Turkish
translation (1874) by R. Ekrem of Silvio Pellico's
his criticism on K. P. Rif'at's *Huqûk-i umûmiyye*
(Istanbul 1929), which was the latter's translation
of PradîF Dodêre’s *Principes généraux de droit politique
mu'âkddamesi*. — 12. His *Laîife* (anecdotte), also called *Pîlevîne mu'âhddahi*, relating to D. Hikmet's *Pîlevîne
Kahramânî* *Ôlümün Paşa* garnâmder (Istanbul
1878). — 13. The criticism he wrote of Mahmut
Dielâlî al-Din Paşa's *Šarh-i Şefik-nâme* (Istanbul
1299), his *Şefik-nâme* or *Râvdat al-Kâmîlin
mu'âhddahi*. — We may also include in this genre
his *Lâyîsha* (memoranda) and *Tabîrîs* (eulogies of
books). But one finds his most sincere and objective
criticisms in his private letters, some of them of
book length, and containing his frank opinions
about the work of his contemporaries and about
various controversies during that period.

[g] Other works. Apart from the works men-
tioned above he produced certain other writings:
*Tendîh al-hânîse* (Istanbul 1307); *Sengûsîyet
*Istanbul 1327*; *Rûyâ* (signed in abbreviation
nim-haf, n.p.d., Egypt 1908, Istanbul 1326, 1932);*Imtâzî-i ahâm - wafa'î-yî 'âdâh (Istanbul 1327);
*Hikmet al-hâbîb, Midîlî risâlesi* and *Medmu'a-i
siyâsî* were never published in bookform.

*Bibliography*: The above is mostly based
on the following works: Fâ'îk Reşhâd, *Edib-i
a'şâm Kemal, Ebuzziya, Kemal Bey'in terâjîme-i
hâlî (Istanbul 1326) and *Yeîî Ôlümünûlârî sâriâyî*, published in the Turkish *Tarih-i *Ahmedi* (A. Ekrem Bolâyir, Namik
Kemal (Istanbul 1933)).

Of other sources, his early life and his poetry
are clarified by S. N. Ergun (Namik Kemal
hayât ve şîirleri Istanbul 1933; Namik Kemal'in
şîirleri Istanbul 1941), while I. R. M. Kemal
In has discussed Kemal's work in his life as an
and his various periodicals (Son asir Türk saîrleri,
yatar, in Cumsuriset, 24 Dec. 1940; Ülkî, no. 101, July 1941; Namik Kemal Aîfûnda, Ankara
1949. Some of his articles have been brought
together and printed (Ebuzziya, *Muntâkahhab-i
Tâşvîr-i efâtâr, Istanbul 1304, 1311; A. Ekrem
Bolâyir, *Külîâyî-î Kemal, Istanbul 1327; M.
Nihâd Öztîn, *Namik Kemal ve îbret gazeteleri,
Istanbul 1938*). See also R. H. Davison, *Reform
in the Ottoman empire 1856-1876*, Princeton
1963, index; A. Bombaci, *Storia della letteratura
turca*, Milan 1956, index; *Enciclopedia Italiana*,
art. s.v. Most of his works were published by others
while he himself was in exile; hence because he was
not able to correct them himself, they contain
some mistakes and omissions. Among the works
which the Türk Tarih Kurumu have published
are, together with a commentary on their contents
and documentation, being prepared for the press by
the Türk Tarih Kurumu (Namik Kemal'in mek-
tuplari, i, Istanbul, Atrûpa ve Mağhosa mektuplari;
i and iii, *Midîlî mektuplari*, Ankara 1967, 1969,
1973). Because of the availability of these volumes,
only a basic bibliography is given here; see fur-
ther the general index to these three volumes.

(F. A. Tanzel)
KEMAL PASHA-ŻADE

died (Ashikpashazade, ed. Giese, p. 197) and was buried in Istanbul; his turbe (no longer extant) formed the nucleus of a maqelle (O. L. Barkan and E. H. Ayverdi, *Istanbul vakfiysleri tarih ve defteri*, Istanbul 1970, 149), and Kemalpashazade set up a waqf in favour of its mosque (op. cit., no. 864).

Kemalpashazade's father Suleyman "Beg" and his wife, *Cebelit* (called by Kabûlî navî sîn-i navîstrân in the last of five kâdîsâfs, cf. Kuûfîyyûdâ, ed. I. H. Ertaylan, 206) is said to have been muhâfîz of Amasya and taqaddum of Tokat from 896/1492-5 until after 896/1492-3 (Amasya Tacrihi, iii, 230-2, 237-8); he was buried in his father's turbe at Istanbul (of his death is unknown). Kemalpashazade's mother was the sister of Ibûn Kûpeli, kâdîasker of Tokat from 879/1474-5 until after Abd al-Rahman Efendi, then *mîderris* at Edirne. 1. H. Ertaylan, *kasidas*, cf. Shafrûdî, *i*, 303-4; Turkish tr. Medjdîl, 215).

Kemalpashazade began his adult life as a sipahi; but upon noticing the respect paid to Molla Lutfi (*g.v.*), a relatively humble *mîderris* by prominent statesmen and soldiers, he decided to embrace the career of 'ulum (this incident, recorded by Taqaddumâzâde from Kemalpashazade himself, seems to have occurred in 897/1492, or perhaps even earlier). He began his studies under Molla Lutfi, at the Dar al-mîderris at Edirne. 1. H. Ertaylan, *kasidas*, cf. Tashkopruza, xcvi/22 (1968), 77-8 and cf. Him (*this incident, recorded by Tashkopruza*).

In 896/1492, or perhaps even earlier). He began his studies under Molla Lutfi, at the Dar al-mîderris at Edirne. 1. H. Ertaylan, *kasidas*, cf. Tashkopruza, xcvi/22 (1968), 77-8 and cf. Him (*this incident, recorded by Tashkopruza*).

Dakfîr al-frafîdîk, *Shafrîdî, i*, 303-4; Turkish tr. Medjdîl, 215). Of Tokat from 879/1474-5 until after Abd al-Rahman Efendi, then *mîderris* at Edirne. His first appointment, as *mîderris* at the medrese of 'Ali Beg in Edirne, was procured for him by Mû'eyyedzade at Edirne, he *kâdî-asker* of Anadolu (and probably an old acquaintance of his father at Amasya), on the same occasion recommended him to Bayezid II as the *mîderris* in the *medrese* of 'Ali Beg in Muharem 909/July 1503 (M. T. Gökbilgin, *Edirne, 479*). He then progressed through a number of *medreses* (Usküb, Edirne, one of the Şah *medreses* at Istanbul, the *medrese* of Bayezid II at Edirne).

Presumably while still *mîderris* at Edirne, he wrote a *risâla* (sometimes erroneously termed *fawâdîd* if *fî al-ramâwîdîd, demonstration against* 'Ali Makîn 'Isâîlî's to *fard* *ʿayn* (Atsz [see Bibl.], no. 84; Brockelmann, no. 478; text published by M. C. Şehabeddin Tekindag in *TD*, xvii/22 (1968), 77-8 and cf. 55); German summary in Elke Eberhard, *Ottoman historians*). In Cairo, for some unknown reason (? a protest at the execution of Tûman Bây), the irascible Selim dismissed him, but he re-appointed him a couple of weeks later (Rabîʿ I-II/April 1517; Ferîdûn, i, 454-89). According to a mediocre record by Selim (ii, 614-6; cf. Hammer-Purgstall, ii, 529-20), Kemalpashazade's influence with Selim was such that the dignitaries, bored with the long stay in Egypt, asked him to convey the hint that the troops wished to return home. In the course of this campaign he gave a ruling in favour of the orthodoxy of Ibn al-'Arabî (*g.v.*, at col. 708f) (Atsz, no. 85; Brockelmann, no. 478).

In 924/1518 he acted as *emin* for a land-survey (tâhri) of Karaman (Barkan, *Kansunlar*, 39; cf. N. and L. Beldiceanu, in *JESHO*, xi (1968), 7, 57). Upon being dismissed, or resigning, from the post of *kâdî-asker* (in 925/1519, according to Mjefîl, 387), he again became a *mûderris* at Edirne (Dâr al-badîth, then *medrese* of Bayezid II). Upon the death of "Zenbîlî" *Ali Efendi* (932/1526) he was appointed Shaykh al-İslâm, and held office until his death on 2 Shawwal 940/16 April 1534. He was buried in the *zâviye* of Mâmûd Cebeli, outside Edirne Kaplû.

Works. Kemalpashazade was a most prolific writer, in Turkish, Persian and Arabic, in the fields of history, belles-lettres, grammar, theology and law. Over 200 works (many of them, admittedly, short *risâlas*) are attributed to him. The most important are:

Turkish: (1) History of the Ottomans, begun in 908/1502-3 and composed originally in eight books (defter), one for each reign from 'Ogîmân to Bayezid II. All survive in manuscript except Book 5 (Meşêmmed I) and the first part of Book 6 (Mûrât II). Book 1 ("Ogîmân"). ed. Şerafettin Turan, Ankara (TTK) 1970; Book 7 (Mekemmed II, largely based on Nêşîrî and Tursun [q.v.], but containing important original data), ed. Ş. Turan in facsimile (from the autograph MS, Fatih 4205, see V. L. Ménage, in *BSOAS*, xxiii (1960), 205-64), Ankara 1954, and in transcription, Ankara 1957. Book 8 reaches to 916/1510. Later, Kemalpashazade was commissioned in 908/1502-3 [see Atsiz, no. 864]. Book 9 (Selm I) resumes the last years of Bayezid II's reign but reaches only to 920/1514 (the apparent date of completion, 19 Şârâr, is expressed, by a *muşâmmâ* in fractions, a literary conceit which appears to be Kemalpashazade's invention, see H. Ritter, in *Oriens*, i (1948), 237-47. (Two mss.—Hazine 1424, Revan 1277—sometimes referred to as a *Selîmname* of Kemalpashazade are in fact by Sa'dî b. 'Âbd al-Mu'tašîl; abridged German tr. by M. T. Speiser, Zürich 1946; see M. C. Şehabeddin Tekindag, in *Tarih Enstitüsü Dergisi*, i (1970), 217-8 and (incorrect) 208-10). Book 10, extending only to Suleymân's return from the Mohacz campaign in 933/1526, was for long regarded as a separate work (cf. Hammer-Purgstall, iii, p. vi) and was published, with French tr., by Pavet de Courteille as *Histoire de la campagne de Mohacz* by Kemal Pachazadeh, Paris 1859; that this text is the fragmentary Book 10 was shown by L. Forrer (*Id.*, xxvi (1942), 187; see also, with important data on the mss., Huseyn Yurdarûdî, in *Yâksîlar Dergisi*, iii (1956), 107-15). It appears that Book 10 was never given final shape (and that Book 9 was never completed). Various portions of the work also exist in mss. under a variety of titles. In spite of its importance, especially for the writer's own times (H. Inalcik has called him "the greatest of all Ottoman historians"), it was very little used by later chroniclers. For the mss. in European libraries: Babinger, 61 ff.; in Istanbul: *Istanbul kültüphaneleri tarih-coğrafya yazmaları katalogları*, ii/2, 1944, 120 ff., and Atsz, no. 1.

dedicated to İbrahim Paşa [q.v.], on the distinctions between apparent synonyms in Persian; to judge from the numerous mss., the work was widely read. Atsız no. 103, for Arabic mss. and printed texts and Persian trans.; anon. English trans. *The old man young again*, 2 vols., Paris 1898-9; and seepars. at col. 532b. However, Kâtip Celebi records (Kaşf, Flügel no. 5878 = Yaltkaya-Bilge, i, 853) that Kemâlpasha-zâde translated it, presumably from Arabic into Turkish, for Bayezid II, born 1389; the author is more probably Ahmed b. Yusuf al-Thâfi, d. 651/1253 (Brockelmann, I, 652; and see al-Tıfâğl).

There seems to be no foundation for the assumption that Abu 'l-Su'ûd [q.v.] was the pupil of Kemâlpasha-zâde. Their names are significantly linked, however, by 'Atâ'î (p. 185), in the statement that it was they who, as *mu'allim-i evvel* and *mu'allim-i hânî* of Süleyman I, succeeded (by their *iklâhîdâd*) in reconciling the *şarâ'a* and the *hânnâ*—an achievement sometimes attributed to Abu 'l-Su'ûd alone (see also Kâtip Celebi, Mi'ân al-âbâk, 116; Eng. tr. G. L. Lewis, 128). The extent of Kemâlpasha-zâde's discourse remains to be investigated (numerous MS collections of his *fatâwâs* survive: Atsız, no. 5; Brockelmann, no. 47). As regards other fields, however, his immense reputation rests rather on his industry and on the profundity and extent of his learning than on any originality of thought.

Works. The most recent attempt at a bibliographic is by [Ciftcioglu Nihat] Atsız, *Kemalpasha-zâde* (more than the 28 noted by Atsız) were printed in the *İkdam* series, Istanbul 1316. Facsimiles of ten of his works, Brockelmann: II, 243-5. One of his letters, to Siileyman I, is published in *Kemâl Paşa-zâde*, new series no. 10, 597-602 = nos. 1-124; II, 175-8; iii, 107-113. Atsız no. 26. (7) *an Arabic-Persian dictionary* (tafslr, hadith, etc.); but valuable as it is, it is based only on the manuscript collections of Istanbul, but so that it does not supersede Djamîl al-Âzîm, *Ubad al-dâwar*, Beirut 1326, 217 f. (214 titles, with some duplications) or, for the Arabic works, Brockelmann: II, 597-602 = nos. 1-124; II, 668-73 = nos. 125-70; S III, 1306 = nos. 171-9.

A number of his *risâlas* (more than the 28 noted by Atsız) were printed in the *İkdam* series, Istanbul 1316. Facsimiles of ten of his *fatâwâs* are given in *Tilimyye sähânesi*, Istanbul 1334, 346-54; one of his letters, to Suleyman I, is published by S. Turan, in *Taşrîk Zevâkân*, new series no. 217 (1958), 221-4. See also R. Brunschwig, *Kemâl Pâshâ-zâde* ve le persan, in *Mâlises ve H. Masât*, Tehran 1953, 46-84. (V. L. Ménage)

**KEMAL REİS** (d. 917/1511), a Turkish corsair and admiral in the time of Bayezid II (886-918/1481-1512), and uncle of the celebrated Pir Reis [q.v.]. Born in Gallipoli of a Turkish family originally from Karâman, he joined the campaign of Agiboz in 974/1470 under Mahmûd Paşa. Later he settled down in that island and was raised to the rank of corsair and admiral in the time of Bayezid II.
of 'azablar ağhâst. He gained great fame through his corsair activities in the western Mediterranean, so that in 900/1495 Bayezid II took him and his nephew Piri Re'Is into the Ottoman service at a salary of 20 ahtas per day. In the following year, he conveyed to Alexandria the income of the awdâv of Adana and Tarsus for the Holy Places of Arabia; on his return he was attacked by the Knights of Rhodes in the vicinity of the island, but defeated them (Kemâl Paşa-zâde, Ta'rikh-i Alî-i 'Othman, Ali Emiri, VIII. Deuter. No. 32, i. 76a). He took part in the İnebakhî (Aymabakhi) campaign in 902/1500 and commanded the two newly-built large battle ships (küke) which were among the Ottoman fleet at that battle under the supreme command of the Admiral or Küçük Dâwûd Pasha. Kemal Re'Is's duties in this battle were to prevent the Venetians giving support by sea, and thus assist the beylerbeyi of Rumeli, Kâğıtâş Mustafâ Paşa, who was besieging the fortress of İnebakhî by land. During the sea battle near the island of Sapienza on 19th Dhu 'l-Hididja 1499/28th July 1499, the Venetians, thinking that they were attacking Kemâl Re'Is, mistooked attacked Burak Re'Is's ship, which also had on board the sandjakbeyi of Yeğenheim, Kemal Bey; Burak Re'Is managed to set the enemy ships on fire with naphtha, though he himself and his ship perished. The island of Sapienza was later renamed Burak Re'Is's island. Kemal Re'Is meanwhile took a position near the coast and prevented the Venetian fleet from landing troops behind the Ottoman forces. In the following month he secured several further victories over the Venetians, and played a great role in the capture of İnebakhî and later of Modon, Koron and Navarino by the Ottomans; for his activities in these battles see Şafâî, Felek-nâme-yi İnebakhî ve Modon, Topkapı Sarayi Kutûphanesi, Revan 1931. He was busy with corsair activities in the western and central Mediterranean during the summer of 906-7/1501, and returned to Istanbul in the autumn of that year. Among the rich booty and prisoners taken was the Duke of Catanzaro, and for the ransom of this person 5,000 gold pieces were demanded (H. J. Kissling, Sultans Bayezid II.'s Bestenungen zu Markgraf Francesco II. von Gonasca, in Münchener Universitätsschriften, Reihen der Philosophischen Fakultät, Munich 1965, i; for the emended Italian translation, see Francesco II Gonasco ed il Sultano Bayezid II, in Archivio Storico Italiano, 1967, i, 34-68; Kissling, Betrachtungen über die Flottenpolitik Sultan Bayezids II 1451-1512, in Sacculum, xx/1, 35-43). It was probably after this success that his daily allowance was increased to 50 ahtas. (Kissling, Zur Tätigkeit des Kemal-Re'is im Westmittelmeer, in WZKM, lii (1968), 155. He died during a campaign in 917/1511 when his ship was caught in a storm and sank; by that time, his daily allowance was 100 ahtas (Topkapı Sarayi Müzesi Arjivi, E. 4661). Notable is his introduction of long-range cannon for the ships of the Ottoman navy.

**KEMAL TAHIR (demiir), modern Turkish novelist (1910-1973). Born on 13 March 1910 in Istanbul, his father's family came originally from Aşar village of Şebinkarahisar (in north-eastern Anatolia), where most of their relatives still live. They were known as Demircioğulları, hence the family name Demir, which however Kemal Tahir never used in his writings. His father Tahir Efendi (d. 1957), a naval officer risen from the ranks, was an aide-de-camp to the Sultan (künkârâyâşı), and also worked in the carpentry shop of the Yıldız Palace (a privileged position, as cabinet-making was 'Abd al-Ḥamid II's great hobby). He married Nurüyye Khanım, a saraylı, a Circassian girl from Adanazarı brought in the Palace and attached to the Sultan's household. Tahir Efendi was retired from the navy as lieutenant following the Revolution of 1908, but was called up again during the Balkan War of 1912 and again at the outbreak of World War I. Wounded at the Dardanelles (1915), he served, behind the front, in various military hospitals in Anatolia until he was retired in 1918, when he settled in Istanbul in his brother's home and made his living working as a carpenter on construction projects. Kemal Tahir attended various primary schools following his movements, and continued his education in Istanbul. In 1923 he entered Galatasaray (the leading high school modelled on the French lyceé), but he had to give up his studies in 1926 when his mother died and he had to earn his own living. Between 1926 and 1927 he worked as a clerk in lawyers' offices and in other odd jobs and eventually settled in journalism, working in various newspapers and magazines as proof-reader, translator, secretary and editor. In 1937 he married İrfan Hanım, a teacher.

His interest in socialist ideas and literature and his close friendship with the famous left-wing poet Nazım Hikmet, brought him into conflict with the government during the rigorous conformist period of the single-party régime. He was accused, together with his friends, of spreading subversive ideas and inciting to mutiny in the Navy (through his brother Nuri, who was a naval N.C.O.) and was sentenced by a naval court to 15 years imprisonment (1938). He spent the first two years of his term in an Istanbul prison; then he was transferred with Nazım Hikmet and to Çankırı where they were held for 16 months more. In the meantime, he was divorced from his wife. Kemal Tahir spent the years 1941-50 in the prisons of Malatya, Çorum (five years) and Nevşehir until his release following the general amnesty of 1950. He settled in Istanbul in the summer of the same year. He brought with him the drafts and sketches of half a dozen novels and several thousands of pages of notes as materials for further works.

The first five years in Istanbul were a bitter struggle for survival. Under a dozen pseudonyms, Kemal Tahir busily produced or translated a great number of detective stories and adventure novels which were serialized in various popular dailies. Semiha Hanım, his second wife, contributed to the family budget by working as a dressmaker. Following the anti-Greek riots of September 1955, Kemal Tahir was arrested with a number of left-wing suspects, as the incident was thought to be in some quarters a communist conspiracy. He was released after six months' detention. The year 1955 is a turning point in his career, as it saw the publication of two of his books (see below). The same year he set up, together with the humorist writer Aziz Nesin, the publishing house Duşan. Kemal Tahir spent the remaining years of his life revising and publishing his sister's drafts and writing new novels and developing his controversial ideas and theories on historical, political,
literary and social problems. His health declined, and he died unexpectedly on 21 April 1973, leaving many incomplete works, particularly his pet project of a historical novel on the famous 15th century rebel Şeyh Bedr ed-Din.

Like most writers of his generation, Kemal Tahir started with poetry. His early experiments were published in Abdullah Cevdet’s İstihlak and were, characteristically, poems on social themes (Bardaki Kadınlar, “Women at the Tavern”, No. 318, April 1932; Açıq Türküst, “The song of the Hungry”, No. 320, May 1931, etc.). These were followed in the early 1930s by poems of symbolist inspiration (then very popular) in the avant-garde literary review Varış. Later, under Nazım Hikmet’s influence, he returned to social themes and wrote poems in free verse which he published under the pseudonyms of Cemalettin Mahir and Ismail Kemalettin in the review Sür (1938-9).

In the meantime, he had been contributing popular short stories and novels to the weekly Yedi Gün (1935-40). But his short stories, which revealed his talent, were written in 1940 and serialised in the daily Tan in 1941 under the pseudonym Cemalettin Mahir (first edition in book form under his own name: Göl İnsanları, Istanbul 1955). These are powerful sketches of the life of peasants and working class people.

Kemal Tahir never returned to the short story, and he serialised his first novel Sağrtdere (under the pseudonym Körüdman) in 1950 (published in book form under his own name in 1955). In this first novel, he describes the everyday life, customs and manners of peasants in their own surroundings (a Central Anatolian village near Corum) and in the city where they come to find work. This is a forerunner of his series of village novels and opens an important phase in the Turkish “peasant literature”, which began to gather momentum in the 1930s. Then followed his Eski Şehrin İnsanları (“People of the Captive City”), which was serialised in the Istanbul daily Yeni Istanbul in 1952-3 and published in 1956. This work opens the series of “period novels” in Kemal Tahir’s career. It is the story of the occupation in 1920-2 and of the bitter struggle between the supporters of the Anatolian Nationalists and the men of the Sultan’s government subservient to the occupying powers. The untypical hero of the novel is a young diplomat, Kâmıl Bey, the son of a wealthy Hamidian Pasha, who has spent most of his life in Europe and who, on his return to Istanbul becomes a müllügi, a supporter of the Nationalist cause, to the indignation of his wife who typifies the collaborationist, wealthy “society” women. The hero is in strong contrast with the type of “Westernising snob” frequently ridiculed by many earlier Turkish novelists, e.g. Huseyin Rahmi.

From 1956 until his death, Kemal Tahir produced a dozen novels in these two categories. Outstanding among them are: Rahmet Yolları Kesti, (“The Rain Blocked the Roads”, 1957), written in answer to Yaşar Kemal’s best-seller İnce Memed (1955, Engl. tr. Memed My Hawk, 1961) where the brigand-hero is idealised, whereas Kemal Tahir tries to kill by ridicule the romantic-epic conception of brigands and rejects the idea that “these former deserters and criminals” can lead popular movements or can be real friends of the oppressed; and Yorgun Savaşı (“The Tired Warrior”, 1965), perhaps his best novel. It is, in a way, the epic of the generation of the officers who, after the restoration of the Constitution in 1908, went through a series of ordeals: the War in Tripoli with Italy, 1911; the Balkan Wars, 1912-13; and World War I, culminating in the collapse of the Empire, the Greek invasion of Western Anatolia and the occupation of Istanbul by the Allies. The novel tells the story how some of these “tired warriors” rushed to Anatolia to form the nucleus of resistance and fought desperately until Mustafa Kemal’s organised movement, which gradually became the master of the situation, took over. Derel Aya (“Mother State”, 1967) is a historical novel which caused much controversy in the press. It explores the circumstances which, in the late 13th century, led to the birth of the Ottoman State between the declining Byzantium and the disintegrating Seljuk power. “The generous and just State” realized by the early Ottomans, “towards which Muslims and Christians alike flocked to seek security and welfare”, as described in the early Ottoman chronicles, is the basis of the author’s “Ottomanist” thesis. This version of “Ottoman revivalism” which he pioneered in literature, rejects everything alien and imposed on the Turkish culture and maintains that the secret of a regeneration is to be found in the “perfect” Ottoman system. In this novel, Kemal Tahir experimented, with unequal success, with a style which is mainly inspired by that of the 15th century chronicles and religious-epic folk stories. In other novels, important issues or episodes of contemporary Turkish history are discussed elaborately, with an approach which is usually different from the received or current versions. The village Institutes, an attempt to realize mass education of the peasantry (Bozkırda Cehirdeh, “The Seed in the Steppe”, 1969); the 1926 Unionist conspiracy against Mustafa Kemal (Kurt Kanunu, “Wolverine Law”, 1969); the short-lived Liberal Party (Serbest Fırka) experiment of 1930 (Yol Ayrımı, “Cross-Roads”, 1971); etc.

Kemal Tahir kept alive the interest and curiosity of his reading public by constantly dwelling on subjects and personalities which have always been a centre of heated controversy: East versus West, tradition versus innovation, the value of the Islamic and Ottoman heritage, for Modern Turkey; responsibility for military, political and economic setbacks and cultural stagnation since the Tanzimat; 'Abd al-Hamid II and his policies; the Unionist leaders and the real nature of their party; and lastly, Atatürk, his companions, his reforms and the Republican era which he inaugurated.

Kemal Tahir’s approach to all these matters is rather emotional and biased. His admiration for 'Abd al-Hamid II (already rehabilitated by some modern historians) and his reign, and his lack of enthusiasm for the 19th century reformers, for the Young Turks, and particularly for Atatürk, may perhaps be partly explained by his family background and his personal experiences. He never lived in Anatolia for any length of time, and his observations of peasantry are limited to his long years of association with the inmates of Central Anatolian prisons. His subjects of study were, by necessity, offenders of various types: bandits, murderers, thieves, forgers, sexual criminals, etc. This circumstance was bound to condition him when he judged and made generalisations on the way of life, problems and moral values of peasants and conditions in villages.

Kemal Tahir’s language and style differ considerably from his contemporaries. His peasants do not speak a local dialect, as is the case with most “village novelists”. Also, he almost ignores the language reform movement and avoids, most of the time, the
use of neologisms and prefers a "moderate" style close to that of the preceding generation. On the other hand, he has a repertory of colloquial or slang words and expressions, and his pet pseudo-archaic forms, which he likes to use indiscriminately on all occasions, and his many diverse characters have often disturbingly identical speech habits. In his novels the plot is often a pretext to put forward his ideas, and in every novel there are one or two characters who use every occasion to defend, at length, the author's familiar themes. Many of his novels consist consequently of loosely connected political arguments or didactic tales.

There can be no doubt, however, that Kemal Tahir ranks among the leading and most remarkable writers of modern Turkish, a writer who invited his readers to re-think on vital issues of Turkish political and cultural life, who experimented in the use of elements of classical and popular Turkish prose, thought to be dead wood by many, and who left two or three novels which will always be considered among the best of his time.

**Bibliography:** Tahir Alangui, Cumhuriyetten sonra hikaye ve roman iïi, Istanbul 1965; Bechet Necatiij, Edebiyatsmda isimler sozligi, Istanbul 1972; Idem, Edebiyatsmda eserler sozligi, Istanbul 1971 (critical summaries of some of Kemal Tahir's works, see index); Fahir Iz, in Cassell's *encyclopedia of world literature* ii, London 1973, s.v.; Memet Seydija (ed.), *Turk roman*, (an open forum on Tahir and Deslet ana), Istanbul 1969; Aytekin Yakar, *Turk romaninda mili mica-dede*, Istanbul 1973: *Turkije deijeri*, no. 6, April 1974 (a special issue on Tahir: important biographical and critical notes by a number of writers); Hulusi Dosdoğru, *Batu aldamacaligi ve pullara karsi Kemal Tahir*, Istanbul 1974 (with selections from his novels).

**KEMALÍYYE.** [see edin]

**KEMÁNESE,** ["Archer"], *Ali Pasha*, Ottoman Grand Vizier. Born in the district of Hamid-ili in Anatolia, he came to Istanbul and was trained in the palace service from which he emerged with an appointment as vezir beylerbeyi of Diyar Bakr with the rank of vizier, probably in 1029/1620. Difficulties arising over his executing a well-known provincial official without reference to Istanbul caused his transfer to the governorship of Bagdad, where he remained for about a year before being dismissed and retiring to the vicinity of Kaysariyya. Returning to Istanbul following the death of Othman II (Radjab 1031/May 1622), he was made a lesser (either fourth or third) vizier and subsequently replaced the Grand Vizier Mere Husayn Pasha, who was turned out of office in Dhu'l Ka'da 1032/August 1623.

Though there were serious problems in various parts of the empire during *Ali Pasha's* vizirate (the rebellion of Abaza Mehmmed Pasha [q.v.] continued in Anatolia, for example, and Bagdad fell to the Safawid ruler Shah 'Abbas II), he appears to have concerned himself mainly with affairs in Istanbul. He played a leading role in the second deposition of the incompetent sultan Mustafa I (Dhu'l Ka'da 1033/November 1623), but otherwise chiefly remained in the sources for his attempts to secure his position, building a sizeable fortune through such means as bribery and the sale of offices and attempting to undermine those whom he felt to threaten him. With the encouragement of his father-in-law, the high-ranking scholar Bostan-zade Mehmmed Efendi, he succeeded in bringing about the dismissal of the Şâykh al-Islâm Zekeriyya-zade Yabây Efendi, who had offended him by alluding in conversation to his susceptibility to bribery; he was unable, however, to obtain that post for his father-in-law, an aim which, had it been achieved, might have resulted in a dangerous concentration of power. He was less successful in his moves against two former Grand Viziers, Gurdjii Mehmmed Pasha and Khalil Pasha: having arrested them on the pretext of supposed subversive letters to Abaza Pasha, he refused to produce the letters for inspection when challenged and the two men were set free. The immediate cause for his dismissal and execution on 14 Dümâdâ II 1033/3 April 1624 is said to have been his attempt to conceal from Murad IV the news of the fall of Bagdad. His considerable possessions were confiscated and his body buried in the grounds of the 'Atik 'Ali Pasha Mosque in Istanbul.

**KENA.** [see KUNA]

**KENÁN PASHA,** also nicknamed Sarî ("pale-faced") and Topal ("Lame"), High Admiral (Kapudân Pasha, [q.v.]) under the Ottoman Sultan Mehemmed IV, d. 1669/1670. He originated from the northeastern shores of the Black Sea (Russian or Circassian?) and came as a slave into the service of Bâktrdi Ahmmed Pasha, Ottoman governor of Egypt. On the latter's execution he was taken by Sultan Murad IV into the Palace and educated there. He was promoted to be Agha of the stirrup-holders (Rikâb-dân aghasî) (Chronicle of Wadjhî, f. 97b of the Vienna MS.), became a favourite of Sultan İbrahim after his accession (1049/1640) and married his daughter 'Atike Sultan. He was at the same time appointed third vizier but banished soon after İbrahim's death 1058/1648) to Crete. In Shawwal 1062/Sep. 1652, he returned to Istanbul and was appointed to the charge of the defences of the Dardanelles. In Shawwal 1063/Sept. 1653, he was given the governorship of Ofen, but deprived of it in Dhu'l Ka'da 1065/Sept. 1655, and in Rabî' II 1066/Feb. 1656, appointed governor of Silistria. On 9 Radjab 1066/May 1656 he was appointed Grand Admiral. On 5 Ramadân 1066/26 June 1656, while in command of the Ottoman fleet sent out against the Venetians, he suffered a severe defeat in the Dardanelles, the greatest naval reverse inflicted on Turkey since the battle of Lepanto; the Venetians then occupied the islands commanding the Dardanelles and thus severed links with the Mediterranean for the Turks (cf. Kâtib Celebi, *Tuhfet al-bikâr fu asÂfâr al-bikâr*, Istanbul 1329, 133-4; Na'imâ, *Ta'rikh*, vi, 183-5; Von Hammer, *GOR*, v, 649 ff.). The whole weight of the Sultan's wrath fell upon Kenân Pasha who was immediately thrown into prison. He was finally released on the intercession of his Russian countrywoman, the Sultanâ-mother (Kösem Wâlide; [q.v.]) but was discharged from the office of Grand Admiral almost immediately on 26 Ramadân 1066/18 July 1656. Two years later he was appointed *Kâhid-malâm* of the imperial stirrup (rikâb-i kumâyân) but the very next month dismissed again and sent to Bursa as commander
of the garrison (muhdfi?) to protect the city against the rebel Abáza Hasan's possible attack (Nâ'îmâ, Ta’rîkhî, ii, 660; Von Hammer, GÖR, vi, 32). But he then left Bursa to join the rebel leader in Anatolia, possibly out of jealousy towards the Grand Vizier Köprüli Mehmed Pâsha. However, he shared the fate of Abáza Hasan and other rebel leaders, and was executed at Aleppo on 23rd Dhu‘dâd 1 i. 1659 (cf. Nâ’îmâ, ii, 685). His head was shortly afterwards brought to the Divânî in Istanbul and eventually buried at Qâshâdar. If this is the Kenân Pasha mentioned by Ewliyâ Çelebi, Siyâhat-nâma, iii, 366 (and he certainly never was governor of Oczakov any more than was Kudîa Kenân Pasha (d. 1602/1651) who is also often confused with the Grand Admiral, e.g. in the Sigîl-i ‘Othmânî, iv, 83), he was also an author and composed a Sâlih-nâma in honour of Shaîr Sâlih Baba (q.v.). His own warlike exploits, especially his military operations in the years 1636-8/1662-8 were celebrated in a rhymed Pasha-nâma by the poet and judge Tûlû‘î İbrahim Efendi (of Kalkandelen) of which there is a copy in the British Museum (Sloane MS. 3584); cf. Ch. Rieu, Catalogue of the Turkish MSS, 1911, with detailed summary of contents. The possibility that it celebrates the above-mentioned Kenân Pasha who had a very similar career to his namesake and contemporary (both were, for example, governors of Ofen), has always to be remembered. The biographical data regarding Shaîr Kenân Pasha are much confused, as the article in Râmîz Paşahâzâde Mehmed, Khaṣrî-i Kapudânîn-i Deryâ, Istanbul 1285, 63-6, and Şâmî Bey Fârsî, Kâmisâ-al-A‘lam, 3900, who follows it, show. According to this authority, Kenân Pasha was buried beside the school not far from Kirklê Çene. (F. Babinger - [N. Göyönc])

KENYA [see KUNA]

KENYA, a state of East Africa bounded on the east by the Indian Ocean, on the north by Ethiopia and the Sudan, and in the south by Tanzania. It was formerly a colony of the British Empire, but became independent in December 1963. The Muslim population in the country formed about 6% of a total figure of 8,636,263 in 1962. Assuming that the number increased annually by the present rate of 3.4%, the Muslim population would number some 800,000 out of a total population of 10,942,705 in 1974. The Muslims themselves generally feel that their numbers have been underestimated. A claim that they represent a quarter of the population has been advanced, although no special census has been made to determine the actual number of Muslims in the country. The Muslim communities in Kenya today comprise various races and tribes, together with all the major sects of Islam, with a definite predominance of the Shi‘î madhhab. A tribe like the Pokomo is 85% Muslim, whereas the Duruma is 25% only.

In the pre-Islamic period, the Kenya coastlands were visited by merchants from southwestern Arabia [see YAMAN, ZANDI], and some Arabs settled there. But it is difficult to fix a date for the earliest arrival and settlement of Muslims on the coast. Local traditions and chronicles of recent origin speak of Muslim settlement going back to the caliphate of ‘Umar b. al-Khaṭṭâb, but no reliable evidence, archaeological or other, has been advanced to support such claims. During some four centuries, between Ptolemy's Geography and the first Arabic sources, there are no reliable data on the coast. The first Arabic source is al-Mas‘ûdî, who relates in the 4th/10th century that the island of Kanbalû (taken to be Pemba or Zanzibar) was ruled by a Muslim family and that its population consisted of Muslims and non-Muslims. Excavations recently carried out at a site on Manda island indicate that a thriving town existed there by that time. "Some of the buildings were of coral stone set in mortar, though many were of mud and wattle, masonry walls built against the sea are of very large coral blocks, many weighing over a ton—a massive form of construction found nowhere else in Sub-Saharan Africa" (Neville Chittick, Zamani). The excavation unearthed vast quantities of Islamic pottery and some shards of Chinese porcelain which indicate direct contact with other Islamic regions. The contacts with China were probably only through intermediaries. By the 4th/10th century, commercial relations were being pursued not only with South Arabia, but also with the Persian Gulf. Immigrants from Persia, known as the Banâdîr, also seem to have come to settle on the Somali coastal towns. They intermarried with autochthonous Bantu-speaking groups and thus contributed to the foundation of Mogadishu which, by the 7th/13th century, had developed into the most important Muslim town on the western coast. Many of these Shîrâzîs, as the Persian-African families became known, later moved south and settled at such places in Kenya as Shanga and Manda and became part of the ruling families in Malindi, Mombasa and Vumba Kuu. On Pate (Patta) island, an Arab family from ‘Umân, the Nabhânî, formed a ruling dynasty through a similar process of integration. The sultanate of Shanga Kuu, on the southern coast, was the result of Shîrâzî settlement and intermarriage between these Muslims and local Africans. In the 12th/18th century, an Arab family of Shâriîs from Hadramawt, the Bâ ‘Alawi, established a dynasty which adopted the title of Divânî for the ruler, but maintained the custom of giving him a Bantu nickname—a symbol of cultural exchange and synthesis, which was also reflected in the investiture ceremonies of the Divânî, which included Bantu and Muslim rites. The Nabhânî rulers of Pate also adopted a Bantu throne-name, Fumo (*spear*).

Such ethnic and culture integration renders inaccurate the description of these city-states as "Arab colonies". Their dominant feature was not their Arab nature but Islam, and they have been compared with some of the western Sudanese Muslim states.

Between the 7th/13th and 10th/16th centuries, up to the arrival of the Portuguese, the Muslim city-states enjoyed their greatest days of cultural and material efflorescence. They were largely independent of one another, the so-called Zanjî empire being a myth; they quarrelled and fought one another many times (Mombasa's and Malindi's enmity towards each other became proverbial), but there was a great deal of commercial and cultural interdependence among them. At this time towns produced an abundance of sorghum, millet, rice and bananas,
largely for their own use, but obtained their wealth from ivory, ambergris, gold and slaves. Gold came from the Sofala region in Mozambique, and was largely responsible for the comparative greatness reached by Kilwa [q.v.] and possibly for the Banadir emigration to the South. In return for their exports, the Muslims of the coast imported household utensils and wares. As their wealth increased, Islamic goods were augmented by greater quantities of Chinese wares indirectly acquired, probably from Cambay in India [see KHAMBARAYAT]. Also from India came glass beads that were used for barter locally. Silver was imported by the wealthy. Some towns had local industries: Pate was known for its production of fine gaily-coloured woven fabrics. In short, when the Portuguese arrived they were astonished by the urban material culture and civilisation of the “Moors” they encountered.

Their exploitation of the Muslim rulers of Mombasa, Kilwa and other city-states was part of their policy to out-flank Islam. Mombasa was burnt down at least twice. The two-centuries long episode of this Portuguese presence certainly contributed to the economic decline and cultural stagnation of the Muslim city-states, although it was by no means the only factor. Disruptive human movements on the mainland, such as that of the Galli, were also a noteworthy factor, as was the general decline of the centres of Islam during the 10th/16th and 11th/17th centuries.

Mombasa’s Muslims had appealed to the Imam of ‘Umân for help to overthrow their Portuguese oppressors. Their call was answered, although the liberation took some decades to be achieved. By the third decade of the 16th century, the Portuguese had been driven south of the Ruvuma. Their presence on the coast, Islam had remained triumphant, and although there are references in Portuguese sources to some local people becoming Christian, none survived the Portuguese expulsion. Christianity had to be sown anew on the coast from the middle of the 19th century onwards.

The Portuguese were succeeded by ‘Umân Arabs as nominal overlords of the coast, the local chiefs and sheikhs enjoying a great deal of local authority. These ‘Umân Arabs belonged to the Ibadîyya sect [q.v.]. However, by the time of their arrival the coast had evolved as a predominantly Shâfi‘i region. This may be ascribed to the influence of Haḍramî sayyids or sharîfs who had settled on the coast in large numbers during the 8th/14th and 9th/15th centuries. Through intermarriage with Africans, these sharîfs and their descendants came to determine not only the madhhab of East African Islam but also greatly influenced Swahili literature and culture generally. The legacy of this Haḍramî Arab settlement and scholarship is to be seen in the methods of teaching Islam, the religious manuscripts, the cult of saints, the veneration for sharifs, the poetic verse form and content of the Swahili epic or utenzi, etc. The Lamu archipelago, Zanzibar and the Comoro islands, became the main centres from which radiated the influence of the sharîfi families. A notable religious intelligentsia developed on the coast which became, and remained, the point of reference for the whole of East African Islam. By the 19th century, cultural traffic linked South Arabia to the Banâdir, to the coast southwards up to Mozambique, and to the offshore islands: the Lamu Archipelago, Zanzibar, Peînba, Mâfia and the Comoro islands. Haḍramî towns like ‘Inâšt and Tarîm, Mecca and Medina, sometimes Cairo and occasionally ıṣṭanbul, helped to mould the minds of East African Muslim scholars. Students from the East African towns travelled to Kilwa, Haḍramawt, and sometimes Egypt, to study under renowned scholars. The acquisition of an idqâda from one of these scholars established its recipient as a teacher in a mosque or in his own home, in the Arabic language, Kur’ânic exegesis, hadith, Sharî‘a, etc. From this educational system there developed a strong body of ‘ulamâ‘, from amongst whom the Bâ Sa‘îd rulers appointed their kâdîs. Some of the most outstanding names among these ‘ulamâ‘ for the latter part of the 19th and early part of the 20th centuries, are Sayyid Ahmad b. ‘Umây and his son ‘Umar; Shaykh ‘Ali b. ‘Abd Allâh al-Ma‘zûrî and his son al-Amîn; Shaykh ‘Abd Allâh b. Muhammad Bâ Kâchîr, Sayyid Abû Bakr b. ‘Abd al-Rahmân al-Husayni, the great Lamu scholar, better known as Sayyid Manşâb, and Sayyid ‘Abd al-Rahmân bin Ahmad, the first Chief Kâdî or Shaykh al-Islâm to be appointed in Kenya in 1897.

In addition to them there were and still are the Kur’ân teachers (Wa‘îlimu, sing. Muwâlimu) and schools that abounded and still abound in every Muslim town and village. In the Kur’ânic school, the Muslim child learnt to recite the Kur’ân, and to write in Arabic characters, but rarely to write in that language. Overwhelming dependency on such a school led to the emergence of generations of coastal Muslims who were Ki-Swahili rather than Arabic-speaking. During his visit to the coast, Ibn Batţûtâ noted this trend, as the result of absorption and integration of Arabs within an African society. Ki-Swahili developed quite early as the lingua franca, though it relied heavily upon Arabic vocabulary. Arabic and Arabic culture enriched Ki-Swahili and enabled it to develop a significant literary tradition, sc. in the verse epic known as utenzi or utenzi [see SWAHILI]. The most famous of such didactic epics is al-Inkîshâfî, written ca. 1800 by Sayyid ‘Abd Allâh b. ‘Ali b. Nâşîr, which uses the decline of Pate as a moral to emphasise the transitoriness of material wealth and enjoins its readers to lead a virtuous life rather than accumulative and real.

The ruins still standing in Pate, now a mere village, testify to a time of great prosperity. But this prosperity came much later than the local traditional source, the Chronicle of Pate, has indicated. N. Chittick’s re-appraisal of the Chronicle, in the light of archaeological work done by himself in the area, shows that the town was of a modest size before 700 to 1300, developing very gradually and not achieving its greatest period of efflorescence until the 12th/13th century. This is attested by the rich deposits of Chinese porcelain discovered from the 10th/16th century levels upwards. On the strength of these archaeological discoveries, Pate has been ranked with Kilwa in Tanzania as two of the three most prominent towns of Muslim civilization south of Somaliland, the third being Lamu. It achieved prosperity and strength during the reign of the Bâtîwâ dynasty, which had acquired power through intermarriage with the indigenous Wasania, a hunter-gatherer group from whom the Muslims had been purchasing ivory on the mainland, and during the reign of the subsequent dynasty, the Nabhânis, its days of prosperity lasted well into the 12th/13th century.

The dates of the birth and death of Sayyid ‘Abd Allâh b. ‘Ali, the author of al-Inkîshâfî are deduced, rather than factually known, from the internal evidence of the poem and from the inscription on the
tomb of his uncle, Talib b. Nasir, who died in 1169/1755. Thus it is assumed that the poet was a youth by then and may have witnessed not only some of the glories of the mansions and life of Paté, but also evidence of the internecine fighting that contributed to its decline. It was subed first by the Mazrū’i rulers of Mombasa and later by the Bu Sa’idis sultans of Zanzibar. By the time the poem was written Paté had fallen into ruin (see W. Hichens, Sayyid Abd Allah al-‘Ali b. Nasir). The Ki-Swahili verses amply evoke a life of great luxury, when at least the ruling classes were familiar with porcelain wares and when furnishings were made from silk and brocade.

Another outstanding example of Ḥadrami contribution to Swahili religious culture is Sayyid ʿAbd Allāh. He was a descendant of the venerated Sayyid Abū Bakr b. Sālim, the 12th/17th century ġarif of Hadramawt, renowned for his erudition, piety and poetry. According to the Pate Chronicle, the people of the town appealed to him to pray for their deliverance from their enemies. It is not certain whether these enemies were the Portuguese or the Galla. In any event, descendants of his two sons ‘Ali and Husayn, settled on the coast and provided some of its most notable figures in the field of theology and literature. Sayyid ʿAbd Allāh was the son of ʿAli, a great-great-grandson; from Husayn’s line came Sayyid Manṣḥ (1828-1922), the renowned jurist of Lamu.

From the Lamu archipelago the poetic tradition spread south and ventured into new fields of comment. By the 19th century, a poet like Muyāka b. Ḥadīdī at-Ḥassānī of Mombasa was writing romantic poetry and patriotic verses in defence of Mombasa’s independence, then under the rule of the Mazrū’i dynasty, and against ʿUmānī attempts to impose their overlordship upon Mombasa and other towns on the coast. All those who appreciated this Ki-Swahili literary efflorescence became wenseyji “those who belonged” and waṣṣararabu (from Ar. isaʿaraḥa “the civilised ones”). These wenseyji differentiated themselves somewhat from the recent immigrants from Hadramawt or ʿUmān who, until they had integrated themselves, were considered alien to this local Muslim culture of the Swahili-speaking people of the coastal towns.

There is little evidence that this Swahili Muslim culture penetrated far beyond the littoral before the 19th century. However, there is evidence of some form of “diplomatic”, commercial, and religious interaction with some African tribes in the immediate neighbourhood, notably the Miji Kenda groups: the Digo to the South of Mombasa, the Rabai, Ribe and Duruma to the west, the Girama in the Malindi area, the Kambe, Chonyi, Kawna and Jibana, and the Segeju on the Kenyan-Tanzanian border. Before the 19th century expansion inland, a significant degree of intermarriage took place between the coastal Muslims and these groups. Duruma and Rabai acted as middlemen for goods exchanged between the Arab-Swahili people and interior peoples like the Kamba; diplomatic-cum-military “pacts” were made between groups of Miji Kenda people and coastal townspeople. The Segeju helped Malindi not only to ward off the danger from the mysterious cannibalistic Zimba, who literally ate their way northwards, but also to take Mombasa in 1552; African auxiliaries fought on Mombasa’s side against Malindi. The so-called Nyika “people of the bush”, or a section of them, helped in finally expelling the Portuguese from Mombasa in 1728 and in the restoration of Mazrū’i rule in 1746 during the struggle for supremacy between the Mazrū’i and the Bu Sa’idis; installation ceremonies of Mazrū’i governors (ṣāḥibin), were attended by neighbouring African notables. After the defeat of the Mazrū’i of Mombasa, their Bu Sa’idis successors not only recognised the autonomous political status of the longer-established Muslim groups known as the Ḥanafī-ṣaḥara ṣāḥibin, the so-called Twelve Tribes, but also acknowledged the long-established “pacts” that had been established between these various ṣāḥibin and neighbouring African groups, whereby the former acted as “agents” for the latter in relations with others. The vestiges of these bilateral relations lasted well into the early years of colonial rule.

To the south of Mombasa, in the area between Gasi and the northern areas of present-day Tanzania, a similar pattern of relationships developed between the Digo and the Segeju on the one hand and the leading Muslim families on the other, except that the politico-military relationships were reinforced by a significant religious impact. The Bā-ʿAlawi ġarift families in this area, centred upon the Diwānship of Vumba Kuu, were responsible for the Islamisation of the Digo and the Segeju. The Segeju had become wholly Islamised and the Digo on the coast had virtually all become Muslims by the time colonial rule arrived.

Islam expanded into the interior of Kenya or the rest of East Africa only in the 19th century, particularly after the Bu Sa’id’s ruler of ʿUmān, Sayyid Sa’id b. Sulṭān, decided to move his capital to Zanzibar. He attracted a large number of compatriots, Indians, Ḥadramis and Balūcīs, to serve in his garrisons, custom-houses, and civil administration. Others came to exploit the economic and commercial potentialities of these newly-acquired tropical dominions of ʿUmān. By this time, trade in ivory, rhinoceros horns and other inland products as well as slaves had already proved lucrative. Under Sa’id this trade was now promoted to unprecedented heights. Caravans, financed by Indian credit, which was shrewdly wooed by Sa’id, moved into the interior with goods such as cloth, beads, knives, axes, etc., to exchange for the inland products traditionally cited. The slaves were not only exported, but used in large numbers to found a plantation system in Zanzibar and on the mainland coast; Malindi in Kenya is a unique example which demonstrates the success of this agrarian industry. As late as 1846, it had been found “deserted and ruined” by the Christian missionary J. L. Krapf as a result of Galla raids. It was Arab settlement and agrarian development that revived it. By the 1870s, vast acres of land around the town had come under cultivation of maize, millet and fruit of various kinds, and it was described as the granary of the coast and to some extent of Arabia through a thriving export trade.

The indigenous ʿAlawi Arab-Swahili Muslims were now reinforced by Indian Muslims, among whom the Ḥodja or ʿAlawi Nizārī Ismāʿīllis, the Mustaʿlian Ismāʿīllis (Bohorās) and the Ḥanafī Memons predominated. An 1875 census of the Indian population reveals that there were more Indian Muslims than Indian non-Muslims on the coast, particularly Ismāʿīllis. In Kenya they were to be found in Mombasa, Malindi and Lamu, either as agents of firms having headquarters in Zanzibar, or as wholesale or retail merchants. Unlike the Hindus, the Indian Muslims generally arrived with their families and showed readiness to settle down on the island and coast ruled by a fellow-Muslim.

However, from the outset they maintained a cer-
tain degree of social and religious aloofness. They began to build exclusive quarters, sectarian mosques and independent religious organisations, in fact forms of internal government or autonomy which were acknowledged or tolerated by the Sultan of Zanzibar as well as by the colonial government thereafter. Thus the Ismailis looked and still look upon the person of the Aga Khan as their spiritual and administrative head. Locally they appointed mukhsis to care for socio-economic affairs. Later, at the turn of the century, a council was formed at Zanzibar to supervise the local mosque (djamati Khana) and the congregations (djamats) on the mainland, when a split arose within the Ismaili community (1880-1910); secessionists protested against the Aga Khan's claims to divinity and what was considered to be his excessive control over the local mosque. Later, Zanzibar lost this overall control as the community spread on the mainland and into the interior, and provincial councils were created to look after the spiritual affairs and general welfare of the community in various parts of East Africa.

The Bohorás [q.v.] formed and still form the second largest Asian Muslim community. The Bohorás who migrated to the East African coast belonged and still belong to the Dā'ī faction. By 1875 there were 54 Bohoras (as compared to 2725 Khodja Ismailis and 116 Memons) at different places in Zanzibar and on the coast. As the supreme spiritual and administrative head of the Bohorás, al-dā'ī al-mutlak appointed representatives to attend to the welfare of his followers. Officials bearing the rank of āmil, agent, were sent to Zanzibar and Mombasa towards the end of the 19th century. The āmil, also known as mīyān, looked after every Bohora congregation of 50 families. He dealt with religious, social and economic problems. His permission was and is essential for every religious ceremony. Among the most important duties, he performed the collection of dues for the Summoner, the administering of the covenant (mīthāk) to the followers; and the instruction in religion and religious history through sermons. It was not until the 1920s that congregational or djamati councils were formed by the Bohorás to look after their secular affairs.

The earliest Ithna-asharis, or Twelvers, arrived on the coast late in the 19th century during the split that occurred among the Ismaili Khodjas, late in the 19th century, over the claims of divinity by the Aga Khan. Many Nizāri Ismailis are said to have defected to the Twelvers. Like the other two Shi'ī sects, they organised themselves into djamati or congregations, each with its own council. In place of a dā'ī, the Ithna-asharis have muttahids, the most scholarly among whom was appointed usma, the interpreter of the faith to the community. No muttahid was appointed to East Africa. Instead, low-ranking mullas performed religious functions within the djamatis. Prayers were performed in the communal mosque whilst sermons, festivals and feasts were held in the Imamād-hā [q.v.].

The first Ithna-asharis were known to have moved to Zanzibar in 1806. By the last quarter of the 19th century, the Muslim population of Kenya had begun to be variegated in a sectarian and ethnic way.

By that time, too, nuclei of Muslims had been created in the interior. It has often been observed how important the caravan trade and trade routes have been in the spread of Islam from early times in different parts of Africa. In Kenya, and East Africa generally, this phenomenon took place particularly during the second half of the 19th century. Until the 1850s trade movements had mostly been from the interior to the Muslim coast. Ivory in particular was brought down to the coast and sold to the Arabs and the Swahili by the Kamba, at first through Duruma and Giriama middlemen, later directly. Gradually, this virtual monopoly of the Kamba was broken. Arabs and Swahili began to move inland significantly after 1860, in order to acquire trade goods directed from inland African peoples. This trade by now had come to include the slave trade, although Kenya was not as affected by it as other slave trading areas in Tanzania. In Kenya slaves were secondary to ivory, cattle, rhinoceros horns and other goods.

The Arabs and Swahili in Kenya were not able to establish bases as important and permanent as their counterparts did at Tabora and Ujiji in Tanzania. (The Maasai plains were never entirely free from danger to permit that.) The Kikuyu only grudgingly permitted some trade on the edges of their country; on the whole, they discouraged close ties with the coastal Muslims. Trade was more successful with western Kenyan peoples, among whom a network of caravan routes was gradually spun. Although not as substantive and lucrative as the trade in Tanzania and Congo, it was of some importance. The Arab-Swahili penetration was dependent upon a series of stop-overs that were chosen for the friendliness of their inhabitants and the security of their goods.

Through these trade connections, nuclei of Muslim traders and Muslim influence were implanted in the interior of Kenya within the body politic of small chieftaincies. Many of these traders passed also as men of medicine, of a novel kind with which the African of the interior was not familiar. The new magico-medical powers, the weapons they used and the goods they could deliver and the luxury goods they Barton, made them welcome and assured them great prestige. Trade relations led to at least some seasonal settlement and intermarriage and thus the nuclei of Muslims grew in size and importance. As the caravan traffic increased during the 1870s, 1880s and 1890s, especially with the decline of the Maasai, the Muslim traders began to make their influence felt upon the internal politics of inland African societies. Centres of such influence were established at such places as that of Kitoto, at Sapei and at that of Mumias, the last being the important capital of the Wanga kingdom in Western Kenya, ruled by Mumia, who allied himself closely with the Swahili traders.

Another factor, that led to the infiltration of Muslim influence into Kenya was tribal movement. The Somalis had been pressing south from the Horn of Africa since the 6th/12th century. It was their expansion that forced the Gaalla to their south to press hard upon the Muslim coastal people and cause a significant degree of depopulation and abandonment of many towns. Both Malindi and its appanage, Gedi, suffered decline as a result of Gaalla raids. Malindi had been eclipsed by 1667, and, as we have seen, it was Arab settlement in the 19th century that led to its revival. By the middle of the century, Muslim Somalis began to move decisively against the Gaalla to their south. They crossed the Juba river in force about 1850, thus making contact with the Gaalla who dominated the region of the Tana. An uneasy coexistence of some 15 years was broken when the Somalis turned upon the Gaalla, decimated them and occupied their territory. Thus began the invasion and settlement of another part of Kenya by Muslims and the slow religious interaction between Muslims and their neighbours. It is this process that has slowly led to a practical islamisation of such groups as the Rendille, Boran, and the Gaalla them-
selves. Today each of these groups is at least 90% Muslim.

By the last quarter of the 19th century, much of East Africa as a whole had come to form a huge Muslim sphere of influence, inspired by Zanzibar and based upon trade, leading to the saying that "when they pipe in Zanzibar, people dance on the shores of the great lakes". European travellers, explorers and missionaries observed these trends, and some were perturbed by them for political or religious reasons or for both. Livingstone and Stanley, whose reports did so much to mobilize Christian missionary efforts, were as much concerned about the slave trade as about Islamic influence. The Muslim traders generally welcomed the European missionaries and explorers, giving them all the necessary help in their ventures inland, even in the foundation of mission stations. No hostility was engendered towards Christianity as a religion. It was only when attempts were made to interfere with their trade, particularly the slave trade, that the Arab-Swahilis reacted with hostility, as did the African peoples who were their partners in this trade. Only in Buganda a religious conflict arose when the Christian missionaries, Catholic and Protestant, regarded the influence established by Muslims at the Kabaka's court as the basic enemy. This was the prelude to the religious wars that broke out late in the 19th century in that country, political pressure being the prime motive. The tide was fighting for: was Arab-Muslim power to be allowed to prevail over Christian-European power?

This was the most relevant and crucial question by the mid-1880s. The European scramble had begun. The extent of the suzerainty of the Muslim sultan of Zanzibar was being challenged by the Germans and the British. In 1884 the Germans declared protectorates over several areas in Tanzania. In 1885 they took advantage of local political and dynastic rivalries and declared a protectorate over the Witu Sultanate, founded ca. 1865 on the mainland of Lamu by a scion of the Nabhan family, after their original centre of power, Pate, had been taken by Zanzibar. Since then the founder of the Witu Sultanate, Ahmad Pumulo (nicknamed Simba "lion"), had been driven off all diplomatic and military attempts to make him acknowledge Zanzibari overlordship. He took advantage of the European scramble to seek German protection from further Zanzibari pressures. In 1886 an Anglo-German agreement signalled the beginning of the dismemberment of the Zanzibari Bu Sa'di sultanate. The sultanate was restricted to a ten-mile coastal strip between the Mozambique border and Kipini (in Kenya), some offshore islands and a 5 to 10 miles' radius round the Banadir ports. The rest of East Africa came under British and German influence, the former including most of present-day Kenya and southern Somalia, the latter comprising the present-day Tanzanian mainland.

The period between 1886 and 1895 witnessed widespread Arab-Swahili reaction and resistance against the advancing colonial designs of the two European powers. This resistance was provoked by several factors: fear of loss of political influence or trade in the interior, European interference with the traditional administration and the social, cultural and religious way of life. The Germans' determination to "Germanise" the Tanzanian coast and humiliate the sultan's representatives sparked off the Arab uprising in 1888, led by the Arabs but with widespread African backing. The blockade of the coast by European powers, whose aim was to strangle the revolt, was seen by the Muslims as a Christian alliance against them. In August 1890, after the revolt was over, the Germans and British sought to eradicate pin-pricks in each other's spheres by coming to another agreement, whereby Germany gave up her protectorate over Witu. This led to the first Witu uprising. Fumo Bakari, Simba's successor, feeling himself betrayed by Germany, ordered some German prospectors out of his Sultanate. When they resisted, a fight ensued in which nine of the Germans were killed. The British government, to whom Witu had been handed over, was forced to carry out a punitive expedition. Two other revolts broke out in Witu under the leadership of Fumo Bakari and Fumo 'Omari. In 1894 Fumo 'Omari was exiled to Zanzibar, by then another British protectorate, where he eventually died. The following year, the Mazrui revolt was sparked off at Takaungu, a stronghold of the family lying to the north of their former centre of power, Mombasa. It was caused by British interference with the traditional method of choosing a wali; Mbarrak, who was regarded as the logical successor, was bypassed by a pro-British wali. Mbarrak denounced British authority and spear-headed the revolt which engulfed virtually the whole Kenyan coast from Malindi to the Tanzanian border. Mbarrak was supported by his uncle, Mbarrak b. Raghid, son of the last independent Mazrui chief of Mombasa who was overthrown by the Bu Sa'di; in the past he had led several revolts against Zanzibari authority. Although this was basically a family revolt, it gained support from coast Africans long associated with the family as well as from Swahili chiefs, one of whom regarded it as a djihad and raised the flag of Islam. It was not until March 1896 that the revolt spent its force in the face of heavier odds. But rather than submit, the leaders sought refuge to neighbours who chose to seek refuge in German territory in the south.

The suppression of the Mazrui revolt meant the loss of any Arab or Muslim aspiration to maintain political independence not only in Kenya, but also the whole of East Africa.

However, in Kenya as in Zanzibar and the Tanzanian mainland under German rule, some semblance of Arab-Muslim administrative organisation was maintained. The first Commissioner of the East Africa Protectorate, which comprised most of Kenya (the western province being part of the Uganda Protectorate until 1902) was Arthur Hardinge, who had served in Muslim countries, such as Egypt and Turkey, an experience that had implanted in him some sympathy for Islam. Having vanquished Kenya's coastal Muslims, he granted them a special position in the administration of the Protectorate. Muslims were needed to establish a viable, new cadre in the administration, the judiciary, the military and the transport fields because they were the only literate indigenous people with some knowledge of administration and a working relationship with the peoples of the interior. Thus an Arab-Muslim administrative hierarchy was established, composed of livil'is (governors), mudir and kaddis, the first two being administrative officers in livil'ates and mudiriyeyets on the coast. Hardinge's plans to train more Arabs and "upper class" Swahili who could serve as officers beyond the coastal strip never materialised. In fact, as time passed, the number of livil'is and mudirs was reduced for reasons of economy or retrenchment.

In so far as Islam was concerned, the new European colonial era brought positive, if indirect results. If Muslim power had been shattered, the faith itself
spread inland with the extension of the *Pax Britannica*,
the hostility of Christian missionaries and
some officials who regarded Islam either as a rival
to Christianity or as a threat to European rule. The
spread of Islam during colonial rule was as haphazard
as in pre-colonial times. Diverse factors account
for this. The building of the Uganda Railway to join
the two British Protectorates brought fresh Indian immigrants,
many of whom were Muslims, some of whom stayed behind and encouraged others to come
out from India. Thus the Indian Muslim population
in Kenya increased in number and moved inland, em-
ployed either in the railway administration or private-
ly employed as merchants, shop-keepers, hunters,
etc. The medical officers, veterinary officers and
clerks of the railway administration had amongst them
the pioneer members of the Ahmadiyya
movement [q.v.] in Kenya. But the celebrated
militant missionary activity began only in the
1930s. The railway also facilitated travel of local
Muslims. Arabs and Swahili moved more easily
inland to settle and trade and thus founded such Mus-
ilim "locations" as Pangani and Pumwani in Nairobi.
Individual Muslim traders were soon to be found in
other townships where they married, settled and cre-
ated new nuclei of Muslims, e.g. at Kendu Bay,
Kisumu, Fort Hall (now Muranga), and the Machakos
district. Some local converts contributed to the
growth of these nuclei.

A second noteworthy factor that facilitated the
diffusion of Islam was the colonial administration's
employment of Swahili, Somali and Sudanese Muslim
troops in its punitive expeditions and in the manning
of garrisons. On retirement or discharge, many of
these soldiers settled in the interior and married local
Muslims. Indeed, the Swahili "colony" in Nairobi is one example of an ex-soldier settlement.
The early administration also employed craftsmen,
tax-collectors of Swahili Muslim
origin; domestic servants, in areas as far as Uganda,
were often Swahili, as were many of the foremen of
the first European settler farms. Thus the non-
Muslim and non-Christian Africans were made
conscious of the comparatively privileged position
of Islam as a soldier, foreman, craftsman,
and in 1900. In 1907 the ordinance
abolishing slavery was promulgated, which dealt a
final, heavy blow to agriculture, the mainstay of the
economy of the coast. Game regulations entailing
the purchase of licences and competition from Europeans
and Indians reduced Arab-Swahili participation in
the ivory trade. In 1908 the Land Titles Ordinance
was passed, and it led to vast acres of land being
either alienated or declared crown land; some of
these lands were leased or given freehold to European
planters.

Thus at the turn of the century, the indigenous
Muslims of Kenya found it essential to embark upon
a drastic reappraisal of their status under the new
colonial order, especially in regard to education.
When the British authorities began in 1920 to take
up responsibility for cultural development, there was at
first no provision for the teaching of Arabic and the
Kur'ān, and it was only in 1924 that the govern-
ment introduced Kur'ānic lessons in the schools of
Mombasa and Malindi.

Also, two very short-lived reform organizations
came into being amongst the Arab-Swahili of
Mombasa—the Mohamadan Reform League and the
Afro-Asian Association. The latter was basically a
political association, but established a Muslim school
in 1937. The most important Muslim Reformer
in Kenya was undoubtedly Shaykh al-Almih b. ‘Ali b.
Nafi‘i al-Mazrū‘ī [see al-Mazrū‘ī] who in his weekly
al-Islāh envisaged the creation of a body to defend
Muslim interests. Other non-coastal, non-Arab,
Muslims issued in 1931 a memorandum addressed
to a Parliamentary Joint Select Committee on Close
Union of East Africa expressing their fears of the
threats to Islam in Kenya, whereas Christianity
was being encouraged by all means possible. In
February 1935, a delegation of three Indian Muslims
left Kenya for India to collect funds and personnel,
in order to initiate a Muslim missionary movement
in Kenya and thus counter-balance the Christian
missionary endeavour by turning more Africans
into Muslims; but its members returned without
achieving any immediate results. Only the Ahma-
diya movement showed interest in the initiation

Island by siding with the Germans. Copies of this
declaration in Arabic and Ki-Swahili were distributed
all along the coast. Equally widely distributed was
the Sharī‘ Husayn’s proclamation of June 1916,
renouncing his allegiance to the Turkish sultan and
denouncing the heretical measures of the Turkish
Committee of Union and Progress.

As it turned out, Britain need not have feared a
large-scale *djihād* in the East Africa Protectorate.
The Muslim population of the coast had never dis-
played active religious fanaticism on a significant
scale. Two decades earlier (1895-6), they had been
equally unenthusiastic in their response to Egyptian
religious exhortation to rise against the Sūfī of
Zanzibar and his British mentors, who had begun to
interfere with the lucrative slave trade. This was
part of an Egyptian design to occupy the East African
coast, from which they planned to forge a route to
the inter-lacustrine regions of central Africa to super-
sede the one down the Nile, which was causing undue
delay in obtaining men and equipment. The Egyptian
expedition along the coast got no further than Lamu,
and failed to exploit the religious sentiments and the
economic motives of the coastal Muslims.

Even so, by the outbreak of the First World War,
the indigenous Muslim population of the coast was
smarting under a series of blows. Punitive expeditions
had shattered all aspirations to political indepen-
dence between 1890 and 1900. In 1907 the ordinance
abolishing slavery was promulgated, which dealt a
final, heavy blow to agriculture, the mainstay of the
economy of the coast. Game regulations entailing
the purchase of licences and competition from Europeans
and Indians reduced Arab-Swahili participation in
the ivory trade. In 1908 the Land Titles Ordinance
was passed, and it led to vast acres of land being
either alienated or declared crown land; some of
these lands were leased or given freehold to European
planters.

Thus at the turn of the century, the indigenous
Muslims of Kenya found it essential to embark upon
a drastic reappraisal of their status under the new
colonial order, especially in regard to education.
When the British authorities began in 1920 to take
up responsibility for cultural development, there was at
first no provision for the teaching of Arabic and the
Kur’ān, and it was only in 1924 that the govern-
ment introduced Kur’ānic lessons in the schools of
Mombasa and Malindi.

Also, two very short-lived reform organizations
came into being amongst the Arab-Swahili of
Mombasa—the Mohamadan Reform League and the
Afro-Asian Association. The latter was basically a
political association, but established a Muslim school
in 1937. The most important Muslim Reformer
in Kenya was undoubtedly Shaykh al-Almihn b. ‘Ali b.
Nafi‘i al-Mazrū‘ī [see al-Mazrū‘ī] who in his weekly
al-Islāh envisaged the creation of a body to defend
Muslim interests. Other non-coastal, non-Arab,
Muslims issued in 1931 a memorandum addressed
to a Parliamentary Joint Select Committee on Close
Union of East Africa expressing their fears of the
threats to Islam in Kenya, whereas Christianity
was being encouraged by all means possible. In
February 1935, a delegation of three Indian Muslims
left Kenya for India to collect funds and personnel,
in order to initiate a Muslim missionary movement
in Kenya and thus counter-balance the Christian
missionary endeavour by turning more Africans
into Muslims; but its members returned without
achieving any immediate results. Only the Ahma-
diya movement showed interest in the initiation
of a missionary movement, but its offer was refused. A year before, in 1934, the Tahrlk-i-Djadld of a missionary movement, but its offer was refused. The Ahmadiyya helped build or repair mosques and produced literature on Islam on a large scale, culminating in the production of a Ki-Swahili translation of the Qur’an in 1953. They had about 1,500 adherents in Kenya according to an authoritative estimate of 1974, compared with just over 1,000 in Uganda and some 2,700 in Tanzania.

Despite Shaykh al-Amin al-Mazrul’s efforts to provide practical guidance, none of his major proposals were implemented by the Muslims. They became more and more reconciled to the idea of living in separate groups, without organic links between African, Arab, Swahili and Indian Muslims. In Kenya the Indian Muslims were and still are the best-organised and the most prosperous. Hence they have been able to finance and build schools and, in the case of the Isma’ili, to build hospitals and contribute significantly to the educational and medical services in the country. The East African Muslim Welfare Society, founded in the 1930s, was a charitable Isma’ili organisation aimed at raising the status of the most depressed members of the Muslim community, particularly the African. A most noteworthy project of the Muslims in Kenya was launched after the Second World War. The colonial government, the Ağā Khān and the Sultan of Zanzibar jointly contributed towards the building of a Mombasa Institute of Muslim Education (MIOME), which encompassed a long-promised academic Secondary School for Arabs and Swahili. The Institute was to lay emphasis upon technical and vocational training, but Islamic studies were included to balance these secular studies. The Institute was seen as a precursor of a Muslim University, but within a few years of its opening in 1951, however, the Institute had to accept non-Muslims and changed its name first to “Mombasa Institute of Education”, then to “Mombasa Technical Institute”, and lately to the “East African Institute of Education”, University of Nairobi, 1974; R. Oliver, The missionary factor in East Africa; A. H. J. Prins, The Swahili-speaking peoples of Zanzibar and the East African coast, 1964; R. B. Serjeant, The Sayyids of Hadramaut.

KENZA (Nubia). [see AL-KANZ, BĀNū —]

AL-KERAK. [see KARKAK]

KERAKSU. [see GIRESON]

KERBELA. [see KARBELA’]

KERBĒNEH. Ottoman name for Karpenésion (Karpensis, Carpentitze), a small township in northern Aetolia. The district was probably occupied under Bāyezīd I [q.v.], when the adjacent regions of Salona, Domakia and [Neo-] Patras fell to the Turks (Hammer-Purgstall, i, 249-50, following Chalcoondyles); when it was first named in a published Ottoman source (the qịways of 894/1489, Beikeler, ii [1964], 100, n. 2), as Kār bāsh, it is grouped with “Badra” (Neopatras, Badarālik), Dūmēke, Čalatāj (Pharsala) and Mūnente (Bodenita). At this period it was presumably administered as part of the sandjak of Tirkhālā [q.v.]; it appears later as a kadā of the sandjak of Aynabāqlīh [q.v.].

The locality is famous in modern Greek history as the scene of the victory of the Suliot leader Marco Botarri (21 August 1204) over the gros de Teules, a French contingent that had come to the aid of the local Greeks.

Giannopoulos, Η δομική ιστορία του οικισμού της Στρειφάλλας Ελλάδος κατά την Τουρκοκρατίαν (1393-1821), Athens 1971, 100-2 (with full references).

KERC, a seaport at the eastern tip of the peninsula of that name at the eastern end of the Crimea [see KIRM] in the modern Crimean oblast of the Ukrainian SSR.

The district was clearly a well-populated one in pre-historic, Cimmerian and Scythian times, since it contains a large number of kurgans or burial mounds, many of which have been excavated since the last century. In classical times, it was from the 6th century B.C. onwards the site of the flourishing Ionian Greek colony of Pantikapaion, later called Bosporos and the capital of the principality of Bosporus Cimmerius (see Pauly-Wissowa, xviii/3, 780-825, s.v. Pantikapaion). After coming under the control of Mithridates VI of Pontus (end of the 2nd century B.C.) and then, from the time of Augustus, of Rome, it suffered badly during the barbarian invasions of such steppe peoples as the Sarmatians, Huns and Goths. From the late 7th century A.D. it was held by the Khazars [q.v.] as the capital of their foothold in the eastern Crimea, with the residence of the khan or governor there.

The name Kerc first appears in Islamic sources under various forms, such as Karz, Kargā, al-Karsh, etc., and may derive from a Greek form Korizos/ Korizos/Korizos.
confederation in the early years of the 11th century, Kerč fell to the Kiev Russians and for some decades the eastern Crimea formed part of the Russian principality of Tmutarakan in the Taman peninsula across the Straits of Kerč, under the patriarchate of Malegra in the Taman peninsula, whilst in 1332 it was to become a metropolitan sea itself (see Heyd, *Histoire de la commerce du Levant*, ii, 184-5). In the 12th century Kerč was in the hands of the Kipčak or Comans, and it may be the town of Rbšša mentioned in a treaty of 1159 between the Byzantine Emperor Manuel Comnenos and the Genoese. In the 13th century, Crimea and South Russia became part of the vast territories of the Golden Horde. Ihne Baţtâta, travelling from Karš/Kerč to Kafa, describes his meeting with Christian Comans (*Rbšša*, ii, 355-7, tr. Gibb, ii, 469-70, cf. Barthold,*Histoire des Turcs d’Asie Centrale*, Paris 1945, 157). From 1289 onwards there was a Venetian consul in Kerč (Heyd, loc. cit.), and by 1318 it was in the hands of the Genoese, who had established themselves on the southern littoral of the Crimea with their centre at Kafa/Kėfe [see KEFÉ] or Theodosia; it was a consulate subordinate to Kafa under the name of Cercro or Cerchio. In ca. 1400 there are mentioned Alan or Gothic princes in Kerč, remnants of the waves of barbarian invasions through South Russia in the Dark Ages, who are described by Signori de la Todor [B. Spuler, *Die Goldene Horde, die Mongolen in Russland 1223-1500*, Wiesbaden 1965, 314-15] and who presumably exercised theoretical jurisdiction over the town and its hinterland. In the 15th century there was pressure on the Genoese colonies in the Crimea from the Giray Khans, and then later in the century, after the attacks of the Ottoman commander Ahmed Paşa Gedik [q.v.], these settlements on the coastland fell into Ottoman hands. Henceforth, Ottoman trade with the Crimea and South Russia was channelled through Kafa rather than Kerč, and the latter’s commercial prosperity went into a decline.

After the conquest of Azov in 1696, Peter the Great in the peace negotiations of 1698 sought the session of Kerč to Russia, but this was refused, and after the Peace of Parnawa [see PARNAVA], Kerč remained in Ottoman hands. Sultan Muştafa III in 1114/1702 built the fortress of Yeşi Kale near Kerč to protect it (see Von Hammer, *GÖR*, iii, 909). Nevertheless, Kerč and Yeşi Kale were occupied by Catherine the Great’s troops in 1785/1777 without resistance, and theircession to Russia confirmed in the Treaty of Küçük Kaynarç [q.v.] in 1288/1774 (GÖR*, iv, 622, 638). It remained of small importance, although in 1821 Tsar Alexander I raised it to the status of a town, and its main function was as a trans-shipment point to shallow-bottomed vessels crossing the Sea of Azov to the Don-Donets basin ports. During the Crimean War, it was in 1855 occupied by the invading Allies, and in the Second World War it was held by the Germans from the winter of 1941-2 till 1944 and was the scene of fierce fighting. Its economic and industrial importance today derives from iron ore deposits, exploited since the end of the 19th century and now sent to the Donbas industrial area, and limestone quarries in the vicinity of the town; it is furthermore the base for an important fishing fleet, and in 1970 had a population of 128,000 (see *BSE*, xx, 565-6).

**Bibliography:** given in the article.

**KERIMBA.** a group of islands lying in lat. 12° S. off Musambik (Mozambique) between the mouths of the Ruvuma and Lurio rivers, with administrative headquarters at St João de Ibo on Quirimba Is. They were part of the sphere of influence of the mediaeval state of Kilwa, but with an independent ruler. They were Islamised at an unknown period, possibly in the 12th century. They were seized by the Portuguese in 1522 because of their important ivory trade: many mosques and large houses were destroyed. João dos Santos went to convert them to Christianity in 1539; the upper class was Muslim, but the majority pagan. In 1750, when the 'Umání Arabs were developing the slave trade from Zanzibar, the Portuguese commander accused the Arab and Swahili traders “of depriving the Portuguese of their ivory trade, God of the souls of Africans who were being enslaved by the Muslims, and the King of his taxes.” Regrettably, a recent account describes only the earlier Portuguese buildings: a systematic survey of the mosques and Muslim cemeteries has yet to be made.

**KERMIYÁN.** [see gerniyán]

**KERRI.** (conventional spelling, Gerri), a site on the east bank of the main Nile in the Sudan, lying at the southern end of the Sabalūkā gorge, about 44 miles north of the confluence of the Blue and White Niles. At the convergence of the route along the Nile and the Baydōa desert crossing the Nile at this point, Kerri was a settlement of political importance from the 10th/16th to the 12th/18th century as the seat of the ʿAbdallābī ḥājkhs, who levied tribute on the nomads during their annual migration-cycle, and, as the principal vassals of the Fundj [q.v.] of Sinnār, were regarded as the overlords of the Arab tribes. The first two ʿAbdallābī ḥājkhs derived prestige from their role as holy men and agents of islamisation in a fringe-region, rather than from purely tribal leadership. This is indicated by the ascription of a ʿSharīfī ancestry to the eponym, ʿAbd Allāh Dīmām al-Kuraynātī al-Kāsimī [fl. 10th/16th cent.], who is reputed to have overthrown Soba, the capital of the Nubian Christian kingdom of ʿAlwa [q.v.]. Tradition associates ʿAmārā Dānkas, the founder of the Fundj dynasty, with him in this explicit, while another tradition (reported by James Bruce) speaks of a victory of the Fundj over the ʿAbdallābī chief (anachronistically styled “Wed Ageeb”, i.e. Walad ʿAdji) near Arbajjī on the Blue Nile in 1504. The two traditions are not necessarily incompatible, and the second would explain the subordination of the ʿAbdallābī ḥājkhs to the Fundj rulers. A legend that Kerri was a Nubian stronghold captured by ʿAbd Allāh Dīmām so far lacks archaeological confirmation, while Bruce’s statement that the
Fundaj compelled the 'Abdallah to transfer their capital to Arbadji is unsupported in other sources. 'Abd jab al-Kafotha, the son of 'Abd Allah Djiamak, by the daughter of a holy man, Hamad Abi Dunana, is represented in 'Abdallah tradition as a pious Muslim, who enforced the Shari'a and made the Pilgrimage. He is distinguished by the title of mopsiflah, held by the great vassals of the Fundaj. He nevertheless fought against his suzerain, and temporarily extended his rule up the Blue Nile, but was subsequently defeated and killed by the Fundaj ruler, 'Adlan I b. 'Amr I, at the battle of Karkodi in 1016/1607-8. 'Adjab's tomb at Kerrl was surmounted by a dome (kubba), typical of the burial-place of a holy man but not of a tribal chief; it was a place of pilgrimage. Of the later skayyik of Kerrl, Dhiyab b. Badii established in 1149/1736 a waqf at Medina for the benefit of immigrants from the Fundaj territories. His harshness resulted in the depopulation of Kerrl, and it was perhaps for this reason that his uncle and successor, 'Abd Allah III b. 'Amr III (d. 1160/1747) transferred the capital to Halfayat al-Muluk, further to the south on the main Nile. Crawford's assertion that this transfer took place in 1798 under 'Abd Allah IV is unjustified. Halfayat al-Muluk remained the capital of the shaykhdom until the Turco-Egyptian invasion in 1821 ended the old regime.

KESRIYE, Ottoman name for Kastoria, a town in Macedonia, situated on the shores of a lake with the same name, at the northern most point of the upper reaches of the River Aliakmon.

An important centre of Christian art during the last centuries of the Byzantine era, it fell under the rule of Stephen Duhan (1337-53) and his successors, and in 1380 it came into Ottoman hands—by capitulation, according to tradition. It was the capital of the homonymous cadha2 of the pasa sandjakli in the eyalet of Rumei (Hadjidji Khalifa, Rumei und Bosna, J. von Hammer, Vienna 1812, 96; M. T. Gokbelgin, in Belleten xx (1956), and, after the administrative reorganisation of 1864, of a cadha3 of the sandjak of Koritsa in the vilayet of Manasti. According to Ewliya Celebi, it was a kadha4 of 150 akhes with 110 villages, and a kha'i of Fatma Sultan. Outside its fortress (in the varoq), there were 20 mahalles, 16 of which were Greek and one Jewish. The town had a djezdar, a mukhtesib, a badi-dar, a shiek kethuhudi and a kha'i aghasi.

The fur industry flourished in this small town, especially from the beginning of the 11th/12th century. Fur merchants from Kastoria distributed the products by caravan to important urban centres in regions north of Macedonia and set up commercial establishments in Istanbul, Vienna, Leipzig, Dresden and Moscow. Although the area was often quiet because of the activities of the Klepthis and the Albanians, the town's flourishing industry and economic prosperity contributed to the construction—especially in the 12th/13th and the 13th/14th centuries—of many Christian churches and its characteristic town houses, which are interesting examples of folk architecture. Greek schools were also established with funds supplied by wealthy emigrants. The Greeks were represented before the Turkish authorities by the kadija bagis. After 1797, the district was the scene of rivalry between Greeks and Slavs, with its metropolitan, Germanos Karavangetelis (1900-7), playing a leading role. With the Balkan War it became part of the Greek state (11/24 November 1912).

KETAMA. [see KUTAMA]

KETKHUDA. This Persian term "master of the house, head of the family", Pahlahi kahak-xwatai, acquired, in addition to the above meanings, those of husband, chief of a tribe, headman of a village and tithe-officer in a town (Chardin, Voyages, ed. 1811, iv, 77, "dixenier de quartier") responsible to the government, and under the Safawids they were playing a leading role. With the Balkan War it may have evolved during Ottoman times.

The term kethhudi is used in the Ottoman state administration from the 9th/15th century onwards (Kânâm-name-yi sulânî ber mühde-i 'orfi-i 'Othmani, ed. R. Anhegger-H. Inalcik, Ankara 1956, 17, 31-2), in the sense of someone who looks after the affairs of an important government official or influential person, i.e. the kethhudi was an authorised deputy official. Hence there were kethhudus below the âghâ or re'is in charge, e.g. of the treasury, the dockyards, the police guard, the Janissaries, the taxation registers, the Grand Vizierate, the imperial pantry, the bodyguard of dawids, of the artillery corps, etc. (see 'Abdurrahman Vefik, Tekâifî hâwidi, İstanbul 1786, i, 192-3). The office was conferred by a diploma (berd), in which the respect and loyalty of those to be under him was enjoined. (see Msbâhoktî Ahrar, Genc Müdürülüğü, Kâmiî Kepeci tasnifi, Rus ufûreti, no.

(i) In Ottoman Turkish administrative usage

Already in II Khânid Persia we find the kadhâhudi acting as the representative of the village vis-à-vis the government, and under the Saftsaws they were in charge of collecting taxes and responsible for the administration of a village or town (cf. A. K. S. Lambton, Landlord and Peasant in Persia, London 1953, 122, 144, 168, 175, 430 and passim). We find the form kethhudi in Anatolian Sahjûk usage of the 7th/13th century (Osman Turan, Türkiye Selçuklu hakkinda resmi vesikal, Ankara 1958, 13), and the form kâhâyva may have evolved during Ottoman times.

The term kethhudi is used in the Ottoman state administration from the 9th/15th century onwards (Kânâm-name-yi sulânî ber mühde-i 'orfi-i 'Othmani, ed. R. Anhegger-H. Inalcik, Ankara 1956, 17, 31-2), in the sense of someone who looks after the affairs of an important government official or influential person, i.e. the kethhudi was an authorised deputy official. Hence there were kethhudus below the âghâ or re'is in charge, e.g. of the treasury, the dockyards, the police guard, the Janissaries, the taxation registers, the Grand Vizierate, the imperial pantry, the bodyguard of dawids, of the artillery corps, etc. (see 'Abdurrahman Vefik, Tekâifî hâwidi, İstanbul 1786, i, 192-3). The office was conferred by a diploma (berd), in which the respect and loyalty of those to be under him was enjoined. (see Msbâhoktî Ahrar, Genc Müdürülüğü, Kâmiî Kepeci tasnifi, Rus ufûreti, no.
217, pp. 14, 180, no. 2i6/a, p. 390). As in Persia, there were in Turkey kethkudas of villages charged with administrative duties there. The most important of those officials bearing this title was, however, the kethku$d of the Grand Vizier (S$adare kethku$d). In 1214/1799 it seems that this official was not only concerned with the affairs of the Grand Vizier in the Divan-ı Humâyûn, but of those of the other viziers also, hence it was decreed that he should concern himself with the affairs of the former only (Kha$t-ı humâyûn tasnifi, no. 13283). The official supervising the imâr-holders in the eyâlet$ and sandjâ$ was called the kethku$d yeri (see the Elâzî$ç judicial records, Divyaberkir Ziya Gökalp Mûse$i, no. 362, p. 137), and the same title was found in the corps of Janissaries (see I. H. Uzunçarşı$i, Osmanî devletinin teşkilî$ndan Kapı$ulu Ocaklari, Ankara 1943, i, 211-13).

Provincial governors had their own kethku$das stationed in the capital Istanbul to represent their interests; these were called kâpi kethku$das$ (similar representatives were allowed to trusted state servants, and in 1200/1785 there were seven kâpi kethku$das$ pertaining to the viziers (Nûrî, Ta$vârik$ Suleyman$i, Â$f$ Efendî, no. 239, f. 88b). Dependent and tribal princes, such as those of Transylvania, Moldavia and Wallachia, and even the Khâ$ns of the Crimean Tatars, had their representatives in Istanbul with this same title. We also find it used to denote the envoys or ambassadors of some foreign countries. Finally, it should be mentioned that the kethku$das$ of foreign and cities were decreed by a decree of 1204/1790 (Kha$t-ı humâyûn tasnifi, no. 9500), and that the term was also used within the nomadic tribes. A tribal chief would appoint a kethku$d for each of the subordinate clans in his tribe, and when hereditary chieftainship was abolished by the state, a person chosen by general consent of the tribesmen and from among themselves was appointed as kethku$d (see C. Oronhû, Osmanî imparatori$un$da a$$ileri is$kan te$shki$l).

(ii) IN THE OTTOMAN TURKISH GILDS

In Turkey the kethku$da$ was also the head of a gild who dealt with the material and administrative aspects of gild life (whereas in the earlier period of gild history, a skaykh fulfilled the ceremonial functions). He was usually chosen by the gild notables without formal election, and his appointment was then confirmed by the kâdi. Recently published documents do not seem to bear out the theory of Gibb and Bowen (i.e., 287) that "until much later [than the middle of the 11th/12th century?] kâdi$sk continued in all cases [even in gilds with Christian members] to be Moslem; but eventually this office... was granted in some instances to non-Moslems"; there were non-Muslim kethku$dâ$s in the 10th/16th and 11th/17th centuries, as well as Muslim kethku$dâ$s of non-Muslim gilds in the 12th/18th century.

The gild kethku$dâs represented the gild vis-à-vis the authorities. They conveyed government orders and announcements to the gild members, and made certain that these instructions were carried out; for instance, it was their task to supervise the implementation of orders concerning the standards of production and of commodities sold. They provided the government with any services and labour which were required, and if necessary, they guaranteed the reliability and good character of the members of the gild.

The gild kethku$dâs were also responsible for the supply of certain goods to the authorities and for distributing raw material needed by artisans and craftsmen; and it was the task of the heads of practically all Turkish gilds to arbitrate in disputes among their members, and the task of some of them to supervise a fund for mutual help.

In later times, individuals who were not members of the gild were frequently appointed kethku$dâ$s, for instance, retired officials who thereupon agreed to renounce their pension. During the reign of 'Abd al-Hamîd II, favoured courtiers were appointed by the Sultan, often because the gild members hoped thereby to further their own concerns.

(iii) IN NORTH AFRICA

The term kethku$da$ was not used in North Africa in the period of Turkish domination, but the form kâ$â$ya was current in Tunisia until recent times to designate the subordinates of the calids or governors at the head of administrative divisions called kâ$hâa. In a more general way, kâ$hâa was in general use with the sense of "assistant to a high official, president or director" (e.g. kâ$hâ$ya râ$'s = vice-president); the deputy of the Public Prosecutor of the Republic was called kâ$hâ$yat al-muddâ$'i 'l-umâmi, and an under-secretary of state kâ$hâ$ya wa$â$ri. In Algeria, the kâ$hâa was a bey's lieutenant, but also a police superintendent and even a simple corporal in the army of the amir 'Abd al-Kâ$dî [q.v.]. The use of the term for a subordinate endowed it with the pejorative meaning of "inferior quality". (Ed.)

KHA$A; the seventh letter of the Arabic alphabet, here transcribed as kh. Its numerical value is 600, according to the eastern order (see Abjad).

Definition: voiceless post-velar fricative. According to the Arabic grammatical tradition: rik$wa, mahmî$s, mustâ$'iya. For the ma$h$ra$d: min â$nda 'l-hâlîk (from that part of the throat nearest to the mouth) (al-Zamâkshâ$ri, Mu$â$alâ$'i, ed. Broch, § 732); Ibn Ya$â$r (Sharb, ed. G. Jahn, 1460, 1. 6) defines it thus: "the khâ$" is nearer to the mouth than the gkay$. The Arabs accordingly placed the khâ$ in the throat and considered it as a laryngeal [ac-
cording to the terminology of H. Fleisch, Traité de philologie arabe, i, 59), as with the ghayn. However, G. Krokr, in WZKM, lix (1963-4), 245, tr. 4,5), puts forward "post-verbal" as corresponding to min adnā 'l-balh (cf. M. Bravmann, Materialen und Untersuchungen zu den phonetischen Lehren der Araber, 44, and H. Blanc, in Procs. of the Internat. Conference on Semitic Studies, Jerusalem 1965, 17). The text of the Mufassal is clear: adnā 'l-balh is the upper part of the throat, as opposed to awsal 'al-balh, the middle part, and asdah 'l-balh, the lower part. Then there comes, as the first sound pronounced within the mouth, al-khāf.

The articulation described is phonemic; for the phonological oppositions which define this phoneme kh, see J. Cantineau, Esquisse d’une phonologie de l’arabe classique = Mémorial J.C., Paris 1900, 175. According to him, its realisation is "fairly close to the German ch in Nach", and it is its localisation which is relevant. For the incompatibilities of ch, see ibid., 201. Kh (and gh) are by their nature mufakkhama and prevent the occurrence of imāla in most of the (eastern) Arabic dialects (Cantineau, Les parlers arabes du Horan, Paris 1946, 127). But this is not the case in Cairo (N. Leomich, Le parloir arabe du Caire, Paris-The Hague 1964, 32), nor in Maâsor Beid-Dine, Lebanon, where people say ākhūn "he betrayed" (Fleisch, in MUSJ, xxxi (1954), 298) and khdn "he betrayed" (ibid., 312).

In Classical Ar., kh is the continuation of a voiceless velar fricative ch of common Semitic. It "becomes h in Canaanitic Aramaic, in Tigrée and Tigrinya, and in Soqotri (Modern South Arabian); it becomes zero in most of the other (modern) Ethiopian languages" (W. Leslau in Manual of phonetics, Amsterdam 1927, 259).

In Classical Ar., kh undergoes few non-conditioned alterations; see Cantineau, Cours, 71. As a conditioned alteration, one only need mention the possibility of assimilation of unvoiced and voiceless, between kh and gh, when they are found in final or initial position of a word, thus: gh kh > khh and kh gh > ghkh (see Fleisch, Traité, i, § 12 p.).

The same type of assimilation is found in some modern Arabic dialects, as in Tlemcen (W. Marçais, Le dialecte arabe parlé à Tlemcen, Paris 1902, 26); note also the special case of Baghdad (Blanc, Communal dialects in Baghdad, Harvard Middle Eastern Monographs, x (1964), 3, 24 (c)).

Bibliography: given in the article.

(H. Fleisch)

KHABAR (A.), plural ADHABAR, ADHABIR, report, piece of information. The word is not used in any special context in the Kur'ān. In the hadith it occurs among other passages in the tradition which describes how the jinn by eavesdropping obtain information from heaven (khabar min al-samā') and how they are pelted with fiery meteors to prevent them from doing so (al-Bukhārī, A ḍhān, bāb 105; Muslim, Ṣāliḥ, tr. 149); al-Tirmidhī, Taṣfīr, Sūra lixxi, trad. 1).

In his collection al-Bukhārī has a chapter entitled Aḥhār al-ābād, which, as the tājidda indicates, deals with the validity of traditions regarding ṣaḥān, ṣalāṭ, fasting, the law of inheritance, and judicial procedure, and which are only given on the authority of one man [see hadāth].

Al-Ghazālī gives the name aḥhār to the traditions that go back to Muhammad. He distinguishes the sayings of the Companions by the term ādār (see his Ḥayā', passim). On such and similar technical distinctions see Lane's Lexicon s.v., and Dica. of

Techn. Terms, ed. Sprnger and Nassau Lees, s.v.

Aḥhār is further often found in the titles of historical works (see Brockelmann, Index ii); in the singular, khabar denotes a piece of information of a historical, biographical or even anecdotal nature, and comes to correspond to khā' ya [q.v.].

Ṣāhib al-Khabar was the title of one of a ruler's officers in provincial capitals whose duty it was to report to his master all new happenings, the arrivals of strangers etc. This post was often given to the director of the postal service [see bārd].

(A. J. Wensinck)

KHABAR, in Arabic grammar, refers to the constituent parts of the nominal phrase, e.g. Zayd ḥa'ir mānun "Zayd is noble"; here, Zayd, the first term, is mubāta, and karim, the second one, is khabar. For the verbal phrase, the corresponding terms are fā'il agent and fīl verb. The Arab grammarians, as can readily be seen, recognised two types of phrase, the nominal and the verbal, in their language. They also recognised clearly the necessity of the ʿābd, the nexus linking the two terms of these phrases, and they called it isnād "the act of leaning one thing against another", the linkage between al-musnad išāyi, the first term, and al-musnad, the second one. But musnād išāyi and musnād both remained terms of grammatical logic, used for the analysis of the nexus of the two types of phrase mubāta-khabar and fā'il fīl are the only terms recognised in the formation of the nominal phrase in the first pair, and in that of the verbal phrase in the second pair. Each type of phrase was studied for itself; the idea of subject remained alien to the Arab grammarians (see Fleisch, Études sur le verbe arabe, in Milanges Masségnon, ii, 153-5).

The khabar is marfū, i.e. in raf, the nominative, as also the mubāta. For an Arab grammarian, it was necessary to determine the ʿāmil, here called al-rāfi "that which puts it in rāf", the khabar and also the mubāta, for the question is connected.

This was the subject of great discussions between the Kūfān and Baṣrān grammarians, and even amongst the Basrans themselves; see the 3rd Question discussed in Ibn al-Anbārī, K. al-Insāfī, ed. G. Weil, ii, 7, 6, with a résumé in Ibn Ya ḍish's Mufassal of Zamakhshārī, ed. G. Jahn, 101, ii, 15-16.

In dislocated phrases, which were outside normal analysis, of the type Zayd khabāba abūhū "Zayd, his father left", the Arab grammarians considered the phrase taken up after Zayd as khabar (Zamakhshārī, Mufassal, ed. Broch, § 20).

After inna and its "sisters" (anna, lākinsa, layta, lā'alla and kaʾansa) the khabar is marjū. The Basrans and Kūfānians disputed over determination over the ʿāmil here, sc. about the rāfī which puts the khabar here into rāf (see the 22nd Question discussed in the K. al-Insāfī, 81-4, Mufassal, § 3, and Ibn Yaʾāfīsh, 124, l. 23-125, l. 17).

For the khabar of kāna and its "sisters", sc. verbs like isbabah "it took place in the morning" or ansāa "it took place in the evening", the Arab grammarians had the task of explaining the marf or accusative of the khabar, as in kāna khabīna "he was wise". They solved this by referring to an analogy with the fā'il and marf of a verb (Mufassal, § 97, and Ibn Yaʾāfīsh, 282). In fact, this accusative can be explained as a complement indicating state, a bāl; this explanation had already been given by the Kūfānians against the Basrans (K. al-Insāfī, Question under discussion, 282, 51; see also Fleisch, L'Arabe classique. Esquisse d'une structure linguistique, 181). The nāf is found after the negative nā (less usually after lā) when
this has the value of laysa (Mufassal, § 38, and Ibn Ya’qub, 132-4). This also involves the question of the ma’budiyyya (K. al-Insaf, 19). See Question under discussion, 76-9, and Ibn Ya’qub, 132, ll. 24-5.

For the khabar’s place, see the Questions under discussion: K. al-Insaf, No. 9, pp. 34-6, No. 17, pp. 70-2, and No. 18, pp. 73-6. For the separation between khabar and na’i, see Question No. 100.

KHABAR AL-WÂHID. Literally, tradition or report going back to one single authority. Synonyms are khabar al-‘âhâb, khabar al-infîrâd and khabar al-„âsîs. According to the generally-accepted definition, a khabar al-wâhid is a report which falls short of the predicate mutawâtir [q.v.] or, as certain scholars assert, mağhîr [q.v.] in that it has only one or a few (from two to five) transmitters in every jaba‘a of its isnad. The first classical scholar who writes about the khabar al-wâhid is, according to Nawawi (cf. Sharh sahih Muslim, Cairo 1349, i, 131), Shâfi‘i (d. 204/820). In his Risâla he devotes two chapters to it. He argues that a khabar al-wâhid constitutes an argument (hadîd) and should be able to grasp the meaning of what he transmits; (3) he should be able to warrant the exact wording; (5) he should transmit from memory, and (6) he should be free from taddîl [q.v.]. The khabar al-wâhid forms in itself an a‘f and can only in part be compared with juridical testimonies (ghahîdîd). It can only be invalidated by one or more other reports which present an opposing view and which, at the same time, meet the requirements of reliability more adequately.

Most Muslim scholars agree in that the khabar al-wâhid can be considered as conveying a probability (zânî, not definite knowledge (‘ilm), although various traditions hold the opinion that those contained in the compilations of Bukhârî and Muslim also convey ‘ilm to the exclusion of all others. The majority of orthodox Muslims, however, finally agreed on the fact that, inasmuch as a khabar al-wâhid conveys at least a probability, every Muslim is bound by it and is obliged to live by it.

Among those who reject the khabar al-wâhid as a valid criterion or an obligation are the Kâdiriyâ [q.v.], the Râfidî [q.v.], certain members of the Zâhiriyâ [q.v.] (although Ibn Hazm lends full credit to them), cf. al-‘îkâm fi usul al-‘âkâm, ed. Shâkir, Cairo 1345-7, i, 108) and the Mu’tazilâ [q.v.].

khabîr wa-mujâjahibhu, Damascus 1959, 152; J. Rosbon, Traditions from individuals, in JSS, ix (1964), 327-40; G. H. A. Juynboll, The authenticity of the tradition literature; discussions in modern Egypt. Leiden 1969, index, s.v. abâd.

Khabbab B. Al-ARATT, ABû ‘Abî AL-LâH OR ABû YAHyÀ OR ABû MUHAMMAD OR ABû ‘ABD RABBÎN, A Companion of the Prophet. Tradition is not unanimous about his origin. Some reports state that his father was captured in a raid launched by the Râbi‘a in the Sawâtíd, sent to Mecca and sold as a slave to Sîbî‘ b. ‘Abd al-‘Uzzâ al-Khuwâzî, a confederate (khâif) of the Banû Zuhrâ. Sîbî‘ (who was later killed by Hamza in the battle of ‘Ujd) gave him as a gift to his daughter Umm Anmâr who freed him. In a tradition attributed to ‘Ali he is said to have been the first of the Nabdî to embrace Islam. Other traditions claim that the mother of Khabbab, a professional circumciser, also gave birth to Sîbî‘; it is for this reason that Hamza when killing Sîbî‘ shouted to him “O son of the woman cutting the clitoris”. By virtue of this kinship, Khabbab claimed to be a confederate of the Zuhrâ in Mecca. Some reports say that this father was from Kastar or from the vicinity of Kûsâ. A quite different tradition states that al-‘Aratt was a Tamîmi, of the Banû Sa‘d, who was sent to Mecca in a raid in 612/c. to Umm Anmâr al-Khuwâzîyya, who freed him. This version, adopted by his descendants, gives his pedigree as follows: Khabbab b. Al-‘Aratt b. Sindâl b. Sa‘d b. Khuzayma b. Karb b. Sa‘d from Tamîm. Another account records that Khabbab was a freed slave (maswâd) of Thâbit b. Umm Anmâr; Thâbit, these sources claim, was a maswâd of al-Akhnas b. Sharîk al-Thâkafî, who in his turn was a confederate of the Zuhrâ. These contradictory traditions do not help to establish exactly his origin and his position in Mecca, but he must have been of a very low status, as he was doubly dependent, being a maswâd of a family which was in turn in a relation of dependence as confederates of the tribal group of Zuhrâ. Khabbab himself was a blacksmith, a profession regarded as base in Mecca and in the Arab peninsula in general. The tradition of his Sawâtíd origin seems preferable because of his father’s incorrect Arabic speech, which is indicated by his nickname al-‘Aratt; this would seem to point to Arabic not being his native language, and he probably spoke Nabataean, sc. neo-Aramaic. Although a maswâd, Khabbab apparently acquired some influence in the Khuwâzî family of his master. It was he who promoted the plan that the family of Sîbî‘ should join the Zuhrâ ‘Awî b. ‘Abd ‘Awî (the family of ‘Abd al-Rahmân b. ‘Awî) as confederates and he indeed succeeded in carrying out his plan. Khabbab was one of the earliest converts to Islam. He is usually mentioned as the sixth or the seventh man who embraced Islam. A unique tradition granting him an unusually high position in Islam says that he was the first man who embraced Islam.

Khabbab is recorded as one of “the weak ones” in Mecca. Lacking any protection (mana‘a), he was exposed to persecution and cruel torture. The noble Kurashîs and leaders of tribes used to mock the Prophet when they saw him in the company of Khabbab and other poor men, and some verses in the Qur‘an were revealed to the Prophet in this connection. It is said that Khabbab was attached to the Prophet and heard some chapters of the Qur‘an from his mouth, and that he witnessed the conversion of ‘Umar to Islam when present in the house of ‘Umar’s sister, reading chapters from the Qur‘an.
Having left Mecca as a muhddiir, Khabbab dwelt in Medina, together with al-Mikdad b. 'Amr, in the house of Kulfum b. Hidm; after the death of the latter they moved into the house of Sa'd b. 'Ubada. In some sources, Khabbab is included in the list of the descendants of the Prophet called the 'Abdab al-Suffa [see AH al-Suffa]. The Prophet set up the relation of brotherhood between Khabbab and Djab b. 'Atik. Khabbab participated in the battle of Badr and was entrusted with the division of the spoils al-Barr, al-Adal al-badawa, that he took part in and in all the other battles of the Prophet: he is, however, not mentioned in the list of warriors recorded in the stories of the battles.

No details are available about the vicissitudes of his life during the caliphate of 'Abd Bakr and 'Umar. 'Ummân granted him possession of Sa'nâb or Isti'niyâ in the vicinity of al-Kûfâ and he settled in al-Kûfâ. Shî'ites claim that he took part in the battle of Siffin in the company of Shâm'd* al-ashraf in Medina, together with al-Mikdad b. Amr, in the house of Sa'amâd*, after the death of the latter they moved into the house of Sa'amâd, in Medina, together with al-Mikdad b. Amr, in the house of Sa'amâd; after the death of the latter they moved into the house of Sa'amâd. Shâm'd* al-ashraf set up the relation of brotherhood between Khabbab and Djab b. 'Atik. Khabbab participated in the battle of Siffin and Nahrawan; some Shî'ites mention in the list of warriors recorded in the stories of the battles.

Khabbab died in 37 AH (or 39) at the age of 63 (or 73) as a rich man, leaving about 40,000 dirhams in cash. He regretted before his death that he had accumulated wealth; he was afraid lest he might have forfeited his reward in the next world, as he had reckoned on living long. In this respect Khabbab was aware that he should be buried outside al-Kûfâ, thus initiating a change in the custom of burying the dead in their own houses. 'Ali is said to have prayed over his grave when he returned from the battle of Siffin. He transmitted 32 utterances of the Prophet, some of which were recorded in the canonical collections of hadith, and some traditions of the Prophet were transmitted by his daughter. A son, 'Abd Allah, was cruelly killed by the Khawarîd.*

between Djabal Abd al-`Aziz and the Sindjar mountains, where it takes a southern direction, which it changes in the last part of its course into a south-western one.

Its springs, as well as those of its numerous tributaries, are chiefly connected with three important towns, Ra‘ al-`Ayn (Reşh’ayna of the Syrians) in the northwest, Mārdīn in the north and Naṣī bin in the northeast. The springs at Ra‘ al-`Ayn are said to be three hundred in number; they were shut off by iron girders in order to prevent people from being drowned in them.

Downstream from Ra‘ al-`Ayn the Khabūr is joined by the river of Nasibin; on Sachau’s map it bears the name of Nahr Zorgan. Just before passing between Djabal Abd al-`Aziz and the Sindjar mountains it is joined by the river of Naṣī bin. The Arab geographers apparently mean this river when speaking of the Hirrās; on Sachau’s map it is called Diaghdiagh. The course and the nomenclature of this and other tributaries are still uncertain.

The Arab geographers mention several more or less important places situated on the Khabūr between Djabal Abd al-`Aziz and Karṣīsīyā, such as Shāţā, Tunaynīr (upper and lower T.), Tābān (also on Sachau’s map), ‘Arbān or ‘Arbānī (also on Sachau’s map), a Shāyiṭayr, al-Shamiyyā (probably Sachau’s Shemīsān), Mākisin (“the customs-house”), al-Ghuddayr (“the pool”), and Şūwar (Sachau’s eṣ-Šawār). At Mākisin there was a bridge of boats. Much cotton was grown here, and by it lay the small lake of deep blue water called al-Munkharīk, which was said to be unfathomable.

The whole region through which the Khabūr flows, and particularly its lower course, was renowned for being fertile; its trees are mentioned in Arabic poetry, and its fruits were exported to the towns of al-‘Irāk. However, when Sachau travelled in the area (1899) the large fertile valley was devoid of towns, villages and human beings in general.

(II) The lesser Khabūr, one of the tributaries of the Tigris which flows past the mountains of southern Armenia, south of Lake Van and west of Lake Urmīya. It passes between the mountain ranges which are now called Djabal Harbāl (north) and Zākhā Dagh (south). The latter mountains derive their name from the town of Zākhā. The Khabūr joins the Tigris between Maghāra and Mazra. The Arab geographers often call it Khabūr al-Hasaniyya, after the town of this name. Here the river was spanned by a magnificent stone bridge which was looked upon as a miraculous piece of mason’s work. Al-Hasaniyya probably survives in the hamlet of Hasan Agha.
KHADIDJA — KHADIM AL-HARAMAYN

mad seems to have been trading in partnership with al-Sa'ib, as already mentioned. Khadidja is said to have died three days after Abu Talib in the year 619 (sc. three years before the Hijira).

KHADIM, from Arabic ḥudâma "to serve (a master)", means properly "servant, domestic", but it has acquired the euphemistic sense, first in Arabic and then in the other Islamic languages, of "eunuch"; hence the word is often ambiguous. In this article, only servants of free status are covered; for slaves, see *abâd and for eunuchs qašîf.

At the side of the slaves, there have always been free servants (coll. ḥammad, pl. ḥaddâm). Anas b. Mâlik [q.â.] entered Muhammad's service as a youth (al-Bukhârî, Dîhâdd, bâb 74 etc.) and he records it to his master's credit that the latter had never said a harsh word to him nor ever asked him for an explanation of his doings (al-Bukhârî, Wasâyû, bâb 25). Servants were used on journeys especially, and put up the tents, etc. These latter are called farsâk (lit. spreaders of the carpets), a name which is, however, given to servants who look after the beds and the house generally (Lane, The Thousand and One Nights, London 1859, ii, 202, no. 16).

In Egypt in Lane's time there was an organisation of servants. They were under special sha'yâkhhs to whom anyone who required a domestic had to apply; these sha'yâkhhs were responsible for any dishonesty or breach of trust by their people (Lane, Manners and Customs, London 1899, 139). There were also free female servants who performed the lowest house-hold duties (op. cit., 147, 197) for a very small wage (168). Some of the male servants used to shave their beards (573).

In Ottoman Turkish houses of the upper classes, these people, who were usually addressed by their name followed by Agha, worked as cooks, gardeners, janitors, etc., and they had to avoid the women's apartments in the house with which they communicated by the swivel-box (doldâb). If they were married they did not live in their master's house.

The women servants in the konaks lived in the women's apartments and had very little personal freedom. They sometimes belonged to impoverished Turkish families or were the children of former servants and slaves. They were called haifa (from khâifs) or hâlaâf (from khâlaâf) and the men ughâh, āfâyîr, hismetkhar (khidmetkâr). The servant girls (khidmetdij = ḥammadetdij) were usually Greeks or Armenians.

Uniformed officials in the imperial and official services were divided into various corporations (chamberlains, janitors, musicians) and were included under the general name hadama = ḥhadâma. On such corporations see also Von Hammer, Constantinopol und der Bosphorus, Post 1822, ii, 396 ff.

In North Africa, ḥâddim (dial. ḥâddâm) has acquired the specialised meaning of "negress", and ḥâddim is used for a domestic servant. However, classical ḥâddim retained an honourable usage in Morocco, where all letters sent out by the Sultan's chancery to his officials began with the formula ḥâddimanâ 'l-ardâ "to our well-pleasing servant". In contemporary Moroccan usage, šâhâb, pl. šâhîb, is more commonly found. Within the great families, there exists in effect a clientage of šâhîb who usually receive no regular salary but live on the bounty of their master. They accompany him on the road, look after his mount, and order illumination for trips at night, etc. If their master is a great kâfa or the head of a brotherhood, he appoints one of his aškhâb to accompany travellers who are passing through the areas over which his authority extends. This is a sign that they are under his protection. In Fez, there existed a corporation of female cooks who performed odd jobs within the household (Le Tourneau, Fès, 562) and were paid in kind.

In the sarayyas servants form a guild to which is entrusted the care of pilgrims and of the buildings; cf. Depont and Coppolani, Les confréries religieuses musulmanes, Algiers 1897; Douûtû, l'Islam algérien en l'an 1900.

The ḥadîth has handed down various sayings of Muhammad which endeavour to secure good treatment for servants; in these it is not always possible to distinguish whether the reference is to free men or slaves. The ḥâddim was responsible for any dishonesty or breach of trust by his people (al-Bukhârî, Wasâyû, bâb 25) on the other hand alms which he bestows out of his master's property bring him a heavenly reward (al-Bukhârî, Zâkâh, bâb 23). One should be ready to forgive one's servant (al-Tirmîdî, Bîrî, bâb 32); he should neither be beaten nor cursed (al-Tirmîdî, bâb 30, 31, 85); and the servant who has prepared a meal has a right to partake of it (al-Bukhârî, Aftîma, bâb 55; al-Tîr-
mîdî, Aftîma, bâb 44 etc.).

One may note finally that, amongst the titles of the Ottoman Sultans, was that of ḥâddim al-Haramayn "Servant of the two sacred areas", and also that at Mecca, one could purchase the title of ḥâddim al-masjid (Dozy, Supplement, s.v.). The collective khadâm is further used, often linked in paranomasia with ḥâddâm, to denote the partisans and entourage of a great man, above all, of a military leader or ruler.

(K. A. WENSINCK*)

KHÂDIM AL-HARÂMAYN (A.), "servant of the two holy places" (sc. Mecca and Medina), a title used by a number of Muslim monarchs. Adopted by the Ottoman Sultan Selim I after the conquest of Egypt in 922/1517 and used by some of his successors, it was regarded in late Ottoman times as a Caliphal title, and was said to have been taken over by Selim from the last 'Abbâsid caliph in Cairo. This does not correspond with the evidence, and appears to be part of the mythology of the Ottoman caliphate. As far as can be ascertained, the title was never used by the 'Abbâsid caliphs, whether in Irâk or in Egypt. It was however used by several Mamlûk sultans, and it was from the sultans, not the caliphs, of Egypt that the Ottomans adopted this title along with other possessions and perquisites of the Sultanate. Al-Kâkâshândi (Subh, vi, 46) is quite explicit, and lists it among the titles (alâbâb) of the Sultan. The first to use the title appears to have been Saladin, and the earliest known occurrence is in a restoration inscription in the Kubbat Yusuf in Jerusalem, dated 587/1191 (CIA, Jerusalem, ii, no. 30 = RCEA, ix, no. 3447). The introduction of this new title was probably a move in the rivalry between Saladin and the caliph al-Nâsir, over the leadership of the pilgrimage and related questions concerning the holy places in the Hijâz (on this rivalry see E.
Sivan, Salaadin et le calife al-Nasir, in Scripta Hierosolymitana, xxiii, 1972, 156 ff., especially 159 ff.

In the Jerusalem inscription of 589/1193 (CIA, Jerusalem, i, no. 36 = RCE, ix, no. 3466). In two inscriptions of Baybars, the title Khdim al-haramayn is followed or preceded by the words Sakh (or Malik) al-Kiblatayn", master (or king) of the two Kiblas", presumably Mecca and Jerusalem (Damasus, 659/1261, and Kara 664/1266; RCE, xii, no. 4476 and no. 4554). The same formula is attested for other Mamluk sultans, e.g. Kallwn (Cairo, 683/1284-5; CIA, Egypt, i, no. 82 = RCE, xii, no. 4852) and al-Asghar Khdli (Cairo, 687/1288; CIA, Egypt, i, no. 95 = RCE, xii, no. 4895).

Khdim al-haramayn is some variant of it (e.g. Khdim haramayn Allah wa-rasulihi (Khdli-bay, Cairo, 883/1480; CIA, Egypt, i, no. 325) was used only intermittently by the Mamluk sultans, and does not seem to have formed part of their standard titulary. An undated letter, purporting to have been sent by Timur to Bayazid I, complains of the use by the Mamluk sultan of the title "Sultdn (sic) al-haramayn". The writer regards this as presumptuous, and considers it a sufficient honour to be the servant (Khdmin) of the two holy places (Ferdin, Mznghd, i, 128, cf. T. W. Arnold, The Caliphate, Oxford 1924, repr. London 1965, 151). According to a Turkish chronicler, the Ottomans used to address the sultans of Egypt as Sultdn-1 haramayn babam, "my father the Sultan of the two holy places", but Mehemmed II replaced this by the less deferential Khdmin-i haramayn and even Khddim-i haramayn Misir Sultan, "my brother the Sultan of Egypt" (Aslkhpdaxzade, Tdwrikh-i Ali 0'tmn, Istanbul 1332 anno 863, p. 209; the passage occurs among the anonymous addenda to Aslkh pdaxzade's chronicle. Cf. Selhnttin Tansel, Osmanl1 kaynaklanrna gore Fatih Sultan Mehmed'in Siyas ve askeri faaliyeti, Ankara 1953, 337-8).

According to Arabic sources Selim I was hailed, during his conquest of Egypt, by the preachers in the mosques of Aleppo and later of Cairo (Arnold, Caliphathe, 140-1 and 145, citing Ibn Iyds, Ta'rkh Misir, iii, 98, and Khb al-Dtn, Chroniken der Staat Mekka, iii, 278-9; cf. Von Hammer, Histoire, iv, 280 and 448). Ottoman sources attach some importance to this recognition by the Sharif of Mecca, thus confirming his authority over the holy places, but significantly, without reference to the title (e.g. Sa'd al-Dtn, Tdgi t-tewavrlik, ii, 371-2; Solakzade, Tdtikh, 480; on some documents, see Selhnttin Tansel, Yavuz Sultan Selim, Ankara 1969, 215-7). In a letter to the ruler of Mecca, announcing his accession, Suleymnn refers to his father Selim as Khddim bayt Allah wa'l-haram fathi mamalik al-'Arab wa'l-Aqdam, "Servant of the house of God and the sanctuary, conqueror of the lands of the Arabs and Persians" (Ferdin, i, 448, cf. Arnold, 155). This appears, however, to be an honorific description rather than a title. In his own documents Suleymnn, while listing Mecca and Medina among his possessions, does not seem to have used the title Khddim. It appears, however, on coins of Suleymnn struck in Baghdad in 942/1535-6 (i.e., after its capture from the Persians), 988/1515, and 960/ 1553 (Khfi Edhem, Meskhd-4 'Othmniyne, Istanbul 1534, 250-2), and remained in occasional but not common use under later sultans. Thus in the treaty with Poland of 106/1607, it figures among the titles of the sultan in the preamble (Hammer, Histoire, viii, 407, citing the Destdr al-nisbah of 'Ali Abdullah), it occurs in the signature of 1528/1552 of a letter from the Ottoman court to the Mamluk sultan, for example (ibid., 161). A similar formula is used in documents of Selim III (M. Guboglu, Palaeographia et diplomatia turco-osmana, Bucarest 1958, 60). (B. LEWIS)

KHADIM HASAN PASHA ŞOKOLLI, Ottoman Grand-Vizier. We have no information about his origin, but he was brought as part of the de
gureme [q.v.] to the Imperial Palace and given a post in the Harem in the department of the white eunuchs; later, he became chief treasurer of the Inner Palace or Enderûn. In Djumadâ I 988/June 1585, he was appointed governor of Egypt in place of Mesih Pasha, but after complaints about him, dismissed in Rabî' II 991/May 1583, and on arrival in Istanbul imprisoned in Yedikule. However, he was pardoned and released after presenting valuable gifts to Nûrnân Sultan, the mother of Murâd III, and was appointed govern-
ernor-general of Anatolia.

In Djumadâ II/June 1585 he joined the Ottoman army at Sivas under Âzâd-Emîlû Pasha, en route for Persia. At the battle of Alîvar he commanded the right wing of the Ottoman army, and continued campaigning against the Persians in Ramadân 993/ September 1585 after the conquest of Tabriz. In the spring of 994/1587 he was appointed governor of Anatolia by Selim II, and in Dhu'l-Qa'da 996/ October 1588 governor of the province of Shirwan after the death of Dja'far Pasha. During the reign of Mehemmed III he was called to the Palace in Istanbul in Dhu'l-Qa'da 1003/July 1595 to be fourth vizier, and remained there as acting Grand Vizier when the young Sultan was absent campaigning at Egri. While in this office, and with the backing of the powerful court favourite, Efrd Efendi, he appointed the well-known Khôdja Sa'd al-Dtn Efendi and recently-appointed kadî of Istanbul by Mehemmed III, from entering Istanbul, retaining Âkhi-zâde 'Âbd al-Hallm Efendi in this office.

In Djumadâ I 1005/December 1595, as âdimmâbâm, he welcomed Mehemmed III back from the Egri campaign with a magnificent ceremony. In Rabî' I 1006/November 1595, he became Grand Vizier in place of the Bosnian Dâmdâ Ibrahim Pasha, the second vizier Djîrrâm Mehemmed Pasha being passed over for this office by the young Sultan. However, Khâmî Hasan Pasha's grand vizierate proved very short. When the Shâykh al-Islâm Bostân-zâde Mehemmed Efendi died, he refused to confer the office of Shâykh al-Islâm on the sultan's choice Khôdja Sa'd al-Dtn Efendi, but appointed either the poet Bâkî Efendi or Karâ Câlebiyân Hüsâm al-Dtn Efendi, which caused the already existing enmity between him and Sa'd al-Dtn Efendi to become worse. Consequently, Khâmî Hasan Pasha's old opponents, Ghâzanfer Agha Sa'd al-Dtn Efendi and the commander-in-chief of the Janissaries, Tînlâkî Hasan Agha, whose execution he had sought from the Sultan, banded together under the influence of the Wâlîe Sultan Şafiyê against him, and secured his downfall on charges of corruption. On 10 Ramadân 1006/8th April 1598, during the ceremony of laying the foundation of the Wâlîe Sultan (Yeâl)}
Mosque at Eminönü, Bostandji-Bashi Ferhâd Ağa arrested Khâdim Hasan Paşa and confined him in Yedikule; six days later he was executed. He was buried in his tomb beneath his medrese, after the incineration of all his property at Eyüp by the state. Near the Çagaloğlu palace and opposite to the present Emînîyet Sandîğî there were situated a mosque and a medrese which were built by him, and also a public fountain built after him in 1594/1602.

Another Sokollî Khâdim Hasan Paşa was the son of Sokollî Mehmed Paşa. He took part in the campaign of Egypt [q.v.] of 1004-5/1596, was beglerbegî of Rumeli, and died later than the Grand Vizier of the same name.

(MOÎIR AKTEP)

KHÂDIM SÜLEYMÂN PASHA (7 - 954/1547). Ottoman governor of Egypt, commander of the campaign of 945/1534 against the Portuguese in India and Grand Vizier. When Selim I died in 926/1520, Suleyman Pasha was holding the office of beglerbegî, and in 931/1524-25 was appointed governor (beglerbegî) of Bâb al-Mandab, and thereafter became governor of Anatolia, acquiring the rank of vizier (Lutfî Paşa, Ta'rihî-i Âlî ‘Othmânî, İstanbul 1341, 358). On 11 Ra'dâb 943/25 October 1536 he was once more given the beglerbegî of Egypt. He stayed in the office until the year 945/1538, when he organised his famous campaign against the Portuguese in India.

Süleymân Paşa had planned a campaign to Yemen during his first governorship of Egypt, and had persuaded the Istanbul authorities to agree to this. He could not, however, put it into action as he had to join the Baghdad campaign of 945/1534-5 (Pevci, Ta’rihî, İstanbul 1282, i, 219). Now the situation was favourable to his plans; the Muslims of Gujûlîrât had been asking the Ottomans to help against the Portuguese, and the local ruler, Bâhâder Shâh, had sent a special envoy to Istanbul for this purpose. The Ottoman government determined on an expedition into the Indian Ocean (Lutfî Paşa, 358; Kübîl-dîn Makkî ‘Alî-Nahrwâlî, Al-Bâkî ‘Alî-î Yamnî fî fâlîth ‘Alî-î ‘Othmânî, Riyâd 1967, 70). Süleymân Paşa’s fleet consisting of 72 vessels with siege guns and about 6,500 soldiers, including 150 Janissaries, left Suez on 24 Muharram 945/24 June 1538 (R. S. Whiteway, The rise of Portuguese power in India, 1497-1550, London 1967, 256; anon., Rustem Paşa Ta’rihî, Istanbul Universîte kütopûnânesi, MS 2438, fol. 205b; cf. al-Nahrwâlî, 71; Kâtîb Cebelî, Tu’hatf al-bîhîr fi âsîrî al-bîhâr, İstanbul 1320, 57, 58). The Paşa sailed down the Red Sea, passing Djiedda and the island of Kamarân and arrived at the straits of Bâb al-Mandab. From there, he proceeded to the harbour of Aden, where he had Âmîr b. Dâwûd, the ruler of the town, hanged from the yard-arm of his flagship. Aden now passed under Ottoman control and became a sandjak dependent on Yemen (Topkapî Sarayı Müzeesi Arşivi, N.E. 6545).

After 19 days sailing Süleymân Paşa appeared before the coast of Gujûlîrât on 9 Ra’dâb 945/9 September 1538, having lost five ships of his fleet during this sail. Süleymân Paşa’s first attack and took the fortress of Gogala (called by the Portuguese Villa dos Rumos and by the Muslims Bandar-i Turkî) and then that of Kat, but failed to reduce the strong Portuguese fort of Diu. Mahmûd III, the successor of Bâhâder Shâh of Gujûlîrât, bearing in mind the fate of the amir of Aden, failed to help the Ottomans (Hâdîjî al-Darbî, Zafar al-udâlî bi-Musafar wa-alîhî, ed. as An Arabic History of Gujûlîrât, Baroda 1970, i, 226-7). On arrival of the news that the Portuguese fleet was approaching, and despite the fall of the outer fortress of Diu, Süleymân Paşa withdrew his siege artillery and on 12 Dîjêmîda 26 October, sailed back to the Red Sea (Particular relation of the expedition of Solyma Pacha from Suez to India against the Portuguese at Diu, in Robert Kerr and F. A. Eden, A General History and collection of Voyages and Travels, Edinburgh 1812, ii, 258-87). On the way, he stopped at Shîbr on the coast of Arabia, an important town for trade. There he aided Badr, the ruler of Shîbr to extend his power as far as Zufar (Dhofar) on condition that he paid an annual tribute (for the letter of this ruler, sent to Hariml e.on. Kabbakan Arşivi, İstanbul, 1852-53). On 8 Ra’dâb 938/30 November 1538 he proceeded towards Aden (Topkapî Sarayı Müzeesi Arşivi, N.E. 6704;
Whilst governor of Egypt, Süleyman Pasha made improvements in the citadel district of Cairo and constructed two mosques, one at Bulak and the other at the citadel of Cairo, and improvements in other districts of Egypt. (For critics of his activities see the various articles of L. Ribeiro in Studia orientalia, v, 59, 297-9, 302-3, and his Histoire de Suleyman Pacha.) In 1274, he died in a city between Egypt and the Ottoman empire.

AL-KHADIR (AL-KHIDIR), the name of a popular figure, who plays a prominent part in legend and story. Al-Khâdir is properly an epithet ("the green man"); this was in time forgotten and this explains the secondary form Khidir (approximately "the green"), which in many places has displaced the primary form.

(i) IN THE KUR'ân AND IN ORIENTAL LEGEND

Legends and stories regarding Khâdir are primarily associated with the Kur'ânic story in Sûra XVIII, 59-81, the outline of which is as follows. Mûsâ goes on a journey with his servant (fâdil), the goal of which is the magâma al-barayn. But when they reach this place, they find that as a result of the influence of Satan, they have forgotten the fish which they were taking with them. The fish had found its way into the water and had swum away. While looking for the fish the two travellers meet a servant of God. Mûsâ says that he will follow him if he will teach him the right path (rû instantly. They come to an arrangement but the servant of God tells Mûsâ at the beginning that he must not ask for explanations and as a result will not be able to bear with him. They set out on the journey, however, during which the servant of God does a number of apparently outrageous things, which causes Mûsâ to lose patience so that he cannot refrain from asking for an explanation, whereupon the servant of God replies: "Did I not tell you that you would be lacking in patience with me?" He finally leaves Mûsâ and on departing gives him the explanation of his actions, which had their good reasons.

This servant of God is called al-Khâdir by the majority of the commentators. Others, however, identify him with Mûsâ's servant (see below). Both interpretations have their roots in Oriental legends. The Kur'ânic story may be traced back to three main sources: the Gilgamesh epic, the Alexander romance, and the Jewish legend of Elijah and Rabbi Joshua ben Levi. The two first are, of course, again closely related to one another; at the same time it should be noted that the fish episode is lacking in the epic and is only found in the romance (cf. R. Hartmann in the ZA, xxiv, 307 ff.).

The main features which the three sources have in common with the story in the Kur'ân are the following:

The Gilgamesh epic. Overcome with melan-
made the fish live again and it swims away. Andreas jumped in after it and thus gained immortality. When he told Alexander his adventure, the latter at once realised that this was the well of life. All attempts to find it again failed: Alexander is denied the immortality which becomes the lot of the unfortunate cook, who does not know what to do with it.

The Jewish legend (printed in Jellinek, *Bel ha-Midrasch*, v. 133-5) tells how Rabbi Joshua ben Levi goes on a journey with Elijah under conditions laid down by Elijah, like those above of the servants of God in the Kur'ān. Like the latter, Elijah does a number of apparently outrageous things, which affects Joshua as it did Mūsā. Zunz, *Gesammelte Vorträge*, x, 130 first pointed out the similarity of this story to the Kur'ān legand. A comparison of the main features of these three sources with Sūra XVIII, 59 ff. suggests the following conclusions, questions and hypotheses.

The chief figure in the Kur'ānic story is called Mūsā. Some commentators doubt his identity with the great prophet (see below). There is not, however, the slightest hint of another Mūsā anywhere in the Kur'ān. On the other hand, we have no legends of Moses, which make him, like Gilgamesh and Alexander, go on the great journey. We might suggest the following explanation of the difficulty. The figure of Joshua ben Levi, with which Muhammad first became acquainted through the Jews and which does not again appear in Muslim legend, was identified, as we shall see, with Joshua b. Nūn. This identification may have resulted in a confusion of his master Elijah with Joshua b. Nūn’s master Moses. Mūsā thus represents Gilgamesh and Alexander in the first part of the Kur'ānic story and Elijah in the second.

The figure of the travelling companion is not connected with the Gilgamesh epic where it is not found, but with the Alexander romance and the Jewish legend. It probably comes in the first place from the romance. This is suggested by the fact that the companion is called *fātīḥa* (here meaning “servant”), a term that points to Alexander’s cook rather than to Rabbi Joshua; the first episode, which also is only found in the Alexander romance, points in the same direction.

The *madjima* al-bahrayn is given as the goal of the journey. The expression has no direct original either in the epic or the romance, although there are points of contact in both. Utnapīṣṭīm lives *ina pi narāt*, i.e. at the mouth of the river. It is not quite certain what the expression means, but it is probable that the place in the extreme west is meant where the sources of all running water are. This, however, still leaves the dual in the Kur'ānic expression unexplained. This is still the case, if we attempt to trace it to the Alexander romance, where (i.e. in the Syriac Alexander legend; see Budge, *op. cit.*, 259) Alexander with his army crosses a strip of land between the eleven bright seas and the ocean. It is also possible that the expression goes back to none of these but to another story unknown to us, which perhaps never found its way into literature, in which there was mention of the meeting place of two seas. According to western Semitic cosmology, this is the end of the world where the oceans of earth and heaven meet.

We can likewise only guess at the origin of the rock. It also belongs to cosmology (see A. J. Wensinck, *The ocean in the literature of the Western Semites*, in the *Verh. A. H. Amsterdam*, xix [26 ff.). It is found neither in the epic nor in the romance, again an indication that the Kur'ānic story borrowed from other sources.

The servant of God at the *madjima* recalls Utnapīṣṭīm-Khasisatra. He is called (v. 64) one to whom God’s mercy had been shown, to whom divine wisdom had been granted. This sounds almost like a translation of the name Khasisatra and the granting of divine favour is perhaps an echo of Utnapīṣṭīm’s immortality.

The test of patience to which he subjects the newcomer comes from the Jewish legend only; the servant of God in this respect thus represents Elijah.

(ii) DEVELOPMENT IN ISLAM

The commentators, *bāḥtiya*, and historians have collected a mass of statements around the Kur’ānic story, additions which, like the story itself, came for the most part from the three sources already mentioned.

The first question discussed is whether the principal character is Mūsā b. *Imrān* or Mūsā b. *Mishā* (= Manasseh) b. *Yūsuf* b. *Ya’qūb*, i.e. a descendant of the patriarch Jacob (al-Ībādī, *Maftūḥ al-ghayb*, iv, 333; al-Zamakhshārī, *Kashshāf*, on v. 59). Commentators are almost unanimous in favour of the former alternative and base their opinion on the following legend which is transmitted in several forms. When Mūsā, the famous prophet, was one day preaching to the children of Israel, he was asked if there was any man wiser than he. When he replied in the negative, Allāh revealed to him that his pious servant, al-Īdārī, was wiser than he. He thereupon decided to visit this wise man. The story comes from Jewish legend; it is found in a considerable number of Arabic sources (al-Bukhārī, *al-Kub*, bāb 16, 19, 44; *Anbiya*, bāb 27; *Tafsīr*, Sūra XVIII, bāb 2-4; Muslim, *Fadā‘il*, tr. 170-4; al-Tirmidhī, *Tafsīr*, Sūra XVIII, bāb 1; al-Ṭabarī, i, 417; *Tafsīr*, xv, 165 f.; Fakhr al-Dīn al-Ībādī, *op. cit.*, iv, 333).

The (salted) fish serves as a guide to the route; the place where it is lost or revived by contact with water is the spring of life where al-Īdārī lives (al-Ṭabarī, i, 417). A eunuch serves as cook, who does not know what to do with it. Vollers consider the reverse probable; he thinks that “river of the wolf” is a translation of the spring of life that is is marked by the rock, for it rises at its foot (al-Ṭabarī, *Tafsīr*, xv, 167; al-Bukhārī, *Tafsīr*, Sūra XVIII, bāb 4). The rock is also located before the river of oil or the river of the wolf (al-Baydawī and al-Zamakhshārī on Sūra XVIII, 61; al-Ṭabarī, *Tafsīr*, xv, 164). Some connection between a river of oil and the spring of life is in itself not impossible. According to many statements, oil is a feature of Paradise rivers. Then *النَّافَض* would be an error in writing *ثَمِّيْت*, which could easily arise. Vollers consider the reverse probable; he thinks that “river of the wolf” is a translation of the name Loukos, which is not uncommon in classical literature as a river-name. If this hypothesis is correct, one might think of the Lukkos in Morocco or the Lycus on the Syrian coast, two regions with which the idea of extreme west is associated, as we shall see directly.

The *madjima* al-bahrayn is explained in various ways. Some regard it as “the place where the Persian Ocean unites with the Roman Sea, to the east” (al-Baydawī on Sūra XVIII, 59; al-Ṭabarī, *Tafsīr*, xv, 163). This points to the isthmus of Suez and is an echo of the idea that the coast of Syria was the extreme west (see A. J. Wensinck, *Bird and tree as cosmological symbols in Western Asia*, in the *Verh. A. H. Amsterdam*, 1921, 17 ff.). Others say that it is the junction of the Roman Sea with
the Ocean (Tandja, Ifriklya; al-Tabari, Tafsir, xv, 163, and al-Zamakhsharl on the passage). This view reflects a later cosmological standpoint which regarded the Straits of Gibraltar as the extreme west. A farfetched explanation is that the union of the two seas means the meeting of Mūsā and al-Khādir, the two seas of wisdom (e.g. al-Damārī, Ḥayāt al-bayyān 1, 315).

When Mūsā first sees Khādir he is wrapped up in his cloak, as the Kurān says, "because he was sleeping", says al-Ṭabarī (i, 418). When he sees a bird drinking out of the sea he says to Mūsā: "Your wisdom is insignificant as compared with that of God as the amount the bird drinks is compared with the sea" (al-Ṭabarī, i, 418; al-Bukhārī, Tafsir, Sūra XVIII, bāb 35; al-Rāzī, Maḏāḥ al-ghayb, iv, 333-4). Al-Khādir lives on an island (al-Ṭabarī, i, 422), or on a green carpet (ṭifāsa) in the heart of the sea (‘ālā ḫādir al-bāḥr; al-Bukhārī, Tafsir, Sūra, XVIII, bāb 3).

The test of patience is embellished by the commentators with a wealth of detail. It would take up too much space to go into them here; cf. the commentaries on Sūra XVIII, 59 ff., and the works on history and tradition mentioned in the Bibliography.

It may be expected from what we have said above, another branch of tradition lays particular emphasis on the connection between al-Khādir and Alexander's search for the spring of life. Friedländer, however, goes much too far when he says (Die Chadbirlegende, 108-9) "that originally Chadhir had nothing at all to do with the puzzling servant in verse 64—who belongs to quite a different cycle of stories—but with the servant of Moses (Alexander) who has charge of the fish in verse 59; in other words, he is identical with Alexander's cook whom we know so well from Pseudo-Callisthenes and the Ethiopic Alexander romance; cf. Friedlander's Paix des Babylone, 275. Clermont-Ganneau further pointed out the identity with St. George, with whom al-Khādir has certain similarities." The latter identification is probably due to a confusion with Alexander's cook whom we know so well from Pseudo-Callisthenes and the Ethiopic Alexander romance; cf. Friedlander, op. cit., 275. Clermont-Ganneau further pointed out the relationship between the consonants kh-d-r and the North Semitic group ḫ-r. The name has also been taken as a corruption of Khasisatra (Guyard in Reih RHR, I, 344-5) or connected with Ahasuerus, the wandering Jew (Lidzbarski in ZA, vii, 116).

Very varying dates are given for al-Khādir's period. Sometimes he is called a contemporary of Abraham, who left Babel with him (al-Ṭabarī, i, 415); sometimes he is put in the period of Afritīdīn; he is a contemporary of Alexander and lived down to the time of Mūsā (Ibn Ḥadjar, Ḥayāt, 886); according to others, he was born in the period of Nāṣihyāt b. Amūs (i.e. Isaiah b. Amos) (al-Ṭabarī, 415-6). The divergence in these statements is partly connected with his immortality (see below).

The descriptive character of the name al-Khādir is so obvious from its meaning that tradition could not but give the hero's real name, as well as his genealogy and date. We find him most frequently called Bālāya b. Malkān. In al-Masūdī (Murādī, i, 144) the latter is called a brother of Kābītān and thus given a place in the South Arabian genealogy. This makes it probable that Malkān is identical with Malkān (I Chronicles, viii, 9), who is also included among the South Arabian patriarchs. This genealogy is next traced back to Shem through Fālāq (Phaleg) and 'Abīr (Eber) (e.g. al-Ṭabarī, i, 415; al-Masūdī, Murādī, i, 92; al-Nawawī, on Muslim's Sahīh, v, 135). Is this Bālāya (Bālāya) perhaps not a corruption of Elīa (Elīa), which is identical with a Syriac form of the name Elījah? On the other hand, Elījah is also given in the Muslim form Iyās as al-Khādir's proper name and also Elīsha, Jeremiah (cf. God's words in Isāba, 889), Khadrūn (al-Ṭabarī, i, 415; al-Diyārbakrī, Taʾrīkh al-khāmis, i, 106, and Friedländer's Chadbirlegende, 333, under Chadbir).

Ibn Ḥadjar also gives the following genealogies (Isāba, 883-4): (1) He is a son of Adam (weak ḫnādā); with this is connected the story (Isāba, 887-8; Abū Ḥattīm al-Sidjastānī, Kiṣāb al-Muʿammardin, 1) that al-Khādir took care of Adam's body and finally buried it after the flood; (2) He is a son of Kābih called Khadrūn; (3) He is al-Muʿammarr ("the Long-lived") b. Mālik b. Abd Allāh b. Nasr b. al-Azd; (4) He is Ibn 'Amālī b. al-Nūr b. al-Qs b. Iṣhāk; (5) He is the son of Pharaoh's daughter; (6) He is a Persian, or his father was a Persian, or his mother a Greek or vice versa; (7) He is said to have been born in a cave, fed there on the milk of wild beasts and finally entered the service of a man called 'Abīd b. Malik, whom he afterwards visited. The latter identification is probably due to a confusion with a king (al-Damārī, i, 318; Ibn Ḥadjar, 891-2); cf. also his meeting "on the market-place of the Banū Isrāʾil" with the man who asks him for alms bi-wadjh Allāh (Isāba, 894-5).

This does not, however, exhaust the traditions about his names and genealogy. We shall only quote here the following from Maracci, Prodromi to Sūra xxvii, 57: Alcedrus, quem fabulantur Moslemi eundem fuisset, ac Phineas filium Eleazar, filii Aaron, cujus anima per metempsychosin emigravit primo in Eiliam, deinde ex Elia in S. Gregorium, quem propterea Mahumetani omnes summo honore prosequuntur. The latter identification is probably due to a confusion with St. George, with whom al-Khādir has certain points of resemblance; cf. thereon Clermont-Ganneau in Revue archéologique, xxxiii, and Friedländer op. cit., 275. Clermont-Ganneau further pointed out the relationship between the consonants ḥ-d-r and the North Semitic group h-r. The name has also been taken as a corruption of Khasisatra (Guyard in RHR, I, 344-5) or connected with Ahasuerus, the wandering Jew (Lidzbarski in ZA, vii, 116).

Very varying dates are given for al-Khādir's period. Sometimes he is called a contemporary of Abraham, who left Babel with him (al-Ṭabarī, i, 415); sometimes he is put in the period of Afritīdīn; he is a contemporary of Alexander and lived down to the time of Mūsā (Ibn Ḥadjar, Isāba, 886); according to others, he was born in the period of Nāṣihyāt b. Amūs (i.e. Isaiah b. Amos) (al-Ṭabarī, 415-6). The divergence in these statements is partly connected with his immortality (see below).

More important are the explanations of the name given in the oriental sources. Ibn Ḥadjar said to have been created through diving into the spring of life and thus got his name (Ethiopic Alexander romance; cf. Friedländer, op. cit., 235-6). As already
mentioned, he lives on an island (al-Damiri, op. cit., 317); he is also said to worship God on the islands (al-Sufi, see Friedländer, ii, 183; al-Tha'labi, 197). This may point to al-Khādir's having originally been a marine being. The following circumstances point in the same direction: he is frequently called the patron of seafaring people (e.g. Ta'ūriḥ al-khamīs, i, 107); he is said to be appealed to on the Syrian coast by sailors in stormy weather. In India he has become a regular river-god under the name Khādīja Khādir (q.v.), who is represented sitting on a fish. Clermont-Ganneau and Friedländer sought the origin of the figure mainly in this direction, the latter on the assumption that the Greek Glaukos legend reached the Muslims through a Syriac intermediary (op. cit., 107 ff.). But apart from the fact that we know nothing of any such intermediary, a connection between al-Khādir and Glaukos would only explain one aspect of the former; nor would it tell us anything about the origin of the figure. Indeed, one may doubt whether it is right to seek for the origin of a figure so complicated as al-Khādir, who has characteristics in common with Utnapishtim, with Alexander's cook and other figures.

There are other things to be considered. In a number of Arabic explanations of the name, al-Khādir is conceived not as belonging to the sea but to the vegetable kingdom (see al-Nawawi, who is represented sitting on a fish and it became green” (e.g. al-Nawawi on Muslin's Šābik, v, 135; cf. al-Tabari, Tafsir, xv, 168). “The skin”, adds al-Nawawi, “is the earth”. Al-Diyārakrī (i, 106) is still more definite. “The skin is the earth when it puts forth shoots and becomes green after having been bare”. According to Umāra, al-Khādir is told at the spring of life: “Thou art Chadhir and where thy feet touch the earth it will become green” (Friedländer, op. cit., 145). Wherever he stands or performs the saḥāṭ, it will become green (al-Nawawi, op. cit.; al-Rāzī, Mañīṭik al-ghayb, iv, 336). These are statements (especially the last) which remind us of a Messianic passage in the Old Testament: “Behold the man whose name is the branch and he shall grow up out of his place” (Zechariah, vi, 12). Al-Khādir is really connected with two Messianic figures—with Elijah (see ii, 115) and with Jesus; these three form with Idīr (q.v.) the quartette of those who have not tasted death (Ta'ūriḥ al-khamīs, i, 107).

The variations in the character of al-Khādir result in different views regarding his nature. If he is a prophet (see Ṣība, 882 ff.), it remains doubtful whether he is to be included among the Apostles (al-Nawawi, op. cit., 135). He is, however, also human, angelic, mundane and celestial (al-Tabari, i, 544, 798). Popular piety as well as Sāfi circles readily regard him as a saint (waṣā). According to one Sūfi view, every age has its Khādir, in so far (cf. Ṣība, 904 ff.). Every Friday he drinks from the Zam zam well, and Solomon's pond and meadows in the well of Siōmān (Ta'ūriḥ al-khamīs, i, 107; Friedländer, op. cit., 145). He flies through the air, meets Elijah on the dam of Alexander and makes the pilgrimage to Mecca with him every year (cf. Ṣība, 904 ff.). Every Friday he drinks from the Zam zam well, and Solomon's pond and meadows in the well of Siōmān (Ta'ūriḥ al-khamīs, i, 107; Friedländer, op. cit., 145); he can find water below the ground and talks the languages of all peoples (al-Ṣūri, in Friedländer, 184).

His immortality is particularly emphasised (cf. Rücker's poem “Chidher”; Umāra in Friedländer, op. cit., 145; Abū Hātim al-Sīgjāstānī, Kitāb al-Mu'amārīn, 1; Ṣība, 887 ff., 892, 895). According to the Ṣība, 882, he was given immortality after a conversation with his friend, the angel Raḥf, in order to establish the true worship of God on the earth and maintain it. Ibn Hāǧar describes a meeting between al-Khādir and a fisherman in various versions (Ṣība, 890 ff.). On meetings with individuals who lived at a later date see ibid., 908 ff.; on the table which was let down to him from heaven, see ibid., 919; on his presence at the battle of Kādisiyah, see Murādī al-dhahab, iv, 216.

He lives in Jerusalem and performs his saḥāṭ every Friday in the mosques of Mecca, Medina, Jerusalem, Kūbā and on the Mount of Olives; his food is kham'a and water-parsley (Ta'ūriḥ al-khamīs, i, 107; Ṣība, 889-90, 904).

On his marriages we have as early as classical khdith ( Ibn Mādjā, Zuhd, bāb 23) a legend also mentioned by al-Thā'labi, Kīṣās, 193 ff., which in its main features must have come from Christian sources. It is the motif of the pious youth who, married by his parents against his will, persuades his wife to become a mystic and to ascend to heaven (compare the Syriac Acts of Thomas, 2nd Praxis). The story links up with that of Pharaoh's daughter's handmaid.

KHADIR, BAN( sing. Khadir), a generic term in Najd [q.v.] for Arabs of dubious ancestry, e. not recognised as descendants of either 'Adnān or Kaḥṭān [see DIzIRAT AL-ARAB. vi. Ethnography]. The derivation of the term is uncertain.
In any case, it is not to be taken as the name of a tribe, though there are sections of Banū Khadr in various towns of al-Najd (see the tentative list in Lorimer, ii, 1904).

Many of Banū Khadr are tillers of the soil for Arabs of pure descent who own the land they work. Rarely is a Khadrī himself a landowner. Banū Khadr as cultivators are numerous in the oases of al-Aflāḥ, Hawwāt Banī Tamīm and its neighbours, al-Ṭārid, Sudayr, and al-Ḳāṣim [q.v.], as well as west of the Ṭuwayq escarpment in Dāmār and al-Kuwayṭ-iyya.

Men of Banū Khadr, however, often rise above the rank of common labourer. When the British official and explorer Philby first became acquainted with the court of ʿAbd al-ʿAzzīz b. ʿAbd al-ʿRahmān ʿAlī Suʿūd in 1336/1917-18, Khadrīs were serving the Wahhābī ruler as treasurer and as master of ceremonies, while others, along with slaves, made up the bulk of his bodyguard. At least three of ʿAbd al-ʿAzzīz’s early secretaries were Khadrīs, and the brother of one of these went on to become his powerful Minister of Finance.

In the old Arabia, Banū Khadr were subjected to a strong taboo: no matter how high a station in life a Khadrī held, any Arab of pure descent, humble though his circumstances might be, would flatly refuse to give him a daughter as his bride. In the new Arabia of the later 20th century, with great changes taking place in the economic and social structure, this taboo may be weakening.

**AL-KHADR, AL-KHAṬIR, KHAṬIR, ʿAṬIR, ʿAṬIRAT** is a name given by the Arabs to Abbadān [q.v.], because al-Khadir [q.v.] is supposed to have appeared there. According to a legend, a ragged man appeared on the bank of the Bahaddīn canal and asked the master of a passing sailing-boat to ferry him across. The master refused. The stranger ordered the boat to come to the spot where he was standing, pulled it out of the water by the anchor chain, and left it high and dry. Then he disappeared. Farmers of the neighbourhood built a mud wall around the boat. The wall was repaired by a builder, called Usta Dīʾāmī, in 908/1501. In 933/1526, a shrine with a cupola was built and the alleged anchor of the boat hung up inside. The shrine is now an object of pilgrimage.

(V. Melkonian)

**AL-KHADR, MUHAMMAD B. AL-HUSAYN (the name al-Khadir/al-Khidr being adopted during his stay in the east), scholar, poet and writer of Tunisian origin.** He was born at Nefta in 26 Radjab 1293/21 July 1876, and studied first at a Kurānic school before coming with his family to Tunis in 1888. In 1889 he entered the Great Mosque for his secondary studies and followed the courses of ʿUmar b. ʿAbd al-Raʾūṣīḥ, Muhammad ʿAlī al-Dāʾīḍī and Sālim Bihādíjīb, who were known for their reformist ideas. He gained the iṣlāḥī atiṣṭ or diploma of completion of secondary studies in 1899, and began to teach at the Zaytūna, interrupted his career to make a trip to the east, but halted at Tripoli and ended up by retracing his steps in 1889. He subsequently began his activities by founding the first Tunisian journal in Arabic, al-Suʾūdī al-ʿumārī, in 1322/1904. He was appointed bāḥi of Bizerta in 1905 and continued to teach at the town’s Great Mosque, then left his post and took up his teaching post at the Zaytūna in 1906. His first lecture during this year, at the council of the Association of Former Sādīqīns, was on the subject “Freedom in Islam”. In 1907 he passed successfully a competitive examination for the teaching qualification, and in the next year began to lecture at the Sādīqī College. According to Mahdī ʿAllām, he refused a post as magistrate on the mixed tribunal, and entered the Khalīdīnīyya, completing three courses in the highest establishments of the capital. During this period, he gave lectures on “the evolution of the Arabic language”, ṣīḥāḥ and Ibn Khalīdūn, and encouraged his peoples at the Zaytūna to demand reforms in the teaching programmes. In 1902 he made a journey to Algiers and had made various contacts with his old pupils and with the local scholars.

In 1912 his uncle Muhammad al-Makki b. ʿAzzūz left for Istanbul, and this may have given him the notion of definitely leaving Tunisia for a new sphere of action, the east. Hence in this same year, he moved permanently to the Near East and toured through most of the Arab lands. At this time, he was appointed professor at the Madrasa sultānīyya in Damascus, but his political activities, envisaging a better Arab-Turkish understanding, irritated Djemal Pasha, who imprisoned him for endangering the state’s security. Six months later, on 18 January 1917, he was set free, probably on the intervention of the Sublime Porte, and summoned to Istanbul to work with the Arabic correspondence section of the Ministry of War. In the Ottoman capital he met various of his Tunisian compatriots, some of whom had been exiled for their “subversive” activities, e.g., Allā Bāḥī ʿHANDA, Muhammad Bāḥī ʿHANDA, ʿAlī ʿSHIRF and ʿIsāmīl ʿṢAYHĪ.

Still believing that it was possible to save the caliphate, he and others of his compatriots put themselves at the service of the Ottomans and was given charge of a special mission to Berlin concerned with arranging the escape of North African soldiers serving in the French army; the Porte had promised its supporters in the Maḥārīb to help them with these deserters for a war of liberation in the Maḥārīb. After the war, he returned to Damascus and taught at the military college, at the Ottoman school and at the Madrasa sultānīyya. In 1919 he was appointed as a member of a Damascus Academy, but soon left the Syrian capital in 1920 in order to escape from the French authorities, who would certainly have called him to account for his pro-Ottoman activities in Berlin. He only returned there in 1937, and then only for a two months’ stay.

In 1920 al-Khadir settled in Cairo, and had excellent relations with the Taymūr family; and in 1923 he founded the Association of North African Colonies. The work of ʿAllā ʿAbd ar-Raʾūṣīḥ, al-ʿIslām wa-ʾusūl al-buhm, which appeared in 1925 (tr. L. Bercher, in REI (1933), 353-90, and (1934), 163-222), and that of ʿAbd al-Raʾūṣīḥ on pre-Islamic poetry (1926) drove the ʿṣayḥī to reply in two nakāds which placed him in the public eye in Egypt when they appeared respectively in 1926 and 1927. The first work contains the same number of chapters (nine) as ʿAllā ʿAbd al-Raʾūṣīḥ’s, and is dedicated to King Fuʾād, who was considered by certain ʿulāmāʾ, including al-Khadir, as the best qualified person to assume the caliphate. In it, al-Khadir succinctly summarises each of the original author’s chapters and then refutes his arguments; in his opinion the caliphate is far from being a religious obligation, since Islam leaves to its adherents freedom to choose the form of government.
most suitable for them. But to argue from this that Islam separates the temporal from the spiritual, and has no political traditions, is to misunderstand the very message of the Prophet.

According to him, Thāḥa Husayn's work is at fault because it denigrates the Arab-Muslim heritage, and even that of Islam. Again following the same plan as the original author, al-Khādir tries to show that the former, the follower of Descartes and Margoliouth, expressly passes over in silence the methodical spirit of an al-Ghazāl or Ibn Khaldūn, with the manifest aim of discrediting the great figures of Islamic civilisation. Did not the old ruwäd themselves express doubts about some pre-Islamic poetry?

In 1926, al-Khādir founded the al-Ḥidāyā al-Islāmiyya society and became editor of its journal, bearing the same name. The editorship of the journal Nūr al-Islām, founded in 1926 and which in 1955 became the journal of the Azhar, Madjāīl al-Azhār, was also entrusted to him. In 1932 he became an Egyptian subject and was made a member of the Cairo Academy, of which he remained a permanent member until his death. He began to lecture at the Azhar, and his career reached its culmination in 1947 when he became rector of this celebrated institution. He left this post in 1954, after the ejection from power of General Nadjib (Neguib), and died in Cairo four years later, on 13 Ṭarādž 1377/2 February 1958.

The list of his works is very long. Several articles and lectures, published in Tunis or the east in the form of epistles, have been collected together into books as part of a general edition under his nephew, Allī Ṭawāf al-Dīn al-Ḥidāyā, 907

KHĀDIR — KHAWDJÀ-I DJAHAN, title of high dignitaries in various sultanates of India, notably the sultanate of Dihl, the Bahmanids, and the sultanate of Madura. It seems to have first been used during the time of Muhammad b. Tughlūku (724-52/1324-51), gradually replacing ṣadr-i ālī as the honorific title of the wāzir (I. H. Qureshi, The administration of the sultanate of Dihl, Karachi 1958, 85, with further references); the title was later accorded to other very high officials. Many such officials are known to history by this title (sometimes qualified by a nisha or łaḥab) rather than by their personal names, of whom the most important are the following:

1. Khwāja-i Dihān Ahmad Ayāz (7068-72/1720-31), who early in the 8th/14th century had held office as khasāıl of Sirf under ‘Alā’ al-Dīn and the later Khādījūs, received the title of Khwāja-i Dihān on Muḥammad b. Tughlūku’s accession in 724/1324. (Yabāyā Sirhindī, Ta’rīkh-i Muḥābrāh Shāhī, ed. Bib. Ind., 98) and became his wāzir, inferior in dignity only to the sultan’s nephew Fīruz b. Raḍjāb (see Fīruz Shāh Tughlūku); although effective power in the diwān-i ważarat was exercised (according to Śams-i Sirājī ‘Alī, Ta’rīkh-i Fīruz Shāhī, ed. Bib. Ind., 394-6) by the wāzīr of this celebrated institution. He left this post in 1932, after the ejection from power of General Nadjīb (Negiub), and died in Cairo four years later, on 13 Ṭarādž 1377/2 February 1958.

The list of his works is very long. Several articles and lectures, published in Tunis or the east in the form of epistles, have been collected together into books as part of a general edition under his nephew, Allī Ṭawāf al-Dīn al-Ḥidāyā, 907.
first of the Bahmanids, the title of Kh*adja-i Djahan was given to:

5. A zamindar Humayun, son of the waqif (and the sultan's father-in-law) Sayf al-Din Ghord [q.v.], who was appointed governor of the Bahmanids' Tilangana province.

6. Kh*adja-i Djahan Astarabd* figures as the waqif of the sultan's *Ala* al-Din Ahmad II in 839/1436, the first clear instance of the title going to one of the (Afakl) faction whom the sultan favoured at the expense of the Dakhnis.

7. On his accession in 862/1458 Humayun Shak* also favoured the Afakl faction, appointing Mummid Gawan [q.v.] waqif and waqfi sultanana, and Malik Sh*ab, said to be of Cingizid descent, *faraddar* of Tilangana with the title of Khadja-i Djahan; he is usually referred to as Kh*adja-i Djahan Turk. He was distinguished as a general in this reign and that of the minor Ahmad III (865-7/1461-3), in which he was a member of the council of regency. The animosity of the dowager queen caused him to be murdered in 870/1465-6.

8. A "local" noble, Kh*adja-i Djahan Dakhni, figures as the Bahmanids' governor of Parenda ca. 900/1495, supporting the Bahmanids and their Barid ministers against the breakaway factions in Biglapur and Ahmadnagar.

**Bibliography**: given in the article. For the Bahmani nobles see also H. K. Shervani and P. M. Joshi (eds.), History of medieval Deccan, i, Hyderabad 1973, index s.v. Khwaja-i Jahan. (J. Burton-Page)

**KHADJA KHOR** (or Khizr in India), is in many part of India identified with a river-god or spirit of wells and streams. He is mentioned in the Sikander-nama as the saint who presided over the well of immortality. The name was naturalised in India, and Hindus as well as Muslims reverence him; it is sometimes converted by Hindus into Raja Kidar. On the Indus the saint is often identified with the river, and he is sometimes seen to be an old man clothed in green. A man who escapes drowning is spoken of as evading Kh*adja Khizr (Temple, Legends of the Panjib, i, 221). In a poem by A zamindar regarding an Indus, a boat is unloosed "to float on the Kh*adja's waves", and it is asserted "the Kh*adja himself will remember that battle". (Popular poetry of the Baloches, i, 74), and by one poet his name is substituted for that of Mikar as one of the archangels. His principal shrine is on an island of the Indus near Bakhar, which is restored by devotes of both creeds (Sind Restored, ii, 226). Manucci, who was present at the siege of Bakhar in 1606/1658, alludes to this shrine under the name of Coia Quitan. Burnes also mentions it in his Travels into Bokhara.

The saint is believed to ride upon a fish, which was adopted as a crest by the Kings of Oudh, and by one poet his name is substituted for that of the name of Coia Quitan. Burnes also mentions it in his Travels into Bokhara, London 1834; J. Wise, Muhammadans of Eastern Bengal, in JASB, lxxii/3 (1894), 38 ff.; Ja'far Sharif-G. A. Herklots, Islam in India, or the Qawwals-I-Islam, London 1879, repr. 1892, 38-9, 67, 135-6. (M. Longworth Dames*)

**KHADJA MUIN AL-DIN HASAN SINGI**. [see Chishti]

**KHADJA-ZADE. [see Khoda-Zaede]**

**KHADJEGAN-I DIWAN-I HUMAYUN**, a title given to the heads of the imperial chancery of the Ottomans. Although the date of its origin is uncertain, the title was certainly known in the 10th/11th century (Huseyin Hazarfen, Teylik-i ul-hayvan fi hadin-nin-i il-i 'Othman, 1600, 1614, 1774, etc.); Tevki 'Abdurrahman Pasha, Kanaanname, in MTM, iii (Istanbul 1331), 520; von Hammer, Staatsverfassungen, repr. 1963, i, 93, ii, iii, ff. 127 ff.; A. H. Lybyer, The government of the Ottoman empire, Cambridge, Mass. 1913, 168 f.). Because the title of Khadjegean was bestowed annually, the term Khadjegeanlik became a synonym for mansab ("high office", "rank") and me'mariyyet ("official duty"). Those officials who were subordinate to the chief clerks (halem re'sleri), so the holders of Khadjegeanlik posts, were called "assistants" (khaliye) of the Khadjegean or "pupils" (agird) of the Khadjegean. From the mid-11th/17th century onwards, the application of the term widened, and it was also given to various officials additional to the chief clerks of the divan. The conferment of the Khadjegean rank and the retention of the Khadjegean in offices always took place in the first half of the month of Shawwal each year (Celebi-Zade Ismail Asim, Dheyli-i Râhid, Istanbul 1282, v, 123). For this ceremony, the Grand Vizier would prepare a conferment list and present it to the sultan for approval; if it was desired to dismiss an official holding the title of Khadjegean, he would write three names on the list, and because it was known that the last name was the name of the person preferred by the Grand Vizier, the sultan would appoint him. For the 6th Shawwal 1134/20th July 1722 list of Khadjegean conferment, see Ismail Hakan, Oduncu veli-in merkez ve bahriye te'kildii, Ankara 1948, 152, n. 1; for an undated conferment list of a later period, see Baybakank Arjivi, A-TSF.

In the 10th/16th century, there were 25 chief clerks forming the Khadjegean group. In a document belonging to the first half of the 11th/17th century, they numbered 15: the chief finance officer Defterdar, the Defterdar of Rumelia, the Defterdar of Anatolia, the Nizâhâ, the Defterdar of the Danube, Chief Secretary (Re'si ul-ku'tub), the Senior Rûsnâmelesi (Clerek in charge of financial transactions), the Junior Rûsnâmelesi, the Câsâhâb, the Chief Accountant (Baš munasebesi), the Accountant of Anatolia, the Accountant of the Awatch, the Chief tax farmer (Mukadda'âfg), and the Tax farmer of Istanbul (Kemânebâkar Mu'tasîf-va Fakha Lâyibârî), ed. Faik Rüstâm Unat, in TV, 1/6 (Istanbul 1942), 454.

By the mid-12th/18th century, because the Khadjegeanlik was also conferred on those who did not hold an official post, the numbers of people holding this rank grew to several times more than the holders of the actual office. Junior officials, besides the chief clerks, might now have the title, such as the clerk of a Pasha's treasury. Such a person thereby had the opportunity of being promoted to a higher post; when dismissed from this office his name would be
rubbed out from the register of Khwādēgdn (Khwādēgdn defteri) in order to give an opportunity for other officials (cf. the procedure applied to Yûsûf Efendi, the Junior Avcâf Accountant, described in Ahmed Wâsî, Maðsûn ul-âthâr we-hâbbâ'îk ul-âkhbâr, Istanbul Archaeology Museum Library, no. 355, f. 101). One notes the excessive number of those holding this rank. In 1180/1766 the officials included in the Khwādēgdn-i Diwân-i Humâyûn were as follows: the General Deputy to the Grand Vizier, the Defterdâr of the Shikkh-i ewvel (the finance accounts of the first division of the Ottoman Empire relating to Turkey in Europe), the Re'sî ul-kultûb, the Çâvûshbâsi, the first secretary to the Grand Vizier (Teâkkhâ-ì ewvel), the Master of court ceremonies, the Secretary to the Grand Vizier, the head of the government chancery office (Byeliklâhi), the Secretary to the Kethûhûd Bâg, the Defterdâr of the Shikkh-i şîhîn (the second financial division of the Ottoman Empire, comprising Anatolia), the Defterdâr of the Shikkh-i întini (the third division of the Ottoman Empire, including Hungary, Iraq, Syria, Egypt and Arabia), the Master of the Mint, the Prefect of the City (Şeher emini), the Emin of the Register, the Second Secretary to the Grand Vizier, the Senior Rûsznamelegî, the Chief Accountant, the Accountant of the Province, the Secretary to the Janissaries, the Overseer of the Kitchen, the Collector of Documents for the Cavalry (Atîl mulkâbâlegi), the Accountant of the Haramayn (Mecca and Medina), the Accountant of the dîzîya, the Arpa Emini, the Mâliyye tekhkiredîši, the Controller of the Office of Suspended Payments (Mezbûhîdî), the Overseer of Topghane (Topghâne nâszû), the Secretary of the Sîshkhs, the Secretary of the Sîlâmname, the Secretary of the Sildhâddrs, the Collector of Documents for the Infantry (Piyâde mulkâbâlegi), the Junior Accountant of the Avcâf, the Kalyonlar kâtibi (sc. the clerk who provided supplies for the galleons and kept the accounts), the Secretary for Expenditure, the Secretary of the Dîbedîsî, the Overseer of the Arsenal, the Chief Secretary of the Fortress (Bûysûk halî teâkkhiresi), the Chief tax Farmer (Boğh Mulkâbâ'î), the Junior Secretary of the Fortress (Kûşûk halî teäkkhiresi), the Tax Farmer of the Haramayn, the Tax Farmer of Istanbul, the Tax Farmer of the Khâdis revenues, the Emin of the Kâhid-i birân, the Emin of the Kâhid-i Enderûn, the Ta'tîrkhdîshik, the Tax Farmer of Bursa, the Tax Farmer of Avlonya and Erâbîz, the Overseer of payments from the treasury (Sergi nâzû), the Secretary of the gun-carriage drivers, the Secretary of the 'ülûfdejîyân-i yezmîn, the Secretary of the 'ülûfdejîyân-i yezmîn, the Secretary of the right wing of the Ghurebî cavalry, the Secretary of left wing of the Ghurebî cavalry, and the Emin of the Istanbul powder-factory, in total 53 officials (Cuştîmî- Zâde Muştafa Reğhdî, op. cit., 20-1, compare this list with those who were in the Khwâdēgdn-i Diwân-i Humâyûn in 1180/1766, in Ahmed Wâsî, Ta'tîrkî, Istanbul 1290, 33-4). For their places in the state ceremonies, see Nâzî'î 'Abdûllâh Pasha, Divân-i Humâyûn’â’ud tekhkîf, in TTEM, xcili (1926), 258 ff.

The Khwâdēgdn system continued in the same manner until 1240/1823. Thereafter the conferring of titles and appointments started to be made in Shâh bân, superfluous appointments were abolished, and civil servants were divided into four categories (Mehmed Thûreyûa, Nûkhbet ul-meṣâbût, Istanbul n.d. 21-2). In 1250/1834, when the Ministry of the Civil Service (Mâliyyeye nezârâtî) was established, a new scheme of rank and promotions was formed (Mehmed Thûreyûa, op. cit., 40-1; for the innovations in the field of administration after 1254/1838, see Luftî, Ta’tîrkî, Istanbul 1302, v, 114). The rank no longer had any importance, since every clerk who could write and express himself well was given the title of Khwâdēgdn; in 1254/1838 it was therefore decided that the rank of Khwâdēgdn should be conferred on those who could qualify by examination (Luftî, op. cit., v, 102, 126). But it had now lost almost all its prestige. It maintained its existence as a minor rank given to the office clerks (Kâlem âmirleri) among the new ranks invented after the Tanzimât reforms (Luftî, Ta’tîrkî, Istanbul 1328, viii, 155-6. For the status of the rank in 1270/1854, see Mehmed Thûreyûa, op. cit., 280, and see also M. Zeki Pâkânî, Osmanlı tarih devşîmeler ve terimleri tâlîfûsî, Istanbul 1946, i, 695).

Bibliography: given in the article.

(CENGIZ ORHONLU)
3. Kamal-nama, a mystical maqamawi in the metre of Haft Paykar, composed in 744/1343-4. It is divided into twelve bâhs and 1,840 bayts. In the prologue the poet praises Shaykh Abû Isâkh İbrahim of Kâzarûn (d. 426/1035), and in the epilogue addresses Shaykh Abû Isâkh, the ruler of Shîrzâ.

4. Rauwât al-Ensâr, also a mystical poem, in the metre of Maḥkan al-Asrâr, consisting of 20 maâshâs and 5,224 bayts. Composed in 743/1342-3, this volume is addressed to Shams al-Dîn Maḥmûd Sâînî, the vizier of Abû Isâkh İndî. This poem was printed at Tehran in 1907/1928.

5. Gauwar-nama, on ethics and mysticism, in the metre of Khusraw u Şîrin, composed in 746/1345-6, consisting of 1,032 bayts. The dedication is to Amîr Mubârîz al-Dîn Muhammad and his vizier Bahâ’ al-Dîn Maḥmûd.

(c) Other compositions: Sâm-nama, a romantic maqamawi in mulâqâb metre; Maîfâtî al-Kuškîa wa Masûdî al-Ghuyûb, a selection of Khâdîjî’s poems; and three risâlas in prose: Risâlah al-Bâdiyya, Sab’ al-Maḥkâmî, and Muntâzâra-i Şams wa Sab’hî.

Kh. AF, older orthography (e.g. in Ibn Rusta, 171) Kh.âb, a rûstak or rural district of Khûshtân in eastern Persia, lying between the district of Bahârâz (q.v.) to the north and that of Khân in the southwest, and adjacent to the modern Iran-Afghan border. The governors of the 4th/10th century mention the towns there of Salûmân (Huddâd al-Salûmî, tr. 803, Salûmîdâ), Farjîrûd and Kussîyâ, the latter being especially populous. Yakrut, Buldân, ed. Beirut 1374-6/1955-7, ii, 399, describes the district as having 200 villages and three significant towns, Sandjân, Sîrâwând and Khârjârd. Also reckoned by some authorities as belonging to the Kh.âf district was the important town of Zawzan; indeed, HamûlîTAB MUSTAWFÎ includes this with Sandjân and Salâm as the three chief towns there. Topographically bounded on the northeast by the Kûh-i Kh.âf, which rises to 8,260 feet (2,517 metres), the comparatively sheltered and fertile Kh.âf plain is described by the Islamic geographers as populous and prosperous agriculturally, producing excellent fruits, the dyestuff madder, and cotton and silk textiles; Mustawfî additionally mentions iron workings there (Nûhat al-kubûlî, tr. 152, 194).

In the early Islamic period, this rather isolated region was one where Zoroastrianism survived tenaciously; the Zoroastrian rebel Bih-‘âfrîd (q.v.) came from here, and a fire temple existed there well into the 5th/11th century, and this administrative subdivision also includes Zawzan; see Farhang-i dâwâdîyeyî-i Irân, ix, 153, 201.

Bibliography: given in the article, but for the information of classical Islamic geographers, see also Barbier de Meynard, Dictionnaire géographique, historique et littéraire de la Perse, 213-14, 190-1, and Le Strange, Lands of the eastern Caliphate, 357-8; and for the present century, Admiralty handbook, Persia, 385-7.

Men, etc. (C. E. BOSWORTH)

KHAFADJA, a subdivision of the Hawâzin tribe of ‘Ukail b. Ka‘b, which remained as powerful Bedouins longer than most of the other tribes which inhabited the Arabian Peninsula at the dawn of Islam. The genealogists give their affiliation to their kindred as Khâfâdja b. ‘Amr b. ‘Ukayl, and they were subdivided into eleven branches: Mu‘awiya Dhul-Karb, Ka‘b b. Dhul-Nuwayra, al-Akra’, Ka‘b al-Asghar, ‘Amir, Mâlik, Dhul-Harshâm, ‘Ali, Khazîn and Hanzîdî. According to Ibn al-Kalbî, Jamhara, fol. 132a, the name of Khâfâdja is Mu‘awiya b. ‘Amr. However, according to Ibn-Samînî, Anîb, fol. 204b, is 222-3. Another native of the area was Fâsih al-Dîn Ahmad b. Muhammad al-Kh.âfî, who was a protege of the Timurids of Harât in the first half of the 9th/15th century and who wrote a well-known historical and biographical compendium, the Mu‘allafrdt, see Browne, Literary history of Persia, iii, 428-8, and Storey, i, 90-1.

In the course of the 6th/12th century, Khûshtân, and Kh.âf and Zawzan in particular, became centres of Ismâ‘îlî activity, perhaps continuing the earlier traditions of heterodoxy there; hence in 654/1256 the Assassin stronghold of Kh.âfî was stormed by Hüleğü’s Mongol hordes, with a general massacre of the adult inhabitants (Djouyânil-Boyle, ii, 615-16; see also P. R. E. Willey, The Assassins in Uzbekistan, in Jnâl. of the Royal Central Asian Soc., iv (1968), 180-5). Not surprisingly, the succeeding period seems to have been one of economic and social regression for the district; whereas Yakût had recorded 200 villages there, Ḥâfî-î Abrû (early 9th/15th century), recorded only 30 (see I. P. Petrushevsky, in Camb. hist. of Iran, v, 496-7). It nevertheless retained some cultural vitality, and Mustawfî comments favourably on the devout Ḥâfî faith of the people of Kh.âfî, who were much given to works of charity and to going on pilgrimage. One of the five survivors of the Kh.âfî district dates from the Timurid period, sc. the madrasa of Khârjârd, begun by the architect Kiwâm al-Dîn Shîrzâl for two of Shîr Rûkî’s ministers, Ahmad b. Isâkh and Fâqîr al-Dîn Muhammad Kh.âfî (see Sir Percy Sykes, Historical notes on Khurâsan, in IRAS (1910), 114-51, and Survey of Persian art, iii, 1126-8).

In recent times, the name “Kh.âfî” has been used both for the district and for its chief town, also called Rûy-i Kh.âfî, near Khârjârd. Travellers such as C. E. Yate (1894) and Sykes (1705) visited it and described it during the late Kâddîr period. Yate found the centre Rûy-i Kh.âfî much decayed, with ca. 800 inhabited houses, all of whose denizens were Sunnis, but over half the houses in ruins; the silk industry had died out and had been replaced by the cultivation of opium and tabacco (Yate, Khurâsan and Sistan, Edinburgh-London 1900, 127-33, Sykes, A fifth journey in Persia, in Geogr. Jnâl., xxviii (1906), 580-2). At the present time, Kh.âf forms one of the five component bâhâkhs of the shahrastân of Turbat-i Haydarîyya in the ustân or province of Khurâsan, and this administrative subdivision also includes Zawzan; see Farhang-i dâwâdîyeyî-i Irân, ix, 153, 201.
probably wrong in saying that Khafadja is a name of a woman. Unfortunately, our early sources do not provide us with important information concerning their dwelling-places in pre-Islamic Arabia, presumably because of Khafadja's assimilation with Banū 'Ukayl. Out of whom they had emerged. However, from the scattered information found in the later sources, we know that they had their territory to the south-east of Medina and owned some villages, among which Sawr Lahūn, al-Sharkiya, Taḫhit, Tha'lab and Orāl are mentioned. Later, we find the frontier at the east war with the Banū Ḥanīfa in al-Yamāma. According to Asma, in Yākūt, Buldān, i., 785, they had their dwellings in the 2nd/8th century in the desert near the Rusafa settlement of the Umayyad Caliph Hīghām b. 'Abd al-Malik. It is probable that the Karmatī movement in al-Yamāma in the early part of the 4th/10th century caused them to move further northwards towards the borders of ʿIrāk. Here we find them towards the end of that century as masters of Kūfah under their amin Thumāl and his sons. About this time also, we find them around al-Šām, al-Rabba, Ḥalab and Hims, whilst al-Kalkaḥandī mentions that one of their branches had settled in Lower Egypt. They may have been at first allies of their cousins the Banū Yuzīl (not Bozīl as in Wustenfeld's Tabellen, or Yezīl as otherwise stated) who established themselves as rulers of Mawsīl and the surrounding country, but were rather in opposition to them. In the year 391/1000 the 'Ukaylīd Karwāsh attacked them in Kūfah and they were compelled to leave the lands and move along the Euphrates towards Syria, where they remained only till the following year, when the ʿAbbasīd general Abū Dāʾīf al-Hadidī was besieged in his aid when the ʿUkaylīds besieged al-Madāʾin. This brought them back again to their ancient dwelling-places and as the Baghdād government had probably supplied them with arms, they utilised these a few years later in 402/1011 in an attack upon the pilgrim caravan, emboldened by this attack, they demanded the lands to the east of the Euphrates which had in the hands of the ʿUkaylīds, and marched under the command of Sulfān, ʿUwān and Raḍāb, the three sons of Thumāl, to al-Anbār, laying the whole neighbourhood waste and besieging the town. An army sent against them from Baghdād and supported by the ʿUkaylīds drove them out and Sulfān was actually captured, but released upon the intercession of Abūl-Ḥasan b. Mazyad al-Asadī. No sooner had he been released than in the following year (403/1012), news was received at Baghdād that the Khafadja were plundering the country round Kūfah under Sulfān. An army was sent against them with support from Abūl-Ḥasan b. Mazyad, and they were surprised by the river al-Rummān. Sulfān escaped, but his brother Muḥammad was made a prisoner; as a result, many of the pilgrims, who had been captured in the year 403/1012, were liberated and reached Baghdād. Meanwhile, the ʿUkaylid amīr Karwāsh had been captured and released, and now tried to make common cause with the Khafadja and to join Sulfān b. Thumāl; but after their junction they were attacked by troops sent from Baghdād and routed, though subsequently pardoned. This gave a few years of comparative peace, but in 417/1026 Dubaybs b. Abīl Mazyad al-Asadī and Abūl-Fityān Manšūr b. Ḥassān, now chief of the Khafadja, ravaged the lands of Karwāsh in the Sawād (q.v.), assisted by troops from Baghdād, and encountered Karwāsh near Kūfah. Karwāsh fled northwards and was pursued by the combined tribes of Asad and Khafadja, who actually took possession of al-Anbār; but after this success the two tribes dispersed again to their pasture grounds. Manšūr b. Ḥassān then marched, with his followers to al-Dāmāfayn (see al-Hilla), which belonged to Dubaybs b. Saḍāka b. Mazyad, and plundered the lands round it; when pursued by Dubaybs, they turned northwards and attacked al-Anbār. The inhabitants defended themselves for a while, but as the town was not protected by walls, the Khafadja were able to plunder and burn it. On the approach of Karwāsh, they abandoned the town, but soon returned and looted it for a second time. When finally Karwāsh was able to drive them out, he spent the winter in the town and ordered protective walls to be built. Manšūr now swore allegiance to the Buwayhs ruler Abū Kālidjār and marched southwards to Kūfah, where he had the khudha pronounced in the name of Abū Kālidjār. This had the result that in 420/1029 Dubaybs severed his allegiance to Abū Kālidjār, being afraid of the depredations of the Khafadja. In the following years, the Khafadja sided sometimes with one party and at another time with the other, and when in 425/1033 Dubaybs had a quarrel with his brother Thābit, they sided with the former, but other quarrels also arose within the Khafadja chiefs, during which 'All b. Thumāl was killed and his nephew al-Ḥasan b. Abīl-ʿBarakāt became tribal chief. When in 428/1036 the Ḥādībīs Bārī Tūḏān rebelled in Baghdād, the Caliph's general al-Basāsīrī [q.v.] employed among others the Khafadja to quell the revolt, as a result of which Bārī Tūḏān was executed. We do not hear much about the Khafadja after that, but in 446/1054 they again made an inroad upon Dubaybs's town of al-Dāmāfayn, which they plundered; al-Basāsīrī came to his assistance, and the KhAFADJA retreated into the desert. They were pursued and their stronghold Khaffān was besieged and apart from its citadel, razed to the ground. When al-Basāsīrī rebelled against the caliph in the same year, he took al-Anbār after a prolonged siege, and we find that among the prisoners he took were 100 men of the Khafadja. There again followed a period of comparative peace, but when in 485/1092 the pilgrims from Baghdād had passed Kūfah they were attacked by Khafadja. When this news reached Baghdād, troops were sent who caused great slaughter among the KhAFADJA, reducing considerably their future power to do serious damage. In 490/1105 the KhAFADJA came into conflict with the Tayyī tribe 'Ubādah over some stolen camels, and while the latter could muster about 500 warriors, Khafadja were unable to place a similar number into the field. However, with assistance from the Asadī chief Saḍāka b. Mansūr they were victorious. This success was, however, of short duration, as in the following year the tribe of 'Ubādah, now assisted by Bādrān b. Saḍāka, utterly routed the Khafadja, who were compelled to forsake their pasture grounds and wander northwards towards Syria, while 'Ubādah in future was to occupy the lands adjoining the Sawād. Again in 536/1141 we hear of Khafadja making an inroad into 'Irāk, but the troops sent against them easily drove them off, killing large numbers. How weak Khafadja had become is evident from the fact that in 556/1160 they assembled in the neighbourhood of Hilla and Kūfah, asking for the food relief and dates which had apparently been granted them. The governors of the two towns refused to grant their request and Kayṣar, the governor of Hilla, sent 250 soldiers to
drive them off, a similar force being sent by the governor of Kufa. They pursued the fleeing Khafadja along the river Euphrates as far as Rabbat al-Sham, where the Khafadja made a stand, and in the fight which ensued Kayyar was slain while Arghash, the governor of Kufa, took refuge with the governor of al-Rabba. The Khafadja then pleaded for forgiveness, stating that they had been constrained to fight by their parol condition. Their excuse was accepted, as the Vizier Ibn Hubayrā, who had marched out against them, saw the futility of pursuing them into the desert. The last time we hear of the Khafadja is in 588/1192, when they came to the assistance of ʻAmir. In addition to the events narrated above in Trak, it is also mentioned that the Khafadja were among the Arab tribes who assisted in the siege of Tiberias in 507/1112 when the Crusader monarch Baldwin had taken refuge there after an unsuccessful raid upon Halab.

Among the poets of this tribe in ancient time was Tawba b. al-Humayyir, celebrated on account of his love for Layla al-Aghyaliyya and on account of the elegies which the latter composed upon his death in battle.

Al-Khaḍājī enumerates most of his works in his autobiography, many of them of considerable size, while he himself tells us that many of these treatises were never collected in book-form. His most extensive work is a commentary upon the Tafsīr of al-Baydawī which he entitled Ḥidāyat al-khādī, and which has been printed in Cairo in four large volumes. His follows the usual tedious method of explaining almost every word and of reproducing the statements of a large number of other authors who have treated upon the same subject. The same is the case with his second largest work, a commentary upon the Shifār of the Kādī ʻIlḥāḥ, entitled Nāsim al-riyāṣ (printed at Istanbul, 1267, in 4 vols.). His two biographical works, Khāḍājīa l-taṣawwuf, fi ma fi l-riyāṣ min al-bayda wa Raḥmat al-awālī wa-nushkat al-bayda al-dum, are hardly any better, and hardly any details, and it is only the arrangement by region which gives us any information on where the persons cited lived. We get, however, a fair amount of contemporary poetry, which enables us to judge to what miserable depth the art of rhyming had sunk. While the first named work exists only in manuscript, the Rayhānīa has been printed three times in Cairo (1273, 1294 and 1306), which shows us that the work was appreciated in Egypt. The most valuable portion of this work is an autobiography of the author (in which he has omitted to state when and where he was born) and the Makāmāt al-Raṣīmīya; the autobiography has furnished the material for the account of his life in the work of al-Muhābbī. Of more value are his Tārīkh al-mašjudīs and his Shifār al-qāhī. The former is a work of the class called amālī in 50 sessions (maḏāli), whose value consists in having preserved extracts of older works now apparently lost or undiscovered. It is interesting to find him quoting from the Kitāb al-Mašānī of al-Uṣnānī (printed in Damascus, 1340), the Fiṣāl of Ibn Hazm, the Fiṣāl of Ibn Nadim or the Anṣāb of al-Zubayr b. Bakkār, considering how rare manuscripts of these books are. The book is in fact a curious collection of odd information from all kinds of sources. Apparently there are two editions of this book, one Cairo, 1284 and a second without date printed in Tanta. The Shifār al-qāhī fi ma fi ḥalām
al-arab min al-da'khhil is, as indicated by the title, a work dealing with words of foreign origin in the Arabic language. The author has used for this purpose the Mu'arrab of al-Djawalik [q.v.] and similar works, but is not content with explaining words of foreign origin, as he also gives ample specimens of vulgar errors in correct Arabic speech. Closely resembling this book is a commentary on the Durrrat al-ghawdâd of al-Harîrî, which was printed together with the Durrra at Istanbul in 1999; this work, together with his Tîrâs, are probably the best of his compositions. His Duwân is mentioned by al-Mubîbî and is preserved in manuscript in Copenhagen.

(F. Krenkow)

KHAFàRA [A.]. "protection", is used, often together with hîmîya [q.v.], to designate certain social practices. Originally, it primarily denoted the protection which Arab tribes extended to merchants, travellers and pilgrims crossing their territories, often in return for payment or as part of an agreement [see IJAB]. Later, the word's usage became extended to the "protection" in return for an obligatory payment exacted by various social groups from other groups or from richer individuals (e.g., by the wyâyân and the 'ayyûs). Once the military class had assumed essential power, military commanders exacted various khafîrât from the rural estates, etc., but at the same time the state intervened to control them, to fix a tariff for them, or to revoke them for its own use. See further Hîmîya. (Cl. Cahen)

KHAFD or KHAFI (A.), female circumcision, corresponding to the circumcision of boys (khâtîn or khûtân [q.v.], terms which may be applied equally to both sexes). There is no mention of it in the Kur'ân, but more or less authentic kadîths attest to the practice in pre-Islamic Arabia and in a certain measure justify it. Tradition attributes to the Prophet the expression muqafâtât al-âl-bûsîr "cutter of clitorises" and the following words addressed to Umm 'Atiyya, iddî khafidî (khafîsi) fâ-unâmî wa-lâ iânîhâhî (i.e., do not excise everything), fa-‘annaku adnaâ‘îli-t-nâdî, wa-abhâ‘îmân sa-ânî, in which one can discern a somewhat curious aesthetic aspect, a display of masculine egoism and the authorisation to do the operation on condition of not going as far as total ablation of the external genital organs and even complete clitoridectomy. Although the texts and the dictionaries are not very explicit, the synonymy of khâtîn and khadîkh/hadîkh leads one to think that the minimal practice comprised excision of the prepuce of the clitoris.

In the Prophet's mouth, muqafâtât al-âl-bûsîr had a pejorative sense; but other items in the ancient vocabulary for designating the operator, khâtîna and muqâbâsîna, formed from basr "clitoris", do not seem to have a contemptuous connotation. However, a woman is called basrâ when she is affected by clitorism, or believed to be so, and lâkhanâ when she has not been circumcised; expressions meaning in effect "son of the uncircumcised woman", ibn al-bâsrâ, ibn al-lâkhanâ, are considered injurious and synonymous with "son of a whore", the violence of sexual appetite in a woman being considered the result of absence of circumcision. These pieces of information seem to prove clearly that the practice was current among the Arabs (who carry it back, like the circumcision of boys, to Abraham and Hagar [al-Dîabr, il-hayawân, vii, 27]), and remained so after the coming of Islam, excision becoming a characteristic trait amongst the Muslims. The Aghânî, ed. Beirut, xxii, 22, tells, for example, that Khâlid b. 'Abd Allâh al-Kasîr [q.v.], who was the son of a Greek Christian mother, was as a result of this called Ibn al-Bâsrâ; in the end, he decided to have his mother circumcised in order to escape satires, examples of which are to be found in the verses attributed to A'isha Hamdân (A ghânî, loc. cit.) or to Ziyâd al-Abî'âm [L. A. Y. my.; the word massân, "barber", "cupper", could well have here the sense of "one who sucks" and connected with such an insult as yâ mâyâsâh basri ummîki, which does not necessarily correspond to an actual practice).

Under Islam, the circumcision of girls has never been regarded as obligatory, but has been considered as recommended (e.g., see al-Kayrawâni, Risâla, 161, 305; Ibn Kudâmâ, Mughnî, 1947, i, 85); in fact, it is practiced very irregularly in the Muslim world, where whole populations are unaware of it or confine themselves to a symbolic prickling of the clitoris. In the same region, some tribes may perpetuate the custom, whilst their neighbours may have abandoned it, if they have ever known it anyway (see especially, H. Jaussen, Coutumes des Arabes au pays de Moab, Paris 1945, 36). In Java, girls are circumcised at the age of 9 and 15 (H. Masse, Croyances et coutumes persanes, Paris 1938, 51); on the other hand, it is unknown in Afghanistan (C. M. Kieffer, À propos de la circoncision, in Festschrift fur Wilhelm Eilers, Wiesbaden 1967, 201, n. 37). This is likewise the situation in North Africa (G. H. Bouquet, La morale de l'Islam, Paris 1955, 70), although the practice is attested for Mauretania, though this is a Maliki region (R. Arnaud, Précis de politique musulmane, i. Pays maures, Algiers 1906, 65-6), where the excision is done 7 or 8 days after birth. At all events, it would be extremely difficult to draw a map showing the extent of female circumcision, in view of the women's discretion and the men's ignorance, since the latter are not informed about the operation; this practice is unaccompanied by any celebration, and is even called sîr "secret" in Moab, according to Jaussen, op. cit., 35, 363, and also taḥr, by analogy with the circumcision of boys.

The only Islamic country, apart from some regions of black Africa (see Boris de Rachewiltz, Eros noir, moeurs sexuelles de l'Afrique de la pré-histoire à nos jours, Paris 1956, where any searching enquiries into this practice have been made is Egypt, where khaft (which according to 18th and 19th century travellers was general and often sought by girls) is still practiced, even amongst certain Copts. Anthropologists and physicians have revealed various degrees in female circumcision, ranging from removal of the labia minora and the prepuce of the clitoris to that of the whole external genitalia ("Sudanese circumcision"), or the labia minora and majora together, with the clitoris (see M. Karim and R. Amma, Female circumcision and sexual desire, Cairo 1965). The very title of this latter work, based on an examination of 331 women in Cairo, is an indication
of the spirit in which the enquiry was conducted, so within a broad movement towards feminine liberation and towards a certain demythologisation which has found a favourable echo in the press (e.g. al-Ahrām of 27 January 1959). The Sudanese Republic has decided to abolish the practice, considered nasty and even barbarous, and similar measures have been envisaged to end it in Egypt.

Female circumcision is far from being a surgical operation meant to prevent abnormal deviations of the genitalia (Wilken, Verspr. Geschichten, iv, 238 ff.), but is rather a rite de passage.

Sexual characteristics. Only in this way can the girl claim to be fully a woman capable of sexual life; Egyptian women still look down on an uncircumcised woman by saying “You are like a man”. In Egypt, the operation is carried out by the midwife either in complete secrecy or in the presence of a few invited women, and it is justified by the desire to maintain pre-marital chastity and virginity. It naturally presents serious dangers, of which the authorities are aware; apart from the complications which can sometimes be fatal, the cooling-down of the female temperament and desires, which the operation tends to bring about, causes on the men’s part an abuse of drugs, especially opium—another unexpected aspect of the consequences of mutilation, whose abolition would produce a three-fold effect.

Bibliography: In addition to the works cited, see above all the extremely well-documented article of O. F. A. Meinardus, Mythological, historical and sociological aspects of the practice of female circumcision among the Egyptians, in Acta ethnographica, Budapesti, xvi/3-4 (1967), 387-97, which has an extensive bibliography on the subject.

KHAFI KHAN, MUHAMMAD NASIM NASIM AL-MULK, historian; his title of Khafi Khan was given him by Muhammad Shah and is derived from a family connection with Khafi [i.e., a] district of eastern Persia, famous for its distinguished men. He was a son of Khafi Mir, a confidential servant of Murad Baksh, youngest son of Shah Djihan. The place and date of his birth are not known, but it seems probable that he was born in India, and a statement in his history (i, 739) implies that his birth took place about 1074/1664. The statement is that 74 years after the death of Shah Djihan’s minister, Sa’d Allah, he was 52 plus the age of discretion (14?). In other words he was 66 Muslim years old in 1140/1728. His father was Khafi Mir, a confidential servant of Shah Djihan’s youngest son, Murad Baksh, and was severely wounded at the battle of Samogad. Khafi Khan, possibly like Bernier’s friend Dandkhamand, began life as a merchant, or as an official’s clerk, and it was in one of these capacities that he visited Bombay in 1693-4 and had an interview with an English official (ii, 424, and Elliot-Dowson, vii, 350). He served under Awrangzeb, Bahirur Shah and Muhammad Shah in the Deccan and in Gujurat, and was long stationed at Surat. He also lived at Ahmadabābād, which he defends against the strikites of Djihnāfr, and at Rahuri; in

Sindjī’s country, and in the beginning of Bahādur Shah’s reign he was governor of Cāmpānār (i, 77). Probably he ended his days at Haydārābād in the service of Aṣaf Djihan Nişām al-Mulk (hence our author’s title of Nişām al-Mulk) about 1732-33. He was an intimate friend of Shāh Nawz, the author of Mādāhir al-umārā (who was also a Haydārābādābī officer) (see iii, 680 of the Bibl. Ind. edn. of that work, and Khafi Khan, ii, 670).

Khafi Khan wrote a history of the Indian branch of the Timurid dynasties, and called it Munākhāb al-lubāb (“The quintessential selection”). It is a standard work and is much admired, especially in the east, for its style, and its accuracy and impartiality, though it is often too grandiloquent for western taste. Still, it is by far the most human and interesting of native histories of India, with the doubtful exception of Badamī. After an introduction beginning with Turk b. Yafīt, and describing the origins, etc., of the Tatars and Mongols, it gives short biographies of Timur, his third son Mirān Shāh, and the descendants of the latter, who were the emperor Bābur’s ancestors. These are followed by a history of the emperors of Agra and Dihīl, beginning with Bābur, of whom there is a tolerably full account, and ending with the 14th year of Muhammad Shāh. Bābur conquered India in 932/1526, and the 14th year of Muhammad Shāh was 1140/1732, so that the history covers a period of over 200 years. The last ten years of the history are given in a very abridged form. The most valuable parts of the work are the accounts of Shāh Djihan and Awrangzeb, for both of whom the author had a high admiration. The history has been published in the Bibliotheca Indica (vols.), but the edition is not complete, for it wants the first part or volume. This last, however, is very rare, and perhaps does not exist in its entirety. There is only a portion of it in the British Museum. The author refers to it in vol. i, 49 of the printed edition. Khafi Khan also wrote a history of the minor Islamic dynasties of India, but this too has disappeared, though a small portion is preserved in manuscript in the India Office Library (Ethb., Cat., No. 407). It was apparently of little value, being mainly an abridgment of Firishta.

The charm of Khafi Khan’s history consists in his digressions and his frequent use of his own observations, and of information derived from his father and brother. He is a somewhat narrow Muslim, and he is too favourable to Shāh Djihan and Awrangzeb. Thus he slurs over Awrangzeb’s treacherous capture and subsequent execution of his younger brother, Murad Baksh. The capture he represents as a clever manœuvre (it was certainly to the public advantage), but he is evidently half-ashamed of it, for he declines to give the particulars. In his account of Murad Baksh’s attempt at escape, and his trial and execution, which he got from his father, he does not plainly set down Awrangzeb’s responsibility, and continues to pay him a compliment for his generosity in rewarding the man who declined to prosecute Murad for the murder of his father. He also deals lightly with Shāh Djihan’s conduct to Khusraw, and to his competitors for the throne, and says nothing about his debaucheries. Still, he is far more honest than Abu ʾl-Faqī āllām (i.e. the author’s title of Shēr Shāh and Dāhāngir are very fair, and in the latter of them he has a very interesting account; of Nur Djihan. He says he got it at Štrat in 1097/1685-6 from a very old man, who as a child had accompanied Nur Djihan’s father on his journey
from Persia to Afghanistan, and India. Khwāfī Khān, though the Tatars, may tell us too much about emperors and their wars, does not omit the more interesting subjects of plague, and famine, and internal administration.

_Bibliography:_ Elliot-Dowson, _History of India_, vii (which contains a very full abstract, by Dowson, of the 2nd volume of Khwāfī Khān); Colonel Lees, _Materials for the history of India_, ii, 1868, 37-8; there is a manuscript translation of vol. i by Major Gordon in the British Museum (Add. 26, 617). KHĀFĪF. [see 'Ārōy]

KHĀFĪN AHMED PASHA. [see Ahmed Pasha]

KHĀKĀN, a title (originally ḵaḵān or ḵaḵānān) borrowed by the Turks from the Juan-juan and meaning “[supreme] ruler.” It was applied by the heathen Turks themselves and the mediaeval Muslim geographers and historians not only to the heads of the various Turkish confederations but also to other non-Muslim rulers such as the Emperor of China. In the form ḵaḵān it was borne by the successors of Čingiz-Khān [q.v.], the Mongol Great Khāns in Karakorum and Peking. Adopted by the Ottoman Sultan, the title, first brought to Europe by the Avars in the 6th century A.D. (the ḥanānas etc. of the later mediaeval chroniclers), survived into the present age.

_Bibliography:_ G. Doerfer, _Turkische und mongolische Elemente im Neupersischen_, iii, Wiesbaden 1967, 141-179 (no. 1161); Sir Gerard Clauson, _An etymological dictionary of pre-thirteenth century Turkish_, Oxford 1972, 611. (J. A. Boyle)

KHĀKĀN. [see Fath Allâh Shāh]

KHĀKĀN, AFDAL ALLĀH IBRĀHĪM (Radil). B. 'ALI B. 'UThMAH, outstanding Persian poet, born about 520/1126, d. 595/1199, who left a divān, the maṭnānawī called _TabīReferences_ al-‘Irākīyān and sixty letters.

Reliable material for Khākān’s biography is only to be found in his works. His poems and letters mirror both his external and internal life, and so they enable us not only to follow, yet formally as well, but to provide us also with historical information.

Khākān’s life can be divided in two main periods. The first period Khākān spent mainly in his home country of Sharwan as panegyrist at the local court. During the second period he led a retired life in Tabriz. Already at an early time his wish to leave Sharwan and to abandon panegyric poetry was connected with a tendency towards mysticism and escape from the world. Born into a humble family of artisans, the young poet attached himself to the Sharwānshāh Manūcīrh, from whose title Khākān-i akbar his own poetic name is derived. His relations with Manūcīrh were changing. More than once he tried to find another patron and his first _hādī jī_ (551/1156-9) should perhaps be regarded in this context. After Manūcīrh’s death (554/1159) he was imprisoned but was able to flee to Darband, his usual refuge when something went wrong in Sharwan. In the following years he seems to have established relations with several courts. In 559/1164 we find him in Persian Irāk. After he had asked for an annual salary of 30,000 dirhams from Manūcīrh’s son Aḵṣatān he returned to Sharwan. However, the good relations between the poet and his patron did not last very long. In 566/1171 he undertook a second _hādī jī_, but the atmosphere did not improve after his return. The deaths of his son and his wife in 571/1175 caused the decisive turn. He undertook a third _hādī jī_ with the intention to end his life as a _mugādir_ in Mecca. He had to return, however, and settled in Tabriz. Material need and the efforts of high personalities to gain his favour frustrated his hopes of achieving the calm he was longing for and obliged him once more to compose panegyrics now and then. In 578/1183 or 579/1184 he tried to reach Khorāsān, but in Ray the Atabeg prevented him from continuing his journey and he returned to Tabriz severely ill. In 580/1185 he tried to achieve his aim in another way. After that date we have no more relevant data about his life, which ended in Tabriz.

Khākān’s poetry is based on Persian _confrontismo_. The notions at his disposal reached farther than those of other _poetae docti_ of his time, especially his detailed knowledge of Christianity. Most of the elements of his poetical motifs are his own creation; this is all the more valid for complexes consisting of elements of motifs as well as of motifs (fantastic etiology, congruity of images, causal hyperboles etc.). Not without reason he felt himself in this respect superior to his predecessors and contemporaries and he was convinced that future poets also would draw on his muse. During the last decade of his stay in Sharwan his inventiveness in devising new elements of motifs declined. His accent was now on developing and combining motifs. In his Tabriz period he played with his enormous repertoire of elements of motifs and their combinations, while using his mastery of rhetorical representation in a more pointed manner than ever before.

In the field of formal devices, Khākān created a new type of _hādī jī_, characterised by a number of parts which are thematically mostly independent. In his later Sharwan period he preferred the _tarkīb-band_ form. About half of his many _ghazals_ belong to this genre only as far as form is concerned; they do not treat of erotic subjects. Besides _rubā’s_ and sometimes long _bīṣ’s_, the _divān_ contains also a series of shorter and longer Arabic poems, the fruit of Khākān’s attempt to write Persian poetry in Arabic.

In the panegyrics, that is in his professional art, Khākān celebrates rulers, generals, viziers, governors, teachers, scholars, but also friends and relatives. But what he loved most was ascetic _Ṣūfī_ poetry. This is indicated by his other pen-name Ḥaḵḵālī and thereon also his close relationship with Ṣanā’ī was based. A kind of combination of panegyric and _Ṣūfī_ poetry is to be found in the praise of the Prophet, to whom Khākān dedicates a series of _ḥāṣidas_, and he derives his honorary title of Ḫaḵḵān al-‘Irākīyām from this fact. His erotic verses usually celebrate profane love, but mystical elements are present in the _ghazal_ bā ḏīlam bā maḥbabbat niṭkān bā ḏīlam, where _Ibīl_ speaks about his _Hallādī_-like love of God. The pangs of love are often mentioned, as Khākān is generally eloquent and resourceful on lamentation. This subject is treated in a lot of his shorter poems and parts of poems, but as well as in those in whole _ḥāṣidas_ and not only in the _ḥabstīyāt_ (prison poems). Special attention is given to the description of nature (sky, stars, seasons and landscapes), and his poetic picture of morning and the morning-draught together with its drinking-utensils became very popular. His _hādī jī’s_ travels were less imitated. His first _hādī jī_ he describes in the _TabīReferences_ al-‘Irākīyān, where he addresses the sun in order to describe to her the way to Mecca. Around the sacred subject all kinds of profane praise are entwined. The often-posed question whether Khākān’s words represent real experience can probably be answered in the affirmative as far as the satires are
concerned, and perhaps also some elegies, laments, religious poems and ascetic verses. In general, however, the poetic transformation of reality seems to dominate.

**KHĀKĀNĪ, also KHĀQAN MEHMED BEY (?-1015/796); it was printed at Istanbul in 1264/1848.** The latter is considered as one of the most productive and influential of the poets of the period. His work is characterized by a strong sense of patriotism and a deep love for his homeland. His poetry is full of vivid descriptions of the natural landscape and the daily life of the people.

**KHĀKĀNIDS. [see SHIRWAN SHAH]**

**KHĀKSAR, a 20th century Indian movement for national regeneration, initiated in 1931 by a government servant called 'Inayat Allāh Khān (better known under his honorific of al-Mashrīkī). As a result of widespread frustration and despondency, this leader—originally a mathematician who had enjoyed a brilliant career—publicised simplicity of life (khāksar, i.e., “humble as dust”), discipline and self-sacrifice for the benefit of the country. Under the spell of the results achieved by Fascist regimes, al-Mashrīkī avowed that India was in need of benevolent dictators (see Asia, Aug: 1939), and in its outward manifestations his movement in its first stage bore a marked resemblance to the Nazi S. A. organisation; its members wore a khaki dress with a badge of ukhsuwa or “brotherhood” stuck on the right upper arm, and carried a belly or spade symbolising both the importance of labour and a readiness to fight. Every day they had to report to the local commander about some sort of social service performed after sunset prayers, and each district unit had their own aims at least fifteen years. Al-Mashrīkī’s followers were chiefly drawn from the petty bourgeoisie and better-off labourers. Explicitly non-communal, the movement was open to every man who believed in his Creator, Muslims as well as Brahmā Samadājists, and it claimed to be “the only party in the country above all parties”. In its heyday (i.e. ca. 1941), it is said to have secured a following of one-and-a-half million adherents; but in 1944 the all-India strength of the Khākṣārs had already dwindled to 20,000. Because of provocative actions, they clashed regularly with the provincial authorities of Northern India. Bows on the movement were imposed, and from time to time al-Mashrīkī was imprisoned. After independence, the leader officially announced the disbandment of the movement. Although the master died on August 27, 1963, a small group of faithful Khākṣārs are still to be found in the vicinity of the movement’s former headquarters at Ichra, a suburb of Lahore.

**KHĀL (א'), pl. KĒKHOWL, maternal uncle, whether a full, consanguineous or uterine one. In such a strongly patriarchal civilisation like that of Islam, the status of such an uncle necessarily entailed a certain degree of inferiority compared with that of the paternal uncle, a'mm (pl. a'mām).**

The latter is considered as one of the ʿasaba, and is high up in their hierarchy; he has a right to the whole of the succession if there are no heirs entitled to fixed shares or ʿasaba with a prior claim to himself. The maternal uncle on the other hand, never inherits in Mālikī law; even if there is no other heir, the Public Treasury is given preference. The position is similar in Shāfi'ī law, unless the Public Treasury is excessively mismanaged. According to the Hanafi and Hanbali schools, the maternal uncles can inherit, but in their capacity as a'mām.

Now it is well-known that this third class of heirs, the invention of these two law schools, can only...
succeed to an inheritance in the total absence of any representative of the fixed-shares heirs and the 'asabā; even the most favourably-placed are set aside in the presence of a single 'asib, however distant in relationship he may be from the deceased.

The same discrimination is found in regard to guardianship (waalāya) over a person. In the absence of the father, only an 'asib can be called upon—this rôle often falls upon a paternal uncle, but never to a maternal one. This inferiority in legal status of the maternal uncle dates from pre-Islamic times, and is moreover characteristic of Sunni Islami, mainly with regard to the various legal incapacities inherent in the maternal uncle. But even amongst the Shi'is, where there is no inequality on the legal plane between maternal and paternal uncle, reliable observers have noted that the populace generally displays more reference towards the paternal than the maternal uncle.

(Y. LINANT DE BELLEFONDS)

**KHAL, KHALAJ, KHALĀ.', [see FIRĀSA].

**KHALADJ**. a people or tribe ostensibly of Turkish origin and living in western Turkistan and then in eastern Afghanistan during the pre-Mongol Islamic period.

1. **History.**

The Islamic geographers of the 3rd/9th and 4th/10th centuries place the Khalaj amongst the tribes of the Turks. Thus Ibn Khurradadhîbîh, 48, 31, includes them in a list of Turkish tribes in the Central Asian steppes; he states that their winter quarters were beyond the Sûr Daryâ in the Talas region, adjacent to the lands of the Kârlûk, but also that they lived “on this side of the Oxus”, i.e., to its south and west. The contradiction illustrates the hazy of uncertainty which envelopes the history of the Khaladj in the pre-Ghaznavid period. A frequent cause of ambiguity is the similarity of the consonant dacty of Khaladj, Ñâ, to that of the name Khalûkh, Ñâ (= Kârlûk), especially as the Kârlûk also lived in the Talas region but at an early date infiltrated south of the upper Oxus into Tughârâstan [see Kârlûk]. Kâshârî, ed. Kîshâlî Rîfî’at Bey, ii, 307 = tr. Atalay, iii, 415, in his long article on the Türkmen, says that the Khaladj originally comprised two of the 24 tribes of the Türkmen, but separated from them and were therefore no longer accounted part of them; and he gives a fanciful etymology for the name, that the two ancestors of the two Khaladj tribes were told by the rest of the Türkmen, bal adî “stay, remain behind!” (another explanation in the Oghâ-nâmâ, ed. W. Bang and G. R. Rachmati, SBPr. Ak., W., Phil.-Hist. Kl. xcv (Berlin 1932), bal ad “stay and open!”).

Hence there is some uncertainty about the original Turkishness of the Khaladj. Marquart, Érânlah, 252-4, connected the Khaladj with the Khu’l-i-s. (? Kholas) of a 6th century Syriac source discussing the Turkish tribes, and with the Kholatâ mentioned in the report of Zemarchos, Byzantine envoy to the Karluk of the Turks in 687, and he opined that the Khaladj were remnants of the Hephthalite confederation, in which case there is the possibility that the Khaladj may have been originally an Indo-Iranian tribe, perhaps remnants of the Sakas subsequently Turkised. In support of this view is the information of the Samanid official Khârâzmî in his Maʃā’lîth al-’ulâm (composed shortly after 366/977), ed. Van Vloten, 119-20, that the Khaladj and the Kandûna Turks (the latter located in the mountains to the north of the upper Oxus, see kumkâta) were remnants of the Hephthalites (see C. E. Bosworth and Sir Gerard Clauson, Al-Khârâzmî on the peoples of Central Asia, in JRAS (1965), 8-9).

We only possess what seems to be unequivocal information on the location of the Khaladj from the second half of the 3rd/9th century onwards. Ibn al-’Athîr, vii, 226, records in his notice of Ya’kûb b. Layh’s death (263/879) that the Saffârîd Amir, in the course of his conquests in eastern Afghanistan, had attacked the Zunbîl or local ruler in Zamin-Dawar and had subjugated the Khaladj (al-Khalâdjîyya) and the people of Zâbulistân, and this is confirmed by the Târikhî Sîstân, 215, which mentions Ya’kûb’s campaigns there against “the Khaladj and the Turks”. In the next century, Işâkîîrî, 245, also locates the Khaladj in Zamin-Dawar, and states that they were ancient immigrants to the region, that they were pastoralists, and that they had retained their Turkish customs, external appearance (and in language?) (see Bosworth, The Ghaznavids, their empire in Afghanistan and eastern Iran, 36, 271: later sources dependent on Işâkîîrî have ilbâsîkî “their clothing” for lâsînîkî, but Marquart thought that the reading “their language” was the original one). The Hudûd al-alâm, tr. Minorsky, 111, describes the Khaladj as sheep-herding pastoralists in the Ghazna-Zamin-Dawar region, but with outlying groups in Balkh and Tughârâstan, Gûzgân and Dâvar, and distant district of Buzurg Daud.

Some form of suzerainty over these nomads of eastern Afghanistan was exercised by the Sâmanîds, and this passed towards the end of the 4th/10th century to Sebûkîtîn, founder of the Ghaznavid amirate. Nîsâm al-Mulk in his Siyyasat-nâmâ, ch. xxvii, ed. Darke, 135, tr. idem, 108, says that Sebûkîtîn had already once been sent by his master Alpîqîn to “the Khaladj and Türkmen” in order to collect taxation due to the Sâmanîd central government. The Ghaznavid historians Utbî and Bâyhaqi mention the Khaladj at times, and describe how Mahmûd recruited them on occasion for his armies; but his son Mas’ûd had in 432/1040 to send out from Ghazna a punitive expedition against them. It is interesting that Utbî tends now to link the Khaladj with the Afghans, which is not surprising, since the Khaladj must have lived in close proximity to the Afghân tribal heartland of eastern Afghanistan.

It appears that there now begins a process of assimilation of the Khaladj to their Afghân environment, leading to what seems very probable, if not wholly proven, sc. the evolution of the Khaladj Turks (whatever their pre-Islamic ethnic origins may have been) into the Pashto-speaking Ghâlay or Ghilzay tribe of Afghans (see Ghilzay). Minorsky cited a passage from the early 7th/13th century geographer Muhammad b. Nadîj Bârân’s Dîkhn-nâmâ, that the Khaladj Turks had migrated from the Kârlûk region (sc. Turkistân) to Zâbulistân, but had now become adapted to their new milieu in appearance and speech, their original language having changed (Hudûd al-alâm, 347-8, and The Turkish dialect of the Khalaj, in BSOS, x (1940-2), 432). Khaladj tribesmen from Zâbulistân were utilised by the Ghîrîds in their campaigns, and Sultan Ghiyâth al-Dîn Maḥmûd succeeded to power in Pirızkûh.
The Mongol invasions created a melting-pot of peoples in Inner Asia and the Iranian world, and the tide of conquest seems to have swept Khaladi elements westwards. Already Muhammad b. Nadji (see above) speaks of Khaladi settlements near Kabul, etc. Ablward near Bawurd, sc. Ablward on the northern fringes of Khurasan, doubtless brought thither during the long struggles of the Ghurids and the Aramz-Shahs for control of that province. An Özbeg tribe whose name in Russian transcription, Galači, may ensnare a memory of the Khaladi in this region, was registered for Russian Central Asia in the mid-19th century, see G. Jarring, On the distribution of Turkic tribes in Afghanistan, Lund-Leipzig 1939, 53. Khaladi are mentioned in Kirman and Pars in the Crimea, which enshrine the name "Khaladi". The Turkish dialect of the Khaldils speaks of Khaladi settlements in the SE) is as considerable, or even more considerable, of these differences (sc. from the most remote points, Ta'kh-āb in the NW of the Khaladi area, and Vinarîc, in the SE) is as considerable, or even more considerable, than the differences between Kazan Tatar and Bashkir, or between Ottoman Turkish and Azerbaijani.

The Khaladji groups is characterised by its very outstanding archaisms. Thus it has preserved -d (ancient Turk adak "foot" = Ottoman Turkish ayak = Khaladi hadad); the ancient Turkish h- (see bibliography, Eine seltsame ... ); the proto-Turkish threefold vowel quantity (short, long, diphthongal), etc. Even in morphology, it has preserved many archaic features, such as the ablative in -da, the participle in -gil ( = ancient Tükic -gil). Khaladji is especially important in the field of lexicography; there are many Turkish hapax legomena, such as qadâhu "fly", which survive only in Khaladji and in no other Turkish language.

KHALAF B. 'ABD AL-MALIK. [See Ibn Bash-Kuwal].

C. E. Bosworth

2. Language.

The Khaladi language ought to be called, more precisely, the Khaladji group of languages, because it is as independent a branch of the Turkish family of languages as, e.g. the south-western (or Oghuz) group or Chuvash, etc. It is spoken (by about 20,000 persons in 47 villages, situated about 150 miles SW of Tehran. Whereas the linguistic differences from each village to each other village are small, the sum of these differences (sc. from the most remote points, Ta'kh-āb in the NW of the Khaladji area, and Vinarîc, in the SE) is as considerable, or even more considerable, than the differences between Kazan Tatar and Bashkir, or between Ottoman Turkish and Azerbaijani.

The first scholar to have studied the Khaladji language was Minorsky, in 1940 (see bibliography). Only a short time after him, the Iranian scholar Mughaddam, when investigating the Iranian local dialects around Āshīyān, also gave a short survey of Khaladji. In 1968, the present writer described the peculiar features of Khaladji in an article based on the two older works. In 1968 and 1969 two expeditions to the territory of the Khaladji were undertaken, which produced a considerable amount of material (50 tapes, a vocabulary consisting of 60,000 words, numerous texts, etc.).
KHALAF b. HAYYĀN AL-AHMAR, ABŪ MUHRIZ — AL-KHALAFIYYA

KHALAF b. HAYYĀN AL-AHMAR, ABŪ MUHRIZ

(ca. 155–80/ca. 755–96), famous rāwīya of Basra. He parents came originally from Farṣandā and had been brought as captives to Šrāk, and then freed by Bīlāl b. Abī Burda [see AL-ASH], whose mawla Khalaf remained. He had a prodigious memory, and knew perfectly Bedouin life, their language, traditions and legends, and he gathered together all the poetic works set before him in order to transmit them to his successors. He is said to have been the pupil of Ṣād b. ʿUmar and Abū ʿAmr b. ʿAṣāʾ [q.v.], but did not pride himself on his knowledge of philology and was content with his perspicacity, which allowed him to distinguish easily between authentic and apocryphal verses. However, he became the transmitter of the poetic corpus gathered together by Ḥammād al-Rāwīya [q.v.], fully aware of his bad reputation, and brought about a change of tastes among the ruṣūd of Basra by instructing them about the nasib of the Bedouins (al-Dāhibī, Bayān, iv, 234). His teaching was followed particularly by al-ʿAsmaʿī and ʿAbd Zayd al-Anṣārī [q.v.], who had great faith in his judgment. Even so, his deep knowledge of archaic poetry, linked with a tendency which was quite frequent in his time, led him to compose poetry of Bedouin type which he attributed then to ancient poets, if at least his contemporaries are to be believed. He is especially accused of having fraudulently placed a number of verses under the name of Abū Duʿād al-Yādī [q.v.], and above all, of being the author of the Lāmīyyat al-ʿArab, which al-Ṣafarā [q.v.] did not in fact write; discussions about the authenticity of this poem have still not ended (see e.g. ʿAbd al-Muʾmin: al-Mallūḥ, al-Lāmīyyat al-ʿArab, Damascus 1966, who attempts in his introduction to show that Khalaf was not the author). At the end of his life, he is said to have condemned his own forgeries, but nothing is known of this. According to al-Dāhibī, Hayāwān, iv, 181, numerous radjāʾ verses were attributed to him without permission.

He is said to have composed a K. Ḍāhib al-ʿArab [q.v.], in which mountains are mentioned, and his works, of which a few verses are extant, have been gathered into a Ḍiwān transmitted by Abū Nuwās, who is himself said to have written within Khalaf's own lifetime his funeral oration, an elegy in fāʾ (Ḍiwān, ed. A. Ḍalāl, Cairo 1953, 574-7).

**Bibliography:** The suspicion which rests on Ḥammād and Khalaf throws doubt on the recension of archaic poetic texts, so that these two transmitters are frequently cited in the controversies over the authenticity of pre-Islamic poetry. ʿAlawārd devoted a monograph to Khalaf, Chalaf al-ʿAhrmar’s Qasida, Greifswald 1859. See also ʿAlawār, Bayān and Hayawān, indices; Ibn Sallām, index; Ibn ʿAbd al-ʿAzīz, index; ʿAbd al-ʿAzīz, index; Marzūnak, Muwākad, index; Ḥāfīẓ, ʿInbāb al-ruqūd, Cairo 1950–5, i, 348–51; Zabīdī, Ṭabākāt, Cairo 1956, 177–81; Ṣuyūṭī, Buḥyā, 242; Abū Ṭayyib al-Luḡawlī, Maṭāb al-naḥawīyīn, Cairo 1955, 46–7; Yākūt, Irāq, iv, 179 ff. = ʿUdābāʾ, xi, 66 ff.; G. KHALAF b. MULĀʾĪH AL-ʿASHHĀBĪ, with the ʿābāb sayf al-dawla, ruler of Ḥimṣ and Afāmiyya in the 5th/11th century. He was accused of various misdeeds, including brigandage, and is said, during a siege of Salamiyya, to have thrown the Shārtī Ḥanīf al-Ḥāflī against the tower from a mangonel. In 483/1095, complaints were sent to the Sultan Malikshāh, who ordered his brother Tutūsh, the ruler of Damascus, and other rulers of Syrian cities to proceed against him. A joint expedition captured Ḥimṣ, and Khalaf was sent in an iron cage to the Sultan in Ṣafāhān. He remained in captivity until the Sultan’s death in 485/1092, when he was released by the Sultan’s widow and sought refuge with the ʿAzmī al-Juyyāsh al-ʿAfdāl in Cairo. In 485/1095–6 a delegation from Afāmiyya went to Egypt to request a new ruler, and accepted (or perhaps proposed) Khalaf, who returned to Syria, presumably in the Fāṭimīd interest. He resumed his activities, and remained in control of Afāmiyya until he was murdered by Ismāʿīlī Assassins in 499/1105.

**Bibliography:** A biography of Khalaf is included in the Buḥyāyat al-ṣalāb of Kamāl al-Dīn Ibn al-ʿĀdīm (ed. from the Istanbul manuscript by B. Lewis in Mélanges Fuad Köprüülü, Istanbul 1953, 332–6); other sources in Ibn al-Kalānīsī, Ḍhalīl Tarīkh Dimashq, 120–1; ʿAzmī, 368, 371, 376; Ibn Muyassar, 466; Ibn al-ʿĀdīm, Zubāl, ii, index. The account in the Buḥyā is based on the (lost) fuller version of the chronicles of the Banū Munkīdī, and the North Syrian chronicle of Ibn Zarayrī, as quoted by al-Ulaymī, known as Ḥawāḥiḏī ʿAṣīrī. (B. Lewis)
al-Aflab b. 'Abd al-Wahhab, after which Khalaf's principality began to disintegrate. Thus the eastern part of this principality, comprising the northeastern part of Tripolitania, to the east of the meridian of Tripoli, became independent, and according to Ibn Khuradadhbih [q.v., in ca. 232/846-7 formed a Berber kingdom under Ibn Sa'ghir al-Barbar al-Maṣmūdī. Likewise, the Tripolitanian Dījāfārā, which had also been part of Khalaf's principality, fell at about the same time under the influence of the Nafūsa of the Dijblo. Certainly, when the ruler of Egypt Ahmad b. Tulun in 266/879-80 besieged the Aghlabid town of Tripoli, the people there received help from Abū Mansūr Iyās, governor of the Dījbal Nafūsa and from the imāms of Tāhtī; he must therefore have been, at this time, in control of all the region between the Dījbal and the Mediterranean.

It was apparently shortly after this that Ibn Khalaf, Khalaf b. al-Samb's son and successor, who had been expelled from his seat of Timiya, took refuge with the Berber tribe of Zawāgha, partisans of the Khalafīyya, in the Risū or Rīsū peninsula (Rīmū in al-Shammākhī, Ris in Muntaner, the 14th century Catalan chronicler, Rāzī in al-Bakrī, the modern district of al-Akkāra opposite Dījbera). Pursued by Abū Mansūr Iyās's army, Ibn Khalaf crossed over to Djerba, where he put himself under the protection of a section of the Zawāgha tribe, which had been assigned to Arkāli Khan. Another sent him along with other captives to Multān, tried to escape, but he was soon surrendered by a Hindu mukaddam and was deported to Bengal. Ibn Khalaf became Abū Mansūr's prisoner, and was deported to the Djabal Nafusa, where he died at some unknown date, by then probably a convert to Wahbism.

Thus there were Khalafi splinter groups at Ghadames and in the Fezzan in the 3rd/9th century, in the district of Risu and on the island of Tahert; he must therefore have been, at this time, in control of all the region between the Dījbal and the Mediterranean.

Certainly, when the ruler of Egypt Ahmad b. Tulun in 266/879-80 besieged the Aghlabid town of Tripoli, the people there received help from Abū Mansūr Iyās, governor of the Dījbal Nafūsa and from the imāms of Tāhtī; he must therefore have been, at this time, in control of all the region between the Dījbal and the Mediterranean.

It was apparently shortly after this that Ibn Khalaf, Khalaf b. al-Samb's son and successor, who had been expelled from his seat of Timiya, took refuge with the Berber tribe of Zawāgha, partisans of the Khalafīyya, in the Risū or Rīsū peninsula (Rīmū in al-Shammākhī, Ris in Muntaner, the 14th century Catalan chronicler, Rāzī in al-Bakrī, the modern district of al-Akkāra opposite Dījbera). Pursued by Abū Mansūr Iyās's army, Ibn Khalaf crossed over to Djerba, where he put himself under the protection of a section of the Zawāgha tribe, which had been assigned to Arkāli Khan. Another sent him along with other captives to Multān, tried to escape, but he was soon surrendered by a Hindu mukaddam and was deported to Bengal. Ibn Khalaf became Abū Mansūr's prisoner, and was deported to the Dijbal Nafusa, where he died at some unknown date, by then probably a convert to Wahbism.

Certain Khalafi groups persisted after the fall of their imāmate. Thus there were Khalafi splinter groups in Ghadamès and the partisans of the Khulfa at al-Risū in the 3rd/9th century, in the district of Risū and in the region of Dījbera in the 4th/10th century, in the town of Zawāgha on the Tripolitanian coast in the 5th/11th century, and in the districts of Yefrem, Bābil, Kikla and Tābkāl in the east of the Dījbal Nafūsa, until the middle of the 7th/13th century. According to L. Massignon, there were still remnants of them amongst the inhabitants of the Dījbal Nafūsa and the Ghāria in ca. 1295.

T. Lewicki

KHALDJIS, an Indo-Muslim dynasty who ruled briefly in Dhihi 629/1230-1320.

The Khaljis were probably of Turkish origin [see KHALDI, History] and the old view that they were Afghāns or Pathans probably arose from Baranī's statement (Taʾrīkh-i Firuzshāhī, Calcula 1862, 171) that the relations of Djalāl al-Dīn Firuz Shāh, founder of the dynasty, with the Turks were strained because he belonged to another racial stock (aslı). He was the son of Yughrā (Yabhā b. Ahmad, Taʾrīkh-i-Mubarakshāhī, Calcula 1931, 61), and seems to have entered the service of Sultan Bālūhn, who is stated to have left him with his son Bughrā Khan when the latter was appointed to the government of Bengal after the suppression of Tughrīl Beg's rebellion in 678/1280 (Iṣāmī gives 670/1271, see Fustakh al-saltānīn, Madras 1948, 168). Eight years later Bughrā Khan passed him on to his own son Kayūkābād, who had succeeded Bālūhn as Sultan of Dhihi, and he subsequently became governor of Sāmāna and then Baran, before being summoned to Dhihi to take charge of the important office of Arūd-i Mamālīk, receiving the title of Shāhīstān. The health of the Sultan was deteriorating fast due to an attack of paralysis, the Turkish nobles, led by Itimār Kačān and Itimār Surkāh, deposed him and enthroned his three-year-old son under the title of Shams al-Dīn Kayumārth. Firūz managed to dispose of his rivals Kačān and Itimār Surkāh, and had them killed, so that most of the Turkish maliks and māḥās now came over to Firūz, and he ascended the throne on 3 Jumādā al-Akhīr 689/13 June 1290, according to Amir Khusraw, Misāḥ al-futūḥ, English tr. in Elliot and Dowson, iii, 536, but Rabiʿ al-Ākhirī/April-May, according to Taʾrīkh-i-Mubarakshāhī, 61, as Sultan Djalāl al-Dīn, Kayūkābād having already been killed by a person whose father had been put to death under his orders. As the people of Dhihi believed that the Khaljis were not Turks, there was opposition to the transfer of power to them; hence in the beginning, Djalāl al-Dīn stayed in Kayūkābād's palace at Kūkikērī, which was rebuilt and embellished and came to be known as Shahr-i-naw or New City.

Before formally crowning himself, the Sultan had made some promotions and transfers, the most important of which, besides the awards conferred on his sons and relations, was the appointment of Balban's nephew, Malik Čaḍjīdū Kīshī Khan to the ıskat of Karā-Manīkpur. However, he raised the standard of revolt in the second year of the reign and marched towards Dhihi. Djalāl al-Dīn, leaving the capital in the charge of his eldest son, Kīshī Khanān, also moved out of the capital and reached Badāyūn. His advance guard, led by his second son, Arkālī Kīshī, crossed the Ganges, attacked the rebels and completely worsted them. Kīshī Khan tried to escape, but he was soon surrendered by a Hindu mukaddam or headman with whom he had taken refuge. The Sultan treated him mildly and sent him along with other captives to Multān, which had been assigned to Arkālī Kīshī. Another instance of his mild treatment of offenders was his decision about the murderous thugs who had been captured and brought to Dhihi, and who were simply deported to Bengal.

However, it is rather surprising that in the case
of a dārāṣūr, Śīfī Muwallīḥ, Sūlṭān Djalāl al-Dīn de-parted from his policy of leniency and allowed him to be killed barbarously under the orders of his son. Muwallīḥ originally came from the northern territories (wflayyāt-i-mulk-i-bālā, Barani, 208), and is stated to have stayed for some days with Shaykh Fardī al-Dīn Gandīshākār who had advised him not to allow rich people to become associated with him. It appears that he paid no heed to this advice and threw open the doors of his hospice (khānābād) to men in all walks of life, regardless of their status. His growing popularity roused jealousy, and some of his enemies created a suspicion in the mind of the Sūlṭān that Śīdī Muwallīḥ was planning to capture the throne. Djalāl al-Dīn accordingly ordered his arrest, but unable to establish his guilt, the Sūlṭān is said to have appealed to a party of Kalandar dervishes who were present to do him justice; one of them immediately attacked the Śīdī with a sharp razor, and at the order of Arkāl Khān he was trampled to death under the feet of an elephant. Most of the historians consider it as the murder of an innocent person; Barānī goes to the extent of remarking that after his murder the city was enveloped in the evening by total darkness due to a wind storm (kālī anbāḥ), and adds that in fact the death of the Sultan's political position was attributed by contemporary historians to some authorities, an off-shoot of the previous Shaykh Package and Kalandar Khāns who were present to do him justice. 

After his arrival in Kara, 'Ālā' al-Dīn adopted an attitude of apprehensive penitence and ultimately succeeded in persuading the Sūlṭān to visit him and forgive his misdemeanor. Despite the warning of his counsellors, Djalāl al-Dīn left Dīhlī and reached the bank of the Ganges, where his nephew was encamping. Just at the moment when the aged Sūlṭān was about to embrace him in affection, 'Ālā' al-Dīn had him murdered, proclaimed himself king (Rama-dān 695/July 1296), and seized Dīhlī.

During his reign of twenty years (695-715/1296-1316), the new Sūlṭān not only made extensive conquests resulting in the annexation of the entire region of central and south India, but also established peace in the north by stopping the raids of the Mongols and introducing a number of administrative and economic reforms; here only a brief reference can be made to his multifarious achievements. 'Ālā' al-Dīn had not been on the throne even for a year when the first raid of the Mongols came. They were, however, defeated and pushed back by the Sūlṭān's forces. This was soon followed by another raid under a Mongol chief, named Sālīd (Barānī 253; Sagālī and Sālīd in Futūḥ al-salātīn, 251); as before 'Ālā' al-Dīn's brave commander, Zafar Khān defeated them capturing 2,000 prisoners. In 699/1299 came one of their greatest raids under the leadership of Kutlug Khwādji, when they reached the gates of Dīhlī. Rejecting the advice of his counsellors to buy off the raiders, 'Ālā' al-Dīn assembled a large army, marched out of the city and encamped in the plain of Sirī. After the death of the Sultan's brave commander, the Mongols nevertheless broke camp and retreated. The next Mongol invasion was led by Tārgāl, who, knowing that the Sūlṭān was busy in the siege of Chitor (702-3/1302-3), marched with an army of 120,000 horsemen right up to the Jamūna. 'Ālā' al-Dīn, who had in the meantime returned from Chitor, having suffered considerable losses in matériel, shut himself up in the fortress of Sirī which was besieged by the Mongols. The Sūlṭān is stated to have requested Nizām al-Dīn Awliyā', a pious Sūfī shaykh, living near Dīhlī, to pray for his victory, and the sudden and unexpected retirement of the Mongols when they were in a clearly advantageous position was attributed by contemporary historians to his prayers. Nevertheless, 'Ālā' al-Dīn was shaken by this raid and decided to take effective measures to increase the strength of his army and repair and regarrison the old forts in the north-western region. It is not surprising, therefore, that when the next horde of the Mongols came in 705/1305 they found the Sūlṭān's army fully prepared to meet them. They avoided the newly-repaired forts, and marching along the line of the Himalayas, reached Arōmā, about 80 miles to the east of Dīhlī. The Sūlṭān's army commanded by the maliks Tughlūk and Kāfūr intercepted them on their return march and defeating them in battle captured their leaders, 'Ālī Beg and Tārgāl, with 8,000 men besides a large number of horses (Barānī, 320; Tārgāl in Amīr Khur-rāw, Khwādīn al-futūḥ, 37). 'Ālā' al-Dīn ordered the prisoners to be killed and their skulls to be built into the walls of the fortress of Sirī. In the following year, the Mongols again entered the subcontinent under Kabāk and crossed the Indus near Multān, but Tughlūk again defeated them on their return march. The last raid of the Mongols in this time (according to some authorities, an off-shoot of the previous one) was led by Ikbālmand; he was also defeated and slain, and the Sūlṭān ordered the captives to be crushed to death. Their successive defeats, the harsh treatment meted out to the captives and Tughlūk's incursions into their own regions deterred them from raiding the territories of the Dīhlī Sultanate as long as 'Ālā' al-Dīn occupied the throne. It appears that besides the major invasions mentioned
by the historians the Mongols frequently raided the frontier regions, for according to an inscription, which Ibn Battūta saw in the mosque of Multān, Tughluq had encountered the Mongols on 29 occasions and it is for this reason that he had come to be known as Ghāzi Malik.

Far more enduring than his victories over the Mongols were 'Alāʾ al-Dīn's conquests in central and southern India. In 698/1299 the Sultan sent Ulugh Khān and Nuṣrat Khān to conquer Gudjārāt. They captured its ancient capital Anhilwara (Pafan), but its ruler Rādājā Karan managed to escape towards Deogir. Besides the booty, they also brought to Dihlī the idol that had been set up in place of the one destroyed by Sūltān Māḥmūd. 'Alāʾ al-Dīn's successes during the first two or three years of the reign led him to entertain wild schemes of conquering the world and founding a new religion. Luckily one of his wise counsellors, 'Alāʾ al-Mulk, cautiously advised him to abandon the idea of founding a new faith, and to undertake the conquest of Raiputana and other parts of the subcontinent. Accordingly in 699/1299 he sent an army to conquer Ranthambhor and subsequently left the capital to supervise the operations in person. In the course of a hunting trip on his way to Ranthambhor he was separated from the main party. One of his nephews, Akat Khān, finding him unprotected, attacked and shot him dead with an arrow. Then he rushed to the camp and proclaimed himself Sūltān, but before he was able to fully control the situation 'Alāʾ al-Dīn, who had only become unconscious for some time, returned with a party of his followers. Akat was overpowered and put to death, and 'Alāʾ al-Dīn proceeded towards Ranthambhor. During his absence from the capital, two other nephews of the Sūltān unsuccessfully rose against the central government in their fiefs in Mādhyān and Awadh. More serious than these risings was the rebellion of Ḥādījī Mawlā who seized the Red Palace at Dihlī and placed on the throne a Sayyīdī who was, through his mother, a descendant of Sūltān Shams al-Dīn Iltutmīsh. Within a week however, the rebellion was suppressed by Malik Hamd al-Dīn, called Amīr-i-Kāk. In the winter of Džumādī II 702/January 1303, 'Alāʾ al-Dīn's army reached Dwārā Samudra, capital of the Hoysāla ruler, Vīra Ballālā III. After its fall, Malik Nāʾīb moved towards the Pāṇḍya Kingdom in the extreme south. Prince Sundar Pāṇḍya, who had murdered his father but had failed to seize the throne and had been expelled by his brother, Vīrā, had come to the court of 'Alāʾ al-Dīn with an appeal for help. However, the hearing that Malik Nāʾīb was marching on his capital Vīrā fled from there and the Sūltān's army captured Madurā without any fighting. Malik Nāʾīb's last expedition to the south was directed against Deogir, as its new Rādājā had tried to defy the authority of the Sūltān. The Malik put the rebellious Rādājā to death and assumed its government. To make firm the authority of the central government, he had to recapture some fortresses in the south and annex the Jaungabād region between the Krishna and Tungabhadra rivers. Malik Nāʾīb is stated to have built a small mosque, known as Masjīd, at Rāṃghvāram, near the sea coast, which was in existence when Fīrūštā wrote his book (Bombay ed., i, 210). Thus in the course of less than eight years, 'Alāʾ al-Dīn's generals brought the entire region of the south under the sway of their master. The Sūltān, however, being a realist in politics, did not assume direct administration there; except for Deogir, which was annexed and directly governed from Dihlī, the Hindu rulers remained as vassals of the Sūltān.

Besides his extensive conquests and positive measures to establish peace by stopping the raids of the Mongols, 'Alāʾ al-Dīn's reign is marked by a series of administrative, agrarian and economic reforms. The successive rebellions which had occurred during his absence from the capital at the time of the siege of Ranthambhor convinced the Sūltān of the need of inquiring into their causes and taking necessary steps to eradicate the possibility of their recurrence. It seemed to him and his advisers ultimately that they were due to neglect of the internal espionage system, a general use of wine, matrimonial alliances among the families of the nobles of the court and the concentrated excessive wealth by individuals. In pursuance of curbing this last, he enacted laws according to which

922 KHALDJIS
all rent-free lands, including religious endowments, were confiscated to the state, and tax collectors were instructed to collect gold on all possible pretexts, with the result that only small holdings of a few thousand tankas' rental were left with the landowners, thus reducing their military power and their ability to rebel, as is clear from the history of the remaining years of 'Ala' al-Din's reign. The internal espionage system was improved, and it was stated that courtiers became so afraid of their conversations being reported to the Sultan that when near the palace they dared not speak, and expressed their ideas by signs rather than words. Another ordinance prohibited the use of alcohol and intoxicating drugs; the Sultan himself did not speak, and expressed their ideas by signs rather than words.

Lastly, he issued an ordinance which made it obligatory on the nobles to obtain permission of the Sultan for matrimonial alliances among their families. This enactment naturally affected the nobles and wealthy families living in the capital or its suburbs, but 'Ala' al-Din knew that the rich and influential persons in the villages could also become a source of danger. The regulations issued by him with regard to the leading men in the villages (mukaddams, badshars and khufs) have been misunderstood by some writers; Baranî used the general term 'Hindu' for these persons, and possible most of them did belong to that community. According to another ordinance, some new taxes were levied as, for instance, a grazing cess on milch cows and goats.

'Ala' al-Din's economic policy, mainly based on a system of price control, was the result of his efforts to maintain a large standing army against threats from the Mongols. Apparently realising that taxes could not be raised indefinitely, and that it was dangerous to decrease the pay of the soldiers, he decided to reduce the prices of commodities and make the necessaries of life so cheap that a horseman could be recruited for a pay of 234 tankas per annum with 71 tankas for keeping an additional horse. 'Ala' al-Din started with issuing several regulations according to which prices of corn were fixed, government stores were opened, the caravans of newcomers were registered and state revenue in the neighbouring areas was collected in kind. Malik Kabûl, an honest and strict officer, was appointed Shaâna-i-Mandî (market superintendent). He suppressed hoarding, and the Sultan ordered that those who gave short measure should have flesh equal in weight to the deficiency cut from their own bodies. The state also fixed the prices of other necessaries of life, such as cloth, for which a separate market was opened in an open plot of land near Badayûn gate, known as the tankas, or drâdû or bârdû in the Persian histories, grew day by day until the latter secured an ascendancy over his master, and he decided to kill the Sultan and seize the throne. Mubarak was warned of the danger of a conspiracy, but he paid no heed to it and Khursaw's partisans succeeded in murdering him (720/1320). His head was severed from his body and thrown into the courtyard where the courtiers who were urgently summoned to the Palace could see it. On the following morning, Khursaw ascended the vacant throne, assuming the title of Sultan Nâṣîr al-Dîn; his reign, however, proved brief.

According to Baranî, 411, Khusraw and his followers embraced Islam but were not genuine in the change of faith; they started worshipping idols within the palace, used copies of the Qur'an as stools and wantonly outraged the Muslim women. Some of the Muslim leaders, unable to bear his excesses, decided on his overthrow. Djîla Kâhî (the later Sultan Muhammad b. Tughluk (725-52/1325-51) left the capital for Sâmânâ where his father, Giblî Malik, was then posted. The latter organised a campaign and marched in the time of 'Ala' al-Din, whilst his son Mubârak Shâh Khâlîdî was unable to enforce them. 

'Ala' al-Din was a severe but vigorous ruler, yet owing to rivalries and a quarrel for power between his eldest son, Khidr Kâhî, and Malik Nâ'îb, his last days were unhappy. The former was transferred to Amôra and thus sent away from the capital, but returned to Dhihî on the pretext of visiting the tombs of some of the leading shaykhs there. In the midst of these worries, the Sultan died in Shâwâl 716/January 1316. Before his death Malik Nâ'îb, who had great influence over the Sultan, had persuaded him to disinherit Khidr Kâhî, to imprison him in the fort of Gwalior, and to nominate his young son, Shâhîb al-Dîn 'Umar, as heir to the throne. On the latter's accession Malik Nâ'îb assumed the powers of regent and ordered Khidr Kâhî and his brother, Shâdî Kâhî, who had been imprisoned in Sirî, to be blinded. 'Ala' al-Din's third son, Mubârak Kâhî, who had also been imprisoned, was also blinded. The prince, however, succeeded in bribing some of the palace guard, and they agreed to murder Malik Nâ'îb and his companions. Thus this cruel and ambitious slave of 'Ala' al-Din was killed only 35 days after his master's death. Mubarak now became the regent of his infant brother, but only two months later he blinded him and ascended the throne under the title of Kuþîb al-Dîn Mubârak. The new Sultan, aged of 18, began his reign by setting free a number of prisoners, recalling those who had been banished by his father and rescinding his enactments in regard to heavy taxation and control over prices of commodities, thus gaining considerable popularity.

Soon after his accession Mubarak left for the south where Harpâl Deo, a son-in-law of Râma Candra, had seized power and defied the authority of Dhihî. On the approach of the Sultan's army, however, he fled from the capital, but he was captured and put to death and the administration of Deoغرî was entrusted to Malik Yaklakhi; after sending his favourite slave, Khursaw, on an expedition to Mâdûra, and having spent the rainy season of 718/1318 in Deoغرî, the Sultan set out for the north. On his return journey a plot was made to kill Mubarak, but the news leaked out and the conspirators were executed. He also ordered his three brothers, Khidr Kâhî, Shâdî Kâhî and Shâhîb al-Dîn 'Umar, to be murdered.

Mubarak now gave himself up completely to a life of debauchery. His infatuation for Khursaw Kâhî, a slave belonging to a low caste (variously spelt as purnârî or brâdû in the Persian histories), grew day by day until the latter secured an ascendancy over his master, and he decided to kill the Sultan and seize the throne. Mubarak was warned of the danger of a conspiracy, but he paid no heed to it and Khursaw's partisans succeeded in murdering him (720/1320). His head was severed from his body and thrown into the courtyard where the courtiers who were urgently summoned to the Palace could see it. On the following morning, Khursaw ascended the vacant throne, assuming the title of Sultan Nâṣîr al-Dîn; his reign, however, proved brief.
on Dihli and defeated an army that was sent against him under the command of Khursaw’s brother. The final battle was fought near the old fort of Indrapat in which Khursaw was defeated, in spite of his profuse distribution of wealth to win the support of the army and the sympathy of the people. He escaped, but was later found, and Ghazi Malik ordered him to be beheaded. On the following morning the nobles urged him to accept the crown as there was no one left in the family of ‘Ala’ al-Din who could lawfully wear it. Hence Ghazi Malik ascended the throne of Dihli in Shab’an 720/September 1320 under the title of Sultan Ghiyath al-Din Tughluq Shah and began the line of Tughluqid Sultans.

(S. Moinul Haq)

KHALLIS OF MALWA. [see MALWA].

AL-KHALDUNIYYA (AL-DJAMCIYYA), a cultural association established in Tunis under the spiritual aegis of Ibn Khaldun. It was sanctioned on 22 December 1866/18 Radjab 1314 and its premises officially opened on Saturday, 14 Dhu ‘l-Hijjah 1314/15 May 1897 in the presence of the Tunisian authorities.

Its creation was in part due to the united efforts of Tunisians educated at the Siddik College, who were anxious to effect a reconciliation with former students of the Zaytuna. In this aim they were supported by shaykhs who were the Zaytuna’s instructors. Their action was in line with the political and cultural trends advocated and put into practice by the minister Khayr al-Din [q.v.], which put a determinedly modern slant on traditional studies and provided the Zaytuna’s students with a scientific course of study that gave them an opening into the modern world, which the French socio-cultural presence in Tunisia made essential.

The activities of the Near Eastern reformists, and Shaykh Muhammad ‘Abduh’s two visits to Tunis (in December 1884 and 1903), also had an influence on the teaching of Arabic studies. During his second visit to the city, ‘Abduh even put forward the notion of introducing instruction in science and mathematics into the Zaytuna itself.

In 1884 the modern studies courses followed at the Khalduniywa were set as obligatory tests in the Zaytuna’s examinations and recognised in the official diploma of applied studies which was created by a decree of 28 Jumada II 1316/12 November 1898 and which conferred job advantages on its holders.

In order to achieve these ends, the association had to smooth over difficulties, combat numerous instances of prejudice and counter the many objections raised by the traditionalists, who considered that the study of modern science was a profane action which might strike a blow at the unity of Islam. The association also had to struggle to balance a very shaky budget and raise the necessary cash to cover the cost of organising courses and lectures, acquiring books for the library and materials which would enable students to begin scientific experiments.

The Khalduniywa course of studies, taught in modern Arabic, imparted, up to World War I, the rudiments of knowledge which played a valuable part in the diffusion of scientific ideas among students and the adults who attended lectures aimed at popularising ideas on physics, chemistry, zoology, botany, modern literature, history, law, economic and commercial geography and political economy.

The last president, Shaykh Fadil Ibn ‘Ashur, had a Zaytun university education but was a wholehearted advocate of the modern ideas that, from 1945, took over from the former directors, who were of essentially Sdikian education. Ibn ‘Ashur inaugurated the final phase, which culminated with the educational reforms of 1958. Several projects were dear to his heart. He renewed the objectives of the association by setting up many “Khaldunian” organisations which coincided with a new spirit of nationalism stemming from the Arab League. He created an Arabic general certificate of education based on a general and scientific curriculum in the Arabic language which fitted students for enrolment in the universities of the Arab countries. He also opened an Institute of Islamic Studies which was intended to revitalise Islamic culture, and from 1945 onwards drew attention to the new realities governing the modern world by organising a series of conferences on specific themes. In addition, he set up an Arabic Institute of Law in 1946 with the aim of modernising law studies and improving the education of barristers and magistrates; that Tunisian justice might be better served. Finally, in the same year he founded the Institute of Philosophy, to educate students who wished to prepare for advanced level philosophy, and also to give wider currency to the major trends of Islamic philosophy.

It is clear, therefore, that from its inception the Khalduniywa had the dual aim of preparing students for official examinations through a proper course of study and of giving adults the opportunity to round off their general education and diversify their knowledge.

With its combination of instruction and culture, the Khalduniywa was gradually raised from the status of a private association to that of a national cultural institution which organised courses and conferences and put in train various other activities. To fulfil these tasks, it employed a linguistic tool which served to transmit traditional teaching but was sufficiently flexible to convey and give mastery of modern and scientific knowledge.

BANU KHÄLID, an Arab tribe occupying the central part of the eastern provinces of modern Saudi Arabia along the Gulf coast known since earlier times as al-Ahsā\(^2\) or al-Hasā\([q.v.]\). The tribe at present occupies the territory lying between al-Mikrā\(1\) in the north and al-Bayḍā\(2\) in the south, with its centre at the town of al-Hasā. For the last two centuries, the chieftainship has been in the hands of the 'Urây'ir family.

The tribe begins to figure in historical sources from the tenth-sixth century onwards, indicating its growing importance. In 989/1581 they fought off Sharifian forces trying to occupy al-Hasā from the sea, but could not prevent the Ottomans, who had the support of the Muntafiq tribe\([q.v.]\) of Lower Irāk, from occupying the region soon afterwards. The Ottomans held it till 1082/1670, when Barrak b. 'Urây'ir Āl Ḥamīd, member of an important family of the Banū Khalīd, killed Rashīd b. Muhāmīs Āl Shābīb of the Muntafiq and drove the Turks from the town of al-Hūfāf or al-Hufuf\([q.v.]\) and thus ended the first Turkish occupation of the province. It was Barrak who established a summer residence in Kuwayt, in a fortress called, like that of al-Hūfāf, a kārīr or kāfīr (whence the diminutive kūfayt from this Indian word). He also sacked the town of al-Dīrīyya\([q.v.]\) in ca. 1091/1680, but died soon afterwards, and his brother Muhammad succeeded as tribal chief.

Until his death in 1102/1691, Muhammad made various incursions into the regions of al-Yamāmā, al-Kharḍj and Sudayr in Najd. He was followed by Sa'dūn b. Muhammad b. Husayn b. Uṯmān, who had been Barrak's ally in the expulsion of the Turks, and under him the area controlled by the Banū Khalīd reached its greatest extent, from Kuwayt in the north to Kātar in the south. Muhammad envisaged also a policy of conquest in Najd, where in 1095/1684 the Idrīsid Sharīf Idrīs b. Watbān, who at that time controlled al-Dīrīyya, had been killed by one Sūlṭān b. Ḥamīd al-Kaysī, who was probably a member of the Banū Khalīd, and who then made himself lord of that town; it was held by Sūlṭān and his brother ʿAbd Allāh for some two decades.

However, incursions from al-Hasā continued, and we find Sa'dūn again attacking and sacking ʿĀkrābā and ʿAmmārīyya in 1133/1721 just before his death in battle in 1135/1723.

A series of internecine conflicts within the family followed, ending in the triumph of Sa'dūn's cousin 'Ālī b. Muhammad, who was in turn followed by his brother Sulaymān. It was during his reign that Muhammad b. ʿAbd al-Wahhāb\([q.v.]\) began his preaching in Najd, and Khalīd opposition to this teaching was one of the main causes of the ensuing warfare between the Banū Khalīd and the Āl Su‘ūd, beginning with the expulsion of Muhammad b. ʿAbd al-Wahhāb from ʿUyayna by Uṯmān b. Ahmad Āl Muʿammar at the behest of Sulaymān b. Muḥammad, after he settled at al-Dīrīyya (1157/1744). Further internal conflict followed amongst the Banū Khalīd, with Sulaymān driven out of al-Hasā in 1165/1752; he found refuge in al-Khārdj, but died there in the same year. The Āl Su‘ūd now intervened in al-Hasā, at the invitation of discontented members of the ruling family, but when Sa'dūn of the Banū Khalīd was defeated at Djāda\(3\) by the rebels, who were aided by the Muntafiq chief Thuwaymi, Sa'dūn actually found refuge in al-Dīrīyya, with his enemy ʿAbd al-'Azīz b. Muhāmīs b. Sa'dūn and Sa'dūn died there shortly afterwards. The rebel leaders Duwayhiy and Muhammad b. 'Urây'ir, together with their uncle ʿAbd al-Muḥsin, now became leaders of the Banū Khalīd in al-Hasā until 1203/1789, when they were briefly succeeded by Zayd b. 'Uray'ir and Barrak b. ʿAbd al-Muḥsin. In 1207/1793 ʿAbd al-'Azīz felt strong enough to invade al-Hasā, and two years later totally defeated Barrak. One Nāḍīm, of obscure family and not a member of the Banū Khalīd, came to power now in al-Hasā as a vassal, nominally wāli or governor, of the Āl Su‘ūd.

The expansionist policies of Su‘ūd b. ʿAbd al-'Azīz, who by 1223/1808 controlled the Hijāz, ʿAṣrī, al-Hasā and Bahrayn, as well as Najd, alarmed the Ottoman Porte, leading to the invasion of Egypt by an army under İbrahim Pasha\([q.v.]\) which defeated Su‘ūd and razed al-Dīrīyya to the ground in 1233/1818-19. This provided an opportunity for the Banū Khalīd to regain control in al-Hasā, and two brothers from the 'Urây'ir family, Māḍīj and Muhammad, briefly managed to seize al-Hufūf and Katīf before İbrahim's commander Muḥammad Kāshīf appeared there. Māḍīj, however, remained ruler of al-Hasā until 1245/1820, when he was killed in battle at ʿAklā with the resurgent Āl Su‘ūd. Al-Hasā again passed under Su‘ūd control, despite the temporary re-imposition of Turko-Egyptian control over Najd in 1838, until internal conflict within the Āl Su‘ūd in 1857 allowed the Ottomans to re-establish their power in al-Hasā, with their headquarters in al-Hufūf. In the following year, the Turkish troops withdrew, and the Porte appointed as local governor or mutaṣāṣirī a member of their old supporters, the Banū Khalīd, sc. Bāzī̇ b. 'Urây'ir. His position nevertheless proved unstable, and when the Su‘ūd ʿAbd al-Rahmān b. Faysal attacked him, and besieged him in the citadel of al-Hufūf, al-Kūt, Turkish forces had to return and drive off the Su‘ūdīs.

(ʿAbd Allāh al-Kasarī)
account of his Christian mother. Some scandalous details about Khamd's ancestry seem to reflect anti-
Arab Shu'ubî sentiment (Goldzweber, Muh. Stud., i, 205 = Eng. tr. i, 188). In a tradition which Goldzweber
(ibid., ii, 45-6 = Eng. tr. ii, 53-4) classified as a pro-Umayyad fabrication, and which may refer to the rivalry between Khamd and his successor as governor of 'Irâk, Yûsûf b. 'Umar al-Thalâsf (q.v.), the Prophet gave Khamd's grandfather Asad precedence over a man of Thakîf and asked for special blessings on Asad's descendants. The report that Khamd was not a descendant of Asad (Ibn 'Asâkir, Damascus 1332/1914, v, 68) may be a response to this hadith. For these and other details of Khamd's ancestry, see especially Aghani, xix, 52 ff.

The dates of Khamd's governorship at Mecca are uncertain. Tabari's two reports, one sub anno 89/709-8, the other sub anno 91/710-10, both attribute Khamd's appointment to the caliph al-Walid. Some sources, however, refer to Khamd as governor at Mecca under 'Abd al-Malik (d. 86/705), among them a detailed report in pseudo-Ibn Kûtabya of the arrest by Khamd, after his arrival as governor in Mecca, of the pious Sa'id b. al-Dubayr [q.v.], a refugee from 'Irâk after the suppression of al-Hâdîdîdî of the revolt of Ibn al-'Ashî'î (K. al-Ismâ'a wa l-tiyasa), Cairo, ii, 51 ff.). The information about Khamd's activities by Khalid, after his arrival as governor in Mecca, in the hope that, since B. Badjila was not powerful and belonged neither to Mudjar nor Yemen, he would be able to remain aloof from the inter-tribal feuds which had become more intense as a result of the rebellion of the Yemeni Ibn al-Muhallab and the pro-Mudjar policy of Khamd's predecessor, 'Umar b. Hubayra. Nevertheless, his appointment seems to have aroused the hostility of the Mudjar, and this may have been a factor in causing his removal from office and downfall, an event which the sources attribute to the jealousy of the caliph at the increase of Khamd's wealth as a result of his agricultural works. In relation to the length of his governorship in 'Irâk, information about him is provided by F. Gabrieli (Ii califato di Hishâm, Alexandria, 1935, 8, n. 2) that the story of the arrest of Sa'id b. al-Dubayr that has been moved forward by pseudo-Ibn Kûtabya in order to make follow the report of Ibn al-'Ashî'î's defeat in 84/703 or 85/704, and that other reports which have Khamd as governor of Mecca under 'Abd al-Malik all derive from the account of pseudo-Ibn Kûtabya, seems to be contradicted by the reports of al-Azrâkî, an earlier source, which refer to Khamd as governor Mecca for 'Abd al-Malik in circumstances which have nothing to do with Sa'id (F. Wüstenfeld, Die Chroniken . . . Meha, Leipzig 1857-61, i, 265, 304-5). Wüstenfeld considered it possible that Khamd governed Mecca on two separate occasions, once for 'Abd al-Malik and once for al-Walid (ibid., iv, 148). While the end of Khamd's governorship of Mecca is usually associated with the accession of the caliph Sulaymân b. 'Abd al-Malik (96/715) and his removal of those officials whom he considered had been too close to al-Hâdîdîdî (J. Wellhausen, Das arabischc Reich, Berlin 1902, 165 ff., Eng. tr. 265 ff.), al-Azrâkî has two traditions which refer to Khamd governing Mecca for Sulaymân and which seem inconsistent with the view that the removal of Khamd from office was one of Sulaymân's first acts as caliph (Chron. Meha, i, 339-40).

Apart from his involvement in the arrest of Sa'id b. Dubayar, the information about Khamd's activities in Mecca concentrates on aspects of the cult. He is said to have decorated the Ka'ba with gold sent by al-Walid (Azrâkî, Chron. Meha, i, 146; Ya'kûbî, ii, 340), to have been the first to enforce the segregation of the men from the women in the masjid (Azrâkî, 265-6), and the first to arrange the lines of worshippers around the Ka'ba (ibid., 304-5). But, on the other hand, he is said to have proclaimed his willingness to violate the hadâm (Tabari, ii, 1231) or to tear down the Ka'ba and remove it to Jerusalem (Aghânî, xii, 90; pseudo-Ibn Kûtabya, ii, 51-2), should the caliph desire it, and it is Khamd who is charged with the construction, on the orders of al-Walid (Tabari, ii, 1199-1200; Aghânî, xix, 60) or Sulaymân (Azrâkî, 339-40), of a fountain which was intended to supplant Zamzam.

Between his removal from the governorship of Mecca and his appointment to that of 'Irâk, Khamd is mentioned only as one of the two men sent by the caliph Yazid b. 'Abd al-Malik to take amân to Yazid b. al-Muhallab [q.v.] in a futile attempt to forestall his revolt (Tabari, ii, 1382, 1387-8). His appointment as governor of 'Irâk is dated to the beginning of the caliphate of Hishâm b. 'Abd al-Malik, but there is some doubt whether it was in 105/723-4 or 106/724-5 (Tabari, ii, 1474; but see Dhinawrî, A khâlier al-funûl, Leiden 1888, 336, where it is said that it was Yazid ii who appointed Khamd).

It seems likely that Khamd was appointed to 'Irâk in the hope that, since B. Badjila was not powerful and belonged neither to Mudjar nor Yemen, he would be able to remain aloof from the inter-tribal feuds which had become more intense as a result of the rebellion of the Yemeni Ibn al-Muhallab and the pro-Mudjar policy of Khamd's predecessor, 'Umar b. Hubayra. Nevertheless, his appointment seems to have aroused the hostility of the Mudjar, and this may have been a factor in causing his removal from office and downfall, an event which the sources attribute to the jealousy of the caliph at the increase of Khamd's wealth as a result of his agricultural works. In relation to the length of his governorship in 'Irâk, information about him is provided by F. Gabrieli (Ii califato di Hishâm, Alexandria, 1935, 8, n. 2) that the story of the arrest of Sa'id b. al-Dubayr that has been moved forward by pseudo-Ibn Kûtabya in order to make follow the report of Ibn al-'Ashî'î's defeat in 84/703 or 85/704, and that other reports which have Khamd as governor of Mecca under 'Abd al-Malik all derive from the account of pseudo-Ibn Kûtabya, seems to be contradicted by the reports of al-Azrâkî, an earlier source, which refer to Khamd as governor Mecca for 'Abd al-Malik in circumstances which have nothing to do with Sa'id (F. Wüstenfeld, Die Chroniken . . . Meha, Leipzig 1857-61, i, 265, 304-5). Wüstenfeld considered it possible that Khamd governed Mecca on two separate occasions, once for 'Abd al-Malik and once for al-Walid (ibid., iv, 148). KHALID b. SA'ID b. AL-'AS b. UMAYYA b. 'ABBAD AL-SAMS b. 'ABBAD MANAF b. KUSAYY b. KILAB b. MURRA b. KA'B b. LU'AYY, d. 13/635, was, according to several traditions, if not the fourth Companion of the Prophet, at least one of the second group of three. Ibn Ishaq, however, places his conversion to Islam at a much later date and thus excludes him from the privileged group of the eight Predecessors (sdbikun, mutakaddimun).

As a rich member of the Umayyad clan, he is said to have presented to Muhammad the slaves inherited from his father; he had some education, and was possibly Muhammad's third secretary, after 'Uthman and 'AII. He fulfilled this latter rôle, and was also responsible for protocol at the time of the reception of the important tribe of Thakafi and their allies in the year 9.

Previous to this when one of the emigrants in Ethiopia, he had just come to profess his adhesion to Islam, he appointed Khalid to accompany him and to collect the sadaka. At the beginning of the year 11, and just before his death, Muhammad appointed seven governors for Yemen and 'Umar, including Khalid for the territory in Baydun, between the streams of Shadr and Zabid. At the time of al-Aswad's revolt, the governors came together around al-Tahir b. Abi Haila, who was in charge of the Tihama of Yemen, but Khalid b. Sa'id had the responsibility of arranging the match (as wali or asail), placed upon him by his companions, although one tradition gives this task to 'Uthman.

His political career began in the year 10. When Muhammad sent back to his tribe in Yemen Farwa b. Musayk, who had just come to profess his adhesion to Islam, he appointed Khalid to accompany him and to collect the sadaka. At the beginning of the year 11, and just before his death, Muhammad appointed seven governors for Yemen and 'Umar, including Khalid for the territory in Baydun, between the streams of Shadr and Zabid. once again accorded to him by al-Tabari, who cites four hadiths mentioning his death, shows the interest which Khalid b. Sa'id seems to have raised; it is probable that his attitude, together with reminiscences of his friendship with Muhammad, posed a problem of conscience for Abu Bakr.  

KHALID B. SINN. R. *AYTH AL-ABRIS* (see his genealogy in Ibn al-Kalbi, Dāmūkara, Tab. 133). One of the personages of the interval [see Fāṭra] between Christ and Muhammad who, in Islamic tradition, was considered as a prophet; he was even regarded as the first prophet to arise amongst the descendants of Ismā'īl. He is said to have foretold the coming of Muhammad, and the latter is said to have greeted Khalīd’s daughter, who had come to him, with these words “Here is the daughter of a prophet whom his people has lost!” popular belief even went as far as to attribute to him knowledge of Sūrat al-Ikhlas (Thiμār al-ḵulūb, 456). He is mentioned in connection with the fire called nār al-Harratayn (al-Dājibī, Hayyūvān, iv, 476; cf. al-Kalākhashandī, 82b, i 409-10), into which he threw himself and which he extinguished (Thiμār, 456), and in connection with the ʿankā (q.v.), whose race God destroyed as the result of a prayer of his (R. Basset, Mille et un contes, iii, 203-4). There is already found in al-Dājibī (Hayyūvān, iv, 477) a tradition according to which Khalīd is said to have instructed his people to disinter him after death so that he could reveal the secrets of the hereafter; this is often repeated (Ibn Kutayba, Maṣāfī, 62, al-Māṣūdi, Murūdī, iv, 22-2 = §§ 1349-50; al-Harawi, Zīvārāl, 61337; etc.).  

These legends, together with the prophethood of Khalīd, are rejected by al-Dājibī (Hayyūvān, iv, 478) in the name of the muḥakkalimān who say that Khalīd was a Bedouin, but God never raised up a prophet from amongst the Bedouin, hence Khalīd could not have been a prophet (a syllogism taken up, in particular in Thiμār, 456).  

Bibliography: In addition to the references given in the text, see Dājibī, Tarīb, index; Ḍamīrī, Hayyāt al-hayawān, s.vv. ʿankā and sīlād; Maṣʿūdi, Murūdī, index; Ibn Ḥadhārj, Isbā, No. 2335; Makānī, Čeṣṭa, iii, 17, 130, 176-9.  

KHALID B. AL-WALID B. AL-MUGHIRA AL-MĀHMUDĪ, Arab commander at the time of the early conquests. Muslim tradition gives his career as follows. He fought against Muhammad at Ubūq, but was converted in 6/627 or 6/629 and participated in the expedition to Muṣta and the conquest of Mecca, both in 8 A.H. The Prophet charged him with the destruction of the idol of al-ʿUzār at Nakhrā and later sent him to the B. Dāḥalīmā, whom he wrongfully attacked. In 9/630 the Prophet sent him from Tabūk to Dūmat al-Dāhbal (q.v.) where he captured the ruler al-Ukaydir and sent him to Medina. In 10/631 he was sent to invite the B. al-Ḥārith of Yemen to Islam. On the outbreak of the ridda or “apostasy” after the Prophet’s death in 11/632, Abū Bakr sent him against the rebels, on which occasion he committed another two misdemeanours, first by killing Muslims (through a misunderstanding) and later by marrying a Muslim woman. Abū Bakr, however, forgave him and he commanded the Muslims against Musaylima in the Yamāmā. In 12/633 he was sent either directly from the Yamāmā or via Medina to ʿIrāq where he conquered al-Ḥira (q.v.), Dūmat al-Dāḥbal and other places before crossing the desert to Syria to assist the armies there. He stayed in Syria, though his troops returned to ʿIrāq (Tabarī, i, 2145). On Abū Bakr’s death in 13/634, ʿUmar b. al-Khaṭṭāb immediately dismissed him from the high command, but he fought in Northern Syria under Abū Ubayda and conducted a number of campaigns on the Byzantine border before his death in Ḥims (or Medina) in 21/642. His son ʿAbd al-Rahmān was governor of Ḥims and the Dāżāra for Muṣṭwīya, who is said to have had him killed because he feared his prestige. Khalīd b. ʿAbd al-Rahmān b. Khalīd, who avenged his father, is found as a commander in 48/689-9, but otherwise nothing significant is heard of the family.  

There are two points of major interest in Khalīd’s career. Firstly, Muslim tradition is extraordinarily eager to discredit him. He is known as Sayf Allāh, an epithet he earned in battle against the Romans at Muṣta (Tabarī, i, 1017, differently in 1531), but he is condemned rather than celebrated as such, doubtless because the title belongs in the same context as that which designated the armies of Syria as ḡund Allāk, sent to take revenge from the Romans for their oppression of the Arabs (Thiμār, 456), and which knew ʿUmar b. al-Khaṭṭāb as the redeemer (fāsrāk, see ibid.). Later tradition might have reduced Khalīd to Sayf Rāsūl Allāh (cf. Khalīfāt Allāh), but instead reduced his contribution, partly by depicting him as self-willed, as exemplified in his misdeeds, and partly by having ʿUmar dismiss him, though, as De Goeje has pointed out, ʿUmar must on the contrary have appointed him to the high command in the first place.  

Secondly, Muslim tradition has Khalīd initiate the conquests in ʿIrāq, a point contradicted by non-Muslim sources. Sebeos (ca. 661 A.D.) has the Arabs divide their armies after their first successes in Syria and send one division to ʿIrāq (the returning armies of Muslim tradition), and the Kūzātānī chronicle (ca. 680 A.D.) only knows Khalīd as the conqueror of Syria. In fact, Tabarī, i, 2082, has Abū Bakr instruct Khalīd to go to Syria. The doctrinal significance of this shift is that it suppresses Syria’s status as the promised land for Jews and Arabs alike (for a similar shift, compare Syria in Sebeos, 95-6, with ʿIrāk in Tabarī, i, 2254, 2285, 2289). The manner in which the shift was effected is clear when we consider the appearance of the Prophet at the head of the first invasions of Syria in non-Muslim sources (Doctrina Iacobi, ca. 634 A.D., 86-7; Cont. Byz. Arab, in MGH, xi, 337), which Muslim tradition has reduced to the pointless expedition to Tabūk. It was from Tabūk that the Prophet sent Khalīd to Dūmat al-Dāḥbal, the city which he is supposed to have conquered again on his later campaign in ʿIrāq, though this was an unlikely détour from al-Ḥira. On initiating the conquest of Syria, the Prophet must therefore have sent Khalīd to Dūmat al-Dāḥbal, which was vital for the control of Syria, and it was from here that Khalīd crossed to join the armies in Syria, a more plausible, if less romantic, desert crossing than that preserved in Muslim tradition.

KHĀLĪD B. AL-WALĪD — KHĀLĪD B. YAZĪD B. MUʿAWIYĀ

Khalid was the boon-companion of 'Ali b. Ḥishām and then of al-Ḍawār b. Marwān. He had the entree to al-Muṭaṣīm's company, was close to the poet 'All b. al-Ḍāḥim [q.v.], and collaborated with the famous player on the ḥurnār, Aḥmad b. Ṣadak (Aḥdānī, xxi, 320-7; Dīyārādī, 16-17; Tāʾirīkh Baḡdād, viii, 313). In practice, he was the author of short pieces of up to four verses only. When he went so far as to compose long poems in honour of al-Muṭaṣīm's victories (the ms. of his Dīwān contains five eulogies), Dīyārādī [q.v.] criticized him for tackling something beyond his capabilities. Khalid's real talent lay in the elegy, in which he describes the lover's torments and the cruelness of his solitude; the memory of the beloved haunts him, and the fatalness of passion tortures him. His verses are addressed to women and also to ephebes, to whom he devoted numerous poems. He also wrote some moving elegies during the period when his reason was tottering. He complained at that time of the loss of his poems: "He said despairingly to his companions when his mind gave way, in circumstances which remain obscure (Yaqūt, xi, 48)."

He then wandered, almost naked, through the streets of Baḡdād, pursued and stoned by a mob ofurchins (Aḥdānī, xx, 244; al-Sāḥibī, Wuzurād∗, 162-3). He died ca. 269/685.

KHALID B. YAZID B. MUWA'WIYA — KHALID DIYA'...

Also at this time, he sent his first original writings to the same periodical. He experimented with a poem 'Ağlıkımın mezari' ("The Grave of my Love") which he sent to the Istanbul daily Terziumâni-i hâkimat. It was published, with ironical remarks of Mu'âlim Nâdiri [q.v.], who was later to become the main opponent of the new school. Leaving school at seventeen, he began to work as a clerk in his father's business, took lessons in English and dancing and enjoyed the cosmopolitan life of Izmir society. In 1894 he founded, with his poet friend (later a Young Turk) Tewfîk Newzâd (1865-1906), the short-lived review Nevarûs where he serialised the translations of Georges Ohnet's Le Maître de forges as Demir-hâne müdürüs. He made a short abortive attempt to Istanbul to try his chance at entering a diplomatic career, but he did, however, meet there important personalities of the literary and publishing world and secured the publication of his Gharbdan şarha seyddâ-i edebîyye ("Literary current from the West to the East")'. Back in Izmir, he was appointed teacher of French at the Rûkıdiyye and an accountant at the Ottoman Bank, where he was the only Turkish employee. Later, he also taught at the local lycée (s'dâddi). In 1886 he founded, again with Tewfîk Newzâd, the newspaper Kâhidmi where he published his Menküf girîve ("The wretched woman") (published in book form in 1889) and began to serialise his first novel Sefile ("The wretched woman"), which was stopped by the censor. Some of his short stories and his second novel Nâmêde were also serialised in Kâhidmi. The loss of his mother in 1886 inspired his poems in prose Mezarîndan sesler ("Voices from the grave"), followed by his third novel Bir sûrunun defleri ("The diary of a dead man"), also serialised in Kâhidmi. In the meantime, Khalîl Diya' married Memnuhâ Kâhidmî, the daughter of a tax director (and a niece of Köse Râ'îf Paşa, 1836-1912).

He accompanied an uncle on his European trip, as far as the Paris exhibition of 1889; he was particularly impressed by Paris, which he knew so well from Balzac's novels. The years 1889-93 were full of bitter experiences for Khalîl Diya'; several losses in the family sent his father, his old daughter and his grandfather, and the arrest and banishment of one of his uncles for being involved in a secret society. In the middle of this turmoil, he finished his fourth novel Ferdi ve şeurâkâsi ("Ferdî and co.") serialised in Kâhidmi (published in book form in 1312/1896). At the same time, he translated specimens from world literature (including Sanskrit and Hebrew) which were later published in four volumes (Nâbilî, 1308/1892).

About this time, he met Redjâlî-Zâde Ekrem, who was passing through Izmir, and who invited him to come to Istanbul to join the group of young writers there. After resigning from the Ottoman Bank, and a brief period as acting director of the Foreign Affairs (Meşhîbî-i eğnînîyye) Department at the Vilâyet, he received an offer to become First Secretary to the Director of the Rejî (Réjîe, administration of the tobacco monopoly) in Istanbul, which he eagerly accepted. This was a turning point in his literary career. He arrived in Istanbul on 31 August 1893 (amid the anniversary celebrations of 'Abd al-Hamîd II's enthronement) and immediately began to visit the celebrities of the literary and publishing world like Redjâlî-Zâde Ekrem, Ahmed Midhat, Mu'âlim Nâdiri, Abu 'l-Diya' Ebulhâsim [q.v.], Tewfîk, 'A'll Efendi and Ahmed Ihsân. Within a very short time, he had met all the leading writers of the new group: Mêmmed Râ'îf, Huseyên Dâhid...
KHALID DIYÄ

(g.o.), Djenab Shihab üd-Din, and free-lance writers like Riza Tewflk (Boliikbashi), Ahmed Rasim (g.o.) and Huseyn Rahmi (g.o.). Some time later, he met the poet who was to be his great partner in the new movement, Tewflk Fikret (g.o.). His office, comparatively safe from Hamidian control, became gradually a kind of a literary club where long and excited discussions were held at a period when a meeting of more than three people was forbidden. Khalid Diya² began to write short stories for Ahmed Ihsän’s Therwet-i funun (g.o.) (originally a popular science magazine founded in 1891 as the weekly supplement of Therwet) and for the dailies Ikdam and Sabäh. In 1894, he also began to contribute to the literary fortnightly Mekteb (originally a children’s magazine, founded in 1891), where several members of the new group published their works. An article he published in Mekteb on Sanskrit literature, where he discussed Indian philosophy and pantheism, was denounced to the Palace by an informer’s jurnal which claimed that the article was trying “to spread the doctrine of the materialists (Maddîyyûn) in the country”. Although the article had passed the censorship, Khalid Diya³ was summoned to the residence of the Minister of Public Security (Dâbîyye nâzîrî). Mekteb ceased to appear and most of the new writers moved over to Therwet-i funun which seemed safer, thanks to a friend and a protector of Ahmed Ihsän’s in the Palace. On Reji³-ı-Zade’s invitation, Khalid Diya³ joined it under Tewflk Fikret’s editorship (1896). For five years Therwet-i funun became the most representative organ of the new, western-oriented literary school of Edebîyyat-i dâlîlede or Therwet-i funun edebîyyâtî. It was in the Therwet-i funun that Khalid Diya³ serialised his famous novel Mâfi ve siyây (Nos. 273-317) and his masterpiece ‘Aghh-i memnî (Nos. 413-79), and many of his short stories and articles appeared there. But all this suddenly came to an end: a jurnal sent to the Palace (probably by Baba Tâhir, editor of the rival conservative periodical, Ma’tâmâ) informed the Hamidian censors that in issue No. 553 of Therwet-i funun, published in October 1896, the forbidden words “Revolution” appeared, and in an article translated from the French by Huseyn Dâhid (for details and the text of the article, see Huseyin Cahit Yaçın, Edebi hatıralar, Istanbul 1935, 161-9). The journal was immediately suspended, and when it was allowed to reappear again, all literary writings were banned and it could only publish articles on popular science. Khalid Diya³ interrupted the serialisation of his novel Kîrh hayâtlar (“Broken Lives”), which had already been mutilated by the censorship, and wrote nothing for more than six years until the Revolution of 1908, meanwhile living in his villa in Ayastafanos (present Yeşilköy). During the nine months³ period between the restoration of the constitution in 23 July 1908 and the deposition of ʿAbd al-Hamîd II, following the mutiny of 13 April 1909, Khalid Diya³ wrote extensively in many of the dailies and periodicals which quickly mushroomed after the abolition of the censorship. He also serialised in the daily Sabäh his period novel Nesî-l-i ahlîr (“The last generation”) which he never published in book form; cf. Cevdet Kudret, Türk edebîyâtında hikaye ve roman (1976, 176-80). Also, during this period, he was appointed government representative at the Rûûs (virtually a sinecure) for five years. One of the personalities of the Istanbul literary world (with his earlier association with the Palace and the Unionists.

When Muṣṭafâ Kemâl ( Atatûrık) started his language reform movement in 1932, with the inauguration of the First Turkish Linguistic Congress in Istanbul, Khalid Diya³ joined the host of writers and scholars who declared their enthusiastic approval of the movement (Birinci türk dili kurultayı, tezler ve müzakere tabbaları, Istanbul 1933, 330-42; the single exception being Huseyin Dâhid (Yaçın), ibid., 270-9). Khalid Diya³’s last years were troubled with family misfortunes, culminating in the suicide in 1937 of his young diplomat son Khalîl Wejdâd. His last two public appearances were his participation in 1942 in the 50th anniversary jubilee of his career as a writer and his chairmanship in Ankara of the committee for the “Best novel” prize (awarded to Khalîl Edîb’s Sinîkî bakkâl). He died on 27 March 1945 in his country house at Yeşilköy near Istanbul. An extremely prolific author, Khalid Diya³ contributed to all branches of prose literature as journalist, essayist, publicist, popular science writer, playwright and translator. But his name is particularly associated with the short story and novel, of which he is the real founder in modern Turkish literature.

Novels and short stories in modern sense did exist before him. After ʿAll ʿAzîz’s (g.o.) Mûlhaṣâyalet (1796), which is a transition between the old and the new type of story-writing, and several translations (mainly from the French) in the 1850’s and 1860’s, the tendency to modernise the narrative technique is apparent in Turkish literature. If we leave out the pioneer work of the scholar-writer Şems üd-Dîn Sâmi’s Taʿâshûk-i tâlkat we filât (1872) and experiments by Namık Kemâl (Ibnâbî, 1876) and some of his associates (particularly Sâmi Paşa-Zade Şevâat’s Serçûdeğe, 1880), the prototype of the novel among the generation of Tàngîmî modernists is Ahmed Midhât, whom Khalid Diya³ greatly admired; see his note at the end of his un-
KHALID DIYA

finished translation of George Ohnet's Maître de forges, Demirkhdne müdürü, 1889). Hiuseyn Rahmi, an independent contemporary of Khalid Diya', was a follower of the Ahmed Midhat school and soon became an equally popular novelist. Although Khalid Diya', as a boy-writer, was an admirer of Ahmed Midhat and had a high opinion of Hiuseyn Rahmi's talent (Kirk yil, 421), there is hardly any trace of the old Turkish popular narrative technique or the influence of the French novels of adventure and entertainment, even in his early novel Izmir period (1888-93). These romantic and, at times, over-sentimental, stories with some elements of realism (particularly in Ferdî ve şürekâslar, 1893), already reveal a complete break with traditional methods of story-telling and develop a well-disciplined narrative technique where there is no room for irrelevant digressions or "small talk" with the reader (for synopses and analyses of Khalid Diya's individual novels, see Bibli.). Khalid Diya' perfected this technique in his later novels of the Istanbul period, inspired mainly by the method and style of French realists and naturalists, and until the middle of 1930's, his works remained the best examples of realism in the Turkish novel. Two titles stand out: Mâ'âr ve şüyâh ("Blue and black", 1897) which describes the dreams, struggles and eventual disillusionment of a young poet and his love ("Forbidden love", 2000), generally considered his best novel, which tells the story of the desperate love of a young woman who could not find happiness in her marriage to an elderly rich man. In both these novels and in his later works, the environment and the setting are described in minute detail and the characters are submitted to exhaustive psychological analysis. The setting and the characters are often chosen from upper or upper-middle class of Istanbul, for which Khalid Diya' has been severely criticised. A stereotype judgement on him is that his characters are not typically Turkish and never leave Istanbul. This is obviously an unfair criticism. Under the Hamidian régime, travel, even within the country, was restricted and supervised, and writers had to confine their observations by necessity to Istanbul. Also as a member of a well-to-do upper-middle class family, and very reserved in temperament, Khalid Diya' described only the type of people with whom he came into direct contact. We know now, from various sources, particularly from many Turkish and foreign memoirs, that an exclusive upper-class Turkish society flourished in Istanbul following the Tanzimat, particularly after the 1880s. It led an alla francâs (alafranga) way of life which is faithfully described by Khalid Diya' and his colleagues of the Thüret-i fânün (1901, reminiscences of the court of Mefremmed V; Bir act hikaye, Istanbul 1942, mainly about his son Khalîl Wedâd and his death. These memoirs are selective and of limited interest, as the reserved and over-cautious character of the author did not always allow him to treat freely and discuss impartially the people he had known and events he witnessed. Finally, Khalid Diya' s research work, including his courses in the University, were mostly based on translation or compilation.

In October 1909, she wrote her first important novel Seniyye Sâlîb (published in 1910), and while continuing her articles on educational problems, joined the staff of the Women Teachers' Training College (Dâr al-mu'llâmiyât), and with the help of the noted educationist Nakiyye Khanîm (Nakîyi Elgûn, 1882-1965) reformed its syllabus and administration. In the meantime, she was married from Sâlîb Dîkî Bey, having left home immediately after he had told her that he had married a second wife (1910). Soon she was attracted by the new movement of Turkism (Tûrkülûk [q.v.]). She wrote her novel Yeni Türkân (1911) and joined the activities of the Turkish Hearût (Tûrk Odâiçî [q.v.]), where she worked with Dîyâ’ Gökalp [q.v.] and his associates. When she resigned her teaching position over a conflict of principle with the Minister of Public Instruction Şûklîr Bey (see Gövä, op. cit., s.v.), she became Inspector-General of Ewâdî Schools which the minister, (the later Şêkîh-ê Islâm Muştafa Khîryî Efendî [q.v.]) decided to modernise. This gave her an opportunity to visit and study the outlying and poorest districts of Istanbul and their people, which incidentally became valuable for her novels. At the same time, she joined with Nakiyye Elgûn in the activities of the Women's Club (Tûlâ-ye Nisvan Diîmî-yi-yeti) in social relief work and nursing.

In the autumn of 1916, at the invitation of Dîmâl Pasha [q.v.], Army Commander in Syria, she toured all the important educational institutions there, and then returned to Istanbul after submitting her report. She subsequently continued her educational activity there by organising schools and by reforming the large ‘Ayûntûr Orphanage. Meanwhile, she was married to Dr. ‘Adnân (Âdvâr [q.v.]), a leading member of the CUP, by proxy (23 April 1917). Her educational work completed, she returned to Istanbul in early March 1918. In the autumn of the same year the war was over. After the Armistice of Mudros (30 October), the CUP triumvirate and many leading members of the Committee fled the country, and the Allied fleets entered Istanbul.

Parliament was dissolved, Italian troops occupied Antalya, and the Greeks, supported by the Allies, landed in Izmir (15 May 1919) and were advancing towards the interior. Sporadic resistance and guerilla warfare started in Anatolia. Khâlide Edîb joined in protest rallies, and her name is particularly associated with the historic mammoth meeting of 23 May in Sultan Ahmed Square, where she made a famous moving and dramatic address; her bust stands there today in memory of that unique occasion (Halîde Edîb, The Turkish ordeal, New York 1928, 32-3). In the following week, 55 intellectuals were deported to Malta by the British. In the meantime, Muştafa Kemâl Pasha (Atatürk) had assumed the leadership of the resistance movement in Anatolia. On 10 August of the same year, Khâlide Edîb wrote a famous controversial letter to Muştafa Kemâl Pasha in support of an American mandate over Turkey (Ghazi Muştafa Kemâl, Nutuk, Ankara 1927, 56-9; Speech, Istanbul 1963, 76-80). She represented a group of opinion which thought that in the summer of 1919 there could be an alternative to armed resistance and to the partition of the country, e.g. by asking for a great power's mandate (H. N. Howard, The King-Crane Commission, Beirut 1963, index; SabahattînSelek, Anadolu ihtilalî, Istanbul 1968, 276-8; Niyaży Berkes, Türkîyedî de çâçdaştî, Ankara 1973, 419-20). At Khâlide's suggestion, an American representative was sent to the Congress of Sivas
(4-11 September) by Charles R. Crane, the co-chairman of the American King-Crane Commission, in order to interview Mustafà Kemâl and to investigate the question of the American mandate (Nutûf, 63, Speech, 85-6, Kinross, Atatûrk, 188, Howard, op. cit. 289-90). The idea was discussed and definitely rejected by the Congress (Ali Fuat Cebesoy, Millî mücadele hatıraları, İstanbul 1935, 175-6). During the winter months of 1919-20 Khalîde kept in close contact with the Nationalists and their supporters in Istanbul and talked frequently to a number of American and British officials, but there came a reinforced occupation of Istanbul by the British (16 March 1920), followed by a raid on the Parliament and more arrests and deportations, so that the recently-elected pro-Nationalist Parliament which had adopted the National Pact (see Miḥâkı-i Millî) had to prorogue itself on March 18 (see B. Lewis, Emergence, 251). To avoid certain arrest and deportation (see Ordûl, 65-8, and A. E. Yalman, Gûrdû -lerim ve geseârûdûlerim, ii, İstanbul 1970, 55) Khalîde and her husband Dr. ʿAdnân went into hiding in a dervîsh convent (Osbekler tekseyi) in Üskûdar and left secretly for Ankara. They arrived in Ankara on 1 April 1920 (followed shortly by Colonel ʾIṣmÊt (Inöönü) and Fevzî (Çâmûk) Pâsha (G. Jaeschke, Türk kuruluşusuna sanayi kronolojisi, Ankara 1970, 96) and she immediately began to work in the “Agricultural School”, the headquarters of the Nationalists, where she surveyed the foreign press, collected news for the “Anatolian Agency”, translated or drafted English and French correspondence and occasionally contributed to the daily Hâkî- miyyat-i millîyya, the organ of the Nationalists. She soon became a member of their “inner circle”, and with Muṣṭafà Kemâl Pâsha, and five other Nationalist leaders, was condemned to death on 11 May by the sultan’s government in Istanbul. In the fighting in central Anatolia, the first victory of the nationalist regular army was won by ʾIṣmÊt at Inöönü (10 January 1921), a few days after the guerilla leader Çerkes Edhem (q.v.) had gone over to the Greeks. Khalîde Edib was busy in Ankara, mobilising the women of the city and reorganising the Red Crescent. Before the Greek offensive of July, she went to Eskişehir and worked as a nurse in the Red Crescent hospital until the fall of the city. On August 5, 1921, Muṣṭafà Kemâl was elected generalissimo (Baṣîh kumandân), and soon afterwards, Khalîde Edib volunteered for work on the Western front under ʾIṣmÊt Pâsha. During the critical weeks before and during the battle of Sakarya (q.v.), 22 August-11 September, she served in the general headquarters (Ordûl, 284-310); she was promoted to corporal (onbaşî), and the name Khalîde Onbaşî became the symbol of Turkish women who took part in the national struggle. Towards the end of December 1921, she moved to Akşehir (between Afiyân and Konya), the new headquarters, and she spent the best part of the eight first months of 1922 with the army, which was preparing for the great offensive. On 24 August she was summoned to the front just before the offensive started. After the decisive battle of Dumlupînar on 30 August the Greek army began to retreat, burning cities and villages and massacring the civilian population in their wake (Lord Kinross, Atatûrk, London 1971, 318). After spending a week in recaptured İzmir with the leaders, Khalîde, now a sergeant-major, left with a group of journalists to inspect and report on the devastated area between İzmir and dervîshlar Bursâya, in collaboration with Yaṣûb Kâdir and Fâlîth Rîfî, İstanbul 1922). After the armistice of Mudanya (17 October) which confirmed the triumph of the Nationalists, as the sultâne was abolished by the Grand National Assembly, presided over by Dr. ʿAdnân (1 November) and Khalîde settled in İstanbul, as her husband was appointed representative of the Ankara Ministry of Foreign Affairs (Kâhidîsiyye müsarûbûhâshî) in İstanbul. Ideological differences between Muṣṭafà Kemâl, an uncompromising radical, and most of his close associates (including Khalîde and ʿAdnân), who were conservatives or liberals, soon developed into a rift culminating with the foundation (17 November 1924) of the Progressive Republican Party (Terakkipërver Diümûrûiyet Fırkast [q.v.]). This party was soon suppressed (3 June 1925) following the counter-revolutionary rebellion, led mainly by Kurdish şerûkân, in the east. Khalîde Edib and Dr. ʿAdnân had left for Europe before the discovery on 15 June 1926 of the conspiracy against Muṣṭafà Kemâl’s life, planned mainly by a group of former Unionists. All leading members of the former Progressive Party, suspected of the complicity with the plotters, were arrested. Dr. ʿAdnân was tried in his absence, and although completely acquitted, he and Khalîde Edib lived in self-imposed exile in Europe for fourteen years. During the four years when she lived in England (1924-8) she wrote her memoirs and continued to write novels which were serialised in the Turkish dailies (see N. A. Banoglu’s interview with Khalîde Edib in the Yedîgün of 28 May 1939). During 1929-30 she lived mainly in Paris, where her husband was lecturer in Turkish at the École des Langues Orientales Vivantes. In 1929 she was in the United States, and went on a lecture tour of various American Universities. She was a visiting professor at Columbia University during the 1932-3 academic year. In 1935 she went to India to lecture on the political and cultural background and contemporary problems of Modern Turkey, at the Dîvânî’s Mi-liyya-i İslâmîyya of Delhi, then left for a lecture tour of the principal universities of the sub-continent. Back in Paris, she wrote more novels, particularly her only novel in English, The Clôun and his daughter, which she later re-wrote in Turkish as Aymîlî bâkhal (see below). She paid a brief visit to Istanbul in August 1935 and returned to Turkey on 5 March 1939 for good, four months after Atatürk’s death (10 November 1938). In December 1939 Khalîde Edib was appointed the chairman of the newly-founded department of English at the University of Istanbul where she trained, in ten years, a team of young scholars with whom she worked on new translations of Shakespeare. Elected as an independent member of Parliament for İzmir at the general elections of May 1950, she retired from political life in January 1954. Dr. ʿAdnân died in July 1955 and her health began to decline; she herself died in her modest home in Bayezîd on 9 January 1964 at the age of eighty. Khalîde Edib was a woman of small stature but with extraordinary energy and vitality. Although considered primarily a novelist, Khalîde Edib was an extremely prolific and versatile writer and her enormous output extending over nearly 60 years covers a wide area: novels, short stories and essays, criticism, articles on social, educational and political topics, plays, memoirs, translations and research. Many of her essays, etc. appeared in various dailies and periodicals, where most of her novels were also serialised. Khalîde Edib (who signed her name Khalîde Sâlib until her divorce from Sâlib Dheki in 1920) started her career in the daily Tanin and since
then she contributed mainly to the dailies Akşam, Waβit, İkdam, Atımkıhâr-ı Yüce (Cumhuriyet), Yeni İstanbul and periodicals Turkish Yardıç, Büyük Vele Meşîmâ, Dergişt, Yedigün, Hayat, etc. (for a detailed list with dates, see the introduction of Inci Enginün’s anthology Halide Edib Aðavur, Istanbul 1975).

Her twenty novels can be divided into three categories: (1) Novels where love and passion are the central themes, and the heroines, who predominate, are submitted to elaborate psychological analysis, e.g. some of her early novels like Seyiye fâlîb (1910), Khandâm (1912), Son etleri (serialised in 1913, published 1919), Mesârîd hûkim (1919) and the two novels of the twenties: Kâbl aγhîrî (1924) and its continuation Zeynâne nûn ıggü (1926). All these novels have considerable autobiographical elements and the passionate, independent, strong-willed heroines synthesise the author’s ideal of the emancipated Turkish woman; until she joined the Nationalists in 1921, the settings are mainly those of the Anatolian countryside. (2) Novels on the episodes of the War of Liberation: Atesbâm gömîk (serialised in İkdam from 6 June to 11 August 1922, published 1923; Eng. tr. by Y. Khan, The Daughter of Smyrna, Lahore 1938) and Vurun hahbeyle! (“Hit the whore!”) serialised in Akşâm, 1923, published 1926; these are based on personal experience and first-hand information, like most of her short stories of the same period (see Dağka iîham kurt, Istanbul 1922, enlarged 4th ed. 1963). These novels were pioneering works on this period; they became immensely popular and were filmed several times (see Aytekin Yakar, Türk romanında millî mücadele, Ankara 1973). (3) Period Novels. After the age of fifty, Khalide Edib produced a series of novels in which she proposed to describe the various aspects of Turkish society, beginning with her most famous novel Siwash kétéh (serialised in English as The clown and his daughter, London 1935) serialised in the Istanbul daily Haber in 1935 and published in 1936, which won the Republican People’s Party’s prize for the Best Novel in 1942, became an all-time best seller in Turkish literature (33rd edition in 1976) and was filmed in 1968. This is mainly a description of the Istanbul society in its various aspects at the turn of the century during 4Abd al-Ḥamîd II’s autocratic rule. A Karâgâs (g.v.) performer and his talented daughter with a beautiful voice who live in a back street of Istanbul (“in the quarter of fly-ridden grocers”) are the central characters of the novel, assisted by a great number of secondary heroes, including the inevitable Hamîdîncâm and Young Turks (synopsis in Litteratur-Lexicon, see Bibliogr.). This popular novel was presumably conceived to cater for a foreign audience in search of exotic details which explains its somewhat artificial “mystic” atmosphere and its unconvinving dénouement. It was followed by Tatarch (”The Little Tatař”) in 1939, an equally unrealistic description of the generation of the young people grown up during the author’s years of exile (for a synopsis, see op. cti., and Muzaffer Uyguner, Halide Edib Aðavur, Istanbul 1968, 63). After 14 years of absence, Khalide Edib settled down again in an old district of Istanbul where she soon built up a large circle of friends, but also discovered the new world of the Anatolian peasants and small town-dwellers who had moved to Istanbul. Most of her novels written after the last two mentioned above, particularly Sonsuza ânay (”The eternal fair”, 1946), Dönem ayına (“The revolving mirror”, 1954), Akle Hamın sokağ (“Akle Hamın Street”, 1958) contain a realistic rendering of her personal experiences and of her observations of Turkish society in the late 40’s and the 50’s, and describe powerfully the panorama of the various types and problems of a society in the process of rapid political and social change in the years following the World War II.

Her novel Yeşil Türan (serialised in Tanın in 1912 and published the same year, German tr. by F. Schrader, Das neue Turan, 1916) stands by itself as a fruit of her brief courtship with Pan-Turkанизm or Pan-Turkism, supported at the time by the CUP (synopsis in Litteratur-Lexicon, see Bibliogr.); although she later rejected Pan-Turkism as a political creed (Halide Edib, Türkiye’de şarîh, çarşî ve Amerikan tesirleri, Istanbul 1956, 99-101), this novel is nevertheless imbued with the strong nationalistic spirit that characterises most of her writing. The obvious failures in the post-1908 period of Ottomanism and Pan-Islamism, served further to strengthen her national consciousness (Memoirs, 312, 329-34), and during the traumatic years 1911-22, her exuberant nationalism mellowed and was further enriched with her experiences in exile.

Some of her short stories have been collected into three books: Dağka iîham kurt mentioned above; Kharâb ma’dîlî (1911, 4th ed. 1973) which contains her earliest work; and the posthumous miscellaneous collection Kübbede kalan hoş sada (Istanbul 1974).

Khalide Edib wrote her memoirs in two volumes in English during her years of exile in England (Memoirs of Halide Edib, New York 1926 and The Turkish ordeal, New York 1928). Apart from their intrinsic literary value, these volumes are of invaluable documentary importance for her biography up to 1922 and for the background of many events in Turkish history between 1900-22. In these, she is extremely honest and candid in recording everything about her own life and, on the whole, fair and balanced in her description and judgement of other people. Thus she is generous in praising many leading men like Talât, Djemîl and ɬîmât Fâshas; but she loses her sense of balance and fairness frequently when she discusses Muştâfa Kemâl Fâshâ, recognising his unquestionable superiority, his almost superhuman energy and his powers of command, but recognising also his obstinacy. This makes her vacillate between praise and blame; she is unfair to the point of conspicuously leaving out the name of the hero of Gallipoli while referring to that campaign (Memoirs, 384), and elsewhere complains that “Turkish people are always the victims of hero worship, especially in military affairs” (Memoirs, 341). All this is of course the result of the fundamental conflict between her own liberal views and the radical nationalism of Muştâfa Kemâl. Khalide Edib published substantially shortened and altered Turkish versions of her memoirs: Mor saltımsî ev (serialised intermittently in Yeni İstanbul, 1951-55 and published 1963) and Türkün ateşle imtihan (serialised in the weekly magazine Hayat as Millî mücadele hatatlar, 1959-60, published 1962) in which much of the controversial material has been either left out or toned down. Khalide Edib is not always careful with dates; her chronological data should be used critically.

Apart from her English novel already mentioned, Khalide Edib published three books in English while
Abroad. The first two are based on her lectures in America and in India: Turkey faces west, New Haven 1930 and Conflict of east and west, Turkey, later
1935. The third book, Inside India, London 1937, contains her impressions and thoughts on a country which she "felt to be nearer to my soul-climate than any other country not my own" and where she met Mah- 
ma Gandhi and all the outstanding nationalist leaders of the sub-continent. The Turkish version Hindistan’ a 
davranışı was serialised in Yeni Sabah in 1940, but not published in book form. Khalide Edib was always 
keenly interested in the theatre, but wrote only two plays, which had no success: the experimental 
Kenan cobanlanar (produced in Syria 1916, published in 1918) and Maske ve rüh (serialised in Yedigün in 1937-8, published in 1945, 
English version Masks and souls, 1953). She directed the translation of four plays of Shakespeare in the Department of 
English of Istanbul University: Hamlet (1941), As you like it (1943), Anthony and Cleopatra (1943) 
and Coriolanus (1945), and she translated herself George Orwell’s Animal Farm (Hayvan çiftliği, 
serialised in Cumhuriyet in 1952, published in 1954). Her research work mainly consists of a history of 
English literature from the origins to the end of the 17th century in three volumes, İngiliz edebiyati 
tarihi, Istanbul 1949-50.

Khalide Edib’s language and style have always been severely criticised both by fellow writers and critics (Rüşün Eşref, op. cit., passim; Cevdet Kudret, Türk edebiyatında hikaye ve roman, ii, Ankara 1970, 66-7). It is true that her language is often awkward and ungrammatical, her style undistilled and unpolished, but it is equally true that this warm and extremely 
personal style has a strange charm and an immediate impact upon the reader. As a great 
admire of folk literature, she had always disliked 
and the role of Victor Hugo in introducing such in-
fluences between Arabic and European (mainly French) 
literature, their respective developments, the in-
fluence of Arabic literature on European literature, 
and the name of the author given. His other works were 
mainly political and scientific, such as Al-İnkibâb 
al-‘Uthmânî wa-Turkiyê ‘l-Fatât was lithographed 
and dated Bordeaux, 7 October 1908, probably in 
the author’s own writing, and further published 
in al-Hilal, xvii (1908), xix (1909), xxi (1910) 
with the title Al-İnkibâb al-siyâsî al-‘Uthmânî. 
Al-İnkibâb also wrote Al-Mukaddima fi l-mas’ala 
al-shariyya mûndûra nașîtîkah ‘l-alâ al-ırbû 
al-thâni min al-karn al-‘lâmîn ‘sâgar (Jerusalem 1925?); Al-Kimyâ’în al-‘Arab (Cairo 1953) 
Risâla fi surat ihtîyâr al-dîn al-Muhammadi fi 
asâm al-‘lâm al-İslâmî (Tripoli 1341/1826); and an 
edition of a booklet by Sa’d al-Dîn al-İnkibâb, 
known as Ibn al-Dîrî, entitled al-İbâb fi ‘l-lukm wa 
‘l-imthân al-‘âlah al-ıbrâ al-ıshûr al-mâl (1321/ 
1903). There are other works still in manuscript.

(S. Moreh)

AL-KHALIDIVAN, the name generally given 
to two poets of Sayyf al-Dawlawa’s [q.v.] entourage, 
the two inseparable brothers Abû ‘Uthmân Sa’d/ 
Sa’dî (d. 350/961) and Abû Bâvr Mûhâmmad (d. 380/990), sons of Hâshim b. Sa’dî b. Wa’îla. 
Theisson had originally from a village of the region of al-
Mawsil called Al-Khâlidiyah (Yûkût, ii, 390), 
and possibly lived for some time in Başra (Yâkût, Udayâb, 
xi, 208 affirms this and attributes to Abû ‘Uthmân 
the ethnic designation of al-Baṣrî), but became 
celebrated above all as the librarians of Sayf al-Dawlawa, 
to whom they dedicated their occasional verse. 
They attracted notice through their rivalry with al-Bâvâfâ’ 
[q.v.], who accused them of plagiarism through the 
use of their prodigious memory; Ibn al-Nâdim 
describes the gap at this, and gives a reply via Abû 
Bakr that he knew by heart a thousand books (sîf) 
each of a hundred leaves. Their poetic works, of 
which specimens can be read in al-Tha‘labî’s Yâsîma, 
i, 507-70, were gathered together by Abû ‘Uthmân 
into a diwan which has not, it seems, been preserved. 
However, two anthologies compiled by the brothers, 
Hamâsât shîr al-mubâhîl (or al-‘ââdâb wa l-
naṣî‘îr) and al-Hâdîyâ wa l-‘lûtâb, are extant (Ibn 
Brockelmann, i, 147, S 1, 41, 226); also attributed 
to them is a Mubâhî min shîr Bâbrîhî, known 
through a selection made by Abû Tâhir Ismâ‘îl-
A study of the caliphate, its institution and subsequent developments, has never been attempted in its entirety until the present. The principal reason for this is that it has not seemed possible to conduct such a survey independently of historical studies relating to different reigns, which are still in most cases insufficient, or even non-existent, whereas studies of doctrine, while more advanced, have not been developed to the same extent with regard to the various periods. The tentative attempts that have been made have therefore been superficial, or lacking sufficient historical perspective. Here we must confine ourselves to making a brief statement of the question and stressing the problems, rather than attempting a complete exposition, which, to do justice to the subject, would require treatment at too great length.

A. The first period

In a sense, the institution of the caliphate was born on the day after the death of the Prophet when the new head of the community, in the event the trusted Companion Abū Bakr, became in 11/632 khalfat rasūl Allāh. The date and the circumstances of the appearance of this institution would seem therefore to be well-established, but two questions arise at once. First, how did the designation of the first caliph take place, and was the procedure adopted observed in subsequent cases? Second, what powers were attributed to this “successor” of the Prophet?

As regards the first point, the tradition adopted by the majority of historians tells of the acclamation of the new caliph by the leading Companions, who gave him an oath of allegiance; this was the first bay'a. Whatever were the circumstances under which this proclamation was made, whatever pressures were applied by 'Umar to the congregation to have Abū Bakr recognized, whatever may have been the protests of 'Ali and his supporters, it seems to have been accepted from this time onwards that the oath of the Believers, to which corresponded the promise of the new chief to lead the community on the right path, alone conferred upon him the succession.

For the two caliphs who followed, variations in procedure should be noted. Abū Bakr, before his death in 13/634, had, according to the chroniclers, personally designated his successor in the presence of 'Umar. The community of Believers was not there-fore in a position to state its own wishes, but got the chance to ratify this oath. The fact in fact, was taken only by the Companions present at Medina, which explains how the authority of 'Umar could be disputed by certain groups dispersed elsewhere in Arabia, who refused to pay the legally-assessed poor tax [see RIDDA].

'Umar, before dying in his turn in 23/644, had decided that a group of six persons, including among others 'Uthmān and 'Abd, should choose his successor from among themselves. After discussion the choice fell on 'Uthmān, who then received the oath of allegiance. So even with the designation of the first three caliphs, three different methods were explored; all, however, were only to be put into effect if ratified by the community, or by its most influential and closest members.

The second question, that of the powers exercised by the new leaders of the community, is more problematical, since these powers were not at the time defined in a precise fashion. One cannot base conclusions on the sense of the title khālīfa (see above) which, suggesting at once the ideas of succession, appointment and authority, remained somewhat vague. These powers seem, essentially, to have authorized the first three successors of Muhammad to pursue the actions previously set in motion by the Prophet himself for the expansion of Islam and to put into practice the regulations set out in the Kur'ānic message, which was to be supplemented by the Sunna instituted among the community of Believers in the lifetime of the Prophet.

The continuation of the work begun by the Prophet was seen during the time of Abū Bakr in the fight against the dissidents of Arabia, soon followed by raiding operations to the north which became a vast movement of conquest. From this time onwards the caliph assumed the role of army commander, and military operations, conducted against infidels or against rebellious Muslims who, for one reason or another refused to accept his authority, became one of his most important responsibilities.

Meanwhile, questions of law, relating to the spheres both of the cult and of social relations, were posed to those caliphs called by the tradition rājdān, that is to say "those who walk in the right way", as opposed to those who came later and were accused of making the caliphate a family possession. Thus 'Umar was obliged to take decisions concerning the penal law, certain types of inheritance and the practice of the law of retaliation (Shahrastānī, Mi'llāh, Cairo, i, 38). To him also are attributed some initiatives in matters of ritual, culminating in the attempt, carried on by 'Uthmān, to set in motion the establishment of the text of the Kur'ānic “vulgate”.

It was also in the time of 'Umar that for the first time the question was raised of the financial organisation of the Islamic state. Since members of the Arab tribes were entitled to endowments, 'Umar instituted the diwan, a register in which the names of beneficiaries were inscribed. In addition, the troops were entitled to a share of the booty, which was gradually replaced by a pension, registered in the same way. The organisation of the diwan [q.v.], first established at Medina, later in all the principal cities of the empire, was thus linked to that of the fiscal system, on which it is not possible to dwell here. Let it be said only that it was at the initiative of the two caliphs 'Umar and 'Uthmān that a treasury was established, which collected and from which were distributed the revenues supplied first by booty, later by property taxes. As this treasury
also met some expenses of communal interest, it should have been seen as the beginning of a financial system which was not strictly in accord with Qur'an principles for the distribution of booty, but which was made necessary by the development of the new State [see BAYT AL-MāL]. This innovation was one of the causes of the troubles which culminated in the assassination of Uthman in 65/656.

Another cause was the choice by Uthman of members of his own family to undertake the government of the principal provinces; in acting thus he was in effect supplanting the earliest converts to Islam, who by virtue of this title had in general more right than the descendants of Abu Sufyān to participate in the organisation of the community. Two concepts of power came into conflict here, of which one consisted in observing strictly the principles of the Qur'ān and giving pride of place to the "first converts", while the other paid greater attention to the efficiency of the apparatus of government. After the confrontation which took place between 'Ali and Mu'awiyah, following the judgement of 'Ādhrūb [q.v.], the second concept held definitive sway.

The murder of Uthman and the events which followed posed to the Islamic community the problem of knowing whether a caliph could be deposed for neglecting his duties. It seems that it was at this time that there appeared the sect later to be known as the Khawārij which declared the principle that the caliph must not under any circumstances deviate from the ordinances of divine origin (see the interpretation by W. Montgomery Watt, The formative period of Islamic thought, Edinburgh 1973, 14-15). The judgement of 'Ādhrūb itself, the principle of which was denied by the Khawārij on the grounds that the cause of good could not be set under discussion, implied a conception of the caliphate according to which the holder of power must answer for his actions, and the justification chosen by Mu'awiyah to explain his action against 'Ali was the defence of the rights of his kinsman, "unjustly" assassinated at the instigation of his political enemies.

The Umayyads, however, on becoming installed in power, made efforts to eradicate this notion of moral responsibility. At the same time as they had the principle of dynastic succession recognised, they maintained the idea that unconditional obedience was owed to the reigning caliph. Thus Yazīd and his successors paid no heed to the proclamation as caliph of 'Abd Allāh b. al-Zubayr [q.v.] at Medina in 61/681 nor to the declaration of dethronement pronounced by the leading citizens against the son of Mu'awiyah. It was their opponents, of the movement called Kadarī, (see Kadrīyya), who vindicated the right to judge the actions of the sovereign, establishing a doctrine which was invoked by Yazīd III, pretender to the caliphate, to justify his revolt against al-Walid II, accusing him of misconduct. As for the revolutionary movements which appeared at this time, some of them were of a Kharidjī tendency, demanding of the caliph particular moral qualities (they succeeded in proclaiming Kātari b. al-Fudājā [q.v.] caliph in Fārs and Kirmān; he bore the title amīr al-muwāminin and coined money in his own name for ten years, 69-79/688-99), while the others followed more or less strictly the Shi'ī tendency, that is to say, demanding the accession to the caliphate of either a descendant of 'Ali, or in the case of the 'Abbāsid party, of an unspecified member of the Family of the Prophet. It was therefore the legitimacy of the Umayyads that they contested, while at the same time they strove to discredit them, denying their adherence to Islamic principles and accusing them of having usurped their legitimate rights; the origins and the actions of the ruling caliphs thus being called into question.

On their side, the Umayyads were not content with imposing the notion of unconditional obedience to the caliph; they established at the same time, in effect, the dynastic caliphate. Without abandoning the principle of election followed by oath of fealty (bay'a), Mu'awiyah accomplished his object by means of an election guaranteeing in advance that his son Yazīd would be recognised as his successor. The same procedure was used for the designation of Mu'awiyah II. But on the death of the latter, the problem of succession arose once more, and the Arab "nobility", meeting at Dābiyya, made free use of their right to proceed to the choice of a new caliph, without however denying the fact that he should belong to the family of the Banū Umayya. A cousin of Mu'awiyah, Marwān, was duly appointed caliph; to the branch called Sufyānid, there succeeded the Marwānid branch to which belonged all the subsequent Umayyad rulers, all of them nominated by their predecessors, with the exception of the rebel Yazīd III. In fact, from the time of 'Abd al-Malik onwards, the caliph was in the habit of leaving a written designation, called 'ādād (whence the granting to the new caliph the title wali 'l-'abd, in the sense of beneficiary of a contract concluded between him and the community). The testamentary nomination, bearing the signature of witnesses of repute, thus became the essential mandate which had executive force and relegated the ceremony of the bay'a to a position of secondary importance. It was also the practice for the caliph to nominate two heirs; but such nominations were not acted upon unless an order of precedence had been set.

The heir was most often a son of the ruling caliph, or in the case of the 'Abbāsid branch, his successor paid no heed to the proclamation as caliph of 'Abd Allāh b. al-Zubayr [q.v.]. At Medina in 61/681, nor to the declaration of dethronement pronounced by the leading citizens against the son of Mu'awiyah. It was their opponents, of the movement called Kadarī, (see Kadrīyya), who vindicated the right to judge the actions of the sovereign, establishing a doctrine which was invoked by Yazīd III, pretender to the caliphate, to justify his revolt against al-Walid II, accusing him of misconduct. As for the revolutionary movements which appeared at this time, some of them were of a Kharidjī tendency, demanding of the caliph particular moral qualities (they succeeded in proclaiming Kātari b. al-Fudājā [q.v.] caliph in Fārs and Kirmān; he bore the title amīr al-muwāminin and coined money in his own name for ten years, 69-79/688-99), while the others followed more or less strictly the Shi'ī tendency, that is to say, demanding the accession to the caliphate of either a descendant of 'Ali, or in the case of the 'Abbāsid party, of an unspecified member of the Family of the Prophet. It was therefore the legitimacy of the Umayyads that they contested, while at the same time they strove to discredit them, denying their adherence to Islamic principles and accusing them of having usurped their legitimate rights; the origins and the actions of the ruling caliphs thus being called into question.

On their side, the Umayyads were not content with imposing the notion of unconditional obedience to the caliph; they established at the same time, in effect, the dynastic caliphate. Without abandoning the principle of election followed by oath of fealty (bay'a), Mu'awiyah accomplished his object by means of an election guaranteeing in advance that his son Yazīd would be recognised as his successor. The same procedure was used for the designation of Mu'awiyah II. But on the death of the latter, the problem of succession arose once more, and the Arab "nobility", meeting at Dābiyya, made free use of their right to proceed to the choice of a new caliph, without however denying the fact that he should belong to the family of the Banū Umayya. A cousin of Mu'awiyah, Marwān, was duly appointed caliph; to the branch called Sufyānid, there succeeded the Marwānid branch to which belonged all the subsequent Umayyad rulers, all of them nominated by their predecessors, with the exception of the rebel Yazīd III. In fact, from the time of 'Abd al-Malik onwards, the caliph was in the habit of leaving a written designation, called 'ādād (whence the granting to the new caliph the title wali 'l-'abd, in the sense of beneficiary of a contract concluded between him and the community). The testamentary nomination, bearing the signature of witnesses of repute, thus became the essential mandate which had executive force and relegated the ceremony of the bay'a to a position of secondary importance. It was also the practice for the caliph to nominate two heirs; but such nominations were not acted upon unless an order of precedence had been set.

The heir was most often a son of the ruling caliph, or in the case of the 'Abbāsid branch, his successor paid no heed to the proclamation as caliph of 'Abd Allāh b. al-Zubayr [q.v.]. At Medina in 61/681, nor to the declaration of dethronement pronounced by the leading citizens against the son of Mu'awiyah. It was their opponents, of the movement called Kadarī, (see Kadrīyya), who vindicated the right to judge the actions of the sovereign, establishing a doctrine which was invoked by Yazīd III, pretender to the caliphate, to justify his revolt against al-Walid II, accusing him of misconduct. As for the revolutionary movements which appeared at this time, some of them were of a Kharidjī tendency, demanding of the caliph particular moral qualities (they succeeded in proclaiming Kātari b. al-Fudājā [q.v.] caliph in Fārs and Kirmān; he bore the title amīr al-muwāminin and coined money in his own name for ten years, 69-79/688-99), while the others followed more or less strictly the Shi'ī tendency, that is to say, demanding the accession to the caliphate of either a descendant of 'Ali, or in the case of the 'Abbāsid party, of an unspecified member of the Family of the Prophet. It was therefore the legitimacy of the Umayyads that they contested, while at
policy, sometimes directly concerning the sphere of Qur'anic precepts. They were obliged for example to define the place that non-Arabic converts, non-Arabic becoming mawdli, might take in the organisation of a state where the reins of power were held by Arab Muslims. Also, the exigencies of the conquests in the west led them to employ the services of Berber contingents, who played an active role in the conquest of Spain and whose status raised difficulties from that time onwards. More delicate was the fiscal problem, which the caliph 'Umar b. 'Abd al-'Aziz was obliged to settle by means of an edict. His decision to establish fiscal equality between the original Muslims and the converts having proved impossible to put into effect, it was decided to retain the former land-taxes, irrespective of the religion of the occupant of the land. Thus was established the form of the levy called dhizya, whereas new converts were required to pay a higher tax than that levied on the original Muslims for the lands that they possessed subsequent to the conquest. Hence to this period belongs the definition of the bharadji and dhizya taxes, an important stage in the development of Islamic law, the process of which can only be grasped with difficulty, but which is to be attributed to the activity of the Umayyad caliphs.

B. The 'Abbāsid caliphate until 658/1260

New modifications to the concept of the caliphate were brought about by the 'Abbāsid dynasty, which assumed power in 132/750 and retained it in 'Irāk until 658/1260, then in Egypt until 923/1517. Its members presented themselves as belonging to the family of the Prophet, and it was with this title that the first among them to accede to power justified their action. They thus maintained the thesis according to which the caliphate must revert to the kinsmen of the Prophet, and more particularly to the descendants of al-'Abbās, who were considered to be the best qualified. Nevertheless, this 'Abbāsid legitimism raised difficulties in establishing principles usable against 'Abd claims. The principal argument, employed very frequently by the caliph al-Mansur in his controversy with the Hasanid Muhammad b. 'Abd Allah, and subsequently developed on several occasions by the sovereigns themselves or by their panegyrist, followed the principle of right of succession: the descendants of al-'Abbās, son of the Prophet's uncle, must take precedence over the "sons of the daughter", that is to say, over those who were descended from the Prophet through his daughter Fātimah and who were related to his two grandsons al-Husayn and al-Hasan. As this argument did not always appear sufficient, the caliph al-Mahdi sought to adduce in addition the thesis according to which al-'Abbās had been nominated by the Prophet himself as his successor. Quite independently of this attempt, which did not last long, the panegyrist for their part strove to prove the eminent qualities of al-'Abbās, protector and nephew of the Prophet. The legitimacy of the 'Abbāsids thus depended on various arguments, whose vague changed with the times, arguments which were sometimes radically opposed to those upon which the Umayyad legitimism had been based and which sometimes approximated to them, as when the panegyrist inevitably proclaimed that the sons of al-'Abbās were "the best of Kuraysh". This legitimism never ceased in defining themselves as the uniquely recognised, even when the "great amirs" of Shi'i persuasion held power, and it was in a sense consolidated by the arrival of the Saljūqs who, taking control of the empire, nevertheless upheld the Sunnī caliphate as it was then established.

Previously, the most dangerous challenge had taken place during the reign of al-Ma'mūn, when this caliph attempted to nominate as his heir the 'Alid ʿAli al-Riḍā, considered by him "the best of the descendants of ʿAli and of al-ʿAbbās". This attempt did not amount to an adoption of the Shi'i point of view; rather, it aimed at restoring vigour to a broader Hāshimi legitimism, which would have permitted the choice of the imām from one or the other of the branches of the Hāshimi family. To this new legitimist concept was linked a doctrine of Zaydi inspiration, according to which the office of imām must revert, in the context of a defined line of succession, to the most deserving. If the attempt failed, it was through the opposition of circles in 'Irāk who showed their attachment to the 'Abbāsid family and their hostility to the new religious policy of al-Ma'mūn, which the latter was forced to abandon.

Whatever may have been the basis of 'Abbāsid legitimism, it was the priority of the ruling caliphs to reinforce the theocratic nature of their power. The same expressions were employed in their case as in that of the Umayyad caliphs. Al-Mansūr declared himself, it is said, "the power of God on earth" (sulṭān Allāh fi ardi-hi) and the caliphs exacted, like all their predecessors, a duty of unconditional obedience which was founded, from the 3rd/9th century onwards, on the concepts of traditionists of the Hanball persuasion. In addition, the royal titles adopted by the sovereigns stressed the charismatic quality of their power: the second caliph had himself named al-Mansūr, "he who receives the victory from God", the third, al-Mahdī, "he whom God leads in the right way", a title which tended at the same time to assimilate the caliphs to the 'Alīd imāms. Subsequently, the honorifics al-Āmin, al-Ma'mūn and al-Wāthik bi-llah, stressed rather the piety of those who bore them; but the personal link between the caliph, and the divinity guaranteeing his power remained strongly marked. One may add that from the reign of al-Ma'mūn onwards, the caliphs did not disdain the title of imām, previously considered to be of too Shi'i a flavour.

Also, the dynastic principle was applied in the same fashion as under the Umayyads, the heir being most often nominated by the ruling caliph after consultation with the most influential supporters of the régime. The procedure adopted bore a solemn character on some occasions; thus the testament of Hārūn al-Rashīd, which named two heirs, establishing a kind of division of the empire between them and specifying the rights and obligations of each towards the other, was displayed in the Ka'ba at Mecca in 285/898; the same procedure was used for the testament of al-Mu'tamid in 261/874.

But as in the preceding period, no rule determined this choice, and the caliph could just as well nominate a distant cousin as one of his sons. It was nevertheless to a son that the sovereign most often sought to bequeath his office, on condition that the son was of the required age or close to it, that is to say, to the age of majority. This need was admitted by all, as it had been already in the Umayyad period, but not the procedure for its application. On the one hand, a minor could be designated heir, since normally he was not required to assume immediately the function of caliph; on the other hand, the age of majority was not fixed in a precise fashion. It was only in 296/908 that the nomination of a caliph, 13 years of age, al-Muṣṭafīdīr, set a kind of precedent.
The practice of testamentary nominations posed another problem when these contained two names. It often happened that a new caliph sought to cancel the act established by his predecessor, so as to replace the person chosen as second heir and now becoming first heir—his brother most often—and to substitute for him his son, for example. It was necessary in such cases to obtain the abdication of the heir, since there was no procedure allowing for the dismissal of an heir, just as there was none for a caliph, and it was considered that the oath of allegiance already given was binding upon the heir as it was upon the community. In consequence, it was almost always by means of more or less violent persuasion that heirs considered to be undesirable were forced to renounce their rights.

As in the preceding period, it happened sometimes that a caliph died without having designated an heir. The choice then reverted to the community or at least to its most prominent representatives. On the death of al-Wâhiq in 232/847, it was a select committee composed of the chief-kâdî, of the vizier and some of the officers of the Turkish guard, who proceeded to the nomination of the future al-Mutawakkil. However, at the times of the sickness of al-Muktafi in 269/980, it was the vizier and the leading officials of the court who chose a caliph, who had not chosen an heir. So the composition of the electoral council varied according to the circumstances.

Under the 4 Abbâsids, no more than under the Umayyads, was there a procedure for deposing a ruler for moral faults. Where attempts were made to do this, it was a case of local councils, convoked in an arbitrary fashion, proclaiming the dethronement of the ruling sovereign or of the heir presumptive, and these had no more than a limited influence on the course of events. Examples of this were seen when al-Ammân and al-Mâ'mün declared another one deposed, or when the population of Baghdâd refused to obey al-Mâ'mün and proclaimed as caliph Ibrâhîm b. al-Mahdî [q.v.]. In fact, these situations always culminated in a trial of strength, and the judicial death sentence, dismissal or abdication of one of the rivals produced each time a judicial solution.

On the other hand, each abdication registered officially by the kâdîs led to an interregnum, and abdications were frequent in the history of the 4 Abbâsî caliphate. There were almost always forced abdications. One caliph, al-Kâhir [q.v.], who refused to bow to pressure, had his eyes put out, by which means he was legally incapacitated from fulfilling his duties. But instances of forced abdication were particularly flagrant in the period of the Buwayhid amîrs, who brutally deposed two caliphs to replace them with princes of their own choosing. The grand-amîr then convoked each time an electoral college comprising the principal dignitaries of the State as well as jurists and members of the 4 Abbâsî and 4 Aflîd families; but his own opinion was the only decisive one in the final choice.

It is only in the 4 Abbâsî period that one sees in the texts the office of caliph as clearly accompanied by insignia worn by the caliph when giving audience; there is mention of the cloak attributed to the Prophet (bûrda [q.v.]), his sceptre (kâdîf [q.v.]), and of a high bonnet (kalânsûwa), which first appeared no doubt in the Umayyad period (although the information concerning ceremonial in this period remains of dubious interpretation); in addition, in the 4 th/10 th century, a copy of the Kurân of Uthmân was carried ostentatiously by the caliph. Insignia of this kind, recalling to a greater or lesser extent contemporary or previous courtly practice, had the object of stressing the eminent qualities of the “successor of the Messenger of God”, and a full etiquette governed the conduct of audiences, requiring from visitors and officials precisely defined marks of respect: the principal one being the kissing of the carpet (tâbâhî) on coming face-to-face with the sovereign, if not kissing his hand. A similar symbolism marked the manners of solemn processions, and when the caliph appeared in public outside the palace he was preceded by the chief of police bearing the lance (harba), at once the symbol of authority and a reminder of the customs of the Prophet.

Between the 2 nd/8 th and the 4 th/10 th centuries, the functions of the caliph are easy enough to determine, using the information supplied by the ancient chronicles. The caliph was then seen as the guardian of dogma, and in this capacity opposed innovations (bîda*) and all that was considered to be such. He was thus permitted to play a full part in the formulation of doctrine, and numerous examples of this may be cited: al-Mahdî ordered for example the persecution of the zîndîlîs [q.v.]; al-Mâ'mûn and his two successors sought to impose Mu'tazilism as an official doctrine, al-Mutawakkil sought to impose in particular the notion of the “created” nature of the Kurân; later, al-Mu'tadîd sought to curb the activities of popular preachers of traditionalist tendencies; al-Râdîl [q.v.] condemned Hanbali theodicy; al-Kâdir [q.v.], in the full swing of the Buwayhid period, proclaimed his adherence to a profession of faith of Hanbali inspiration in an attempt to prevent the dissemination of other doctrines. On the other hand, the caliphs did not participate in the formulation of law; al-Mansûr did not take up the suggestion of Ibn al-Mukaffâ [q.v.], to establish a uniform code of law to which judges would be obliged to refer, and from this time onwards, the judicial schools were established, independent of all interference from the caliph. The measures which the caliph could take in the judicial sphere were thus heavily limited to decrees applying to fiscal matters, although he was obliged, in his capacity as leader of the community, to ensure that the law was observed in all its various aspects.

The caliph was the imâm [q.v.] par excellence, and conducted the Friday Prayers in the great mosque. At the end of the 3 rd/9 th century, however, he was exercising this function only in the great mosque of the caliph's residence, leaving to delegated officials the task of conducting the prayers and performing the khutba [q.v.] in the other great mosque of the capital. Similarly, he performed the Pilgrimage in his official capacity or sent a delegate on his behalf. Many of the earlier caliphs performed this religious duty in person, sometimes more than once, as in the case of Harûn al-Râshîd.

In the same way, the caliph was expected to preside over the periodic expeditions against the lands of the infidel. This was done in person by Harûn al-Râghîd, then by al-Mâ'mûn, while subsequent caliphs delegated this duty to appointed officers. He also conducted campaigns against rebels, whoever these might be; but when operating against particularly ferocious enemies such as the Zandî [q.v.], he would delegate his powers to an effective regent, in this event, al-Muwaffâkî, brother of the sovereign al-Mutâmîd. The maintenance of order was in fact one of the normal obligations of the caliph, who was
obliged to defend the community against all types of subversion. It was also the caliph who was obliged to deal with those governors who demanded financial autonomy and the hereditary status of their office. On the other hand, it was his duty to ensure the normal exercises of the judiciary in nominating directly—as the practice had been established since the start of the Abbasid caliphate—the kādīs, who were themselves subject, from the reign of Harūn al-Rashīd onwards, to the intermediate authority of the kādī l-khudādī. So the caliph delegated his powers to magistrates, but he reserved the right to arbitrate as a last resort in cases of litigation and to settle differences arising between administrators and administered. It was the practice of “redressing of wrong” that every caliph conscious of his reputation conducted in person, while other entrusted it to persons specially appointed for this purpose.

Finally, the caliph ensured the well-being of the state, though this concept was to some extent ignored in the middle period of Islam—that is to say, he ensured the material life of the community. In particular, he managed the levying of taxes of which the revenues were subsequently distributed between soldiers and officials, and these taxes were levied according to rules established at the end of the Umayyad caliphate [see DZIYAH, KHZRĀJ, 'USHR, ZAKĀT]. The collection of these taxes was entrusted to agents of the caliph, the 'ummālī, who collected sums in cash or contributions in kind from the administered peoples, or to “tax-farmers”, who sent to the treasury a lump sum and then recouped the equivalent by means of the sums collected in the territories entrusted to them; the method used remained at the discretion of the caliph. The system varied according to different regions and periods at the will of sovereigns constrained to a greater or lesser extent to cover continually rising expenses; but financial difficulties led the caliph to make a general practice of the farming-out of the taxes, advantageous in the short term but later to prove dangerous, and in the long term making the caliphs dependent on these tax-farmers.

Nevertheless, the details of the powers thus exercised by the caliph and related in precise fashion in the historical texts do not suffice to clarify completely the technicalities of a situation in respect of which two kinds of questions are posed. The first kind arises from the impossibility of deciding with certainty in what measure the authority of the caliph was, or could be, arbitrary or despotic. Certainly, the arbitrary exercise of power was in principle limited by the existence of the law, which the caliph was bound to respect, while enforcing it upon others, and which forbade him in particular to put a Muslim to death, except in precisely defined circumstances. But on the other hand, the duty incumbent on the caliph to suppress all rebellion gave him in this capacity a free hand in treating as a rebel against Islam every rebel against the dynasty, and thus in eliminating, sometimes in summary fashion, the enemies of his own policy.

The second set of problems arises from another difficulty, that of deciding to what extent the caliph himself exercised the powers with which he was invested. It is certain for example that the representatives of judicial authority enjoyed a certain degree of independence, in that they possessed knowledge and technical ability to which the caliph could only with difficulty lay claim; cases of resistance to the caliph on the part of provincial kādīs, or even of the chief kādī of Baghdad, were not uncommon. It is certain also that the arbitrary exercise of the powers of the caliph was restricted, after the end of the 3rd/9th century, by the establishment of High Courts, before which individuals accused of treason or heresy were most often tried; in this period, only rebels caught bearing arms were executed or subjected to torture in a manner not authorised by the law; others were tried before courts where the final decision was taken by one or the other of the kādīs of Baghdad, playing the role of chief magistrate, although the caliph was not bound to ratify this decision.

In addition, it should be noted that in numerous other fields, between the 3rd/9th and the mid-4th/10th century, the caliph no longer reserved for himself the conduct of affairs. We cannot speak in this context of a steady progression, since we observe on the part of some sovereigns reactions in the opposite direction, which were generally of short duration. The evolution was, however, none the less irreversible and the main beneficiary was the vizier [see wazīr], a man of trust and reliability whose title appeared at the start of the Abbasid regime, without from that time onwards being necessarily attributed in a regular fashion. It was to him that the caliph most often delegated the conduct of administrative affairs, and subsequently matters of general policy, including dealings with the governors of provinces and military affairs. The vizier was, however, entrusted with nothing more than the execution of political decisions which he had previously formulated and which had received the approval of his master; he was regularly accountable to him and could be dismissed at any moment, as could any agent of the sovereign, and was only the “minister” par excellence of the caliph, employed by him for as long as his activities gave satisfaction and liable to be replaced as soon as he ceased to please. The arbitrary will of a caliph who apparently disassociated himself from the conduct of affairs but wished nevertheless to retain the exercise of power, was much in evidence in these appointments and dismissals, of which we see examples in the reigns of Harūn al-Rashīd and al-Muktadir. On the other hand, it should not be forgotten that the caliph would have difficulty in holding cheap the services of a supporter who could assure him of such-and-such a group of partisans and faithful servants, without whom it would be impossible to govern, and from among whom originated the viziers. Even if there existed among the administrators themselves rival cliques which encouraged the exercise by the caliph of arbitrary power, the presence of these persons, linked to the régime which supplied them, according to the circumstances, with more or less high offices, remained an element of stability likely to discourage abuse of personal power in the golden age of the caliphate.

After the middle of the 4th/10th century, the caliphs ceased to exercise their authority in person, and even ceased to control those to whom they had delegated this authority, in whole or in part. It was then that there began the period of the “grand-amīrāt”, to be replaced a century later by the sultānate. The chief characteristic of this period is that the delegate of the caliph appeared first as a military commander and that after 356/965, that is to say ten years after the appointment of the first “grand-amīr”, a dynasty of grand-amirs was established and the caliph was not permitted to interfere in the succession of these new officers. The authority that the latter exercised in all matters relating to
the administrative, financial and military spheres was nevertheless officially delegated from him, and the caliph retained, in theory at least, the right to appoint agents. It was thus that he succeeded, in certain exceptional cases, in exercising real power, and in one known instance, the Buwayhid amir was unable in spite of all his efforts to obtain for a Husaynī sharif nomination to the post of chief kādī. For, besides doctrine, the area in which the caliph continued to exercise some influence was the judiciary. There was, however, no clear-cut separation of functions between the caliph and the amirs, and it would be inaccurate to say that the latter exercised "temporal power", while the caliph retained a limited authority in "spiritual" matters. Not only did the caliph consider himself entitled to intervene in all areas of policy, but the amirs did not hesitate to use their authority for settling religious affairs, e.g. in promoting the celebration of specifically Shi'i feasts.

Moreover, the relations established between the caliphs and their amirs varied constantly. There was during the second half of the 4th/10th century a period when caliphs were frequently dethroned or forced to abdicate to be replaced by persons chosen by the amirs, although the latter did not always obtain this means the result envisaged. On the contrary, in the first half of the 5th/11th century the caliphs al-Kādīr and al-Kā'im were able to nominate their own heirs and enjoyed a resurgence of power, feeling themselves supported by the Ghaznavid amirs who appeared in Khorāsān and actively upheld Sunni policies there. However, at this time there appeared the first examples of titles compounded with din and attributed to certain local amirs, to Buwayhids as well as Ghaznavids. This practice, the origin of which cannot be definitely identified, doubtless did not correspond so much to a new set-back in the authority of the caliph, as to a devaluation of the titles compounded with dāwla, which were born at first only by the grand-amirs, later by the Ḥamdānī amirs of al-Djazīra, and were eventually attributed to other amirs of secondary rank. In the eastern provinces which did not appreciate: it was with the greatest of difficulty that the sultans had imposed themselves on the sovereigns. They did not abandon the attempt to recover their power, undermining as it was the capacity of the caliphs and their successors, receiving a large measure of power which was entirely a matter of secondary rank. On the other hand, the caliphs and the sultans did not follow the same political-religious orientation. Faced with sovereigns remaining loyal to the traditionalist Hanball doctrine, the sultans adopted the Shāfi'i-Ash'arī line, which was somewhat different, and it was of design that one of the most remarkable viziers, Niẓām al-Mulk, founded in Bagdād as in the eastern provinces madrasas intended for the training of future lawyers. It was nevertheless admitted, in this period of domination by Suldūk sultans, that the latter alone should nominate the candidate for the caliphate: this attitude was justified, as we know, in various of the writings of the celebrated al-Ghazālī who, among other things, castigated the "bad doctors", too eager to submit to the authority of the sultans. The doctors for their part, considered themselves at this time to be the true depositaries of the Law, and demanded in consequence no longer the capacity of idṭṣḥād for the caliph which in principle was claimed for him in the past, but above all qualities of morality and piety.

In these difficult circumstances, the caliphs did not abandon the attempt to recover their power, undermined as it was by various quarrels, about 60/1067-8, al-Kā'im dismissed a vizier judged to be too amenable to the sultan Alp Arslān. Then his successor al-Muktafi, after the death of Malik Shāh, succeeding in profiting from the rivalries between the various claimants to the sultanate to make his own authority better respected. Subsequently, in 495/1092, al-Mustarshīd managed to raise an army which permitted him to oppose the Arab chief Dābār, but which did not prevent him from being made a prisoner by sultan Mas'ūd. Finally, it fell to al-Muktafi, after the death of Mas'ūd in 547/1152, to assert definitive sway over ʿIrāk. Whatever the circumstances, the disintegration of the Suldūk empire was accompanied by a multiplication in the number of sultans, and this fact alone further enfeebled the position of the Suldūks; it was in 544/1151 that for the first time more than one candidate for the khūṭba was nominated, although the Suldūks themselves had no more influence in ʿIrāk the ʿAbbāsid which he represented the caliphate, al-Kā'im dismissed a vizier judged to be too amenable to the sultan Alp Arslān. Then his successor al-Muktafi, after the death of Malik Shāh, succeeding in profiting from the rivalries between the various claimants to the sultanate to make his own authority better respected. Subsequently, in 495/1092, al-Mustarshīd managed to raise an army which permitted him to oppose the Arab chief Dābār, but which did not prevent him from being made a prisoner by sultan Mas'ūd. Finally, it fell to al-Muktafi, after the death of Mas'ūd in 547/1152, to assert definitive sway over ʿIrāk. Whatever the circumstances, the disintegration of the Suldūk empire was accompanied by a multiplication in the number of sultans, and this fact alone further enfeebled the position of the Suldūks; it was in 544/1151 that for the first time more than one candidate for the khūṭba was nominated, although the Suldūks themselves had no more influence. The arrival of the Saldūk Turks brought, in principle, no changes of an institutional order to the situation. The new amirs behaved like their predecessors, receiving a large measure of power which extended legally to the west, occupied by the Fatimids, as to the east; this is indicated notably by the succession of Malik Shāh in 543/1150, to the aid of the sovereign, with the particular object of the caliph. Another difference, with particular reference to the functioning of the régime, was that the Suldūk sultans claimed to be defenders of the Sunna and the Sunni caliphate, claiming to have come to the aid of the sovereign, with the particular object of re-opening the Pilgrimage route. But the tension was hardly less between the caliphs and the sultans than it had been previously between the caliphs and the amirs.

Thus the sultans had imposed themselves on the caliphs in a manner which the latter could not and did not appreciate: it was with the greatest of dis-
One of his propagandists, Abū Hafs al-Suhrawardi, thus formulated a theory of the caliphate which, while retaining the traditional bases, linked to these Shi‘ism and the futuwwa, making the caliph the intermediary between God and the believers and giving him the attributes of a kind of šaykh. Al-Nāṣir, who had no vizier as such, was better able by virtue of this to assert his political prerogatives: he succeeded in having his authority recognized by the powerful Abu ‘Abd al-Salāh al-Dīn (576/1181), who for his part declared himself a defender of the caliphate and of Islam. It was nevertheless with difficulty that he obtained the bay‘a of certain local amirs of Persia and Upper Mesopotamia. Moreover, the efforts of al-Nāṣir, in which he continued until his death in 622/1225, did not prevent the caliphate from remaining fragile as an institution, and the great reconciliation between Sunni and Shi‘is which was one of the most cherished objectives of his policy was never achieved. After only a few more years, the Mongols put an end to the ‘Abbāsid caliphate of Baghdad, executing the caliph al-Musta‘ṣim in Șafar 656/February 1258.

Even so, one should not forget the importance of the rôle played throughout the Sāldjūq and post-Sāldjūq period by an ‘Abbāsid caliph, whom a number of local rulers recognized as the bearer of their power. Alongside the sultans, who were not so numerous, even when the sultanate was conferred upon several dynasties (Sāldjūqs of Rūm and of Iran, and Ghaznavids), there were princes of Syria, of Anatolia or of Iran who to some extent put themselves under the authority of the caliph, bearing among their titles a title with the component of amir al-mu‘minin bestowed by the chancellery of Baghdad and stressing their personal link with the caliph. This was the case with Zankīds and Ayūbidids in Syria, Rasūlids in the Yemen, Ghaznavids, Ghūrids and princes of Delhi in eastern Iran and in India, to mention only the most important of this group. Different relationships were established too between the caliph and a prince of the Islamic west such as the Umayyads of Cordova, the ‘Abd al-Rabbīs of Ifrikiya, prince of the Ghurids and princes of Delhi in eastern Iran, and where since the 4th/ioth century rival caliphates appeared with the title of amir al-mu‘minin, which they adopted with the consent of the chancellor of Baghdad, the Almoravids contented themselves, as has been seen, with the title of amir al-mu‘minin, thus setting himself up as a rival to the ‘Abbāsid sovereign and claiming that he was restoring a caliphate now in decline, in the same way that the Mādī Ibn Tūnart, the Almohad caliph al-Mustāriz, who for his part declared that the sons of ‘Abd al-Mu‘min had transformed the caliphate into a mulk (al-Maṣkari, viii, 23), the Almohad protocol retained in its formulae (al-hadra al-ṣunniya al-tadhira al-kudsiyya), a reminder of the initial doctrine. The title of caliph was subsequently taken over by the Hafṣids, successors to the Almohads, and likewise by the Marinids.

C. The caliphates of the west.

It was at the beginning of the 4th/oioth century that an Umayyad amir of Spain put an end to the situation which had previously arisen in the region: the appearance of a local prince who, while not recognizing the authority of the caliph of Baghdad, nevertheless allowed the bay‘a to be made in his name. Then, in 316/928, ʿAbd al-Rabbī II declared himself amir al-mu‘minin. According to Ibn Khaldūn, this decision was explained by the fact that at that time “the authority of the caliphate of the east was reduced to nothing”. To this should be added the fact that the Fāšīmīd caliphate had appeared in Ifrikiya, and the new caliph of al-Andalus hoped to make himself the champion of Sunnism against this new form of sovereignty.

The new caliphs essentially based their legitimacy on the idea of inheritance. “Sons of the caliphs” they considered the caliphate a “portion” set aside by God for the Banū ʿUmayya, who had inherited it from Marwān, if not from ʿUthmān himself, as was stated by Ibn Bassām who went so far as to call the Umayyad caliph “kinsman of the Prophet” by virtue of his status as a member of Kuraysh. Furthermore, in imitation of the Umayyads, the caliphs of Spain adopted the colour of white. They applied the hereditary principle in a stricter manner than did the ʿAbbāsids, not considering the minority of an heir presumptive as an obstacle to his proclamation. But the succession was put into effect by the same process, bay‘a, whether preceded by an ʿabd or not. Also, the bay‘a held a more important place than in the Orient and sometimes the rite lasted several days.

The caliph frequently declared himself the “caliph of God”. He governed in a direct fashion, surrounded by a council of viziers, but in the course of the 4th/oioth century, he rapidly ceased to take an active interest in the conduct of affairs, relying on a prime minister who bore, in Spain, the title of hāджī, not that of wazir: whence the appearance, in 317/929, of a dynasty of “major-donors”, of which the founder was the famous al-Manṣūr (Almanzor). A kind of sultanate was thus established in Spain also, but it lasted only a short time, since the caliphate came to an end, in a period of disturbances, in 422/1031.

In the West, other Sunni caliphs appeared subsequently in rivalry to the caliph of Baghdad. If the Almoravids contented themselves, as has been seen, with the title of amir al-mu‘minin, which they adopted with the consent of the chancellor of Baghdad, the Almohad ʿAbd al-Mu‘min, successor to the Mādī Ibn Tūnart, ca. 525/1132 took the title of amir al-mu‘minin, thus setting himself up as a rival to the ‘Abbāsid sovereign and claiming that he was restoring a caliphate now in decline, in the same way that the Mādī Ibn Tūnart had revived Islam; in addition, the Almohad caliph, just as was previously the Shī‘ī imām, was the bearer of the ʿisma. Although the original character of the Almohad movement was gradually eroded, to the point where one chronicler declared that the sons of ‘Abd al-Mu‘min had transformed the caliphate into a mulk (al-Maṣkari, viii, 23), the Almohad protocol retained in its formulae (al-hadra al-ṣunniya al-tadhira al-kudsiyya), a reminder of the initial doctrine. The title of caliph was subsequently taken over by the Hafṣids, successors to the Almohads, and likewise by the Marinids.

D. The Fāšīmīd caliphate and the Shī‘ī imāmates.

Founded in 297/910 in Ifrikiya by the Mahdi ʿUbayd Allāh, the Fāšīmīd caliphate [q.v.], the appearance of which had, as stated above, led to the constitution of an Umayyad caliphate in Spain, had only a temporary historical rôle to play—it lasted in fact only until 567/1171—but dominated a vast expanse of territory, including Egypt and Syria, and for a brief period came close to endangering the institution of the ‘Abbāsid caliphate. It was a Shī‘ī caliphate derived from the Ismāʿīlī movement. As such, it presented a different aspect from that of the Sunni caliphate; the caliph was the imām maṣjīm, impeccable and infallible, supreme interpreter of the Law. This charismatic leader derived his powers from his predecessor by virtue of an explicit nomination (nasṣ), kept secret throughout the preceding reign and revealed only after the death of the caliph, by the man of trust to whom it had been confided. Opinion held that the descent should be by a direct line, from father to son, and by virtue of the Shī‘ī doctrine, the community could not remain even for a moment without an imām, whom it had no right to nominate.
This principle of accession was applied in a general way throughout the duration of the Fāṭimid caliphate. After the demise of each sovereign the waṣīyya of the late caliph, revealed by the senior minister, was put into effect. Nevertheless, after the end of the 5th/11th century the system ceased to function regularly, as the ministers had begun to exert too much influence and to involve themselves in affairs of succession. As early as 411/1021, on the death of al-Ḥākim, who had nominated one of his cousins, his sister Sīt al-Mulk decided that the rule and intervened to have the son of the late caliph proclaimed. Later, in 487/1094, the minister al-ʿAfdal proclaimed the succession of one of the caliph’s sons, al-Mustaʿṣir, whereas another son, Nizār, had, in the opinion of some, been named by the waṣīyya. This was the origin of the schism of the Nizaris or neo-Ismaʿilis. Another crisis occurred in 525/1130, when the caliph al-ʿĀmir died without male issue and without having named an heir: this caused some public disorder, if we are to believe the historians; the caliphate passed to a collateral branch of the family. More serious was the initiative taken by the minister Tālāʾī in 555/1160 when, upon the death of al-Fāʾiz, he sought out a candidate for the caliphate without troubling to discover whether the late caliph had designated an heir. The new caliph could not be under age, as was the case with al-Fāʾiz; in such an instance a de facto regency exercised power, and sometimes the trustees were women. This was what happened for example in the case of the aunt of al-Fāʾiz, and previously in the case of the sister of al-Ḥākim, who for a time made her authority supersede that of a nephew, then seventeen years of age. Let it be added, that throughout the closing years of the regime, the candidate for the caliphate, whose position was the same as that of the waṣīʿ ʿl-ḥād for the ʿAbbāsid, was appointed by the minister.

The new caliph received a bayʿa which apparently did not differ from the bayʿa made for the ʿAbbāsid caliphs. This bayʿa was, however, in principle simply an expression of homage, and could not in any sense be considered a designation of the sovereign. The caliph, as imām, was in this respect the chief of propaganda, the interpreter of the law, the source of all knowledge. The panegyrists did not cease to develop these themes, stressing that the caliph was the friend (wālī) of God, intercessor for all; the doctrine of the waṣīyya was in fact regarded by the jurists as one of the pillars of the faith. Only the caliph al-Ḥākim went so far as to consider himself an incarnation of the deity, or at least, he allowed himself to be proclaimed as such (in 408/1017).

The theocratic nature of power was thrown into especial relief under the Fāṭimid caliphate. Nevertheless, the conditions for the exercise of power did not differ noticeably from what they were under a Sunni caliphate. Here also the authority of the caliph fell into decline and, in the 5th/10th and the 6th/12th centuries, power was in the hands of all-powerful ministers who, to the normal title of waṣīʿ, succeeded in adding that of malik (530/1135), and some of whom passed on their power in what was temporarily a hereditary manner. The last of these ministers was Šalāḥ al-Dīn, who put an end to the régime, restoring the ḥudūs to the name of the ʿAbbāsid caliph and depriving the last Fāṭimid caliph al-ʿĀṣid of his rights and powers, without however proclaiming his dethronement.

Although the Ismaʿil movement thus succeeded in maintaining an effective caliphate for more than two centuries, there never was such a possibility for the Imāmī movement, whose devotees continue to this day to await the return of the Mahdi.

On the other hand, the Zaydi movements led to the creation of Zaydi states ruled by imāms descended from al-Ḥasan. One of these states, that of Ṭabaristān, constituted in the mid-3rd/9th century, was short-lived, but the other, the Yemen, constituted in 288/901, lasted into the very recent past, covering it is true, only a very limited area. The Zaydi imāms, though not considered impeccable, were doctors schooled in the religious sciences as well as warriors. The most famous of these was the founder of the state of the Yemen, Yabhā b. al-Ḥusayn, who took the surname al-Hādī ʿl-dī ʿl-hādh, as well as the title amīr al-muʿminīn, which appeared in the state documents and on the coinage. Al-Hādī, considered by the Zaydis to be a model sovereign, possessed, in addition to his qualities of courage, a great knowledge of law and great piety. It is said that he strove to apply strictly the prescriptions of Islam, especially in fiscal matters, and to him are attributed a number of scholarly writings. Under the terms of the Zaydi doctrine, the imām did not command unconditional obedience, because the subjects ceased if the caliph deviated from the prescriptions of the Book and the Sunna. On the other hand the imāmāte did not necessarily pass from father to son, since it was personal qualities which, in addition to ʿAlid origin, gave entitlement to the imāmate. This explains how it was that the Zaydi imāmāte succeeded in surviving into the 20th century, in spite of interruptions, especially in the Ayyūbīd and Ottoman periods, and in spite of various vicissitudes.

E. The institution of the caliphate after 658/1258.

If the murder of al-Mustaʿṣim and the Mongol invasions did not bring about the effective disappearance of the ʿAbbāsid caliphate, the new era which began at this date was nevertheless of a quite different character. The Mamluks, having gained power in Egypt and Syria, took to Cairo a member of the ʿAbbāsid family, the uncle of the last caliph of Baghdad, and Baybars had this man declared caliph through the good offices of the chief ḥādi who had verified his genealogy (Radjīb 659/June 1261). This individual, who took the surname al-Mustansir, claimed in his first ḥudūs all the privileges of the caliph and claimed to extend his authority over the whole Islamic world, to which end Baybars entrusted an army to him. He failed in his attempt to reconquer Baghdad, and the new caliph, al-Ḥākim, who was then proclaimed in Cairo (Muḥarram 661/November 1262) and installed in the citadel, no longer had the right to interfere in political life; his presence seems to have had no other purpose than to render legitimate the power effectively exercised by the Mamluks, according to a regulation which remained in force for two-and-a-half centuries.

From a juridical viewpoint, the caliph remained, it is true, titular holder of a sovereignty which continued to be transmitted in the line of the caliph al-Ḥākim. But the ensemble of powers, including the right of nominating various agents, had been delegated to the sultan, who was henceforward chosen by the Mamluks and invested with the sultanate by the caliph. The author al-Kalkashandi compares the sultanate to a delegated vizierate, and declares besides that it consisted of a combination
of the ʿimārat al-ʿiṣlād with the wizārat al-taʿfīd (Ṣūbḥ, xi, 72), which shows the importance that he still attached to the investiture by the caliph. The sultanate had none the less acquired a kind of juridical autonomy; when the Mamluks could not agree on the appointment of a sultan, as happened for example in 615/1219, they entrusted to the caliph the powers of the sultan, which were thus, according to the chroniclers, "added" temporarily to the caliphate.

In addition, the caliphs lost in Cairo certain of their privileges, the right of sīkha, which was no longer observed from the time of the third caliph onwards, the right of ḥuḫba which seems to have fallen into disuse, while the traditional insignia of the caliphate were henceforward carried by the sultans themselves. The name of the caliph was no longer mentioned in the ḥuḫba at Mecca, but retained the prestige of holding a power of divine origin and of being, as in the past, the "lieutenant of God on earth" (nāʾīb Allāh fi ardi-hi). So obedience to the caliph seems to have been, especially for rulers of distant provinces, a kind of religious duty. Investiture at his hands was always sought by various sovereigns, notably the Muḥaffāzīn of Iran, the sultans of Delhi and the Ottomans of Anatolia. Khāliḍ al-Zahrīʾ (d. 863/1459) wrote: "The amīr of the believers is the lieutenant of God on earth and no prince of east or west can justly call himself sultan if he has not received investiture at his hands." Without this investiture, he could not for example nominate a ḥāḍī whose decisions were to be valid.

Various princes of this period refused, however, to recognise the ʿAbbāsid caliphs of Cairo. This happened notably in the case of the ʿIl-Khwānī Shāhān Khan who occupied Damascus and had himself named in the ḥuḫba "the august sultan, sultan of Islam and the Muslims". As for the Timūrid Shāh Rūkh, he considered himself sovereign by divine right and it was his ambition to be recognized as ḥalfīṣa by the other princes which was refused by the Mamlūk sultan Barsbāy and the Ottoman sultan Murād II.

Moreover, it seems that from the end of the 7th/13th century onwards, certain princes introduced the word ḥalfīṣa into their titles, without however appropriating the title amīr al-muʾminīn; this was done by the Saldūjī sultans of Rūm, protected by the Mongols, and also by the sultans of Dīhil. The Türkmen Uzun Ḥassān (857-82/1453-78) wrote ca. 875/1467 to the Ottoman sultan concerning his new capital Shīrāz, calling it the "throne of the caliphate". At the beginning of the 9th/16th century the prince of Transoxania, Muhammad Shāybahī, put on his coinage the title ḥalfīṣat al-Rahmān. While it is admitted that these titles did not always correspond to a precise aspiration, it appears that from the time of the Mongol invasions onwards, the title of ḥalfīṣa was no longer reserved for the ʿAbbāsid amīr of the Believers and that a number of rulers did not hesitate to take it up, as though it were a normal title of Muslim sovereigns.

This title appeared notably in letters of congratulation addressed by allies to Ottoman sultans after certain of their successes. Thus Murād I at the end of the 8th/14th century saw fit to call himself "chosen ḥalfīṣa of the Creator", and "shadow of God on the earth". A little later, the sultan Bāyāzīd did not hesitate to apply to himself verse VI, 165 of the Kurʾān: "The amīr of the believers is a representative of the (ḥalfīṣa) on the earth." In the same way, Muḥammad I after the restoration of the Ottoman empire at the start of the 9th/15th century, spoke of his "caliphate", a term which the other Ottoman sovereigns did not hesitate to use on occasion in dealings with their allies. At all events, and in spite of the fact that Muḥammad II the Conqueror did not take to himself the title of ḥalfīṣa, official correspondence addressed to the Ottomans by their neighbours did not cease to consider them repositories of the caliphate and Selīm himself, after 1512, was called by his brother "shadow of God on earth".

It is noteworthy that at the same period too, various eulogists applied on occasion to Ottoman sultans the title of ḥalfīṣa or ḥalfīṣat Allāh, although these expressions were nothing more than laudatory epithets, appearing generally in texts of rhymed prose and not to be regarded as official titles. More often, indirect expressions such as "the throne of the caliphate" were employed.

In fact, the Ottoman sultans early wished to be considered, without however claiming the title amīr al-muʾminīn, as bearers of the sultanate and the caliphate combined, a caliphate conceived by the Muslim thinkers of the time in terms completely different from those of early Islam. Thus two thinkers as different one from the other as Ibn Taʾmīyya and Ibn Khālīd agree in declaring that the caliphate ceased after the ʿalāʾīd caliphs and that the sovereignty exercised by the latter was the "lieutenant of God on earth and no prince of east or west can justly call himself sultan if he has not received investiture at his hands." Without this investiture, he could not for example nominate a ḥāḍī whose decisions were to be valid.

At the same time, they recognised no authority on the part of the caliph of Cairo. This is seen in the episode when the sultan Selīm conquered Syria, then Egypt, making a prisoner of the caliph al-Muṭawakkil, treating him with a complete lack of deference and exiling him to Constantinople. Al-Muṭawakkil was unable to leave this involuntary exile until the reign of the sultan Sulaymaṇ, returning to Egypt where he died in 950/1543; he made no further exercise of his functions as caliph, except in conferring the investiture on the governor Aḥmad Paṣā, a governor who had rebelled against the Ottoman sultan. The fact emerges clearly from the account of these events that the last ʿAbbāsid caliph was considered of negligible importance by the victorious Ottoman sultan.

On the other hand, not one of the historical accounts states in precise fashion that Selīm sought to take to himself the legacy of the caliphate to the extent that it might be inferred from the late, popular versions which began to circulate at the end of the 19th century and were collected by Mouradgea d'Ossborn. There is no justification for the view that there was an official transfer of the caliphate to Constantinople. It is true that certain relics of the Prophet and of the Companions were transferred...
to the capital of the Ottoman empire; as for sultan Selim and his successors, they never bore officially in documents of state, inscriptions and coinage, titles other than sultan and hâdiş; they did not use those of amir al-mu'minîn or of imâm. The only new title adopted by Selim after the conquest of Egypt was that of hâdidî al-şarâmayn [q.v.], which was in fact a title belonging to the Mamlûk sultans and not to the caliph.

These ill-defined pretensions of the Ottoman sultans towards sovereignty over the entire Islamic world, came into conflict in certain respects, in the east, with the ambitions of the Mughal rulers of India during the 16th and 17th centuries. After the reign of Akbar (963-1014/1556-1605) [q.v.], the capital of these faraway but powerful princes, Dihlî, was called dâr al-şârifî ("seat of the caliphate") and the coinage of Akbar bore the inscription: "the great sultan, the exalted al-şârifî."

The Mughals, who dealt on equal terms with the Ottomans, continued until the reign of Shâh Âlîm II (1172/1760) to qualify themselves with the title of al-şârifî, although it is unclear to what extent they were thereby disowning the traditional concept of the Kurâshî caliphate.

Nevertheless, it was the masters of the Ottoman empire who finally enjoyed the distinction, in the 18th century, of being presented by their diplomats to foreigners, including European monarchs, as the holders of the "caliphate". An example of this appeared in 1774 in the treaty concluded between 'Âbd al-Ḥamîd I and the empress Catherine of Russia; the sultan was called "the imâm of the Believers and the caliph of those who profess the divine unity"; an expression which at the time was rendered in French by "le Souverain calife de la religion musulmane". The intention was to retain the sultan's religious authority over Muslim populations which had passed under foreign domination; this the Russians did not accept (the treaty was revised in 1783).

In any case, from this time onward, and throughout the 19th century, in the various confrontations which occurred between the Ottomans and the European states, the Ottomans never present themselves officially as caliphs, that is to say, as the spiritual leaders of the Muslims and defenders of Islam. The distinction, of European origin, between the spiritual and the temporal thus found, through the exigencies of the situation, echoes in Ottoman circles. Hence the constitution formulated in December 1876 by the sultan 'Âbd al-Ḥamîd II declared explicitly in its art. 3: "The august Ottoman sultanate, the office of the supreme Islamic caliphate, must devolve upon the eldest of the members of the family"; and in art. 4: "the sultan, in his capacity as caliph, is the protector of the Muslim religion".

Even though the process of giving executive force to the constitution of 1876 was postponed until 1908, the sultan continued to hold to this conception which enabled him to assert his authority over the Arab countries and furthermore to embrace the ideal of pan-Islamic unity, inspired in him by Djamîl al-Dîn al-Afghânî [q.v.]. The principle was in any case recognised in the countries of the West, and in Bosnia-Herzegovina, after the annexation of the province to the Austro-Hungarian empire in 1908, the name of the Ottoman sultan continued to be mentioned in the public prayers. In Libya, even after the establishment of the Italian protectorate, the chief ba'dî of that country was still appointed by the Ottoman shâhîkh al-Islâm. In Bulgaria, under the terms of the treaty of Constantinople of 1913, the prerogatives of the Ottoman sultan, though more strictly limited, were nevertheless upheld, as was also the case in Greece at that time.

It should be added that the Ottoman sultans had, in fact, for a number of centuries, exercised functions similar to those of the ancient caliphs, with the difference that they sought to establish a more regular system. In addition to the law, they formulated a code of rules, the purpose of which was in principle to supplement the law, but which sometimes tended to supplant it; called hâmîn, it was employed by Sulaymân the Great as by the other sultans, and was applied not only to financial questions, but also to questions such as the problem of succession. Later, in the 19th century, the sultans sought, under the pressure of various circumstances, to modernise the structures of the Ottoman state. This is not the place to examine the reforming measures known as the Tanzimât [q.v.], but it should be recalled that it was in their capacity as leaders of an important Muslim community that the sultans introduced modifications in the traditional fîkh, as in the organisation of public powers. The movement culminated in the formulation of the constitution of 1876 which envisaged a parliamentary régime and which did not come into force until 1908.

The installation of a parliamentary régime, then the appearance of the officers of the Committee of Union and Progress, had the effect of calling into question, even before the First World War, the sultanate and the caliphate. The Young Turks had at first been cautious, and if they sought to circumscribe the powers of the sultan, they tended also to use the expedient of the caliphate to maintain Turkish influence over the Arab lands. The issue of the war modified the assumptions of the problem, since the new Turkish nationalism, whose champion was Mustafa Kemâl, had nothing to do with the caliphate. The suppression of the ancient institutions was nevertheless gradual. Mustafa Kemâl began by attacking the sultanate, while recognising the caliphate as "a moral link, sacred and respected by the entire Muslim world." On 29 October 1922, the sultanate was abolished by the Grand National Assembly of Ankara, which reserved for itself the right to choose the holder of the caliphate under the terms of the Constitution adopted in January 1921 and which declared the sovereignty of the people. The sultan Meşûmmed VI, deposed by means of a fatawâ, went into exile and was replaced by 'Abd al-Magîd, who had been chosen by the Assembly and was asked to consider himself only as the caliph of the Muslims. In fact, the new caliphate was ill-defined, and fruitless discussions were held regarding the functions to be attributed to a figure in whom Mustafa Kemâl, in April 1923, recognised above all "supreme inter-Islamic authority" and the "symbol of Islamic solidarity", and yet who held no real spiritual power; for he did not have the right to appoint ba'dîs, muftis or preachers. In January 1924 Mustafa Kemâl declared: "The idea of a single caliph, exercising supreme religious authority over all the peoples of Islam, is an idea taken from fiction, not from reality." In February, the caliphate was abolished by the National Assembly which was then enwowed with all powers of legislation (législatif). The prayer was delivered in the name of al-şukûma al-żujumîhîyya wa l-ḥâkîmah wa l-hâkimîyya. Meanwhile, a group of "ulama" had drafted a document which was circulated not only in Turkey but also in the Arab countries and which tried to show that the problem
of the caliphate was a question not of theology but of practical politics, that the caliphate had not been instituted by the Prophet and that it did not constitute a fundamental element of Islam.

The abolition of the caliphate, of which the concept had changed somewhat since the 7th/8th century, was none the less powerfully resented in the Middle East, where various projects were attempted for the restitution of this institution, considered to be fundamental to the very life of the community of Islam. The khalif of Mecca, Husayn, made an attempt to have himself recognised as caliph, but succeeded only with a few neighbouring princes. In 1026, two congresses were held, which had the object of debating the issue of the caliphate; one took place in March, in Cairo, the other in July at Mecca, without any result. The western powers, for their part, sought to encourage the restoration of the caliphate, on the condition that the holder be their ally. In 1930 there was denunciation from certain Muslim quarters of the policies of the British, who continued to give financial support to the former Ottoman sultan while backing King Husayn, and those of the French, who favoured the Bey of Tunis. Then in 1931, a congress of ulama and political figures was held in Jerusalem. It had no result other than to affirm the spirit of solidarity which still existed among Arab and Muslim countries and which, in 1941, led to the “Congress of Arab Unity” held in Cairo and from which arose the League of Arab States, founded in 1944. Meanwhile, the attempt of King Fārūk of Egypt, in 1939, to revive the caliphate to his own advantage, met with vigorous opposition from the Turkish government. The rise of nationalism thus brought about the transformation of a pan-Islamic movement into a simply pan-Arab movement.

In fact, Muslim opinion was in general resigned to the new situation, entrusting interpretation of the Law to the doctors, and political affairs to the de facto authorities. Even in 1922, the reformist Rashīd Rīdā had proposed a plan for the reform of the caliphate in his work al-Khilāfa aw al-Imāma al-'Uṣūma; he asserted that no Arab sovereign was worthy to accede to this office and he proposed the holding of a seminar with the purpose of drawing up a list of doctors from among whom the caliph would be chosen; the rôle of the caliph would essentially have been to adapt Islamic law to the conditions of modern life. But such a project was never realised.

More radical was the theory advanced by a bā'nah of al-Azhār, ʿAlī ʿAbd al-Rāzīq, who, in 1925, wrote an essay entitled al-ʿIslām wa-usūl al-bāghā “Islam and the bases of power”, which caused a sensation in traditionalist Muslim circles because it laid down a doctrinal basis for the separation of the temporal and the spiritual, and suggested that the government of the Prophet at Medina was not dependent on the prophetic mission. This work was condemned by the bā'nahs of al-Azhār, but the notion of temporal sovereignty continued nevertheless to take root in Muslim circles during the decades that followed.

(ii) In political theory

There are two references to khālīfa in the Qurʾān (Sūra II, 30 and Sūra XXXVIII, 20). The first, “We have made thee a khālīfa in the land; then judge between the men with the truth, and follow not thy desires, lest they cause thee to err from the path of God”, refers to Adam. The second, “We have made thee a khālīfa in the earth; so judge between the people with truth” is addressed to David. The plural (khālīfīn) and khulūfīn) is more frequent, means successors (i.e. progeny) (see further R. Paret, Signification coranique de halīfa, in Studia Islamica, xxxvi (pars prior), 211-17, and W. Montgomery Watt, Islamic political thought, Edinburgh 1968, 32 ff.). For the commentators such as Zamakhshāri, the concept of Adam included or typified all mankind and the prophets, while David had the dual rôle of king and prophet. Although there is no indication that the word khālīfa was intended to serve as the title of the successor of Muhammad, both the passages quoted above are important for the development of the theory of the khālīfa as the successor of the prophet, and his office, the khilīfa.

It is asserted by Muslim historians that the term khālīfa was first used as the title of the successor of Muhammad by Abū Bakr, but it is doubtful whether he ever assumed it as a title (Caetani, Annali dell’ Islam, i 1 A.H., para. 63 n. 1). From the reign of ʿUmar b. al-Khaṭṭāb, however, khālīfa rasūl Allāh, successor of the messenger of God, became the common designation of the community, the amīr al-muʾminīn [q.v.], the Commander of the Faithful, the title which ʿUmar had adopted on his
The title *khilafat rasûl Allâh* implied the assumption by Muhammad's successor of Muhammad's functions as judge and temporal leader of the community. Muhammad's prophetic functions, on the other hand, was held to have ceased with him and it was believed that the spiritual guidance of the community had been inherited by the community as a whole. The *khilâfâ*, thus, had no authority to give new interpretations to religious matters: his function was merely to maintain old doctrines. His office was simply a delegation of authority for the purpose of applying and defending the *sâri'a*. The title *khilafât rasûl Allâh* was commonly applied to the orthodox or rightly guided caliphs (the Râshîdûn), who were regarded as the representatives or successors of Muhammad. Muâwiya's claim to the caliphate, if it was based on the text of the Kur'ân (XVII, 35), was to be sultan: as such he was not Muhammad's deputy but God's, and the title *khilafât Allâh*, vicegerent of God, appears to have been approved by the Umayyads (Diwan Ibn Thabit; *Rdhat al-sudur*, in *A volume of oriental studies presented to E. G. Browne*, ed. T. W. Arnold and R. A. Nicholson, Cambridge 1922, 327). The phrase *khalifat Allâh* had earlier excited the indignation of Abû Bakr, because of the boldness of its implication. It was, nevertheless, used by 'Âッシn b. Thâbit in A.D. 35 in an elegy he wrote on the caliph *'Uthmân* (*Divan* of हस्सân Ibn Thâbit ed. W. N. Arafat, GMS, N. S. ii, London, 1971, 110). The 'Abbâsid later employed the title *khalifat Allâh*, but its use was resisted by many of the 'ulamâ', who rejected the idea that the *khalifat* was the representative of God and the implication of autocratic power contained in the title (I. Goldziher, *Muhammadianische Studien*, ii, 61; H. A. R. Gibb, *al-Mawardi's theory of the caliphate*, in *Studies on the Civilization of Islam*, ed. S. Margoliouth, London 1922, 135). An attempt to limit the true caliphate to the Râshîdûn, on the basis of a tradition attributed to the Prophet which states "the caliphate after me will be thirty years: then it will become kingship" (quoted by Margoliouth, op. cit., 328), did not become accepted doctrine. Later Sunnî jurists, however, drew a distinction between the caliphs of the Râshîdûn, the *khilafât al-nubuwa* (the vicariate of prophecy) and the later caliphs which they held to have had the character of worldly kingship (*mulk*). As used in the sources, the terms *khilafat* and *imâm* (and *khilafat* and *imâm* [q.v.], which refers to his office) are broadly interchangeable. The former is primarily applied to the supreme leader of the Muslim community as the ruler of the community exercising the "temporal" functions of Muhammad, while the latter is applied to him as the religious leader of the community and derives from his function of leading the prayers of the community, which, in the view of the Sunnis, was his most important function. The propriety of the election of Abû Bakr was, in fact, defended by many jurists on the ground that he had led the prayers. In the literature the terms *imâm* and *imâm* are used in preference to *khilafat* and *khilafât*. Among later writers traces are occasionally to be found of a distinction between the functions of the leader of the community as *khilafat* and as *imâm*. For example Râwandî alleges that Tughrîl b. Arslân's atabeg, Muhammad Pahlavân-djâhân, used openly to say, "The *imâm* should occupy himself with delivering the *sâri'a* and leading the prayers, which are the best of actions and the greatest of deeds and which uphold (or protect) profane rulers; and he should entrust kingship to sultans and leave rule to this sultan (i.e., Tughrîl)" (*Rkât al-shâri'a*, ed. M. A. Shahâbî, GMS, N. S. ii, London, 1921, 334).

Politics and religion in Islam were inextricably mixed and the political doctrines of the *khilafat* as the leader of the community cannot be easily separated from the theological and juridical doctrines concerning his office (see *imâm*). The early doctrinal disputes and religious polemics—the controversies over the imamate raised by the first civil war, the development of the *Shî'î* and the Khawârîdî schisms, the succession of the Umayyads and their overthrow by the 'Abbâsids, the Mu'tazîli movement and its refutation by the Ash'ârîs, and the polemics against the Rawâfîd and Khawârîdî—profoundly influenced the development of the political theory as well as the religious doctrine of the *khilafat*, and also did Hellenistic and Sassanî theories of government.

As the temporal head of the community, whose internal organisation was secured by a common acceptance of and submission to the *sâri'a*, the caliph was the symbol of the supremacy of the *shâri'a*. He, like other believers, was subordinate to it and they owed him obedience only as its representative. So far as there was an element of contract in the relations between him and his followers this was to be found in the *bay'a* [q.v.]. Termination of the contract was only permitted if a change took place in the status and condition of the caliph such as might cause prejudice to the rights of the community. The weakness of the position was that no tribunal was specified to decide upon his deposition.

Gradually the political doctrines of the imamate were worked out in the political development of Islam (cf. H. A. R. Gibb, *al-Mawardi's theory of the caliphate*, 154-5). Significantly, most of the important expositions of the theory of the caliphate were written, if not at a period of crisis, at least at a time when some fairly major problem faced the Muslim community and was exercising the minds of the faithful.

In the turbulent years following the transfer of power from the Umayyads to the 'Abbâsids, Ibn al-Mukaffa' [q.v.], who died probably in 1309/756, concerned at the internal dissensions within the community, felt the need for a definition of the powers and authority of the caliph. Recognising the change in the basis of the caliphate which had taken place with the 'Abbâsid revolution, and believing that the only bond between the caliph and his army was religious conviction, he made right belief the cornerstone of his political programme. Convinced of the need for stability, he proposed a rigid control by the state. He suggested that the caliph should supersede and regulate *ra'y* [q.v.] as used in the ancient schools of law and recommended that he should create a code based on (i) precedents and usage (*siyâr*), (ii) tradition and analogy, and (iii) his own decisions which would in turn be emended by succeeding caliphs. Ibn al-Mukaffa's pleas, however, went unheeded: orthodox Islam rejected the view that *ra'y* was the domain of the ruler and referred the final decision
to idāmā (q.v.) (see further S. D. Goitein, A turning-point in the history of the Muslim state, in Studies in Islamic history and institutions, 149-67).

Abū Yusuf (d. 182/298) (q.v.) represents a somewhat different point of view. Disturbed by contemporary practices, many of which seemed contrary to the spirit of the early caliphate as reflected in the works of the Traditionists, he cites a number of traditions in his Kitāb al-Kharāj showing the duty of the subjects to their imām. The bay'a by this time was no longer of practical significance and Abū Yusuf does not attempt to maintain even the principle of election. He is aware of only one source of authority: God's choice by which the caliph became a vicegerent of God on earth (see further S. D. Goitein, Attitudes towards government in Islam and Judaism, in Studies in Islamic history and institutions, 203 ff.). By implication he holds that the actual possession of power is the necessary basis for authority and a sufficient justification for its exercise, irrespective of the ruler's personal qualifications. Although Abū Yusuf, who looks upon the caliph as the shepherd of his people, bases the principles of true Islamic government upon the sunna of the Rāshīdūn and of ʿUmar b. ʿAbd al-ʿAzīz, and implicitly protests against the prevailing cult of the Sasanian tradition (cf. other later works of Ibn al-Farraʿ in al-iHikmat, and discusses the functions of his office, having in mind the limitations imposed upon the caliph by political circumstances. Like various writers before him, al-Māwardi speaks of the forfeiture of the imamate, without, however, laying down any legal means by which this might be brought about. In his discussion of the formal institutions of government he concentrates mainly upon what constitutes a valid investiture by the caliph of his functionaries, in particular the ważir and the amir. Some two centuries earlier al-Dījahiz had defined political obligation with regard to the overthrow of an impious imām in terms of possibility. Al-Māwardi went further. Constrained by necessity and expediency, he limited even the political obligations of the caliph as the executor of the sharīʿa by the possibility of fulfiment. (See further H. A. R. Gibb, al-Mawardi's theory of the caliphate.)

In the 5th/11th and 6th/12th centuries the jurists continued to wrestle with the problem of how to assert the supremacy of the caliph. They were all concerned to a greater or lesser degree with the caliph's mission as the vicegerent of the prophet, and with his duty to defend Islam and to administer the affairs of the community. Among them were Abū Yaʿūs (380-458/990-1066) Ibn al-Farraʿ (q.v.), Ibn ʿAqlī (435/1040-1119) (q.v.), al-Dījahiz, Ibn al-Hayamayn (410-498/1020-1105) (q.v.), and al-Ġazālī (450-505/1058-1111) (q.v.). The last named breaks new ground on the subject of the relationship of caliph and amir in his Ḥūṣād al-ʾtibād. The caliph remains the symbol of the supremacy of the sharīʿa but the amir is associated with him and recognised as the holder of coercive power (see further L. Blinder, al-Ġazālī and Islamic government in Muslim Iraq, July 1955, and H. Laoust, La politique de Ġazālī, Paris 1970).

Ibn Dījamā (639/1241-733/1333) (q.v.), writing after the extinction of the caliphate by the Mongols, broadly speaking transfers to the de facto rulers the constitutional theories worked out by earlier jurists, holding that the seizure of power itself gave authority, while Ibn Ṭaymīyya (672-755/1273-1328) (q.v.), seeking a more radical solution, denied the obligatory nature of the caliphate (see further H. Laoust, Essai sur les doctrines sociales et politiques de Ibn Taimīyya, Cairo 1939, idem, Le traité du droit publique d'Ibn Taimīyya, Beirut 1948).

the works of the Muslim theorists mentioned above see under the relevant articles.

(A. K. S. LAMPTON)

(iii) IN ISLAMIC MYSTICISM

This term may have any of the following meanings, all carrying the idea of vicarship, when used in writings dealing with or pertaining to some aspects of Islamic mysticism:

1. He may be the kuth or perfect man, al-insân al-khâlîfâ [q.v.], around whose spheres of being evolve, upon whom the Muhammedian tradition (al-âhâlî al-muhammadiyya), which is the hidden side (bâtînî) of his own reality in the world, irradiates. This makes the kuth the khâlîfa of the Prophet on the plane of manifestation (gâtîrîn). In this sense the founders of the farîkâs [q.v.] and their successors, when identified with the kuth, are referred to as khâlîfât of the Prophet (see e.g. Muhammad Abu 'l-Mâhâsîn al-Kâmî, al-Badr al-munîr 'âlaihi al-khâlîfah al-khâlîfah, Alexandria 1312, 9; Muhammad Mâdî Abu 'l-'Azîzîn, al-Tafrîr al-madârî 'âlaihi al-âbrâr, Cairo 1340, 32; Muhammad 'Abd al-Rahîm al-Nasîrî, Asrâr al-hâddîsî li-man yahâmîkhu al-khâlîfah, Cairo 1921, 66 f.).

2. He may be the successor of the (alleged) follower of a jârî or to the deceased leader of a group of mystics, without the connotations attached to the term as mentioned under (1). The term may refer to his immediate successor (see e.g. Tafrîr al-Dîn 'Abd al-Râyîshîn al-Wâsîshî, Tirajîr al-muhbabîn fi farrâkât khâlîfât al-mudhkiyya al-ardîsîn, Cairo 1305, 20; Karîm al-Mâhâsîn al-Azn坚持不懈înî, Tanwîr al-ihdîsî li-man yahâmîkhu al-sâhirîn al-âbrâr, Tunis 1325, 345; al-Nasîrî, Asrâr, 64 f.) or to the successor to al-khâlîfah, i.e. to the position of supreme leadership over the jârî or group as shaped by its founder or first leader and/or their successors (see e.g. Dâlîl al-Dîn al-Karâkî, Lisân al-jârî al-loyd al-âsli al-jârî Sîdî 'Abd al-Karîm al-Dašâshî, ed. 'Abd al-'Azîz al-Dîn Khâlîfâ Allât, Tanâtî 1960, 5 f., for al-khâlîfah al-Bîrâmîyya, and al-Dâbârî, 96d-dîn al-dâbârî, 70, for al-khâlîfah al-Wâfîsîyya).

Equivalent to al-khâlîfah in this sense is the term sadîqâtâda [q.v.]. According to 'Abd al-Wâhhab al-Shârâni, al-Âmsâr al-khâdîsîyya fi mârifat bâdîz alâ-sâhirîn, Cairo-Beirut 1962, 6, 1, 185, preference for succession of a deceased dâya [q.v.] should be given to the eldest of his disciples. The successor may already have been designated by the jârî's leader during his lifetime (on this see e.g. Muhammad 'Abd al-Bâdi al-Lânkâwî, al-Minâh al-mudhkiyya fi muhkâtârat al-sâhirîn, Medina 1330, 88 ff.). In addition, the sûfî manuals maintain the existence of consensus among the disciples about the successor as a legitimate basis for the assumption of leadership (cf. al-Lânkâwî, al-Minâh, 93). Hereditary patrilineal succession to the leadership position became the rule adopted by many of the Sufi orders. This practice is frowned upon by those belonging to the shâbîhah, who has the obligation to grant the ijdâsî al-khâlîfah to a disciple who has attained perfection.

'Abd Allât al-Khânlî, al-Bâghâlja al-sâhirîyya fi âdâb al-jârî al-sâhirîyya al-Khâlîfîsîyya al-Nâgâkhândîsîyya, Cairo 1339, 33, and it is discarded as a practice which was used by authors belonging to al-Shâdîhîlîsîyya [q.v.], such as 'Allî Sâlim 'Ammâr, Abu 'l-Hassan al-Shâdîhî, Cairo 1951, 62, 1, 31.

3. He may be a murîd [q.v.] who, after having reached a certain stage of mystical perfection as defined by the teachings of the jârî to which he belongs, is granted permission by his spiritual master to initiate novices and to guide them on the mystical path. This includes permission to transmit the jîrîka's prayers, to lead hadras [q.v.] and to grant the status of khâlîfah to his own disciples in turn. To this effect a so-called ijdâsî (Pers./T. igâzâtâtâmâmâ/casetename [q.v.]) is granted to him by his spiritual master, possibly during a festive gathering of the jîrîka's members, when the ijdâsî is read (cf. P. Kahle, Zur Organisation der Derwischorden in Ägypten, in Isl., vi (1926), 157). The actual investiture may consist in the pronouncement of a special oath-formula, the muhâba'at al-khâlîfah (cf. al-Lânkâwî, al-Minâhîsî, 89) which differs from the common 'ahd formula [q.v.]. An ijdâsî of this type may be defined as the deed of spiritual succession granted to a murîd. It is generally referred to as ijdâsî al-khâlîfah (Pers./T. khâdîsîtaç etçin, khajîfêtdenê, or just khâlîfah. This document generally contains a more or less elaborate exposition of rights and obligations of its recipient and mentions the silsila [q.v.], i.e. the chain of initiation and transmission of mystical knowledge also known as sanâd [q.v.] al-khâlîfah (cf. 'Abd al-Muhammad al-Shâdîhî, al-Simq al-madîdî fi 'aşrân al-bay'â wa 'l-âdîn wa 'l-âs'în wa-sâsîlîsî al-jârîh, Haydarâbâd 1327, 67 f.). Provided with the seal of its purveyor, who must have been similarly authorised by his own spiritual master, and sometimes endorsed by a number of witnesses, who may also be khâlîfahs (cf. Muhammad b. Mubârak 'Alâwî Kirmânî, Amîr Khûrûc, Siyar al-awliyâsî=), Dîfîl 1302, 179) it constitutes the khâlîfah's primary source of legitimacy as a teacher of the jîrîkh. The ijdâsî al-khâlîfah need not necessarily be restricted to the permission to transmit mystical knowledge, but may also contain permission to teach and transmit texts of a different nature. It can also contain permission to initiate into and to teach the methods of more than one jattâ (cf. Muhammad b. Sulaymân al-Hânâfî al-Bâghâdî, al-Hâdîsî al-mudhkiyya fi âdâb al-jattâ al-Nâgâkhândîsîyya wa-l-bâghâdîsî al-Khâlîfîsîyya, Cairo n.d., 45). The fact that somebody has been granted the ijdâsî al-khâlîfah means only that he possesses the prerequisites for initiating and guiding disciples of his own, independent of his spiritual master. He is not under the obligation to do so, and he may very well refrain from setting himself up independently until after his master's death (cf. e.g. Amîr Khûrûc, Siyar al-awliyê, 169, and for present-day practice, Siyed Nagûb al-Attas, Some aspects of Sufism as understood and practiced among the Malays, Singapore, Malaysian Sociological Research Institute, 1963, 37). He may also choose not to set himself up independently but to accept the spiritual leadership of another khâlîfah as his master's legitimate successor. In this case a "renewal of the 'ahd" may take place with the latter (see e.g. Mâmûbî b. 'Affî al-Dîn al-Wâfîhâ, Maš'hâd al-tâhîsî fi sâmî al-munirîn 'âlîn al-jârîh, Cairo 1960 (various editions), 245). According to the Sufi orders, of some of which the shâbîhah has the obligation to grant the ijdâsî al-khâlîfah to a disciple who has attained perfection.
4. He may be the deputy of the head of an order in a particular area. The pre-condition for assignment to such a position is formal investiture as khalifa and hence possession of an idjazat khalifa, which is crucial for the legitimation of any claims for the office or position of local deputy. Appointment as khalifa by this sense may be to an already existing group of murids, in succession to a deceased or suspended predecessor (cf. Muhammad al-Bakhshi al-Halabi, Shams al-mafdir, Delhi-i Kitab Khaliid al-djawshir, Cairo 1908, 27; Amir Khurd, Siyar al-awliyd, Cairo 1908, 27; Muhammad Hasan Shams al-mafdir, Dhayl li-Kitab KadiHd, Cairo 1306, 110; Muhammad Haghim Bada khalifat al-khulafa*, Zubdat al-makamay, Lucknow 1859, 70-1, 347, 352; al-Baghdiri, al-Hadika al-nadiyya, 85). The degree to which these khalifas could and did act independently of the incumbent(s) of a position of superior authority within the fariba differs considerably among the various farikas over time and in diverse areas. The position of the office of khalifa may differ within the organisational hierarchies of the orders. Thus within the Central African Kadiiriyya branch, having its centre at Ujiji (Tanzania), khalifas are inferior to and nominated by a category of officials known as maakhir (sing. akhda), (cf. J. M. Cuqo, Les Musulmans en Afrique, Paris 1975, 325).

Within a fariba such as the Ahmadiyya al-Maraziq, the khulafa* of its semi-autonomous sub-sections (buyut) rank under the Shaykh of the buyut, who is a khulifa himself in the sense mentioned in section 3 above (cf. Muhammad Hasan Shams al-Din, al-Risla al-Ahmadiyya al-Thaynaya, Cairo 1976, 59). In the Maghrib and West Africa, the local deputy of the head of an order is generally referred to as muhaddam [q.v.]. This is also the case within a number of Shairiyya orders in the Middle East and Egypt, e.g. al-Yashrutiyya (cf. J. van Ess, Libanesische Missstellen 6, Die Yashrutiya, in WI xvi (1975), 1-103, passim), and a now defunct Egyptian branch of al-Nasiriyya. Within the latter fariba, the muhaddams (khulifas) ranked under the so-called nayhibi, who as provincial leader held jurisdiction over them (cf. Ibrahim Khalil, al-Majarid, Cairo 1934, 40 f.). Frequently, the khulifs in a particular area was inherited within the family and developed into a virtually autonomous power position which allowed its incumbents to pay only nominal allegiance to the head of their fariba. In many cases, this constituted the prelude to the formation of an independent branch or an entirely new fariba. The position of the khulifa as murshid [q.v.] is to all intents and purposes the same as the position of the head of a fariba. Therefore, the rules for spiritual leadership, i.e. the pre-conditions which allow one to assume the position of khulifa, found in Sufi manuals, also apply to the position of khulifa. It is only in relatively late 19th and 20th century manuals of the Egyptian orders, which became integrated parts of a highly developed bureaucratic organisation, that some of rules pertaining to the office of khalifa may be found. Within this organisation a limited number of khulifas in various areas received additional confirmation as local deputies of the heads of their orders from the head of al-Bakriyya [q.v.], and formed a special category of dignitaries within the administration. They held jurisdiction over those khulifas who could only claim this status by virtue of the idjazat al-khulifa in their possession. Within some of the Egyptian orders, a khalifa may continue to hold some degrees of authority over either the khulifa* ordained by him or over those within a particular fariba. In this case, he is referred to by the term khulifa al-khulifa*. In Persia under the Safawids [q.v.], a similarly-named office existed, which was defined by V. Minorsky as 'a special secretariat for Sufi affairs'. The incumbent to this office was regarded as the vicar of the king, on whose behalf he acted and appointed khulifas in the provinces (cf. Minorsky, Tadhkirat al-muluk. A Manual of Safawid Administration (London 1943, 95-125 f.). A possibly identical office of this name was also mentioned in another Shii fariba, the Ni'matullahiyya [q.v.] (cf. R. M. Savory, The Office of khalifa al-khulifa* under the Safawids, in JASOS, ixxxv (1965), 497).

5. He may be the pre-eminent representative and principal propagator of a fariba in a particular area acting independently of any authority as mentioned in section 3 above but not paying allegiance to any of the fariba's leaders elsewhere. It is this meaning which can be most safely adduced whenever the term khalifa is mentioned in conjunction with the name of a fariba or of a fariba founder, when the latter is not a contemporary of the khalifa mentioned and when there is no evidence of the existence of this fariba as an organisation. It should be interpreted as such in passages in a variety of texts in Arabic, Persian and Turkish as diverse as the following ones in which the relevant passage is found on the pages indicated: Muhammad Da'if Allah al-Dja'ali, Kitab al-Taba'at fi khushâs al-awliya* wa 'l-sâhlîn wa 'l-`ulamâ* wa 'l-qâdirâ* fi 'l-Sudn, Cairo 1930, 40; al-Djabarti, 'Idjazat al-Sudn, i, 220; Mahmet Shukri al-Alusi, al-Mizk al-adhfar, Baghdad 1930, 14; Tâsuk-i Dâshângiri, ed. Sayyid Ahmad Khan, Ghazipur 1864, 211; Ewliya Celebi, Seyhâname, Istanbul 1938, 8, 237.

6. Within al-Bektashiyya [q.v.] it refers to a rank of spiritual achievement which could be attained only by those who had been ordained as bâbâ. It is marked by the donation of the idjazat al-khulifa* as mentioned in section 3 above and was the pre-condition for investiture as dede. The latter degree entailed, among other rights, the right to participate in the elections of a dede bâbah. Investiture as dede entailed the right to appoint heads (bâbâs) of tekkes.
In addition, the term khalifa may denote the representative of the head of the Sanusiyya order who has been sent on a mission to a zawiya (cf. H. Duveyrier, *La conférence musulmane de Sidi Mohammed Ben Ali es-Senoussi et son domaine géographique*, Rome 1918, with notes by C. A. Nallino, ii, 1), the head of a holy lineage among the Mourners in Senegal (cf. D. B. Cruise O'Brien, *The Mourides of Senegal. The political and economic organization of an Islamic brotherhood*, Oxford 1971, 111), and in Turkish periods. In 1295, the vicar of the head of a teke, as reported by J. P. Brown, *The dervishes or oriental spiritualism*, London repr. 1968, 114. It may take a similar meaning in the Maghrib, where the term spiritualism may denote the vicar of the head of a zawiya (cf. V. Crapanzano, *The Hamadsha*, Berkeley and Los Angeles 1973, 81 f.). In Mamluk Egypt, the offices of the custodians of the shrines of Ahmad al-Badawi and Ibrahim al-Dasuki respectively of the custodians of the shrines of Ahmad al-Badawi and Ibrahim al-Dasuki are referred to as khalifat-`amr al-badawi and `amr al-badawi. On the appointment of khalifas and on the khulaf* Ahmad al-Badawi respectively of the custodians of the shrines of Ahmad al-Badawi and Ibrahim al-Dasuki, n.p. [Cairo], n.d. (approx. 1898), and al-Karaki, *Lisan al-tarif*, 51 f.).

In the Sudanese Mahdiyya

(1) The originator of the Mahdist movement, Muhammad `Abd Allah, as a leading member of the Sammaniyya faridya, was commissioned in 1917/185-6 to appoint `Abd Allah ben Sharif Nour al-Din-the head of this order of the Egyptian Sudan: one letter of appointment is extant (see Muhammad Ibrahim Abu Sallim, *al-Murhid tla wathdik al-Mahdi*, [Khartum] 1969, no. 1). (2) After his public manifestation as Mahdi (1 Shabban 1302/29 June 1881), Muhammad Ahmad appears to have conferred the title of khalifa on at least some of those to whom he delegated authority to administer the bay'as: two examples have been calendared by Abd al-Salim al-Murhid, no. 113 (see Muhammad Ibrahim Abu Sallim, *al-Murhid tla wathdik al-Mahdi*, [Khartum] 1969, no. 1). This use of the term khalifa for local Mahdist leaders fell into disuse, and the title became restricted to three of the Mahdi's principal companions, `Abd Allah b. Muhammad al-Ta`ahikh (q.v.), `Abd Allah b. Muhammad Hili (a pious man of the tribe of Dighayn from the White Nile), and Muhammad Sharif b. Hamid (the Mahdi's son-in-law). The Mahdiyya was represented as an eschatological drama, reproducing the primitivistic umma in the end-time. In his drama, the Mahdi was the Successor of the Apostle of God (Khalifat Rasul Allâh), and his three companions the Successors respectively of Abû Bakr (Khalifat al-Siddîq), `Umar (Khalifat al-Fârûq), and `Ali (Khalifat al-Karrâr). The date of this development is uncertain; perhaps before the Mahdi left Abû (Ramadan 1298/August 1881) or during the following months, while he was at Kadrî (cf. R. C. [von] Slatin, *Fire and sword in the Sudan*, London 1896, 338; F. R. Wingate, *Ten years captivity in the Mahdi's camp 1882-1892*, London 1892, 14). In a letter dated 5 Rajab 1300/12 May 1883, the Mahdi informed Muhammad al-Mahdi al-Sanusi that he had been designated by the Prophet as the Successor of `Uthman, but al-Sanusi ignored this approach. The letter is calendared in Abû Salîm, *al-Murhid*, no. 113: there is a good text in Manghûrât... Muhammad al-Mahdi b. `Abd Allâh, ii, 70-3 (Khartum 1963, photographic reproduction of corpus lithographed during the Mahdiyya).

The pre-eminence of `Abd Allâh b. Muhammad was stressed in a proclamation of the Mahdi (17 Rabî' I 1300/20 January 1883), where he is styled Khalifat al-halifat (calendared in Abû Salîm, *al-Murhid*, no. 78: text in Manghûrât, i, 30-2). The restriction of the title khalifa, and the special status of `Abd Allâh b. Muhammad, aroused resent-
ment. One of the Mahdi's most influential sup-
porters, al-Manna Ismacll, a holy man of ... ThanI ever
since.
csa b. CA1I reigned longer than any other Al
Khalifa ruler; for although he formally abdicated in
his former co-ruler, Muhammad b. Khalifa's reign
was because of his offer in that year to become a tributary
and by the Al Bu Sa
ld of
leadership of Khalifa b. Muhammad in 1179-80/1766.
and by the British authorities in the Gulf to afford
redress for this breach of the convention, he refused
"Successor of the Mahdi", which was not used as a
khalifat al-Mahdi, "the
khalifas
from the Mahdl (calendared in Abu Salim,
Manshurdt al-Mahdiyya, n.p., 1934, 229-41). Another pretender to the
Mahdl's death, 'Abd Allah b. Mu-
hammad succeeded him as head of the Mahdist state,
the analogy to Abû Bakr's succession to the Prophet
was emphasized in a proclamation by the two junior
khalifas and the Mahdi's kin (text in Abu Salim (ed.),
Manghârât al-Mahdiyya, 84-9, dated 8 Ramadanâ
1302/22 June 1885). From this time, 'Abd Allah
assumed the new style of khalifat al-Mahdi, "the
Successor of the Mahdi", which was not used as a
formal title by his two colleagues. His reign saw the
appearance in Dâr Fûr (q.v. of another pretend
the holy man called Abû Djummayya, who claimed
the vacant khalifa of 'Ughman, but who died about the
beginning of 1886.

(P. M. Holt)

AL-KHALIFA, the ruling dynasty of Bahrain since
1197/1783. One of the three clans of the Utb tribe
the others were Al Saâbâh and Al Djalâhima)
which established itself in Kuwait ca. 1128/1716, the
Al Khalifa migrated to Zubâra in Katar under the
leadership of Khalifa b. Muhammad in 1179-80/1766.
Khalifa b. Muhammad died in 1197/1783 while on
pilgrimage to Mecca, and in the same year his son
Abd Allah was made ruler of the Bahrain Islands from
the Persians. Abd Allah's predecessor was his kinsman,
Muhammad b. 'Abd Allah, son of 'Abd Allah b. Abd Allah. Supported by other disaffected
members of the Al Khalifa and several hundred
tribesmen, they descended upon Bahrain in Djuumâdâ
II 1286/September 1869, overcame 'Alî b. Khalifa,
and slew him. Muhammad b. 'Abd Allah then
turned on his allies, imprisoned Muhammad b. Khalifa,
and declared himself ruler. Two months later he and Muhammad b. Khalifa both surren-
dered to a naval force sent by the British Indian
government and were taken as prisoners to India.
There they remained in custody until Muhammad
b. 'Abd Allah's death in 1294/1877, when Muham-
dad b. Khalifa was transferred to Aden. He lived
there for ten years and was then released on con-
dition that he never returned to Bahrain. He died
at Mecca in 1307/1890.
The new ruler of Bahrain was Sâd b. 'Ali, the
21-year-old son of the slain 'Ali b. Khalifa. Consider-
able pressure was exerted upon him by the Ottoman
Turks, after their occupation of al-Hâsâ in 1288/
1872-2, to acknowledge Ottoman suzerainty, and it
was because of this pressure that a convention was
concluded by him with the British government in Mu-
barram 1298/December 1880 by which he undertook
not to enter into relations with any other state or
to allow other governments to establish diplomatic
or consular agencies in Bahrain. He confirmed this
undertaking in a further agreement signed in Shâbân
1309/March 1892 in which he also engaged not to
alienate any of his territory to another power. By
this time, most of the Al Khalifa possessions in Katar
had been lost to Djasîm b. Muhammad Al Thânî of
Dawhâ, who had acknowledged Ottoman suzerainty
in 1288/1871. Zubâra, the principal Al Khalifa pos-
session in Katar, was sacked and destroyed by
Djasîm, in alliance with renegade members of the
Al Khalifa branch of the Al Khalifa, in Dhu
l-'Ka'da 1295/November 1878. Although the town
was not rebuilt, ownership of its site has been disputed by the Al Khalifa and the Al Thânî ever
since.
Sâd b. 'Ali reigned longer than any other Al
Khalifa ruler; for although he formally abdicated in
his great-uncle's. He was constantly embroiled at
home in quarrels with his kinsmen and with his sub-
jects in Katar, who several times rebelled against
his oppressive conduct and repeated fiscal exactions;
whilst abroad he was at feud with the Al Saâd, the
Persians, and the Ottoman Turks, all of whom
claimed sovereignty over Bahrain although only the
Al Saâd attempted to pursue the claim by force
of arms. Muhammad b. Khalifa's struggles with his
kinsmen disrupted the peace of the Gulf, which the British Indian government was at pains to
preserve. His conduct led that government in
Dhu l-'Ka'da 1277/May 1861 to force him to con-
clude a convention by which he forswore piracy,
maritime warfare, and the seaborne slave trade, in
return for British recognition of his independence
and a guarantee of the security of his territorial
possessions against aggression. Six years later,
in Djuumâdâ II 1284/October 1867, he attacked
and sacked Dawhâ and other ports in Katar to
punish some rebellious tribesmen. When called upon
by the British authorities in the Gulf to afford
redress for this breach of the convention, he refused
do so, and as a consequence he was deposed by the
British as ruler of Bahrain in Djuumâdâ I 1285/
September 1868 in favour of his brother 'Ali.
Muhammad b. Khalifa found refuge after his de-
position at Katîf, where he formed an alliance with his
kinsman, Muhammad b. 'Abd Allah, son of 'Abd Allah b. Ahmad. Supported by other disaffected
members of the Al Khalifa and several hundred
tribesmen, they descended upon Bahrain in Djuumâdâ
II 1286/September 1869, overcame 'Alî b. Khalifa,
and slew him. Muhammad b. 'Abd Allah then
turned on his allies, imprisoned Muhammad b. Khalifa,
and declared himself ruler. Two months later he and Muhammad b. Khalifa both surren-
dered to a naval force sent by the British Indian
government and were taken as prisoners to India.
There they remained in custody until Muhammad
b. 'Abd Allah's death in 1294/1877, when Muham-
dad b. Khalifa was transferred to Aden. He lived
there for ten years and was then released on con-
dition that he never returned to Bahrain. He died
at Mecca in 1307/1890.
The new ruler of Bahrain was Sâd b. 'Ali, the
21-year-old son of the slain 'Ali b. Khalifa. Consider-
able pressure was exerted upon him by the Ottoman
Turks, after their occupation of al-Hâsâ in 1288/
1872-2, to acknowledge Ottoman suzerainty, and it
was because of this pressure that a convention was
concluded by him with the British government in Mu-
barram 1298/December 1880 by which he undertook
not to enter into relations with any other state or
to allow other governments to establish diplomatic
or consular agencies in Bahrain. He confirmed this
undertaking in a further agreement signed in Shâbân
1309/March 1892 in which he also engaged not to
alienate any of his territory to another power. By
this time, most of the Al Khalifa possessions in Katar
had been lost to Djasîm b. Muhammad Al Thânî of
Dawhâ, who had acknowledged Ottoman suzerainty
in 1288/1871. Zubâra, the principal Al Khalifa pos-
session in Katar, was sacked and destroyed by
Djasîm, in alliance with renegade members of the
Al Khalifa branch of the Al Khalifa, in Dhu
l-'Ka'da 1295/November 1878. Although the town
was not rebuilt, ownership of its site has been disputed by the Al Khalifa and the Al Thânî ever
since.
Sâd b. 'Ali reigned longer than any other Al
Khalifa ruler; for although he formally abdicated in
favour of his son Hamad in 1342/1923, he continued to hold the reins of government almost until his death in Sha'ban 1351/December 1932 at the age of 85. Hamad b. Isa, who had been named heir-apparent by his father with the consent of the principal members of the Al Khalifa as early as 1311/1893, in turn designated his son Salmán heir-apparent in Muharram 1359/Febuary 1940, again with the consent of the leading Al Khalifa members. Two years later, in Safar 1361/February 1942, Hamad died at the age of 76, and Salmán b. Hamad succeeded. He ruled until his death in Dhu 'l-Qa'da 1371/November 1961, aged 67, being succeeded by his eldest son Isa, who had been named heir-apparent some years earlier.

A slight but significant devolution of power, under the pressure of domestic and external events, took place in the latter years of Shaykh Salman’s reign, and the process was accelerated by his successor. An advisory council to assist the ruler was established, individual members having responsibility for different departments of government. The councilors were at first predominantly members of the Al Khalifa, but after the accession of Isa b. Salmán they have become more representative through the addition of members from Bahrayn’s mercantile and professional communities. Isa b. Salmán promulgated a constitution in 1393/1973 which declared Bahrayn to be an Islamic state with the Sha'ifs as the principal source of legislation. It also provided for the setting-up of a national assembly composed of appointed and elected members. The first elections for the 30 elected seats took place in Dhu 'l-Ka'da 1393/December 1973.

In external affairs, the principal changes that have occurred have been the renunciation by the Persian government in 1390/1970 of its claim to sovereignty over Bahrayn, and the termination of the Al Khalifa’s treaties with the British government, following Britain’s withdrawal from its special position in the Gulf in 1391/1971.

**Al-Khalifa b. Abi ‘l-Mahasin Al-Halabi,** Arab physician who came originally from Aleppo, and was possibly related to the family of Ibn Abi Usayiba [g.v.]. The biographical details concerning him are fairly sparse, but it is known that he wrote, probably between 654 and 674/1256-75, a work on ophthalmology called al-Kifa fi l-khul (or fi l-fibb). In this he gives a concise sketch of the history of ophthalmology among the Arabs and deals with the anatomy, physiology and hygiene of the eyes, citing the medicaments used for treating eye disorders, and describing also the surgical operations, e.g. for cataract, which can be performed on them. All in all, the work is on a high scientific level, and the text is often accompanied by synoptic pictures and illustrations which throw light on the text itself. Various manuscripts exist, and a German translation has been made by J. Hirschberg and his collaborators.

**Bibliography:** Brockelmann, II, 366, S I, 895; Sejrig, GAS, III, index; J. Hirschberg et alii, Die arabischen Augenärzte, Leipzig 1905; ii; G. Sarton, Introduction, ii, 1101. (ed.) **Khalifa b. ‘Askar, Libyan nationalistic leader, who after having sought refuge in Tunisia, hastened from November 1914 onwards to assume leadership of the revolt fomented by the Sanussis [q.v.] against Italian domination. The rebels soon achieved some spectacular successes against the Italians [see Libyia], and Khalifa speedily attempted to raise the Tunisians against France. On 16 August 1915, in a letter to the head of the postal service in Dehibat (southern Tunisia), he called upon the latter to send back to him his family, which had remained in Tunisia, and declared war on the French government. Benefiting from a certain amount of complicity in his plans by the notables of southern Tunisia, he went on to the attack in September of the same year with Tripolitanian troops aided by some tribal elements of Tunisia. These fellaga [see Fallak] at the outset constituted a grave threat for the small outposts strung all along the frontier, and these had to be evacuated, and then they inflicted severe losses on the Franco-Tunisian garrisons of the Dehibat, Tatahouine and Remta outposts, without however managing to occupy them. On 2 October, at the head of 3,000 rebels, Khalifa suffered a severe defeat before Umm Swjih, which led to a period of calm for some months along the Tunisian frontier, but the situation became threatening again in the following spring. Armed now with some field artillery, Khalifa returned to the attack, bombarded Dehibat on 19 June 1916 and then inflicted heavy losses on the Remda garrison; but he was again defeated on 28 June and did not engage in activity with such ardour during the last two years of the Great War. After the Armistice, the Tunisian rebels benefited by munificence of clemency, and Khalifa b. ‘Askar was even able to be reunited with his family, who had been kept as hostages.

**Khalifa Shāh Muhammad, Indian Muslim scholar who flourished during the latter part of the 11th/17th and early part of the 12th/18th century. He was the author of an epistolary work in Persian entitled Diāmi‘ al-kawdnin, also known as Inšā‘ al-Khulafa. According to Ghulam ‘Ali Kathārī and Sayyid Khayyār Allāh (d. 1115/1703). The Diāmi‘ al-kawdnin is divided into four sections: the first two contain long and short letters respectively, the third (divided into two parts) comprises letters of greetings and condolence, and the last gives forms of civilities and styles of addressing in correspondence. The book, as mentioned in the preface, was composed at the incentive of some friends while the author was residing in Kanawjī as a student. The original printed edition of the work (Lucknow 1846) carries a chronogram which gives 1085/1674 as the date of composition.

**Bibliography:** Diāmi‘ al-kawdnin, B. M. Add. 19,434; Ghulām ‘Allāh Khān Azād Bilgrāmī, Mā‘ādir al-kirām, B. M. Or. 1804; cf. Rieu, Catalogue of Persian manuscripts in the British Museum, i, 414. (Munibur Rahman) **Al-Khalīl.** [see Shām.]

**Al-Khalīl.** The Arabic name for Hebron, a town in southern Palestine, 32 km. south of Jerusalem.
lem (31° N 34° E), the only urban centre in the southern Judaean hills and their virtual capital and commercial centre. It has given its name to the entire mountainous region surrounding it, which is known as Diabal al-Khalil, while the whole plateau is known by the name of Diabal Kays, due to the local tradition which regards the fellahin of the area as of Kaysi origin (cf. Volney, *Voyage, Paris* 1787, ii. 104-5, 197). Hence in the Bedouin dialects of southern Palestine this means a peasant, particularly of the Hebron hills.

In mediaeval times Mukaddasî, 172, mentions Diabal Naḍra (or Naṣra, Naṣra) as the nearest hills to the town. Since the reading is uncertain (*EI* art. al-KHALLIL), it is possible that Naṣra represents a copyist's mistake for nimra (Mamre (?); cf. Arculfus, *Early travels*, 6), the north-westernmost spur of Diabal al-Dja'ābira, which dominates the city from the north-east. The town is the highest in Palestine, and one of the highest in the Middle East, ascending on the surrounding hills to altitudes between 925 m. (the old city) and 1,000 m. (the modern parts built in the present century) above sea level. It is situated in the northern reaches of Wâdi al-Khalil which is a tributary of the Wâdi Beersheba. Its extremely fertile soil and the fair amounts of rainfall, especially in the northern parts of the area (average of 700-850 mm. a year), along with the skill the inhabitants have acquired in preserving water and utilising the soil, have made this area into one of the most flourishing in the country.

Because of the mountainous nature of the area and its climate, it developed the cultivation of certain fruit trees, particularly apples and grapes, which, according to Mukaddasî loc. cit., used to be exported mainly to Egypt. The Hebronites developed, in particular, the cultivation of vines, and throughout the ages they were regarded as the best viticulturists in the Middle East (Karmôn, in *Studies on Palestine*, etc., 71-3). They learnt how to prolong the grape season for about six months a year, between July and December, a fact which proved to be of great economic importance. After the Islamic conquest, many vineyards in the lowlands of Palestine had to be abandoned in the wake of the prohibition and decline of wine production and consumption. Hebron then turned its supply of fresh grapes into its main cash-crop.

In addition to this agricultural advantage, Hebron had yet another advantage arising from its topographical setting. It lies astride natural crossroads which lead to the Negev and the coast in the south and south-west to the southern end of the Dead Sea and the main ancient Syrian-Arabian caravan route. Hebron thus offers an alternative to the Via Maris, sc. the mountain route which cuts from Baysan through Nablûs and Jerusalem. In the later Middle Ages and until modern times, travellers from Egypt often preferred the Hebron route to the Via Maris which could be more easily attacked by Bedouins.

**Topography.** The ancient town of Hebron (Kiryât Arbaʿ (?) see below) was built to the west of Wâdi al-Khalil or the Valley of Hebron, which runs along the modern town in the north-east direction, on Diabal Romanûa, on which a tomb called Kaibrâbun is shown today next to Mashtaghe Arbaʿ 'in (called today by the name of Dajbat al-Kayfûn), a Muslim sanctuary which in Jewish tradition has been identified with the tomb of Jesse. The Arab town developed on the eastern side of the Vale around the sanctuary of the Tomb of the Patriarchs; until the Crusading period, to the north of it Nâṣir-i Khursaw, 55-4, *Le Serant Palestine*, 312, and during the Mamlûk period in other directions also, mainly in the south and south-east. Until the beginning of the 19th century, therefore, the town consisted of three sections. The oldest, on the easternmost spur of Diabal al-Dja'âbira (called al-Ra's), adjacent to the Haram; a smaller section around the Mosque of 'All al-Bâkka (the north-west of it on another spur called Djibal Bayûn; and a third section, larger than the previous two, called Hârat al-Kayfûn, to the south of the valley. This division of the town into three sections was possibly the factor which prevented the construction of an encompassing wall (cf. Arculfus, *op. cit.*). Each section was partially protected by means of building the houses along the periphery in a continuous line with no doors facing outwards.

Water supply was the main problem of the town. In the pre-Ottoman period, the Muslim sources mention a few springs from which water used to be brought to the town by means of aqueducts. Nâṣir-i Khursaw, *loc. cit.*, cf. Le Strange, *loc. cit.*, mentions a channel conducting water "in no great abundance" from a spring in a nearby village to the town. This must have been the same channel which is later mentioned by Mudjîr al-Dîn loc. cit., conducting water from the village of Maṣjîd Fâsîl to a water tank near the northern entrance to the Haram, which was rebuilt by the Mamlûk amir Bakhtâmûr al-Djûkandâr. In the *szâriya* of Shaykh 'All al-Bâkka, a water tank and a sâbil for a well that was found in the place, were built by Sâyî al-Dîn b. Sâlâr, the Mamlûk Nâbîb al-Sûlûnî in Syria, in 702/1300. Mudjîr al-Dîn mentions a number of six springs that supplied water to the town (al-Uns al-djâjîlî, 428). However, the quantity of water supplied by all these springs was meagre and could hardly have supported the population of the city. Since during the later Middle Ages and the Ottoman period, large numbers of pilgrims came to the city and passed through it on the Hadîjî route to Mecca, the need for greater reserves of water necessitated the construction of two large reservoirs in the Hebron valley. The date of their construction is unknown, but in the Ottoman period and most probably during the time of Sûleymân Kanûnî they were rebuilt and enlarged. One was called Birkaṭ al-Kâzâzân (today filled up, and a mosque built in its place), and the other Birkaṭ al-Sûlûnî, a name given to several cisterns built by the Ottomans along the Hadîjî route, including Solomon's Pools, the large reservoirs in Kurmul (Biblical Carmel) and 'Ein Gêdî. This further attests to the prominence of Hebron as an important station on the Ottoman (and possibly Mamlûk) Hadîjî route from Jerusalem to the main Syrian route in Trans-Jordan through southern Judaea and the Dead Sea region (Karmôn, 74-6).

**The name.** The ancient Biblical name of Hebron, Kîryût Arbaʿ, is not mentioned in the Arab sources, which are very well-informed about the original name of the town and which they repeat in many versions: Habrûn, Hafîrûn, Hibra (or Habra), Bayt Habrûn, (Mukaddasî, 172; Yâkût, s.v. al-Khalil, Dimashkî, 201; Kâl���sînî, Subh, i, 335; iv, 102; Arûd Habrûn (Ibn 'Iyâs, Nağî al-Ashârî ed. Arnold, *Chrest Arab.*, 60), Mazraʿ at Habrûn (Muţahhar b. Tâhir al-Mâkdîsî, *al- Bad' wa l- tabîkî* ed. Huart), iii, 53). However, the number of four settlements hinted by the ancient Hebrew name (Arbaʿ, cf. B. Mazar, *Kîryût Arbaʿ* in *Sefer Hevron* [in Hebrew], 20 f.) could have some reference to four localities in the
city and its environments mentioned in the Islamic literature: Ḥabrūn, Martym, Bayt ʿAyūn (= Khirbet Beit Einūn; its identification with Aenon of St. John, iii, 23 is very doubtful, cf. EI, art. al-KHALIL), and Bayt Ibrāhīm. According to a famous legend which appears as early as the 2nd/ 8th century, the Prophet bestowed the different quarters of Hebron on his companion, the oil merchant Tamīm b. Aws al-Dārī (Muṣṭir al-Dīn, 428-9). In the early literature, however, there is mention of only two or three localities. Ibn Saʿd mentions Hibra and Bayt ʿAyūn (Ṭabakat, ed. Sachau, i/2, 75; vi/2, 129-30; cf. Bākrit, Muṣṭir, ii, 420; Ibn Durayd, Iyīkhāb, ed. Hārūn, Cairo 1958, 377), and Balādḥurī adds to them Masǧīd Ibrāhīm (Futūk, 129; cf. Kalkashandi, i, 335). The name Martum, which has always existed as well in this or similar form appears in later literature, and it was mistaken by Naṣīr-i Khusrāw as the name of the whole town (though in the corrupted spelling Maṭlūn, Sāfar-nāma, 53, cf. Le Strange 310 and note; Kalkashandi, xii, 120 has al-Ruṭūm).

The Muslims extended the name which they gave to the sanctuary, Masǧīd Ibrāhīm al-Khalīl, to the whole town, in the same way that Bayt al-Makdis was extended to the whole of Jerusalem. In both cases, the new name is connected with the sacredness of the respective shrines in Islamic tradition (see al-Kuds). The prominence of Abraham in Islamic literature, and the strong mention of the bestowal of the name of Abraham, who was also called “Haver” (Mīrāzkh Rabbā, on Genesis, section 84; Babylonian Talmud, Menākhōth, 33b). The deep Islamic significance of the attribute al-Khalīl was, however, further stressed in the Islamic tradition which says that Muḥammad was also named Khallī Allāh (Muṣṭir, Saḥīh, masāqīd, no. 23, cf. LA, kh-1-i).

Islamic Significance. The Islamic sanctification of Hebron came in two phases, parallel to and following that of Jerusalem. Whereas at least the name of Jerusalem was known to the Muslims from the time of Muḥammad, they did not know anything about Hebron. In the earliest reports about the conquest of Syria, unlike the case of Jerusalem, its conquest is passed over with no special remark. The sources only mention the legend of the bestowal of the place on Tamīm al-Dārī and his descendants by the Prophet, a fact which was of importance to the beneficiaries alone. They later tried to confirm their claims by presenting a letter from the Prophet to Nuʿaym b. Aws al-Dārī attesting it. Although the Arabic sources mention such a document (kiyāb), there is no doubt that it is a forgery (EI, art. al-KHALIL; Balādḥurī, loc. cit.; Muṣṭir al-Dīn, 428-9; Kalkashandi, i, 335; cf. Caetani, Annali dell’ Islam, iii/1, 298, 9 Al., § 69). However, the tradition about this kiyyāb is very early, and the rights of the Dāris have been recognised down the ages. At least one abortive attempt was made on the part of the government to abolish them on the ground that the Prophet could not have granted land which he had not possessed (Muṣṭir al-Dīn, loc. cit.).

For lack of any detailed early Islamic traditions, we must assume from the mention in Balādḥurī of the name of Masǧīd Ibrāhīm that the first phase of the Islamic sanctification of the city was connected solely with the memory of this Patriarch. Similarly, the early traditions about Jerusalem made it holy because of the Biblical episodes and figures which were related to it, (Abraham’s sacrifice, the Ark of Moses, Solomon’s Temple, etc.). The fact that active worship of the tomb of Abraham was conducted by Jews in Hebron during the Byzantine period, as attested by the 5th century Greek author Sozomenus, puts this assumption on firmer ground. The close and friendly relations, immediately after the conquest of Syria, between the local Jews in Palestine, who were quite numerous in the Hebron area, and the Muslims, may explain this. It also elucidates the Frankish account, according to which the Jews showed the Arabs the entrance to the sanctuary which had been walled up by the Byzantines, and in return they were allowed to live in peace in the town and build a Synagogue next to the Sanctuary (RHC, Hist. occ. v, 309 f.).

The report of Muṣṭir al-Dīn, that the Dāwulīyya mosque, adjacent to the mosque from the north-east, was built over an ancient Jewish cemetery, attests the historical element in this account.

The second phase of the Islamisation of al-Khalīl came about when the city was connected directly by the person of Muḥammad once again according to the same method applied to Jerusalem. The older Biblical traditions were no longer sufficient for an Islam to that had to confront both Christianity and Judaism; the Islamised holy places had to be connected to the founder of the faith. The isrāʾ and the miʿrāj were therefore connected at the beginning of the 2nd/8th centuries with Jerusalem and later with many other places in Syria which had to have a proper Islamic sanctity. Early traditions speak about the isrāʾ only from Mecca to Jerusalem (cf. Buḫārī, Sahīh, al-Muṣṭir, and al-Miʿrāj). Later on, probably towards the second half of the century, traditions appeared saying that the Prophet was ordered, during the isrāʾ, to descend and pray on Mount Sinai, in Hebron and in Bethlehem before finally reaching Jerusalem (Tadmuri, Muṣṭir al-gharām, 132). Local traditions developed very rapidly connecting the sanctity of Jerusalem with that of al-Khalīl, enhanced no doubt by the interest in establishing the Islamic holiness of Palestine vis-à-vis Christianity and in attracting pilgrims and settlers to it. The Cave of the Patriarchs was made the Tomb of Adam as well, his head lying in Jerusalem and his feet in Hebron (Tadmuri, 178 f.; cf. Muṣkaddasī, 46; Arculfus, loc. cit.). When Abraham died, Allāh said to Hebron, antī ʿabdī wa-baytī makdiṣ, and promised that it would be the scene of the resurrection (Amos, BM, MS. or. 1510, fol. 54b-55a). Local, popular Islam found a real object of veneration in the tombs of the Saints. Jerusalem had none, but Hebron had plenty of them. In addition to Adam, the Patriarchs and their wives, the tomb of Joseph was also discovered just outside the southwestern wall of the sanctuary and a dome was built over it (in the time of the Abūṣāid al-Muṣṭarīd, Tadmuri, 186-91), and some forty obscure martyrs were also found to be buried on the Dāwulīyya, the tomb of which also became a pilgrimage site (Muṣṭir al-Dīn, 427). In the post-Crusader period, Jerusalem and Hebron were called al-Haramayn al-Sharifayn, a
term which, until then, was reserved for Mecca and Medina. During the Mamluk period, control of the Haram was transferred to the Mamluks and their extensive endowments, was entrusted to one functionary, either a Mamluk amir of a local dignitary, who bore the title Nâṣir al-Haramayn al-Sharafsayn (Saḥalwī, al-Dawūd al-lāmī, iii, 208, 218, IV, 13, 134, VII, 32, and passim; Mūḍir al-Dīn, passim, all through the description of the Mamluk period e.g. 440-5, 623, 632, etc.; on an inscription: M. Van Berchem, C. A. ii, No. 201), which grew up around the visiting of the Tombs of the Patriarchs which were similar to those practices at the visit of the Prophet’s Tomb in Medina, and traditions appeared to legalise them. “He who cannot visit me”, the Prophet was made to say, “let him visit the Tomb of Abraham... The prayer next to it is the Ḥadīth of the poor...”, “He who visits the tomb of Abraham, Allāh abolishes his sins”, etc. On the attachment of the sanctity of Hebron to that of Mecca and Medina see Khiṣârīzmī, MS. BM Or. 4584, fol. 22b (Kister) (Tadmuri, 193-6; Sibt b. al-Djawzī, Mirrât al-samānī, ed. Jewett, 305; Kister in Le Muséon lxxxii (1969), 193). Al-Khālīl thus developed in popular Islam as a real substitute for Medina in the same way that Jerusalem was supposed to be a minor sacred city.

For the visitors to al-Khālīl, the tombs also had a practical meaning. An atmosphere of miracles and mysticism grew up around those tombs. This found expression in popular legends concerning the cave, in which the Patriarchs were supposed to rest, and in which the requests of the believers were promptly fulfilled (e.g. Tadmuri, 139). This atmosphere, the status of the city and the pilgrimage to it, were all supported and stimulated by the practice peculiar to this popular veneration of both sanctuaries and their localities. The whole atmosphere, the ceremonies and practices centred around it, all gave rise to a most unobjectionable reaction amongst the strict Islamic orthodoxy. Most of the popular ceremonies which developed around the Tomb, including the Simā‘, were regarded as bid‘āt. Early traditions denounced the use of tombs as mosques, (“May Allah curse the Jews and Christians, they turned the tombs of their prophets into mosques”, Muslim, Ṣāḥīh, masâ‘īdī, nos. 16-22). However, the fact that there is a hadīth which says that Muḥammad is Allāh’s friend (Khālīl) exactly like Abraham and continues to forbid the usage of tombs as mosques (ibid., no. 23), which is a simple amalgamation of two traditions, shows that the debate around the status of the al-Khālīl shrine was an early one. The only tomb that Islam has sanctified for the purpose of prayer and pilgrimage is the Prophet’s tomb. The above combination of traditions puts Abraham and Muḥammad on the same level in an attempt to give the former’s tomb the same status as the latter’s. Orthodoxy has never accepted the solution hinted at here. While Mūkaddasī, loc. cit., only raised objections to partaking in the free meals of the Simā‘, in the post-Crusader period, with the wave of Islamic veneration of Jerusalem and Hebron, scholars representing strict orthodoxy like Ibn Taymiyya and Ibn Kayyim al-Dawawiyya (Ibn Ḥādījār, al-Durar al-kāmina, ii, 40) raised objections to this popular veneration of both sanctuaries and cast doubt even on the authenticity of the locality of al-Khālīl’s tomb. The Maghrībī theologian Ibn al-Hādījī al-‘Abdārī (died 737/1336) ruled against entering the sanctuary on the grounds that the exact location of the graves is unknown, and that the present tombs were built by the Franks, who also opened a door in the sanctuary wall. The pious Muslim should heed therefore the previous generations and visit the place only from outside (al-Madkhal, Beirut 1972, iv, 258). He was particularly angry about the musicians of al-Khālīl who used to play trumpets; drums and other instruments after the afternoon prayer (naubah al-‘ālī), and brought people to dance and be amused, all of which he regarded as a grave sin (shāhī ‘wa-munkhār) (Kister, op. cit., 195). He also objected to the use of bread and lentils called diyāfāt al-Khālīl which he regarded as a desecration of Abraham’s memory, for he used to offer his guests meat and not lentils (ibid., 259).
On the other hand, there were ‘ulamā’ who argued in favour of the place. Tadmuri and Muḏjir al-Dīn devote long discussions to proving the authenticity of the tombs by reporting stories about people who went into the cave and actually saw the bones or even the intact bodies of the Patriarchs (Tadmuri, 183-4, 188-9). Prominent authorities are quoted calling the place haram and musjid to prove that it is not a cemetery and that the prayers and the other ceremonies in it are legal (Muḏjir al-Dīn, 55).

In the long run, the advocates of al-Khaylī were those who triumphed. Both the Mamlūk and Ottoman governments showed considerable interest in the town, in which popular Sūfī activity came to be combined with learning. Muḏjir al-Dīn, 425-7, lists 32 sūfīyyas, mosques and musqāfīyyas, in addition to the Mas̱jīd al-Ṭārifīn (mentioned above) and the mosque of Shaykh ʿAll al-Bakkāʾ (died 670/1272, Makrīzī, op. cit., 1, 604) and two masjūdās, al-Madrasa al-Fakhriyya and al-Madrasa al-Kaymaṣīyya. This was confirmed by the Maghribī traveller al-Balawī, fols. 62b-63a, who regards al-Khaylī as a place of Islamic scholarship.

History. Historical information about al-Khaylī in the Arabic literature is very sparse, since the city, like the rest of Palestine, was never the centre of any important political events during the Crusader period. Sporadic traditions concerning its sanctuary already appear in the 2nd/8th century, but it was only at the end of the 9th/15th that, probably for the first time, a more comprehensive work appeared, compiled by the kāfī Muḏjir al-Dīn. It seems that he was the first to collect and classify the material then available about it. With the exception of the legend about Tamlīm al-Dīn (see above), the sources are silent about the town. Nothing is said even about its conquest. A Frankish source, which could by no means be considered as reliable, reports that the Byzantines walled the entrance to the sepulchral cave before leaving the town and that the Arab invaders were shown the place by the Jews (for the implications of this, see above).

The history of al-Khaylī revolves around two main poles, its sanctuary and its topographical situation, and also its proximity to the desert and its important traffic route.

Until the time of Muḏjir al-Dīn, the sources concentrate on the sanctuary with a few references to the agricultural products of the locality. The first information is, however, no earlier than the 4th/10th century (Iṣṭāqīrī and Ibn Hawkal, loc. cit.). From the more detailed information of Muḥammad b. ʿAbd Allāh Mukhlīs it appears that the Muslims changed nothing inside the sanctuary nor in the traditionally-accepted arrangement of the tombs: Isaac and Rebecca inside the covered (Byzantine Basilican) mosque in the south-east, Abraham and Sara at the entrance and Jacob and Leah on the other (north-western) side of the open court. This arrangement was established at least at the end of the 3rd century A.D., if not earlier (Brašlāvī, in Senfr Hebron, 288). According to Muḥammad b. ʿAbd Allāh Mukhlīs, the tombs were built in the Islamic period (but Muḏjir al-Dīn ascribes the work to the Umayyads). According to Nāṣir-i Khursaw (438/1047), who gives a minute description of the Haram, one of the Fāṭimid caliphams ordered that a gate be opened in the north-eastern wall of the Sanctuary enclosure. He also relates, and this was most probably repeated later by ʿAbd Allāh, that until then the interior of the building was inaccessible for visitors (op. cit., 238; cf. Le Strange, 315). The place was highly venerated by the Fāṭimid and other rulers who sent many expensive gifts, and Muslims from many other countries sent their dead to be buried there (ibid., cf. Muḥammad, 173, note d).

In 425/1033, the Haram suffered from the heavy earthquake which destroyed large parts of Ramla and Nābulus (Muḏjir al-Dīn, 269-70). It underwent extensive alterations under the Crusaders, who occupied Hebron in 1099 and converted the mosque into a church, supplying it with a sloping roof (the present building, cf. Le Strang, 311, notes). They called Hebron Saint Abraham, and Godfrey of Bouillon bestowed it in 1100 as a seigneurie on Gerard d’Avesnes (d. 1102). He was followed by Hugo de Rebèque, Rohardus (Rorgius), Galtérie Mahomet and Baldwin. In Baldwin’s time (1119-20), the sepulchral cave was discovered by Christian monks, a detailed account of which was preserved in a Frankish chronicle (see EI art.) and mentioned by ʿAll al-Harawi and later Arabic chroniclers (cf. Le Strange, 318). It seems that Baldwin and his successors were the governors of Hebron, first under the king of Jerusalem and later, from about 1155, under the lord of Karak. In 1168 Hebron was made a bishopric, and the Crusader convent of ʿElī Gédi was subordinate to it (EI art.; E. Rey, Les colonies franques de Syrie aux XIIe et XIIIe siècles, 1883, 384; cf. G. A. Smith, Historical Geography, 185).

ʿAll al-Harawi, who visited Hebron in 567/1171-2, relates how he met a knight who had entered the cave, and gives details about the restoration of the place at the order of King Baldwin II (Le Strange, 316-18). It was then that the ancient flat roof of the covered mosque was replaced by a system of arches and a sloping roof (Vincent, Hebron, 166).

Hebron was captured by Ṣālāb al-Dīn, according to most sources, after the conquest of Ascalon (Ibn al-Athīr, al-Kāmil, Beirut 1966, 360-1; Makrīzī (op. cit., i/1, 95) puts it in the same year but before the conquest of Ascalon (583/1187). According to Muḏjir al-Dīn (56), the wooden minbar which had been built by Badr al-Dīn al-Dīrī (cf. supra) by order of the caliph al-Mustansir in 484/1092 (for the inscription on the minbar see, M. Van Berchem, in Festschrift Edvard Sachau, Berlin 1915, 500-1; Vincent, Hebron, 222, fig. 85, cf. ʿAbd Allāh Mukhlīs, in BIFAG, xxv, 57; Jaussen, KB (1953), 579; RCEA vii, n° 2790).

After the death of Ṣālāb al-Dīn, Hebron passed into the domains of al-Malik al-Nāṣir Dāwūd of Karak, who was supported by his father al-Muʿazzam ʿĪsa. After the death of the latter in 624/1227, his domains were claimed by his uncle al-Malik al-Kāmil of Egypt. The crisis that ensued threatened to engulf all the Ayyūbīd princes in war. At the end of that year, however, a treaty was signed redressing the Ayyūbīd territories, and according to this treaty, hebron, together with large parts of southern Palestine, were given to Egypt (Makrīzī, Sulāb, i/2, 235). Later it came once again under the rule of al-Nāṣir Dāwūd until 642/1244. In this year, during yet another war amongst the Ayyūbīds, southern Palestine fell into the hands of al-Ṣālīb Ayyūbī of Egypt, who sent many expensive gifts to the Muslims. Shortly afterwards, the Khwarazmians changed sides, joining Dāwūd, and Hebron was again returned to him (ibid., 318-22); and in 658/1260,
Plan of the Masjid Ibrahim

[After Vincent, Hébron].
When Mamluk rule was established in Egypt and Syria, securing the country from external danger for over 250 years, the sanctuaries of both Jerusalem and Hebron were given particular attention by the central government as well as by the local governors. Hebron came under the jurisdiction of the governor (nâbiḥ) of Jerusalem and its waqfs and other endowments were supervised by a special functionary (Nâṣir al-Ḥārâm). In one case, however, a special nâbiḥ is mentioned for Hebron (Makrīzī, op. cit., 699; cf. Khalqashandī, iv, 199). In 666/1266 Baybars visited Hebron and issued an order banning the Christians and Jews from entering the sanctuary. Until then they could enter the place in return for certain payments (Makrīzī, op. cit., 544). This ban continued in force until Israel occupied Hebron in 1967. In 666/1266 he allocated large sums and rich endowments for the Haram and its attendants and ordered extensive repairs to be carried out there, despatching the amir Djamal al-Dīn b. Nahār to inspect the works (Ndīr al-Haramayn al-Sharif ay n).

In al-Mansūrī after him, and a year later, he dedicated repairs to be carried out there, despatching the amir Djamal al-Dīn b. Nahār to inspect the works (Ndīr al-Haramayn al-Sharif ay n). He also ordered that the free meal, the diyafa of al-Khās, should be distributed from the sanctuary (Makrīzī, op. cit., 565). Kalâwûn built in 679/1280-1 a riḥâb opposite the citadel and adjacent to the Haram, which was called al-Riḥâb al-Manṣūrī after him, and a year later, he dedicated the Bismârristân al-Manṣūrī (Mudīr al-Dīn, 426). The ever-growing number of pilgrims that came to Hebron or passed through it on the way to Mecca necessitated the building of a large water reservoir.

Orders were given in 682/1283 that the poll-tax of the dhimmis of Jerusalem, Bethlehem, Bayt Dālā and Hebron should be dedicated for this purpose; the construction was entrusted to the hands of the amir 'Alā' al-Dīn Ayydughī al-Ruknī (Ibn al-Furat, 739/1339, vii, 259; Makrīzī, op. cit., 712). In 713/1313 another water project was completed when the amir Abī Sūrūgī al-Ruknī (Ibn al-Furat, 745/1344-5) dedicated an aqueduct that conducted water to Ayn al-Tawāshī at the northern entrance to the Haram. The same amir built between 718/1318 and 720/1320 from his private funds the Djawulliyya mosque adjacent to the north-eastern wall of the sanctuary. Next to the Djawulliyya were the kitchens, the mills and storage places of the Simâ' (cf. Balawi, loc. cit.; Ibn Hāḍjar, al-Durar al-kāmina, ii, 117; Makrīzī, op. cit., ii, 231, 674; Mudīr al-Dīn, 58, 131). The walls of the covered mosque (al-mushâṭâ) were overlaid with marble by the amir Tankiz, the viceroy (nâbiḥ al-salānâ) of Syria, in 732/1332 (ibid., 55, 57). The citadel (kaftā) of the town was rebuilt and dedicated by al-Nâṣir Hasan (748/1347-51, 755/1254-61) (ibid., 426). In 796/1394, during the reign of Barkūk, the mikrâb of the Mālikyya to the right of the entrance to the covered mosque and the arcade along its western wall (the "Women's Mosque") were built by Shihâb al-Dīn al-Yaghmûrī (ibid., 57-8). Barkûk himself directed the village of Dāyr Istiya in the vicinity of Nâbulus solely for the expenses of the Simâ' (ibid., 440). Additional endowments for the Haram were ordered by al-Āṣīraf Īnâl (850/1444) and al-Zāhir Khushkadam, who also renewed the marble covering the walls of the Djawulliyya (867/1462). Khâlīl Bāy showed great interest too in the sanctuaries of Hebron and Jerusalem, and used to inspect them in person (Sakhāwī, Dāwa, vi, 205; Mudīr al-Dīn, 647; Ibn Iyâs, iii, 108). To this period belong three detailed descriptions of the Haram, that of Abu 'l-Fīdā' Ishāb al-Khalīlī (752/1352), copied by Suyûṭī and Mudīr al-Dīn; cf. Ibn Baṭṭûta, who visited al-Khalīl in 626/1232; and of Balawī, who arrived there in 732/1332. While the latter spoke sceptically about the location of the tombs, Ibn Baṭṭûta defended the traditional sites (Balawī, loc. cit.; Ibn Baṭṭûta, 32; cf. Le Strange, 319-20).

The proximity of Hebron to the desert put it and its environs in constant danger from the Bedouins. The roads leading southwards from the town came almost constantly under attack and travellers could rarely pass along them in safety. The Bedouins in Syria and Palestine preserved the old division into Kays and Yaman, which also divided the fellahin [see KAYS and YAMAN. In the Ottoman period]. The two factions were in constant strife; and from time to time the nomads used to attack the sedentary areas. The Mamlûks could not keep the Bedouins in check all the time, and their military expeditions against them were at best only a temporary remedy (cf. Sharon, The political role of the Bedouins in Palestine, in Studies on Palestine, ed. M. Ma'oz, Jerusalem 1975, 11-17. On a large Bedouin eruption in 750/1349, see Makrīzī, op. cit., ii, 790). Sometimes the Bedouins were invited to participate in the local rivalries, as happened with a quarrel between the Dāris and the Kurds when each side invited the Bedouins to help him and the town was almost destroyed (Mudīr al-Dīn, 632-3).

The Ottomans occupied Hebron in 921/1517 and made it the administrative centre of a nahiyya in the sandjak of Jerusalem (Ibn al-Furat, op. cit., 86 n. 1). Its Muslim inhabitants were exempted from government taxes (ibid., 71-2) and like the Mamlûks, the Ottoman sultans regarded the repair and the maintenance of the sanctuaries in it and in Jerusalem, as well as elsewhere in the country, as a major obligation. Large numbers of pilgrims from all over the empire and from other countries visited them and had to be protected and provided for. Fomenting outbreaks were issued from Istanbul concerning the proper management, repairs and upkeep of the holy places, and in case of want of funds, additional new lands were endowed as waqf and skilled workers sent from Damascus for repairs to the Harāms (ibid., 15). A document from 959/1552 reports that the domes over the tombs of Patriarchs, which had not been repaired since the time of the Circassian Mamlûks, had fallen to pieces, and orders are issued for their repairs (ibid., 155). From another unique document of the Mühimme defterleri dated 991/1583, it appears that the wardens of the Harām (tirbeddr) and its doorkeepers were traditionally eunuchs, so as not to disturb the women's tranquility of mind when they came to pray there (ibid., 157-8).

In 979/1571, an additional source of income was added to Hebron when saltpetre was discovered in its vicinity, and an extensive gunpowder industry was developed there for the Ottoman army (ibid., 129, 137-8). Large quantities of this gunpowder, as well as large quantities of arms, some of which were directly smuggled from the army arsenals in Istanbul, reached the Bedouins and other rebels in the country. Hebron continued to suffer even more intensely from both the Bedouins and the continuous warfare between the Kays and Yaman factions. The Ottomans tried in many ways to keep the Bedouins in check, in particular to safeguard the pilgrimage roads. These measures
included building fortresses along the roads, taking hostages from the tribes and nominating 40 timār holders, who were exempted from participating in the wars of the empire, but all this was to no avail. Hebron and its vicinity were at the mercy of the Bedouins until modern times. The towns and travellers to and from them had to pay special taxes to the Bedouins (ziyād), in order to gain some degree of safety. The mountain villages around the town relied for their defence on their own strength (ibn ṭārīq), and were hence less affected during the Napoleonic wars when the coastal towns were almost completely destroyed, Hebron flourished as one of the most important commercial centres in Palestine with the caravans from Egypt preferring the more southerly route through Sinai and Beer Sheba to Hebron and Jerusalem over the insecure coastal one. Glass manufacture also developed rapidly in the town, and the mountainous areas which opposed the Egyptians suffered. Hebron took an active part in the revolt of 1834. It was besieged by the Egyptians, its citadel destroyed by cannon fire, and it was occupied and sacked. Additional destruction was caused by earthquake that affected Palestine in 1837. Towards the end of Egyptian rule in 1840, a rebel from Dūrā near Hebron, ‘Abd al-Haqq al-Madīnī, a major Egyptian governor of the town, proclaimed the Ottoman sultan and made himself the governor. He terrorized Hebron, especially the Jews and Christians in the town, from whom he used to extort heavy taxes. In 1846 the Ottomans, in pursuit of him, destroyed parts of Hebron with gunfire and the soldiers looted it. The rebel was not caught and he continued to infest the area for many years to come, as we learn from the detailed reports of James Finn, the British consul in Jerusalem and the only source of help to the Jewish community during the 1850s (A. M. Haymson, The British Consulate in Jerusalem, London 1939, 1, 168-9, 171-2, 198 ff.).

The improvement of security in the country during the second half of the century, with the growth of the European Powers' interest in it after the opening of the Suez Canal in 1869, brought recovery to Hebron. Its population grew from 8,000-10,000 in the 1870s to about 14,000 at the close of the century. This trend continued after the British conquest of 1917 and the establishment of the British mandate, when Hebron was made the capital of a subdivision in the Southern District (1922). It also became an important political centre, and its leaders have been fanatical opponents of the Jewish settlement in Palestine. During the riots of 1929, influenced by the Mufti of Jerusalem, Amin al-Husayni and by local agitators, the mob attacked the Jewish quarter and slaughtered 63 Jews. The rest of the community fled from the town. An attempt to renew the Jewish community in Hebron a few years later was cut short during the riots of 1936. After the war of 1948, Hebron came under the rule of Jordan, until in 1967 it was occupied by Israel during the Six Day's war. Until 1976 it was led by the ancient and powerful Diābārī family. Its population is over 38,000. During the present century, a large number of Hebronites have emigrated to Jerusalem, where they occupy a very prominent position in the commercial life there.

KHALIL ALLAH

KHALIL ALLAH (Šaḥ), d. 866/1460, the son of Shāh Niʿmat Allāh Kirmānī (730-834/1329-1431), "a great saint and mystic as well as a poet." Hearing the fame of Niʿmat Allāh's great piety and learning, the Bahmaní ruler Shāh Bihār al-Dīn Aḥmad I (825-39/1422-34) invited him to Muḥammad bāb-Bidār, his capital. The saint declined the invitation, but sent one of his disciples. The Sultān repeated the invitation with the request to send one of his sons, if he could not himself come. Niʿmat Allāh replied that, since he had only one son, named Khālīl Allāh, with whom he did not wish to part, he was sending the latter's son, Nūr Allāh, instead. However, after his father's death, Khālīl Allāh emigrated to the Deccan with his family and many of the followers. Aḥmad I received him with honour, and gave his daughter in marriage to the saint's elder son, Hābīb Allāh, and his grandson of the Jewish settlement in the Deccan, Mūḥibb Allāh. In addition, he accepted Khālīl Allāh as his pir and conferred on him the title of Malik al-Maṣlahī, thus
giving up his allegiance to the descendants of the famous saint of Gulbarga, Sayyid Muhammad Ghusul Daraz (721/1321-1422). Under the influence of Khalll Allah and his sons, who were Shi'i, not only Ahmad I became a Sh'ite, but Shi'i forces were strengthened in the Deccan.

Khalll Allah continued to be revered by Ahmad's son and successor, 'Alla? al-Din Ahmad II (830-62/1427-58) who also regarded him as his pir, and, on the occasion of his coronation ceremony, seated him on his right. Khalll Allah was not a poet or mystic like his father; he was a pious man, given to prayer and meditation, and, unlike his elder son, Habib Allah, kept aloof from war and politics. He was succeeded by his younger son, Muhibb Allah, as his sadidjada-nasih (spiritual successor). Over his grave a beautiful tomb was erected by Ahmad II. Another building called Takht-i Kirmâni, because it contained the takht or throne on which Khalll Allah used to sit, was also constructed in his memory during this period.

(Mohibbul Hasan)

AL-KHALIL B. AHMAD B. 'AMR B. TAMIM AL-FARAHIDI (AL-FURHUDI; see W. Caskel, Gamharat lichen arabischen Falkner literatur, Graz 1936; Muhammad Kasim HindiirShah, al-Layth b. al-Muzaffar al-Djumal fi 'l-nahw (fol. i: by Ibn Shukayr?), 65 folios; for a second (?) manuscript, also by Ibn Shukayr, (cf. a fragment, Lucknow 1281/1864). The work fills 75 folios and deals with nasb, rafâ', hâfâf, djam, aljif, lâmâl (cf. a fragment, Berlin, vi, 212 no. 6902), hâdâ, tâdâ, wâdâl, lâm-aljif, al-ikhilif fi ma'amikh, in connection with many, mostly anonymous verses (O. Rescher, in ZDMG, lxv (1910), 508 ff.; for the Incipit, see Rescher, Abriss, ii, 121, note 1). For a second (?) manuscript, see Kawala, ii, 118, no. 266 k: Kitab Wudhgh al-nasib (fol. 1: by Ibn Shukayr?), 65 folios; for a third (?) incomplete (?) manuscript, see Firristl-nushkhâhâ-i khatti-i Kitabkhâna-i Markazi-i Dânishgâh-i Tabrîzn; Tehran 1345/1967, xx, 4075 ff., no. 4951, 3: Tabrîzi al-Djumal al-ving, 16 folios. Ibn Khallikan, Waqâyû, Cairo 1367/1948, ii, 17 no. 206, may well be referring to the Kitab al-Djumal when he mentions a kitâb fi 'l-wâmiil among al-Khallil's works.

Further investigation is necessary into a short treatise of two pages by al-Khallil about the question why the root fâ is used as paradigm (ms. Bodeleiana, i, 230 no. 1047,4, dated 654/1256). The longer fragment of 24 folios of a Kitâb yar al-Khallil, dated 621/1428 (Berlin, vi, 215 no. 6909), is perhaps connected with this treatise.

Appreciation of the significance of al-Khallil's lexicographical activities has steadily increased as permanently influenced the broad field of philology in his capacity as grammarian, lexicographer and poet, but he also left impressive written testimony—though more indirectly than directly—of his competence, acumen and gift of presentation. There is a double reason why his output was so small. First, it was not yet at all common in those days to commit to writing scholarly discussion; secondly, it seems that al-Khallil had scruples about finally editing his material together with his explanations and commentaries. It is not correct to assume that he was unable to do so through incapacity to generalise from details. Recent investigations have shown clearly that al-Khallil had a fundamental part in the first systematic grammar of Arabic, the Kitâb of his pupil Sibawayh, not only as far as the material is concerned, but also in the systematisation. In this connection it must be remembered that al-Khallil had already found elements for a theory of the language. It is even possible that such a theory had already been formulated in a fragmentary way and noted down in lecture courses, in answers to questions about individual problems, and the like. But it started to take shape only thanks to the abundance of observations of individual cases, comparisons and proofs adduced by al-Khallil, which gave the impulse to systematisation. To give Arabic philology its first systematic written form, hardly surpassed later, was reserved for his great pupil, the Persian Sibawayh. This however does not alter the fact that al-Khallil was the real creator of this science (see G. Well in the Introduction to Ibn al-Anbari's Kitâb al-Insâf, Leiden 1913, 69), as may be seen clearly from almost every page of Sibawayh's work. For details see W. Reuschel, al-Khalll ibn Ahmad, se Lehrer Sibawayhs, als Grammatiker, Berlin 1959; G. Troupeau, A propos des grammairiens cités par Sibawayhi dans le Kitâb, in Arabic, vii (1961), 309-12; cf. also M. G. Carter, Les origines de la grammaire arabe, in REI, xi (1972), 69-97, esp. 74 ff.

It has yet to be studied how far al-Khallil's Kitâb al-Djumal is 'l-nasib corresponds to those passages which Sibawayh associated with al-Khallil's name; according to a statement in Yahyâ al-Dârar: his, the author of the Kitâb al-Djumal was Ibn Shukayr (d. 317/929) in the ms. Asyosyâla 4456, 2, dated 601/1204, the work fills 75 folios and deals with nasb, rafâ', hâfâf, djam, aljif, lâmâl (cf. a fragment, Berlin, vi, 212 no. 6902), hâdâ, tâdâ, wâdâl, lâm-aljif, al-ikhilif fi ma'amikh, in connection with many, mostly anonymous verses (O. Rescher, in ZDMG, lxv (1910), 508 ff.; for the Incipit, see Rescher, Abriss, ii, 121, note 1). For a second (?) manuscript, see Kawala, ii, 118, no. 266 k: Kitab Wudhgh al-nasib (fol. 1: by Ibn Shukayr?), 65 folios; for a third (?) incomplete (?) manuscript, see Firristl-nushkhâhâ-i khatti-i Kitabkhâna-i Markazi-i Dânishgâh-i Tabrîzn; Tehran 1345/1967, xx, 4075 ff., no. 4951, 3: Tabrîzi al-Djumal al-ving, 16 folios. Ibn Khallikan, Waqâyû, Cairo 1367/1948, ii, 17 no. 206, may well be referring to the Kitâb al-Djumal when he mentions a kitâb fi 'l-wâmiil among al-Khallil's works.

Further investigation is necessary into a short treatise of two pages by al-Khallil about the question why the root fâ is used as paradigm (ms. Bodeleiana, i, 230 no. 1047,4, dated 654/1256). The longer fragment of 24 folios of a Kitab yar al-Khallil, dated 621/1428 (Berlin, vi, 215 no. 6909), is perhaps connected with this treatise.

Appreciation of the significance of al-Khallil's lexicographical activities has steadily increased as
scholars have recognised him as the author of the first Arabic dictionary, the Kitāb al-'Ayn, and this notion (without considering the fact that the authorship of this work was rejected by a majority. Recent investigations have again considerably contributed to the solution of this problem. They have shown that the plan of the dictionary undoubtedly comes from al-Khalil. It is not arranged alphabetically but—probably under Indian influence—by certain groups of sounds (the phonetic-permutative principle), i.e., after the so-called “order of al-Khalil”1: 3, h, dh, dh, t, k, b, d, n, f, s, z, l, d, t, r, l, n, f, b, m, w, alif, y. Recent investigations have also shown that al-Khalil’s contribution to the dictionary is hardly more than that of a source, and that the Kitāb al-'Ayn in its present form, especially in regard to the bulk of the material, is to be considered as the work of al-Layy b. al-Muqaffa’ (q.v.). Al-Layy may have arranged his compilation soon after al-Khalil’s death. But a little later—probably not long after 200/815—this work was revised by an otherwise unknown Abū Mu‘ādh ʿAbd Allāh b. ʿAbd Allāh Dāraysh. Additions and corrections, also in the form of refutations (rudūd), followed. Many abstruse methods have been made and it is well known that later lexicographers have repeatedly gone back—directly or indirectly—to the Kitāb al-'Ayn and have often been inspired from it. It is worth noticing that the Introduction to the Kitāb al-'Ayn, with the exception of editorial interpolations, may go back directly to al-Khalil. For details see Bräunlich, op. cit., esp. p. 94, on al-Khalil’s Kitāb Fā’id al-'Ayn, mentioned e.g. in Fihrist, 43; J. Kraemer, Studien zur altarabischen Lexikographie nach Istanbuler und Berliner Handschriften, in Oriens, vi (1953), 201-38; J. A. Haywood, Arabic Lexicography, Leiden 1966, passim (reviewed by A. Spitaler, in OLZ, xiii [1968], 50-8); above all Stefan Wild, Das Kitāb al-'Ain und die arabische Lexikographie, Wiesbaden 1965 (reviewed by J. W. Füeck, in Bi Or, xxiii [1966], 199 ff.; M. M. Bravmann, in ISL, xlvi [1971], 238-44). A first fascicule of the Kitāb al-'Ayn was published by Father Anastase al-Karmall under the title: al-Layth b. al-Muqaffa, ’I’tiqad, published in Baghdad 1914; of the new edition by ʿAbd Allāh Darvīsh, Kitāb al-'Ayn awal mu’ājim fi l-lguba al-arabīyya li-i-Khalil b. Ahmad al-Farāhīdi, the first volume appeared in 1986/1967 in Baghdad (reviewed by R. ’Abd al-Tawwāb, in al-Muḥād 4/2 [Baghdad 1388/1968] 127-51).

Al-Khalil’s small treatise al-’Ahrūf, also called Riṣāla fi ma’na ’l-ḥurūf, which is not listed by the ancient biographers and lexicographers (see Bräunlich, op. cit., 67), has been published by R. ’Abd al-Tawwāb, Cairo 1960. The author deals concisely with the ancient grammatical abstracts and systems of the alphabet and as a rule supports them by citing ancient verses. While working on old Arabic verses as evidence for the meaning of words, linguistic peculiarities and grammatical constructions (Fihrist, 43, mentions among his writings a Kitāb al-Sawāḥik), al-Khalil made a surprising and important discovery. The scanning of verses revealed to him that short and long syllables alternate and repeat themselves in strict patterns. He divided these unities, which can be distinguished according to their quantity, into five concentric circles. He thus found an adequate and telling graphical form, equally simple and brilliant, for representing the metre-order of the verses, following each other repetitively, while the rhythmical accent was also taken into account. Al-Khalil’s metrical system has been adopted by all later authors (see, e.g., the manuscripts and summaries Berlin, vi, 325-48 no. 7108-58). The names of the metres (cf. Marzubān, op. cit., 201 ff., 207 ff.) appeared in the early 3-4th century, while they reach undoubtedly back to him so that metrics were called simply ‘tim al-Khalil’ (see Hádhāj Khalifa under the title ʿarād Ibn al-Ḥajjīb; I. Goldzieher, in WZKM, xvii [1903], 187-90; see also al-Dāhibī, al-Mu’allimin, on the margin of al-Mubarrad, al-Kāmil, Cairo 1324/1906, i, 33; idem, al-Ḥayawan, Cairo 1356/1938, i, 150). Although al-Khalil’s original work, the Kitāb al-’Ard, does not seem to have survived, the content of this treatise (cf. Zubaydi, op. cit., 291) may be conjectured from later works, like Ibn ʿAbd Rabbih’s (q.v.) chapter on ʿarād (q.v.) in his al-ʾīyād al-farādī, Cairo 1365/1946, v, 424-518. For details see G. W. Freytag, Darstellung der arabischen Verskunst, Bonn 1830; G. Weil, Das metrische System des al-Xalil und der Thius in den altarabischen Versen, in Orissi, vii (1954), 303-21; and esp. idem, Grundriss und System der altarabischen Metern, Wiesbaden 1958 (reviewed by A. Bloch, in GGA, 213 [1959], 67-80). [See also ’Arūf.] Two other works by al-Khalil, the Kitāb al-Nāfṣah and the Kitāb al-Ibra’, dealing with tones and rhythmic tempi, are mentioned in Fihrist, 43 (see H. G. Farmer, The sources of Arabian music, Leiden 1965, i, nos. 5 and 6; E. Neubauer in Oriens, xxii-xxiii [1968-9] 197), 196 ff.

Among the works by al-Khalil enumerated in Fihrist, 43, a Kitāb al-Naḥw wa l-’Ikhār is mentioned, an otherwise unknown treatise on diacritical punctuation and vocalisation (in the ʿkurāʾ) (see Gesch. des Qor., iii, 262, note 1 and TA, iv, 411, 9 s.v. ʿbd). According to Dharrīa, i, 38 ff. no. 184, it is identical with the above mentioned Kitāb al-Drumal. Such a supposition is however as doubtful as another statement by the same Dharrīa, i, 325 ff. no. 1292, namely, that al-Khalil composed a Kitāb al-Imāmā, allegedly finished by Abu ʿl-Fath Muhammad b. Diyar al-Marāghi (d. 376/980). The correctness cannot be verified from the available sources and literature (see, e.g., Khābābā, i, 157; Brockelmann, S III, 1194 should be corrected accordingly). A so-called Kitāb al-Musūfī fi ‘l-amnāf, which is mentioned only by Zubaydi, Tabakī, 47, and then in connection with a quite unconvincing story (cf. Haywood, op. cit., 21 and 133).

Nuzhat al-alibbd*, Cairo 1386/1967, 45-8 (with indications of other sources); Yakut, Gāyāt al-nihayāt fi tabādūl-al-khurrā, Cairo-Leipzig 1932, i, 275; Ibn Hādjar, Tahāhīb al-tahāhīb, Haydarābād 1325/1906, iii, 163; Suyūṭī, Bugāyda 243-5 (Cairo 1384/1964, 557-60); Ṭashkūpīzāde, Muḥfah al-ṣaʿīda, Cairo (ca. 1368), i, 106-8; i, 153-8; i, 216 (R. Sellheim).

Khalil B. Ishāk B. Muṣā B. Shʿyāyib, Abu 'l-muwaqqad da Ļī al-dīn, ibn al-qundū, Mālikī ṣahīh of Egypt, born in Cairo 13 Rabī‘ I 776/22 August 1374 (but other dates, in particular 767 and 769 are also given). His father was a Ḥanafī, and it was through the influence of his teacher 'Abd Allāh al-Manṣūr that he adopted the Mālikī law school. He performed the Pilgrimage, and then remained some time in Medina, studying and teaching at the madrasa Shaykhīmīyā. Although generally leading a fairly retiring life, he nevertheless took up arms in the defence forces, and thus took part in the recovery of Alexandria from the Christians in 767/1365-6.

From a juridical point of view, Khalīl represents, just like his model Ibn al-Ḥādjīb, a view of law somewhat tinged with Shafī‘ism, the result of a fusion between the Egyptian and the Maghribī aspects of the Mālikī school. He composed various works, of which manuscripts survive: al-Tawāfūhī, a commentary on the Mukhtāsir of Ibn al-Ḥādjīb, K. al-Manāṣirī, Manāṣir al-Shaykh 'Abd Allāh al-Manṣūrī, and Dāṭī al-muwaqqad da Ļī wa-ra’sīfah; but all these are today forgotten. His Mukhtāsir, however, called by some simply al-Kūhā‘ī, the Book by excellence, gained him a great fame, both in the Maghrib and also in the Mālikī centres of West Africa, and furthermore the honorific designation of Sāli Khalīl.

This Mukhtāsir, then, so obscure because of its conciseness that it can only be understood by means of a commentary, is the most renowned manual in the countries of the Maghrib and also in the Mālikī centres of West Africa, and furthermore the honorific designation of Sāli Khalīl.

This Mukhtāsir, then, so obscure because of its conciseness that it can only be understood by means of a commentary, is the most renowned manual in the countries of the Maghrib and also in the Mālikī centres of West Africa, and furthermore the honorific designation of Sāli Khalīl.

The battle for a strong sultanate that should be independent from the oligarchy of the amīrs left its stamp on Khalīl's short reign. Yet he failed to achieve his aim. In 693/1293 he was killed during a hunting-party in the Nile delta by his deputy Baydārā and a handful of other conspirators. In the beginning, Baydārā had been Khalīl's esteemed nābībi: still in 690/1291 the sultan had granted him the Syrian fortress of al-Ṣubayba (Alā‘ī, 29 ff.). But later he had been humiliated repeatedly by Khalīl, on one occasion in the presence of the assembled amīrs, probably in connection with Baydārā's unsuccessful campaign against the Maronites of Dājbīl Kasrawān in 692/1292. Other amīrs like Karāsunfīr, who later acquired fame for his flight to the Mongols, or the future sultan Ḥusnān al-Dīn Lāḏīn (see on him P. M. Holt, in BSOAS, xxxvi (1973), 521-32), were imprisoned. Although they were set free shortly afterwards, Khalīl failed to secure their loyalty.

Khalīl's closest adviser and confidant, his arrogant vizier Ibn al-Salā‘ūs, a Syrian merchant, did everything to estrange the high amīrs even more from the sultan. Under Ibn al-Salā‘ūs, the vizierate ceased to be in the hands of the military, the mukalwatun, and became the “second office of the state” (Ibn al-Dawādārī, Kanz, viii, 306; Kāshkandī, Ṣubb, iv, 17).
KHALIL — KHALIL ALLAH BUT-SHIKAN

Ibn al-Salih was the first of a long series of merchants who decisively influenced Mamluk policy between 1290 and 1450, particularly under Sultan Barsbay [q.v.; see KARIMI].

Khalil’s reign saw the beginning of the flourishing Mamluk trade policy. After the fall of ʿAkkāt [q.v.] in 690/1291 Khalil resumed and strengthened contacts with the Christian Mediterranean powers. He concluded treaties with Venice and Aragon. In his biography of Khalil, al-ʿAfāfī al-makhtūyiyya, 44 ff., Ibn ʿAbd al-Zahir [q.v.] mentions a change-treaty of Venetian prisoners. Khalil renewed on January 29, 1293 the treaty which Kalâwûn had made with James’s predecessor Alphonso III, including its provisions concerning the delivery of such forbidden war-materials as iron, weapons, wood and pitch (see K. Müller, al-Malik al-Aṣraīf, 66, quoting Kalkaghandi, Sīāh, xiv, 63-70).

He also made contacts with the small principalities of Menteshe, Awīdīn and Karmām, which were developing in Anatolia under Mongol suzerainty (ʿAlīf, 15 f.).

Khalil won his greatest fame, however, in the Islamic and Christian world alike as the skilled commander of the Egyptian-Syrian armies who captured ʿAkkāt (St. Jean d’Acre) after a carefully prepared six-year siege. Only the timidity of the amir ʿUsām, al-Dīn Lādīn, the later sultan, before the walls of ʿAkkāt, jeopardised the Muslim victory for a short time. Saydā, Bayrūt, ʿAthlīth, Dībāyil and Sūr, the few remaining strongholds of the Franks, fell into the hands of the Muslims without a fight. All the captured Frankish fortresses were demolished; thus Palestine lost the basis of its economic prosperity. Contemporaries, especially al-Dīzārī [q.v.], probably the most important authority for this period, complain seriously of the destructive fury of Khalil, which fell even upon Damascus and the stronghold of Shawkah in the land of Moab. But it should be remarked that this policy was a calculated one, both on strategic and economic grounds: the Syrian cities should no longer serve as a foothold for Frankish invaders nor attract the lucrative Indian trade which was directed from South Arabia through the Red Sea to Alexandria and Damietta and further to Europe. The undisguised aversion of the Syrians for Kalâwûn and his successors reflects the political and economic centralisation of the Mamluk state after the capitulation of the insurgent amir Sunkur al-ʿĀqish of Ṣaḥyūn during Kalâwûn’s reign. The building of a fleet to protect the Syrian coast (ʿAlīf, 56-61) is not in contradiction with Khalil’s endeavours to monopolise the East-West trade through Egypt.

In contrast with his father, Khalil seems to have been inspired by religious motifs in his political and military activities. Certainly, the reproach that he was a vile libertine is unfounded. Ibn ʿAbd al-Zahir pictures Khalil’s zeal in the Dīr al-salāt, the royal court of justice, and speaks highly of his equity and incorruptibility. As opposed to his predecessors and to most of his successors, the sultan had a command of Arabic and concerned himself actively with the dīwān al-inṣāḥ, until 635/1239 headed by the above-mentioned Ibn ʿAbd al-Zahir. Khalil was eager to secure the homage of the sharīf of Mecca ʿNaḍīm al-Dīn Abū Nūmāy (ʿAlīf, 50), and gave new functions to the ʿAbbāsid shadow caliph al-Ḥākīm, the returning to its legitimate ruler of the old capital of the caliphs being one of the foremost aims of his foreign policy. Ibn ʿAbd al-Zahir (ʿAlīf, 6 f.) records the text of the public dīwāḥād sermons given by the caliph—another indication of Khalil’s religious zeal.

Khalil’s strategy was mainly directed against the Mongols, “the vile enemy” (al-ṣaddaw al-makhtūhid), at least after the Franks had been driven away. After the death of ʿArghūn, the Ilḫāns [q.v.] lost their clear military superiority over the Mamlûks. Khalil grasped his chance, attacked the kingdom of Lesser Armenia and conquered the important stronghold of Kalʿat al-Rûm on the Euphrates (see ʿArūj al-ḥāṣīriyya). One year later, the Armenian king Hethūm II surrendered the fortresses of Bahāsān, Mārʿāsh and Tall Ḥamdōn, commanding the routes to Aleppo, to the Mamlûk ruler. The Bedouins, controlling the strategic Ilkhānid-Mamlûk frontier in the Syrian desert, were also, if only temporarily, subdued. But the great dream of the age, the recovery of Baḥdād, Khalil was not able to bring about.

Information on Khalil’s internal policy is scarce. Three times yearly the troops received a special pay (nafaka) (Ibn al-Dawādārī, Kanṣ, viii, 152), which constituted an additional burden on the treasury, already heavily drawn upon by the costly campaigns in Syria. Only Khalil’s early death may have prevented him from redistributing the ʾiṣkās of the emirs, brought about by sultan Lādīn a few years later (al-rukṣ al-ḥusāmī). The small princely states staunchly resisted any interference with their privileges; Baydūr’s refusal to cede his share of the customs dues of the port of Alexandria to Khalil or his vizier aggravated the strife between the sultan and the most powerful amirs. Other sources of income were not easily accessible. The very lucrative confiscation of the fortunes of Turuntāy, Kalâwûn’s nāḥib, remained an isolated episode.

Khalil’s murderer Baydūr reigned only for a few days. Unable to capture the citadel of Cairo, the centre of political and military power, he was killed after a short fight against Khalil’s followers, led by the ustāḍār (majordomo) ʿUsām al-Dīn. The eight-years’ old al-Nāṣir Muḥammad, Khalil’s brother, was enthroned (for the first time), the real ruler being the new nāḥib Sayn al-Dīn Kītūbḡā, who usurped the throne in 694/1294 under the name al-Malik al-ʿĀdī.

province of Persia, on Friday 11th Sha‘bān 775/26th January 1374, and was the son and spiritual successor of the celebrated Shāh Nī′mat Allāh Wall of Kirman [p.6]. He was widely respected as the chief exponent of the religion of Ahmad (Abdus Subhān) the Well-Merited, who was also ordained as his spiritual vice-regent (khalifa).

Whether Sayyid Khalīl Allāh died whilst he was still in India or after he had returned to Persia has been a disputed point among the historians. Firīḍaṣṭa, Ta‘rīkh, 634-5, while asserting that the Sayyid had returned to Māḥān in Kirmān, where he breathed his last and lies buried, refers to the opinion of some persons that he could not return to Persia and that he died in India. Modern scholars such as Yazdānī (p.76), and Shershāhī have said that he died in Bīdar, the Bahmanī capital, in 864/1460 and that his tomb is still in India or after he had returned to Persia has been, according to the opinion of some persons, that he could not return to Persia and that he died in India. Modern scholars such as Yazdānī (p.76), and Shershāhī have said that he died in Bīdar, the Bahmanī capital, in 864/1460 and that his tomb is

KHALIL ULHAN BUT-SHIKAN — KHALIL MUTRAN

Besides a commentary, he left the Turkish translation of a part of the history of ʿAyyn (d. 762/1361). Of his sons and grandsons, some were notable theologians.

KHALIL GHANIM (1846-1903), journalist and author, born in Beirut of Maronite parents and educated at the Lazarists' school in ʿAynṭūra, where he acquired a knowledge of French and English, as well as Arabic and Turkish. Khalīl Ghānim began his career in 1862 as a member of the commercial court in Beirut. He was then appointed dragoman of the Beirut mutasarrīfiyya, and subsequently of the wilāyēt of Syria. A wāli under whom he served, Sakhlī Ahmad Asʿad, appointed him dragoman to the Ministry of Foreign Affairs when he became briefly Grand Vizier in 1873. He was promoted dragoman of the Grand Vizierate and its master of ceremonies when Asʿad once more became Grand Vizier in 1875. Following the proclamation of the Ottoman constitution, Khalīl Ghānim was elected a deputy for Syria, and sat in the chamber of deputies until it was prorogued in February 1878. He seems to have become a supporter of Midrāt Pasha, and thus to have attracted the displeasure of Sultan ʿAbbād al-Hamīd II. In consequence he took refuge in Paris, entered in the French embassy and fled to France, where he spent the rest of his life, becoming a naturalised French citizen and marrying a Frenchwoman. In 1881, in partnership with Fadl Allāh Dabbās of Beirut, he started in Paris an Arabic newspaper al-ʿĀṣir, which received a subsidy from the French government and which acted as the advocate of French interests and policies in Tunis and in the Ottoman empire; it was presumably in recognition of these services that he was awarded the légion d’honneur. Khalīl Ghānim was also a contributor to the Journal des Débats and the Figaro, and was prominent in anti-Hamīdīan and Young Turk activities in Europe. In Paris, he published a periodical La Jeune Turquie and in Geneva the Materiaux pour la biographie de Khalil El-Hanim, in two volumes (Paris 1902), and also the author of a Life of Jesus and of a work on political economy in Arabic.

development and the nature of his poetry. The stringent Catholic discipline must have served to enhance his sense of moral values, and the restrained attitude attributed to him ([Muḥāfāz, Nov. 1939, 407-78; Maqādilat Sarkīs, special issue, 1913; al-Kitāb al-Dhahabi, passim]). Mention should be made of the influence of his eminent master Ibrāhīm al-Yāzdī (d. 1906), from whom he gained his mastery of the language and his concern for perfection. (Evidence of the poet, Dinām, i, 290, 294, ii, 29, 326; and testimony borne by al-Yāzdī, Anis al-djalāl, ix, 371). He imitated al-Yāzdī in composing the bitter poem which hastened his departure from Lebanon in 1890 (for the poem of al-Yāzdī, see Arab awakening, 1955 ed., 54, and Makdisī 80-3; we have two verses from Muṭrān's poem, al-Tunāḥi, 45-6; see Djamāl al-Dīn, 46).

Muṭrān paid a visit to Alexandria and stayed some time in Paris, making preparations for emigration to Chile (Tunāḥi, 58-64; Muktaṭaf, June 1939, 91). To the time spent in Paris (1890-2), he owes his cultural sympathy with the West. There he discovered French romanticism, in which he became engrossed, and he exposed himself to the literary and artistic trends of the nineties. He became acquainted with a group of militant Lebanese and Syrian émigrés, and with Āhad Mīrāḏ, 1āḏut, the founder-member of the Young Tunis. Imbued with the impulses of the French Revolution, he was inspired and stirred by it. (The celebrations of the 14th of July thrilled him; see Āhad al-Ṣawī, Paris, the references to Muṭrān and Tunāḥi, 61-4.) Asked to restrain his political activities, he left Paris, made his way to Egypt and landed in Alexandria on 11 August 1892 (ibid., 71). The following day, the death of S. Tāqī, founder and proprietor of the daily newspaper al-ṭarīq (Muktaṭaf, ibid., 209), gained him access to the journal where he made his debut as a journalist with an obituary poem (unpublished, seven verses quoted in Tunāḥi, 72-3).

In 1899 he abandoned his duties, revisited Lebanon after an absence of ten years (see the poems where he evokes his memories and Kāfīr al-Raʾdbābakh, in Dinām, 97-101), returned to Cairo and on 1 June 1900 published the first issue of al-Tunāḥi ([q.v. in Suppl.], he became involved in the theatre as translator and producer (al-Risdīla, ix, nos. 288-96, 301; Tunāḥi, 280-9). A co-founder of the Society of the Arabic Theatre which he inaugurated on 30 Dec. 1920 (al-Hilāl, xxix, 465-72), he was appointed to the post of administrative director of the National Company (1935-42, Mūhammad Taṣmūr, Ḥāydūnīt al-amālīyya, 108-9; al-Hilāl, xxxvi, 303-4; al-Kitāb al-Dhahabi, 60-7; al-ʿAhrām, 14 Dec. 1937). The tour which he organised in 1924 (Lebanon, Syria and Palestine) increased his reputation. In 1947, he found himself covered in honours (the week of 26-29 of March; al-Kitab al-Dhahabi, passim). Disabled by attacks of arthritis, he succumbed to the disease and died on 30 June 1949.

Muṭrān left a varied corpus of work. Among his unpublished writings, there is mention of a study of Shībī al-Ṣumārayīl, scientist and philosopher. He also published the Dinām of Ibn Kalākūn (Muktaṭaf, ibid., 209), which for financial reasons was forced to cease publication in 1902, to re-appear temporarily seven years later, 17 January 1909. Meanwhile, on Friday 6 February 1903 he launched a daily paper, al-Dinām al-ʿAṣrīyya (a title borrowed from Fārīs al-Shidyāk, d. 1887), in which he pleaded for social reform and defended liberty and the public interest. To this period (1897-1903) belongs the story of his great love which inspired him to write many lyric poems (Tunāḥi, 126-8, 140-1, 153-4, 157; Dinām, i, 144, 184-222, ii, 10, 17, 298, 326). His attachment to Egypt, which he was wont to stress in order to consider a second homeland, became more pronounced (Dinām, ii, 13, 226, 295). A moderate partisan of the nationalist movement, he became committed to its cause. A foreigner, one of a minority, he found in Egypt his social equilibrium. The friendship and admiration which he showed towards Muṣṭafā Kāmil (1874-1908; Dinām, i, 308-13, iv, 292-6) attached him to his successors (Muhammad Farid, d. 1919; see Dinām, ii, 233; Saʿd Zaghīlī, d. 1927; see Dinām, ii, 320, iii, 207, 231, iv, 250; and see M. Khoury, iii, 261, iv, 250, 274). In 1955 ed., 54, and Makdisī 80-3; we have two verses from Muṭrān's poem, al-Tunāḥi, 45-6; see Djamāl al-Dīn, 46).
the predominance of lyrical and descriptive poems, narrative poems inspired by history (Diwan, i, 25, 47, 100, 179-83) or social conditions (ibid., 223-45), the militant tendency retained (ibid., 162-4, 308-13), and the poetry inspired by circumstances varying between authentic vigour (ibid., 271-4, 290-2, 308-13) and pale conventional urbanity (ibid., 118, 167-71). The traditional structure of the kašida with juxtaposed lines disjointed in sense, appears alongside poems where the line becomes an organised unit contributing to the overall effect of the whole. In some instances, the poet abandons metre and simple rhyme and makes use of takhbīs, of taklīūt, of madājī,2 complex or varied rhyming-schemes, and even comes to the point of writing prose poems (Diwan, i, 294-6). Other combinations of style produce new poems. The number of poems grows, but there is no apparently no radical change affecting the nature of his poetry. However, the narrative poem, drawn out to extreme length, finds its ultimate realisation in a long piece of 332 lines, entitled Nāyrūn (Diwan, iii 50-73). In this unique exercise he was aiming at a work of definitive nature (ibid., Introd. 48-50). Also, he immersed himself in a patient process of craftsmanship, seeking documentary evidence, researching details and ephemeral nuances, orchestrating sonorous alliterations, manipulating the language in an exciting manner, reconstructing the apocalyptic decadence of Rome (ibid., 61-8), depicting under the portrait of Nero an allegorical potentate embodying the tyranny of Ḥāfiz al-Ḥāfiz,3 al-Adīb, and walking on the tombs.4 A play on the senses of words, the gamut of romantic themes which are produced in a dignity of man, reality disguised as allegory, or symbol, lyrical experience which probes itself, dissects itself and emerges rationally from chaos, inspired songs of the human condition and cosmic transcendence meditating on matter; in fact, the entire gamut of romantic themes which are produced in a form that is sober, perceptive, charged with images and tending towards the overall unity of the poem.

Intimately linked to that of Shawkī (d. 1932) and Ḥāfiz (d. 1923), then in decline, his poetry, with its quality of neo-classicism, changed in many ways the beginnings of a new poetic era.

KHALİL MACNDARL. Ottoman Grand Vizier, the eldest son of Djandarlı İbrahim (d. 832/1429), who served as Grand Vizier to Mehemmed I (q.v.). He was serving as Kādī-lāṣker (q.v.) at the time of his father's death. Murād II (q.v.) raised him to the vizirate, and by 847/1443 he was Grand Vizier, becoming this sultan's closest adviser. He appears to have been the chief architect of Murād's policy of appeasing Hungary and the western powers in an effort to prevent a concerted crusader attack against the Ottomans in the Balkans. He was chief Ottoman negotiator in the discussions leading to the Treaty of Edirne, concluded with the Hungarians on 24 Safar 848/12 June 1444. On his abdication after the conclusion of peace, Murād appointed Khalīl Grand Vizier to his son Mehemmed (q.v.), and it was presumably Khalīl who recalled Murād on the crusader invasion of Dijmād II 848/September, 1444. Although he commanded a force which guarded the Bosphorus at the time of Murād's crossing to Rumelia with the troops of Anatolia on his way to meet the invaders, he himself was in Edirne (q.v.) as the young sultan's guardian at the time of Murād's

Victory at Varna. He appears during the years of Murad's abdication to have regarded Murad as the true sultan. Having the loyal support of the Janissaries [see portlet], Khalil used the Janissary revolt of 850/1446, which he may himself have engineered, as a pretext for recalling Murad to the throne. On the old sultan's reaccession, he retained the post of Grand Vizier unchallenged.

On Murad's death in 855/1451, Khalil summoned Mehemmed to Edirne and at first retained the Grand Vizierate, despite the grudge which Mehemmed evidently bore him for his actions during the first sultanate. Khalil's cautious and pacific policies in fact suited the delicate political situation at this time of Mehemmed's accession, with a Karamanid attack [see KARAMAN-OGHULLARI] and the fear that the Byzantines might release the pretender Orkhân. Khalil appears to have played an important part in negotiating the peace with the Karamanids. It was he, too, who during the campaign, dismissed the Byzantine ambassador who sought an increase in the sum paid to the Emperor for keeping Orkhân in captivity. By securing peace on the borders and causing a breach with the Byzantines, Khalil created conditions favourable for the Ottoman siege of Constantinople. Perhaps in recognition of his diplomatic achievements, Mehemmed granted muhâl lands near Plovdiv or Filibe [q.v.], in 852/1451.

However, Khalil's continuous opposition to the siege of Constantinople both before and during the operations aroused the sultan's displeasure. He had, furthermore, a reputation of being a "friend of the Greeks". With the fall of Constantinople, he lost all remnants of his power and influence to Zaganos Pasha [q.v.] and the war-party around the sultan. Mehemmed had him arrested on 21 Dhu 'l-Mi'dd 857/30 May 1453. He was sent to Edirne and executed a few weeks later.

KHALIL PASJA HADJDJI ARNAWUD, Grand Vizier under the Ottoman Sultan Ahmet III. He was an Albanian from Elbasan born ca. 1655. At the time his elder brother Sinan Agha was Grand Vizier under the Ottoman Sultan Ahmad III. The latter's death in 850/1446, which he may himself have engineered, was a pretext for recalling Murad to the throne. On the old sultan's reaccession, he retained the post of Grand Vizier unchallenged.

On Murad's death in 855/1451, Khalil summoned Mehemmed to Edirne and at first retained the Grand Vizierate, despite the grudge which Mehemmed evidently bore him for his actions during the first sultanate. Khalil's cautious and pacific policies in fact suited the delicate political situation at this time of Mehemmed's accession, with a Karamanid attack [see KARAMAN-OGHULLARI] and the fear that the Byzantines might release the pretender Orkhân. Khalil appears to have played an important part in negotiating the peace with the Karamanids. It was he, too, who during the campaign, dismissed the Byzantine ambassador who sought an increase in the sum paid to the Emperor for keeping Orkhân in captivity. By securing peace on the borders and causing a breach with the Byzantines, Khalil created conditions favourable for the Ottoman siege of Constantinople. Perhaps in recognition of his diplomatic achievements, Mehemmed granted muhâl lands near Plovdiv or Filibe [q.v.], in 852/1451.

However, Khalil's continuous opposition to the siege of Constantinople both before and during the operations aroused the sultan's displeasure. He had, furthermore, a reputation of being a "friend of the Greeks". services delayed the sailing of the Ottoman fleet till July 1609. Khalil chased corsairs in the Levant seas, but his fame was established by the capture of a Maltese squadron off Cyprus and the capture of the “Red Galleon” of 80 guns called “Kara Djahannam” by the Turks, commanded by the Chevalier de Fraissinet.

On his return to Istanbul, Khalil was given by Ahmad I the rank of Vizier (1018/25 Nov. 1609). On 16 July 1610, Khalil set out to sea again to chase corsairs, but did not fight any major battle. In this same year, he began to work towards the formation of an offensive alliance against the Dutch Republic, Morocco and the Porte against Spain. His letter to the States-General in the Hague was sent off on 15 July 1610. Venetian and French opposition to this policy did Khalil no harm in entertaining good relations with both respective ambassadors.

From 1620/late 1621 till 1622/1623 Khalil was deprived of the admiralship, and the court favourite Dâmid Öktûz Mehmed Pasha [q.v.] took his place. Being out of office did not weaken Khalil’s position in promoting the Dutch alliance. Meanwhile, a Dutch envoy, Cornelis Haga (1612-20), had arrived in Istanbul on 17 March 1612. With Khalil’s help, the Dutchman was soon received by the Kâdim-makâm and other persons in authority at the Porte. Venetian and French intrigues were also rendered vain by his help, so that the Dutch envoy was given an audience by Ahmad I on 1 May 1612 and recognised as ambassador of the States-General. Khalil Pasha remained all along a supporter of Dutch interests at the Porte, but the States-General never entered upon a military alliance with the Porte because of their pacific policy towards Spain at that time (1609-21, Hispano-Dutch truce), and because of general political opinion in Europe being unfavourably disposed towards it.

On 8 Shawwâl 1022/22 Nov. 1612, Khalil became Kapudân Pasha for a second time. At once he started the re-equipment of ships in the Sultan’s dockyard. The Turco-Dutch-Moroccan alliance project was taken up again with the letters to Maulûﬂ Zaydân of Morocco (1012-3/1602-3) and to the States-General. The following year he went to sea and made a raid on Malta and continued to Tripoli (Tarabûlûs-i Gharb) on a punitive expedition against a local insurgent, Şafar Dâ’ûl, whom he executed. On the return journey, rebellious Greeks in the Maina district (southern Peloponese) were suppressed in cooperation with the local Ottoman Governor, Arslân Pasha. Khalil was back in Istanbul at the end of November 1023/1614 to be duly honoured by the Sultan. He continued the overhaul and enlargement of the fleet during the winter of 1614-15. A part of the fleet remained in the Archipelago on police duty against Spanish squadrons or other enemy war-fleets.

On 17 Rabî’ II 1024/17 April 1615, Khalil left with a small fleet for the Mediterranean. Off Calabria, a Spanish galleon from Sicily was taken but no great offensive was feasible. At the end of the season, murmurs in Istanbul rose accusing him of having avoided confrontation with the enemy fleet. After his return on 26 Shawwâl 1024/6 November 1615, Khalil counterattacked Habsburg intrigues of the Ottoman plenipotentiary in Vienna, Gratiani (d. 1620), against the Dutch, Venetian and French interests at the Porte. In 1616 Khalil once again started on the project of equipping a large fleet to ferry over the army of the Grand Vizier Murad Pasha to Asia for another campaign against the rebels. This and other

to the States-General to foster the alliance scheme
cherished by Khalll. These negotiations failed, how-
ever, because of Malaguer's family of Malagueño
established in Morocco and Holland at the time. Khalll
tried to reaffirm the Porte's authority in Algiers and Tunis and to curtail the
predatory raids of the Muslim corsairs of those places
against English and Dutch merchant-shipping in the
Mediterranean. Cossack raids on Black Sea coastal towns forced Khalll to send a squadron into
the Black Sea. He himself went on a short campaign
through the Archipelago in this season. Contribband
trade here had increased widely, especially that
carried by Dutch merchants. Upon advice given
by the Dibe, Khalll Pasha was appointed Grand Vizier by Ahmad I on 8 Dhul-Ka'da 1025/27 Nov. 1616.

As Grand Vizier, Khalll made an end to the levying of hurred's/ on subjects of the four capitolatory
nations in the Ottoman Empire, thus ameliorating
relations. Further, he ordered the equipping of the fleet against the menace of the Spanish navy. An
agreement between a delegation from Algiers and the
Dutch Ambassador was made under authority of the
Grand Vizier. His main task was, however, to con-
tinue the war against Persia in a more successful
manner. On 10 Djamād 1-awwal 1026/5 June 1617, as serddr-i ekrem, he left for the Turco-Persian
border. Consequently Khalll played no role in the
succession to Ahmad I, who died on 23 Dhul-Ka'da 1026/1617, and he remained cruising till November. In June he left with the fleet on its
yearly cruise of 1618. In the beginning of 1623
he was still admiral, and supported the policy of
peace with Poland. But the new Grand Vizier, Mere Huseyn, dismissed him as a rival to power and banished Khalll to Malkara (Thrace) in April 1623 (thus Haga's letter dated 30 April 1623/5 June 1623; Cey's of 14 April 1623, FF 1615 fol. 56; also Sagredo, 615 f.).

It was at this time that Khalll's fate became linked
with that of Abaza Mehmed Pasha [q.v.], who, leading the sivāhis, had revolted in Erzurum to averge the murder of Othman II and to punish the rival corps of Janissaries for it. Abaza was a protégé, a spiritual
son (as he was called by the Dutch ambassador Haga) of Khalll. It was now either the hatred and
terror of the Janissaries or the fact that Abaza kept him out of office, or the support of the sivāhis which pushed him towards it, in the years following 1623. His influence on
Abaza was much counted upon. Some time after his
accession in 1623, Murad IV, or rather the Wālide Sultan Kösem [q.v.], reappointed Khalll as a vizier (Sagredo, 636 f., calling him "la miglior testa della Turchia"). Khalll remained for a long time out of higher office now, operation to his becoming Grand Vizier being too strong.

On 2 Dec. 1626, Murad IV at last appointed Khalll to be Grand Vizier once more. His orders were to
bring Abaza Mehmed Paşa into submission, the latter being still in revolt in Anatolia. Furthermore, Khalll had to put an end to the war against Persia by a treaty. It was a hard journey to the winter quarters of the army. In August 1627, Khalll opened
negotiations with Abaza at Erzurum, but to no avail; furthermore he could not be subdued, being strongly
trenched in the fortress. Akhisårıya [q.v.] was lost to the Persians, and the siege of Erzurum was given up by Khalll in November because of the lack of siege artillery. He thus moved to Tokat for the winter, and the only result of his campaign was the restoring
of order in Anatolia and Syria.

The failure on the Persian front, and the failure to negotiate with or force the submission of Abaza Mehmed Paşa, caused Khalll's dismissal on 1 Shaban 1037/6 April 1628. Only then was it possible to find a paşa ambitious enough to take over. This was Khusrav Paşa, the Agha of the Janissaries, who
was able to make Abaza surrender later in the same
year. At the end of May 1628, Khalll returned to
Istanbul retaining his rank of vizier, with his prestige still great. In the next year on 7 August 1629/15
Dhu'l-Hijjah 1038, Khalll Pasha died.

In private life, Khalll Pasha had links with various
mystical orders or groups, the Malami-Hamzawiyya, the Ḡジャriyya of Ẓiyyah, and especially with the Djilwatiyya order and its shaykh Mahmūd b. Hūdatī from Uskudar (950-1038/1543-1628), a famous and influential mystic of the period and a religious poet. This holy man was his lifelong spiritual guide, and in the crisis periods of his existence gave him refuge in his tekke in Uskudar, notably in 1628/1629, and in 1637/1638. Often Hūdatī gave his blessings to the outgoing Ottoman fleet under Khalīl. Curiously, the disappearance of Khalīl’s last appointment in 1626. This same mystical bond must have attached him to Abāzā Mehmed.

Even Christians like the Dutch ambassador Haga were admitted into Khalīl’s spiritual friendship with Ḥūdatī. It was rare for an Ottoman of the early 17th century to entertain friendships with foreigners and Christians. Undoubtedly Khalīl used these friendships with diplomats like Šišmanec, Haga, Čēs, the Venetian bāli Nani and Valier, as sources of political information. These and other contacts like the dragonem in his service, the renegades of his household, and his Jewish physician, helped him to play the role in foreign policy of the Porte that he did.

On the whole, historians, Turkish and non-Turkish, have praised Khalīl Pasha as a wise and moderate statesman and a good admiral. His constant anti-Spanish policy brought him the favour of the Venetian, Dutch and French historians and contemporaries, as did his loyal fulfilling of the capitulatory information. These and other contacts like the diplomatic relations with diplomats like Salignac, Haga, Čēs, the Venetian, and French historians and contemporaries, as did his loyal fulfilling of the capitulatory obligations of the Porte. Great successes did not come to him, however, either in diplomacy or on the battlefield. His türbe still stands near the tekke and mausoleum of Hūdatī in Uskudar.

KHALÌL PASHA KUT. [see under PASHA].

KHALÌL SULTAN [see Timurids].

KHALÌL (ca. 810-90/1407-85), Ottoman Turkish poet and mystic. Apparently a native of Diyarbakır, where he studied theology, he then moved to Iznik for further study, where he remained for the rest of his life, apart from one year in Istanbul (870/1465-6). He established a dervish convent or maḥābāt-i Hādīdji Kemal’s Điāmī of İsfâhān (918/1512). Khalīl thus forms an interesting and significant figure in 16th/17th century Ottoman literature.

KHALÌSA (pl. khalîsâ) [see under KHALÌS], as a term signifying crown lands comes into general use in Persian sources in the middle ages. It is also applied to lesser rivers, handîs [q.v.] and wells belonging to the crown. In early Islamic times the term ʿawāfî [q.v.] is used to denote crown lands in general, while the terms diyâ al-khâṣṣa, diyâ al-ṣâlîdân and diyâ al-huṣûfîn are used to private estates of the caliph. Under the early semi-independent dynasties which arose in Persia on the fragmentation of the caliphate, the terms khâṣṣa and khâṣṣa are used of the personal possessions of the ruler with special reference to the revenues paid into his personal treasury from land and other sources. The funds controlled by the ʿâsâfî were known as māli-i khâṣṣa in contradistinction to māli-i maqâlîth, which were the funds controlled by the diyân (cf. Rawandi, Râḥat al-ṣudar, ed. Muhammad Iqbal, GMS, London, Leiden 1921, 382). From the reign of the Ilhâmi Ghāznâ Khan (694-703/1295-1304), the term khâṣṣa is used as well as khâṣṣa and khâṣṣa, with which it may sometimes have been synonymous, though it appears to have been applied especially to crown property consisting of dead lands. Under the early Safawids the terms khâṣṣa and khâṣṣa are used indiscriminately, but from the reign of Shâh AḥÂmâd I (995-1038/1587-1629) khâṣṣa is applied to royal
estates while khāssa is used of provinces and districts under the direct administration of the central government in contradistinction to provinces (mamālik) alienated from its direct control. With the fall of the Safavids the distinction between khāssa and mamālik disappears and under the Kādījars the terms khālisa (pl. khālisdād) and amlākh-i khālisa are used to signify crown lands. The term amlākh-i sawāfi al-ītād is also used in contradistinction to amlākh-i khāssa (private estates).

In both times of Islamic crown lands, originating from conquest, confiscation from rebels and tax defaulters, gift, purchase and reclamation, formed an important category of land in Persia. The basic theory of crown lands goes back to the Kur'ānic prescription that one fifth of the booty (fāy), (q.v.) was to be set aside for the Prophet Muḥammad while the remainder was to be divided among the combatants. Under the orthodox or rightly guided caliphs, the Rāshidūn, there was general agreement that the caliph might retain in the same way one fifth of the booty, and so far as this concerned land it became crown land, sawāfi. Special diwāns were from time to time established to administer crown lands and their revenues, but in practice if often happened that little distinction was made between the revenue from the private estates of the caliph, and later of the temporal rulers, on the one hand and the revenue from land which belonged to the community or the state on the other.

With the spread of the Islamic conquests, modifications were made in the theory of what constituted fāy and its use. ʿUmar I and ʿĀlī are both represented as reserving the division of fāy land in the Sawād (Tab., i, 2371-2, 2469), while the people of Kūfah sought to exclude their lands from fāy, alleging that fāy land was to be found only in the Sawād (Tab., i, 2375). Drained marshes and swampy property belonging to fire-temples and post-houses, princes and their wives, and those to whom fell in battle, and mills in Mesopotamia were exempted from fāy by most authorities. Such lands became sawāfi al-īstān or crown land. Some authorities, however, maintained that the estates belonging to the former Persian royal house and the property of those who had fallen in battle were not so exempted (Tab., i, 2468; Taxation in Islam, iii, Abā Yāsūf’s Kitāb al-kharrāj, ed. A. Ben Shemes, Leiden, London 1969, 75; Balāḏūrī, Futūḥ, 272-3; Taxation in Islam, i, Yaḥyā b. ʿAbd allāh’s Kitāb al-kharrāj, Leiden 1967, 53-4; N. P. Aghnides, Mohammedi an theories of finance, New York-London 1916, 508; F. Lokkegaard, Islamic taxation in the classic period, Copenhagen 1950, 50-224; M. van Berchem, La propriété territoriale et l’impôt foncier, Geneva, 1886, 41-2). It is not to be assumed, however, that all former Sasanian crown land in fact became Muslim crown land. Some estates, at the time of the conquests, were usurped by local daḥkhān (Lokkegaard, 111). In the reign of Muʿawiyah there was an increase in crown land (cf. M. A. Shaban, Islamic History, A.D. 600-750 (A.H. 132), Cambridge 1971, 89). Grants of crown land in Lower ʿIrāk were made by him in the form of baṭṭa (q.v.) to his relatives and supporters. Resentment at this was one of the factors in the revolt of Ibn ʿAṣḥāb against Ḥādīdāh in 82/701. At the time of the battle of Dayr al-Dīljājamīn the register of sawāfi lands was burnt and some crown land was temporarily usurped. ʿAbd al-Malik and his son Walīd further extended the principle of sawāfi in order to appropriate lands reclaimed from desert, marshes or sea, and granted much of it to members of their own family, though some of these grants were later annulled by ʿUmar II (Shaban, op. cit., 124, 132). In the reign of Walīd I more land was reclaimed from the desert (lower ʿIrāk by Mālam b. ʿAbd al-Malik and became his baṭṭa and the owners of many of the estates (diwān) along the two Sīb canals entrusted these to him for his protection. These eventually became the estates of the caliph when the heirs of Dāwūd b. ʿĀlī b. Abū Dālāh b. al-ʿAbbās, to whom the Sībayn estates were granted after the fall of the Umayyads, sold them (Balāḏūrī, 294). Reclaimed and other public lands and endowments in the Hīdājāt were assimilated in the reign of Muʿawiyah to sawāfi land (W. Schmucker, Untersuchungen zu einigen wichtigen bodenrechtlichen Konsequenzen der Islamischen Eroberungsbewegung, Bonn 1972, 142).

The measures taken to deal with the conquered territories were often of an ad hoc nature. There were wide divergences in practice, and many controversies arose concerning their extent and their administration and the right of the caliph to dispose of them. The main question at issue was whether they were the joint possession of the Muslim community, held by it in common and administered by the consent of its leaders, or were held by the imām for the community and were at his disposal (see further Schmucker, op. cit.). The jurists in their expositions were concerned primarily with the practical consequences of the ownership of land rather than its legal status. They attempted to regularise and unify the various practices which had grown up during the conquests, basing their classification of the land upon their varying interpretations of separate incidents in the conquests, in particular the conquest of the Sawād. Extensive Sasanian crown lands had existed in this district, and under the later Sasanian rulers grants from these had been made to members of the royal family. Registers of Sasanian crown lands were apparently kept, though it was not until the reign of Muʿawiyah that lists of the crown lands which had been in the possession of the Sasanian ruler and the royal family are alleged to have been obtained for Muʿawiyah from Ḫūlān (Yaḥyā b. ʿAbd allāh, ed. M. Th. Houtsma, Leiden 1883, ii, 258; Balāḏūrī, 290, 295).

Social and political conditions in Sībā, Sīrā, and Transoxania at the time of the conquest differed from ʿIrāk and the neighbourhood, as also did the circumstances of the conquest, and did not affect the evolution of the theory of crown lands. There was no development of crown lands there comparable to what happened in ʿIrāk and the neighbourhood.

There appears to have been a great increase in crown lands under the ʿAbbāsids (P. Schwarz, Iran im Mittelalter, nach den arabischen Geographen, Leipzig, 1929-36, vii, 876). In some cases, the owners of land in the conquered territories transferred their property into crown lands, sharing the proceeds with the caliph in order to obtain protection from lawless elements or unjust tax-collectors (cf. Balāḏūrī, 310-11; Lokkegaard, 68-70; Ḥasan b. Muḥammad b. Ḥasan al-Qummi, Ṭāḥib-i Qumm, tr. by Persian by Ḥasan b. ʿĀṣī b. Ḥasan b. ʿAbd al-Malik, ed. Sayyid Djalāl al-Dīn Tehrānī, Tehran 1934, 187). The revenues from crown lands were paid into the bayt al-khāṣṣa, a distinction being made, in general, between what belonged to the caliph and the state revenue. It was, however, by no means without precedent for money from the bayt al-khāṣṣa to be used to defray expenses made for the benefit of the whole realm (Lokkegaard, 51, 157. Cf. also D. Sourdël, Le vizirat ʿabbāsid, Damascus 1960, on the diwān al-dīyā, ii, 591-2).
The classification of the land by the jurists was affected both by the concepts of communal ownership [see IMĀM] prevalent among the early Muslims and the theories of the functions and position of the imām. Land conquered by force (sawādī) and abandoned by its inhabitants, who had been killed, captured or had fled, was, according to al-Shāfi‘ī, treated as property for the public good. Malik on the other hand considered that such land belonged to the community, while Abu Ḥanifa held that the imām could divide it among the captors, who would pay ‘ushr on the land so divided, return it to its original owners and levy khandi on them, or immobilise it for the benefit of the Muslim community. Since land conquered by force constituted booty, the caliph had the right to one fifth of it as sawāfī. Land acquired peacefully because its owners had abandoned it formed a second category. This paid khandi, which represented a dominium paid by whoever exploited it, while a third category was constituted by land coming into Muslim ownership by virtue of a treaty, such land remaining in the possession of its original owners on condition they paid khandi.

Crown land, deriving in part from lands conquered by force and in part from the former crown lands of the Persian kings, was thus distinguished from both land belonging to the community and administered by the imām and land occupied by its original owners, the ownership of which was vested in the Muslim community. Land belonging to the community could not be sold, though in some cases, possibly irregularly, hereditary grants on such land were made to Muslims. Kaffa grants, on the other hand, could be made from crown land, which, from early times, was also granted to individuals as ḥāk al-famili (see further Løkkegaard, 58 ff., and 191 A).

In practice, there was a general tendency for the land belonging to the community to become assimilated to crown land and for both to be looked upon as the property of the imām (cf. Wellhausen, Das arabischische Reich und sein Sturz, Berlin 1927, 171-2). Cases could be found in which both were common. (See further A. K. S. Lambton, Landlord and Peasant in Persia, Oxford 1953, 17 ff.)

The Shāfi‘ī theory of crown land, formulated rather later than the Sunni, differs only in matters of detail. Land acquired in any way other than war, whether abandoned by its owners or voluntarily handed over to the imām, or land which had ceased to be cultivated by its owners, belonged to the imām. He could dispose of it to individuals to cultivate, the latter becoming responsible for the tax on the land. Land which was unoccupied and without owners, such as beaches and shores of the sea, and the summits of mountains, also belonged to the imām. Similarly, after the conquest of enemy territory all the effects, moveable and immovable, of the conquered ruler, provided such property had not been seized formerly from a Muslim, ally or tributary, became the property of the imām (Muhammad b. al-Ḥasan al-Ṭūsī, al-Nihāya fi muḍjjarād al-fīh wa-l-fatāwah, ed. Sayyid Muhammad Bākr Sabzawārī, Tehran 1954, 130-1, 133 A; Nasir al-Dīn Abu’l Kāsim Dā‘far b. ʿAlī Yahya al-Muḥākkik al-Awawl, Sharā‘ī al-Islām fi masāli‘ al-hiql al-wāl wa-l-haram (Droit musulman), tr. A. Querry, Paris 1871-2, i, 179-80, tr. into Persian with the title Muḥkamāt al-nāfī‘, ed. Muhammad Taqī Dānishpārzād, Tehran 1964, 145). There was, however, some difference of opinion as to the disposal of the “fifth” of the booty during the concession of the imām (al-Nihāya, 133-4). Dead land or abandoned land belonged to the imām and no one could take possession of it except with his permission. He could take possession of it himself, give it away or sell it, though in the case of dead land it was preferable that he should give it to whoever had reclaimed it; he could also buy such land (al-Nihāya, 131). All land conquered by force became the property of the Muslim community as a whole and not only of the combatants. It could not be sold, constituted into waṣf or given away. Its administration belonged to the imām alone. Its proceeds were to go for the public good (masāli‘) (al-Nihāya, 130-1; Sharā‘ī, i, 337; Muḥkamāt al-nāfī‘, 144-5).

In view of the special position of the law in the life of the Muslim community, no independent theory concerning the legal status of the land or its ultimate ownership was to be expected. The formulation of the jurists, whether Sunni or Shi‘ī, based on their interpretation of the conquests, remained the standard theory, though practice diverged even more widely from theory than in early Islamic times. Just as confusion had existed in early times between sawāfī and jayyīland, and lack of clarity as to what constituted ownership, to what extent the ruler enjoyed rights of disposal, and to whom and on what terms rights of use might be given, so in later times there was often confusion as to whether the land be held by the ruler as the head of the state (diwānī land) and crown land, though the nature of his ownership of the one clearly differed from that of the other. The conception of the community as the owner of the land disappeared and was, as it were, swallowed up in the conception of the ruler as the owner of diwānī land. But whereas under Islamic law the ownership of land held by the community and that held by the ruler was able to make permanent, temporary and life grants on diwānī land. It may, perhaps, have been argued that such grants were merely a right of use, but diwānī land was also sometimes constituted into waṣf, which implies full rights of disposal. Crown land, as in the case of the earlier sawāfī, was not all of the same kind: some was acquired by the ruler in his “official” capacity, which had then been transferred to the former rulers, and some by purchase or gift. The latter constituted his “personal” estates. In either case, however, he appears to have enjoyed full rights of disposal over the land. So far as the ruler’s “personal” estates were transmitted by inheritance or gift to minor members of his family and not to the succeeding sultan, they became ordinary private property (milāḥ). Permanent, temporary and life grants were at all times made from crown land, as from diwānī land, and crown estates were also frequently constituted into a charitable or personal waṣf. The fact that crown land could be thus disposed of makes it extremely difficult to estimate its extent at any given moment. Moreover, the registers in which crown land was entered were often destroyed in the upheavals and disturbances which accompanied the transfer of power from one dynasty to another.

When the caliphate fragmented in the 3rd and 4th centuries, the local rulers also acquired by conquest, confiscation, purchase, or gift lands which they converted into crown lands. A similar process took place in the various empires and kingdoms which arose in Persia after the fall of the caliphate. During the reassembly of the temporal power of the caliphate by al-Nasir billāh (575-622/1180-1225), his waṣir, Mu‘ayyid al-Dīn (d. 592/1195-6), attempted to assert the caliph’s ownership to all land. He called in title-deeds (kabālāhā) in Khūzestān and
said “The land belongs to the Commander of the Faithful” (Rawandl, Rabat al-sudur, 381-2, Bartold, Turkestan, 186).

According to Gardizî, ʿAmr b. Layîš, the Şaffârîd (265/887/890), had four treasuries. One was for its weapons and the other three for funds obtained from various sources and expended on different purposes. One of these was for the monies (mâl-i ḵaṣṣ) deriving from grain and estates (diywāʾ), which were expended on his personal expenses (māfābāt wa māfābāt wa māfābāt ūnān) (Yaʿqûb al-Kindî, Mūʾajjâl al-Mustawla, ed. Muhammad Nâṣîrîn, Berlin 1928, 135; Bartold, Turkestan, 221). One of the nine government offices of the Šām from the time of Nâṣîr al-Dîn mentioned by Nâṣîr al-Dîn in the Târîḵ-i Buhârî is the diwân-i mamîlîk-i ḵâṣṣ, which was presumably concerned either with the ruler’s personal estates or with lands whose revenue was paid directly to him (transl. into Persian by Abû Nabî Ahmad b. Muḥammad b. Naṣr al-Kuchâvî, adapted by Muḥammad b. Zufr b. ʿUmar, ed. Mudarris Râdîvâl, Tehran 1938-9, 31). Nâṣîr al-Dîn also mentions the purchase of estates by Ismâʿîl Šâhânî (ibid., 33-5), and an occasion when crown lands (diywāʾ-i sultân) were exempted from kharâj after a flood (ibid., 40). The Ghaznavids also had extensive royal estates (diywāʾ-i ḵasni-i ḵâṣṣ). These were under a special official, who appears to have had an important position (Nâṣîr al-Dîn, Qâṣimî, ed. G. Leiden 1921, ii, 96; Ibn al-Athîr, viii, 342). Expropriation was widespread, but it is not clear whether expropriated estates became crown land or state land, though in all probability no clear distinction was made between the two. The diwân al-khâṣṣ in Baghdad is mentioned by Hâfîz ibn Âlî Shâhânî (in Kâlamânir al-Khâṣṣ, ed. Khanbâbâ Bahâruddîn, Paris 1894, ii, 45). Aḏud al-Dawla (who ruled in Fârs from 338/949 and over ʿIrâk also from 367/977 to 372/982) probably owned many personal estates, some of which he made into ḵâṣṣ for his sons by his chief wife. At the time of Kâzîrîn to the ruler (in hârîz bi ḵâṣṣ-i diwân-i ḵâṣṣ-i nāṣîrîn, ed. Fâṣâl, Strang and R. A. Nicholson, GMS, Leiden 1911, 145-6). Alp Arslân appears to have held a number of private estates, some of which had been newly created (Nâṣîm al-Mulk, Nâṣîr-i nāṣîm, ms. in my possession, f. 30b). Mention is also made of estates held by the sultan (ḥâṣṣ al-sultân) in Kûfâ in the reign of Tughrîl Beg (Ibn al-Athîr, x, 8) which may, however, have been the private estates of the caliphs surviving from earlier times. There are also references to property belonging to the diwân-i ḵâṣṣ of Sandjar in Bâstâm, Marv and Ray (ʿAtâbât al-kâtâba, ed. Muḥammad Kâzîwâlî and ʿAbbâs Ikbâl, Tehran 1950, 56, 67, 72), to peasants on his estates (Қazâzîr-dawâb-i ḵâṣṣ) in Marv (ibid., 67) and to the diwân-i ʿamâli va ʿabâb-i ḵâṣṣ in Ray (ibid., 73).

The rulers of the Saljuq successor states also acquired, like others before them, crown land. Part of Fârs, for example, was held by the Atabegs (543/1148-1287), as their personal estates (amâkî) (Shâhîzâd-nâmâ, 94).

The Mongol invasion, in contradiction to the Saljuq, brought about a large increase in crown lands. Much land, both at the time of the conquest and later, became dead or unclaimed land and this became crown land (Ibn ʿAbî ṬâṬîs, ed. Schefer, Paris 1891-3, Persian ed. Schefer, Paris 1891-3, Persian text, 28; Landlord and Peasant, 61), but crown land, as such, appears to have had small importance. There is little evidence to show that former crown land, which belonged immediately to the ruler and to land which belonged in perpetuity to the ruler and to land granted as apancies to his relatives (cf. Doerfler, Türkische und mongolische elemente im Neupersischen, Wiesbaden 1963, i, 325). The term ḥâlây rapidly went out of use, but the term ḵâṣṣ continued to be used throughout the Ilkân period to designate land primarily, though not exclusively, granted to the family and to land which belonged immediately to the ruler and which belonged in perpetuity (ibid., 325-32). Gradually the concept of ḵâṣṣ land became assimilated to existing concepts of crown land and came to signify land over which the ruler had full rights of disposal and which he granted on a hereditary title to his family and others. Whether the grantees then had full rights of disposal themselves is not clear. Much of Fârs became ḵâṣṣ. When Abûdâbî beg was appointed Abîbî bint Saʿd over Fârs (ca. 683/1283-4), her wazīr Nâṣîm al-Dîn urged Abîd to issue a yirîlîq declaring the former khâlîsîa of the Atabegs, much of which had been resumed by the diwân, to be ṣâyi and to share its proceeds with the Atabeg. A yirîlîq was duly issued and on this pretext Nâṣîm al-Dîn converted much land in Fârs into ṣâyi, although it had not, in fact, formerly been khâlîsîa. Among the estates confiscated by the Mongols were those of the Tabâtabaʾi sayyids. Eventually some of these estates were re-granted to Sayyid Kûtâb al-Dîn Abîd and the Tabâtabaʾi sayyids of Fârs were thenceforward known as the ṣâyi sayyids. Eventually some of these estates were re-granted to Sayyid Kûtâb al-Dîn Abîd and the Tabâtabaʾi sayyids of Fârs were thenceforward known as the ṣâyi sayyids of Fârs (Fâṣâl, Fârs-nâmâ-i Nâṣîrîn, lith., Tehran 1894, ii, 42). Ṣâyi al-Dîn states that Ghažân Khân assigned ṣâyi lands to each horse to provide for its upkeep and that of the Mongol princes. These lands were separated from the diwân and given into the possession of the horses. He made his own ṣâyi lands into ḵâṣṣ for his sons by his chief wife. At the time of
the composition of the Tārīkh-i mubārak-i Ghāzānī all īndja lands were alleged to have been in the possession of the deputies (umāmā) of Ghāzān Khan’s wives. Drafts were made on them when money was required for the army (Tārīkh-mubārak-i Ghāzānī, 330-1). In 703/1303–4 when Ghāzān decided to give iḥṣā’s to the soldiery, these were granted on īndja, dālāy and dead land (ibid., 305; Landlord and Peasants, 89–90).

The Persian ministers of the Īlkānids were, no doubt, largely responsible for the assimilation of the concept of dālāy and īndja respectively to the concept of state land and crown land which existed in the conquered territories. Among them was Naṣīr al-Dīn Ṣūrūtī, who discusses crown land in a brief essay on finance. He states that one of the forty tax units of īndja land was, as Chardin pointed out (Voyages du Cheva-

lire Chardin en Perse, et autres lieux de l‘Orient, ed. L. Langës, Paris 1811, v, 382), potentially khāṣṣa, since the shah could, whenever he wished, declare it so. In a sense, therefore, there was in theory no difference between the ultimate ownership of dālāy or īndja land, (māl-i maśāliḵ-i pāḏavāshāliḵ) and that destined for the needs of the kingdom (māl-i maśāliḵ-i pādāshāh). The former came from the reclamation or improvement of places which had been in a ruined or bad condition (after the right of the owner or owner’s representative had been redeemed) and landed estates (mīlḵ-i āh) which had been bought and from various other sources. (Madmūs-i roudhī, Proc. of the University of Tehran, No. 308 (1956), 32. See also M. Minovī and V. Minorsky, Naṣīr al-Dīn Tūṣī on Finance, in BSOAS, v/3 (1942), 51 ff.

As in the case of the earlier savāfī there appear to have been different categories of crown land. At the time of Ghāzān Khan, in addition to īndja land and amālāk-i khāṣṣa (royal estates), mention is also made of īndja-i ghāzānī (state lands) and īndja-i Ghāzān Khan (cf. Rashīd al-Dīn Fadl Allah, Mukta-

bāšt-i Rashīdī, ed. Muhammad Shaffī, Labore 1945, 224–5). Dead land also constituted a special category and was called khāṣṣa. Its extent was very considerable, and Ghāzān Khan, in his efforts to revive agriculture and to restore prosperity, established a special divān, the divān-i khāṣṣa, for the registration and classification of dead land.

Reclamation, as in Islamic law, carried with it rights of ownership and sale (Tārīkh-i mubārak-i Ghāzānī, 353–4, 356. Cf. also ibid., 204, and Landlord and Peasants, 91). According to Waṣṣafī, in or about 698/1298–9, 20,000 faddāns of land, including 3,000 ploughlands (dūfī) in Baghdād and the neighbourhood, and 3,000 in Shīrāz were transferred to the divān-i khāṣṣa. The latter supplied seed, draught animals, and implements to those who undertook their cultivation. In return so much per ploughland was to be paid annually to the divān-i khāṣṣa. The contracts for cultivation were apparently for a limited period only and on the expiry of this period the seed, draught animals and implements, or a sum of money in lieu thereof, were to be returned to the divān-i khāṣṣa (Tārīkh-i Waṣṣafī, 349). What success attended Ghāzān’s efforts to reclaim khāṣṣa and how long the divān-i khāṣṣa existed as a special divān is not clear.

When the Īlkān empire broke up into a number of successor states, their rulers also became possessed of crown land. For example, the Muzaffarids had estates in Kirmān (Muṣṭafā al-Dīn Nātasī, Mumākhabal al-tawārīḵ-i Muṣīnī, ed. J. Aubin, Tehran 1957, 181). Hāfīẓ Abūrū mentions the amālāk-i khāṣṣa of Amir Mūḥammad Shāh Īndjū (Dhayl-i ḡāmān-i al-tawārīḵ-i Rākhīdī, 187) and Ibn Zarkūb makes an interesting statement to the effect that when Mūḥammad Shāh became independent in Fārs “īndjū and dāla became one” (Shīrūs-nāma, 101). Between the decline of the Īlkān empire and the rise of the Šafawīs in the 16th century there does not appear to have been any major spread of crown lands such as occurred under the Īlkānids, though further research may cause this statement to be modified.

Under the Šafawīs the general distinction between khāṣṣa or crown land and divān or state land, which was now known as mamālīḵ (provinces), continued to exist, but was not so much a question of the ownership and the legal status of the land as of the control and expenditure of its revenue. All divān (mamālīḵ) land was, as Chardin pointed out (‘ibid., 308-1038/1597–1629), if not earlier, it appears to have been assumed that all property was owned by the shah, and that only its usufruct, not its outright possession, could be granted (cf. A chronicle of the Carmelites in Persia, London 1939, ii, 1032).

The separation between khāṣṣa and mamālīḵ districts was not absolute, and it appears to have been possible for divān dāla to have been drawn on khāṣṣa land and for transfers to have been made between the khāṣṣa and mamālīḵ treasuries. A decree given by Shāh ‘Abbās for the gift of land along the Zāyanda-Rūd of Isfahān to the Armenians of Dūlāh in 1028/1619 suggests that no very clear distinction was made at that time between crown land and state land. It states that the land to be given to the Armenians was “our royal property (mīlḵ-i mawlaḵi- humayyān-i māl)”, and instructs the mustawīf of the divān to delete the land from what belonged to the divān (milkiyat-i divān) (Hunarfar, Gandjina-i āthār-i tārīkh-i Isfahān, Isfahān 1966–7, 505–6).

Within the general category of crown land there was, as in earlier times, a confusion between land directly administered under the crown and the personal estates of the ruler. Prior to the reign of Shāh ‘Abbās, the terms khāṣṣa and khāṣṣa appear to have been applied indiscriminately to provinces and districts which were under the direct administration of the state in contradistinction to provinces which were alienated as tuyāl from its direct control. Broadly speaking, khāṣṣa appears to have been applied to large districts or provinces, whereas khāṣṣa was more often applied to smaller districts reserved to the khāṣṣa administration within provinces which were granted as tuyāl (K. Rohrborn, Provinzen und Zentralgewalt Persiens im 16. und 17. Jahrhundert, Berlin 1966, 131). Shāh Tahmāsp (930–89/1524–76) is alleged to have remitted the khāṣṣa for eight years from districts which were khāṣṣa (Haydar b. ‘Abbār Rāzī, Tārīkh-i Haydārī, quoted by Rohrborn, 132). On the death of Tahmāsp, Iskandar Munshi states that Mūrcḥid Kūč Khan appropriated most of the khāṣṣa estates (amālāk-i khāṣṣa) which had belonged first to Tahmāsp, and then to Sultan Hamza Mirzā and Abū Tālib Mirzā (Tārīkh-i ḡāf-
Other members of the Safavid family also held private estates in different parts of the empire: Sayyid Begum, Tahmasp's daughter, held estates (amalak wa rastabat) in Yazd and the neighbourhood (Muhammad Mufid, Djamisi-i Mufidi, ed. Tradi Afsari, Tehran 1951-2, ii, 262, 701). Shah Abbass also possessed extensive personal estates and in 1635-9 or 1640 (abadi, ii, 761-2). The administration of khassa land was under waizirs appointed by the central government, each khassa district or province having its own waizir. In a waizir dated 975/1567 entrusting the waizariate of Gilan to the waizir of Khurasan, the latter was instructed to make, with the knowledge and approval of the minor waizirs of Gilan, payment orders on the taxes and monies (mali va dighat va wudjihat) of each district (mahall) for the wages (masadid) allotted by royal decrees to the great amirs. He was to take possession on behalf of the khassa administration, of whatever remained (B.M. Or. 4698, ii, 17b, quoted by Rohrborn, 110). In general, it seems that local administration and defence was the first charge on the revenue of the khassa districts. If the revenue of a given district was insufficient for these purposes, it was possible for an additional draft on khassa revenue from some other source to be made available to make good the deficit (cf. Rohrborn, 109).

From the reign of Shah Abbass onwards a distinction was made between khiliska and khassa. Muhammad Mufid, for example, mentions the khilisadidt of the khassa administration (Djamisi-i Mufidi, ii, 173). He also states that a certain Mawlana Muhammad Shafi (d. 1063/1652-3) was entrusted by the shah with the annual distribution of 1,000 tumsan in cash and kind from the khiliska to the deserving of Yazd (ibid., iii, 308-9). Rohrborn considers that the distinction between khiliska and khassa became clearly drawn under Shah Abbass who had decided to pay the standing army and the provincial militia by assessments made on khassa land ("Amadari, ii, 924; Rohrborn, 110, 134. Cf. also Chardin, Voyages, v, 250-2, 279, 205-9, 303-4, 380-2). Rohrborn gives lists of the khassa provinces up to 995/1587, the year of Shah Abbas' accession, and after (177-8). In either case the outlying provinces tended to be mamalik and the central provinces khassa. In the second period the number of khassa provinces is greater. The most important and richest of them was Isfahan, which became the capital under Shah Abbass. Defence of the khassa provinces was the concern, not of the provincial governor or tawaldar, as it was in the mamalik, but of the standing army and local militia (Rohrborn, 118-22). Under Shah Safi (1038-52/1629-42) Fars became khiliska but, contrary to Chardin's assertion (v, 279), he did not initiate the policy of resuming mamalik into khassa. This policy reached its height under Shah Abbass II (1055-77/1642-67), who, according to Chardin, resumed Kavvin, Gilan, Mazanderan, Yazd, Kirmn, Khorasan and Aghardvar (v, 251). The resumption of a province was, however, sometimes only temporary. After the reign of Shah Abbass II the tendency was for the mamalik to expand at the expense of the khassa and at the same time for the distinction between them to become, perhaps, less sharp.

Chardin states that various types of grant were made on khassa land. These were (i) grants in lieu of salary, such grants being sometimes attached in perpetuity to an office, (ii) grants to officers and servants of the royal household and for the pay of the standing army, and (iii) temporary and life grants, which were sometimes converted to son over several generations. What remained after the allocation of such grants was administered under the waizirs for the benefit of the khassa administration. So far as crown estates were not rented they were worked on a crop-sharing system, which probably differed little from that in operation in privately owned property. The main difference was that both the mali (the taxes) and the kind (what remained after the payment of taxes) belonged to the crown. Kaempfer gives an account of the crop-sharing system prevailing in khassa land round Isfahan in or about 1684 (Amonestatam exoticarium politico-physico-medicum, fasc. v, Lemgo 1712, 91; Landlord and Peasant, 127). Du Mans, writing in 1660, states that most of the land was crown land, "moulki chahy", as opposed to privately owned (arabbi) land. He gives an unfavourable account of the administration of crown land, alleging, like Chardin, extortion by the waizirs and comptrollers (Estat de la Perse en l'an 1660, Paris 1890, 227, Chardin, v, 250-4, 276-7, 279).

Sanson, on the other hand, alleges that the whole of Persia was the property of the shah, that all estates were held by his grace and that he could, when he wished, resume them (Voyage ou relation de l'état present du royaume de Perse, Paris 1695, 192). This, however, would seem to be an exaggeration. It is possible that both Sanson and Chardin, whose evidence on the subject of land tenure is not wholly consistent (cf. Rohrborn, 113), in their interpretation of the legal status of the land, were influenced by their knowledge of western European feudal tenure.

Two administrative handbooks, the Tadkhirat al-muluk (ed. V. Minorsky, GMS, London and Leiden 1943) and the Dastuir al-muluk (Muhammad Taqti Diniqapazhui, Dastuir al-muluk-i Mirda Raftif, in Rev. de la Faculte des Lettres et des Sciences humaines, University of Tehran, xvi/5-6 and xvi/7-6), belonging to the late Safavid period and possibly going back to a common original, make a clear distinction between the khassa administration and the mamalik administration. The duties of the mustausfi of the sarkari khassa give an indication of some of the matters (in addition to those pertaining to the royal household) which came under the khassa administration. These were not confined to the administration of crown land. The main duty of the mustausfi was to keep the records and files of the taxes and monies (mali va dighat va wudjihat) from the mahall of Isfahan, Gilanat, Mazendaran, Kishan, Bandar (? "Abbass), and Yazd, and certain monies (wudjihat) from other provinces (sair-i wilayat), and monies from the djizya of the Armenians, the sale of tobacco, road tolls (rakhdari), ad hoc levies on sheep and goats in Isfahan, customs at the ports (wudjihat-i 'ushr wa khurudi-l bandar), the mints, psakhak from kalantar (v.o.), fees (daghuhih wa psakhak-i mukarrari), and other monies according to the assessments made by the khassa administration (? sair-i wudjihat-i djamisi-i sarkari-khassa), and to clear the accounts of the taxpayers with that administration (Dastuir al-muluk, xvi/3, 312). The khassa administration was not, however, wholly independent from the mamalik administration, since the mustausfi al-mamalik could, it seems, make drafts on khassa revenue (cf. Tadkhirat al-muluk, ii, 28a-b, Dastuir al-muluk, xvi/3, 312). The grand waizir exercised supervision over both administrations, and documents for the appointment of scribes to the royal secretariat and private house-
hold (daštarḵhāna-i humāyūn wa ḥaḵṣa) and of workers in the royal workshops (buyūtāt) were issued by the grand wazir with the approval of the mansūfī al-mamālīk, the nāẓīr-i buyūtāt, and the mustawfī-ī ḥaḵṣa. Applications for remissions of taxation from taxpayers in ḥaḵṣa districts also had to be sanctioned by the grand wazir (Tadhkirat al-mulūk, f. l0a).

One of the main tasks of the ḥaḵṣa administration was to administer the land round ʿĪṣāhān, known as the muḥāli. This consisted of ḥaḵṣa, awḵāf, and mustawfī-ī-ḵandāt. The first was under the wazir of the capital. His duty was to arrange for the cultivation of ḥaḵṣa land either by concluding tenancies or crop-sharing agreements with the peasants, to ensure that no place lacked peasants or what was needed for its cultivation, to see to the repair of kandāt, and buildings (shops, caravansarais, baths, etc.), to protect the peasants from oppression from whatever quarter, to investigate agricultural disputes, to collect the revenue and produce of the ḥaḵṣa districts, and, after the deduction of his own salary and the expenses of the administration, to see that what remained was expended upon its proper purposes (Dastūr al-mulūk, xvii/3, 319-20; Tadhkirat al-mulūk, ff. 72a-74a; Landlord and Peasant, 119). The second, awḵāf, came under the wazir of the fāyṣāḏār department, whose duty was to see that the land concerned was cultivated according to capacity, to provide whatever was needed for its cultivation, to see that gardens, buildings, mills, and kandāt were in good repair (Dastūr al-mulūk, xvii/3, 321; Tadhkirat al-mulūk, ff. 71a-72a; Landlord and Peasant, 121). The third, which came under the wazir of the initiḏātī department, possibly consisted of land newly transferred from the diwān to the ḥaḵṣa administration (cf. Dastūr al-mulūk, xvii/3, 540). The duties of the wazir of the awḵāf-i initiḏātī were similar to those of the wazir of the capital (Tadhkirat al-mulūk, ff. 82a-b; Landlord and Peasant, 120).

With the fall of the ʿAfāfids, the distinction between ḥaḵṣa and mamālīk, which had concerned the administration rather than the legal status of the land, disappeared. The sources use again, from time to time, the term diwānī for land which belonged to the state opposed to ḥaḵṣa. The ruler and deriving from earlier times, confiscation or purchase. The difference between them is not always clear, however, especially since confiscated land sometimes became diwānī land and sometimes ḥaḵṣa. The situation became further confused by later dynastic changes. New ḥaḵṣaḏātī were created, mainly by confiscation, while some old ḥaḵṣaḏātī were usurped. In 1135/1728-9 Nadīr Shāh (1148-60/1236-47) issued orders for the resumption of the awḵāf of Fārs by the diwān-i ḥaḵṣa (Fārs-nāma-i ʿĀḏīl Shāh, i, 87-93, cf. also i, 66, 86), and in the last year of his reign promulgated a decree for the resumption of all awḵāf. Consequent upon this decree a considerable number of awḵāf were taken over and entered with ḥaḵṣa estates in the land register subsequently known as the rābakht-i nāḏīrī (Hasan Khan Shāhīdkhāna-i Aqšerī, Tārkīḵ-i niṣf-i diḵān wa hamāta-i diḵān, līth. n.d., 36-8; Landlord and Peasant, 131-2). The decree was revoked by Nādīr’s successor, ʿĀḏīl Shāh. Some of the confiscated estates were returned to their former owners (Tārkīḵ-i niṣf-i diḵān, 49), but Sir John Malcolm, writing at the beginning of the 19th century, states that the lands were never fully restored (History of Persia, London 1829, ii, 353).

Under the Kāḏārs, ḥaḵṣa, deriving partly from earlier periods and partly from confiscation for ar-
KHALISA — AL-KHALISA

Khalisa land, as at earlier periods, was either
directly administered on a crop-sharing basis or let
on a tenancy, which in effect amounted to a revenue
farm, the farmer concluding crop-sharing agreements
with the local peasants (Landlord and Peasant, 148-9).

Tuyuls were also frequently assigned on the revenues
of Khalisa land either to officials in lieu of salary
or as allowances and pensions to the ruler's sup-
porters, tribal leaders or religious dignitaries (cf.
Rawlinson, Notes on a journey from Tabrīz through
Persian Kurdistan to the ruins of Takhti-Soleiman, in
JRGs (1841), 5). In the provinces, the taxes on
Khalisa land and the government's rent or share of
the produce were collected by the provincial gover-
nors, provided that they had not been otherwise
assigned. Grain obtained in this way was used
primarily to provision the army, but also to prevent
the creation of artificial shortages and hoarding in
times of grain shortages.

By the second half of the 19th century much
Khalisa land, which still occupied a considerable part
of the country, was in a state of decay and made
little contribution to the revenue. Some estates had
been abandoned by their peasants as was the case in
Māmālūk (cf. Rāznī, i, 207-8; Sīāhkhānyā, 29
Djmādā I 1269/2 March 1853). Many villages in the
province of Isfahān, some of which were Khalisa,
also fallen out of cultivation. At the beginning of
the reign of Nāṣir al-Dīn (1848-96) a large sum
of money, together with a considerable quantity of
grain, was made available on the revenue of Isfahān
to Mīrzā ʿAbd al-Husayn, the head of the finance
department of Isfahān, to enable him to bring them
back into cultivation. Instead, he spent the money on
military supplies and rebelled. After the ensuing
disorders were put down, the estates of those im-
plicated were confiscated and became Khalisa. Sub-
sequently, however, their former owners regained
them by various means.

In 1861, Eastwick wrote that a third, or according
to some, half of the land of Persia was Khalisa, but
that it was said to be much neglected. Advances for
the expenses of cultivation at enormous rates of in-
terest were made to the cultivators, who, subject to
innumerable arbitrary exactions, were unable to
accumulate capital to make improvements, and who
would, in any case, not make them if they could
"knowing that their rent would be raised or their
leases rescinded" (UK. British Parliamentary Papers,
58 (1862)—Accounts and papers: Manufactures and
commerce, and trade of foreign countries, Session
6 Feb.-7 Aug. 1862, LVIII (1862). Report by Mr.
Eastwick, Her Majesty's Secretary of Legation, camp
near Tehran, 5 July 1861, 70). Some two years later,
in 1863, an attempt was made to develop Khalisa
land in Isfahān, and an order was issued that the necessary
expenses should be provided by the government and
that they should be let on a five-year lease (Rāzmāna-i
dawlat-i ʿalām-i ʿIrān, 18 Dhūl Kaʿdā 1270/7
May 1863). The measures were abortive. Wālik al-Mulk,
who had been sent about the same time to Kirmān
to look into the condition of Khalisa, property was
apparently more successful (ibid., 14 Djmādā II
1280/26 Nov. 1863).

More land fell out of cultivation during the famine
years of 1871-2. No control was exercised over Khalisa
land and further confusion followed. Finally in 1874,
Zill al-Sulṭān, when he was appointed governor of Isfahān, concluded mukādaʿā contracts for a ten-year period (instead of the more
normal three years) for the Khalisa of Isfahān, presumably hoping that a long-term contract would
encourage the lessees to improve the land (Tarikh-i
nīsīf-i ʿIrān, 51 ff.).

Nāṣir al-Dīn and his successor, Muṣṭafā al-Dīn,
were repeatedly in need of money and on several
occasions lots of Khalisa land were sold, including, in
the latter years of Nāṣir al-Dīn's reign and the early
years of Muṣṭafā al-Dīn's reign, most of the Khalisa
round Isfahān (Tarikh-i nīsīf-i ʿIrān, 63 ff.). Much
of it was bought by the rich notables and the ʿulāmā
(see further Landlord and Peasant, 153-4, and cf.
also UK. Consular reports 2260/1899, No. 2260 An-
nual series. Preece "Isfahān, 1897-8", 13). In 1901-2
there was another major sale of Khalisa land, when
the ʿadr-i aʿṣām, Mīrzā ʿAlī Aṣghar Amin al-Sulṭān,
disposed of most of Shūlāstān to Muʿīn al-Tujjiğār
Bushīhīrī (Gašter of Persia 3, Calcutta 1910, under
Māmālūk, 65)). For the rest, no effective steps
were taken to improve the cultivation of crown lands
or to exploit them effectively for the benefit of the
state (cf. A. Destrée, Les Fonctionnaires belges au
service de la Perse 1898-1915, doctoral thesis presented
to the Free University of Brussels, 1973, 1, 423).

In the 20th century new political exigencies led
to the disappearance of some categories of Khalisa,
the creation of new categories and legislation
apparently more successful than what it replaced
with it. This legislation, however, was mainly con-
cerned with the sale, acquisition, and administration
of Khalisa and no general legal principles underlying
the existence of such land were formulated. The
dichotomy in the administrative field between dawānī
(state land) and Khalisa (crown land), so far as it
had survived, disappeared after the grant of the
Constitution, and in due course the term Khalisa
to be applied to crown lands in the sense of state
lands and no longer signified the personal estates of
the ruler, which were referred to as amāk-i Shāh
or amāk-i ʿalāmāt (see further Landlord and Peasant,
238 ff., for an account of the history of crown lands
since 1906, and A. K. S. lambton, The Persian land
reform 1902-6, Oxford 1969, index).

Bibliography: given in the article. It is not possible to give here an account of all texts which might
contribute to the history of crown land in Persia
since they would include most chronicles and local
histories.

(A. K. S. LAMBTON)

AL-KHALISA, Fatimid citadel built in 326/937-8 by ʿAlī b. Iṣḥāk b. ʿUmar, who had been sent by the Fatimid caliph al-Kāʿīm [q.v.] to suppress a rebellion of the Sicilians against the amīr Sālim b. Abī Rāshīd.

For strategic reasons, in particular, the possibility of receiving with ease reinforcements by sea, the town was constructed opposite the ancient Cassaro (al-Ḳāṣr) of Palermo [see BALARM] and near to the port. Its construction, at the inhabitants' own expense, was achieved by demolishing a large part of the ancient urban centre, whose walls were carried off, according to Ibn al-ʿAṯīr (for the information of this historian, and of the geographers cited below, see the BAS, cited in the bibliography, index). The town, called by its founder al-Khāliṣa ("the Pure") (Xελισα in Greek diplomas of the Norman period, Chalcia, Halicia and more rarely Chaleasa in Latin documents down to the 14th century, and Alza or Alca at the end of the 13th century, a vulgar form from which is derived the present name Ausa), was encircled by walls provided with gateways, apart from the eastern side. Al-Muṣṭafādīs gives the names of the four gates as Bāb Kutāma, Bāb al-Futūḥ, Bāb al-Bunūd and Bāb al-Šināʾa (Bāb al-Brāʾ in al-Idrīsī). In the Fātih-
mid and Kalbid periods, it was the residence of the Muslim governor and his entourage, and at this time, according to Ibn Hawkal who visited it in 365/976, it possessed neither markets nor hostels, but was provided with administrative services, a small Friday mosque, an arsenal, a prison and baths. This new “external” town, whose prestige as an administrative centre was linked with all the fortunes of the Muslims in Sicily, is mentioned as one of the five sectors of Kalbid Palermo visited by Ibn Hawkal (in addition to al-Khalisa, they are named al-Asrār al-Harāq, al-Triq al-Djiydi, al-Harr al-Shaqlība). It was then described by al-Idrīsī as part of the rażd of Palermo, and by Yāḵūt (d. 626/1229) as a mere mahāl in the centre of Palermo.

The disappearance of the walls, from the 14th century onwards, makes identification of the former Fāṭimid citadel difficult within the urban sprawl of modern Palermo, where the name of Kalsa has been extended to a quarter which goes from St. Francis of Assisi square to the port. If the reconstruction of the former urban limits done by Amari (BAS, i, 12 n. 3) seems to posit too great an extent for al-Khalisa, the hypothesis of Columbia seems more acceptable: he proposed an area trapezoidal in shape and covering some 8 hectares, which would be enough to make Kalsa into a citadel including the amīr’s residence, administrative buildings, a small Friday mosque, baths and a certain number of other buildings.

**KAHLAK (a.), creation.**

1. Lexicographical data.

Khalak, noun of action of the verb khalaka, which properly means the act of creating, can also be used to designate Creation in its entirety: wa-l-khalak yahān al-masād wa-yakān al-makhlūk (L.4). The noun of the agent, al-khali̱l, defined by the article, is applied only to God and is one of His Names. According to the L.A., in the speech of the Arabs al-khalk is used to designate the production of some new thing (ṭabbaṭ) on a pattern which has not been previously employed (ʿalā miṣghāl lam yusbab ishaṣ). Abū Bakr b. al-Anbārī, a philologist of the 4th/10th century, gives a slightly different definition: khalak is either a product (ingaṣḥ) designed on an invented model (abbaṣa), or it is the act that determines the proportions (tkādir) of something which is to be brought into being; thus when ʿāš b. Maryam (Kurān, III, 49) says: “Yes, I will create (abkḫuṭu) for you from clay the likeness of a bird”, he does not wish to say that he will bring into existence that which does not exist (lam yurūd annahu yuḥāṣu maḏmuṭ). Ibn Ṣidāh (5/11th century) considers that for God to create is to bring into being a thing which previously was not (baʿḍ an lam yakan). It should be noted that some commentators (al-Ḥasan al-Baṣrī and Muḥādīdī) give the meaning of din (religion) (the totality of classes of the Law) to the word khalak in the verse (IV, 119): “They have tampered with God’s creation”. The reasoning behind this is that God has stamped on creation a nature (jamlaʾ l-khalak) that conforms with Islam; cf. Kurān, XXX, 30: “nature created by God (jāfrāt Allāh) according to which He has stamped the nature of men: there can be no change in God’s creation”, that is, in the truth of religion (ṣiḥḥat al-dīn). Elsewhere, khalk can mean a mendacious forgery (Kurān, XXVI, 137); three commentators indicate the reading, “It is nothing but a forgery (khalak) of the ancients” instead of the customary khulūl. Khalak is therefore equivalent to ṣāṣīr al-aḥwālīn, the legends of the ancients, which is found in a number of sūras (cf. al-Zamakhshari, Kashf al-hīdūl). There is also the expression abāḍīth al-khalak, which is synonymous with ḥurrāfīt, old wives’ tales.

Most of these meanings are supplied by relatively late lexicographers and bear the clear stamp of theological reflection on the word khalak. But the L.A. gives uses which seem to haste back to the primitive meaning of the root. Thus the Arabs say: khalākāʾl-adīm, which means: “to determine before it is cut how much leather is needed to make what is required, and to size it up with a view to cutting out a shopping-bag, a water bottle or a boot”. Ibn Manẓūr gives, as an example, one of Ẓuhayr’s verses and a ḥādīth from the sister of Umāyya b. Abī Ṭaḥlib, both evidence from early times, and a verse by al-Kulaynī (d. 224/743). With the meaning of a lie, the form ikhlṣīlāt is also used (Kurān, XXXVIII, 7). Moreover, although with other ṣaṣādār than khalak, the word ḥallak (or ḥalluka) means to be worn out (= baliṣya). The root subsequently carries the meaning of being smooth, polished, without cracks (the L.A. gives ṭayyin, amlas, musmar as synonyms of ḥallak: equal, harmonious). All these meanings are found in the corresponding Hebrew root, ḥālōt: to shave, distribute, assign a part to; to be flat and polished. In the pl. ṭifel, ḥallak signifies to differentiate separate, specify (cf. ṭakādir); in the hīpīl, ḥallak means to smooth, to polish, to plane. It seems therefore that the original sense of ḥallak expressed on the one hand the idea of determining parts (as does ṭakādir; cf. ṣaṣādar l-arṣāb, to determine sustenance), and on the other the idea of polishing, equalising. These very concrete etymological values can be found in certain Kurānic terms associated with ḥallak, and in the speculations of theological commentators. The latest and most abstract meanings, grafted on to the earliest ones, constitute one of the bases of speculative and mystical kalām, as well as of falsafa.

II. The Kurānic vocabulary and the ideas it carries.

Before considering what creation is in the Kurān, it must be stated first of all that the words khalak and khali̱l are the most frequently employed. On only three occasions, in two verses, do we find the usage al-Bāriʾi, the Creator, the agent noun from the Semitic root which appears at the beginning of Genesis: B'rēshit bāraʾ Elohim. These passages are: “He is God, the Khāli̱l, the Bāriʾi, the Maker (al-Musawwir)” (LIX, 24): “Return therefore, towards your Creator (lā Bāriʾītum); it is best for you in the sight of your Creator (idem)” (II, 54). It is pointless to look for two English words to translate these two terms, which the lexicographers give as synonyms. Nevertheless, according to the L.A the Bāriʾi is he who creates without imitating a model (lā ʾan miṣīḥ); moreover, it is nearly always used for the creation of living beings in particular. In the same way, barīyya is synonymous with khalak. The former term is found
twice in two verses (XCVIII, 6 and 7) and the context clearly underlines that the subject is human creatures. In the Kur'anic, the verb *khalaka* is used twice in two verses (XCVIII, 6 and 7), which is not Kur'anic, although the Kur'anic uses the verb *dhara* with complements which designate living things: plants and cattle (VI, 136), djinn and men (VII, 179). Abû Ihsân and Thâtab accord it the sense of God multiplying (yukaththir) the beings in creation. Parallel with *baryya* we find *dhariyya*, which has a similar meaning but is not used in the Kur'anic. The Hebrew *šēt* has the etymological sense of "cutting and putting into shape" (The Jewish Encyclopedia, art. Creation).

Only once do we find the words "work of God" (sunūt Allāh); in the context of mountains which seem inert but which God causes to travel like clouds (XXVII, 88), a context that led R. Blachère to translate the expression as "miracle". The commentators (al-Zamakhshâri, al-Djalalîn) consider it a strengthening verbal noun of the verb (masdar muhlakh) which refers to the entirety of divine acts enumerated in the preceding verses. By these means God has worked a work of God, he has acted as God "who makes all things good" (ultama: abhanna). In this sense, merely accentuating the idea of a verb, which is retrenched (muhkâm) in other respects according to the Kâshfî, although it can be found in *dsūna* (we have established) in verse 86, the word sunūt has no grammatical value alone and does not expressly designate the divine work of creation. Nevertheless, the presence of this term in the Kur'ân has authorised those who allow God to be given names formed by deviation (išbâk) to call the Creator al-Sâni" the Artisan, the Demiurge of the Greeks, the *djalal*; for "ordering" (*xoa*rodoc); afterwards, the word *khalak* has no parallel with *kaddara* (cf. above, the meaning of *khalaka*).

One important root is *s.w.r*. We have already met al-Musawwir following on from al-Khâlik al-Bârî. *Taswîr* is an action brought into being by the creative act proper: "We created you, and then We gave you form" (wa-lakad khalakaka, thumma sawwarndkum, VII, 12). The same verb is employed for the act of a man in his womb's movement (III, 6). One verse is particularly rich in philosophical meaning: "In the very shape (心仪) He withholds;" (XXVIII, 89, VI, 2), or "of potter's clay" (salsâl, LV, 14), to note an example of usage of archaic "of" not "from" clay (*jin, XXVIII, 89, VI, 2), of clinging clay (*min *fin lâzîb, XXXVII, 12), of an extraction of clay (sulâla *min *fin, XXXII, 12) and of earth (*turâb, XVIII, 37, XXX, 20, etc.); stinking mud (*hamsa* masâni, XV, 28); "He created the djinn of smokeless fire" (LV, 15). But these examples indicate clearly that the preposition denotes the matter with which these created beings are created, and not a pre-existent matter from which they would be created. This can be seen specifically in the statement of Iblîs who, because he is made from fire, considers himself superior to men, who are made from mud. On the other hand, when *khalaba* designates the idea of observation (*atkanâ: ahkama). The preposition *min* does not seem to mean "from", as in expressions like "He created you from a single soul" (*khalalâna* min nafs, TV, 1, VII, 89, XXXIX, 6). Here, however, the meaning is clear: the text refers to the children of Adam from whom Eve was drawn forth, who are themselves created; also clear is "We created you from a male and a female" (XIX, 13).

In a word, God's every action on one of his creatures, the beings in creation, is retrenched. This can be seen in the statement of Iblîs who, because he is made from fire, considers himself superior to men, who are made from mud. On the other hand, when *khalaba* designates the idea of observation (*atkanâ: ahkama). The preposition *min* does not seem to mean "from", as in expressions like "He created you from a single soul" (*khalalâna* min nafs, TV, 1, VII, 89, XXXIX, 6). Here, however, the meaning is clear: the text refers to the children of Adam from whom Eve was drawn forth, who are themselves created; also clear is "We created you from a male and a female" (XLI, 13).

But in a broader sense *khalaba* appears to mean "to create" like the Hebrew *bârî* as it is understood by the Jewish exegetes. Many Kur'anic verses are the exact replica of the first verse of Genesis; such as "Praise be to God who created the heavens and the earth . . ." (VI, 1). Sometimes the text adds, "and what is between the two" (XXV, 5, 15). In a word, God's every action on one of his creatures can be called creation. Similarly, the different developmental phases of a created being are also creations: "He created you in your mother's womb, creation after creation (*khalâna min ba'd *khalâni*)" (XXXIX, 6). The same word is used for the act of creation in general, the heavens and the earth encompassing all creatures, and for the particular...
creations of each category of beings. This second usage explains the extension of meaning brought by the word khalaka, which is weak; the Tafsir al-Djalālayn makes khalaka synonymous with basha' (creation) and interprets it by lā ilāh-ghayb). The word khalika is very strong; it evokes all the futility of error and in the Kurʾān itself is opposed to ḥāk. Examples are: "Do not cover the true reality with the futility of error" (II, 42, III, 77); "And say: the truth has come and falsehood has vanished. Yes, falsehood by its nature, must vanish" (tahāk; which marks the instability and inconsistency of basha').

Thus the creative Word, the kun (equivalent to the biblical fiat), is not a flatus vocis: it brings about something in factual truth. Creation has an end, although God has no need of anything apart from Himself: He is sufficient unto Himself (cf. wa-staghāna 'ilāh, LXIV, 6). He is learned, wise, living, determined. Creation, say the theologians, does not issue from God without a natural and necessary process. The Tafsir al-Djalālayn expounds bi 'l-ḥākī (in XLIV, 39) in these terms: "that is to say, We have created by allowing Our Truth (muhākikīn) to triumph, so that Our power and Our unity may be proven." Elsewhere the Kurʾān assigns a purpose to the work of creation: "I have created not men and djūms except to worship Me" (II, 36). This worship profits God nothing, but it is the greatest good of mankind. This good is "in the hand of God" (III, 26); "that which is with God is the good of the pious" (III, 198). All the names of God by which he is designated as He who gives, who pardons, who pours out his bounties in favour of believers, who fear Him and obey Him, are therefore associated with this ultimate end of creation, the return to God. Verse XXIII, 115 (cited above) states this clearly, a point which recurs in XXX, n: "God by which he is designated as He who gives, who pardons, who pours out his bounties in favour of believers, who fear Him and obey Him, is therefore associated with this ultimate end of creation, the return to God." Verse XXIX, 115 (cited above) states this clearly, a point which recurs in XXX, n: "God by which he is designated as He who gives, who pardons, who pours out his bounties in favour of believers, who fear Him and obey Him, is therefore associated with this ultimate end of creation, the return to God."
over, the Kur'an alludes to a first beginning of creation. The expression badā* 'l-khalq, therefore, does not always refer to an absolute beginning, as in, for example, the case of “He began the creation of man from earth” (XXII, 7). Elsewhere we read: “As we originated the primordial creation (badā*na awwala khalq*), so will We repeat it” (XXI, 104; X, 4, 34, etc.). This refers to the creation of the visible world in its entirety and to a second creation in the hereafter. Al-Zamakhshari, followed by the Ḍalā'ilayn, explains that the primordial creation is the fact of giving existence to the world by making it emerge from the void (idīdūn hān an-l-adam). But this raises a grammatical problem: Why “a creation” in the indefinite form? “This is because it is said: awwal al-khalq* means awwal al-khalq*aḍ in the sense of awwal al-

khalq* means awwal al-khalq*aḍ in the sense of awwal al-
hadīlak, the first of creatures, because khalq* is a masdar which cannot be put into the plural.” The aim of this commentary is not just to point out the idea of creation ex nihilo but also to pose the problem of the first creation drawn out of the void, a problem we shall encounter again.

Another term corresponding to ibtīdā, noted by the Tafsir al-Djaldlayn (IV, 117), is ‘l-anwdr. Apart from the allusion in XIV, 48, the Kur'an poses several other problems: of the creation in six days, of the first created being, and of the process of creation. These will be dealt with under ḥadīth and Tafsīr.

III.—Khahl in ḥadīth.

The Prophet was often questioned about the Beginning. One tale recounts this reply: “God was and there was nothing else with Him; His throne was on water (cf. Kur'an XI, 7). Then he created the heavens and the earth.” When someone asked the Prophet where (ayna) God was before he created the creatures (ḥabla an yaddibun), he said: “He was in a mist (luḥm); there was no atmosphere either above or below Him, and He created His throne on the water, that is, there was nothing with Him (layasa ma’ahu ghay).” The role of water in creation is important (cf. Kur'an XXI, 30, XXIV, 45, XXXII, 8, LXXVIII, 20, LXXVI, 6). Several ḥadīths relate how when water boils it becomes a vapour which constitutes the sky, while it forms on its surface a smoke which constitutes the earth, while it forms on its surface a frot which becomes the earth. The vapour, called smoke (dukhān = bukhār mutaṭfī), al-Djaldlayn plays a part in the Kur'an (XLI, 11) in the creation of the sky. On this subject, the narratives are simply picturesque amplifications of the Kur'ānic text conveying any number of mythical traditions of Oriental peoples which were transmitted by way of rabbinical haggādā or Iranian and Hellenistic gnosticism. A large number of them are found at the beginning of al-Ṭabarī’s Amālas, in al-Mas‘ūdī’s works, and, much later, in Madā‘īyatīs’s Bišārī. A sea beneath the seven heavens, eight asā’il beneath the sea, and a throne carried on their backs are also
described. This image is an extension of the verse: “And on the borders of the sky shall stand the angels, and on that day eight shall carry above them the throne of their Lord” (LXIX, 17). The word waṣṭīl designates the chamois goat which lives on the mountain tops. The plural asṣāl or waṣāl is applied to those beings dwelling on the height, the asghāfīs, here the angels (LA, māla‘īka ‘alās sūrat al-aswāl). At this stage, the distance which separates each rung from the next is a 7, 72, or 73-years’ walk (500 according to other versions). But in some texts, the figure 500 represents the thickness (khilāt) of each sky.

There are many, though differing, narratives about the days of creation and their duration in terrestrial years, about the first day (Saturday or Sunday), and the division of the creative work between the different days. Many of them are designed to refute the Jewish concept of the sabbath day of rest: God never rests because tiredness can never affect Him (cf. Kur‘ān L, 38). Concerning the successive order of creation the Prophet said: “God created the earth (turba) on Saturday, the mountains on Sunday, the trees on Monday, the makrūh on Tuesday and light on Wednesday. On Thursday he dispersed the animals (dawābb) over the earth, and he created Adam at the end of creation, after the ‘āṣr of Friday in the last hour of the last day, during the period which separates ‘āṣr from ‘ishr.” But some, i.e. the Prophet replied to Jews who were quizzing Him that God had created the earth on Sunday and Monday, the mountains and all the useful matter they contained on Tuesday, trees, water, cities, the prosperity of cultivated lands (‘umrān) and destruction (kharāb) on Wednesday, which makes four days (cf. Kur‘ān XLI, 9-10). On Thursday He created the sky, on Friday, up to the last three hours of the day, the stars, sun, moon and the angels (cf. XLI, 12: “In two days, He, by his decree, established the heavens in its stages, the distance which separates each rung from the next is a 7, 72, or 73-years’ walk (500 according to other versions). But in some texts, the figure 500 represents the thickness (khilāt) of each sky, but God would not have “spread it out” (dahdhal) before creating the sky, since tashīya is the act of displaying or unfurling (bast) not of creating. But, he said, this explanation raises two objections: the first is that since the earth is an immense expanse it is impossible to separate its khalīf from its tashīya, and if one occurs later so must the other. The second objection is that verse II, 29 proves that the creation of the earth and all it contains seems to follow that of the heavenly corners after the creation of all that is on earth. According to Fakhr al-Dīn al-Rāzī, the earth must have been created before the sky, but God would not have “spread it out” (dahdhal) before creating the sky, since tashīya is the act of displaying or unfurling the earth before the creation of the sky. There was an attempt to counter this by distinguishing between the creation and the “leveling” (taswīya) of the sky, particularly its division into the seven heavens. The creation of the sky was before the creation of the earth, but its tawāyi came afterwards. Unfortunately verse LXXIX, 26 makes the construction, lifting of the vault and levelling of the sky all part of the same thing, and all take place before the spreading out of the earth. As a last resort, al-Rāzī suggests extending the preposition thāmma (and then) in verse II, 29 to mean not an actual order of succession, a tāriba, but a simple list of bounties (ni‘ādū al-mā‘ām), which enumerate in second place something which could very well actually have been first. The aim of this discussion is to show that there are processes like tawāyiya and tashīya, which come into the general category of tādir, are, with a few exceptions, conceived of as creative acts, or at least as aspects of khalīf.

Another contradiction, between XLI, 9-12 and L, 38, concerns the total number of days of creation. The first text seems to give a total of eight days; two for the creation of the earth, four for establishing (taswīya) the mountains and diversifying (kharāb) its nourishment, two for the seven heavens. The second
text states quite precisely that six days sufficed for the creation of the heavens, the earth and what is between them. All the commentators solve this by saying that in XLI, 9-12 we must not make the addition $2 + 4 = 6$. The Kur`ānic sentence wa-điṣ'āla ... is an isti'naf, a new sentence which goes back to the beginning and means that the creation of the earth and all it entails (mountains, foodstuffs) took place in four days. Likewise, explains al-Rāzī, when we say that it is twenty days' walk from Kūfah to Medina and thirty to Mecca, it does not mean that the distance from Kūfah to Mecca is $20 + 30 = 50$, but that Kūfah to Medina takes 20 days and (isti'naf) Kūfah to Mecca 30. Here the d̄a'iʿ and tabādīr are considered as creations. Ibn Ḥazm, however, in the Refutation of Ibn Nağhrīla, separates them from ḥālāk: "The two days during which God created the sky in seven heavens are the last two of the four days when he distributed the crops on the earth, for this distribution is something other then creation." Hardly a satisfying explanation! Finally, some commentators also echoed theological or philosophical conceptions.

V.— Ḥālāk in kalām.

With the theologians, especially the Muʿtazilīs, the vocabulary of creation grew richer. In the first place, the creative act was expressed by the term ḥālād, the fact of giving existence to that which did not exist. God is He who also gives existence (al-Mādiyā). But in order to endure, existence (waḍīd) needs subsistence (baḥād), and that in abundance; ḥālāk is not only ḥālād but also baḥād, the gift of subsistence. Al-Rāzī related this second idea to the one expressed in the Kur`ānic term rūḥ, the act of catering for, providing for, sustaining. God is Raḥīk and Raṣāk just as He is Ḥālāk and Ḥālālāk. The Kur`ān brings together the two ideas: "Is there a creator other than God who gives you sustenance (yarsuḵubum") (XXV, 3). And, more explicitly: "He who originated creation and repeated it, and He who gives you sustenance from the sky and the earth, is there another than God?" (XXVII, 64). The sustaining power, like the creating power, is associated with the oneness of God. The act of creation is not simply an original snap of the fingers; it must be repeated at each moment of the existence of creatures lest they should sink into the void. This is the Muslim doctrine of continuous creation, which is illustrated to perfection in al-Bakillānī's atomism and occasionalism, though it is not a prerogative of Ashʿarism alone. Al-Bakillānī thinks that an accident cannot last two minutes in succession on a body which God has created in each of those two moments. The Muʿtazilīs are not unanimous on this point: some, the disciples of Muʿṣammār, deny that God can create an accident; other affirm it. ʿAbd al-Dijābār belongs to the second group, since he speaks of bāḥādī (generation of a new thing in time) of accidents, which are therefore mudāḥtī and must have a mudāhīt, who is God. Nevertheless, the existence of accidents is a weaker proof of the existence of the Creator than that of bodies (Sharh, al-uṣūl al-khamsa, 39 f.). Ḥālāk is an attribute of God; it is an attribute of action and for the Muʿtazilīs, it is like the realisation of an act of goodness (lāḏān) or the exercise of justice (lāḏād). But it is necessary to know if God was thus eternally "creatory" (lām yasaʿl khālāk), or if before the creation of the world He was, in pre-eternity, eternally "non-creatory" (ghayr khālāk). In general, the Ashʿarīs think that khālāk, as a name of God, was eternally applied to him, but they do not press the analysis of the problem any further. All and what the Muʿtazilīs do not deny that God was eternally "non-creatory", "non-providing", "non-operatory". They think that this is true of all those attributes of action which are unambiguously styled (lāṣy af nāṭiṣi kāmā): in fact, God can be just either because justice is of His essence or because He exercises it. Thus, states al-Dijābār, it is not said that He is eternally "not-just" and eternally "not-injust", for as long as the ambiguity lasts, that is, for as long as the object of his justice does not exist. But in the case of the creation there is no such ambiguity: The Creator is He who creates in reality. ʿAbd b. Sulaymān takes another stance: when he was told that God had never ceased to be khālīk, he denied it; he denied it also when he was told that God had never ceased to be ghayr khālīk. By this double denial, ʿAbdūthād touched on the philosophical problem of the eternity of God and the temporality of his creation. He maintained in fact that God is before (kabh), but not before things or after things, just as it is not said that He is the First with regard to things (awwal al-ṣaydi̇). The question of divine will was asked in this context of ideas. ʿAbd al-Dijābār (Sharh, 440) writes that God is "willing" by an "innovatory" will (bi-trāda muḥdatha). We will not dwell here on his evidence, but will observe that if, as ʿAbū Ḥāṣim thinks (Sharh, 548), the act of creation is none other than the act of will (al-kalām innamā kuwa l-trāda) and the act of creation cannot be realised without the realisation of a created being (mahbūl, īḥād, 549), this way lies the trap which philosophical reflection has spotted in connection with muqaddaḏīh, that is, the thing which swings the balance in favour of creation. Is it eternal? Creation must then be eternal. Is it not so? It must therefore be created in its term, and the question stretches back into infinity. Or, perhaps the muqaddiḥ, eternal though it is, was hindered from acting? Therefore there must have been a hindrance, a tark al-muqaddiḥ. And was that eternal or created? This notion leads to the same labyrinth as the previous one.

But theological speculations, by Muʿtazilīs at any rate, never went to these lengths. For them, the essential problem was to know what could be said of God from what the Kur`ān teaches. They had not the least doubt that the creation, as regards creatures, was "innovatory". Creation was produced in time and cannot be eternal. The question of the eternity of the creative act, however, underlined in their eyes the general problem of the attributes of essence and action. ʿAbd al-Dijābār thought (Sharh, 115) that God had the power to create and to will by His essence; but saying that His will to create is muḥdatha does not imply that He needs a muqaddiḥ in order to create, just as from our own experience (fi-l-ḥākī, 116) we know that man does not need the will to will something in order to do it.

Relationships between attributes exist. Khālāk is obviously connected with the Almighty (kudrā). This latter substantive is not Kur`ānic, but theologians consider that the word kuwawa, which occurs in verse II, 165 (al-kuwawa li-lāḏā ḍi̇mānī), is its equivalent. God is khālīk in respect of bāḥīr (Kur`ān, XVIII, 99, XXVI, 61, XLVI, 33). ʿAbd al-Dijābār writes: "The proof which demonstrates that God is the Innovator of the world proves this attribute, His Almighty Being, acting without intermediary" (Sharh, 151). This is why the Muʿtazilīs say that it was the Almighty who conceived us originally. Creation also proves that God is wise, through the
intermediary of the harmonious company of creatures (ta*lif), the marvels of the animal world and the ordering (tarkib) of the celestial spheres (ibid., 157), in short, well-conducted processes (al-afqāl al-mukhama).

But the relationship between creation and knowledge did present the Mu'tazilis with a serious problem. Did God know his creatures before He created them? Did He have any knowledge of what these essential beings must be before He gave them existence? Is it permissible to speak of a "beforeness" at all? We have already looked at 'Abbad b. Sulaymân's thesis. The disciples of Abû 'l-Husayn al-Šâlîh claim that the Creator does not cease to be eternally "within the beforeness of things" (lam yastal kabla l-ʾaḫyār), but not "before things" (kabla l-ʾaḫyār). Following the Makâlî al-islâmiyyîn, most Mu'tazilis nonetheless think that He has been eternally before things. Despite the various shades of opinion, this does not indicate a belief in the eternal simultaneity (ma'yya) of God and things. Consequently, the preceding question is asked legitimately in this school. All the scholars agree that God is eternally knowing (dâlim). But does He have eternal knowledge of the elements? Are those things which can be known (cognissibles, maṣ'ānîs) in fact known before they come into being (kabla kawāntî)? Furthermore, have "things" (a very general term corresponding to ρόδα) never ceased to be (albeit as pure cognissibles)? Various different answers are given. Al-Fuwâṭî, for example, thinks that God knows eternally what He is, but to say that He knows things from all (cognissibles, maṣ'ānîs) in fact known before they come into being (kabla kawântî) is not possible to devise what exists. The name thing can only be applied to that which God has created or destroyed, mabhlûk and maṣ'âlîm. The pure void ('adam) is not so named and cannot be known.

Abû 'l-Husayn al-Šâlîh, however, is of the opinion that God knows things eternally, but "in their moments" (fi aḥâlibîhî), that is, that motionless eternalities embraces all (aḥâlibîhî) of the moments. The knowledge of God is eternal, immutable, but the objects of this knowledge are subject to a temporal factor. 'Abbad b. Sulaymân acknowledges that God has eternal knowledge of the creative act (al-mâhkîkātî) elements or results of acts (al-mafṣūlātî). Al-Šâbîbî subscribes to a similar doctrine.

What does this mean? If God has knowledge of substances and accidents before they are created, why does He not also know the elements which are the substances that transmit the accidents? The stress laid on the ideas of action (ṣâkhîl, af_qâl) leads to the notion that God has eternal knowledge of the power which He has to create certain sorts of being without knowing these beings themselves in their concrete and transient reality. Eternal knowledge of the eternal Almighty Power to create, this creative knowledge, can neither, by the preceding definition, be a posteriori knowledge of creation nor a knowledge of creation in the a priori of His Idea. In fact, these speculations encompass the problem of Platonism's exemplary Ideas, mutâbul, which the Mu'tazilis reject. If such models existed in the divine mind, the creatures would resemble their Creator; but "nothing resembles God" (Kûrîān XLII, 11). If there was ever in Islam a ṣâkhîl that God created man in his image, it was either rejected as unæthentic or interpreted as meaning that man was created in accordance with his own form.

These speculations led to the theory that essences were eternal in the state of nothingness (fi bâl al-ṣâdam). He did not create them for a nonexistent essence before making them exist in things, because to create essences in this way implies that they are known beforehand, and this leads once more to the Platonic error they were anxious to avoid. If to create is to bring into being out of the void, it is reasonable to suppose that the essences of created things, like the things themselves, are in the void before creation. They must at least have the determination to be possible, meaning by possible that which is not but could be. This corresponds to God's almighty power, and its mukmînîdât are makâlîd. Thus what God knows eternally is His power. The problem, therefore, is to know if God creates all possible beings or if He makes a choice, or again if His power wears itself out in the creation of that which He creates. Djamh thinks that the objects of God's power and knowledge have an end and a limit (ghâya wa-nihâya) and that His acts will end in a final act (wa-li-afqālîhî āḏâqir). But, agreeing with Islam's deepest conviction, the Mu'tazilis as a whole believe that God's power is limitless and that the created world does not exhaust it.

VI.—Khalîf in falsafa.

As a general rule, the falsâfîs used the word khâlîf in the sense of creation ab aeterno. Proclus formulated this conception precisely in the Commentary on the Timaeus and it was elaborated upon by commentators on Plato and Aristotle. It was revived by al-Šârîf and Ibn Sînâ. Al-Ghâzâlî criticised it in his Tahâfût al-falsâfîa, and his theological arguments were refuted by Ibn Rushd in Fahdât al-tahâfût in the name of a pure Aristotelianism which differed significantly from the Avicennan ideas on this question [cf. KID AM]. Ibn Sînâ often uses the term ibdâ (g.v.). It is the extent to which a thing owes its existence to something other than itself, and is subordinate to this other thing and no other, without the intermediary of matter, instrument or time (fârâdîl namâ, v, section 9). "The Prime Innovator is an intellectual substance (dâ'if al-šarîq) of the accidents (maṣ'âlîm) in the true sense of the word. By his intermediary He (God) innovates an(other) intellectual substance and heavenly body (ibdâ, VI, 21)." Here we have the theory of the emanation (fâyâd) of intelligences and spheres which comes directly from al-Šârîf. Quiddities exist in concrete form in things, abstractly in human thought and as an exemplar in God's knowledge. But, unlike the Platonic Ideas, these are not individualised as if divine thought was their "intelligible place" (tôpôs noûptòcç). God had prior knowledge of the "exemplary representation of universal order" (lamâlîd al-nîfat al-kullî) from which this order is unfolded in its disposition and divisions (ṣu'd tartîbîs wa-taṣârîfîsî), in the intelligible course of its emanation. The two major Neoplatonic principles adopted by the Muslims are present here; that nothing can come from the One but one, and that God has no knowledge of details as such, neither in their material reality nor in their individual essence. Yet verse LVII, 3, which states that God is the Manifest and the Concealed, gives rise to the notion that worldly beings are simply manifestations of God (cf. al-Fusûs fi l-šâhîm: "In as much as He is manifest, He extracts All from His essence... His knowledge of All multiplies in a multiplicity which comes after His essence, and All is included in His unity... He is therefore manifest in as much as He is concealed and Concealed in as much as He is..."
Ibn 'Arabi systematised this concept: Being had an interior reality and an exterior expression which are inseparable and dialectically united. This gives rise to the cosmological pair khalq-habhkx corresponding to the ontological pair sahr-bisl. Creation is an expression and a manifestation of God; it is the “epiphany” of God. Beings are manifold mirrors of the divine Essence, which is absolutely one, ineffable and without end. The most beautiful names of God are the patterns from which and for which all the beings in the world are “created” (Fusihd, i, ch. 4). “The first divine step in creation was resolution (labdr), even before the existence of creatures: it is the manner in which creatures are qualified in being manifestations of Divine Reality (bi-hawwihim mas'hir bi-l-T habkx)" (ibid., ii, 11, ch. 3, question 30).

The Ikhwan al-ṣafwa also believe in emanation, but of a different type than Ibn Sīnā’s. They call the Creator (al-Barī) muhdth, mubhth, mubdi, mubkt, mutammim, mukammil. The Intelligence, the prime innovator, has existence (wudjud), sustenance (bi-kawnihim mazdhir li-’l-Hakk)” (ibid., V, 45). They explain that khalq designates corporeal things and amr spiritual substances. Their general term for creation is ibdā.

A distinction of this type is even more marked among later Ismā’īlis. In Kanz al-walid, Ibrahim b. Husayn al-Ḥamidī also speaks of an ibdā which arose from a single stroke connected with the Prime Innovator (al-mubda’ al-a’wval) or Prime Intelligence; then came successively the first emanation (al-Muna’bth al-awval), al-Kalam, which subsists in action, and the second emanation, which subsists in power. Both are derived from the Prime Innovator, which was not created (muhktarti) as a result of “something which can be called an act of innovation”, but which is “the very act of the Highest (al-Munbas’hī), gushing from Him towards existence.” The first emanation glorifies, worships and sanctifies the Prime Innovator, and together they testify to the Highest. It too is perfect in its essence and completed in its act. The second emanation, however, while occupied second place and did not acknowledge the first emanation’s prerogative. For all these reasons, although perfect in its essence, it is defective (mubkṣi) in its action, which is therefore power. Here we notice the appearance of a fault committed by the upper world, and the idea of a culpability that is inserted into the process of creation, which is not found in the Ikhwān’s thought, gradually develops in later Ismā’īlism. Evil is therefore born in the spiritual world, that of the ‘ibāl and the angels, although at the “emanatory” (imha’didhī) level and not that on the ibdā. In his article “The Ismaili Vocabulary of Creation” in SI, xi (1974) 75-84, a study of the Kitāb al-yanabī’i, a manuscript of Abū Ya’qub al-Sijī’s Muḥaddith and al-Kirmanī’s Kitāb al-Riyāḍ, P. E. Walker concludes: “In sum, the creation process . . . divides into three distinct levels, each corresponding to the level of reality being created.”

He cites the Ṭabād, which makes a distinction between asyiyyīya muhkmawna, asyiyyīya mulamawna and asyiyyīya maḥda. At the sensible level, things are created by the passage of time and things come to be out of things that were. On a higher plane, things in the intelligible world come forth by emanation or the special process of al-imʿād. Above all is creation by al-ibdā. He defines creation by ibdā as “the radical coming to be of being from what is not being.” It is “an eternal, timeless existentiation.” H. Corbin compares this theory with al-Kindī’s in Hist. de la philos. isl., 220. The source of such innovation is a God there is a recognisable will, one which does not more can be said than what He is not, while adding that He is not what he is not.” Ṭabād is outside the realm of intellectual speculation and is not a process arising from an intelligible act; this gave rise to the voluntarist conception of it. God innovates through a commandment that is also will (amr-irdda). Oddly enough, we have here in the use of words a reflection of Ibn Rushd, who, for other reasons, also thought that God, immobile Prime Mover that He is, moves the world through His amr. He acknowledges that in God there is a recognisable will, one which does not resemble man’s will at all but is for Him analogous to it. Ibn Sīnā, and especially his commentator Naṣīr al-Dīn al-Ṭūsī, rejected the intervention of will in the creative act, for to will is to strive for something missing and God does not lack anything. He creates through pure generosity (djud), which these philosophers consider the exact mean between a natural production (tabfī) and a willed creation.

VII—Creation in the thinking of the Shi’ī Imāms.

Imāmī teaching introduces the concept of a pre-eternal creation of “forms of light, precosmic entities” (H. Corbin, op. laud., 75). Many traditions speak of a pleroma of five of these: Muhammad, Fāṭima, ‘Ali, Ḥasan and Ḥusayn. The universe is made from them, governed by them and constructed to receive their temporal manifestations. The Muḥammadan Light is the Prime Innovator of all creation. There are many accounts of this topic in Bihār al-anwār. But all the Imāmī sources speak of a pleroma of five: Muhammad, Fāṭima, ‘Ali, Ḥasan and Ḥusayn. The universe is created from these and given breath by the two Spirits. Another text says that they are created from the sublimest of the ilāyīn (cf. Qur’ān, LXXXIII, 18-19). Clearly, while based on Kur’ānic verses, all these tales embody elements alien to Muslim Revelation and obviously showing Gnostic influence.

VIII.—Supplementary questions.

Some ṭabād state clearly that God created evil and the pains suffered by mankind. Theology, particularly Aghārī’ī theology, supported this doctrine, justifying it by saying that creation does not entail that normal causality where effect issues from cause. God can therefore create evil, but it is not necessary to call Him evil. Associated with this question is that of the creation of human actions, a concept which the
Djabriyya upheld, which asserts that God created belief and unbelief, worship and disobedience. All that exists and is not God is created by God. Evil exists and is not God. The conclusion is inescapable.

Elsewhere, we find the doctrine of creation by the Word (the imperative hun, the amr), and creation by generosity (djid). It should be added that some mystics, such as al-Hallāgh, believed that God created by love. In al-Hallāgh's eyes, says L. Massignon, concluding his study of the developments of khahl and ʿārah, "the mystery of creation is love, essence of the divine essence" (Passion, iii, 116 and index s.v. khahl.

(R. ARNALDEZ)

**KHALKEVI** (Modern Turkish orthography, Halk, pl. halkevi, Halk's, People's House, the educational and social centres founded by Mustafâ Kemal (Atatiirk) to replace the "Turkish Hearths" (see Türk Odalan) which were active, with some intervals, between 1912 and 1932. The Odalan represented originally the Pan-Turkist ideology of the Committee of Union and Progress (Itihad ve Terakki Dümmüviyeti [q.v.]). Although the government continued to support them after the foundation of the Republic in 1923, they were gradually looked upon as an obsolete institution, out of keeping with Kemalism, which rejected "unrealistic" ideologies (i.e. Ottomanism, Pan-Islamism, Pan-Turanianism) and cultivated a nationalism based on the National Pact (Miithâk-i Millî). Hence they were dissolved on 10 April 1930. In the meantime, the Republican People's Party (RPP, see Dümürviyeyet Halk âradi) Convention of May 1931 formulated the six fundamental principles of Kemalism: republicanism, nationalism, populism, statism, secularism and reformism, which were going to be disseminated all over the country through a new organisation, the People's Houses. Founded on 19 February 1932, they developed rapidly and their number in cities and towns reached 379 in 1940 and 478 in 1950. In 1939 they were expanded into villages, where they were under direct control of the RPP, which appointed the heads of the houses and Rooms were abolished on 12 April 1961 set up Turkish Cultural Associations (Türk Kültür Dernekleri). On 21 April 1963, these non-political associations changed their names to Halkevi. The revived People's Houses have not yet (1976) recovered their former important position in the country.

**KHALKHA**, the name of a river. It rises on the western slopes of the Great Khingan in Mongolia and empties into the Buyir-Nor; this river appears in the Chinese atlases in the forms Ha-lo-hin or Ha-er-ha, which render the name Khalkha. It is mentioned in the 12th century by the "Kin dynastic history" (Kin-she) in ch. 94, 3, under the name Ha-lo, very likely an incomplete transcription of this same name for the river. It is cited on a few occasions in the Mongol period and the Ming one, appearing very frequently in the Manchu period in the Chinese, Mongol, Russian and western sources. Naturally, it is cited in the Mongol period by Rashid al-Din, ed. Berezin, in Trydu VORAO, xiii (St. Petersburg 1868), Persian text, 216, Russian tr. 134: Kalâ, and xv (1889), text, 3, i. 14, tr. 3. For the greater part of its course, this river forms the frontier between the province of Khingan (former Hei-long-kiang) and the Mongolian People's Republic. Since the 16th century, the term Khalkha has designated the northeastern part of Mongolia, from the actual province of Khingan to the eastern frontier of the province of Kobdo, and from the Russian frontier to the territory of Inner Mongolia. The name Khalkha is also used at the present time for the language spoken in almost all of the Mongolian Republic.

Sanan Setsen, Geschichte der Ost-Mongolen, ed. I. J. Schmidt, St. Petersburg 1829, 191, 197, and also the later Mongol chroniclers, speak of 12 Khalkha tribes, and they distinguish five "nearer tribes" and seven "further tribes" (op. cit., 205, also 191, 285. The Mong-hu she-hi p'u "Genealogical tables of the Mongols" (L. Hambis, Documents relatifs à l'histoire des Mongols, Paris 1969, 235) relates thus: "The eighth son of Batu Mongâ Dayan-Ḥan was called Gârošâna; he himself had seven sons who lived among the Qalqa tribes, whence their name of the seven Qalqa banners". On the other hand, J. B. du Halde, Description . . . de l'Empire de la Chine et de la Tartarie chinoise, The Hague 1736, 75, mentions thus in regard to the Khalkha: "This name is taken from the river Kalka. At Peking, they are called Kalka tase and Kalka Mongu". The ancestor of all the Khalkha princes was thus Gârošâna (or "Ge-resente"), son of Dayan-Ḥan (d. 1543?); cf. on his genealogy, A. Pozdnyev, Mongolia i Mongoli, following the end of the single-party régime in 1946, the RPP made great efforts to turn the People's Houses into non-party institutions. After the victory of the Democratic Party [see Demokrat Parti] in the general elections of May 1950, the RPP suggested to the government a compromise to "to save this heritage of Ataturk"; this was nevertheless rejected, and the People's Houses and Rooms were abolished on 8 August 1951 (by law No. 530) and all their property confiscated. After the revolution of 27 May 1960, the military régime, which stood for the principles of Kemalism, on 12 April 1961 set up Turkish Cultural Associations (Türk Kültür Dernekleri). On 21 April 1963, these non-political associations changed their names to Halkevi. The revived People's Houses have not yet (1976) recovered their former important position in the country.
KHALKHA — AL-KHALLÁL

St. Petersburg 1896, i, 472, and especially the genealogy in the Sara Tudzi, ed. N. P. Shastina.

The Mongol inscription of Dolon-Nor, inscribed on the occasion of the submission of the Khalkha to the emperor Kang-hi in 1691, published and tr. by A. Pozdneyev, op. cit., ii, 292 ff., mentions seven sons of "Geresentse," amongst whom the Khalkha were said to be divided in seven divisions (khoşun, in Arabic script köşûn); these would be the seven "further tribes" of Sanan Setsen. Around 1355, the Khalkha appeared to have adopted Lamaist Buddhism, and the Dalai Lama appointed for them a "Kutuktu." The five "nearer tribes" are essentially the Djarayut (< Djarod) and the Bardin, who live today in the southern part of the Khingan province on the borders of the former Manchuria (cf. B. Ya. Vladimirov, Gde "pyat" Khalkhaskikh pokolenii—Tabun otoj yaşa ("Where are the five tribes of the Khalkha") in Dokl. Ak. Nauk (1930), 201-5).

After the proclamation of the Chinese Republic in 1911, the Khalkha proclaimed their independence, but despite Russian intervention, were brought into subjection again by the Chinese government. After many vicissitudes, and after having received aid from the Soviet army in order to suppress the attempts of Ungern-Sternberg, they became independent under the name of "People's Republic of Mongolia," thus acquiring this independence as de jure, as official maps show, the Khalkha have undergone a radical transformation through the revolution and through socialisation, having suffered bitterly during the Stalinist period.

(L. Hambis)

KHALKHAL, in mediaeval times a district and town, now a district only, of Ardabyl province, has four component sub-districts; the Farhang-i digrafiyya-yi Iran (1330/1551) estimates the population of the whole district at 110,000. The administrative centre is Harawabad, which lies on a relatively easy route across the Talish mountains to the Caspian, and which seems to have existed as such for some three centuries, though Minorsky surmised that the al-H. of Biruni's Khánun was probably the modern Haraw(dab), see his Transcaucasia, in J.A., ccxvii (1930), 73. The present population is largely Turkish, ethnically and linguistically. The Farhang, ii, 104, also mentions a place Khalkhah-lyun in Talish, doubtless in origin a settlement of Khalkhalis, and Mustawfi, tr. 206, records a fishing village called Kalkhal on the eastern shore of the Caspian where the Oxus channel debouched from the direction of Khabzam.

the traditional enemies of Ḣanbalism and, more generally, against the committee of evidencing and disorder (faṣād) likely to threaten the caliphate and the Sunna order.

He also composed various manuals setting forth Ḣanbal doctrine, whose importance is attested for us. Ahmad b. Taymiyya tells us in his K. al-Imām (ed. Cairo, 158) that Abū Bakr al-Khāllal's K. al-Sunna was the supreme work of the Ḣanbal school for the study of its ideas on dogmatic theology (waṣf al-din) whilst his K. fi ʿl-Imām was moreover the best Ḣanbal manual for setting forth the ʿImām Ahmad's doctrines in moral theology (waṣf al-fikḥiyya). Al-Dhahabi also held the opinion that Abū Bakr al-Khāllal had written the first summa of Ḣanbal law, and emphasised the importance of his K. al-Yisal on the effects of ḥadīth (Tabākht al-Buhfāf, iii, 7-8).

Finally, Abū Bakr al-Khāllal wrote a history of Ḣanbalism, of which a few leaves survive in the Zāhirīyya library at Damascus. The greater part of this work, however, was incorporated in two classic histories of Ḣanbalism which are still extant: the Tabākht al-ḥanābilah of the hādi Abū l-Ḥusayn (d. 526/1132), and the Dhayl of Ibn Raḍajāb (d. 827/1327). This work was transmitted, continued and to some extent completed by his chief disciple, Abū Bakr Abū al-ʿAzīz b. Dīfār (d. 936/1527). Abū ʿAmr al-Khāllal (Dhahabi, op. cit., i, 117-27; Ḥikṣar tabākht al-ḥanābilah, 334-40).

Abū Bakr Abū al-ʿAzīz completed the K. al-Dāmāmī by his Zād al-Musīrijī in which he sets down the masāʿīl which had escaped his master. The work is now lost, but we do have two texts by this same author. One is a K. al-ʿAmr, preserved in the Zāhirīyya, in which there is a strong criticism of the life of luxury and ease enjoyed by the caliphal circles and the Turkish amīrs which formed part of them; the other is a list of masāʿīl concerning which the author diverges from the doctrine of al-Ḵirākī (Tabākht al-ḥanābilah, ii, 75-118).

(II. Loaut)

KHALWA, technical term of mysticism, meaning "retirement, seclusion, retreat" (from khalwā "to be alone"); and, more specifically, "isolation in a solitary place or cell" (ṭawāf, [bayt al-khalwa], involving spiritual exercises. "Seclusion" or "solitude" in general (waṣla, waḥda, inšīfād, ḥikṣā) is one of the fundamental principles of asceticism (ṭuhd); and the predilection of early Muslim ascetics for the solitary way of life is a prominent topic of Sūfī hagiographic literature. The example of Christian ascetics is likely to have exercised a certain influence in the formation of this ideal, though orthodox Muslim authorities, e.g. Sūlyān al-Ṯawrī (d. 661/778), are also quoted as favouring a life in separation from society (Abū Nuʿaym al-Īshāhī, Ḥiyāt al-ṭawāfīd, Beirut 1387/1967, vi, 376, ll. 20-2). The Sūfī Dhu l-ʿNūn al-Mīṣrī (d. 745/860) learned from a Syrian hermit about the "sweetness of seclusion, invocation (dākhr) and of secret conversation with God in private (al-khalwah bi-ṣannalāhītāh)" (Ṭīfāl al-ṭawāfīd, i, 356, ll. 14-15). The same Sūfī is frequently quoted as "knowing no better inclination to bring about spiritual sincerity (ṣāḥiḥ) than khalwah"; and another celebrated Sūfī, Abū Bakr al-Shībīlī (d. 334/945), is said to have given this advice, "Cleave to solitude, abolish your name from the (memory of the) people, and face the wall (of prayer) until you do so" (al-Kuḫayrī, Ṣūsūl, Cairo 1379/1959, 55 f.; Abū Ḥāṣ al-Suhrawardī, Ḥiyāt al-maʿārif, Beirut 1966, 210; cf. Rümi, Maṭnawī, i, vv. 643-9). However, the statement of classical early Sūfīs quoted by Kuḫayrī (Ṣūsūl, 54-6) and Ḡazālī (Iḥyāʾʿulām al-dīn, Cairo 1332/1933, ii, 197-210) reflect a wide spectrum of opinions as to the relative virtues of "solitude" and "community" (ṭuḥtah). Spiritual isolation from the world was considered higher than material seclusion; and it is clear that periodic retreats rather than permanent seclusion were practised in reality. The Sunna certainly does not favour the solitary way of life, and community life was, in fact, increasingly becoming a characteristic feature of Sūfīsm itself. Thus, Abū l-Ḥusayn al-Nāṣirī (d. 925/1517) is said to have strongly commended "community" as a means to practise "altruism" (īḥār) (ʿĀṭār, Ṭabākht al-ulayyīd, ed. Nicholson, London-Leiden 1907, ii, 46, and Abū Yaʿṣīkī al-Sūsī of Baṣra (ca. 449/1050) is quoted with this statement: "Only the strong ones are able to support solitude, whereas community life (al-īqūm) is more beneficial for people like us, so that each individual's behaviour is controlled by each other" (Abū Naṣr al-Sarrajī, Kitāb al-lumā, ed. Nicholson, London-Leiden 1914, 207, ll. 19-21; Kuḫayrī, Ṣūsūl, 56, ll. 1-3).

In post-classical Sūfīsm, the situation is essentially the same. According to Abū Ḥāṣ al-Suhrawardī (q.v.), d. 632/1234), it is community life which distinguishes the Sūfīs from the ascetics, but Suhravardī explains this difference by claiming that the Sūfīs prefer community because, due to their spiritual "health", they are free from the temptation of which the ascetics tried to escape by choosing the solitary way of life (ʿĀṣūrī, 108). Still, the Sūfīs' spiritual sustenance is "solitude" (ibid., 221), and even in the "common room" (bayt al-dāmāmī) of the Sūfī ribāf (q.v.), they are supposed to sit on their prayer carpets as if these were their individual retreats; and the practice of periodic retreats, which plays an important role in Sūfī education (tarbīya), is developed into a real institution. Suhrawardī devotes three chapters of the ʿĀṣūrī to its description (op. cit., 207-27). Special emphasis is also placed on it by the Kubrawīy, the Shadhiliyya, the Kādiriyā and, of course, the Khalwatiyya. This khalwah involves the "Major Holy War" (cf. Rümi, Mathnawī, i, vv. 378-6), i.e. ascetic discipline, notably vigils, gradually increased fasting, and concentration of the mind, mainly by means of ḥikṣā [q.v.]. On entering khalwah, one should free oneself from worldly possessions and be in a state of ritual purity. Being in the cell should evoke the idea of being in the grave (ʿĀmmār al-Bidlaṣ, ca. 600/1200, in Kubrā, Fawāʾith al-dāmāl, ed. F. Meier, Wiesbaden 1957, text 60, introd. 32); the cell itself should be a "dark room prohibiting the entering of daylight. Its purpose is the "closing up of the external senses" (wakaʾw al-khalwah) and the "opening of the internal senses" (Kubrā, in M. Molé, Traités mineurs de Naʾm al-Dīn Kubrā, in Annales Isamolalogiques, iv (1963), 25; cf. Fawāʾith al-dāmāl, text 18), i.e. readiness for mystical experiences. However, warnings against attaching too much value to such experiences (waḥda ṣīk al-khalwah) are voiced frequently; the guidance of a spiritual director is, therefore, considered vital. According to Suhrawardī, visionary experiences and extrasensory perceptions in general may serve a certain purpose
on the mystic way, but the ultimate goal of khalwa is rather the experience of the "dhikr of the divine Essence" through consubstantiation (taklouk) of its light in the heart ('Awdrif, 216, 219).

This institutionalised seclusion is normally limited to periods of forty days, which is why it is also called al-arba'inatiyya, or šilla (from Persian šišil); it should not be interrupted except for ritual community prayers, and it should be repeated once every year ('Awdrif, 221). It is conceived as an imitative practice of retreat is only a means to an end, and the experience of the "dhikr of the universe, which is the scene of the mystic "journey" ('Awdrif, 207 f.; 'Aṭṭāf, Muṣḥābat-nāma, cf. H. Ritter, Das Meer der Seele, Leiden 1955, 18 ff.). At the same time, the khalwa extends ideally over the whole life of the Sufi ('Awdrif, 221, 226). The practice of retreat is only a means to an end, and the goal of Sufi education is khalwa "in spirit" (khalwat al-ma'nd), i.e. being spiritually with God in spite of material presence in the world (Kubra, Fausūdāl-dāmāl, 60). The same idea is expressed in the Nāṣirī 'awādī formula of khalwa (tadhawur al-ma'nd), (solitude in society). Similarly, Ibn Ṭarabī is not speaking of the common practice of retreat when he considers khalwa as the highest makān; he takes it to mean the absolute "emptiness" (khālī) of the Perfect Man, i.e. the state of being "filled" with the Absolute (al-Futiifrdt al-Makkiyya, Cairo 1270, i, 86 ff.).

At the same time, the khalwa extends ideally over the whole life of the Sufi ('Awdrif, 221, 226). Faydiyya, named after Fayd al-Din Husayn Ghunaym, was active in Istanbul, where its founder lived most of his life and died in 1309/1891 (cf. Tībīyān, i, 306a). Al-Bakrī's Khalīfa and direct successor in Egypt was Muhammad b. Sālim al-Hifnī (d. 1181/1767, Cairo). The spectacular spread of al-Khalwatiyya in Egypt in the 19th and 20th century is due to the latter's students and their khullas (cf. al-Djabarti, "Aqīdah, i, 298). For details on the various branches which developed in Egypt, see F. de Jong, The Sāfī orders in post-Ottoman Egypt (in preparation).

Out of a Syrian branch of the Djamālīyya, introduced in Damascus by 'Uways al-Karamānī, a khulīfa of Celebi Elendi, two fariḥas emerged: al-Assāliyya, named after Ahmad b. 'Aṭī al-Harrī al-Assālī (d. 1048/1638, Aleppo; cf. al-Muhībbī, Khaṣṣāṣ al-Aṣghar, i, 248 f.) and al-Balāghīyya, founded by Muhammad al-Bakhrī al-Halābī al-Balāghī (d. 1098/1686, Mecca), which had its centre in the Iklaṣīyya tekhe in Halab (cf. Tībīyān, i, 108b). The remaining Khalwatiyya branches all have sīlasas going back to Ahmad Shams al-Dīn b. ʿĪsā al-Marmarāwī al-Dīgītbašī (d. 910/1504, Maqqanīa). He had founded his own order, al-Abmādiyya, which had spread mainly in and around Maqqanīa. His shaykh ʿAlī al-Dīgītbašī (d. 910/1504, Maqqanīa), was a student of ʿĪbrāhīm Kāṣāriyya, who was initiated by Mehmēd Erzindjiānī, one of Yābūy al-Shīrwanī's khullas.

Further details, including the sīlasas of most of these orders, are given by Kissling. From al-Harrī's mention of his initiation into the majority of the branches, which had emerged prior to the middle of the 19th century, it appears that many had active nuclei, or propagators of the khulīfas, taken with respect to the idea of wahdāt al-wujūd varied over periods of time within the same branch and between the branches. Mehmēd Nīzhārī al-Mīṣrī, e.g., taught that wahdāt al-wujūd is restricted to certain levels of being (cf. Tībīyān, iii, 132a). Hasan Rūdīwānī (d. 1330/1912), a khulīfa of ʿĪbrāhīm al-Shalqānī al-Shāmī, openly adhered to Ibn al-ʿArībī's ideas (cf. Roud al-Kullāb al-Mustawīd, Cairo 1332). Muṣṭafā Kamāl al-Dīn al-Bakrī opposed monist views altogether (cf. E. Bannert, La Khalwatiyya en Egypte, in MIDEO, viii (1964-6), 11 f.). He stressed the separate identities of God and the human soul, hence conceiving unity with the divine as a conjunction (ittīdāl). Shī'a conceptions have occasionally been incorporated and elaborated, e.g. by Dā'ūd al-Shāmī (cf. Kissling, ZDMG, cii, 260; idem, Zur Geschichte der Deutschen in der Byzanzzeit, in Südostforschungen, xv (1956), 248-9). In early as well as later Khalwātī writings it is stressed that the order is basically the fariḥa of al-Di-nayd (cf. Tībīyān, ii, 65a; Sirāḍī, 160; al-Adawī, 67; Muhammad b. ʿAbd al-Mutawal al-Buḥūfī, Itḥāf al-Basṭār bi-Ṣāhīr Wird al-Sāhīr, Cairo 1953, 13). The foundations of this order are considered to be voluntary hunger (dīḥ), silence (ṣamā'), vigil (ṣaqār), seclusion (ṣīrah), dhikr, meditation (fikr), permanent ritual cleanliness and tying (fārāb) one's heart to one's shaykh. In some treatises only the first four are mentioned as such (cf. Muhammad al-Munīr al-Sanāmī, Tuhfāt al-Sālikīn, Cairo 1932, 26 f.).

In most of the Khalwātīyya fariḥas periodic retreat, Ṣāhīr, is required of the murid. The shortest period recommended is three days and the longest forty days (cf. al-Bakrī, Hadiyyāt al-Abābī sīdāl-liʿliʿ al-Ṣāhīr min al-Sāhib wa ʿl-Abābī, in Sirāḍī, 179 f.). Various sets of rules, regulating the murid's behaviour before, during and after the period of Ṣāhīr, have been elaborated (see, e.g. E. Bannert, Über den Stifter und Sonderbrauch der Demirdīsīyya-Ṣāhibīs in Kairo, in WZKM, lii (1969), 225 f., for the Ṣāhīr rules of this order). Opinions about who may enter the Ṣāhīr have varied among the various fariḥas. According to some branches it is necessary to prepare for initiation, while others hold it to be appropriate only for those who have reached a specific makām or stage of the soul (see nāṣ), generally the fifth. Al-ʿĀṣīa is recommended to those in the lower makāms (cf. ʿAbd al-Ḥāfīz ʿĀlī al-ʿAzharī, Luḥādat al-Ṣaḥīḥa wa Tuḥfāt al-Ilkānī, Cairo 1323, 5, 23). In al-Khalwātīyya seven makāms are postulated. To each makām, ʿdhīr, of one of the seven names (al-ṣabīʿa), viz. al-Ṭahālī, Allāh, Ḥā, Ḥāyy, Ḥākīm, Kayyūm and Ḥakārī is appropriate. On this point, al-Khalwātīyya differs fundamentally from al-Shadhiliyya; in the latter only three makāms are postulated. The first makām of al-naṣf al-ammār, is conceived as a part of the preparatory stage of taubah and only the fifth, sixth and seventh makāms are conceived as reality. These cannot be reached by ṣiddāhāt but only by divine grace (cf. ʿĀlī Muhammad ʿAmīr al-Muḥādīdī, al-Fīyūdídīl-Ikhaṣīyya wa ʿl-Tadnīḏīl al-Iṣṣānīyya wa Sayr al-Ṭarīq al-Khalwātīyya, Cairo 1301, 15, 21).

ʿDhīr of the names is surrounded by a number of ritual prescriptions set out in the manuals. For communal ʿdhīr exercises or ḥadras, similar rules apply, although the ritual itself, the formulas, and the names recited may be different. Ahmad Shams al-Dīn b. ʿĪsā al-Marmarāwī (see above) is credited for having added five names, (al-furūʿ): Wāḥīd, Nūkhād, Wāḥīd, Ṣamād) to be recited after completion of the other seven names. This practice is common in the Abmādiyya branches. It was incorporated by some Bakriyya branches as well (cf. Muhammad Fuʿād al-Ṭawfīlī, Maṣāmī̂a al-Fawā'id al-Muḥimmah, Cairo 1930, 108 f.; Ahmad b. Ahmad al-Djuyendi al-Maymūnī, Risālāt al-Sayr wa l-Suḥāl l-Īlāh l-Ilāh . . . , Cairo 1938). There are differing opinions about the ʿdhīr of names not transmitted by the šaykh to the murid, ranging from the point of view that any name is allowed as well as any noise or sound to the view that only the ʿdhīr of a clearly pronounced allāh is permissible (cf. Muhammad b. ʿAbd al-Karīm al-Sammānī, al-Nafṣah al-Ikhyāyya wa Kayfīyyat Suḥāl al-Ṭarīq al-Muḥammadiyya, Cairo 1326, 26; Tībīyān, iii, 59 f.; al-Munīr, Tuḥfāt, 21). In addition, other prayer-tasks, fasting and nightly vigils may be required from the murid, which differ considerably between the branches. An element of ritual which all Khalwātīyya ṣariḥas have in common is the reading of Yābūy al-Shīrwanī's Wird al-Saṭṭār at set times and occasions. It consists of three sections which glorify the oneness of God, the Prophet and his prophethood, and the Companions. According to Muṣṭafā Kamāl al-Dīn al-Bakrī, it is the pivot of Khalwātīyya ritual. It should be read aloud by a single person, while the others are listening; this is held to be more beneficial than reciting. It equates silent ʿdhīr, the ʿdhīr of the heart. The external union on these occasions is believed to lead to an internal
union, which equals mudidhada and should lead to mushdhada. It is the shaykh who, as object for murid, leads to mushdhada. Some Khalwatiyya groups however take the latter position, e.g. al-Diidiyya (cf. al-Diibar Ahmad Mu‘ammarr, Mankal al-Warrad ‘al-Bahjat al-Tirghad il-man arada Tarbta al-Ragdad, Cairo, n.d., 430), where this is expressed by stating that the faith al-murid is proportionate to one’s belief in his shaykh. Within Turkish Khalwatiyya branches, notably within the Karabashiya, the role of the shaykh in guiding the murid is conceived of as necessarily a passive one. He is for participation in the community is conceived of as union, which equals mudidhada and should lead to mushdhada. (cf. al-Bakrl, al-Manhadi al-‘Adhb al-‘Amir, Beirut 1964, 63-4. The Egyptian Silsilat ‘Aliyye Khalwatiiyyinins usita, Istanbul 1288. For literature and detailed information about the Khalwatiyya orders in Egypt, see F. de Jong, The Safi Orders in post-Ottoman Egypt (in preparation). Muhammad al-Makti b. ‘Azn, al-Nafakat al-Rahmaniyya fi Mankhqt ‘Urfi al-Khalwatiyya, Istanbul 1327 (partly published), 11-8, gives a list of Khalwatiyya writings. Kamal al-Din Muhammad al-Hafri (d. 1299/1882), Tibriin Wasdiil al-Habak al-Bayd Saliiil-al-Tairb, Mu‘alb Fatih, mss. 430-2, is as valuable for the study of the Khalwatiyya as it is for the study of other orders. Muhammad b. Shiib al-Bousnawt al-Randjli, al-Diabukar al-Asma fi Taridtim ‘Ummiyya, Dervishkota red Khalseti vo Makedoniya, in Zbornik Shtipskiot naroden Musesy, i (1958), 105-19). In 1971 hadras took place regularly in tekkes in Ohrid, Struga, Kirkovo, Stip (all Haytiiya) and in Peć, Djakovice, Orhovac and Prizren (all Karabashiya). For a description and historical information about the latter two tekkes see Muccabot Asiim, Kosova’dar Esirgenmis Islam Amurtlar, Çevreci il, Priglia 1974. In Greek Thrace active groups with a tekke existed in Xanthi, Komotini and Echinos.

No data are available for the Khalwatiyya in Turkey after 1925, when the orders were abolished and all tekkes and shaykhs were closed. In the Middle East various Khalwatiyya groups are active in Lebanon (Beirut, Tripoli) and Syria (Aleppo, Damascus). Some of these groups have a silsila going back to Mustafa b. Muhammed b. al-‘Aziz, founder of the Rahmaniyya shaykh in Nafta (Tunisia); cf. al-Baydan fi ‘Amal al-Lisian, Beirut 1964, 63-4. The Egyptian Khalwatiyya al-Dinuaydiyya claims substantial membership in Syria (cf. Ma‘dalla al-Islam wa’l-Taqawuf, l/5, Cairo 1958, 82). Khalwatiyya and other tarikas active in Egypt are listed in Muhammed Mahammed al-Wadna, al-Taqawuf al-Islami, Cairo 1958, 71 f. In addition to these tarikas and the murids mentioned by Bannert, the following branches were active in Egypt in 1973: al-Dawmiiyya (two branches), al-Diidiyya, al-Fu‘adiyya, al-Haddadiyya, al-Kasabiyya, al-Haytiyya, al-Nimriyya, al-‘Ashkariyya, al-Shawadiyya and al-‘Imarniyya al-Kubaysiya. Al-Sammaniyya has its own shaykh al-tadjudad for Egypt. Some Egyptian Sammaniyya, however, consider themselves as a part of one or another of the Sudanese branches of this order. In Ethiopia, it is the only active Khalwatiyya branch. Little is known about its present functioning beyond what is reported by Trimmingham (Islam in Ethiopia, Oxford 1952, 247). Nothing is known about the present state of al-Sammaniyya in Indonesia. P. Fauxque (Où en est l’Islam traditionnel en Algérie?, in L’Afrique et l’Asie, lv (1961), 17-22) provides the most recent information on al-Rahmaniyya, and he states its membership in Algeria as 230,000.

Bibliography: in addition to the references in the text, see the literature mentioned in the articles by Kissling and the bibliography to Bannert’s article, which gives information about Khalwatiyya orders active in present-day Egypt and includes a translation of Ahmad al-Dardary, Tu‘fat al-Ikhwan (a set of rules for the murid). Literature not mentioned in these studies may be found in B. G. Martin, A Short History of the Khalwatiyya order of Dervishes, in N. R. Keddie (ed.), Scholars, Sainds and Sufis, Muslim Religious Institutions since 1500, Berkeley-Los Angeles, 1972, 275-305, which is largely based upon the work of Bannert and Kissling. A Turkish source not mentioned by these authors is the anonymous Taridtim ‘Aliyye Khalwatiiyyinins usita, Istanbul 1288. For literature and detailed information about the Khalwatiyya orders in Egypt, see F. de Jong, The Safi Orders in post-Ottoman Egypt (in preparation). KHAMIS MUSHAYT, also Khamis ibn Mushayt, the main town in interior 'Asir [ytr]. In Saudi Arabia, almost due east of Abha on the coast, known as Khamis Mushayt or Khamis Mountains. It is a town and a market, and is called a chief town of the 'Asir, on the east bank of the principal branch of Wadi Bih in the far east of the 'Asir. The Kh. Mushayt market is held on the plain between these two villages. Mushayt is a favourite staging point for military campaigns, e.g. those of 1338/1920 and 1353/1934. Its agricultural produce grows on terraces to the west and on gently sloping land to the east, irrigated by wells and some eastward-draining monsoon precipitation, and is quite varied, including spring wheat, autumn millet, alfalfa, and a number of fruit trees such as apricots, peaches, plums, pomegranates, and figs. Cattle are more common than camels, and dates must be imported. Khamis Mushayt has thus become the most important interior trading centre between Bih and the Yaman. It is also worthy of note that it is here where a traveller from the north first encounters the...
The prohibition of wine may, however, also be looked upon from a wider aspect, as Islam is not the only monotheistic religion which has taken a negative attitude towards wine. It is well known that, according to the Old Testament (Numbers vii, 3-4) the Nazarite who had wholly devoted himself to Yahweh had to abstain from wine and spirits, just as the priests before administering the sacred rites (Lev. x, 9). The Nabataeans, according to Diodorus Siculus (xiv, 94, 3), likewise abstained from wine and one of their gods is called in their inscriptions "the good god who drinks no wine". Likewise the abstention from wine belonged to the rule of many Christian monks. All this has its roots in remote Semitic antiquity which ascribed a demonic character to wine and spirits. The same is true for music, especially singing, which is also prohibited by Islam. It is not improbable that negative feelings of this kind may have worked, together with the motives mentioned above, to induce Muhammed to prohibit wine.

The prohibition of the Kur'ān has been taken over by the jurists; all madūkhās, and also the Shī'a, call wine harām and the wine-trade is forbidden. For an exposition of the Shāfi'i view, see al-Nawawi, Minhāj, ed. van den Berg, iii, 241; for that of the Ḥanafis, Fātūdū al-'Alāmīrī, vi (Calculta 1853), 604, it is a great that of the Madīnah, schol. on the Mawṣū'a, Cairo 1280, iv, 26; for that of the Shī'a, Shārāf al-İslām, Calculta 1839, 404. Theology reckons the drinking of wine among the grave sins (ḥabā'ir).

Hadīth has many utterances regarding this theme. Wine is the key of all evil (Abd al-Kays went to Abd al-Rahmān b. Abd Allāh, he said: Wine has been prohibited by the Kur'ān; it comes from five kinds of fruits, from grapes, from dates, from honey, from wheat and from barley; wine is what obscures the intellect (wa 'l-khamr md khdmara al-ţālī; Bulhārī, Ağrıba, bāb 2). The question remained, whether beverages prepared from grapes in a different way were prohibited. There was e.g. a kind of syrup. "When 'Umar visited Syria, the population complained of its unhealthy and heavy climate and they added: This drink alone will heal us. Then 'Umar allowed them to drink honey. Then they said: Honey cannot heal us. Thereupon one of the natives of Syria said to him: May we not prepare something of this drink for you? It has no inebriating power. He said: All right. Then they cooked it till two-thirds were evaporated and one-third of it remained. They brought it to 'Umar, who put his finger into it and licked it. Then he said: This is tilā' like camels' tilā' (viz. the pitch with which they smeared their skins). Then he allowed them to drink it" (Mālik, Ağrıba, bāb 14). According to the first chapter of the same kitāb, however, 'Umar forbids a man to become drunk on tilā'. Juice from grapes, prepared by pressing them only, is considered as wine. Tāriḳ b. Suwayd al-Ḥāḍrāmī said to the Prophet, We have in our country grapes which we press. May we drink the juice? He said: No. This negative answer is given three times and when Tāriḳ asks whether the juice may be given the sick to drink, Muhammed answers: It is no medicine, it is sickness (Abd b. Hanbal, v, 292 f.). And not only those who drink and sell wine are cursed by Muhammed, but also those who press grapes and have them pressed in order to drink the juice (Ibn Māḍāja, Ağrıba, bāb 6).

Another question of importance arose, in connection with spirits: Had they to be considered as wine or not? All the madūkhās, except the Ḥanafis, have answered the question in the affirmative sense. They have consequently extended the prohibition of wine, in accordance with the intention underlying it. Tradition, which is the best source for the history of the origin of several institutions, shows that the question belongs to the much-debated ones. The standard hadīth, which is found very frequently in the classical collections, runs as follows (Muslim's version İmām, trad. 26 is cited, because it contains important details): "Some men of 'Abd al-Kays went to the Apostle of God and said to him: O Prophet of God, we are a tribe belonging to Rabī'a; between us and yourself dwell the infidels of Muḍar, so that we can only reach you in the sacred month. Tell us therefore what we have to tell our tribespeople which will open Paradise for us if we to cling to it. The Apostle of God answered: I order four things and I forbid four things. Serve God without associating anything with him. Perform the salāt, pay the zakāt, fast the month of Ramadān and deliver the fifth part of booty. And I forbid four things: dubbā', antium, musaffat and naktī. They asked: O Apostle of God, how do you know what the naktī is? He said: Well, it is a palmtrunk which you hollow out; then you pour small dates into it and upon them water. When the process of fermentation has finished, you drink it with the effect that a man hits his cousin with the sword. —Now among these men there was someone who had received a blow of the sword in this way,
It would take us too far to give here a detailed survey of the opinions of the fakhips of all madhhab[s]; it would be superfluous, to some extent at least, because the more important differences regard chiefly nabīth only. The following rapid survey is based on the Fatāwā 'Alamgīrī, vi, 604 ff. (cf. Shā'ānī's Miṣrīn, Cairo 1279, 192-3).

Allowed according to the iṣlām[4] is-fermented, very sweet drink.

Prohibited (ṣāīm), according to the iṣlām[4], are wine and sakar of every kind. As to wine, there are six cases: to drink it in any quantity or to make use of it is ḥarām; to deny this is kuf, to buy, sell, present it, etc. is ḥarām; no responsibility (dimān) rests on him who spoils or destroys wine (mulisfāh); whether wine is a possession (māl) is an unsettled point; it is mājīs just as blood and urine; he who drinks any quantity of it is liable to punishment.

Several kinds of products prepared by means of grapes (bādhik, munassaf, etc.) are prohibited according to the majority (ṣāima) of the fakhips.

Allowed, according to the majority of the fakhips are the ḥaṣb (see above) or muskallīth and nabīth from dates with the restrictions mentioned above. So is juice from grapes when the process of cooking has made to evaporate two-thirds. Muhammad (al-Shaybānī[a]) has a special exception in this point. As to the punishment of him who drinks wine, kādīth tells us that Muhammad and Abū Bakr were wont to inflict forty blows by means of palm branches or sandsals (Buḫārī, Ḥudūd, bāb 2-4; Ḥudūd, trads. 35-7). Under 'Umar’s caliphate, however, Ḥālīb b. al-Walīd reported to him that people were indulging in prohibited drinks. Thereupon 'Umar consulted the Companions, who advised him to fix the number of blows at eighty, a number suggested by the Kurān which prescribes that those who accuse muhāsatuṣ of sīna, without being able to prove their accusations by the aid of four witnesses, shall be punished with eighty blows (Sūra XXIV, 4).

Repeated drinking of wine, according to some traditions, was punished by death at Muhammad’s order (Abū Dāwūd, Ḥudūd, bāb 36; Ibn Māḡī, Ḥudūd, bāb 17; Abū Idrīs, Ḥudūd, bāb 36; Ibn Ṭāhir, Ḥudūd, bāb 43; Zarkaḥ, Abu Nuwas, etc., and see Muṣṣarīyāh, and at the court of the Caliphs wine was drunk at revelling parties as if no prohibition existed at all (see e.g. The 1001 Nights, passim.). Even the common people could not always and frequently; see e.g. Bukhari, Ashriba, bdbs, trads. 16-29; Nasa’ī, 36, etc.). Of special traditions prohibiting fermented drinks, there may be mentioned the following. It is forbidden or disapproved of to sell raisins if they are to be used for preparing nabīth (Nāsā‘ī, Ashriba, bāb 51, 51). It is prohibited to mix together different kinds of fruits so that the mixture should become intoxicating. This tradition occurs frequently; see e.g. Buḫārī, Ashriba, bāb 11; Muslim, Ashriba, trads. 16-29; Nāsā‘ī, Ashriba, bābbs 4-17; Ibn Sa’d, viii, 360; Ahmad b. Hanbal, i, 276; ii, 456; vi, 242, 292. But each of these kinds may be used separately for preparing a non-fermented drink (Muslim, Ashriba, trads. 81-3; Nāsā‘ī, Ashriba, bābbs 14-18, etc.).

It can easily be seen that the difficulty in this matter was caused by two circumstances. People were accustomed to prepare from all kinds of dates, from raisins and other fruits, drinks which only became inebriating if they were preserved a long time, and probably also if they were prepared after special methods. Where was the line of demarcation between the allowed and the prohibited kind to be placed? Several collections of traditions went so far as to mention nabīth among the drinks prepared by Muhammad’s wives and drunk by him (Muslim, Ashriba, trads. 79-99; Ahmad, i, 232-3, 240, 287, 320-1, 336, 355, 359, 372; ii, 35; iii, 394, 307, 374-4, 326, 379, 384, etc.). Abū Dāwūd (Ashriba, bāb 10) and Ibn Māḏīja (Ashriba, bāb 22) have preserved a tradition on this subject which is instructive. Ibn Māḏīja’s version is given here: ‘Aṭīṣa said, ‘We used to prepare nabīth for the Apostle of God in a skin; we took a handful of dates or a handful of raisins, cast it into the skin and poured water upon it. The nabīth we prepared in this way in the morning was drunk by him in the evening; and when we prepared it in the evening he drank it the next morning’. In another tradition of the same bāb, Ibn ‘Abbas says that the Prophet used to drink this nabīth even on the third day; but what was left then was poured out.

All this could, however, not persuade the majority of the fakhips to declare nabīth allowed; three of the madhhab[s] as well as the Shi‘a prohibit the use of nabīth. The Hanafī school, on the other hand, allows it, when used with moderation, for medicinal purposes, etc.
everywhere refrain from their national drink, date wine of several kinds; the caliph Umar b. 'Abd al-'Aziz deemed it necessary to promulgate a special edict in order to abolish his custom (see von Kremers, Culturgeeschichte der Streitfrage, Leipzig 1873, 68-9).

Wine has a special place in the literary works of the mystics, where it is one of the symbols of ecstasy. In this point they only took over the language of their Christian and non-Christian predecessors. As early as Philo of Alexandria ecstasy is compared with intoxication (see especially his De Vita Contemplativa). Among the Ibāḥiya, language may have been a reflex of practice; but this cannot be said of Sūffis in general, who, on the contrary, cling to the ascetic methods of the via purgativa. As to Ḥāfiz’s wine- and love songs, it is an unsettled point whether they are merely metaphorical or not.

(A. J. Wensinck)

2. As a PRODUCT.

Wine has been known in the Orient since the earliest times, and Arabic literature preserves vague memories of its legendary origin, not omitting to recall the demonic aspect, in accordance with Kurān V, 90-2. It takes account, on the one hand, of Babylonian traditions linked to Biblical characters such as Adam and Noah (cf. the Midrash based on Babylonian elements; Tankhām, Lublin 1879, 28-9) and, on the other hand, of the Aramaic-Syriac extra-Biblical tradition, thus symbolising that ancient culture of the Fertile Crescent inherited by the mediaeval Muslim world. Certain versions link the origin of wine to the two great civilisations which were neighbours to Islam, that of Rūm and that of Thailāl (cf. al-Mas‘ūdi, Murādī, ii, 88-92, § 518-9; al-Ra‘īk al-Kayrawānī, Kūb al-sūrūn, B.N. Paris, art. cit., f. 42; al-Nawāḍī, Ḥalab al-kumaytī, Cairo 1938, ii, 11-12; al-Badrī al-Dimaghī, Rāḥat al-arādā, B.N. Paris, art. cit., f. 54a-59a; Bahb al-hikāyāt, B.N. Paris, art. cit., f. 358f., 107b-108b; on the strap 1, a pouz (q.v.), notably Istanbul, Reisülküttab, 899, f. 96b; Topkapi, E. H. 1329, f. 69; B.N. Paris, art. cit., f. 96a-97a, 5931, f. 252a.

The Book of Agriculture attributed to Ibn Waḥṣīyya (q.v.) points out the importance of the vine in the Fertile Crescent, and alludes to wines in speaking of the various types of grape which are suitable for their manufacture (Leiden ms. or. 303, ii, 87-291).

The Arabs who settled in agricultural regions had no real tradition of viticulture; in fact, in pre-Islamic Arabia vineyards were rare and wine-vaults even more so (however, there were some in al-Ṭa‘if). The quality of the wine was mediocre, and a certain amount must even then have been imported, mainly by Jewish and Christian merchants (after the birth of Islam, this commerce was practised exclusively by these two communities, as a result of the Kurānic prohibition). One should not suppose that the Be- douin knew nothing of wine (as is claimed by the Shu‘ūbīs [Bashshār, Diwān, Cairo 1950-6, i, 378, l. 2, and especially Abū Nuwas, Diwān, Cairo 1898, 244-5; cf. Ibn Kūtayba, ‘Uyūn, iii, 237; Ibn Ḥamdūn, Tādhkira, Istanbul Ragib, 1083, iii, l. 287a; Ibn Ghārīsīya, in Nawādīr al-makhlūdīlī, Cairo 1951, 250), nor that they drank it to excess (Ibn Ḥāwi, Fann al-gh‘īr al-khamrī, Beirut n.d., ii. 11). The truth is that the ancient Arabs were acquainted with wine, though tasting it only on rare occasions such as inter-tribal fairs (cf. G. Jacob, Studien in ar. Dichtung, Berlin 1895, 95-109; H. Lammens, Le berceau de l’Islam, Paris 1914, 54-5; H. F. Lutz, Viticulture and brewing in the Ancient Orient, Leipzig 1922, 32-7; 143-57; Diwān ‘Alī, Tarīkh al-‘Arab haβl al-islāmī, Basbūd 1951-2, viii, 162-5).

The expansion of Islam enabled the Muslims to familiarise themselves with new regional types of wine, and the taste of the consumers gained in refinement to the extent that connoisseurs were able to appreciate and distinguish between wines of diverse origin; al-Dība‘ī (Ṣāhirī) speaks even of various "wine-producing regions" (bulādan). The poets of the Islamic era speak of countries renowned before the advent of Islam for the quality of their wines (for Beirut see F. Gabrieli, in RSO, xv (1935), 39; for Ḍā’n, in Upper-Mesopotamia, see al-Ḏakkāl, Diwān, Beirut 1891, 117; F. Gabrieli, art. cit., ii, 51; J. Ben- cheikh, in BEO, xviii (1963-4), 18-20; cf. Ibn Ḥawkal, tr. Kramers-Wiet, 223; for Iran see F. Gabrieli, art. cit., 62; for the viticultural tradition, very often of Sāsānian origin, cf. the wine-producing regions mentioned by al-Ṭa‘lā‘lībī, in J. M. Unvala, King Husayn and his boy, Paris 1926, 45; and J. Bencheikh, op. cit. There were also renowned wine-producing districts in Egypt and in other parts of the Muslim world.

As regards the wine-making process, the information that we have is not very extensive. The grapes were trodden, with a light jumping movement, in a maṣṣara (shallow vat), according to an ancient procedure. Wine presses of circular motion were not introduced in the Orient until very late (some ancient specimens still exist in certain monasteries in the Lebanon). A poet of the 4th/10th century (apud al-Nuwayrī, Nihāyā, iv, 144), describes the maṣṣara as a sea of red flames in which the labourer stands, the lower half of his body soaked with the grape-juice. From the 7th/13th century onwards, miniatures provide the best illustrations of the process (see D. S. Rice, Deacon or Drink, in Arabic, v (1958), to which may be added Leningrad ms. S. 23, p. 76); here labourers are seen carrying the grapes, others press them by treading them in a vat, hanging on strips in order to jump more easily; in the vat there is an aperture, allowing the juice to flow out into a receptacle; against a wall stand the amphorae (dann, pl. dinīm) with tapered bases, in which the fermentation takes place (in vats, seldom in the open), and the maturation (on the storing in amphorae, cf. Leningrad S 93, pp. 44, 193; yet what are
involved are perhaps not wine amphorae, but large water containers, see G. Le-Bon, La Civilisation, Paris 1884, 397, and cf. the *khazān* described by Kugäh-djm, *Diez*., 1313, 83, and al-Suyūtī, *al-Hayā' al-saniyya*, Univ. of Istanbul, Arap 1476, f. 50. These various stages are described in works of literature, while religious treatises aimed at prohibiting the consumption of certain drinks, concern themselves at some length with the various types of vessel used for fermentation.

The medieval anthologies and the treatises of *fīh* list various ingredients for the manufacture of alcoholic beverages; fruits: dates (see *tamr*), figs, apricots, cherries, mulberries, and various berries; cereals: wheat, barley, maize, millet; honey (hydro mel is called *bīr*); sugar cane; milk (Ibn Kutayba, * Ağrib*, speaks of the making of alcoholic drinks from different kinds of milk), especially mares' milk (for making *kūmīs*, introduced at an early stage by the Turks, and attested from the 5th/11th century onwards, which was to become the favourite drink of the Mamlūks [see *kumīs*]). On all these beverages, see *sharāb*.

**KHAMRIYA (A.),** designates a Baccic or wine poem in modern critical terminology, at least since Tâhâ Husayn in 1923 (*Fāʾilat al-ʿArbiq*., ii, 71). This name does not seem to be attested in the mediaeval nomenclature of the genres. The usual expressions *al-kawi fīl-khamr*, *lauh maʿānī fīl-khamr*, *wasṣāfī fīl-khamr*, indicate the existence of themes, but do not include any willingness to organise them into an independent poem. In fact, the problem of appellation conceals the problem of evolution, of which the principal stages will be traced here.

1. *In early times: the inserted statement.* The state in which the works of the *Dârikīya* have been transmitted to us forbids our pronouncing on the problems that the working of the Baccic framework poses. It is possible, despite that, to put forward observations which are not without interest. The first concerns the insertion of statements in compositions with many themes, sc. the *muṣallaḥāt* of Labīd (vv. 57-61), *ʿAntara* (vv. 37-40), and especially *ʿAmr b. Kūlīqīm* (vv. 1-8), where the person involved already has a closer relationship with this type of inspiration. With the elegiac poet Muraqkīsh al-ʿAsgār, uncle of ʿAṭāf, the Baccic statement presents itself in the *nābī* as a syntactic and semantic intrusion. As a tool for comparison, it does not have as an autonomous form. Several other poems offer examples of instrumental, inserted statements: in an amorous evocation of *ʿAw b. ʿAtiyya* (*Mufād-

TABLE 6
philosophy of intoxication appears in relief (Mu'allalat, vv. 45-57). Although still attached to the fa'akb, included in a heterogeneous hasida written in the Bedouin context, this poem introduces a particular treatment of Bacchism.

It is in this sense that several other poets are regarded rightly as true precursors. The Tamimi Christian author of combined Arab-Iranian culture, 'Adî b. Zayd (q.v.), produced poems of which fragments survive. Their writing foreshadows unquestionably that of the later great tradition. The work of Abû Mîbdjân (q.v.) is badly mutilated, but his personality may be viewed as a means to illustrate the attitude of refusal that would characterise his successors. Finally, the hasîn of al-'Ahsâî Maymûn (q.v.) includes about ten pieces, important because of the number of lines devoted to the Bacchic framework, which, however, never constitutes the whole of the poem. We have before us here an autonomous discourse which is written in the space of the hasida similar to other frameworks. The poet expresses in it a genuine pleasure without a bad conscience or aggressiveness. The monsters of Bacchism, who will appear later, do not dwell there. Moreover, its language is strong, still rough and one may speak of an inspiration still sustained by the Bedouin environment. But the use of numerous Persian words must also be noted, especially when flowers are mentioned —there is the beginning of a poetry of nauvîyyât or nauvîyyât which was to develop later. Thus an Iranian influence is felt which also affected 'Adî b. Zayd. The work of al-'Ahsâî reveals how the tendencies are entangled or juxtaposed and makes therefore hazardous any hypothesis which would claim to distinguish them. One must be content with the observation that several elements of the Bacchic framework are set there and that there is an evolution towards a specific kind of writing and the characteristics of a genre.

ii. The First Century: consolidation of a framework. While set entirely under the sign of a historic mutation, the first century of Islam is still a period of transition and, as such, marked by great complexity. In a purely operative manner, it is possible to distinguish two types of production:

(a) Hîdjarî Bacchism. In a Hîdjarî disappointed in its ambitions, which history made of marginal consequence and immobilised as sacred, it is well-known how hedonism developed among the representatives of an idle aristocracy. This was a decisive stage for amorous poetry and Bacchic poetry, which lent support to one another and shared between them some large thematic areas. In view of this, Hassan b. Thâbit is a forerunner, especially as the local trend is linked with the influence that the court of al-Hîra had on him. Even if his work is in part apocryphal, and even if his Bacchic statements survive scattered in mainly laudatory compositions, he was capable of some audacities, of which posterity preserved the memory (Yâkût, Udhâdi, xv, 164-6).

Hîdjarî Bacchism is well represented by Ibn Saybân (q.v.), a not very productive poet, but one who dedicated himself to wine and love and was often punished for it. Al-Ahwâs is the type of aristocrat of whom it could almost be said that he combined several features of the libertine, while taking care not to give to that word a meaning which would exceed the socio-cultural realities of the time. A great lover of the pleasures of drink and music offered him, he put an adventurous insolence into his pursuit of them, saw how far he could go with morality or even with religion, and arrived at a political attitude that was critical of the régime that brought him to the pillory and exile. It is a great pity that the state of his works hardly allows judgement to be made, for certain fragments are significant, notably those that are concerned with the combined treatment of the elegiac and Bacchic frameworks.

(b) 'Irâkî Bacchism. Due to the copiousness of his Bacchic work, al-Aghâlî (q.v.), another Christian connected with the milieu of al-Hîra, appears as the successor of al-'Ahsâî, and that despite the harsh evaluation that certain modern critics have placed on his real importance. But once the necessary cautions have been given as to the present state of the hasîn, it must be acknowledged that we are analysing here an important treatment of the framework studied. Indeed, Bacchic development is inserted in a hasida. But the variety of the themes (concerning the preparation of wine and its effects), the diversity of the descriptive processes, and, generally, the coherence of the scheme, allows some interesting observations to be made (M. S. Benani, Bacchic themes and personalities in the hasîn of al-Aghâlî, thesis [in Arabic], Algiers 1965, and Madjallat Kulisiyyat al-'Adâb, Algiers, i (1967), 59-78). One might mention here the overlapping of the themes of water and wine, which compose very rich semantic constellations. Beneficial or destructive, abundant, rare, calm, or wild, occupying space with their sound and perfume, leading to drunkenness or suspending it, water and wine join together or confront one another to impose a framework of liquidity which continues in strict relationship with reality. Later poets were to depart from this reality and their work was to become enriched with symbolic significance.

The poetry of al-Aghâlî preserves some characteristics of traditional Bedouin Bacchism as it continued in this first century in a few poems of al-'Udjâyar b. 'Abd Allâh al-Salûl (Aghâni, xiii, 60, and al-Djumâbî, Tâbaabî, 517 ff.) and al-Nâbîgâh b. Shaybân (Aghâni, vii, 107-8, 110); cf. Blachère, HLA, iii, 505). But it is also connected with another type of inspiration that develops in 'Irâk, especially at al-Kûfâ, which sets itself up as heir of al-Hîra. With this type, it must be linked the works of 'Hârîgâh b. Badr al-Ghûdânî (q.v.), comprising about 80 lines, which certify that numerous Abû Nuwâs-like processes were already in use. A great drinker ('khimir), this noble Basran of Tamlâm defied the prohibition on drinking where Bedouin bragging takes on quite significant tones of rebellion. But the poet is mediocre and his Bacchism has few nuances, finding only inadequate expression.

Mâlik b. Asmâ` b. Khâridjî (Aghâni, xviii, 158-67; Ibn Kutayba, Shîrî, 666-7), a senior official of al-Hâdîdî's with few scruples, sings of the pleasures of love, music and wine in this light language which was soon to impose itself on khâmiriyyât.

But it is above all another Kûfân, a pure Arab, al-Mujhîr b. 'Abd Allâh, called al-Ukayshîr al-Asadî (Aghâni, xi, 234-59; cf. Blachère, HLA, iii, 515), who represents one of the first truly Bacchic personalities of the literature of the first century. This writer was first of all a picturesque Bohemian with little to recommend him, but amusing and quick-loving, who haunted the taverns and monasteries of al-Hîra, and formed with several companions a group called the madjâdir al-Kûfâ. We are here at the beginning of the libertine school of al-Kûfâ which was henceforth to be exposed to the repression of official morality.

Al-Ukayshîr is moreover an excellent poet, who describes wine in beautiful language, still strongly
marked by the Bedouin lexical tradition. In this poetry, which is very true to life, describing tavern adventures, the relation is skilful and lively, the Bacchism vigorous and sympathetic. This type of inspiration can be connected with the brief and rather dull pieces of the Kūfān Muḥammad b. 'Abd al-Raḥmān al-Thawrānī (al-Shabuḥši, Diyarād, 49, 176, 230–2), an inveterate drinker and lover of young men, found dead among the leather bottles of a low tavern. So, in the first century, various tendencies exploited a well-established framework to which great poets were soon to give fuller expansion.

iii. The Second Century: the assertion of a literary style.

(a) A great forerunner: al-Walīd b. Yazīd.

The second century, which was to end with the glory of Abū Nuwās, had at its outset that of the caliph al-Walīd b. Yazīd. Between the two men the line of descent is direct. Everything is included between these two poles: a philosophy of existence, the conception of an art, the practice of a language.

A style of writing defines Bacchic poetry as a major mode of speech.

Al-Walīd, a controversial personality if ever there was (see our brief sketch of a counter-portrait in Encyclopaedia Universalis, Thesaurus, s.v.), Arab prince, poet and composer linked with the musical school of the Hijāz, throwing himself into the passions of life, free with a lordly freedom that could not conceive of any limit and, hence, of any morality, is doubly important. He gathered around himself a literary group, in which were Ibn Māyyāda [q.v.]; Ibn Shūrāṣ; Yazīd b. Dabba, an excellent poet, the inseparable friend of the prince (Aghdāni, vii, 92–100); Yāḥyā b. Ziyād al-Hārījī, and many others. Also, conspicuous personalities like Mutīf b. Iyās, Ḥammad al-Rawīya and Ḥammad ‘Adrājī, the famous libertines of al-Kūfā frequented his salon. The composition of this literary group is significant, and makes understandable the literary admiration of al-Walīd for ʿAdī b. Zayd and for Bāshshār b. Būr, whose personality and work incontestably dominates this century.

Moreover, al-Walīd is recognised as the master of modern Bacchism. The author of Aghdāni asserts it already: this poet composed numerous poems which were plundered, notably by al-Ḥusayn b. al-Dāḥbāk [q.v.] and Abū Nuwās (Aghdāni, vii, 21). The quality of the borrowers is itself a homage rendered to a work of which only some fragments have been preserved. The Bacchic inspiration is here very close to the amorous inspiration which predominates. Features of exquisite delicacy in the sentiment of finesse in the expression, are neighbours to excesses which still go to set off an insolent elegance. The language by its simplicity and its naturalness breaks away from the heavy machinery of conventional poetry. Bacchism finds suddenly a personality which animates it and a way of writing, even more, a style— that is to say a depth—able to exploit the richnesses of its register. Bacchic speech has combined all its mediums.

(b) The libertines of al-Kūfā. The poets of al-Kūfā form a group whose homogeneity is such that it is permissible to speak of a school which becomes notable in the second half of the second century. Al-Kūfā became the centre of a poetical activity, of which the components are complex and the characteristics diverse. Its motivations originate at many levels, and their interactions do not allow them to be disentangled easily. Everything comes within the conception of what could almost be called a counter-culture: the political, the religious, the racial, the economic and the social. It is here, and at its best, that Bacchism appears as the expression of a rebellion, that the attitudes of the poet take on subversive overtones. The rebellion is spectacularly directed against religious precepts: it is not an accident that most of the poets of this group fall under the accusation of sandāba (cf. for example, Aghdāni, xiii, 280, 335, but all the sources underline this point), and several of them paid with their life for their desire to reject a constraining socio-cultural system. For it goes without saying that the subversion did not only aim at the Kur'ānic law; it was in fact the entire system of a culture that was threatened.

This group includes famous luminaries of the literary milieu, such as Wāliba b. al-Hūbāb; the three Hammāds: ‘Adrājī, al-Rawīya and al-Zibrīkān; and Mutīf b. Iyās, who all died between 155/772 and 156/787. Their freedom of morals, their anti-religious spirit or their indifference towards religion, their Shu‘ābī tendencies, are a mark of this period. Bāshshār b. Burd is their great contemporary. But his work, fundamentally amorous, touches only slightly upon the Bacchic framework, and, if his companions are sometimes drunk, he loves above all to sing of the beauty of the mulkhanīya or singing girl.

Among the libertines one notices the presence of poets who are little-known, but who are nevertheless of great interest for the study of the genre. Such is Bakr b. Khāridjā (Aghdāni, xiii, 66 ff.; al-Shabuḥši, Diyarād, 424–3), a Kufān mawla of Asad, a poor Bohemian who was deprived of his reason by drink and misery. He spent most of his time in taverns, and took refuge to drink amongst the ruins of al-ulā. He is the author of small pieces which al-Dāḥbāṣ and Dībil enjoyed.

‘Ammār b. ‘Amr, whose kunya is poorly established as Dīḥū Kināz or Kubār (Aghdāni, xiii, 366 ff.), was the friend of Hammād al-Rawīya and Mutīf b. Iyās; his wife, a shrew, shared in his drinking. A minor poet, he is the author of numerous love poems and some khamriyyāt.

Appearing here also is Yāḥyā b. Ziyād al-Hārījī (Diyārāt, 247 ff.), who gave himself over to some unbridled orgies with his friend Mutīf b. Iyās. The two were accused of sandāba, and it is true that their provocative attitudes do not leave any doubt as to the unbelief of Mutīf who was absolutely passionate in his anti-religious activities.

With the Kūfān milieu of this period is associated Abī Dūlāmā (q.v.), a habitué of taverns and a great lover of joyful evenings spent far from the palace where he was kept as a buffoon. Exasperated by the religious duties, he hurls several vigorous gibes against Islam. There must be noted in his production some characteristics, notably linguistic, which make one think of an inspiration of popular origin. This fact, attested also in Hammād ‘Adrājī, shows firstly that the Bacchic genre is directly opposed to laudatory poetry, whose official function is specific. But one is also led thinking that the poetry of rebellion, based on an existential attitude, and transcribed in a literary or non-literary form—according to the dominant norms—has perhaps drawn vigour and vivacity from a people absolutely excluded from the cultural system (cf. J. E. Bencheikh, Politique arabe, Les voies d'une création, Paris 1975, ch. i).

We may note finally that the works of this group are quite sparse. But they played a decisive role in the maturation of a genre which eventually found its masters in the second half of the century.
(c) The Pre-Nuwāsians. Emphasis must be placed on the most original, the most striking of these, and preparations be made for an injustice that posterity commits against him, sc. Abu ‘l-Hindī al-Riyābī (it is difficult to establish his exact name: Ḡqādānī xx, 293; al-Kutubi, Fāṣadī, ii, 240 ff.; Ibn ‘Abd Rabbiḥ, Ṭibī, vi, 342; al-Ma‘arrī, Ghurfān, 168, 208; Ibn Kutayba, Šīrī, 572; Ibn al-Mu‘tazzazz, Tabābālī, 136-45, etc.). A poet of Arab origin, he lived mostly in Ḳhurāsān and Sigjūštān, and this remoteness explains how he can be forgotten. His talent was nevertheless real. Ibn al-Mu‘tazzazz, who composed in the 3rd century the first anthology of Bacchic poetry that has come down to us, asserts that Abū Nuwas, al-Ḥusayn b. al-Ḍabḥāk and Abū Ḥīfān were able to establish themselves in the genre only after reading his poems (Ṭātabālī, 142). The author of the Ḡqādānī quotes the judgement delivered by Abū ‘Ubayyād and confirmed by Isḥāḳ al-Mawsīlī, according to which Abū Nuwas drew all his inspiration from Abu ‘l-Hindī (Ḡqādānī, xx, 29). Even anecdotes of which he was the hero are attributed to other personalities who were living in a similar way. Remote from cultural centres, Abu ‘l-Hindī was unable to defend himself against being pillaged, and it seems that it did not worry him. He was one among these poets whose work contributes to the growth of a trend, to the putting of his own plan in effect, but who, melting into the collective effort of creation, leave little trace in memory. All his importance must be due to this transmission function in Arabic poetry.

Abu ‘l-Hindī never wrote anything but khamriyyāt, which impels Ḳ-Isfahānī to assert that he was the first Bacchic poet of the Islamic period (Ḡqādānī, xx, 293, copied by Fāṣadī, ii, 242). This is clearly false, but not useless for the understanding of an evolution: Abu ‘l-Hindī is considered in fact as the first to give independence to the genre, and we must concur in this judgement. In a plain and harmonious language, this poet chisels poems of an excellent workmanship, highly representative of this lively, exciting spirit, that was also to be that of Abū Nuwas.

Abd b. Ṭibī al-Ḫūrāsānī (Fihrist; Ibn al-Muṭazzazz, Tabābālī, 306 ff.; Ibn al-Ḍirrāb, Warāṣa, 58, etc.) was, according to Abū Nuwas, the origin of the public practice of debauchery (mudājin) and of the composition of verse describing his drinking bouts and varied sexual activities. He was thus to open a path that his young contemporaries were to develop, that his word forms an experience. With a talent made up of sensibility, elegance and intelligence, he wrote poems which do not always have the merit of originality, but often have the sparkle of exceptional success. Thus a unique work of its genre, through its abundance, its variety and its quality, comes to crown a long evolution. Abū Nuwas mastered a speech that others had forged for him, and nobody in this field can dispute with him for first place. Such was the domination that he exercised during his lifetime that he was able to force Ibn al-Ḍabḥāk, for example, to cede to him some of his lines, and posterity was bound to attribute to him much that did not belong to him. A personality of remarkable prominence, he gave to Bacchism its existential significance, one which did not reduce it to the simple pleasure of drinking (cf. J. E. Ben-ceiver, Thèmes bachiques et personnages dans le diwan d’Abū Nuwas, in BEQ, xviii (1963-4), 1-84).

In the very incomplete diwan of Muslim b. al-Walī, a score of poems contain important Bacchic developments. These entail two observations. The first, in certain pieces, relates to the Bacchic note being given priority treatment and becoming a framework in which other themes are inserted. The second deals with the language, Muslim is a master of the badi‘, and does not forget it even in these poems. This concern for formalism makes the expression heavy and goes against the nature of the inspiration. Ibn al-Ḍabḥāk produced some verse which is better-developed (cf. Muhammad al-Munifl, al-Ḥusayn b. al-Ḍabḥāk, aṣḥāb khamriyya ti wa-ḥākima ti, Faculty of Letters of Algiers University thesis, 1965). Despite the fragmentary state of his diwan, it is possible to place him among the poets of the first order. One should mention with him Abu ‘l-Sḥāb [q.v., cousin of Dībil, friend of Muslim and Abū
Nuwas, author of long Bacchic poems revealing a great mastery of the language (Ibn al-Mu'tazz, Tabākāt, 77-86). They are furthermore interesting to study, as the survivors of the Bedouin language are quite marked in them. Finally, 'Amr b. 'Abd al-Malik al-Warrāk (al-Sāḥib al-Shaghili, Diyarāt, 172 ff.; al-Marzubān, Muṣqām, 218; etc.) was a companion of Abu Nuwas, a lewd drunkard, a wicked rogue of a fornicator and pederast, an arrogant mocker of religion, who wrote a poetry with his genius more closely connected with the drinking song than the poem.

The Khamriyya after Abu Nuwas: the playing-out of a style of writing. It seems that, having attained glory, the genre became fixed in the academic. While the formalists reduced poetry to the set exercise, the khāmriyya was drained of its subversive function. Having become a stylistic exercise, it is not surprising to find it composed by any hand. Some poets whose temperament was as far removed as possible from Bacchism attempted it (al-Butṭurī, for example, wrote a dozen khāmriyyāt). This evidently contributes to the playing-out of the genre. The surprises, quite rare, come from obscure authors in whom is found a note of sincerity or a felicitous expression.

Besides, the Bacchic tone becomes diversified— and some of its strong indications—with the development of the rawdīyya, floral poems, of the dayrīyya, poems describing evenings spent in concerts or monasteries, and of the ṣāḥīhīyya, versified friendly letters, whose respective domains are not always easy to delimit. These different forms competed to render familiar a light poetry, with a descriptive tendency, which expressed a pleasure in living surrounded by a byzantine and happy nature. The force of the Bacchic theme becomes insipid in this gentle culture of the Muses.

The 3rd century is dominated by Ibn al-Mu'tazz [q.v.] who composed an important Bacchic anthology (Fusūl al-tamādhib fi tābākīr al-surūr). He wrote poems of youth, whose delicacy recalls that of the other talented aristocrat, al-Walid b. Yazīd. But the well-born adhīb Ibn al-Mu'tazz, an enemy of every passionate outburst and concerned with an elegant measure, was unable to exploit in depth a framework whose indispensable vitality he did much to lessen.

The voluminous work of Ibn al-Rūmī [q.v.] contains several khāmriyyāt in which he attempts, not without difficulty it is true, a more spontaneous and sensitive language than that of his great compositions. But it must be noted that in the dayrīyya, the Bacchic themes become more and more secondary. Associated with this tradition is Muhammad b. al-'Abbās b. al-Bāṣrī, called Sāhib al-Rākūba, a drug seller in the service of the Ikhshидīds of Cairo (Diyārāt, 292, 294-7). He is presented as a debauchee (mādīn). But in his eclogues, the themes, reduced to commonplace stereotypes, serve above all to introduce here the description of a lake peopled with birds, and there that of narcissi and roses growing on the banks of a stream. In this poetry of a smiling nature, wine is described in it as a supplementary excellence to verses to the great themes well-known in the register and in rediscovering, sometimes with felicity, the Nuwāsian inspiration. But we can feel that in this 4th/10th century, still honoured by the works of al-Mutanabbi and Abu Firas [q.v.] (cf. the poems of the latter's diyārāt, nos. 150, 171, 178 and especially 364, his great ṣāḥīhīyya which finishes in a Bacchic development), Arabic poetry has nothing more to invent, so that it becomes set, worn out by nearly six centuries of an exceptionally abundant production. The few poets that remain to be cited wrote a poem worthy to be cited in an anthology, and reveal only a fanciful spirit already too familiar; they approach as well as possible these great masters of the past, of whom some are still cited by al-Ma'arrī in his Risālat al-ghyfār, 134-45.

In the 5th/11th century Ibn Shībī [q.v.] (and in addition, al-Kiftī, al-Muḥammadīn min al-fursīrān, 938, 127-134). In fact, these figures provide material for the anecdotal literature which flourishes around Bacchic poetry, but do not leave any striking work.

From this point of view, more interesting is Abu l-Ṭayīb Muḥammad b al-Kāsim al-Nu'mayrī. A close friend of Ibn al-Mu'tazz, he exchanged with him a whole correspondence (Agābhī, ix, 137; al-Shābuquītī, 71 ff.; al-Marzubānī, Muṣqām, 336-7; etc.). It consists of ḥawāniyyāt, friendly invitations to profit from the pleasure of love and drink, where the poet shows himself skilful at making glittering promises, and subtle in expressing his joy in accomplishing them with friends. These notes are sometimes in ṣādī (Diyārāt, 74). They deal with the same themes as poetry and offer samples of a Bacchic prose for consideration; it reveals an atmosphere and way of life. Here it is a case of well-born companions who have nothing to do with the "Fauvists" of the preceding century. They handle drunkenness like love, sc. with delicacy and good taste, in an allusive language which suits the courteous elegance of the salons. The ṣādāb of the mundūdā, already defined by Abu Nuwas, finished by imposing its rules on the ṣūrāfāt of polite society.

In the 4th century, Kushādīm [q.v.] confirmed this insertion of Bacchism in a poetry of social relationship. This nadīm-poet was capable of describing a flower, a cup, a musical instrument in an exquisite, light, delicate language, closely related to a way of life. The social discourse, inspired by the inspiration and the poem is subjected to an essentially descriptive plan (cf. al-Shabūshī, Diyarāt, 251 ff.). On the last point, this approach becomes clear in the production of al-Ṣanawbārī (Diyārāt, 218-24, which cites several poems that do not figure in the diyarāt). Here appears very clearly the relationship existing between the khāmriyya and the poetry of nature. But it must be noted that in the dayrīyya, the Bacchic themes become more and more secondary.

On the other hand, Abu l-Faraqī Muḥammad al-Wāwā'ī al-Kutbī, Fawād, no. 357, ii, 301-6), a Damascene poet of simple and harmonious language, returned to the Bacchic tradition in dedicating certain excellent verses to the great themes well-known in the register and in rediscovering, sometimes with felicity, the Nuwāsian inspiration. But we can feel that in this 4th/10th century, still honoured by the works of al-Mutanabbi and Abu Firas [q.v.] (cf. the poems of the latter's diyarāt, nos. 150, 171, 178 and especially 364, his great ṣāḥīhīyya which finishes in a Bacchic development), Arabic poetry has nothing more to invent, so that it becomes set, worn out by nearly six centuries of an exceptionally abundant production. The few poets that remain to be cited wrote a poem worthy to be cited in an anthology, and reveal only a fanciful spirit already too familiar; they approach as well as possible these great masters of the past, of whom some are still cited by al-Ma'arrī in his Risālat al-ghyfār, 134-45.
the pleasures enjoyed in a monastery. But the Bacchic note is minor in his work, as attested in the great philosophical poems where he gives himself up to a reflection on existence and the fate of man. Muhammad b. Khalifa b. al-Hasayn al-Numayri (al-Kutubi, *Fawâdi*, no. 403, ii, 402), a poet of Sa'ïf al-Dawla's circle, strove without success in the genre. Ibn al-Nabîh [q.v.], a poet of the Ayyûbidids, revived a few of the most frequently-repeated statements without introducing the slightest new view. We may conclude this list, which could be filled with the names of several minor authors, by citing three poets of the 7th/13th century.

Nûr al-Dîn Muhammad al-Isârî (1619-56:1222-58: *Fawâdi*, no. 377, ii, 329-34; *Shâhârîd al-Âshâb*, v, 284), who grouped the libertine part of his *diwân* under the title of * Sulûtât al-sâdîfân fi l-Âshâb wa'1-muʕâbân*, a work which also comprises an anthological section. This poet loved wine, and he speaks of it with passion in some quite long poems running to more than 20 verses. He asserts especially the superiority of alcohol over *hadâqâz* for the quality of intoxication which it provides. But his poetry is prosaic, heavy, often trivial, deprived as it is of the Nuwâsîan brilliance which lent glamour even to obscure compositions. A little later, Ibn Nuhâtta [q.v.], poet of the Ayyûbid sovereign Abu 'l-Fïdâ', inserted Bacchic formulae in heterogeneous compositions. But it is above all Sa'îf al-Dîn al-Hilli who, at the end of the 7th/13th century and in the first third of the 8th/14th one, rediscovered a real inspiration with a richness of themes and remarkable images. The fact is so much more notable, since this poet took a great interest in the strophic poetry of classical or colloquial language, e.g. poems nos. v. Mystical intoxication or substituted speech. It was, paradoxically, the mystics drunk with their love for God who gave to Bacchism a new impetus. They took possession of a well-established framework and activated it by substituting for hedonistic motivations the decisive quest for happiness in God. From there, a whole symbolism became established. Wine becomes a divine emanation which spreads its rays from one form to another, a symbol of the supreme love which manifests itself in creation. Drunkenness is forgetfulness of all that is not He. Under the effect of this application of meanings, an inner discourse is substituted for a text apparently set in its formulae. For, it must be noted, the mystical poet is not anxious to renew the writing of the Bacchic framework, or he does not care to do so; instead, he adds to it another meaning. At the same time as he accepts and pronounces the fixity of a language, he enlarges his conceptual field. Thus constellations of symbols appear around original themes. A thorough study of these appropriations—it is necessary to reverse the order of things, says al-Nâbulûsî—would show how a new inspiration was able to arise from within an old language, to illuminate it, but not destroy it. No more than the Bacchic poets of the 2nd/8th century did the mystics conceive a poetic theory. In going beyond the Islamic orthodox vision, they imposed a style of speech, not a writing.

The operation had been attempted with success as early as the middle of the 2nd/8th century in the poems of Râhîn al-'Adawiyya. The importance of the zones common to the erotic and Bacchic frameworks was to mark out the *khâmriyya* for serving the passionate quest of the mystics. The *diwân* of al-Hallâdî contains only one quatrain of this type, which is furthermore also attributed to Ibn al-Ḍabbâk and Abu Nuwas (*Diwân*, ed. Massignon, 73, no. 38), but several anonymous poems were later dedicated to the description of mystical intoxications (*ibid.*, 127-30). The saint from Tilimsân, Abâ Madîyan [q.v.], composed some *sadji* of very marked popular inspiration, illustrating also an ancient tendency of the Bacchic genre to distinguish itself from classical poetry. It is also true that the mystics had at their disposal two keyboards, that of esoteric composition, and that of popular incantation which was to become fundamental in the practice of the brotherhoods. An entire production of *khâmriyya* was to see the light of day in the East and in the Maghrib, where a representative sample is supplied by Hurayfîsh al-Makî (d. 801/1398-9; cf. *Diwân al-Halladî*, 140 ff.).

But it is Ibn al-_FARîd [q.v.] who draws attention with his great *khâmriyya*. In this, indeed, he gives himself to a masterly re-interpretation of the whole Bacchic theme and deepens its symbolic range. Moreover, he does this without renouncing the artifices of a formalistic rhetoric. The mechanisms of poetic writing continue to be used, but here they injure neither the feverish palpitation of the substituted speech nor the powerful rhythm of the incantation. In the 11th/17th century, 'Abd al-Qâni al-Nâbulûsî was to write a commentary on this poem, composed according to the comments made on it by the author of the *Tafsîr*, which Al-Jâmi al-'Arabî. Al-Nâbulûsî reveals also the secret significance of wine in pieces where Bacchic themes are intertwined with developments of love themes. In the mystics, the overlapping of the two registers becomes total in order to express passion and ecstasy. The *diwân* of Abu 'l-Hasan al-Shu'âbartî, very few poems do not have recourse to Bacchic statements (*Dîwân*, ed. al-Nabûsî, Alexandria 1924; cf. ibid., nos. 5, 8, 9, 12, 20, 26, 31, 38, and the majority of *muwâshâhât* and *sadji*; cf. also Massignon, *Recherches sur Shu'âbartî*, in *Mélanges W. Marçais*, 1950, 251 ff.).

The quest for the intoxication of love is a central theme which catches in him the nervous rhythm of a popular language. Moreover, he exploits the vein of an Ibn Kûmân, and the narrative of visits to a monastery, or evenings in a tavern, could easily lead to confusion, the language being to such an extent that of the *khâmriyya*. There could not exist here any of those deceits which sometimes inspired pornographic poems with a pseudo-mystical aim. But it is interesting to note this second substitution of speech, by means of which we return to the origins.

The mystical *khâmriyya* continued to be practised, anonymous or obscure, in classical or dialectal language, until the 10th century, where it is attested, for example, in the *diwân* of the Algerian amîr 'Abd al-Kâdir (cf. A. Ben Harrath, *Maghdalat Kulliyyat al-Âdâb*, i (1967), 47 ff.), and even in the 20th century in its popular form.

vi. *The khâmriyya in Muslim Spain: atomised speech.* The Andalusian environment suited the fading of Bacchic poetry especially after the proliferation of the kingdoms of the Tarîqât. On the literary side, the creation of strophic forms such as the *muwâshâhât* and the *sadji* offered a more supple and effective structure to capture this type of inspiration. The use, especially in the *sadji*, of a semi-popular language, assured a very appreciable source of invention. Linked with the pleasure of life, with the quest for love, with a profound communion with nature, Bacchism competed to express a certain mode of existence in the world.

Paradoxically, the conjunction of these favourable elements provoked, it seems, a contrary result. The Bacchic framework, already exhausted in the East,
falls into such common use here that it becomes increasingly worn out. Used to love or the joys of nature, it is instrumentalised and hardly requires an autonomous plan and specific style any more. If one adds to all this the proliferation of poets, and especially the mutilation that time has wrought in their work it is understandable why it is necessary to speak here of “pulverised” or “atomised” speech, echoing E. García Gómez.

As early as the 5th/6th century, during the period of the amirs, then of the caliphs, Ibn Darrādī [g.v.] included Bacchic statements in some khamriyya, floral poems, which augur the coming of Ibn Khafṣīdī. The prince Abū 'Abd al-Malik Marwān, great-grandson of Abū al-Raḥmān III, also followed this path, and Bacchic themes came to sustain in him an inspiration of an erotic or descriptive order.

But it is in the 5th/6th century that Bacchism finds its full extent, as much from the point of view of poetic creation as from that of ontological activity. To the latter, Ibn Ṣūḥayd assigns the setting of a visit to the valley of the ta‘wūbī, where he meets especially the inspirational genius of Abū Nuwās during a succession of very interesting poetic confrontations. For his part, the historian Ibn al-Raḳīk al-Kayrawānī [g.v.] dedicated to the Eastern khamrīyūd his Kāḥib al-sa‘rūn fi wasf al-anbīḍa wa'l-khuḍrī, still in manuscript, and a Kitāb mu‘ṣbahār al-ṣ̄̂kārāb which has not come down to us. The vizier Abū ‘Amīr Ibn Maslama [g.v.] for his Ḥikāṭat al-irṣyāḥ fi ḫāṣṣat al-rāḥ, draws upon the Andalusian works, his own notably, of which a few fragments survive devoted to largely banal forms of enjoyment.

In that which concerns poetry properly so-called, we must make a choice among numerous poets whose works are often known only by a few lines in anthologies. Ibn al-Abbār [g.v.], also an author of floral poems, dedicated a few pieces to the madājīlī al-ʿunṣ, in which an aristocratic taste delighted the tastes of love, walks and friendly evenings. The striking personality of the century was the sovereign of Seville al-Muṭāmilī (cf. R. H. Souissi, al-Muʿātim Ibn ‘Abbād et son œuvre poétique, doctoral thesis, Paris 1973, 135-48). He drank with pleasure and describes the joys of drunkenness in poems where the themes of liquidity and luminosity are touched upon. But the statements do not represent an organised view, even if the signs of an existential anguish often appear. The author’s attractive personality does not succeed in giving life to a language that has been over-used. The same observation applies to Bacchic mentions noted in the work of those faithful to the unfortunate prince, sc. Ibn al-Labbān [g.v.] (cf. Dār al-Ṭīrās, 55; M. al-Karīmī, Fann al-ta‘wūbī, 1297 etc.) or Ibn Hamdīs [g.v.]. The Kāḥīb ‘All b. Ahmad (al-Kutubī, Fawādī, no. 304, ii, 140-1; H. Pères, La poésie andalouse, 154) composed short pieces where the astral themes play an important role in the description of the spark of the wine.

Bestriding the 5th/6th and 6th/7th centuries were several poets who attempted the khamriyya. Ibn Khafṣīdī [g.v.] (cf. H. Haddījīdī, Vie et œuvre du poète andalou Ibn Khafṣīdī, typed thesis, Paris 1969) did not detach himself in any way from the Nuwāsīan vein, which he exploits in brief developments and without originality. His tavern outings supply the opportunity for imitation, and he remains incapable of rendering an atmosphere and painting a living picture. His talent is elsewhere. His nephew Ibn al-Zakkāk [g.v.] wrote mostly love poems or pastoral verse, a genre in which his uncle was famous. The sole aim of the Bacchic statement in his work is to under-
for a long time the Maghrib and the Near East, were
to fill with languishing echoes the great silence of a
bloodless poetry. After the nakḥa, Bacchic statements
are rediscovered at the band of a Amin Nakha or an
Abu 'l-Kāsim al-Shābbī in elegies with accents of
Lamartine, aghānī al-hayāti. But the time of another
poetry had by then come.

vi. The khāmriyya: the scope of the poem. The
evolution which led from the technique of inserted
statements to the composition of homogeneous
khāmriyyā, then to the "pulverisation" or "atomisa-
tion" of a style of speech was first accompanied by
the enactment of any rules which defined a genre or
determined the architecture of a fixed form. The
general characteristics that one can discern, belonging
to a very much mutilated corpus (except perhaps in
the case of Abū Nuwās), do not have an informative
value.

(a) Brevity: the requirements of a style of writing. The
khāmriyya is a relatively brief poem. Only 41
poems of Abū Nuwās out of 299 have more than 14
lines. In his work, the tendency to conciseness is
found again in conventional genres. But this brevity
characterises all the Bacchic poets of different
periods. A need was felt to keep to a number of lines,
ranging from 4 to 15 as a verifiable average, even
when it involved inserted statements in multithematic
kasidas. Bacchic writing was composed in a limited
comprehension, but that of mechanisms which determine
the setting of the poem. For the khāmriyya, this
involves the choice of a certain compass—a poem
written in the plan of the creation at the level of the
language and notably the phono-semantic organisa-
tion.

(b) The organisation of an allotted space. There is
no rule for the thematic regulation of a khāmriyya.
If we accept the poem that is ordered around a
narrative and so of a chronology, the poet handles
the statements freely (cf. the six thematic tables
pp. 999-1001 above). The unity of the inspiration,
the fairly strict limits of the framework, assure
homogeneity to the whole. We have noted the
frequent recourse to amorous or floral themes. It is
a matter of common areas exploited by several
frameworks. It is possible, moreover, in refining the
analysis, to disclose an entire rhetoric of Bacchic
discourse which governs small units of this discourse
without denying the frequency of the use of so-called
"light" metres such as the sari* and the khafif,
a "light" metres such as the sari* and the khafif,
its occurrence even, in poets as little

Problems of metric specificness. The problem of
the adequacy of the metre for the framework is a
matter of common areas exploited by several
frameworks. It is possible, moreover, in refining the
analysis, to disclose an entire rhetoric of Bacchic
discourse which governs small units of this discourse
without denying the frequency of the use of so-called
"light" metres such as the sari* and the khafif,
a frequency confirmed elsewhere even in poets as little

* (n%); and in al-Akhtal, by the
wafir (15.7%), the kamal (15.4%) and the
kasida. The airān of Abū Nuwās, the only
Bacchic corpus sufficiently important to lend itself
to analysis within the field of hypotheses most of the
time. In the case of developments inserted in a kasida,
it cannot be a question of specificness. In al-Aḥṣā,
the group of four major metres is formed by the
jawil (34%), the kamal (14.5%), the mutabārib (12%)
and the basāt (11%); and in al-Āqītal, by the
jawil (53%), the wafīr (15.7%), the basāt (14%)
and the kamal (9.2%). The airān of Abū Nuwās, the
only Bacchic corpus sufficiently important to lend itself
to enumeration, supplies the following results, drawn
from 993 poems: jawil (45.45%); basāt (14.21%);
sari* (15%); wafīr (13.11%) and kamal (8.75%). This
general percentage, compared with a percentage
drawn from only conventional poetry (panegyric,
panegyric, elegiac, etc.) brings out a perceptible decline of the
jawil and the kamal, and a slight increase of the basāt
and sari* (cf. op. cit., the curves of metric use drawn
from three centuries). The one is a long metre, the
other a short metre, which leaves the problem intact.
Without denying the frequency of the use of so-called
"light" metres such as the sari* and the basāt, a
frequency confirmed elsewhere even in poets as little
modernist as Abū Tammān and al-Ṭuḥṭūrī, it is always worth asking ourselves the real nature of the concept and the theme treated. It will not be possible for any suggestions to be made in this matter as long as no serious analysis has been made of the connections established between the structures of the phonic chain in operation and the stylistic organisation of the verse which is wedded to the scheme. At this point, we return to the fundamental problem of the language of the khamriyya, which has unfortunately not been the object of study. Considerations as to the use of a simple vocabulary and the clarity of a syntactic organisation have certainly not been taken place.

The study of Baccich literature remains to be undertaken. Such a study ought to show how its expression was fed by a variety of philosophic tendencies, and how it analysed a series of spiritual attitudes in historical relationship with given socio-cultural situations. From materialism to the search for the absolute, the khamriyya was the field for a certain type of force, and to the art of the 14th century, from the 16th to the 18th century, from the 18th to the 19th century, and to the art of the 20th century, from the 19th to the 20th century, and to the art of the 21st century.

khamsiyyya fī-šī‘r al-‘arabī, Cairo 1945; Muḥam-
dad Mu‘aṣṣar, Al-‘asāf al-‘arabī, Ṭbrīz 1953; Ṭabān, Ṭr al-khamsa wa-nīnba ba‘n al-‘āsāf wa-džāhīliyyin, Alex-
andria 1960; Iyyā Ḥāwil, Fann al-šī‘r al-khamsi, Ṭbrīz 1960; M. al-Ṣādik al-Ṣāfi‘ī, Thawarat al-
khamriyyāt, Ṭbrīz 1971. All these are very unequal
studies. Several monographs on authors or periods
dedicate sections of varying length to the kham-
riyya.

KHAMSA (A.), "five" still possesses, in several
Muslim countries, as amongst peoples of ancient
times, a magical value in connection with the use
of the fingers of the hand as a defence against the
evil eye (see ‘AYN). An efficacious method of protec-
tion against the evil eye, especially in North Africa
but also in certain parts of the Near East also,
consists essentially in stretching out the right hand,
with the fingers spread out, towards a person
whose glance can harm, and in pronouncing a formula
containing the word khamsa, e.g. khamsa fi ‘ayn-h
"five in your eye". This gesture is supposed to send
the evil to its source, but since it is not always possible
conveniently to do, pronouncing the formula in the
mind retains also a certain prophylactic force, and
has in any event the force of a curse.

Various representations of the hand, which were
formerly current also in ancient civilisations, may
be attached to this belief (see A. MacCulloch, in
Hastings’ Encycl. of Religion and Ethics, vi (1913),
495). One of the best-known is the piece of jewellery
called "the hand of Fatima", used as an amulet and
called māhkamān, khamsa, khamsa, etc. (see W.
Maqās, Textes arables de Tanger, 205; J.-H. Prost-
Biraben, La main de Fatima et ses antécédents symbo-
liques, in Revue anthropologique, xiii (1933), 370-5),
but one often finds, on the walls of houses and else-
where, the mark of a henna-painted hand, or a more
schematic pattern with five branches. Also, many
amulets contain patterns made up of five elements.

In certain countries, notably in North Africa,
the name of Thursday (al-khamis) likewise possesses
a prophylactic value, and it is combined with "five"
in formula against the evil eye, above all the henna-
wa-khamsa. Furthermore, Thursday is a day eminently
favourable for undertaking enterprises (e.g. travel-
ing) or ceremonies (e.g. circumcision, marriage), and

is referred to euphemistically by means of quali-
ficative terms like mabrūk or mubārak "blessed". The use of these terms against the evil eye makes
them in practice to a large extent inconvenient to
use. Thus the reply of khamsa pure and simple to a
question requiring such a response is avoided, and
various euphemisms are employed: yaddaš "your
hand", ad‘ā‘dād yaddaš "the number of your
hand", etc., or else two numbers whose sum or
differences is equal to 5; e.g. at Rabat, ta‘āla u-ta‘āla = 3 + 2.

KHAMSA is in the technical language of Persian
and Turkish literature a set of five maḥnawi
poems. The term is used, first of all, to designate
the five epic poems of Niẓāmī [g.v.] of Gūrja which
were composed between ca. 570/1174-5 and 600/
1203-4. The set contains one diwan poetic piece
al-asrār, in the metre sar-i muṣāfī-yī mabrūk; three
romantic poems: Layāl u Majdzān in the metre hasāṣā-i musaddas-i mabrūk-i mabrūk, Ḵurṣāv u Ṭārīn in the metre hasāṣā-i musaddas-i mabrūk, and Ḥaft Pāykar in the metre khafī-fi mabrūk-i mabrūk; and the Iskandānā in the metre mulākābīr-i muḥman-i mabrūk consisting of two parts, the Ḵurṣāv and the Ḵhān-i Ḵurṣāv. This last work belongs to the genre of the heroic epic
as well as to that of the literature of wisdom. There is
no general concept connecting these five poems. That
they were traditionally regarded as a whole may have
been caused by the exceptional brilliance displayed
by Niẓāmī in all of them, but it may also be a result
of their being transmitted almost exclusively as a
complete set in so-called kālīliyyāt manuscripts. An
earlier example of a similar name was applied by
Unsuri (Lúbāb, ii, 32). The enlargement of the khamsa
pattern to a set of seven poems by DJamiil constituted in its
form a model for so-called sābās which were written
by a number of poets from the 10th/16th century
onwards. Occasionally, the sūta, a set of six
poems, is used for collections of the maḥnawi-poems
of Ṭaṭṭār and Sa‘ādī.

The entire Khamsa as well as its individual poems
have from the late 7th/13th century onwards inspired
many imitators in Persian as well as in the main
literary languages of the Turks (i.e. Cağhatay, Azeri
and Ottoman Turkish) and, more rarely, in Kurdish.
The attempts to write a parallel (nāẓira) to the
Khamsa of Niẓāmī can be classified into two main
types. To the first type belong those efforts which
were indeed efforts of a new kind, and to that of the
literature of wisdom. There is

KHAMRIYYA — KHAMSA 1009

Encyclopaedia of Islam, IV
accepted this challenge, only very few of them succeeded in finishing more than one or two parts of the proposed scheme. The earliest imitation of the *khamsa* was written by the Indo-Persian poet Amir Khusraw Dihlawi [q.v.] between 688-701/1288-1301. It contains the poems *Majna* al-anwar, *Shirin u Khusraw, Magdun u Layla, Haft bihist* and *Din-i Iskandari*. The last poem of this *khamsa* consists only of one part dealing mainly with Iskandar as a seeker of wisdom. The second successful *khamsa* of this type was written in Caghan-Turkish by *Ali Phir Nawat* between 888-90/1483-5. The poems are entitled: *Hayrat al-abhur, Farhad u Shirin, Layla u Magdunin, Saba-i sayyari* and *Sad-i Iskandari*. Nawat’s work was inspired by both the examples of Niẓāmī and Amir Khusraw.

The second type of *khamsa* is formed by those collections of *mathnawis* which only contain some imitations of Niẓāmī’s works. The number of five is achieved by adding poems which are either entirely original as far as their subject-matter is concerned or may be regarded as imitations of the works of other great *mathnawī*-poets such as Sanā’ī or Farīd al-Dīn ʿAṭṭār. In the *Khamsa* of Khwādigi Kirmānī [q.v.], for instance, which was written between 732-46/1331-41, only the first poem, *Rawgat al-anwar*, is a *nasīra* of Niẓāmī’s *Makhzan al-asrār*, whereas the four others, *Humād al-maktab, Gul u Naqūs* and *Dīvān nāmā* deviate from the Niẓāmīan pattern both as to their subject-matter and, partly, their metres. Collections of this latter type very soon contain even more than five poems, like the six poems in the *kulūydi* of ʿImād al-Dīn Fakih-i Kirmānī (d. 773/1371-2) [cf. Ahmed Ates, *İstanbul kültüphanelərinde farşə mansum ersəler*, Istanbul 1966, 279f.]. His mystic-poet, Kirmānī’s *Diyah* show the influence of the works of ʿAṭṭār. The most celebrated instance of an extended *khamsa* however, is the *Haft awrang* of Dījām [q.v.] (written ca. 890/1485). These seven poems are entitled: *Sīsīlat al-khākhah, in khafīf, Salāmān u Abās in ramal, Turhāt al-abhur (a *nasīra* of the *Makhzan al-asrār*), Subhāt al-abhur in ramal, Yūsuf u Zaḥī, taking the place of *Khamsa u Shirin*, Layla u Madīnun and *Khwarad-nāmāi* Iskandari). The last five poems are sometimes taken together as the *Khamsa* of Dījām, but even in this way the scheme does not confirm to that of Niẓāmī. Other notable *khamsa* writers in Persian literature were Ḥāṭifī [q.v.] who introduced a historic theme in his *Timūr-nāma* taking the place of the *Iskandar-nāma* and *Fayḍī* [q.v.], among whose incomplete set of five poems there is a treatment of the Indian love story of Na-Dāman. In Ottoman-Turkish poetry prominent authors of *khamsas* were Bihīghī; Lāmī, who composed in fact a *sāba* to the model of Dījām; Vābyā Boy; ʿAṭṭāṭ; and Nergisi [q.v.], who composed his *khamsa* in prose. All these collections consist mainly of poems which do not belong to the canon of Niẓāmī. The imitation of Niẓāmī’s poems was particularly popular during the hey-day of the Indo-Persian literature in the 10th-14th century.

The numerous imitations of the individual poems of Niẓāmī’s *Khamsa* are to some extent parts of unfinished *khamsas*, but this is not necessarily always the case. The most frequently imitated works were the *Makhzan al-asrār* and *Layla u Magdunin*. Some of the best *nasirās* can be found among the parallels to the latter poem, e.g. the *Magdun u Layla* of Maktābī (written in 895/1489) in Persian and that of Fuṣūlī [q.v.] in Azeri. Most of these imitations, however, were not very successful. They have either disapp-
communication routes such as the Sardis to Susa highway. These staging-posts which Herodotus calls xocTaX6-nae; Ctesias calls emporia were numerous in the Byzantine empire, where they were set at a distance of 50 parasangs one from another. Little is known of the architectural evolution of these structures in ancient times, for the oldest khan built of unfired brick have disappeared.

The appropriate term to describe the type of building which provided lodging for caravan traffic on the main trade routes is caravanserais, transcribed by Pierre Belon of Le Mans as "Carbaschara"; khan, with which it is often confused, being applied rather to an establishment where commercial travellers could lodge for a period of time and where facilities were provided for the sale of their wares. A stopping-place for caravans is often called manzil in the ancient Arabic texts.

As communal buildings for public use, mentioned by all the travellers who testify to their vast number in the east, the khan marked the commercial highways once followed by caravan traffic in an area comprising Asia Minor and the "isthmus region", to borrow the phrase of Maurice Lombard, usually set at a distance apart of a day's journey, about 20 miles, the khans of plain and mountain, varying in number according to the degree of prosperity of the regions, provided staging post for animals. Often the khan was more than a shelter for travellers, pilgrims and itinerant traders; it was indeed a centre for the exchange of ideas from individuals from different parts of the world.

The institution flourished greatly from the 7th/13th century onwards in Iran, Syria and Anatolia; in this region alone, Erdmann has listed 119 khans belonging to that century. Sometimes it happened that over a period of time there developed around the khan a congregation such as at Khan Shaykhun or at Dîsir al-Shughûr in Syria.

The term appears for the first time in Arabic epigraphy in Syria on the occasion of the foundation of the Khan al-'A'kaba in 610/1213 (RCEA, No. 3720). The plan of construction of the highway khan, which was most often located in an isolated position, needed to provide for the security of pack-animals and of warehouse goods stored there for long or short periods. The construction material varied according to the regions: it might be brick, fired or unfired; it might be limestone; lastly, it might be basalt. The building comprised rooms for the accommodation of travellers, an oratory and sometimes a bath-house. There were places for the stabling of pack-animals and saddle-animals, covered stables for horses and donkeys, stalls for mules and camels or dromedaries, according to the area. The installations needed to take account of the temperament of each species, for horses cannot endure the smell of dromedaries and mules do not readily accept the proximity of donkeys.

From the outside, the khan appears as a quadrangular structure, often having two storeys, with massive towers at each corner and exterior walls supported by buttresses. It resembles a small fortress from which it is distinguished by an entrance protected by sallents framing a monumental gateway, decorated to a greater or lesser extent according to the period. This gateway gives access to a deep vestibule on which there open, on either side, the warden's quarters and sometimes shops from which items of basic necessity could be purchased. From here there is access to a large central courtyard, usually square, with a water-cistern. Around the
courtyard on ground level there would be storerooms and shops, living-quarters and stables, sometimes a forge for the shoeing of animals. In many khan, the travellers would sleep in a communal hall on raised platforms. In a khan of some importance there is an upper floor laid out on the same plan as the ground level, to which there is access by an internal stairway. The dimensions and number of rooms vary, the plan differing according to the region and the period.

The khans of mountain districts are on a smaller scale than those of the plain. They are built square with corner buttresses; against the inner wall of the outer wall there are installations for the accommodation of animals, while the travellers' quarters are built on the inner wall, opening on the central courtyard. There are also, in cold regions, very simple khans without courtyard, consisting only of a hall with one or more aisles, whose archways, with openings for light, rest on columns or pillars while a bench runs the length of the interior, providing sleeping or sitting space. The prices paid by the traveller for accommodation, storage of goods and shelter of animals would very according to the quality and facilities of the highway khan. Some khans received wa6ufs, enabling them to entertain pilgrims free of charge.

The khans which have survived enable us to identify the characteristics distinguishing the various types. At the time of the expansion of Islam in the Near East, there were two types of staging-post in existence; the one, consisting of oblong hululs running parallel to the central courtyard, is specifically Iranian. Soon axial bâbus appear and the gateway takes on a particular importance. The other consists of a quadrangular structure with galleries enclosing a central courtyard. This "Mediterranean" type existed from the early times.

The oldest known Muslim highway khan would seem to be, according to the hypothesis of Oleg Grabar, the building dating from the Umayyad era known as Kasr al-Ḥayr al-Sharkî (q.v.). It consists of a structure with a windowless façade, corner towers and buttresses on the walls, on the inside two floors opening on a courtyard, a peristyle on the ground level and a gallery on the upper floor. It is thus built in the "Mediterranean" type.

There are distinctions to be drawn between the Seldjûk khans of Iran and Anatolia, the Ayyûbid khans of Syria, the Mamûl khan of Egypt and Syria, the khans of the Pilgrims' route, the Ilkhanid and Safawid khans of Iran and the Ottoman khans of Asia Minor.

From the Seldjûk period in Iran, where there was a flowering of commercial activity at the end of the 13th century, we know the Khan ZafaranI, between Nishapur and Sabzawar. It is built on a square plan, the exterior walls 75 m. in length, built of unfired brick on foundations of fired brick, with circular towers at the corners. In the centre of the façade a high gateway flanked by towers gives access through a vestibule to the almost square inner courtyard (36 × 38 m.) on to which, as in the madrasas, four open fora. Those of the lateral sides are enclosed by four rooms on each face, while those of the rear and the vestibule have three rooms on both sides. The lay-out of the courtyard resembles that of the cruciform madrasa; it is only the purpose of the rooms which is different. In the case of the qanat they are designed for study, in the other for the accommodation of commercial traffic. On the right hand side of the entrance is a mosque, and on the exterior there is a bath-house attached to the building.

There are some excellent examples of Seldjûk
Khan from the 7th-8th/13th-14th centuries in Anatolia. They are of four types. There are khans with a monumental entrance and a vestibule giving access to a central rectangular courtyard surrounded by arched galleries and rooms, as at Evdir Khan (606/1210-19) near Antalya, Kırkgöz Khan (633-43/1236-46), Sultan Khan (633/1236) between Sivas and Kayseri, or Yeşi Khan (717/1317) on the road from Tokat to Sivas, and the Khan of Marand in Ardabil (750/1350). There are covered khan like Susuz Khan (644/1246) near Burdur, measuring 25 m. by 26 m., with five cradle-vaulted girders and a central cupola. Some khans combine the courtyard surrounded by rooms and the covered building, bringing together the "Mediterranean" and "Iranian" types, as at Sultan Khan (626/1229, restored in 677/1278) 40 km. southwest of Ak Saray, not to be confused with its namesake near Kayseri. This Khan, which is entered through a gateway decorated by stalactites, has two sections, one measuring 50 m. by 62 m., with a courtyard bounded by a portico upon which the living-quarters open and by a warehouse as well as a bakehouse and a hamam; in the centre of the courtyard is an oratory with a cupola standing on four pillars; to the south of the courtyard is the other section; a huge hall measuring 33 m. by 55 m., with five cradle-vaulted aisles and a door at each end, in which the animals were quartered. It is the most important Khan of the 7th/13th century. Ak Khan, to the north-east of Defizli, built in 680/1282 by sultan Kay Kâwûs, is of a rectangular plan with a square inner courtyard bounded by porticos on two sides and by a vaulted hall supported on ten lines of pillars. Finally, the Alara Khan to the north-west of Alaniya is of yet another design: the inner courtyard is nothing more than a corridor open to the sky with seven rooms on each side, the whole enclosed by long cradle-vaulted halls. Differing in design and dimensions, the Salğûk khans are alike in having corner towers and walls supported by buttresses; they are remarkable for their large gateways, having broken arches decorated with stalactites, framed by intricately worked geometric patterns often consisting of figured decoration.

The Ayyûbid type (6th-8th/12th-14th centuries) in Syria is of square or rectangular plan with central courtyard and a peripheral gallery with cradle-vaulting, broken along the principal axis by an entry corridor, with, in some cases, a room on either side of the vestibule. The gate may be preceded by a salient. In the axis of entry there sometimes opens on the opposite side the wide bay of an indah. The design of Ayyûbid khans is almost always identical, the only variations being in the proportions of the various parts (e.g. Khan al-ʿArdis, Kutayfa, and Kara to the north of Damascus).

In the later Mamlûk period (9th/15th century) commerce in the Orient was most active and the khans multiplied in Syria, especially on the Aleppo to Cairo highway; there is, however, no particular architectural evolution to be noted. The khans of this period are rectangular with windowless walls and a central courtyard containing a water-cistern and surrounded by a gallery, cradle or groin-vaulted, there is a mosque and often a bath-house, the main door-way opens in the façade or in a fore-projection of the wall, and the entry corridor is flanked by two vaulted chambers. Worthy of mention are, in the vicinity of Damascus, Khan Ayûb to the north and Khan Dunnûn to the south, in Palestine Khan al-Abmar, Khan Rastân on a bridge over the Orontes between Hims and Hamat, and the Khan of Kaflat al-Mudîl (40 m. by 40 m.) at Apamœa. There are examples of the same type from the 11th/17th century at Khan Tûmân and at Karamurt (1048/1638), and an enormous Khan (161 m. by 122 m.) near Baghrais [q.v.].

In Iran, the Khan evolved more rapidly and with more frequent changes than in Syria. In the 8th/14th century, in the time of the Il-Khanids, a new type of Khan appeared. This is a building on a rectangular plan with the exterior wall reinforced by circular corner towers, and there is a monumental entrance in the form of a basilica with a solid vaulted doorway in an ornamental setting of brick such as that of which traces survive near Marand (730/1330). Within, one enters a vast courtyard bordered by lodging-quarters with indahs in the main axes. A fountain, cisterns and a mosque complete the installation. These khans often have two stories with gallery, on the ground floor there are the stables, and the shops, and there is access by an interior stairway to the first floor and the merchants' quarters, sometimes furnished with fire-places as at Sin (730/1330).

Under the Safawids, in the 10th/16th century, wealthy caravans, signs of the significant progress made by the economy of Central Asia since the Timurids, moved along the trade-routes. Shâh ʿAbâs I

nature tend to disappear. In the period following the death of the great sovereign, a concern for symmetry dominates the building-style and huge hypostyle stables appear. At the end of the 12th/13th century, khan on an octagonal plan with circular corner towers are found in mountainous areas. We shall mention three examples, at Aminabadh, at Khan-i Khurra and at Dabhid on the road between Isfahan and Shiraz.

In Agharbaydjan, the khan typical of the 9th/10th century is that of Sangatchali, near Baku, with its window-less walls, designed on a plan identical to that of the Mamluk khan. In the 10th-11th/16th-17th centuries there existed in this region two types of khan: one, on a square plan with a central courtyard and a lay-out resembling that of the Mediterranean khan, and the other, on a rectangular plan, having a long hall open at both ends divided into three aisles, open at both ends with a single entrance in a pilared projection.

In the same period in the Ottoman empire, a large number of highway khan continued to appear, some consisting of one section containing installations bordering on a courtyard open to the sky and another section covered against the winter, others constructed according to the Saljuq prototype, but decorated in a more sober fashion.

A new type appeared, built on a plan almost square, with a long central passage lying along an east-west axis and bounded by shops; in the middle of the passage, two doorways each giving access to an oblong hall running parallel to the passage, with four aisles and three sets of pillars. The chamber on the north side of the passage, provided with a bench, was intended for travellers, while that on the south side sheltered animals and merchandise. Of this type were the Yeşi Khan (10th/16th century), which has recently disappeared, but was formerly on the road from Tokat to Sivas, and Khan Mehmed Pasha (1028/1619) at Ulukışla to the east of Konya. Finally, at Gebze, on the road from Istanbul to İzmit, there is a khan of classical Ottoman type having a rectangular structure, without a central courtyard, and consisting of a double hall with six pillars marking off two sets of seven twin sections.

The last great highway khan was built in Iran in

Plan and section of the khan of Māder-i Shāh [M. Siroux, Caravansérails d'Iran et petites constructions routières].
the reign of Shah 'Abbās II (1052-77/1642-66). It is the imposing khan of Mādar-i Shāh, a grim and impressive work of architecture 45 km from Isfāhān.

Two instances of the structural evolution of the khan should be noted, one in Syria, the other in Iran. In the first case, we observe the transformation of a highway khan into an urban khan: in fact at Dījār al-Shughur, to a khan built in 1070/1660, in the course of time a refectory was added, later a hospital; this collection of buildings, on the left bank of the Orontes at the approaches to the bridge, became in the 19th century the nucleus of an urban settlement which grew up around it. The second case is that of the khan of 'All-ābād, between Tehran and Kum which became at the end of the 19th century the nucleus of a flourishing oasis settlement; with the addition of a hamam, a flour-mill, two ice-houses and some shops, the khan lost its original character, ceasing to be a highway institution and taking on the functions of an agricultural centre.

II. The urban khan. While the highway khan is a staging-post and a relay-station, the urban khan lies at the end of a journey; it is a depot, a place for commercial transactions and brief stay.

In fact, the term khan has been applied to hostelries and urban depots in the Near East only since the Mamlūk and Ottoman periods, more especially the 12th/18th century. In the 5th/11th and 6th/12th centuries in Bagdad and Damascus, the large depots bore the name of dār with the name of the commodity for which the establishment was noted. The urban caravanserai would have been called dār al-wakāla (the house of procurement or agency), before this became a synonym for funduk, which at the end of the 7th/13th century began to be replaced by wakll as a designation for suburban hosteleries. Later, in the 11th/17th century the khan began progressively to take upon itself exclusively the functions exercised within the city-walls by the dār al-wakāla, the funduk (fundukou) and the kaysariyya (q.v.). In fact, to the town, the khan gave lodging to travellers who could lodge there in exchange for a fee paid to the warden who provided bedding and straw. In the present day as in the past there is installed there, in the courtyard, a vaulted warehouse protects the goods; bales and packing-cases are stacked in the courtyard.

The most common type of depot, the khan, providing the means to await the time for the transfer of merchandise, is designated either by the name of the founder or by the name of the principal commodity to be sold there. Thus there are to be found in most towns a khan al-sabūn (khan of soap) or a khan al-tayy (khan of oil).

In the second half of the 9th/15th century, the Mamlūk sultans provided certain facilities for European traders visiting Alexandria. After the grant of capitulations by the Ottoman sultans [see iMTRAYZAT], the urban khāns flourished greatly in the Near East. The number of visiting Western merchants grew and, from the start of the 10th/16th century tended to be replaced by wakll as a synonym for the agency and office of attorney, before this became a synonym for the urban khan.

This description by Jean Sauvaget applies to the classic type of khan which has prevailed in the lands of the Oriental basin of the Mediterranean since the Mamlūk epoch, and subsequently throughout the Ottoman empire, as is attested by a picture of Raffet, depicting the khan of Bucharest in the 15th century. The khan could be a pious foundation set up by a rich and illustrious person; it would then be either one of the sources of revenue of a wafrf to the benefit of a madrasa like the khan Mādar-i Shāh in Isfāhān, or for the upkeep of a mosque, such as the two khans of Bursa which supported the Green Mosque (Yeşil Cami), or the beneficiary of fixed revenues, attributed to it when it served the specific purpose of sheltering pilgrims. Being a profitable business, the khan could represent an investment, and more than one amir was proprietor of a khan in the 8th/14th and 9th/15th centuries. At the end of the 9th/15th century, at Damascus, out of five new khans, three were built by amirs and two by merchants; at Aleppo, as against nine khans built by amirs, only one was founded by merchants. The managers of khans would often be the descendants of the founders, and the principal official was the wakil al-tawdijar, the agent of attorney who attended to the storage and sale of the merchants' goods; the khan also received visits from an inspector appointed by the muhtasib. At nightfall, the leaves of the door were always closed while a guardian kept watch in his lodge.

In the Ottoman period, according to J. Sauvaget, the plan is "uniform in principle: around two courtyards of unequal dimensions there are juxtaposed, on ground-level, shops rented by the foreign merchants lodging on the upper floor in rooms opening on a gallery, while a vaulted warehouse protects the stocks of merchandise against theft and bad weather." In some khans the central courtyard is replaced by a covered hall, as at Khan As'ad Pāshā at Damascus, or sometimes the central courtyard instead of being square becomes a long rectangle, divided crosswise into three suites, as at the Valide Han of Istanbul.

At Aleppo, the oldest khans were situated in the suburbs of the city; Ibn Shaddad (end of the 7th/13th century) mentions eight of them. Within the city-
walls, the oldest khans date from the Mamluk period; they are in the centre of the city. The Khan Bayraktar was constructed by two amirs in 827/1424. Between 815/1412 and 874/1470 numerous khans were constructed. Ibn al-Sjina (d. 890/1485) mentions 25 of them within the city-walls and 13 outside. There were other khans built, such as the Khan al-Zayt constructed by the amir Khayr Bek, the Khan al-Kashabiyah begun by the amir Atrak in 916/1510 and completed in 938/1532, and the Khan al-Sabun with its two façades, attests to the amir al-Saidamur. Aleppo benefited, on the economic plane, from the expansion of the Ottoman empire. The buildings were situated on the edge of the commercial centres, and it was possible to set up on the exterior façades of the khans rows of shops forming a souk, assured by its location of a good supply of business. “The prime example of the type at Aleppo is the Khan al-Kumruh (Khan of Customs) built in 986/1574, which combines within a single structure 58 shops, and 77 rooms as well as two stone-built souks lit by two cupolas, a total of 344 shops.” It had two fountains, a mosque and a monumental entrance. Dating from the end of the 11th/17th century, the Khan al-Wastir (1092/1682), now in ruins, still has its monumental entrance. In this period d'Arvieux counted 68 khans at Aleppo; in the mid-20th century Sauvaget counted 38 still in existence.

At Damascus, the first khans seem to have been built outside the city-walls as at Aleppo. In the 7th/13th century, in the northern suburb of al-Ukayba, was the Khan al-Zindar; reputedly a place of debauchery, it was destroyed in 632/1236 and replaced by the al-Tawba mosque. The inner-city khans are situated to the south of the Great Mosque in the western sector of the old city. Ibn Sjira mentions five khans at the end of the 8th/14th century, including the Khan al-Habdalin and the Khan built by the amir Mandjak al-Yusufi. In the 10th/16th century the khans replaced in the city certain fundusbi and kaysariyyas; thus we have the Khan al-Zayt (Khan of Oil) and the Khan al-Harir (Khan of Silk), a vast building constructed by Darwish Pasha in 980/1572. The Khan al-Kumruh (Khan of Customs) was built at the end of the 10th/16th century and the start of the 11th/17th century. Of the two biggest khans, the one, covered by two cupolas, is attributed to Sulayman Pasha (827/1424). In the 11th/17th century, the Khan al-Basha became an important caravan centre. In 1089/1678 Ahmad Bushnak built the famous Khan Bani Sa'd. In 1823 the madrasa al-Mustansiriyya accommodated the Customs service and took the name Khan al-Ortm; in this period European travellers testify to a great number of khans at Bagdad.

At Isfahan, which knew a period of great economic prosperity after the accession of Shah Abbâs I, Chardin counted in the 11th/17th century 1,802 caravanerais. Many have disappeared but the khans adjoining the madrasa Mâdar-i Shâh remains and testifies to the prosperity of the capital at the end of the start of the 18th century.

In Asia Minor, the Ottoman khans are mainly concentrated at Bursa and at Istanbul. The khans of Bursa, the first Ottoman capital, rectangular in form with a central courtyard surrounded by a portico with arcade, are of classic Mediterranean type. The most ancient of these is the Bey Khan (mid-8th/14th century), which at the present day has lost its original form but survives under the name of Emir Khan. Mention should be made of the Ipek Khân (Khan of Silk) dating from the start of the 9th/15th century which, like the Geyye Khân, was constituted as a mek to the advantage of the Green Mosque and of which only a few traces remain. The Kosa Khân (Khan of the Cocoon), with a central water cistern in the courtyard and an octagonal mosque, was built at the end of the 9th/15th century. The Pirinc Khân (Khan of Rice) with two stories, in ruins today, was built in 913/1507.

At Istanbul, the two most ancient khans whose ruins are known to us in the vicinity of the Rustum Paşa Mosque, the Harmali Khân (Khan of Dates) and the Balkapan Khân (Khan of Honey), date back for their origin to the Byzantine era. The most ancient of the sixteen khans of the Grand Bazaar is the Çubaci
Khān (Khan of Cloth); it dates from the 9th/10th century. These khāns are in most cases spinning-shops at the side of warehouses and retailers’ shops. One of the largest warehouses is the Kūrḵūḵāl Khān (Khān of the Furriers) constructed by the grand vizier Māhmūd Pāsha in 872/1467; the building is of impressive dimensions (130 m. by 65 m.), with one courtyard measuring 40 m. by 45 m. and another pentagonal in shape, with a perimeter of 140 m. As many as 167 rooms open up the porticos on the ground-level; on the upper floor there are barrel-vaulted rooms with windows opening on the gallery, and in front of each door there used to be a miniature cupola covering the portico. The building remains, but has deteriorated beyond recognition. In the mid-16th century, Sīnān built in the name of Rūstum Pāsha two khāns on the banks of the Golden Horn, Cūkur Khān (Khān of the Ditch) at Istanbul and Kūrḵūḵāl Khān (Khān of Lead) at Ghalaṭa. As elsewhere, the term stems from the dimensions of the installations. In the mid-11th/16th century, the buildings could not all have been large, for Ewliya Čelebi counted 556 khāns at Istanbul. It was no longer a question of vast warehouses, but rather of places of sale for provincial and foreign traders.

The two finest specimens from the 11th/16th century are the Wālīde Khān with its three courtyards and all kinds of offices, and in front, the Büyük Yeni Khān with its long rectangular courtyard bounded by two galleries with arcades; this stone-built edifice underwent modifications in 1178/1764. From the 13th century, we have the Khān Shirmakesh (Khān of the Silversmiths), whose façade has alternate rows of stone and brick and which was completed in 1215/1716 on the foundations of a mint. The original feature of this building is the fact that the rooms are set on both sides of a large corridor on the upper floor and do not open on the courtyard. Taking the examples of Ūskūdar, the terminus of caravan-routes on the Asiatic shore of the Bosphorus, we may note in the 17th and the 18th centuries different categories of khāns: there are large buildings with many rooms and multiple stalls for saddle-animals such as the Mihrimah Sultan and Orta Khān, and the large luxury establishments like the Kösem Wālīde Khān. There are numerous khāns of more modest dimensions, reserved for “merchants of land and sea.” There are khāns for pilgrims, some of them offering lodging free of charge, but most often the Muslims would be accommodated in the town in madrasas or ḥāḵmāḵās, while Christians would lodge in monasteries. The Wakf Khān (1918) of Istanbul, with its offices and commercial facilities, bears witness to the functional evolution of the contemporary khān.

Bibliography:
Front, sections and plan of the khan of Aminabad [P. Coste, *Monuments modernes de la Perse*, Paris 1867, Pl. lxvi].
1610 the Emperor decided to send Khan Dajhan Lodt to help Khan Khanan’ Abd al-Rahim Khan in the Deccan statesman and commander Malik Anbar, the commander of the forces of Ni'am Shah offered submission, but this peace did not prove to be a lasting one, and it was not long before the new regent of Ahmadnagar, Hamid Khan, again declared war. Khan Dajhan promptly opened a vigorous campaign, but instead of subjugating the enemy completely he granted him peace, restoring his territories for the very moderate sum of three lakhs of mans; some writers have, therefore, accused him of accepting this money as a bribe. It has also been suggested that by granting exceptionally easy terms, he wanted to place Ni'am Shah under obligation so that he might if necessary seek refuge with him.

At the time of Diahangir's death (October 1627), his son Shahdajhan was in the Deccan. After some hesitation, Khan Dajhan Lodi recognised his succession, and the new Emperor appointed him Governor of Berar and Khansdesh. He was directed to recover the lost territories in the Deccan; but noting his reluctance, Shahdajhan transferred him to Malwa and ordered him to co-operate with the forces of the enemy and sustained a defeat. The other army was also subjected to harassment by Malik Anbar's men who had cut their sources of supplies, and managed only with difficulty to withdraw to Dabdab, in the vicinity of Burhanpur, where Prince Parwiz was encamping (Turuk, 107-8).

Diahangir castigated the commanders who were responsible for the defeat, transferred them to other places; Khan Dajhan was also demoted and posted as Thandar in Thamlr, but a year later he was restored to favour. He was again sent to the Deccan with Mahabat Khan, and in 1031/1622 and had been appointed Sihindah of Gujaraj in the following year, was now ordered to take the place of Mahabat Khan as Subahddr of Partab, and later, on his death in Muframm 1036/October 1626, was entrusted with the supreme command of forces in the Deccan with the title of Sipah-Saldr. On the death of Malik Anbar, the commander of the forces of Ni'am Shah offered submission, but this peace did not prove to be a lasting one, and it was not long before the new regent of Ahmadnagar, Hamid Khan, again declared war. Khan Dajhan promptly opened a vigorous campaign, but instead of subjugating the enemy completely he granted him peace, restoring his territories for the very moderate sum of three lakhs of mans; some writers have, therefore, accused him of accepting this money as a bribe. It has also been suggested that by granting exceptionally easy terms, he wanted to place Ni'am Shah under obligation so that he might if necessary seek refuge with him.

In the account of the fifteenth year of his coronation, Diahangir says that Khan Dajhan, who was a heavy drinker, suddenly abandoned this habit and “thenceforward did not touch wine despite my advice that he should give it up gradually”; possibly this action and a general change in his approach to life were due to his association with Shaykh Fa'd Allah of Burhanpur (see Dakhsha, 115). However, in the same year he was appointed Sibahdral of Multan because reports were coming from the direction of Kandahar of threats on it from the Safawid Shah 'Abbas of Persia (Dakhsha, 118). However, in the same year he was appointed Sibahdral of Multan because reports were coming from the direction of Kandahar of threats on it from the Safawid Shah 'Abbas of Persia (Dakhsha, 118). However, in the same year he was appointed Sibahdral of Multan because reports were coming from the direction of Kandahar of threats on it from the Safawid Shah 'Abbas of Persia (Dakhsha, 118).
KHĀN DJAHAN LōDī—KHĀN KHĀNAN

KHĀN DJAHAN LODĪ, KHĀN KHĀNAN

Shaykh Farid Bhakkari, who had served under him, nevertheless praised some of his personal qualities and says that he was a pious person, who passed hours in the society of the 'ulamā' and shaykhs.

KHĀN: DJAHAN MAḴBŪR, KĪWĀM AL-MULK, minister and confidant of the Dīhlī Sultans Muḥammad b. Tughlūk and Fīrūz-Shāh in the 8th/14th century.

Of Hindu origin (his original name was Kannū “flower”), he stemmed from Tīlangānī in South India, and was converted to Islam in 722/1322 when the Hindu Rāja surrendered his besieging army to Dīhlī under the amīr Uḥūb Khān, the latter came to power, the new Sultan rewarded the former for his services. Khāṭfī Khān himself, after a few years in Mūltān to Dīhlī, was appointed governor of that important frontier province. He was subsequently transferred to Dīhlī and being therefore utterly dependent on the Sultan’s favour. Thus he cultivated the friendship of Fīrūz-Shāh’s favourite slave Bāghrā, who held the office of Amir-i-ʿĀrāf or Inspector-General of the Army with the personal title of ʿĪmād al-Mulk, even though the latter was notoriously corrupt. Khāṭfī-ī-Djāhān himself acquired extensive ikāds for the support of his official duties and rank, to the value of three million tānkūsdars per annum, and he built in them numerous markets and caravanserais and constructed irrigation canals.

He died, aged over 80, in 770/1368-9, and his office, ikād-i Khāṭfī, the title of Khān-i Djāhān and all his other privileges were made over to his eldest son Diwān Shāh.

KHĀN KHĀNAN, a high military title in mediaeval Indo-Muslim usage. The term Khān [q.v.] became popular as the designation of a high officer or nobleman and in a technical sense it was used for a commander of ten thousand soldiers. In reproducing the instructions of Būghrā Khān to his son, Kāykhūs, Barānī (Taʾrikh-i Fīrūzshāhī, Bibl. Ind., i45) makes the former speak of a book, Adāb al-salāṭīn, which had been especially brought from Bāghdād for the sons of Iltūmīsh and which he had studied with Khāṭfī-Djāhān al-Dīhnī-Bahārī. In this the legendary Persian ruler Djamshīd speaks of the decimal chain of command, in which a khān commands ten maliks. More historical, however, are the statements of Ibn ʿAdī al-Umārī in his Māšāl al-əgbār fi mamālīk al-amsār, and al-Kalāqghāndī, ʿṢubḥ al-ʿagāʾī, that a khān commanded ten thousand soldiers, a malik one thousand, and an amīr one hundred; this decimal system probably came from Central Asia to the subcontinent.

Khān Khānān (Khān of Khānāns) was the highest title conferred upon a governor of the State, at least up to the time of Akbar, for Dīḥāṅgīr says that there was no title higher than that of Amir-i-ʿĀrāf, shown also by the fact that normally the title of Khān Khānān was held by one person only. The first person to bear this title as recorded in the historical sources on the Dīhlī sultanate was Māmūd, the eldest son of Sultan Djjāhān al-Dīhnī Fīrūz Shāh (Barānī, 172); another case is that of the brother of Khāraw Khān
the usurper (Barani, 410). Under the Mughals, this title was conferred rather more frequently, the first person to receive it at the hands of Bâbûr being Dilâwar Khân, son of Dawlat Khân Lodi. Humâyûn had conferred this title on Bayram Khân; on his dismissal early in the reign of Akbar, Mun'în Khân received and held it till his death in 983/1575. Nine years later it was conferred on Bayram Khân’s son, Mirzâ ʿAbd al-Raḥîm, who died in 1036/1627. Maḥbûl Khân (d. 1043/1634) held it in the time of Dja-dja Humam al-Dîn Muhammad b. Khânamir entered Khânbalik even more late it was conferred on Bayram Mîn; on his 1020

Notes on Marco Polo, i, 10-1. On the town and its situation on the Imperial Canal cf. Rashîd al-Dîn, ed. Dj. Fadil, Tehran 1340 sh., iii, 430. The earliest patron of his life (Zap., xv, 251). It is also known as a place-name (cf. Yakût, ii, 476; al-Bâbûl Hûrî, Fuṣûl, 85). Its best-known application is to the so-called “expedition of the Khânbalik” (besides the references in the text): Ch. Schefer, Notices sur les relations des

KHÂN KHAÂN — KH*KHÂNDARIM

KHÂN KHAÂN — KH*KHÂNDARIM

KHÂNDARIM, surname of the Persian historian Ghiyât al-Dîn who was born ca. 880/1475 into a family of high officials and scholars. His father, Khâtja Humân al-Dîn Muhammad b. Khâtja Burhân al-Dîn Muhammad Shârîz, was for many years the minister of Sultân Maḥmûd b. Abl Saʿîd, who at the end of his political career became the Timûrid ruler of Samârkhând from 899-900/1494-5. The historian Mirkh*and [g.r.] was his maternal uncle and took an important part in his primary education. It is, therefore, likely that Khânâmir was actually born in Herat where his grandfather lived, although the maḥkât ibn (ed. Dj. Fadil, Tehran 1340 sh., iii, 430) enters him under Bukhârâ. The earliest patron of his own career was Mir ʿAli Shîr Nawâʾî, who put his vast library at his disposal and to whom Khânâmir dedicated his first three books. Shortly after the death of ʿAli Shîr in 906/1500, Khânâmir entered the service of Mîrzâ Badi’ al-Zamân, the eldest son of Sultân ʿUsâyn Baykârâ, who succeeded his father in 921/1516. During the years of the Uzbek invasion of the Timûrid lands which ended with the conquest of Herat by Shâybanî in 931/1527,
Khâmundâr was entrusted with diplomatic missions to potential allies of the Sultan. He was also appointed to the office of šâdî. When the Uzbeks were marching on Balkh, he wrote at the request of the citizens of Herat, he wrote at the request of the citizens of his times but applies the rhetorical embellishment with such moderation that he served his son and successor Humayun until his death from an expedition of Humayun to Gudjarat, which was left unpublished thesis).

The most valuable work of Khâmundâr is the Habib al-siyar, a general history from the earliest times down to near the end of the life of Shâh Iskâm I (died 930/1524). The title refers to Karîm al-Dîn Habîb Allâh, the Şafawid governor to whom the work was eventually dedicated, after the death of the original patron of the writer, Sâyîd Ghiyât al-Dîn Amîr Muhammad. The work consists of an introduction (dibâqa), three books (muqallad), dealing respectively with pre-Islamic history, Islamic history up to the end of the Fatimids caliphate, and the period of Mongol and Timurid rule till the foundation of the Şafawid state in Iran, each book being divided into four sections (dîjâ'), and an epilogue (khâtima) containing geographical information. An interesting feature of the composition of the Habib al-siyar is the occurrence of a great number of biographies at the end of the treatment of each major historical period. This innovation in Persian historiography was imitated by writers of the Şafawid period (cf. 'Abîd al-Şâhus Navâ', Rîdî'î-ši Dibdî Habîb al-siyar, Tehran 1324/1945). The original version of the chronicle (represented by the text of the literary edition, Tehran 1271/1854-5) was written in 927-30/1520-4. Khâmundâr continued however to make other, revised copies, the last we know of as yet being marked by a note added to the first volume in Şâbân 935/4 April 1529. His first work, Ma'âthîr al-mulâkâ, a collection of historical maxims attributed to Pre-Islamic kings and sages as well as to the Prophet, the Imâms and the secular rulers of the Islamic period, was completed before the death of his uncle Mirkhând, which occurred in 903/1498 (cf. Storey, i, 102; Brogel' Persiske studier, Moscow 1972, 380, 1398; A. Munzawi, Fihrist-i nuskhah-yi khafti-i farsî, ii, Tehran 1349/1970, 1675 ff.).

The Khâdsât al-aḫbâr fi bayân al-ḥâl al-aḫşâyâr, which was completed in 903/1499, is a concise world history digested from the Rawâdat al-safa' of his uncle but also based upon other historical material which was put at his disposal by 'All Shir Navâ'. The most original contribution of the author is his description of Herat and of the contemporary divines, scholars and artists living there (cf. Storey, i, 102 ff.; Brogel', 380 ff.; Munzawi, iii, 1398). An autograph of this work has been described by A. M. Piemontese, in RSO, xlvi (1972), 40-6.

Just about the time of death of his patron, in 903/1499, Khâmundâr completed a panegyrical biography of 'All Shir Navâ' entitled Makârim al-akhkhâr (cf. Storey i, 795; A. Khayyâmî, in Nâṣrîyya-i Dânishkâda-i Adabiyyât-i Tabrîz, iii (1329/1950), 3-4, 41 ff. and 7, 68 ff.). A collection of biographies of the famous ministers, entitled Dastûr al-nezâvî, was dedicated to Khâmundâr's patron, the Şafawid governor of Herat, on Herat, he wrote at the request of the citizens of the town a letter of submission to Shaybân. He remained in Herat after its capture, and he has given an account of how he and other members of the local aristocracy were squeezed by the Uzbeks (cf. Habib al-siyar, Tehran 1333 Shb, iv, 381 ff.). His verdict on the rule of the Şafawids, who took possession of Herat in 916/1510, was much more favourable, yet he seems not to have entered her service, but to have been the author of an account of how he and other members of the local aristocracy were squeezed by the Uzbeks (cf. Storey i, 92 f.). The historical value of the Habib al-siyar is enhanced by the fact that the author was a close witness, and some-
it does not obscure the factual contents of his text (cf. Storey i, 104-9, 1237 f.; Bregel', 383-93, 1399; Munzawi, vi, 4127-46).

The last work of Khwandamir is the Čahāni Humāyūn or Humāyunnamā, a description of institutions, ordinances and buildings introduced or erected at the order of that ruler, made at the latter's request and completed probably in 940/1534 (cf. Storey, i, 1386, 1313; ed. by M. Hidayat Hosain, Calcutta 1940).

In the introduction to the Habīb al-siyar, Khwandamir claims also to have made an abridgement of the general history of Wassaf [q.v.], but there are no manuscript copies of this known to exist.

The historiographical tradition of Khwandamir's family was continued by one of his sons, Amir Mahmūd, who wrote a history of the reign of the early Safawids (cf. Storey, i, 304, 1279; Bregel', 854, 868).

Bibliography: In addition to the references given in the article, further references to manuscripts, editions and translations of Khwandamir's works as well as to secondary sources may be found in the works of Storey and Bregel' mentioned above and in the introductions to text-editions, notably those by M. Hidayat Hosain to the Čahāni Humāyūn, i-xxxvi, and the introduction by Djalal al-Dīn Humāyūn to the edition of Tehran 1333/1954 of the Habbīb al-siyar, i, 2-43.

(2. BEVERIDGE — J. T. P. DE BRUIJN)

KHANDÉSH, a region of west-central India lying to the north-west of the Deccan [see Dakhān], the upper valley of the river Taptī (also called Tāptī), and the surrounding plain and forest country bounded on the north by the Satpura hills and the river Narbādā, on the west separated from mainland Gujārāt [q.v.] by the northern ranges of the Western Ghāfs, on the south by the Sāmālā hills which separate it from the Deccan tableland, and on the south-west by the Laling and Gānā hills which divide it from the Nāsīk district of Mahārāstrā. There is no well-marked eastern natural boundary, and the governed district, whether under the Dihlī sultanate, the Fārūkī rulers, the Mughāls, or the Marāṭhās, has frequently included territories outside the natural boundaries. The region owes its name to the Fārūkī rulers who, not being admitted by their more powerful neighbours of Gujārāt, Mālwā and the Deccan to the status of sultans, were known by the lesser title of Čhān; but it has been suggested that the name Khandēsh is a convenient Islamicisation of an older form. The Mughal sāba of Khandēsh was for a time renamed Dandēsh after Sulṭān Dāniyal [q.v.], youngest son of Akbar.

The Taptī, an ancient river flowing in a deep bed, is of no value for navigation or irrigation, although perennial; but its tributaries, all the more important of which lie on the left bank, provide irrigation water, and there is an abundance of wells in the central region. This is a 250 km. stretch of rich alluvial plain, ideal for cotton and foodgrains. The northern tract is hill forest, inhabited chiefly by Bhils; the west and south-west are also well forested. In Mughal times the region was famous for its sugar-cane, indigo, the snow-white rice of Nawāpur, and its fine cotton and the cloth trade, especially the gold and silver brocaded cloth produced at Burhānpur (J. de Thévenot, Voyages . . . en Asie, Paris 1727, v, 212 ff.; —J. B. Tavernier, Voyages . . . aux Indes, Paris 1676; although Bernier points out that the labour was exacted almost by force and that the labourers were wretchedly poor). Much of its prosperity derived
from the trade-route from the north through the Burhānpur gap, along Khāndēsh, and to Sūrat.

1. History.—The Khāndēsh region was in the time immediately before the first Muslim conquest held variously by the Yādavas of Devagiri (= Dāwar-lataṭābād) or a branch of the Cawhāns at Aslīr. (The latter displaced the Tāks, a tribe (Tāks̄hāka) of Scythian origin; the statement s.v. asīrgārān identifies Tāks and Cawhāns needs correction.) In 693/1295-6 Aslīra was taken by ‘Alā’ al-Dīn Khālqī on his return north from the Decan; apparently the peace was not laid under tribute; although the Cawhān ruler and his family were killed. Asīr seems to have been occupied by another Hindū king. In 705/1306 Malik Kāfūr [q.v.], sent from Dihlī to exact the tribute from Devagiri, occupied Sūltān-pur in the north-east of Khāndēsh; six years later Kāfūr, again collecting tribute, established a governor at Devagiri, and hence presumably at least controlled the western part of Khāndēsh for Dihlī. Muslim power was reinforced firstly by Kūṭ Khālīn Mubārāk Khālqī, and later by Muḥammad b. Tughlūk. The fact that Malik Rādījā received this region in dājurāh from Fīrūz Shāh in or before 722/1320, and that the region does not figure in the fourth dājurāh of ‘Alā’ al-Dīn Bahman Shāh’s kingdom, implies that it continued to be regarded as part of the Dihlī dominions; but many petty Rādījūtī chiefs held sway even within the central Tāpfān valley region, and Malik Rādījā’s first task as dājurdār (later sipah-salar) for Dihlī was bringing them under tribute. Malik Rādījā’s independence from Dihlī did not come until about 784/1382 (it is worth stressing that this fell before the independence of both Gūdjarāt and Māwlā); for the history of the region from then until the capture of Asīr by Akbar in 1099/1682, see the article Fīrūzshāh.

The Aḥīn Akbari (tr. Jarett, li, 222-7) describes the district and its products and revenues at the time of its absorption into the Mughal empire, and European travellers (Fitch, Newberry, Jangigny) supply further information: it was highly fertile and well populated, and its markets well stocked. The Aḥīn enumerates its sub-divisions (Nandurbar and the western districts of Haydarābād in return for the guaranteed safety of the centre, and when in 1173/1760 Aslīra fell to the Peshwa Bādīl Rāo the Marātā possession of Khāndēsh was complete. For some years it remained peaceful, and recovered its prosperity, but later suffered in internece Marātāh struggles, and from plundering by Bhīls and by disaffected Arab mercenaries in Marātāh employ. The British, first appearing in 1779, took Burhānpur and Asīr in 1803, and eventually the district was ceded to them in 1818. For the general history of the region under the Pešwās and others see Mārātāh.

The British assumption of power was met with sporadic resistance from Arab bands (especially at Amañēr, Sōngir fort), and everywhere from Bhīls (two tribes of whom, the Tādvī and the Nīrdhī, are Muslim, at least nominally), and it was not until 1846 that the district was finally pacified. With the reorganisation of district boundaries under the British, the Burhānpur-Aslīra region became part of the Nimār district of the Central Provinces (1864). In 1906 the district was divided into two new districts, West and East Khāndēsh; these are now known by the names of their headquarters towns, Dhuḷī and Jalgaon respectively.

Bibliography: For the early period of Khāndēsh history see Bibliography to Dihlī Sultānāt; for the Fārūkī period see that to Fārūkīs, also asīrghārān, burhānpur, thālmēr. To these now add H. K. Sherwani and P. M. Joshi (eds.), History of medieval Deccan (1225-1724), i (1926); W. Foster, Early travels in India, London 1921, for Fitch, Hawkins, Finch, Coryat; ed. idem, The embassy of Sir Thomas Roe in India, Hakluyt Soc. 2nd ed. 1926; ed. idem, English factories in India, 13 vols., Oxford 1906-27. Spate, India and Pakistan: a general and regional geography, 2nd ed. London 1957, index s.v. Khāndēsh. Now out of date in many particulars, but still very valuable for detailed descriptions of sub-districts, towns, products, ethnography, and history of British period up to 1880: Gazetteer of
KHĀNĐÈSH — KHĀNĪN

the Bombay Presidency, xii (Khandesh), Bombay 1880; also Imperial gazetteer of India, xv, Oxford 1908, 225-39 (J. Burton-Page). AL-KHĀNDI (see Handiç in Suppl.).

KHĀNFū, an Arab name, denoting what was in the 3rd-4th/9th-10th centuries, the most important port of China, and centre of the maritime commerce with the peoples of western Asia. Certain scholars have in the past (from J. Klaproth, in J.A., v (1824), 40, up to I. Hallberg, L'Extrême-Orient, etc., Göteborg 1906, 213) tried to prove that Khānīfū should not be identified with Canton, but the identification of the two cities seems certain. This view derived support from the fact of the confusion between Khānsā (Hang-čū) and Khānīkū (Khānīn) made by the informants of Abu 'l-Fidā (tr. Guyard, ii/4, 122-3); but in fact, Khānīn was the name by which Canton was known in the 3rd/9th century to the Arabs, since Khānīn is the rendering of Kuang-fu, the popular form of Kuang-ču-fu. According to Pelliot, Notes on Marco Polo, i, 272, s.v. "Chin", there is a piece of information in Yi-tsing which states that "Chī-na (Chin) is Kuang-fu (Canton); Mo-ho-čē-ma (Mahācīṇa) is the capital (Ch'ang-nan = Si-ńg-fu)"; cf. Chavannes, Religieux éminents, 56. Again following Pelliot, thirty years after Yi-tsing (in 730), an ancient passage can be found in the Siu Ku-Kin Yinchou-či (Tripitaka, kie, iii, 93b): "The kingdom of Yiu-ťu (India) generally calls Kuang-fu (Canton) 'Čhe-na' (Chīna), and gives to the imperial capital (Si-ńg-fu) the name of 'Mo-ho-čē-ma' (Mahācīṇa)". This note has passed into the Song kiao-seng čum (Tripitaka, che, iv, 76b); cf. Bagchi, Le canon bouddhique en Chine, ii, 551-2.

In his commentary on the Haddād al-Ālam, 224, Mincrsky gives some information concerning Khānīn not cited by that source. It was only in the 8th/14th century that Khānīn was confused with Khānsā [q.v.] by the Arab travellers and by historians of the Mongols. Ibn Bāṭṭāta, iv, 92, 271-2, calls the city Sin-Kālān (cf. Yule, Cathay, etc., iv, 109, 120); this name is the Arabic form equivalent to the Indian name of Mahācīṇa, whilst the Persian form was Cin-Kalan. Wāṣāf, ed. von Leiden, ii, 278-9; Ferrand, Relations de voyages, 43b; Rashīd al-Dīn, ed. Blochet, ii, 493, writes "Kongi (?) which the Persians call Cin-Kālān", which according to Pelliot, Notes on Marco Polo, 276, should be corrected to Kōnūfū, since this is one of the popular forms of Kuang-fu (cf. J. A. Boyle, The successors of Genghis Khan, New-York-London 1971, 283-4, "Chin-Kālān"). Finally, Abu 'l-Fidā, in his Geography, ed. Reinaud, 363-4, tr. Guyard, 122-3, writes Khānīkū, which may be read as Khānīfū (see above); this town (Ferrand, Relations de voyages, 30, 123) is said to be four days' distance by boat from Lūṅkūn-fū, i.e. from Lūṅkūn, which is mentioned in the 10th century as the land whose people had recently invaded Čampa. Lūṅkūn should be corrected into Lūfū and identified with Long-pien = Hanoï, and as being 20 days by land.

Ibn Khurāsān's information (text, 69, tr. 49) on the site of Khānīfū (at a distance of 4 days by sea and 20 by land from the more southerly port of China Lūṅkūn, modern Hanoï) can only apply to Canton, as was also noted by H. Hirth and W. W. Rockhill, Chau Ju-kua, St. Petersburg 1911, 22; cf. also Idrisī, ed. Jaubert, i, 84, 90.

Among the western sources, the name of Chin-Kālān appears in Odoric of Pordenone (Van den Wyngaert, Sinica-franciscana, 458) in the form "Censcala", probably to be read "Cencala"; in John of Marignoli (ibid., 343) in the form of "Cynkalan", in a context which opposite this name, of which he says "it is Greater India", to that of "Cynkali", of which he says "it is Lesser India" and which he calls "Mynibr"; and finally, in the Catalan Map under the form "Cincalan", probably borrowed from Odoric (cf. on all these facts, Pelliot, op. cit., 275-6, s.v. "Čin", and 583, 590, 595-6, s.v. "Čaïton", also 833, s.v. "Silinguī").

Under the Tang, Canton was an extremely important port, where numerous Muslims settled, who in 778 plundered it (cf. Chavannes, Documents sur les Tou-hiue (Turcos occidentaux), St. Petersburg 1903, 173), an event not mentioned in Arabic sources. These last (Abū Zayd al-Sirāfī, in Reinaud, Relations des voyages faits par les Arabes et les Persans dans l'Inde et la Chine, Paris 1845, 64-5; Sauvaget, Relation de la Chine et de l'Inde, Paris 1948, 6, 40; Mas'ūdī, Marāqīā, etc., iv, 109, 120); this name is the Arabic form derived from the fact of the confusion of Khānīfū by the rebel general Huang-C'ao in 264/878-8; according to the Chinese sources, Canton was captured by this latter general in 879 (cf. S. Levy, Biography of Huang Ch'ao, Berkeley and Los Angeles 1935). It is in reference to this event that the "Flâng" of this city of overseas commerce is stressed (Pelliot, note on Ferrand's Voyage du marchand arabe Sulayman en Inde et en Chine, réédité in 85t suivi de remarques par Abū Zayd Ḥasan (vers 916), in T'oung Pao, xxı (1922), 410).

According to the Arabic information, the city gave 50,000 dinār each day to the government (Reinaud, op. cit., text 41; Ferrand, op. cit., 58). When a foreign vessel arrived, the Emperor sent his eunuchs there to select the best goods (Reinaud, text, 73-4); the journey between Khānīn and the capital Khūnda (Si-ńg-fu) took two months (ibid., 77, 103). The ruler (malik), i.e. the governor, of Khānīn bore the title of dīfū (ibid., 38; according to Reinaud, n. 81, ii, 27, for Chinese Ci-ču); cf. on this title, R. des Rotours, Traité des fonctionnaires et traité de l'armée, Leiden 1948, ii, 534 ff. c'e-fu "army of the capital cities"—one should certainly understand here "the chief of the armies of the city", hence the governor. Concerning the treatment of the Chinese of merchants who had come from across the seas, cf. T. Lewicki, Les premiers commerçants arabes en Chine, in RO (1935), 173-86 (bibliography), and the Persian text of 'Awfi in Bartholdt, Turkestan, i (texts), 98.

Bibliography: Given in the article.

KHĀNĪN, a town in al-Ṭirāk, on the Heiwan-Cay. The statement that Nu'mān V, king of al-Hira, was kept here a prisoner till his death on the order of his overlord, the Sāsānian Khusrw II, suggests that there was a fortress here in the period. The bridge of Khānīn must also go back to Sāsānian times; it is built of brick and plaster in several arches across the river valley. At the Muslim conquest, a battle seems to have been fought at Khānīn, for a "day of Khānīn" is mentioned in Ibn al-Fākīh. Under Arab rule Khānīn was a small town and an unpretentious station on the road from Baghādād to Khurāsān. Ibn al-Mu'tazz praises the wine of Khānīn. According to Abū Dulāf, a napthha well at Khānīn yielded a considerable revenue to the state. The Zuṭṭ were deported to [the region of] Khānīn after their rising in lower Mesopotamia had been suppressed in 279/893.

Le Strange, The lands of the Eastern Caliphate, 61, 62, 80. (P. Schwarz)  

**KHĀNKHĀH**, a composite word of Persian origin meaning a building usually reserved for Muslim mystics belonging to a dervish order. The terms ribâb, tekhâ, and khanfr\textsuperscript{3}, are generally called by him (44, 118, 188, 415, 430) Su\textsuperscript{7}fs, distinguished by him into specific groups and linked only with musâfi\textsuperscript{3}d or ribâb of the countryside. If one takes this information into account, it must be admitted that the early history of the khānkhāh cannot be properly elucidated until the early evolution of the Karrāmiyya and their eventual connections with the Manichaean saints are examined [see KARRAMIYYA].  

However, from the end of the 4th/10th century there seems to be an evolution of the khānkhāh (appearance of directors of them in Nishāpur, Frye, i, 360, 414, 468, 55b; al-Sam\textsuperscript{14}ānī, nisba of Khānkhāh; al-Sulki, Tabābāt, iii, 137, 344, iv, 127) into establishments connected with Sufi-\textsuperscript{8}fī links. These groups which become almost totally identified with them and largely disguise their origins. These groups are those of the Su\textsuperscript{7}fs, often allied to Shāfi\textsuperscript{9}i and Ash\textsuperscript{13}ar\textsuperscript{13}i; the emergence together of these and their links in eastern Persia has been too little studied (but see H. Halm, Die Ausbreitung der schaftischen Richtschriften, Wiesbaden 1974, and for the Sufi-Sâfī Add. 243 ff. (1972), 36).  

The first half of the 5th/11th century is one of founding and organisation. The Sūfī Ābū Sa\textsuperscript{15}d [see ĀBŪ SĀDIB ABÛ 'IΣYAR] (d. 440/1048) drew up a code of ten rules for the people in the khānkhāh (Achena, op. laud., 324, already noted by Nicholson, Studies in Islamic mysticism, 46). He was considered by the next generation as the first to have regulated the communal life in the khānkhāh. He links them with "a second source of evidence which still in use today" (Frye, ii, 74a). Such an enterprise inevitably led to the fabrication of references to it in the past. This is doubtless the reasoning behind the legend of the first khānkhāh, allegedly built at Ramla at the opening of the 2nd/8th century (al-Anšāfī, Tabābāt al-Ṣā\textsuperscript{12}bīyya, 9; in fact, according to al-Mukaddasi, 164 ff., the district of Ramla was sprinkled with coastal ribâb). Moreover, the terminology was still indefinite; madrasa could mean a centre for Sūfis (R. Bulliet, The patricians of Nishāpur, Cambridge, Mass. 1972, 253-4), and dina\textsuperscript{13}wān often alternates with khānkhāh to denote the same establishment (dina\textsuperscript{13}wān/khānkhāh of al-Sulami, in Frye, ii, 82a, iii, 6a, 18a, 274, 42a, 73a). Finally, from this period onwards, certain khānkhāhs are also burial places, a fact which enabled them to benefit from the largesse of pious pilgrims (Frye, ii, 47a).  

The second half of the century is marked by the alliance, in effect, of the people of the khānkhāhs with the Sālājūk ruling power. The ideological linkage of Šâfīfī with Šâfīfī-Ash\textsuperscript{13}ar\textsuperscript{13}i in Karrāmān now enjoyed an unprecedented expansion, not only on a local scale, but also outside the region (naturally, Ḥanafīfī was also able to adapt itself and integrate itself within this movement). Sālājūk expansionism, far from being territorial and political only, was often linked with an ideological expansionism, based in

Encyclopaedia of Islam, IV
the first instance on the spirited policies of official patrons. Nizām al-Mulk and his Khurāsānī imitators were not the only ones to found madrasas and khānkhāhs (examples of such patronage at Nishāpūr in Frye, ii, 278, iii, 192). The Sālḍūqīs of the west and their slave commanders, masters of Syria in the third quarter of the 5th/11th century, speedily imitated them at Aleppo and Damascus (lists of Syrian khānkhāhs in al-Nuṣayrī, Dāris, ii, 139-91, for Damascus; this list repeated with another for Aleppo and other towns by Elisseeff, op. cit., iii, 766, n. 1). From that time onwards, ribāt and khānkhāh seem to become synonymous; at the end of the 6th/12th century, Ibn Djuwayr was concerned about Ayyūbid Syria, "As for the ribāt, called here khānkhāh, there are many of them; they are meant for Sūfīs, and are splendid palaces, since Sūfīs are real Kings in this country" (Rībā, 256). In ʿIrāq, the word ribāt predominated (J. Chabbi, F. l. c., 1974; Achena, op. cit., 351).

In Egypt, the founding of the khānkhāh tradition, began logically under the Ayyūbids after the fall of the Fāṭimid dynasty in the later 6th/12th century. It continued under the Mamlūkīs, but with some slowing down after the second half of the 8th/14th century. The khānkhāh were then gradually transformed into official institutions, hence controlled and not always linked to the Sūfī orders, which accordingly tended to move into institutions enjoying more autonomy. Often they became part of complexes containing several institutions, e.g. masjīd-madrassa-mausoleum. Nevertheless, terminology remained still imprecise, and mediaeval historians could not always agree on the name for such and such institution (see for all this period, art. AL-KAHIRA, list of monuments shown on map, and section on Mamlūk khānkhāhs; al-Makrizī, Khīrāt, ii, 1, 41-47). From the Ottomans period onwards (10th/16th century), khānkhāh were still founded, but they appeared more and more in the form of the Turkish institution of the tekke (Pers. takiyya, Ar. tahriyya). A good number of these various institutions have survived to the present days (see AL-KAHIRA, section on the Ottoman period, Madrasas, tekkes).

There is, however, a general conclusion to be drawn here; that whilst the khānkhāh did not pass beyond Egypt, constituting the last wave of the original Šaldjuk expansion, the Turkish tekkes were carried along by the Ottoman conquests and reached the Maghībīs.

During this time, in the east the Khurāsānī khānkhāh swiftly spread beyond the Sālḍūqī domains and reached the eastern Iranian fringes and Afghanistān, sc. the territories of the Ghurānīs and then the Ghūrūds (middle of the 6th/12th century). The severe local upheavals involving these powers seem to have affected them little, but the opposite became true with the Mongol invasions of the early 7th/13th century. The last Ghūrūds, soon replaced by their slave commanders, founders of the Dihlī sultanate, fled to India. There followed a migration, which included the Sūfīs, comparable to that accompanying the westwards advance of the Sālḍūqīs. This does not of course imply that all the Persian khānkhāhs disappeared during the Mongol period, nor that new institutions were not built (Cambridge history of Iran, v, 372, 374).

But from the course of the 7th/13th century onwards, two new dervish orders, the Ḥiǧriyya and Subhāvardiyya, founded by refugees and soon based upon a widespread network of khānkhāhs, appeared in the new sultanate (Kh. A. Nizami, Some aspects of Khaŋghah life in medieval India, in St. Isl. viii (1957), 52-69; see also ĀṬĪYYA and OMDĪ). In the 8th/14th century, the reforms imposed on the Sūfī movement by Sultan Muhammad Tughūk took the form of a resumption of khānkhāhs but also of the extension of their network in the Indian territories [see DIĀLĀL AL-DIN AL-BUKHĀRĪ]. This type of institution, brought from Persia in the 7th/13th century, prospered more there than almost anywhere else right down to modern times and constitutes one of the characteristic manifestations of Indian Islam (see IIKMND, v [a]).

Constitution and functions. It is impossible to give here more than a few bibliographical references, since such a study would be intertwined with the immense and complex question of the links between Sūfism and its various forms and the contemporary society and ruling institutions. The most exhaustive work is J. S. Trimingham's The Suṣī orders in Islam, Oxford 1971; for the way of life in Khurāsānī khānkhāhs, Achena, op. cit., 79, 84, 97, 115, 120, 286, 289, etc.; for Egyptian ones, al-Makrizī, Khīṣ, is a rich source; for Indian ones, Nizami, op. laud.

Architecture. Since they were institutions meant both for leading the communal life (rooms for prayer, corporate sessions) and also for sheltering individual mystics, often in significant numbers, all khānkhāhs contained both types of accommodation (and frequently too various annexes and dependent buildings permitting self-sufficiency). However, there was a great gulf between the sumptuous buildings founded under official patronage (Syria, Egypt) and the first Indian khānkhāh. But neither of these gave rise to a special type of architecture distinct, for instance, from that of the madrasas (Elisseeff, Nūr ad-dīn, iii, 265, 266). Moreover, at the end of the Circassian period in Egypt (the 15th century), the khānkhāhs were integrated within great funerary complexes; they ceased to have individual living-rooms within them, and became non-residential centres for Sūfī activities [see AL-KAHIRA, section on the Mamlūk period, Khānkhāhs].

Bibliography: given in the article.
21-2, writes Khinzay (or Khanzay, Blochet, op. cit., 499, Quatremer, op. cit., LXXXIX) and (apud Barthold) Khinray. Hamd Allah Mustafa Kazwini, Nukka, ed. Le Strange, 235, 1. 10 and 261, 1. 10, writes Khinsay. Ibn Battûta, iv, 284 ff. has Khansa (as in F. Ferrand, Rel. de voyages et textes géogr., ii, 1914, 429), and connects it with the poetess al-Khansa5 [q.v.]. Abu 'l-Fidâ', tr. Reinaud, Geogr. d'Aboulfida, 124, has Khansa and also Khinza, as in Ferrand, loc. cit., and Blochet, in JRAS (1917), 9. Amongst the other sources, as well as Marco Polo, tr. in Hambis, La description du monde, 195, 206-14, 217-18, 398, is Oderic of Pordenone, in Van den Wyngaert, Sinica Franciscana, i, 463 (with apparatus criticus), who writes "Canssy", "Canssay": Marignolli, in ibid., i, 548, who writes "Campsay"; Pegolotti, in G. F. Pagnini, Della decima..., Lisbon and Lucca 1766, ii, 1, and Yule, Cahay, iii, 148, 172, "Chassai"; and in the Livre du Grant Cason, sometimes attributed to John of Cora, in J.A, vi (1830), 60, "Cassay". On the other forms in various sources, see I. Hallberg, L'Extrême-Orient dans la litt. et la cart. d'Occident, Göteborg 1906, 428-9.

**Bibliography:** The best data can be found in A. C. Moule, Quinsars, Cambridge 1957, 1-53, to which may be added the Islamic sources: Quatremer, op. cit., LXXXVII ff., and in Ch. Scheler, Centennaire de l'Ann. des Indo-Erman., 19, 20-34. On the foreign colony at Hang-ču, see Hirth and Rockhill, Chao Ju-k'ui, St. Petersburg 1911, 16; and on the town, Hirth, Uber den Schiffverkehr von Kinsay zu Marco Polo's Zeit, in TP, v, 186-390. (L. Hambis)

**Al-Khansa**3 ("the snub-nosed one" or "the gazelle"), sobriquet of Tumadir bint 'Amr, of the tribe of Sulaym and the clan of Sharld, Arab poetess of the pre-Islamic and early Islamic periods. She was born ca. 575 A.D. in the 'Aliya of Nadj, where her tribe was encamping. Only a few outlines of her predecessors. The basic stock-in-trade of images and in the eulogising of the dead poetess of Sulaym, apart from her undeniable personal sagacity, eloquence in tribal contests of oratory, etc.), which still remained fairly stereotyped in al-Khansa's poetry, was enriched by her with new expressions; these became fixed in the history of the genre after her, but she brought in addition to these new stylistic and metrical embellishments which assured her a primacy in the elegiac genre which none could later dispute with her. One should nevertheless add that her verses make striking reading (there are about 1,000 of them, some of doubtful authenticity), especially the most famous of them, not only by their technical accomplishment, but also by the intensity, violence and tenderness of feeling, all of which place al-Khansa well above the average level of accomplishment. She herself proudly summed this, at the same time, of 'Ukâ' and elsewhere, by her insistence on a primacy in grief, no doubt along with a consciousness of her calibre as a poet. Although tradition makes her welcome Islam and even exhort her sons to fight to the death for the new faith, her poetry is wholly pagan in feeling, and her view of life and death is invariably that of the ancient Dâhiliyaa.

Al-Khansa's elegies were gathered together into a Diwan in the 'Abbasid period, probably by Ibn al-Sikkît, and enjoyed great fame amongst the Arabs as models of the genre. Apart from the citations in Ibn Sallâm, Ibn Kutaibâ, the Aghâne and other authors of 9th and 10th centuries, the poems have come down to us in several manuscripts of varying value, on which (and above all on the excellent Cairo ms.) was based the edition with commentaries of Père L. Cheikho (Beirut 1886, preceded by another edition of the same author, Beirut 1888). Père Coppier provided a good French translation (Beirut 1889), and there are other examples in Italian by G. Gabrieli in the book cited below.

**Bibliography:** T. Noeldeke, Aklansâ, in Beiträge zur Kenntniss des Poesie der alten Araber, Hanover 1864, 152-82; G. Gabrieli, I tempi, la vita e il concorrere dei poeti arabi della Dlwan aqwal al Khansa, Florence 1899, 2nd ed., Rome 1944; N. Rhodokanakis, Al-Khansa und ihre Trauerlieder, in SBAW, cxvii (Vienna 1904); R. Blachere, HLA, 290-2 (very sceptical, as always, about the poetess's life and the authenticity of a part at least of her work). (F. Gabrieli)

**Khwânsâr, Sayyid Mirza Muhammed Bâsîr Mosâfî Châh-rûskî b. Mirza Zayn al'âdhnî** (1811-95), was born into a religious notable family in Persia. He studied Arabic and theology under his grandfather, Sayyid Abu 'l-Kâsim, and others. After his grandfather's death in 1824, however, Khânsâr moved with his father to Isfâhân where he studied fiqh, hadîth, and other religious subjects under Shaykh Muhammad Ta'âlî, the grandfather of Aka Nadjâfî (q.v. in Suppl.), Sayyid Muhammad Shahâhâhâni, Muhammad Ibrahim Karbâshi, and Sayyid Muhammad Bâsîr Raghtî, known as "Hudjdjal al-Islâm". During a visit to the shrine cities of 'Irâk, Khânsâr continued his studies under the religious authorities, from a number of whom he received his degree of idjâthâd. As a mujtâhid he became expert in both traditional and rationalist sciences and gradually received a widely-based recognition as a religious leader in Isfâhân. Apart from leading congregational prayers and performing other religious functions, Khânsâr lectured regularly before a sizable number of students in the field. Several great religious leaders and sîlos, al-tâbî'îs whom we know of have been mentioned among his disciples, such as Sayyid Muhammad Kâ'îm Tabâtaibâ'î Yazdî (d. 1919) and Mirzâ Fath Allâh Shaykh al-Shârî'î Isfâhânî (d. 1920) (see A. H. Hâiri, Shi'ism and Constitutionalism in Iran: a study of the role played by the Persian residents of Iraq in Iranian politics, Leiden 1977, 62-3).
Khansari was also an active and productive writer; the classical journal al-Murshid has ascribed to him 14 books and treatises on Arabic syntax, Islamic dogmatics, jurisprudence, and ethics, and other related subjects (All Wāgī Khīyabānī, Khīābī ‘ulamā’-i muṣūrīn, Tabriz 1947, p. 7). The grandson of Khansari’s brother, Sayyid Muhammad Mahdi Mūsawi, has added in his Aṣāṣan al-wadā’i, i, Nadjaf 1968, 102-28, another four items to the list of Khansari’s works, the most well-known of which is, of course, his biographical dictionary, Rawdāt al-‘ulamā’ fi aḥādīth al-‘ulamā’ wa l-ṣādiq, Tehran 1889.

Khansari compiled his Rawdāt in 1869, after having worked on it for over ten years. This book, which contains the biographies of over 700 learned men including the author’s own (pp. 126-8), was compiled in an unusual manner which makes reference to it fairly difficult. The following authors therefore compiled separate guides to the book: Mīrza All Rawṭatī, Khān-Allah and Sayyid Muhammad All Rawdātī, Khansari’s son and great-great-grandson respectively, Muhammad Bākīr Ulfa, and Muhammad All Mu’ālim Ḥabīb-bābī (Lutf Allāh Hunafar, Gānjina-yi ortex-rī tākht-yi Isfahān, Isfahān 1965, 825).

Khansari’s approach to the subjects discussed in his Rawdāt was not always objective; it was in fact overshadowed by certain sectarian tendencies, especially when he dealt with delicate problems such as the possibility of Ṭaḥṣī’s active role in the extinction of the ‘Abbāsid caliphate in 252 (Rawdāt, 605, and Abdul-Hadi Hairi, Naṣīr al-Dīn Ṭāḥṣī: his alleged role in the fall of Baghdad, in Actes du 7e congrès International d’Arabistants et d’Islamistes, Bruxelles, 31 août-6 septembre 1970, Bruxelles 1971, 235-66).

Since its appearance, however, the Rawdāt has enjoyed a great reputation among the students of the field; it has been described by the journal al-Murshid as “the best and the most useful” (aṣāṣan wa anwa anfā) source among 14 other biographical dictionaries, such as the Wafaydt al-a’yan of Ibn Khallikān and the Amal al-Āmil of al-Hurr al-Āmilī (Wāgī, ‘Ulāmā’-i muṣūrīn, 34). The fame of the Rawdāt has reached such an extent that its author himself has often been identified by the book and has been referred to by some biographers as Ṣāḥib-i Rawdāt al-Djinnāt (“the author of . . .”) (Muhammad All Muddarīs, Raybānāt al-‘adāb, iii, Tehran n.d., 366-7). Many of his numerous descendants also took their last name from the title of the book and called themselves “Rawdātī.” Khansari, who was buried in the Taḵt-i Fālid of Isfahān, left seven sons, five of whom succeeded in occupying certain distinguished religious positions.

KHAN-ZADA BEGUM — KHVAR

KHAN-ZADA BEGUM, the title (“Princess”) of Sevin Beg, a grand-daughter of Ozbeg, the ruler of the Golden Horde, and the wife successively of Timur’s eldest son Djahangir and his third son Miranâghâh. After Miranâghâh’s outbreak of madness at Tarbriz she came in person to Samarkand to report his behaviour to Timur. Daulatâghâh describes the interview with their father-in-law “with colourful details which are not in the other sources and can hardly be true”.

KHANDIT (Grk. Antizene, in Yâkut Hinzit), name of the province and of the basin enclosed between the great bend of the Eufrates to the NNW, Sevin Beg, a grand-daughter of Ozbeg, the ruler of the Golden Horde, and the wife successively of Timur and Firdûshâ. (Houtum-Schindler, cited in bibliography). After Miranâghâh’s outbreak of madness at Tarbriz she came in person to Samarkand to report his behaviour to Timur. Daulatâghâh describes the interview with their father-in-law “with colourful details which are not in the other sources and can hardly be true”.

KHAPUTS (Russian designation—Khaptuttsî, Gupatuntsî, Khaputuntsî from the ail Khaput); other designation—Khaptul. A small Caucasian ethnic group, forming with the Krîz [q.v.] and the Dzhek the Dzhek subdivision of the Samurian group (Lezhgin, Agul, Rutul, Tsakhur, Tabasaran, Budukh, Dzhek) of the Northeastern Ibero-Caucasian language family.

According to the Soviet census, in 1926 there were ethnically 12 Khaputs, and linguistically 4,284 (including speakers of Dzhek and Krîz dialects); in 1933 (estimation) there were 3,000 Khaputs, living in several auls in the Shahdadag area, southwest of Konkahkend (Azerbaijand S.S.R.). The Khaputs are Sunni Muslims of the Shâfîite rite.

The traditional economy of the Khaputs was based on sedentary animal husbandry, agriculture, and horticulture. The Khaput language is only a variant of Dzhek (as is Krîz), which is a purely vernacular language; Azeri is used as the literary language, and the Khaputs are being culturally and linguistically assimilated by the Azeris.

KVAR, a group of villages in northern Persia, at present in the jâhristân of Garmârs in the Central Province (ustân-i markazi), centred on approximately lat. 35° 15' N. and long. 52° 20'E. and lying at an altitude of 2776 feet. It is bounded on the north by the mountain districts of Damâwâd and Fîrûzkûh, on the east by Simnan, on the west by Varâmdin and on the south by salt desert stretching away to Khług and Ardîstân. It was often called Khîrîrî-Ray to distinguish it from another Khîrîrî in Fârs about which little is known. As a district, Khîrîrî was generally considered to include the historically known villages of Ahrâdân and Dîh Namak (earlier Karyat al-Milb), but not Lasgird to the east or Aavyânkây (Ayyân-i Kayf) to the west.

Khîrîrî lies on the plain just east of the pass which is now identified with the Caspian Gates of the Ancient World, and constitutes a stage on the old arterial route that skirts the southern slopes of the Alburz from Rayy to Khurâsân. It was reckoned as three marches from Rayy and three from Simnan. An important route to the Caspian Sea leads north from Khîrîrî up the valley of the Ḥabîla Rûd, and the stone road (sangfargh) that was built under Shâh ʿAbbâs to shorten the route from Ṣafâhân to Khurâsân starts some 10 km. to the south of the fields of Khîrîrî and leads south over salt flats (kâvir) to Sīyâh Kûh. Much of the sangfargh is still intact. The name Khîrîrî was characteristically applied both to the district and to the primary village; today, the name Garmârs is similarly applied to both. Historically, the present centre was known as Kishlâk, and this lies 114,5 km. from Tehran by the railway line that was completed in 1938. Kishlâk remains the formal name of the bakhsh (administrative division) of the district. The name derived from the fact that Khîrîrî has historically served as the kishlâk (“winter quarters”) for the population of Fîrûzkûh in the mountains to the north, with which it has always been closely connected. Garmârs is probably simply an iranisation of Kishlâk, although Garmârs is the more common equivalent. Paradoxically, Khîrîrî was considered to be the coldest part of the province of Kûmîs.

Khîrîrî was a flat, well-watered plain surrounded by mountains on the north and west and looking out on to the great salt desert on the south and east. Alberts, in Social structure and culture change in an Iranian village (see bibliography), estimates the total area of the district at 2,000 km.² of which 230 km.² were the cultivable lands of 73 villages, and 185 km.² were cultivated in 1956. Twenty of the villages were khâlisâ (q.v.). According to the 1966 Census, the population of the district was 35,678, an increase of some 2,000 over the figure given in the first Census a decade earlier. This population was by no means homogeneous. Apart from Persian-speaking cultivators and transhumants from Fîrûzkûh—some of whom are said to speak a Samî dialect—there are several tribal groups which are mostly Turkish speaking. Of these the most significant are Pazuki, Osanlu, Alikahi, and Koti (transliteration uncertain). The Pazuki were traditionally a landowning élite in Ahrâdân, and appear to have split from a larger Pazuki grouping and settled in Khîrîrî at the beginning of the 19th century (see Houtum-Schindler, cited in bibliography). The other groups are pastoralist, and in 1958 the Koti still lived exclusively in tents (see Alberts).

Khîrîrî owes its existence as an agricultural centre
to the Habla Rūd which flows down from Firūźkūh. Curzon, Persia, i, 293, writes of an "abundant stream" that "descends from the mountains and separates into many channels, of which I must have crossed twenty in the space of half a mile. Cultivation improves in the same ratio, and at Kischlak ..., which is khālīsah, or Crown property, is responsible for the grain and fodder with which the royal stables are supplied at Teheran".

In the late 1950s, 59 of the 73 villages of Khwār took all their water from the river. Three were supplied exclusively from ḫandāts while the remainder used both. There were 30 functioning ḥandāts and 15 in disrepair. The water was regulated for irrigation purposes by the Independent Irrigation Authority (Bungāḫ-i mustabbil-i ābāyrī). Regulation and supervision were essentially apparent; when the water was low during the summer season, the villages would send representatives to watch upstream distribution points to prevent theft, and during the spring floods, damage was common (see Alberts).

Khwār provides an excellent example of a small-river irrigation system from the Iranian Plateau. The annual statistics of the Bungāḫ-i mustabbil-i ābāyrī for the 1950s show that the average monthly flow of the Habla Rūd at the point where it enters the plain varied between a low in late summer of 1.2 and a high in spring of 22.6 cubic metres per second. (For comparison: during the same period the most important river on the Plateau, the Zayanda Rūd at Isfahān, showed a low of 13 and a high of 202 cubic metres per second).

The existence of such a good and reliable supply of water at an isolated point on a major arterial route makes it a priori likely that Khwār would have been one of the earliest centres of agricultural development on the Iranian Plateau. This hypothesis is corroborated by the known antiquity of the name Khwār and the abundance not only of ruins but of impressive archaeological mounds; unfortunately, however, no intensive archaeological research has yet been undertaken that might confirm it.

Because of its position as a stage on the route to Khūrāsān, most travellers' accounts, geographies and histories, from the earliest to the most recent, contain some reference to Khwār, yet it seldom seems to have stimulated more than a passing reference to its pleasantness or unpleasantness. It may never have supported a town large enough to engage the traveller's attention, although Ibn Hawkal does use the term ḥāvr to describe it. Generally, its fortunes seem to have varied with the long-term trends of the Plateau. Before it was occupied and plundered by the incoming Oghuz in the first half of the 5th/9th century, it was considered populous and fertile. It generally had an independent but low-ranking governor, and much of it became khālisah under the Šafawīds. Under Rīdā Shāh, the district became a bahās of Tehran, and was only restored to its relatively independent status as a khāristān during the 1960s.

The district of Khwār is unique as the site of the only detailed village study that has yet been carried out on the Iranian Plateau (by Alberts, see bibliography).

KHWĀR — KHARĀDJ

Kharādj, a word derived, via Syriac, from Greek ἱγγούτα, but attached by the Arabs to the native root ḥ. r. d. Contrary to its original meaning, the word seems in the current usage of the Near East, to have denoted "tax" in general, and is in fact found with reference to various specific taxes, thus causing considerable confusion (see ḏijzā).

Arabic technical and legal literature uses it more specifically, at least in the period before the formation of Turkish states in the sense of a tax, and it is this sense which is exclusively discussed in the present article. For other taxes, see Bāyt al-Mal, Darība, Darība, ḏay'ā and ḏijzā.

I.—In the Central and Western Islamic Lands.

At the outset of their conquests, the Arabs—whatever agreements had been made with the conquered towns—were in general willing to levy some kind of tribute which would reflect their own sovereignty and lordship, whilst leaving to the indigenous authorities the task of raising the taxation according to their own traditions, as being the only authority capable of doing this. Even when a financial organisation more integrated with the new regime was set up, they were unable, or were largely unwilling, to do anything but follow the old traditions here, which were adapted to local circumstances and inherited from a long background of bureaucratic state organisations. It was of little importance that for the Arabs, these taxes were an acknowledgement of Islamic domination; for the populace, it was simply a case of the old taxes going to new masters. Because of this continuity, the Islamic fiscal system varied from region to region in such a way that it would never be able entirely to absorb the conceptualisation of the fitḥ or the centralising efforts of the ʿAbbāsid administration. It is accordingly all the more necessary to bear this basic truth in mind, since the paucity of information means that there is a risk in applying the state of affairs in certain regions which were privileged in this respect, above all Irāk and Egypt, to other parts of the Islamic world, whose individual characteristics must on the contrary be brought out.

Whether the texts of treaties handed down by later authors like al-Baladhūrī are completely authentic or whether they have been put together later in order to explain the actual existing differences of organisation, known as such but not actually explicable, they undoubtedly convey the ideas of the first generations of Muslims. Some general principles emerge from amongst the particular practices. The first is the guaranteeing of their lands to all proprietors—at this time non-Muslims—in such a way as
to assure their value. They paid tax on these lands, apart from certain groups of owners on the frontiers, from whom some form of military service was required in lieu of tax, and apart from some pastoralist groups who paid in other ways, e.g. in slaves, beasts, manufactured products, etc. It is true that at the outset, there was a feeling amongst the Arabs that they should acquire the lands, which would then be liable only to the voluntary precept (takāt) paid by the Muslim to the Islamic community; but the first caliphs assured the victory of the principle of the ḥārādji paid by the convert had to pay the zakāt [q.v.], the benefit allowed for in the whole operation became very debatable. It was only later, under the pressure of an evolution of the state of affairs, that conversions took place collectively by whole villages, without the fiscal structure being however changed.

From the technical point of view, there were two great problems in the administration of the ḥārādji: those of perception of the tax and of its method of collection. In all directly administered districts, a land survey or cadaster had been made [see ʿamār]. But whilst in the lands under the Sasanid tradition and in others like Egypt, the basis was a fixed unit of land surface, the ḥārādji in the East and the faddān in Egypt, in other, former Byzantine lands—as in the greater part of Europe—the unit was the amount of land which could be ploughed by a pair of oxen, which meant differences in actual area involved, according to the differing geographical conditions. In the latter case, the same amount of tax could be levied on two different amounts in area of land; but in the first case, the unit of surface area had to be adjusted in order to fix a level of taxation suitable to the land's potential. The factors involved here were essentially those of irrigation, natural or artificial, but also the general fertility which could be estimated experimentally through a periodic survey of the average yield over a certain number of years, with reductions and even exemptions being granted in the case of natural disasters; this procedure of estimating was called ʿibra.

This question was, in fact, linked with that of the method of payment of the tax. In ancient times, there had been, ʿgrosso modo, no other possibility except the sharing of the crop, according to fixed proportions, between the cultivators and the state. But, as a money economy developed, the inconveniences of this procedure began to be felt, e.g. transport difficulties, fluctuation of prices and consequently of the real income accruing to the state, profits for speculators and injustices for the tax-payers. Hence the Roman and Sasanid governments introduced a system involving a fixed tariff of payment, and where possible, payment in money. Conversely, the disadvantages of the new system were not long in appearing: the peasants, rarely having immediately at hand the monetary sums demanded by the treasury, were obliged to borrow, often under ruinous conditions, and grain merchants could speculate on the difference between the low prices at harvest times and the high prices of the stocks of grain subsequently released. The Muslim régime at first retained as they were the Roman and Sasanid usages which they found in the conquered countries, but under the first ʿAbbāsids there was a reversion, at least in the Sawdāʾ of Baghdad, to a proportional payment in kind, which furthermore best corresponded to the requirements of provisioning the great city; whatever one may say, it does not seem that this reform was generally applied elsewhere, and especially not in Iran. Indeed, in many provinces there was a mixed system, i.e. proportional payment in kind was exacted on certain products of the ground (especially grain), whilst others were taxed on a monetary basis (especially plants used in manu-
facturing, hence of more commercial utility). Moreover, even in the case of payment in kind, there was allowed, by means of a table of equivalences (ta'sir), the substitution, at least in certain cases, of one product for another, e.g. a quantity of wheat for a double quantity of barley (barley cost usually only half that of wheat), etc. The system of payment in kind had various names, the most general being *muḥāsama* (lit. “sharing”), that of *kharāḍj* itself, and at the same time others specially connected with a particular technical term or usage (in Egypt, *mufādana*, taxation by *faddān*), meaning taxation in kind generally. In effect, *muḥāsama* brought the taxpayer into the same status as the share-cropper, especially the share-cropper on state lands, because the latter always paid his dues to the landholder in kind on a basis of proportional sharing-out. It is possible that the *muḥāsama* system spread *pari passu* with that of the military *iḥdā* [q.v.], since in general the *muḥā* was a person already accustomed in other circumstances to control property exploited by métayage, and found the direct delivery of grain useful for his animals. Various lesser taxes were added to the *kharāḍj* proper, despite the lawyers’ protests, in order to compensate and remunerate the different officials involved in the perception and collection of the tax.

In Egypt, where various authors dispute whether there ever was properly speaking any *kharāḍj*, taxation in all forms had its own special features, due especially to the rise and fall of the Nile floods and the use of them by the state since the time of the Pharaohs. In Egypt, the survey made at the time of the seasonal fall of the waters showed not only the area of land involved but also the necessary amount of cultivation to be done in the season and the sum that could normally be expected. It is because of the misunderstanding of this system that it has been thought, on the basis of a passage in Ibn ‘Abd al-Hakam, that this involved a tax system by apportionment, with a global total fixed arbitrarily in advance and then divided out by quotas on the districts and then villages. It was in fact nothing of the kind, but it was possible to calculate in advance the expected total, and for the process of perception, the accountancy offices of the time noted first of all the total and then the details.

In districts where administration was difficult, or simply when it was desired to favour some exalted person, *iḥdā* [q.v.] reductions or *muḥāsama* tax-farming contracts were granted to be set against the *kharāḍj*. In many cases, and especially in Egypt, where the system worked to the benefit of the army leaders, a notable guaranteed in advance the sum of taxation which the area was obligated to pay the exchequer (the *kabila* [q.v.] system). In Egypt, there was a kind of adjudication process, and the sum handed over was not that of the tax, but of the tax with the subtraction of the equivalent of a salary for the beneficiary, an original local adaptation of what was later where the *kabila* [q.v.] which was to lead to the *iḥdā*. Furthermore, it appears that the peasants were compelled to cultivate certain lands belonging to the state, on which they paid taxes (rusūm) distinct from the *kharāḍj*, and this was also the case with pasture grounds. There was also added to the tax proper, on all the village, various small exactions in kind (straw, chickens, etc.). Inevitably, many places were in part or wholly bankrupt; in that case, the remaining amount (*kād*) was noted down and carried over to the next assessment. Since this in itself reduced the chances of attaining solvency, a compromise was usually reached after a certain time. In regard to collection of taxation in kind, it often happened that the peasant had not enough seed left from his own share of the crop to sow for the following year; he might then be lent, perhaps as a simple advance, a quantity of seed (*badrān*). The later development of the *iḥdā* system was to affect the levying of the *kharāḍj* but not its organisation, which was a miscalculation, *muḥā* had to respect. A tax paid in kind or narrowly dependant on the harvests was naturally paid according to the solar year; but in the case of tax-farming by contract or of a fixed amount, the exchequer made as many as possible of its demands by the lunar year, as with all other taxes not linked with the land. It appears also that payments were often made not all at once, but e.g. in three installments; this was especially the case for taxes paid in cash, which the tax-payer had more latitude in obtaining. But apart from this, the taxes levied in kind or in cash on cultivated land were naturally paid over at different times and for the crops ripened at various points of time.

For the ‘Abbāsid caliphate, we possess four budgets, bearing almost exclusively on the land tax, and leaving aside the other taxes. These budgets have been discussed in the article BAYT AL-MAL (add to the Bibl. there S. al-‘Aff in the present Bibl., below).

The various modes of tax-levying have already been alluded to. In general, administration and perception of taxation by a state agent (‘damīn) was distinguished from tax-farming (*damān*), which, as explained, should be distinguished from *kabila*. Whatever régime was involved, the tax-collector arrived accompanied by police officers and various technical staff, such as the surveyor (*waṣīţ*) and the assayer-money changer (*iṣḥābād*), for whose benefit the minor taxes mentioned above were exacted. Naturally, these all had to be given hospitality, which was also done according to a tariff. The various operations stretching from the preliminary survey to the actual collection generated mounds of papers setting forth the situation from the exchequer’s point of view on one side, and the tax-payers’ one on the other, and the final demand handed over to the payer had to be paid and a receipt obtained.

All that has been said so far rests on a purely eastern documentation and thus concerns the Muslim east exclusively. In the west, the information available and the studies so far made do not seem to admit such precision. A fairly strong impression may nevertheless be gleaned that at the time of the Arab conquests there was not so strong a division made between the possessions left to the indigenous peoples and the Muslim share of property, and that very often the Arabs and Berbers had to acquire lands to which they would have had no right in the east. Whence there resulted, it seems, both in terminology and in practice, a certain confusion between *waḥr* and *kharāḍj*, as much in the Maghrib as in al-Andalus. It does not appear—unless perhaps for a while under the Fātimids in Idrīsīya—that the efforts of the Spanish Umayyads or the Almohads in Morocco and Spain had any result in this direction. The word *kharāḍj* itself is only used rarely outside Fātimid and Zirid Idrīsīya, and only in a vague sense. Other terms appear instead, whose precise meaning is uncertain, and it seems that the tax-payers had in fact to pay much much more than an *waḥr*. In regard to Sicily, al-Dāwūd’s treaty bears witness to the confusion of the jurists themselves.

Further confusions appear to have resulted in the
east itself, in the Anatolia wrested from the Byzantines by the Seljuk Turks. Since most of the lands there were considered as state property, there was no kharādī properly speaking, but the peasants, assimilated in some degree to the share-croppers on public lands, did not thereby pay any the less taxation, which was combined with the ḡīṣyā which they had to pay as non-Muslims. In practice, the term ḡīṣyā came to denote the whole complex of their obligations, essentially pertaining to the land, and the word kharādī, taken at first in a vague sense, was applied progressively to the personal poll-tax. This inversion of the state of affairs in classical Islamic times was to be extended in time and area all over the Ottoman empire. One is tempted to conclude that, in the general context of the Muslim east, where the Turks were nurtured and formed, the meaning of terms in current usage never corresponded exactly to the official definitions; one may find a confirmation of this in the preservation in Syrian usage of the Byzantine dimāsājdāmosīn to denote the basic taxation, which one never finds used thus in official texts before the Crusades, but after then till the Ottoman conquest.

**Bibliography: 1. Sources.** The first specialist treatises devoted to the kharādī and related questions which have so far been given in the course of studies on the texts by the authors mentioned above. One might add, for example, Yabābā b. ʿĀdīm, ed. Juynboll, Leiden 1896, Abū Yūsuf (written for Hārūn al-Rašīd) and, on a larger scale, the K. al-Amwāl of Abū ʿUbayd b. Sallām, ed. Cairo 1535. To these should be added, from a century later, the K. al-Kharādī (with a wider range of contents, but incompletely preserved) of ʿUdāmā b. ʿAbdallāh, unedited. The essential core of these texts is the point of view of taxation, has been tr. by A. Ben Shemesh, *Taxation in Islam*, i (Leiden 1958), ii (1965) and iii (1969), but with a commentary of very unequal value. Abū Yūsuf has been tr. into French by E. Fagnan, Paris 1921. There is a whole chapter on the land tax in Māwārid's al-ʿAkbām al-sulṭānīyya (5th/11th century). Apart from these, there is important information in various other types of work: historical, like Balādhurī's Ṣulṭān al-baladān and Miskawayh's Ṭadhārīb al-ʿumām; encyclopaedic, like Khārazmī's Majāfīt al-ʿulām (ʿIrāqī and Khārusānī) matemathical, like the K. al-Manāṣīs of Abu ʿl-Wafāʾ al-Būzāqīdī (see Ehrenkreutz, *Al-Buzaidī on the maṣfer*, in JESHO (1965), 90 ff.) and the K. al-Ḥāṣibī, studied by Cahen in AIEOAlger (1952); administrative, like the histories of viziers by al-Dīnahshīyāt (q.v.) and Hilal al-Ṣabībī (q.v.) and the Ṭarīkh-i Kumm, preserved only in Persian, by Ḥasan b. Muhammad al-Kumī, ed. Tehran 1934; and finally, all the great classical geographers, especially Iṣṭaḥkhrī for Fārs. For ʿIrāq in the 8th century, see also the Syriac *History* of Dūnios of Tell-Māhīr, analysed by Cahen from this point of view in Arabicia (1954). We have further some versions of official correspondence archives like those of Abū Isbāk al-Ṣabībī, and especially of the ʿAbbāsīb Ibn ʿAbbād, for the Bāyūd period. In the last century, A. von Kremmer brought together from various sources four Abbāsid budgets and studied them, partly in his *Culturesgeschichte*, and partly in the *Denkschr. der Akad. der Wiss. Wien*, Phil.-Hist. Cl, xxvii (1923); on the oldest of these, see now Sālidī al-ʿAbbāsī, *A new version ...*, in JESHO (1972). H. A. R. Gibb derived material from the *Sirāt ʿUmar b. Abī al-ʿĀsīs* of Ibn ʿAbbād Hakam (brother of the historian) for his *The fiscal rescript of ʿUmar II*, in Arabica (1955). See also, Ibn al-Mukaffaʾs Risāla fi ʿl-ṣaḥāba, ed. and tr. Ch. Pellat, Paris 1976.

Egypt is a special case, partly because of the preservation of numerous papyri (or paper documents), and partly because of the original nature of its administrative literature. The interest of the papyri for the study of taxation was first demonstrated by C. H. Becker in regard to his publication of the Papyrus Saqḥ al-Muharramīt. Most of the subsequent publications emanate from A. Grohmann, who has himself published a commentary concerning this and has commissioned the economist C. Leyerer to make a synthesis, in ZDMG, ciii (1933), 40-60. Some complementary information can be found in the subsequent papyrological works of A. Dietrich (Arabische Briefe aus ... der Hamburger ... Bibliothek, 1955), and of J. David-Weill (JESHO 1965, 1971). Finally, Greek papyri should be taken into account (see especially, Bell in Isl. (1921-13) and Rémondon in Chronique d'Égypte, 1965).

Furthermore, the centralised character of Egyptian administration allowed the composition of highly-detailed administrative and financial treatises which fill out for us the information of the published papyri, especially the Mafīth al-ʿĀdiqī of al-Maḥmūdī (6th/12th century), financial content analysed by Cahen in JESHO (1962), and the Kawānim al-dawānim of Ibn Mammātī (Saladin's period), of which the administrative passages have been tr. and studied by R. S. Cooper in his unpublished 1973 Berkeley doctoral thesis. Their information may be completed by the K. al-Fayyūm of al-Nabulusi, ed. Morita, cf. Cahen in Arabicia (1956); Nuwayri's Nihāya, viii in four, and Makrīzī's Ḥokūt. The Secretary's guide early used by Sauvage for his researches on money and numismatics (= ms. arabe, B.N. Paris 4445) and the ch. on finance and administration of the Rawdat al-arīb of Muhammad b. Ibrāhim al-Ḥamawi set forth by M. al-Ḥila in the Cairo millenary volume, ii, 1043-95, are adaptations from the Mamlūk period of Ibn Mammātī.

There is important information on the Yemen in the Mulākkāhās al-fisān studied by R. B. Serjeant and Cahen in Arabicia (1957), and also in other administrative documents in the hands of the first of these two authors.

For the Maghrib, there are extracts from the K. al-Amwāl of al-Dāwūdī by Ṭabīb al-Wahhāb and F. Dachraoui, in Études d'orientalisme Lavoisier, ii (1962), 401-44.

2. Modern studies. Some pre-1950 works may still be mentioned: M. von Berchem, *La propriété territoriale et l'impôt foncier*, 1886; Becker, *Die Entstehung von 'Uṣr und Ḥarāfland in Ägypten*, in ZA (1904), 301-19, also in Islamstudien, i, 318-33 (see also his papyri studies mentioned above); and A. N. Pollak, *Classification of land in the Islamic law*, in AJSL (1940).

The contemporary works are F. Lekkegaard, *Islamic taxation in the classic period*, and D. C. Dennett, *Conversion and poll-tax in early Islam*, both from 1950, of whose existence Divāʾ al-Dīn al-Raʾīsī, K. al-Khārīdī fi ʿl-dawār al-islāmīyya, Cairo 1957, is unfortunately unaware. A. K. S. Lambton's *Landlord and peasant in Persia*, London 1953, has an interest, for the pre-Mongol period, which goes beyond Iranian territory. The main corrections or partial additions to the information given in the course of studies on the texts by the authors mentioned above. One might add, for

On Egypt in the Ayyūbīd period and the beginning of the Mamlūk one, there is now a fine synthesis by Hassanī Rabī‘, The financial system of Egypt, London 1972 (cf. Cooper, cited above). For Syria, see a forthcoming article by Cahen in JESHO.

On Salahīdūn Anatolia, see Cahen, Pre-Ottoman Turkey, London 1968.

For the Muslim world, see the classic works of Lévi-Provençal for Spain and R. Brunschvig for Ḥafsīd Tunisia, to be completed by H. R. Idris, Les Zirides, 1959; R. Arie, L’Espagne musulmane au temps des Nasrides, 1973; and J. F. P. Hopkins, Medieval Muslim government in Barbary, 1960.

(Č. Cahen)

II.—IN PERSIA.

Terms. Kharādī was the basic term for land tax in mediaeval Persia, as in earlier times. By extension, it sometimes came to mean tax or taxes in general. Kharādī-i ahrīshūm in the sense of a tax on silk, or possibly a tribute paid in silk, is found in Ikhtān and later times (Ḥamd Allāh Mustawfī, Tārīkh-i gustīda, ed. ʿAbd al-Ḥusayn Nawā‘ī, Tehran 1957-60, 607; Ḥādī-‘Abdu, Ḥādī-i īlāmī-i Rasqīdī, ed. Khān Bābā Bāqir, Tehran 1957-60, 115). Kharādī is also used in mediaeval Persian in the sense of tribute; and khardī is also used in mediaeval Persian in the sense of a tax on silk, or mdli wa mdliyydt, which in mediaeval Persian occurs in the sense of tribute; and khardī- gūdhdh, in modern Persian means a taxpayer in the broad sense (not simply one who pays tribute or land-tax).

By Ikhtān times the terms mdli, mdliyydt and mlīyydt-i ardī were also used to denote land-tax (though mdli had in addition a wider significance). In Dīlāyīrid and Timūrid documents the phrases mdli wa mdlaa wa mlaa wa mlāwadīghīshīt and amudī wa mlawadīghīshī occur and (probably) mean land tax(es) and other taxes (cf. Muhammad b. Hindubāḥ Nakhādīvānī, Dastur al-ādil, ed. A. A. Ali-zade, Moscow 1977, ill., 150, and passim; M. al-Sā‘dī, ed. Muhammad Shaftī, Lahore 1941, 1, 322-3), while in Kārā Kūyunlū, Āk Kūyunlū and Safavid documents the phrase mlī wa mlīzzīt wa wdgīshīt is commonly found. Its precise meaning is not clear, but is probably land tax(es), other taxes, and dues (or fees). The phrase mlī wa mdliṯī, first found in Ikhtān times and in frequent use thereafter, means the tax on a landed estate and that which remains (for the owner) after the tax has been paid. Under the Kūšārīs, the terms mdli and mlīyydt signify “regular” or “fixed” taxation, consisting of taxes on the land, animals, flocks, herds, shopkeepers, artisans and trade (cf. Sir John Malcolm, History of Persia, London 1829, ii, 336 ff., and see also Great Britain, Public Record Office, F.O., 881/7364, Report on the Persian Army by Lt. Col. H. P. Picot, Jan., 1900 (pt. i, chs. i and 2, written by Sir A. Houtum Schindler), 11; C. H. Markham’s statement that mlīyydt meant “fixed” revenue derived from the land, i.e. that it was exclusively derived from land taxes, is probably in error due to the fact that land taxes formed the major part of the “fixed” taxes, A general sketch of the history of Persia, London 1874, 561). Curzon, writing towards the end of the 19th century, defines mlīyydt as fixed revenue deriving from (i) regular taxation, i.e. land tax, taxes on animals, flocks and herds, and taxes on shopkeepers, artisans, and trade, (ii) revenues of crown lands, (iii) customs, and (iv) rents and leases (Persia and the Persian question, London 1892, ii, 470). By about 1900, kharādī, as distinct from mlīyydt, no longer appears as a separate entry in the revenue accounts (Report on the Persian army, op. cit., 11).

Land taxes and the theory and practice of government. Until modern times agriculture was the main economic activity of the country. The governing classes sought their material foundation in landed property and animal husbandry. The wellbeing of the land was closely affected by the existence or otherwise of “good” government and stability. Further, since the revenue of the state was derived primarily from taxes on land, the financial wellbeing of the state was dependent upon agriculture prosperity. Governments were concerned to raise as much revenue as possible, but the fact that the ability of the land to provide revenue on a long term basis depended upon its being cultivated and upon the wellbeing of those who tillled it, set, in normal times, a limit to their demands. The peasant was not a serf and was free, at least in theory, to leave his land, though some rulers attempted to curb his freedom. If the burden imposed upon the peasant by the government’s demands became intolerable, they would have recourse to flight and leave their lands uncultivated. The state could, in theory, leave the land to someone else or cultivate it itself at the expense of the public treasury (for which cases the jurists laid down certain conditions). But often neither course offered a practical alternative. The possibility of flight was, therefore, to some extent a restraining factor (see further below).

Many writers on the theory of government recognised the connection between stability and the financial wellbeing of the state. The tradition “no kharādī on land in a bad (ruined) condition”, although not accepted by all schools of law, was widely held and demonstrates the general recognition of the financial dependence of the state on agriculture, and also, implicitly, the significance of “good” government, because one of the most common reasons for the land being left uncultivated was the flight of the peasants provoked by extortion. Ḥāmid al-Dīn Aḥmad b. Ḥāmid Kirmānī, addressing Kawām al-Dīn Zawānī, who took possession of Kirmān ca. 613/1216-17, states “The king of Islam (may God exalt his dignity) has acquired an extensive kingdom and there is no question but that it will prosper and that produce and benefit from it will accrue to his treasury”. He then warns him that there could be no security or prosperity in the province of wellbeing among the peasants “as long as every six months or every year a new governor or mubāhā comes, because
every mukja’ who arrives will take possession of any produce or stocks he sees and will demand kharāḍj, in advance, or by force on produce not yet to hand; and when another mukja’ comes, hungry and unclothed, with an empty pocket to fill, he, too, will impose similar burdens and begin to torment the peasants all over again” (al-Mudāfūdū sūbū badā‘īs al-samān fn waqā‘yīs Kīrmān, ed. Abūbās Iklbāl, Tehran 1952-3, 46). ‘Abd Allāh b. Muhammad b. Kiyā al-Māzdārānī, writing in the middle of the 8th/14th century, makes a similar point. He states, though hardly with complete accuracy if one considers the arbitrary nature of Ilkhānīd taxation practices in the 7th/13th and 8th/14th centuries, “Formerly the custom was that no alteration should be made [in the tax] of any place for which an assessment had been made, so that the subjects (ra‘ā‘iyā) paid to the disun, year by year, the tax as laid down in the assessment (madū‘-i mukannān) and, with their minds at ease, occupied themselves in agriculture and the development of the country. Now, since the assessed tax is not permanently fixed [by the disun] and every year the tax-collectors, when they come, demand the tax in a different way, the subjects, since they have no confidence, withhold their hands from cultivation and the provinces are becoming ruined” (Die Residie-ye falsafer, ed. W. Hinz, Tehran 1952, 308), underscores the importance attached to the land tax as the sinews of the administration and to the observance of justice in its collection. Husayn Wa‘īq Kāshīfī, writing in 900/1494-5 under the Timūrids, makes a similar statement, but substitutes for the sāhib kharāḍj a waṣīr “who regulates financial affairs”, which suggests a decline in the relative importance of kharāḍj compared to other forms of taxation, even though it was still, no doubt, the largest single item (Abbāb-i mu‘āsinī, ed. Ibrāhīm Tājīr Shīrāzī, lith. Bombay 1890-1, 265). A 19th century writer, Nadīm Bārfu‘rūshī (d. 1241/1825-6), asserts that one of the main causes leading to the destruction of a kingdom was the demand for the payment of taxes when the rains failed (Mufarrī ‘al-kulūb, B.M. Or. 3499, f. 205a), from which it is to be inferred that agriculture still provided the economic basis on which the state rested.

Many writers recognise the fundamental importance of proper order in the assessment and levy of kharāḍj. The advice alleged to have been given by ‘Allābādī Tālibī to Malik al-‘Āshārī when he was appointed governor over Egypt in 368/H58-9 is frequently quoted as a model to be followed (cf. Waṣṣāfī, Tartīkh-i Waṣṣāfī, ed. Muhammad Mīhdi Iṣfahānī, lith. Bombay 1852-3, 440). This was to the effect that he should give greater attention to the development of the land than to the collection of kharāḍj, because the latter depended upon the former, and whoever demanded kharāḍj without developing the land, destroyed the country and the people. If the people complained of the heaviness of taxation, or of some natural calamity, the interruption of irrigation, misfortune, or that the land had become waterlogged or parched, their burden was to be lightened so that their affairs might recover (Nahdī al-balā‘gā, Beirut 1890-1, ii, 45. See further, A. K. S. Lambton, Landlord and peasant in Persia, repr. Oxford 1969, xx ff.). Rāşīd al-Dīn Fadl Allāh, Ghāzān Khān’s waṣīr (d. 718/1318), recommends that men of wealth and those with high aspirations should be appointed over the collection of the taxes, because such persons, being themselves satisfied, would not act extortionately against the taxpayers, or at least would not be covetous in small things (Mukhtārāt-i Rāşīdī, ed. Muhammad Shāhī, Lahor 1952-5, 185), and Muhammad b. Hindūshāh Nahkībīwānī urges the need for consultation in the administration of taxes (Dastūr al-khātī, 181-2).

Land taxes and land tenure. In the early centuries the jurists attempted to fit the tax practices of the conquered territories into the framework of Islamic law (see also BAYT AL-MĀLI, II. HISTORY). In the theory, as worked out by them, there was a close connection between taxation and tenure. According to their expositions various factors were taken into account in the assessment of the land tax: the mode of conquest, which affected the tenure of the land, the geographical situation of the land, the manner of its irrigation, the crops grown, their yield, and price levels. In practice, however, local custom (which was itself also clearly influenced by most of these factors), was often the key (Khalid, 170), and, therefore, that there were wide variations from province to province and often from district to district.

In mediaeval times, although conditions were in many respects different from the early centuries, the influence of the ‘ulama‘ with the ruling classes and the population in general ensured that the legal theories would not be forgotten and made it possible to reactivate particular issues should circumstances so demand. Thus the pecuniary laws laid down by the jurists continued to have more than simply theoretical importance. The mode of conquest was, it is true, no longer of crucial importance, but the tenure of the land still affected the levy of kharāḍj. Land fell broadly into four categories: private property (milk), crown lands including the personal estates of the ruler which were not always clearly distinguished from town lands proper [see gāzīāt], and dead lands (mawsīr). In the case of private property, kharāḍj was regarded as a tax on the land or its produce. In the event of a concession being granted on private property, the kharāḍj was paid not to the state but to the concessionaire, who might or might not have been granted exemption from its payment to the state (see further below). Crown lands, the extent of which varied greatly at different times, strictly speaking did not pay kharāḍj, the whole produce belonging to the state. However, they were often conceded to individuals on temporary or life grants, in which case the holder, unless granted exemption, paid kharāḍj, which was regarded as a rent rather than a tax, and the rate of which often differed from that paid on neighbouring estates.

In the 19th century, experience showed that crown lands often tended to be left uncultivated and failed to provide the state with revenue (cf. British Parliamentary Papers 58 (1862) Persia. Report by Mr. Eastwick, Her Majesty’s Secretary of Legation, Camp near Tehran, 5 July 1861, p. 70). Accordingly they were sometimes transferred to individuals in the hope of encouraging the spread of cultivation. This was the case in the latter part of the reign of Nāṣīr al-Dīn Shāh, when, in view of the decay then prevailing in Madīṣa land, it was decided to sell them to individuals. In some cases special rates of tax were laid down (Hasan Khān Shāykh Dībābī Anṣārī, Tartīkh-i mīsāīr
Lands immobilised as wa'af for charitable purposes were frequently granted exemption from the payment of land tax and other dues. Naṣīr al-Dīn Tūsī (d. 672/1274), in an essay on finance written for his patron Hālāgū (or Abākā), states that kings considered it ill-omened to levy kharādī on awāf̄ and ordered their proceeds to be spent entirely on the purposes for which they had been constituted (Mādżīmaʿaʾ-ī rasāl al-tawḥīf-i Khwāṣja Naṣīr al-Dīn Tūsī, in Publications of the University of Tehran, 308 (1956), 34. This was first published by M. Minovi and V. Minorsky, Naṣīr al-Dīn Tūsī on finance, in BSOS, X(3) 1940-2). In fact, practice probably varied. Under the Ilkhanīs it seems that immunities were extended to wa'af̄ land by an extension of Mongol custom, which happened in this case to coincide with local custom.

Bāyādī is said to have reaffirmed on his accession in 694/1295 an old regulation (yāsā) of Cīnghz Khān, which exempted awāf̄ from taxation (Tārīkh-i Wazzāf, 824). Later rulers also granted immunities to wa'af̄ land. The Safawid shrine at Ardabil, for example, enjoyed exemptions and immunities from the 9th/15th century, if not before (cf. V. Minorsky, A sooyārghāl of Jahāngīr Qoyunlū, in BSOS, ix (1956-7), and London 1956/8, and London 1944-5, 104. See also H. Busse, Untersuchungen zur islamischen Kanzleiwesen, Cairo 1959, for various grants relating to wa'af̄ land). Curzon’s statement that all religious endowments were exempt from land tax under the Kādžārs (Persia and the Persian question, ii, 470) is rather too sweeping. Only those awāf̄ which had been granted exemption by a special decree were exempted, but it is probable that many awāf̄ came into this category.

A third category of land was formed by dead lands (mawd̄), which had no owner, and had fallen into disuse. In view of the close dependence of the state upon kharādī, the desirability of bringing such lands under cultivation is clear. The jurists laid down special regulations for their revival (cf. sections on ibdhat-i mawd̄ in fiqh literature). These provide for the acquisition of ownership of disused lands, and give reductions, which varied from district to district, in the amount of kharādī to which they were liable (see further Rashīd al-Dīn Faḍl Allāh, Tārīkh-i mubd̄jadi-i ghaḍar, ed. K. Jahn, GMS, London 1940, 333-4; cf. also 303 ff.).

The status of lands which had fallen into disuse or been abandoned (bāyāridī) but whose owners could not be deemed to have died without heirs (in which case the land became mawdī) was more shadowy. The main issue was whether such lands should pay kharādī or not. Hanafi jurists argued that since kharādī was levied according to the productivity of the land, it was due whether the owner cultivated the land or not, since by not cultivating it, the owner deprived the beneficiaries of kharādī of their revenue. Mālikīs, however, rejected this view. They held that the owner did not pay kharādī if the land was not cultivated. If, however, the reason for the land being uncultivated was that the owner lacked the means to cultivate it, the imām was entitled to lease the land to another person on a muṣūraʿ contract and to collect the tax from the owner’s share of the produce, to lease the land to a tenant and collect the kharādī from the rental, or to have the land cultivated at the expense of the public treasury and collect the tax from the owner’s share. Abū Hamīd held that if kharādī payers abandoned their lands, the imām might have them cultivated at the public expense or let them on a muḥāsā contract, the entire income from this belonging to the public treasury (see further N. P. Aghnides, Mohammedan theories of finance, Lahore 1961, 384-5).

The problem of abandoned lands was a perennial one. It is illustrated by the following incident related by Faḍl Allāh b. Rūzbihān Khūndī. He describes how Muhammad Shaybānī Khān, the Uzbeg ruler, asked the ‘ulamāʾ at his court to give a fatwa in 914/1509 on the status of certain lands in the neighbourhood of Samarkand. These lands had been abandoned by their owners for over thirty years. There was no one left in Samarkand to cultivate them on behalf of the owner. How to ensure that the country did not fall into ruin and that the land became liable to tax? They had become virtually dead lands. What, Muhammad Shaybānī asked, would be the position if someone revived them? Would ownership be established thereby (as was the case with dead lands)? One of the jurists present said that it would be difficult to give a decree annulling the ownership of those who had abandoned them, but if it was known that the owners had left the land, a decree could be given to make the cultivation of the land permissible (ibhāt-i zirāʿat). The Khān replied that this would not solve the problem which he had in mind. Kharādī land if cultivated paid kharādī. If its cultivation was abandoned, it was the duty of the governor to impose upon the owner a sum for its kharādī and to ask him why he had allowed the assets of the Muslims to be wasted by letting the land fall out of cultivation. Thus, if the land had an owner, he could be made subject to one of two rulings: either he would cultivate the land (and pay kharādī) or he would pay kharādī by estimation (bi takdir) on the land which had fallen out of cultivation. Two objects would be achieved: the land would be brought back into cultivation and it would be made liable to kharādī. By simply declaring the cultivation of the land permissible these objects would not be achieved, because in order for the cultivation of the land to be permissible, it was necessary for the right to demand rent to lapse; in other words if the owner made the land free for cultivation (mubdāh), his right to demand rent ceased, and the ruler could not make it incumbent upon him to cultivate the land or to pay kharādī. Muhammad Shaybānī Khān then explained that this object in putting the question was that the owners of the abandoned lands should be subjected to one of the two rulings mentioned above.

Finally, Faḍl Allāh b. Rūzbihān, who was also present, stated that if someone became the owner of a property by purchase, his ownership, being based on a contract, was not affected by lapse of time, even if he did not take effective possession of the property. It did not follow from the abandonment of land by reason of a journey that the cultivation of the land became free (muḥāsā). The people who had left their estates had clearly done so by force of necessity:
excessive injustice had made it impossible for them to live in their homeland, and the imposition of excessive dues by the dinām had prevented them from exercising effective ownership over their estates and so they had departed into different regions. It did not follow from the fact that they had left their estates that it was permissible for others to take possession of them (ibkhāt-i taṣarūf). Then, in order to show that lapse of time did not affect ownership he related how the Atabeg Abū Bakr Fārār Sa'd b. Zangi had been persuaded to restore to their owners estates which he had seized in Fārs (see Tārīkh-i Wazāfā, 165, for an account of this event), and advised the khan to seek conciliation with the owners of the estates in question, if they were known, so that they would return, and once they had returned, to treat them well, so that they would resume possession of their estates. In this way, the land would be cultivated, the kingdom prosperous, and the land liable to kharādī. If, however, the owners were not known, the ruler should take possession of the estates, cultivate them, reap their produce by virtue of the axiom "what is cultivated belongs to the cultivator even if he is an usurper" while purposing in his heart that he would give the owners, should they be found, the rent for their land from the public treasury. In this way also the land would be cultivated, while the rights of the owners would not be annulled or lost (Faḍl Allāh b. Rūzbībān Khūndji, Mīhmand-nāma-i Buḥārā, ed. Manūṣhīr Sutūdā, Tehran 1962, 295-9).

The state, however, clearly was not always bound by the letter of the law. Under the Ilghāns it would appear that taxes were frequently demanded from land which had fallen out of cultivation (cf. Tārīkh-i Wazāfā, 446, 631).

The rates of kharādī. The jurists were generally agreed in the early centuries that the smām could increase or decrease the rate of kharādī according to the ability of the land to pay and the taxable capacity of the land to pay and the taxable capacity of the payees. It was tacitly assumed that the temporal rulers had similar prerogatives. By the 7th/13th century a tradition seems to have evolved, perhaps deriving from the original theory of 'ushr, that the proper rate for land tax was one-tenth of the produce. Mention of this as the basic rate is found from time to time. There is also frequent reference in documents to a tax or due called 'wahr, but whether this was land tax levied at the rate of one-tenth of the produce or a special due is not clear. Rashīd al-Dīn Faḍl Allāh in a letter to Ahmad Turka states that he had laid down that the people of Isfahān should pay as land tax one-tenth on their cultivated lands (apart from orchards which paid different proportions according to the kind of produce) and that he had sent officials to other provinces to make a similar assessment (Mukaddah-i Rashīdī, 374). In a letter to his son Shihāb al-Dīn, when governor of Shushtar and Ahwāz, it is again mentioned that kharādī should be taken at a rate of 10% and should be levied in kind (ibid., 721). There is nothing however in the Tārīkh-i muwābrāh-i Ghāsini to suggest that uniform rates were established over the whole country. In the late 18th century or early 19th century the rate is alleged to have been 10% (see below), and in the 19th century it was, in theory, one fifth of all agricultural produce, or its value in money. According to a report by Mr. R. F. Thomson, dated 1868, this was, as a general rule, somewhat exceeded and 25% could be taken to be the average assessment (excluding dues levied on cattle and flocks and duties exacted for provisions brought to market in the principal towns) (British Parliamentary Papers, 69 (1868), Persia). Report by Mr. Thomson, Her Majesty's Secretary of Legation, on the population, revenue, military force and trade of Persia, 250-3. Excerpts from this report are given in C. Issawi, The economic history of Iran 1200-1924, Chicago and London 1971. There was in practice at all times great variety in the rate levied in different districts and on different crops.

The law-books laid down the purposes upon which kharādī was to be expended and those who had a right to its proceeds. Control over these matters, as over the rate at which kharādī was levied, was similarly tacitly assumed to have passed to the temporal rulers. Naṣīr al-Dīn Ṭūsī states that kharādī was levied for the expenses of the kingdom (ibkhāt-i masāhīr-i fādišāhī, 31). So far as the temporal rulers expended the kharādī on the payment of the army (which, in theory, if not in practice, was for the defence of the lands of Islam) and on the officials concerned in its collection, on pensions to the religious classes and the needy, and on public and charitable works, they could be regarded as spending it on the interests of the Muslims (masāhīr-i musālimīn). Public opinion did not sanction the expenditure of reserves of kharādī on other purposes or the accumulation of reserves which, militated against long-term economic development.

Assessment and collection. Kharādī was assessed in three main ways, by masāhā, mukhāsama, and mukāšā. These methods, known in the early centuries, continued to be used down to modern times. Under the first the amount due was based on the measurement of the land. Under the second it depended upon the crop yield, while under the third the tax was compounded for a lump sum in cash or kind or both, and did not vary with the area sown or the amount of the crop. Assessment by masāhā did not, however, involve a comprehensive cadastral survey. Usually only the land sown was taken into account, which practice was sanctioned by the tradition "no kharādī on land in a bad (ruined) condition", and the tax demand was based on the average yield from good, bad, or fallow land. There was, however, a difference of opinion among the jurists on the matter of land not under cultivation. Where a part was fallow, some held that kharādī should be levied on the whole area but at half the normal rate. The issue turned on the question whether kharādī was a tax on the produce of the land or a rent for the land. If the latter, the holder of the land paid whether the land was cultivated or not, provided he was not prevented by force majeure from cultivating it. Gardens, vineyards, and date groves were assessed either according to the extent of the land sown or the number of trees on the land, the number of years it had been planted being taken into account. Irrigated crops paid a higher rate than unirrigated, and in the case of the former the rate varied with the method of irrigation. The quality of the land was also taken into account, and to meet the variety of physical conditions a number of tax schedules (waqāfī's, fīsh) were sometimes drawn up. The masāhā method of assessment was thus in fact concerned not so much with the extent of the land as with its produce. It differed from the mukhāsama system in that the tax demand did not vary in a good year or a bad year. In districts where the climate was capricious this was to the disadvantage of the taxpayer, unless he was able to accumulate reserves to tide him over a bad year. So far as the peasants were concerned, this was probably seldom the case. This may well have been
one of the reasons why assessment by masāḥa tended to be replaced by mukdāma.

This method was simpler in that it did not involve a calculation of the area under cultivation. It also had the merit of safeguarding the taxpayer in the event of partial or total crop failures—an important consideration in districts where these were of common occurrence. On the other hand, it was a disincentive to the extension and improvement of cultivation, since the heavier the crop the greater the tax. An added disadvantage was that the taxpayer could not remove the crop until the government's share had been taken, while budgeting was made difficult for the government since its revenue fluctuated and was not known until harvest time.

Valuation or ʿībra may have originated simply as an extension of masāḥa and mukdasama, the average annual value of the crop over a number of years, usually three, assessed by whatever method, being taken as the basis on which the tax was calculated. The term ʿībra is not met with after the early centuries and appears to have been replaced by hars, which, in the later centuries, seems usually to have meant not an average calculation made on the basis of three or more years, but an arbitrary valuation arrived at by the tax-collector, sometimes, but not always, after an inspecting growth or harvest time. Arbitrary valuation, in the 7th/13th and 8th/14th centuries, under the Ilkhans, and also in the 19th century, appears to have been common. The tax-collector, or his agent, would examine the crop in situ and estimate the tax due. Some were skilled in the task and made fair estimates, others did not. As the practice grew of assessing the provincial revenue at the centre and leaving its collection to the discretion of the provincial governor, who was then responsible for the remission of whatever sum remained after the deduction of provincial expenses, arbitrary valuation at the local level became increasingly common, whatever the assessment may have been according to the tax rolls drawn up at the centre (see further below).

The mukdāma method probably prevailed over other methods in the more remote districts and in tribal areas. With the extension of the škhāf [q.q.] from the 4th/10th century onwards, as more and more land became alienated from the direct control of the state, the mukdāma method became increasingly adopted. Under this system, the landlord, since he knew the area cultivated, agreed to a fixed price, which was to be obtained by taking the average annual produce of a good year, a bad year, and a medium year. This was the old tradition of ʿībra (though Nasir al-Din does not use the term). The amount in kind was then to be converted into cash at a medium rate, "neither high (dear) nor low (cheap)". He continues, "if the land is not cultivated every year or the garden does not bear fruit every year, the kharāḏi is taken at half rate [the variant "kharāḏi is not levied" reflects the conflicting views held by different schools of jurists, see above]. Every few years the lands and gardens are re-examined: if land in good condition (dhāḏān) has fallen into bad condition (kharāḏ), its kharāḏi is removed on the grounds of "no kharāḏi on (land) in a ruined condition", and if land in a ruined condition has been brought into cultivation (maʿnāʾ), it is to be treated in two ways. If it has been out of cultivation for thirty years, it is exempted from tax for three years and then for the following ten years pays half rate so that its prosperity may be firmly established and men be encouraged to develop it. If it has recently become ruined and been brought back into cultivation, this should be taken into account when fixing the kharāḏi; Similarly if land is converted into orchards or orchards are converted into ordinary agricultural land the tax demand should be according to the value of its product neither less nor more" (30-1).

In actual practice, however, in spite of what Nasir al-Din Tusi says, it is clear that assessment by masāḥa, muḥāṣama and valuation, together with muḥāḏaʿa, continued side by side under the Ilkhans and later rulers. Rashīd al-Din Faḍl Allāh alleges that valuation (hars) and muḥāṣama predominated in those provinces in which the tax was levied in cash and kind, and that Ghāzān Khān determined in 705/ 1304 to abolish these methods in certain categories of land (Rashīd al-Din Faḍl Allāh, Tārikh-i mubārak-i Ghāzānī, 267, 354). According to Wassāf, as a result of Ghāzān's reform of the kharāḏi the people were relieved from demands for extra payments when the crops were valued (taksir dar hars) and when the tax-collectors drew up the assessments and obtained the acknowledgment of the taxpayers, as well as from additional payments when the tax was demanded in advance (tafāwmuʿt-i takdāma), from excess payments extorted when the amount due for taxes assessed in kind was converted into cash (sawāʿid-i tafsīr) (see below), and from payment of the expenses and allowances of officials. They were also freed from the control and ascendency of the massaḥ and barrāz, whom he described as tyrants towards the peasants (Tārikh-i Wassāf, 386).

The various methods of assessment mentioned above were, to a greater or less extent, recognised by the jurists. Another method, based on custom, and probably in use in many districts from early times, was to take the ploughland (dhwfl, sawāḏ, škhāf) as the fiscal unit. This, in a sense, had something in common with masāḥa in that it was concerned with the area cultivated. The size of the ploughland, however, varied with the method of cultivation, the type of soil, the configuration of the land, and the pressure of the population on the land. It corresponded roughly to a single agricultural holding, and sometimes consisted of dispersed plots, and might be fragmented into smaller fractions such as halves or quarters. The amount of the tax and the dues levied on the ploughland varied. In the tax regime of the Āk Koryunlu ruler, Turan Hāsan, drawn up between the years 894/1470 and 883/1477, mention is made of dues levied on the ploughland (see W. Hinz, Das Steuer-
By whatever method the tax was normally assessed, it was paid partly in cash and partly in kind. If assessed by masahata (except in cases when the whole area, cultivated an uncultivated, was taken into consideration) or by mukadsama, both of which methods were closely concerned with the actual amount of the crop, the assessment was according to the solar year (also known as sa'i-i kharadji), which began at the vernal equinox. Mukadsama contracts, on the other hand, were usually according to the lunar year (see BAYT AL-MAL, II. HISTORY, and also Tārīkh-i Waṣṣāfī, 405). The general tendency was for the tax, when assessed by measurement, to be paid predominantly in cash. Under the mukadsama method, the tax on grain crops was usually paid in kind but on vegetables and summer crops it was converted into cash. The tax demand in a mukadsama contract frequently included some grain to be paid in kind. There was, however, great variation in practice in different districts and at different times. In districts which were not self-supporting in grain the tax, although assessed in cash and kind, was paid wholly in cash, the part assessed in kind being converted into cash at one of several prescribed rates of conversion. This was also sometimes the case in districts from which, owing to their remoteness, the removal of grain was impractical (cf. Sykes, op. cit., 3). Malcolm, writing in the early 19th century, states that according to the general rule taxes ought to be paid in cash and kind in equal proportions, but in practice the proportion varied. About the middle of the century the proportion of the total paid in kind was rather less than one-eighth but there were many local variations (see below). Some villages, where the inhabitants were poor, paid almost entirely in kind; but where the landowner was wealthy he preferred to pay in cash, thereby avoiding the interference of minor revenue officials (Malcolm, History of Persia, ii, 57). In 1844, Abbott noted that the revenue in Mazandaran was raised in money instead of money and produce as formerly, the difference being that what had formerly been collected in kind was priced and demanded in cash (F.O. 60: 108. Abbott, Journey along the shores of the Caspian, incl. in Abbott to Aberdeen, No. 8, Encampment near Tehran, 29 June 1844, also quoted in Isawi, op. cit., who refers the quotation, wrongly, to Gilan). From the point of view of the peasants, it was to their advantage to pay khardji in kind. If the tax was demanded in cash, having small reserves, or no reserves at all, they were often forced to sell their produce immediately after harvest when prices were at their lowest, in order to realise the cash to pay the tax. It was also in the government's interest to collect the tax partly in kind, because it could use the stocks of grain thus accumulated to provision its armed forces, hold grain against a rise in prices, thus providing itself with additional funds, or, perhaps more importantly, release the grain on to the market in times of shortage or famine thereby lessening the danger of bread riots and forestalling shortages artificially engineered for political purposes. Karim Kāhn Zand is alleged to have taken great care to replenish the government granaries regularly in order to ensure supplies of bread at low prices (cf. Muhammad Ḥāglich Rostam al-Ḥukamāʾ, Rostam al-

khāndān, ed. Muḥammad Muḥbīr, Tehran 1969, 421-2). In the early 19th century also, government granaries were well stocked, and those who had resided in Tehran as a result of the famine of 1247/1831-2 were fed for seven months from government stores until the new harvest came to hand (Muḥammad Taqī Ḵān al-Mulk Szībīr, Nāṣīḥa al-khaṣāṣ, ed. Dīhāngār Rām Mīkhāmī, Tehran 1958-9, i, 296; cf. also R. B. M. Bining, A journey of two years' travel in Persia, Ceylon, etc., 1857, ii, 476-7, who alleges that Fath-ʿAlī Shāh bought grain (and retailed it at ruinous prices). It was also customary for the government in the 19th century, and probably in earlier centuries also, to pay part of the salaries of its officials in kind.

So far as kharadji was assessed in cash, from the end of the 3rd/19th century, when an attempt was made to establish a unified system of accounting on the basis of the gold standard with a legal tariff for the exchange of the dirham (see BAYT AL-MAL, II. HISTORY), it was usually assessed in gold dinār or some "standard" coin. Actual payment, however, was made in silver coins. There were many different coins in circulation, sometimes of greatly debased value, and the rates of exchange for them against gold dinār or "standard" coins were subject to fluctuation. By manipulating the conversion rates to its own advantage, the government could raise or lower the amount of the tax without changing its nominal rate. In later centuries also the tax continued, for the most part, to be assessed in gold or a "standard" coin, and to be paid in some other coin (see further B. Spuler, Die Mongolen in Iran, Berlin 1968, 300 ff. for a discussion of Ilkhanid practice). In the 19th century there were still a number of coins in circulation of varying values in different parts of the country, which made for difficulty over the payment of taxes (see H. L. Rabin di Borgomale, Coins, medals and seals of the Shaḥs of Iran, 1500-1941, London 1945, 61 ff.; cf. also F.O. 60: 165 K. Abbott, Report on the commerce of the South of Persia, Trade report, Notes on the trade, manufacturers and productions of various cities and centres of Persia visited by Mr. Consul Abbott in 1849-50). Frequently the tax when assessed in kind was converted into cash by a procedure known as ṣafir. Ideally, as Naṣīr al-Dīn Tūsī stated, a medium price was taken, but in practice a number of rates were fixed arbitrarily and often bore little relation to prevailing prices. Raḥšād al-Dīn mentions the heavy burdens placed upon the peasants (rāḍyād wa muzmīn) by this system (Tārīkh-i mubāraḳ-i Ghāzānī, 267). It not only enabled the government, if it so wished, to raise or lower the amount of tax paid, it also provided an opportunity for the tax-collector or provincial governor to misappropriate sums of money which should rightfully have been paid into the central treasury. It also gave rise to innumerable wrangles between the central government on the one hand and the tax officials and governors on the other when their accounts were being cleared, a process which often ran for one tax year into the next. Waṣṣāfī cites numerous cases of officials who were forced to spend time and money over the clearing of their accounts during the reign of the Ilḵāns, and similar instances are frequently met with in later times. ʿAbd al-Fattāḥ Fūmnī mentions the case of Mirzā ʿAlāmīyān, who was for twelve years waṣār of Gīlānāt, Māzandarān, Gaskar and ʿĀstārā, and then waṣār of Ḵᵛāsīn and later waṣār of Ḵᵛārāzūn in the reign of Ṣalāḥ ad-Ībād (958-975/1552-1629). He was accused of not including in his
revenue accounts money which he was alleged to have taken from the taxpayers of Lāhīgān when converting the tax assessed in rice into cash (lāfāsūt-i tāšīr-i birāndī), and was finally made to pay this sum (Ṭārīḵ-i Gīlān, ed. Manūcbīr Sūtūda, Tehran 1970, 183 ff.).

Responsibility for the payment of taxes in general, including the land tax, was, in the early centuries, the collective responsibility of the taxpayers of a given district (see kābālā-l). They were required, as a body, to make good the tax from defaulters. This continued to be the case in practice, since so far as the tax was assessed on provinces and districts at the centre and partitioned locally among the villages and individual taxpayers, in effect those who remained had to make good the taxes of any who had left the district. Arrears were common. J. B. Fraser, writing in the early 19th century, states that there was a continual struggle between the governor of a province and his myrmidons on the one side, and villagers, dābfis (revenue collectors), and kadhkhudās on the other. Few villages paid without requisition. The giving and accepting of douceurs was common (Narrative of a journey into Khorasan in the years 1821 and 1822, London 1825, 221). The situation was probably not very different in earlier times.

If assessed in cash, or assessed in kind and converted to cash, the tax was often levied in two or more instalments. So far as it was paid in kind, the division of the crop was normally made at harvest time on the threshing floor. The responsibility for transporting the grain to government granaries was usually that of the landlord. If the land was worked by him under a crop-sharing agreement, the responsibility for the payment of kharādji was, according to the law-books, both Sunna and Shīʿī, the landlord's (cf. Abū Yūsuf, Kitāb al-kharādji, tr. E. Fagnan, Paris 1921, 137, Bahāʾ al-Dīn ʿAmīlī, Dīmons-i ʿAbbāsī, Bombay lith. 1884, 162). In practice, so far as the tax was levied on the threshing floor before the division of the crop between the landlord and the peasants, the tax liability was shared between the two parties. Ghāzān Khān laid down special regulations in 703/1304 for the payment of kharādji and the delivery of the amount owed on a periodic basis. During the winter crops. The dates when payment fell due in the garmār and the sarādīr respectively differed. The taxpayer was responsible for the transport of the tax quota to the government storehouses within a fixed period (Ṭārīḵ-i mubārak-i Ghāzānī, 264 ff.). There was, however, in the matter of the date when payment fell due and the number of instalments, a variety of practice. For example, in Kāšān, under the assessment made in 1233/1817-18 the tax due in kind in barley was collected from crown lands (khālidādāl-i dīwānī) towards the end of May (when the grain harvest had been reaped), and the tax due in cash was levied in three instalments, towards the end of June, September and January (ʿAbd al-Rahīm Dārābī, Tarīḵ-i Kāšān, ed. Irādī Afšār, Tehran 1956, 286-7). In Khorāsān at the beginning of the 19th century the revenue in cash was paid in three instalments, the first during the first month of the Persian solar year beginning on 21 March, the second four months later and the third towards the end of the tenth month. Revenue in kind and cash combined was paid in two instalments (Sykes, op. cit., 5).

Exortion by government officials over the collection of land taxes was common. Often the tax was demanded before the harvest was reaped, a practice of which Nisārān al-Mulk disapproved as leading to the ruin and dispersal of the peasants (Siyāsat-nāma, 18). In times of financial stringency and military campaigns, it was not only common to demand the taxes in advance but also to demand them several times over (cf. Tarīḵ-i Waṣṣāf, 346, 438, Tarīḵ-al-mubārak-i Ghāzānī, 267). The arbitrary exactions of government officials were, indeed, often more oppressive than the burden of taxation itself (see also below). The difficulties were, however, not all on one side. Governments and their officials were frequently extortionate, and the peasants feared that unless they countered poverty, they would be supposed to be rich and become a mark for extortion (cf. F.O. 60: 194. Sheil to Shah, n.d.). Perennial difficulties were experienced over tax collection. Arrears were common. Sometimes they were the result of a series of bad years or some natural disaster for which no remission had been granted, and sometimes the result of heavy demands made on the taxpayers; but they were also at times due to the recalcitrance of the taxpayers. There were doubtless village communities other than that of Simkān in Fārs whom Mīrzā Muḥammad Kālāntār's statement that they "were never in the habit of paying taxes" would have fitted (Rūznāma-i Mīrzā Muḥammad Kālāntār, ed. ʿAbbās Ilyābī, Tehran 1946, 20). Estates were not infrequently temporarily taken control of by the diwān until outstanding claims had been settled, while others were confiscated to the diwān. The kholīli land held by the Kāḏārs was acquired in this way (see further Landlord and Peasant, 147; see also Aghnīdes, op. cit., 389-90).

Remissions of taxation. Tradition demanded that remissions of kharādji should be granted in the event of natural disasters, such as flood, drought, and the destruction of crops by pests (see also Aghnīdes, op. cit., 389), and there is frequent mention in the chronicles of remissions and demands for remission of taxation. Waṣṣāf records that the kharādji had not been paid in Fārs in 703/1305-6 as a result of a dry year coupled with the extortion of officials. Accordingly Uḏījātū, who had succeeded in 703/1304, recalled Djamāl al-Dīn Ibārīm b. Muḥammad Shavākh al-Īslām to Shīrāz from Kīsh, whither he had retired after having been in charge of the financial administration of Fārs, to take control of affairs again. Djamāl al-Dīn gave orders for the sums outstanding for kharādji to be recorded but not to be demanded from the taxpayers, and for seed and advances to be given to the peasants (Ṭārīḵ-i Waṣṣāf, 507; cf. also 446). He died shortly afterwards, apparently in 706/1306 (ʿAbbād b. Zarkūb, Shīrāznāma, ed. Ismāʿīl Wāʿiz Ḏawākādī, 1971-2, 99, Tarīḵ-i Waṣṣāf, 446), and there is no record of the results achieved by these measures. Fath ʿAll Shāh gave remissions to the governors of Isfahān, Gīlān and Māzandarān in 1247/1831-2 on account of heavy loss of life from cholera and the severe winter of 1830-1, and a decline in silk production (Muḥammad Taḵlīsān al-Mulk Šīrīr, Nāṣīkh al-lawārḵārī, 1, 296). Despite the disastrous outbreak of silk-worm disease in Gīlān in 1864-5, the tax assessment of the province remained unchanged until 1868 when it was reduced by about 20%, though the relative decline in silk output and in the population's income had been greater (see further G. G. Silbermann, Persian constitutional revolution: the economic background, 1870-1906, unpublished Ph.D. thesis (London), 1974, 149 ff.).

Remissions were also sometimes granted as a reward for services already performed, to mark a military victory, the birth of a son, or to encourage future support. Shāhruk b. Tīmūr in a fath-nāma
issued after his defeat of Kārā Yūsuf (823/1420-1) announced the remission of one-third (du dang) of the taxes of the kingdom (māl wa mānādī-i mahrūsā) as a favour (suyūrgāh) for his subjects (ʿAbd al-Husayn Nawāʾī, Asnād wa muḥābātāt-i ʿārākh-i I Irān, Tehran 1962-3, 214). It is not clear whether this was intended to be a temporary remission or a permanent reduction. Śah ʿAbbās remitted the taxes (māl wa mānādī) of Iṣfahān for one year after his successful campaign in Khurāsān in 1007/1695 (Iskandar Mūnḫū, Ṭarīkh-i Qaṣīm wa mukdtabdt-i Ṭarīkh-i Iran, Tehran 1965, i, 587) and in 1025/1616 he is said to have remitted one month’s khandān-i diwānī (i.e. the instalment due in Ramadān) from the Shīʿīs in all provinces (ibid., ii, 895). Nādir ʿAbbās after his Indian campaign in 1151/1738-9 ordered the taxes to be remitted for three years (Mīrza Mīḥīl Aṣṭarābādī, Dānąćagāh-yi Nādirī, ed. ʿAbd Allāh Anwār, Tehran 1962-3, 334). He subsequently revoked this order (ibid., 422. Cf. also Diābīr Anṣārī, Ṭarīkh-i nisf-i ḡākān, 122).

**Charges on the land taxes.** In mediaeval Persia, as in earlier times, the main charge on the land tax and the revenues in general was the payment of the army and officials. In times of peace the tax regime tended to be milder than in times of war or when the numbers and influence of the military were increasing. Waṣṣāf’s account of Kirmān and Fārs, Kirmān in 647/1250-1 and early 7th/13th centuries illustrates how military adventures and defence affected the revenues. When the governor of Kirmān complained to the Salghurid ruler of Fārs, Saʿd b. Zangi, who had taken the province in 605/1208-9, that the revenues (ḥāṣādī) of Kirmān were not enough for the needs of the administration and the wages of the army (masālīk-i saflanat wa manādīk-ī iṣlāḥār), the latter issued a decree for an additional levy of one-tenth (furu*) of officials was in the late 6th/12th and early 7th/13th centuries.

Whereas the jurists had laid down that those who were responsible for drawing it up, half of the produce was for the administration and the military needs of the country on the other, and encouraged by ʿImād al-Dīn Mīrzā, the head of the diwān-i ināqāh, who pointed out that the ġarīnā permitted those in authority to levy sums from the rich for the defence of Islam, Saʿd b. Zangi increased the land tax and imposed a variety of new taxes upon the townspeople. Under this settlement, which was known as the Mīrathī settlement after Mīrā, Kadjars the costs of collection and administration were levied locally under the general head of tafṣawāt-i ʿamal over and above the basic tax (aṣl) and additional cesses (furu*). Under the French military adventurer appointed by the Persian government in 1907, states in a report dated 15 March 1909 that the tafṣawāt-i ʿamal was levied in the form of a percentage of the mālīyāt and varied from province to province and often exceeded the basic tax. When he was writing it was more or less fixed and where there was a surplus under this head it had to be remitted to Tehran. Under the Mongol amirs, the costs of collection and administration were levied locally under the general head of tafṣawāt-i ʿamal over and above the basic tax (aṣl) and additional cesses (furu*). Under the French military adventurer appointed by the Persian government in 1907, states in a report dated 15 March 1909 that the tafṣawāt-i ʿamal was levied in the form of a percentage of the mālīyāt and varied from province to province.

**Additional cesses.** Land taxes were not limited to the payment of the basic khandān. Numerous additional cesses (farāʾ, pl. ġarīnā, saḏār, pl. saẓārāt, sādīrīyyāt) for “occasional” purposes were added to the basic tax. Rūstam al-Hukamāʾī, writing at the end of the 18th or the beginning of the 19th century, states that the traditional rate for the basic tax was one-fifth of the produce from privately owned lands and one-third from land owned by the ruler (amādīk-i ṭāzdīkāhāt) and that in either case additional cesses (sādīrīyyāt) should not exceed one-fifth of the tax (Rūstam al-wābdīk, 172-3, 325). It is not clear whence he derived this theory. It was frequently transgressed if, indeed, it ever existed. The additional cesses in fact sometimes equalled or even exceeded the basic tax.

One of the most common of the additional cesses was the dīnār-i ‘aṣl or ‘aṣlār and under the Shiṣwālids, who collected the khandān, for whom they required special qualifications, should be paid out of the proceeds of khandān, sums for their pay were in practice commonly levied in addition as a proportion of the basic tax. They were subject to arbitrary increase or decrease, and varied from province to province, sometimes exceeding the basic tax. Naṣr al-Dīn Tūsī states that the additional cess (farāʾ) for the duties (mārīsūm) of officials had recently been raised and that a cess of 10% or 20% was levied on this account (as mālīyāt-yi dāh yāzīd dāvdīz dāvīsmīlāndu) (op. cit., 32). Under the Shiṣwālids the additional cess for the expenses of officials was known as khirmān-i hukkām. Iskandar Mūnḫū states that in ‘Īrāk (from the text it is not clear whether he means ‘Īrāk-i ‘Arab or ‘Īrāk-i ‘Aqṣām or both) an additional cess of five dinārs per one dinār had, in the course of time, been added to the basic tax for the perquisites of the tuṣūrgāh and dāvdīz (manāfīs-i tuṣūrgāhā wa dāvdīz) (Persiens im 16. und 17. Jahrhundert, Berlin 1966, 59-60), thus reducing it from 20% to 16%. Under the Kāḏjārs the costs of collection and administration were levied locally under the general head of tafṣawāt-i ʿamal over and above the basic tax (aṣl) and additional cesses (furu*). Under the French military adviser appointed by the Persian government in 1907, states in a report dated 15 March 1909 that the tafṣawāt-i ʿamal was levied in the form of a percentage of the mālīyāt and varied from province to province and often exceeded the basic tax. When he was writing it was more or less fixed and where there was a surplus under this head it had to be remitted to Tehran (Further correspondence respecting the affairs of Persia, Pt. xviii, April to June 1909, Report by M. Bizot on the financial situation in Persia, Tehran, dated 15 March 1909, incl. in No. 388, Sir George Barclay to Sir Edward Grey, Tehran, 8 April 1909). The surveyor (massūz), like the qāmā-i khandān, received his pay from the proceeds of the khandān, according to the theory of the jurists, but in the course of time duties for the surveyors also were levied in addition to the khandān. Ghānrā Khān, as stated above, attempted to do away with the need for the surveyor and the valuer, but his efforts were only temporarily, if at all, successful. In a document dated 904/1498-9 for a suyūrgāh, the grantee is given exemption from the payment of the due for measurement and valuation (rasm al-bāz wa masūz) (Landlord and peasant, 103).

According to the Šāfawī manual, the Dāṣūrīt, a small sum was levied as a due for the surveyor (massūz) of Iṣfahān (M. T. Dāndīshpāzhūhī, Dāṣūrīt al-mulūk-i Mīrzā Rașīdī wa taḥīrat al-mulūk-i Mīrzā Samīrī, in Rev. de la fac. Encyclopaedia of Islam, IV
Malcolm states that the sum derived from ṣādir had been calculated at two-fifths of the fixed revenue (i.e. double the rate mentioned by Rustam al-Ḥukmānī), and ought to have been levied according to definite rules, each person paying in the same proportion as he paid the basic tax. But the governors of provinces, he alleges, usually exercised an arbitrary discretion in collecting the ṣādir. It bore most heavily on “the proprietors of lands and citizens” (History of Persia, ii, 342-3). Once an additional cess was added for whatever purpose, the tendency was for it to become in due course part of the “fixed” tax (cf. Landlord and peasant, 144-5). Fraser relates that not long before his visit to Persia in 1821-2 various additional charges, which had been imposed to make good the deficiency of the revenue, had been compounded for a figure of 10% of the produce and added to the basic rate, which was also 10%, so that the regular government dues, when he was writing, were one-fifth of the produce. The government, he alleges, had kept ill-faith over the matter and ṣādirī were still levied in capricious and arbitrary forms (Narrative of a journey into Khorasan, 211). Thomson reported in 1868 that “It is impossible to discover what people really do pay in excess of the fixed assessment. Some pretence is made to the amount of tax equal to the legal assessments, and there does not appear to be any reason for supposing that this is an exaggeration” (Report on Persia, op. cit., 254-5. Cf. also Sykes, op. cit., 4 ff.).

The term ṣādirī covered not only additional cesses assessed in the same way as the basic tax (ṣāl-i māl), i.e. on the produce or ploughland, but also extraordinary or “occasional” requisitions made on the occasion of the progress of the ruler of a governor through the country, or to meet the expenses of a military expedition, or for some other purpose (cf. J. Morier, Journey through Persia, Armenia, and Asia Minor, to Constantinople in the years 1808 and 1809, London 1818, 237, and Malcolm, op. cit., ii, 342). Such reliefs also tended to become part of the fixed revenue.

Pasture taxes and taxes on flocks and herds. In addition to the additional cesses and “occasional” requisitions, there were many other taxes and duties which those who lived on the land were required to pay. Some of these were known in the early centuries; many more were added in Ilkhan times and continued to be levied thereafter. They included cattle and sheep taxes, pasture taxes, poll-taxes, dues for officials other than those specifically concerned with revenue collection, together with a great variety of other dues and services. Although they were not paid only by those living on the land, yet since the latter formed the main body of taxpayers, it was upon them that these levies bore most heavily.

Pasture taxes and taxes on flocks and herds (mardī, mawdshi, mawdsh), in contradistinction to the land tax, appear to have been paid mainly in cash. With the increase of the Mongol conquest of the 13th century a poll-tax (diżya), sanctioned by Islamic law and levied on dhimmīs, but like the diżya they implied an element of subjection. ‘Abd al-Razzāk records the levy of a hearth tax by Abū Sa‘īd in 839/1434-5 and 874/1469 (Mafā‘ī al-Sā‘ādayn, ed. Muhammad Shafī‘ī, Lahore, ii, 1087, 1410). In the 19th century a poll-tax of one kran was exacted from each man over 18 years of age. The inhabitants of towns did not pay this tax (Report by Mr. Thomson, op. cit., 255). In some villages, however, sarāna was exacted from the age of fourteen (Ṭārīḵ-i Kāḡān, 91).

Djuwaynī, describing the organisation of the Mongol horde, mentions certain contributions to which they were liable, including various dues (sauridād), sums for the maintenance of travellers (ikhrddjat), the furnishing of mounts (wādaḥ), and provisions (ulsāfī) (Ṭārīḵ-i Djuhāngūshā, ed. Muhammad Kāzwīnī, GMS, London/Leyden 1922, i, 22).

With the spread of the Mongol conquests, these contributions and many others were laid upon the conquered population (see also below). Rāshīd al-Dīn mentions various levies made for the provisions of Mongol officials and the establishments of the Mongol princes and princesses—sādān (provisions for travellers), sāfā, awfā, šewān, and tārīḵ, among others—which he alleges were abolished under
Ghazan’s reforms (Tāriḵ-i mubāraḵ-i Ghāzānī, 255).

Uldjātu, on his accession, announced his intention of codifying Ghazān’s policy and forbade the demand of irregular dues (Abū ‘l-Kāsim ‘Abd Allāh b. Muhammad al-Kāshāni, Tāriḵ-i Uldjātu, ed. M. Hambly, Tehran 1969, 96). In fact, however, similar levies continued to be made for the ruling classes, and large numbers of different dues and services were mentioned in documents granting tuyūls and swayyārgāhs in the 13th/14th century and later (see further Landlord and peasant, Land and H. Busse, Untersuchungen zum islamischen Kanzleiewesen. See also documents in T. M. Musevi, Orta ēr Āstābājan tariḵhind dair Fars ādānd yastīrmīnd snēdelār, Baku 1956, and idem, Bakl tariḵhind dair ēr ēr snēdelār, Baku 1967).

One of the most grievous levies was swayyārdāt (purveyance), claimed not only by the officials known as mihmandārs, who conducted foreign envosys through the countryside, but also by all great men or messengers travelling on behalf of the ruler. This first reached extortionate proportions under the Ikhāns (cf. Tāriḵ-i mubāraḵ-i Ghāzānī, 270 ff.), and continued to be demanded under later rulers. Clavijo described its levy in the time of Timūr (Embassy to Tamerlane, ed. G. le Strange, London 1933, 160). Abel Pinçon, writing ca. 1655, mentions the ill-treatment of peasants belonging to ambassadors, who were conducted through the country by soldiers furnished by the shah (Antony Sherley, His Persian adventure, ed. E. D. Ross, London 1933, 166). Under the Kadjars a similar system existed and provisions by way of swayyārdāt were extorted from the private stores of the villages. “The villager”, wrote Morier, “groans under the oppression, but in vain shrinks from it; every argument of its poverty is answered, if by nothing else, at least by the bastinado” (Journey through Persia, 37. Cf. also Fraser, Narrative of a journey into Khurasan, 88, 113, 115).

The abolition of swayyārdāt was announced in the official gazette on 21 February 1851 except for soldiers on the march (F.O. 60: 158. Shell to Palmerston, No. 29, Tehran, 21 February 1851), but there is no reason to think that this practice was completely eradicated. The abolition, however, was attended by violence and oppression. Mubāqāls were the chief offenders. Governors and other functionaries travelling to and from their posts were also a scourge to the country (F.O. 60: 194. Shell to Shah, n.d.).

The tax assessment and the levy of troops. The provision of troops, so far as this was connected with the grant of ḳẖādās and tuyūls, was closely connected with the assessment of the land tax. In 1851, under measures introduced by Mirzā Taḵī Amīr Niẓām, Nāṣir al-Dīn’s first minister, this connection became even closer. The basis of Mirzā Taḵī Khān’s reform was that a certain quota of soldiers or government servants (nauhar-i dwāla) should be provided under the group assessment (baṣīla) of each village, district or tribe, proportionate to the amount of its revenue assessment. The men served in theory for six months of the year and returned to their villages for the other six months. Their pay for this latter period was a charge on the village, as also was the small allowance paid to their families while they were away on service (Abū `l-Ḥāshām Mustawfi, Ṣarḥ-i sindāq-i mān, Tehran 1945-6, 1, 91-2). A decree issued in 1307/1889-90 laid down that one man per 180 male Muslims in each village was to be taken for military service and 150 ṭūmāns for every 180 non-Muslims, but this was probably never fully operative (see further Landlord and peasant, 168 ff.). According to the report on the Persian army dated 1900, quoted above, nominally for every 12-20 tūmān of the assessment one recruit was to be provided. Ṣayyids, sayyiḍ, ṣulāmā, the inhabitants of towns, and peasants on crown lands were exempted. In practice, however, recruitment was fixed in an arbitrary fashion. A village of 500 might furnish the same quota as one with only 50, while a village whose revenue might have declined might be required to provide the same number of men as when its revenue had been much greater (Report on the Persian army, op. cit., 97).

Assignments on the land taxes: ḳẖādās, swayyārgāhs and tuyūls. The jurists in the early centuries had sanctioned the practice of making assignments on the ḳẖādāj. Naṣr al-Dīn Ṭūṣ had, perhaps, such assignments in mind when he states that there were people whose ḳẖārāj had been remitted and others to whom a specific sum was allotted as a pension (ṣādār) or for other expenses and put against their ḳẖārāj. These privileges, he asserts, could be transmitted by sale and inheritance (op. cit., 31), though it is not clear what exactly he meant by “sale” in this connection. Al-ʿUmarī also states that he had been informed that pensions (ṣādār), whether in the form of money or villages, remained, like landed property (mīl wa ṣuwail), in the hands of the brothers of the last holder, who could dispose of them by sale or gift, or constitute them into wakf, as he pleased (Des mongolische Weltreich, ed. K. Lech, Wiesbaden 1968, Ar. text, 96).

The practice of assigning the fiscal rights of the state to the military as ḳẖādās [q.v., which became common from the 4th/10th century onwards, was, to some extent, an extension of the earlier assignments on ḳẖārāj. From about the 10th/14th century there was a change in terminology, and the term ḳẖādā was tended to be restricted to land grants made to soldiers (cf. the grants made by Ghāzān, Tāriḵ-i mubāraḵ-i Ghāzānī, 303 ff.), though it was also used from time to time in other senses. The beneficiaries had no authority over the peasants except to see that they cultivated their lands or their villages and to collect their rents (mīlām) from them if they were remiss. The local body (nawwār) or the holder, who might have declined was still required to provide the report on the Persian army dated 1900, quoted above, as one with only 50, while a village whose revenue might have declined might be required to provide the same number of men as when its revenue had been much greater (Report on the Persian army, op. cit., 97).

In the 9th/14th century the term swayyārgāh came to be used for other aspects of the institution formerly designated by the term ḳẖādās, and was itself replaced in the 9th/15th century by the term tuyūl so far as the institution designated earlier by the “provincial” ḳẖādā was concerned (see further I. P. Petrushevsky, K’istorii instituta soyurgala in Soveetskoe Vostokose- denie, vi (1949). The grants of swayyārgāhs by Timūr would appear to have been very much like the earlier “provincial” ḳẖādās. In post-Timūrid times, however, the term swayyārgāh for the most part designated a grant of immunity, often hereditary, from the payment of taxation, and frequently, though not by any means always, granted to members of the religious classes. If the grantee held land the grant might include not only immunity from the payment of taxation, but also the right to receive the taxes from the local population and sometimes to exercise rights of jurisdiction. Swayyārgāhs were also attached to institutions. Thus, Shāh Sulṭān Husayn (1205-3/
694-1722) constituted six hamlets (mazra'a) in Bara'an into a wafrf for the Sultani madrasa in Isfahan and granted their revenues (māl wa ḡāḥāt wa ḡāhrād) as a permanent suyūrgāl to the administration of the madrasa. No drafts for taxes or other sums (māl wa ḡāḥāt wa sā'ī ḡīḥāt) were to be made on those hamlets or their peasants on any account (‘Abd al-Husayn Sipinta, Tārīḵ-i awāfī-i Isfahan, Isfahan 1967, 225).

Tuyūls, on the other hand, were primarily temporary grants in return for services. They were often in practice, and sometimes in name, hereditary. In theory, however, they had to be re-granted on the accession of a new ruler. For example in Şafawid times, when the empire was divided into directly administered land known as ḡāṣa (see mülk) and indirectly administered land known as māmilāt, the taxes, including the land tax, were collected by the provincial governor or wuzūdīl and retained by him for provincial and other expenses. One of the crucial differences between ḡāṣa and māmilāt was that tuyūls were granted on the latter but not normally on the former. “Abd al-Fattāḥ Fūmīn quotes Mirzā ʿAlāmiyān as saying, “in ḡāṣa districts (dar uṣūl-i ḡāṣa) the existence of a tuyūl has no meaning” (Tārīḵ-i Gīlān, 232). This statement, however, does not apply throughout the Şafawid period. The tuyūl granted to Fakhr al-Dīn ʿAbd al-Bāṭil (see below) was on ḡāṣa land.

Shaḥ ‘Abbas in 1049/1631 appointed Burḥān al-Dīn Ḥālīfā of the district of Dīzmar in succession to his father and allotted to him, as had been allotted to his father, 34 tāmānān 7938 Tābrīzī dinārs on account of taxes (māl wa ḡāḥāt wa ḡāhrād) of Dīzmar as his ṭuyūl and suyūrgāl from the date of the death of his father. The hadhandūs and peasants (raṣūyā) of Dīzmar were to recognise him as the holder of the suyūrgāl and their tuyūlādār and to pay to him their taxes year by year and to refer to him their affairs, apart from cases of murder (siwā-yi ṣāfiyyā-i ḡān). The Şūfs (i.e. the Kiziλbāḏi) of Dīzmar and Uṣūlīs were to serve him as their commander and some of his followers (7 bi ġār wa yāsāḵ) as they had served his father. The governors (hukkām), dārīqās, tuyūlādārs, and tax-collectors (ummālā) of ʿAḏharbāyjān in general and Dīzmar in particular were not to interfere in any way in his suyūrgāl or tuyūl or to make any drafts or allocations on account of expenses (ṭūrgāḏā or dūs), in particular the dues of the dārīqā, the waqīʿ, or the ḡālā, etc., which according to the decree of the late sultan (Tahmāsp) were not levied on the suyūrgāls of the Şūfs (Sarhang Bāyburdī, Tārīḵ-i Arābārān, Tehran 1962, 160).

In the case of most tuyūls and some suyūrgāls the grantee was required to perform certain services or to provide military forces. For example Fakhr al-Dīn ʿAbd al-Bāṭil was ordered by ‘Abbas to provide 300 men from Bāf and Yazd to serve as Attendants in the Khāṣa administration and to accompany the royal train on military expeditions. He collected 300 ṭuqfālās from the aforementioned places and returned with them to the capital. Šāh ʿAbbās then ordered Bāf, Yazd, Sar Yazd, Fāhrādī (in the Yazd district), some of the districts of Kirmān, districts in the desert regions (māfāsā), Ḍandak-i Nāwḵūt and elsewhere to be his tuyūl, and he also appointed suyūrgāls for his children. Fakhr al-Dīn attained freedom of action and authority in those regions and spread justice among the people (Muḥammad Muḥiḍ, Dīmāsi-i Muḥṣīḍ, ed. ʿIrāqi ʿAjṣār, Tehran 1965, iii, 270). ‘Abbas later on established a tax on grain (māl wa ḡāḥāt wa ḡāhrād) to Amir Bāyānūr Sulṭān, the governor of Karadžā Dāgū, in 1113/1702 allotting to him the sum of 6 tāmānān 3,063 dinārs from the taxes (māl wa ḡāḥāt wa ḡāhrād) of the Dīzmar district. After his death this was to pass to his son on condition that he provided seven men for the shah’s service (bi ġār wa yāsāḵ-i ḡāh).

The headman and peasants of Dīzmar were to remit the (māl wa ḡāḥāt wa ḡāhrād) and government dues to the grantee (A suyūrgāl of Jahāngīr Aḡ-葯ymānī, 158-60). ‘Nādir ʿShāh similarly granted a tuyūl in 1156/1743 to Sulṭān Muḥammad Beg, the ḍarbūšt, on one of the villages of Burḵwār, which was his private property, so that it should be free of dayān drafts (dayānsādāt-i dāndānī) and he should expend its revenues on his livelihood and perform whatever was demanded by way of service (lāsudām-i ʿawkār wa ḡān-sipār) (B.M., Or. 4935, No. 27).

The assumption appears to have been made that the obligation to service was a permanent one and that the tuyūl would therefore also be permanent, and it was, in fact, frequently re-granted to the original holder’s sons and descendants. The following example illustrates this. Muḥammad Mirzā (later Muḥammad ʿShāh), when governor of ʿAḏharbāyjān, granted a tuyūl to Ṣajjādī Dājamān, holding in 1223/1807, allocating to him the taxes of Nūkūdūdī, in the district of Ahar, which was assessed at a lump sum of 15 ḵārāwds of rice, as his permanent tuyūl just as it had been granted by ‘Abbas Mirzā in former years to his late father, Ḥusayn Sulṭān, so that he should year by year collect the dayān taxes (muʿtaṣarādāt-i ḍarbūšt-i dāndānī) of that village, expend them on his expenses and perform what was demanded of him by way of service (bi lāsudām-i ʿawkār-ва ḡān-sipār) (Tārīḵ-i Arābārān, 260).

The degree to which a district on which or in which a tuyūl had been granted was removed from the control of the central government varied. In 1101/1691 Muḥammad ʿShāh’s envoy, ‘Abd al-Fattāḥ Fūmīn quotes Mirzā ʿAlāmiyān as saying, “in ḡāṣa districts (dar uṣūl-i ḡāṣa) the existence of a tuyūl has no meaning” (Tārīḵ-i Gīlān, 232). This statement, however, does not apply throughout the Şafawid period. The tuyūl granted to an individual on his own land, the land and its taxes were removed from the control of the central or provincial government. For example, a farman dated 1252/1836 from Muḥammad ʿShāh granted to Hasan Khān Bāyburdī Karadžā Dāghī as a tuyūl the village of Razīn in the district of Ahar, which was his own estate, and gave him its taxes, in cash and kind, as pay, which he was to collect every year and spend on his living expenses. The farman commands Karahmān Mirzā, the governor of ʿAḏharbāyjān, to hand the village over to Hasan Khān as his tuyūl and to consider it immune from the entry of officials (Tārīḵ-i Arābārān, 264). Some years later in 1272/1856 Nāṣīr al-Dīn ʿShāh issued a farman to the commander-in-chief (sarār-i kull), ʿArż Khān, stating that the 184 tāmānān 7300 dinārs in cash and 47 ḵārāwds and 50 mans of grain (diṣn) as wages (mawāqūf wa mustarri) had been granted to Hasan Khān Bāyburdī Karadžā Dāghī on account of the taxes of Bohol and his other estates (māmilāt) and debated against the revenue of ʿAḏharbāyjān in the assessment (dayānsādāt-i dāndānī). Since Hasan Khān had
been appointed to serve in Fars, 'Aziz Khan was to order his tuyuls to be paid (wd gudhdr namuda) to him as before and to forbid anyone to interfere in them (Tārīkh-i Arābārān, 268).

The amount of land or its revenue alienated from the crown as tuyuls varied. Rawlinson, writing about 1838, states that it was calculated that about one-fifth of the whole land revenue of Persia was then alienated from the crown (Notes on a journey from Tabriz through Persian Kurdistan to the ruins of Takhhtī-Soleimān, in JRGS (1841), 5, n).

Apart from suyurghāls and tuyuls, grants known as hamasāla were also common. These were allocations on the revenue of specific villages or districts, according to which the taxpayers paid their taxes, up to the amount stipulated, to the holder of the hamasāla instead of to the government tax-collector. Since the holders were usually military men or government officials, they were not usually resident in the district on which their hamasāla was allotted. It was perhaps for this reason that the local people were sometimes required to certify their consent to the grant of pay (hamasāla) on the revenues of their village. A firmān from Shāh Šulṭān Husayn dated 1122/1710 states that Pīr Beg b. Kalb 'All Beg, the deputy (nābi) of Naṣīf Kūl Beg Yūzbāshī Bāyburdī, who claimed that his wages (mauskūlā) were paid by draft, part of which was paid by the people of Almān and Bohol (both near Ahar) out of their taxes (māl wa sīyāhā), had asked that these sums should be paid as his hamasāla in accordance with the certificate (ridānmāla) sealed by a group of the people of those villages. The firmān orders this to be done with the approval of the department (sarkār) of the kūrīs (Tārīkh-i Arābārān, 251; text also in Kāvīm Makāmī, Yīk wa wānī jāhīd sandād-i tārīkhī, Tehran 1969, 74-5).

Two earlier firmāns issued by Shāh Šulṭān Husayn in respect of Pīr Beg also concern the payment of his hamasāla. The first dated Shawwāl 1123/1702 states that the peasants (ra'āyā) of Usnūr in the district of Kandāvān of Karāhūrūd were to pay, according to the assessment of the register of the kūrīs, 6 tumāns annually on account of the annual grant of the kūrīs. The sum due to Pīr Beg from this was in arrears. His presence (on duty) having been testified to and confirmed by the kūrībāghī, his pay was to be made available. The second document, dated Muḥarram 1144/1720 orders the peasants (ra'āyā) of the districts mentioned on the back of the document to pay, according to the statement and assessment of the kūrī register, 1,466 dinārs in cash and 3 kharĀds and 50 manās in grain, according to their individual assessments, in respect of the annual wages (mauskūlā-i hamasāla) of Pīr Beg, this sum being included in the total sum of 36,000 tumāns odd (due to the kūrīs) (Kāvīm Makāmī, op. cit., 63-4).

Under the Ilḵāns, personal immunities, known as tarkhdn, were granted to Mongol princes and princesses, and also to members of the religious classes and scribes (cf. Djuwayni, i, 27-8 for the supposed origin of these grants). The historian Waṣṣāf claims to have held such an immunity, though it did not, in fact, protect him from the extortions of the tax-collectors (Tārīkh-i Waṣṣāf, 631). It is possible that the hereditary grants of immunity made to the religious classes and others as suyurghāls (see above) developed out of the tarkhdn.

The grants known as musāfī and musaylamā were also personal immunities. So far as the persons to whom they were granted held land, the immunity included, presumably, immunity from the payment of kharāḏj. Such grants are met with in the early centuries and continued to be made down to modern times.

So far as the tuyul was simply a device for the payment of salary the tendency was, according to Tavernier, for the dastarkhāna to allocate the sums due to an official on different places in small sums so that it was uneconomical for the recipient to collect them in person and tašāfīs would buy the drafts at a discount and collect them together making a great profit (Voyages en Perse, Geneva 1790, 243-50). Chardin, however, states that ‘Abbās II had reformed this practice (v, 422). Under the Kāḏārs such grants were usually made as block grants and the tuyulādār would, as Sheil wrote in 1854, “by some means not very intelligible” make himself the temporary owner of the land to the exclusion of the real proprietor. Almost everyone holding a certain position at court, from the prime minister downwards was, he states, a tuyulādār (F.O. 60: 194, Sheil to the Shah, n.d.).

Drafts on the revenue. An even more harmful practice than the alienation of the fiscal rights of the state in the form of tāhās and tuyuls was the practice of writing drafts on the revenue. This also arose because of the difficulties experienced in revenue collection and tended to reach high proportions in periods of financial stringency. It first became common under the Bāyids and more especially under the Ilḵāns (cf. Tārīkh-i mubārak-i Ghdzdānī, 244). The practice was highly detrimental to agricultural prosperity and to the wellbeing of the cultivators, who could never be certain that new demands for sums of money or supplies of grain and other crops would not be made upon them. Not infrequently the drafts made on the revenue exceeded the income. ʿAbd Allāh b. ʿAlī Falak ʿAḏ-ḏrī Tibrīzī in his handbook on financial administration, the Saʿādat-nāma, written during the reign of Gḥāzān Kḥān or Ulījāyūṭī, describes how drafts for salaries and other purposes were drawn on the revenue, and states that drafts in favour of the ruler, the princes, the princes, and the amirs had priority in that order on available funds (Mirkamal Nabipur, Die beiden persischen Leitfaden des Falak ʿAḏ-ḏrī Tibrīzī über das staatliche Rech- nungswesen im 14. Jahrhundert, Göttingen 1973, Persian text, 52b).

Gḥāzān Kḥān attempted to lessen the evils of the practice. He prohibited the indiscriminate writing of drafts by the officials of the central government and forbade its practice altogether by provincial officials. He appointed a bākī to be in charge of each province in the supreme diwān and made him responsible for writing drafts on that province, village by village, in accordance with the assessment (ḥānān). These measures were only partially successful. It was found that the village headmen continued to levy more than they ought from the taxpayers. The next step was to require them to send detailed lists of the liabilities of each taxpayer to the diwān so that the taxpayer would know what he was supposed to pay, and the headmen could not make demands on them. These names were not entered in the registers (ībād., 253 ff., and cf. Landlord and peasant, 82 ff.).

Under the Ṣafawīds and Kāḏārs it was also common practice to write drafts on the revenue for the salaries of officials, and for pensions and government debts. Under Muḥammad Shāh (1834-48) the issue of bārās or bills on the provincial treasuries in payment of his army, servants and other creditors exceeded tenfold the amount of the revenue. Their value was thus merely nominal, and none but a favoured few,
or those who bribed highly, actually received payment. Sheil, writing in 1846, states that scarcely any of the holders of drafts drawn on their respective provinces. The full amount was then afterwards charged in their accounts with the government although perhaps only a fifth or a tenth might have been really paid (P.O. 60: 125). Sheil to Palmerston, No. 177, Tehran, 20 November 1846. See also Lady Sheil, *Glimpses of life and manners in Persia*, London 1856, 386-7). This state of affairs was, in some respects reminiscent of that which prevailed under the Ilkhānids prior to Ghiyāth Khān (cf. *Tārīkh-i munbarak-i Ghāzīnī and Tārīkh-i Wāṣṣāf*).

Revenue farming. Another practice which closely affected the collection of kharāḍj was that of revenue farming. Partly because of the frequent shortage of funds and partly because of the perennial difficulties experienced over the collection of taxes governments frequently had recourse to this practice. The revenue farm (see damān), which might be for a single tax such as kharāḍj, or for all the taxes of a district or province, had some outward resemblance to the mufradta'a contract. In fact, however, it was something different. The latter in the early centuries was for the most part made with the local landowner or tribal leader, who became responsible for the payment of the taxes, apportioned them among the local peasants, collected them and paid them to the government. The taxfarmer, on the other hand, contracted to pay annually to the state, for a stipulated period, a certain sum of money for a specific tax, or all the taxes, of a district or province, which sum he recovered from the local farmers, and is given immunity from interference. He is forbidden to impose new dues or to take more than the customary amount from the taxpayers, while the diwān is enjoined not to make drafts in excess of what is laid down or to send tax-collectors to the province (*Die beiden persischen Leitfäden*, I. 56a. Cf. also Nafṣī's al-funūn for a specimen taslim-nāma, I. 312-13).

Expenses for the post (yām), sūlāf and ulāq were allowed against the sums due from the tax-farmers. The fact that the establishments of the Mongol princes, princesses and amirs and the ortāšaks (trading establishments attached to the court) also made frequent and unauthorised demands on the peasants for provisions, fodder, and animals complicated the system (cf. *Tārīkh-i munbarak-i Ghāzīnī and Tārīkh-i Wāṣṣāf*). In theory a trial balance could be struck at any moment, but the checking of the tax-farmers' accounts was often a lengthy business, as the numerous references to the prolonged investigation of their accounts show (see especially *Tārīkh-i Wāṣṣāf*).

Although money may often have changed hands at the time of the award of a contract, it appears to have been unusual for payments of the amount due from a farm to have been made in advance. Wāṣṣāf records that the Shaykh al-Islām Dīmāl al-Dīn Ibrāhīm b. Muḥammad, who received a muhradta'a contract for the indāy and daīlay of Fārs for four years from 692/1292-3 for 1,000 tāmāns less 114 tāmāns expenses (kharāḍj) allowed him per annum, paid the money due for one year in advance together with various presents for the Ilkhān, the princesses, and amirs so that "no financial demands would be made on the poor peasants nor would the burden of the coming and going of iktā' be laid upon them" (*Tārīkh-i Wāṣṣāf*, 168). This was, to judge from Wāṣṣāf's account, probably an exceptional case.

In the early years of Ilkhān rule many of the outlying provinces were administered by the local Saldjuk rulers of Rūm, ʿHz al-Dīn Kay Kāhās and Rūkūn al-Dīn Kilīdī Asrlān and their successors, who acted as governors on behalf of the Ilkhānids, appear to have held their governments, nominally at least, on a muhradta'a tenure (cf. Muḥammad Musāmarat al-akhbār, ed. Osman Tura, Ankara 1944, 62). Kīrmand, after paying tribute for some years, was finally fully incorporated into the Ilkhān empire under Djalāl al-Dīn Suyūrgāmtuṣ, the Kuthluq Khiyānī, who succeeded to the government of Kīrmand in 681/1282. He farmed all the taxes of Kīrmand for 600,000 dinār-i sā-i rādīj. He was allowed as regular expenses (ikhtārādi jī-i muharīrāt) 390,000 dinārs. This sum was broken down as follows:

- 100,000 dinārs for his personal expenses as governor,
- 120,000 dinārs for the wages of the army, 10,000 dinārs for guards (qāba surūl), 10,000 dinārs, and the repair of fortresses, city walls, and the digging of diwānī handān, 30,000 dinārs for pensions (iṣırdārāt), 90,000 dinārs for provisions (ṣusūn), 10,000 dinārs for the post (yām), 10,000 dinārs for provisions (ḥawājī) and bahva (ord. = "wine"), 10,000 dinārs for the wages of the officials of the diwān (Nisīr al-Dīn Muḥṣīl, Simī al-ʿulā, ed. ʿAbbās Ibbāl, Tehran 1939-57).

Fārs had a varied fiscal history in the second half of the 7th/13th century. In 662/1263, on the death of the Musafarid Suldjukshāh, with the succession of Abīḥā Khāṭūn, the daughter of Saʿd b. Abū Bakr, who was married to Tāsh Mangū, Hūlāqū's son, it came under direct Mongol rule. The Mongols were unable to establish an effective administration, and some three years later, in 665/1266-7, after an abortive rising led by Sḥarāl al-Dīn Ibrāhīm, the kāk al-badīt of Fārs, a ḫūṭūk came to Shīrāz to collect the taxes. He was unable to accomplish his task and in 667/ 1268-9 Abākā sent Inkiyānī to Fārs as governor. He restored order and established an administration. The taxes were collected and the province prospered (*Tārīkh-i Wāṣṣāf*, 193). Intrigues led to his dismissal and he was succeeded by Sungūndjak Noyān in 670/1271. After investigating the accounts of the province, Sungūndjak concluded muhradta'a contracts for the districts of Fārs with the local leaders (askāb wa muhrad-i buḥāh) from the beginning of the kharāḍjī year 671/1272-3 on condition that each one should rule.
independently in his own district and meet whatever requisitions were made on the revenue of the district by the dishân (ibid., 195). Washâd states that although there were abundant surpluses under these contracts, yet owing to the numerous dues and requisitions made upon the revenues and the envy and strife prevailing among the local leaders, the revenue was not paid, the holders of drafts were unable to collect their money, the peasants were ruined, and the country lost its prosperity. Finally, in 676/1277-8 Şhâms al-Dîn Ahmad b. Malikî, a rich merchant with extensive trade connections with the East and the west, accepted a muhâsâlât contract for the whole of Fârs. Because of the failure of the local leaders (arbâb-i bulânî) to pay the sums due to him, all his reserves were rapidly dissipated in this venture (ibid., 197-8). In 678/1279-80 Sughundîakî was again sent to Fârs by Abâl-şâdîk to investigate the accounts and collect the revenue (ibid., 204). He abrogated the muhâsâlât contracts for the districts, demanded arrears and gave his ważir Khâdiya Nizâm al-Dîn charge of all the districts (bulânî). However, as a result of the intrigues of rival factions, in which some of the revenue farmers were also involved, Sughundîakî and Nizâm al-Dîn fell from favour.

Meanwhile Abâl-şâdîk died (680/1281) (ibid., 206-8). The next two years were a period of confusion. A Mongol vizier, Bulûhghân, was sent as a provincial revenue official (bâsâh) to Fârs, and during the next year accumulated much wealth. In or about 682/1283-4 Abîshâ, Tâsh Mangî’s wife, was appointed governor by Tegâdîr (ibid., 210-11). Partly, perhaps mainly, because of three years of drought and famine in which over 100,000 people were said to have died (ibid., 212, 217-18), little revenue reached the central government during her governorship. She was accordingly summoned to Tabrîz; she and her supporters after examination agreed to pay the arrears of taxation and various other sums. She died, however, almost immediately (685/1286-7) (ibid., 222). A yałîgh was then issued to the governors of Fârs, who had come to Tabrîz with Abîshâ, on their promising to pay 5,000,000 gold dinârs on account of arrears for several years, and they set out with a number of Mongol officials and amîrs for Fârs to collect the arrears. Although the governors, tax-collectors and wealthy people were mercilessly mulcted, it proved impossible to collect the full sum and the Ilhân was forced to reach a compromise with the governors of Fârs (ibid., 224-5).

Fârs may have been an extreme case. But it seems likely that the revenue farmers all over the empire committed abuses. Raşûld al-Dîn states that they extracted double the amount for which they contracted but paid nothing into the treasury (Târîkh-i mubârak-i Khânî, 258). Ghâzân Khan, who sought to bring the financial administration of the empire under stricter control, considerably decreased revenue farming. It nevertheless continued on a modified scale. Bâyât in Khûzistân, for example, was farmed to the local leaders for a fixed sum which was to be used for the salaries of amîrs of four hundred provided that they demanded their dues at harvest time (Mubâhâtâdî-RAshûldî, 179).

Under the Kâdîrs, revenue farming again became widespread. Abâbâ Mirzâ, when governor of Afgânîshân, is said to have made some progress in abolishing the practice and fixing the revenues of the province on a systematic scale and enforcing their collection (J. B. Fraser, Travels in Koordistan, London 1840, i, 8, and cf. Morier, Second journey through Persia, 240-1), but his reforms were limited and short-lived, and towards the end of the reign of Fâth ‘Alî Shâh and under his successors revenue farming was again common. It was of two kinds. The first resembled the early Islamic muhâsâlât contract, according to which powerful landowners farmed the duty of their estates to prevent the vexatious interference of the subordinate officials of the revenue (cf. Malcolm, ii, 338). The second, and more pernicious, was the system by which governors bid for their districts.

The tax administration: central government records. At the level of the central government, land revenue matters went through the department known as the dishân al-ṣâfâ’î, which was part of the supreme dishân (g.v.). Its elaborate procedure concerned with the assessment, collection and expenditure of the taxes was transmitted to posterity by the mustawfîs (g.v.). However, because of the widespread practice of farming the revenue, of the alienation of land from the control of the central government as ûlûqûs, iływûs, and suyûrgûs, and their expenditure (see below). The practical steps needed to keep the assessments up to date were seldom taken.

The two handbooks by ‘Âlâ-yi Tabrîzî, the Khânîn al-sa’âdat and the Sa’âdat-nâmeh, which have come down to us (see Mirkamal Nabipur, op. cit.), show that in spite of the introduction of new taxes, notably hâbatîr and tamâghâ (see below) by the Mongols, there was a marked continuity in accounting practice (cf. also Mâmûd-i Âmmû, Nafrîs al-funûn, whose description of the art of accountancy (šim-i ṣâfâ’î) is largely the same as ‘Âlâ-yi Tabrîzî’s exposition, though less detailed). There were some minor differences in vocabulary and dating, the Khânî solar year having come into operation under Ghâzân Khan (see further Târîkh-i Wâṣîfî, 404), and also certain modifications, made, according to ‘Âlâ-yi Tabrîzî, with a view to a simplification of the accounts for the benefit of the Mongols (f. 33b).

The tax assessments were entered in two registers. One, the daftar-i mâl, which was concerned with the “fixed” taxes of the villages, included land taxes. The other, daftar-i darbà, recorded dues and commercial transactions (mumîmdûd), and included tamâgha taxes, etc. (f. 62b; cf. also Nafrîs al-funûn, i, 324). ‘Âlâ-yi Tabrîzî’s description of the subsidiary registers (sârât-i mufri’d-i wîlâyâtî) throws considerable light on the sources of revenue, including land taxes, and their expenditure (see also below). Taking the case of the tûmen (province) of Kâshân as an example, he sets out the total revenue in cash from (i) “fixed” taxes from mumîmdûd (taxes on production other than agriculture), sheep and cattle taxes (al-ma’râfî), and land tax (al-ṣâwîr) according to the ancient assessment (fîl-kadîm), and (ii) tamâgha taxes, responsibility for which had been accepted by a certain mâlîkh, Nasîr al-Dîn, for a given year, as from the Naw Rûz. The revenues from “fixed” taxes are set out under taxes from (i) the town (al-balâd), these being levied on craftsmen (al-mu’tahârîs), who were sub-divided into those who paid 5 per cent tamâgha and those who did not (and presumably paid higher ad hoc rates),
KHARÂDJ

and dhimmls (Jews and Armenians), and (ii) the outlying districts (al-nawdi'iy), sub-divided under villages. Against this he sets out the sums to be deducted under various heads. These were (a) the expenses of the province (masâlih al-wilayya) as laid down by the supreme divân, namely allowances (al-rusûmid) for the bâzâb, the mulk and the scribe (bâdhab) and sums for the upkeep of the roads, listed under two districts, and (b) drafts made on the revenue by the court for the upkeep of the estates of two Mongol princesses (âshâ-i kubâdâhân), drafts (al-ikhtisâbiyya), or a Mongol princess for one year on specific villages, allocations for military personnel (al-âsâhîn) attacked to falconers (al-bâdhiyya), partly in cash and partly in kind, and partly as expenses (lazhâr), and for post-stations (al-yâm) and forage for them (al-sâsân) for six months. The revenue from tamghâ is similarly set out under (a) brokerage (dalldlkhâna), camel-markets (kharâq), slave-markets (nakkhâbiyya), cattle and sheep markets (sâk al-dawâbb) and slaughterhouses (al-sallâbiyya), and (b) districts, together with the expenses charged against their revenue for various Mongol officials and amirs (ff. 67a-68b). Cf. also Mahmûd-i Amuli, who divided the taxes entered in the defar-i mufrid wa dzâmis into male, bâdhab levied on craftsmen and on districts (bâdhab-i muhbarra), or bâdhab-i hâr mâhâyi, and tamghâ on transactions (tamghâ-i muhâba). See also Mahmûd-i Amuli, ed. Velami, St. Petersburg 1860-2, ii, 120. They are mentioned in the Tadhkira al-mulâkî in connection with the dues of the râhîb dzâmis of the rîhâkâdâna (l. 100b). Nevertheless, it is unlikely that Uzun Hasan's assessment was put into operation over the whole country, and it cannot, in any case, have operated efficiently during the fratricidal struggles between his son, Khâllî, who succeeded him, and Sultan Ya'qûb. A considerable part of the country was at that time alienated from the control of the central divân. Shîrâs was given to the Amîr Alwâd, the son of Khâllî, for his expenses (khurûf), the Shabânââ, on the other hand, was brought directly under the supreme divân (V. Minorsky, Persia in A.D. 1479-1490, an abridged translation of Fadîlûllâh b. Râbî'ûshân Khânji's Târîkh-i 'Amârâ-yi Aminî, London 1955, 47). Sultan Ya'qûb after his death (894/1489) Khâllî, who was apparently to collect additional revenue from many places which had never before been registered. But it is doubtful whether these records existed detailed records of the revenue of the tax districts of the empire and the charges made upon it. Accordingly on 4 Rabî I 894/5 February 1489 Kâdî 'Îsâ and Shâh Shâraf al-Dîn Mahmûd Daylamî, an inspector of the diwân, set out for 'Irâk and Fârs to revise the khârâdî in conformity with the sharîa and collect the land taxes. Their main activities appear to have been to resume suyârâhâls; their operations were cut short by the death of Ya'qûb in 896/1490 (Persia in A.D. 1479-1490, 93 ff.).

Under the Safawids there would appear to have existed detailed records of the revenue of the tax districts of the empire and the charges made upon it. These were probably based on earlier records, notably the assessment of Uzun Hasan mentioned above. Fadîl Isfahânî records under the years 953/1555 in the Afšâl al-tawdîrâhî that a new assessment (dastûr al-'umal) was made by the sadâr, Mir Zayn al-Dîn 5All, and that it was based on "the customs of good administration and care for the subjects, designed to achieve the embellishment of armies (kashânârî) and to contribute to the pomp of sovereignty, and founded upon good treatment of the subjects and soldiers (sulük bi ra'iyyât wa sipâhî), and concerned the levy of taxes (mâl wa gîhût wa suyâhâl), from every district and tribal region (wilâyât), even (capital) offences and the fining of criminals" (Minorsky, the Aq Qoyunlu and land reforms, in BSOAS, xxvii (1955), 449-62). His intention was apparently to collect additional revenue from legal taxes (absâb-i kifâyât) so that the various tamghâ taxes could be repealed. Accordingly on 19 Jumâdâ I 912/17 January 1505 (see further Divânî, ta'dîl in the province of Shiraz was given to Sadâr Shâh, the son of Shâh Shâraf, a son of the supreme divân, who was appointed to the province as laid down by the masâlih al-wilayya). It may be that Uzun Hasan's assessment was composed of the tax paid by the province of Shâh Shâraf as it was made by the sadâr, Mir Zayn al-Dîn 5All and that it was based on "the customs of good administration and care for the subjects, designed to achieve the embellishment of armies (kushânârî) and to contribute to the pomp of sovereignty, and founded upon good treatment of the subjects and soldiers (suluk bi ra'iyyat wa sipahi), and concerned the levy of taxes (mal wa gihati wa suyakhi) from every district and tribal region (wilayat), even (capital) offences and the fining of criminals" (Minorsky, the Aq Qoyunlu and land reforms, in BSOAS, xxvii (1955), 449-62). Detailed statements of the individual taxpayer's liabilities were in theory, if not always in practice, entered in the registers of the divan (see Dastur al-mulak and Tadhkira al-mulak). There is nothing, however, to show that the revenue records of the Safawids were regularly revised, any more than earlier records had been.

Nâdir Shâh in or about 1736 ordered an assessment of all landed properties in Fârs to be made. Their income and expenses were to be estimated, together...
with the dues of the peasants (bāzyārān). No difference was to be made between the khalisa land in possession of the supreme diwan, land held by sayyids, ulamā and notables, and private property made into waḥf for mosques or madrasas. The facts were to be recorded in the registers and a report submitted to Nādir so that the diwān taxes and dues might be justly fixed. He arranged for similar assessments to be carried out in all the provinces of Persia (Fasā‘, Fārs-nāma-i Nāşiri, lith. Tehran 1804-6, i, 181). The assessment for Fārs appears to have been submitted to Nādir in Kābul in 1738-9, whereupon he issued an order for the resumption of ṭuwyāl and awāḥf in Fārs (ibid., i, 183). Similar orders were given in respect of Iṣfahān, but Nādir was assassinated in 1740/1747 before the operation was completed (see further Landlord and peasants, 131-2; also Fasā‘, op. cit., i, 200-1). In 1739 and 1741 officials were sent to review the revenue assessments of Ālbarāy-dān. It is not clear whether their work was ever completed (Nādir Mīrzā, Tārikh wa diyāḥarīsā-yy dār al-salāman-ī Tabrīz, ed. Lišān al-Mulk Sīpīr, Tehran lith. 1905, 281 ff.). Rustam al-Ḥukamā al-Misri alleges that Nādir's registers were more accurate than any others, and that those of Karim Kāndān (1163-93/1750-79) were also accurate (Rustam al-Ḥukamā, 135). His figures appear to have remained in force, broadly speaking, until Mīrzā Taqī Kāndān, Nāṣir al-Dīn's sadr-i aʿzām, carried out a new assessment in 1851, many alterations in the value of the land having meanwhile taken place.

In the second half of Nāṣir al-Dīn's reign, between about 1878 and 1882, a number of reports were compiled on the villages, lands, and population of most of the provinces of Persia, presumably with a view to achieving greater efficiency in the assessment and collection of the revenue and the levy of troops. New assessments were made in various districts during his reign and under those of his successors (cf. Abū ʿAbd Allāh Mustawfi, Sharḥ-i ḥindagi-i man, Tehran 1945-6, ii, 651-2). Curzon, who visited Persia in 1889-90, however, records that for the most part the assessments were obsolete in date and character (Persia and the Persian question, 174). A land survey was planned to be carried out under the Ministry of Finance in 1889-90 proved abortive (see further Landlord and peasants, 168 ff.).

There were perennial difficulties over the actual collection of taxes, and what happened at the local level often had little relation to the assessment drawn up at the centre. Ghausān Kāndān, when he attempted to reform the tax system, found that the local authorities continued to exact more than they should. He sought to remedy this by demanding full returns from the provinces (see below). Although such steps under a strong government may have reduced abuses, the peasants and small landowners were for the most part unable to resist the demands of the tax-collectors, the provincial governors and the military. In the nineteenth century, although the central government continued to draw up the provincial assessments, the provincial governors, instead of collecting the taxes as authorised by the central government, followed a different procedure. Thomson describes this as follows: “In practice, a very complicated and irregular system of taxation is pursued, the main feature of which appears to be that it is designed solely with a view to take as little as possible from the wealthy and influential classes, and to get as much as possible from the hard-working peasant. The object, indeed of all Persian Governors and their subordinates, as well as of the landowners generally, is to avoid sim-
made a distinction between taxes levied on Mongols (who were nomads) and non-Mongols (who were sedentary), a dichotomy which was to some extent paralleled by the differences between taxes paid by Muslims and dhimmis in the Islamic system. The nomadic taxes were "occasional", whereas those levied on the sedentary population were "fixed" or "regular". The precise form of these two groups of taxes varied with the nature of Mongol rule and the roles of the nomads at different times and in different places (see further J. Masson Smith, *Mongol and nomadic taxation*, in *Harvard Journal of Asiatic Studies*, 1970, 46-83).

Under the Mongol system there were apparently three main taxes, kühb, kalán (kilán) and tankhá. The last named was a tax on commercial goods. What the precise difference was originally between the first two, kühb and kalán, is not entirely clear. According to Bartold kühb was originally levied mainly on nomads. As Quatremère has shown, it was also levied on the sedentary population, which, in turn, might have undergone modifications in their meanings. Bartold thinks that kühb was not a tax levied on the sedentary population, but in many of the passages in which the word occurs it could carry a different interpretation. With this the Mongol terms kühb and kalán, as used in the Islamic system, were assimilated, or had already been assimilated, to the terms used in the Islamic system. The passage in Djuwayní reads l'saldn, kühb, "in the sense of occasional" or "casual" and, until the collapse of the Mongol army, the post, expenses and fodder were "fixed" or "regular" taxation paid by non-Mongols (al-kubturiyya, al-mu'tamildt (i.e., fixed taxes) levied on the Mongol tribes (ulü-i muckgl) (Tärkh-i mubarak-i Ghasání, 304), by which he presumably meant a tax levied at so much per head on flocks and herds or an "occasional" tax on flocks and herds. Mün al-Din Natanzí referring to the administration of Kazaghan in Central Asia in the 8th/14th century, states that because of his justice no amir or vazír could take a single dínár from anyone under any pretext except by way of *küdr-i dísn* and kühb-i rasmí (Muníkhab al-tawrálth, 200). The former presumably meant a tax levied in kind, but it is not clear what taxes meant by what it is perhaps a poll-tax or a tax on flocks and herds. In documents issued by Ya'qub Beg and Alwánd dated 884/1479 and 904/1490 respectively granting certain immunities and exemptions to sayyids descended from 'Ali b. Músá al-Rídá, kühb does not seem to mean a floor tax. The relevant passage reads, "mawdshi, mard*i tankhá shall not be taken from them and their peasants (barsiqarán) shall not be ordered to perform forced labor (bihgbg) or to bear on hunting expeditions (shkdr) and kühb shall not be taken from them" (Untersuchungen, 159, 166).

So far as the Mongols became in the course of time agricultural proprietors and town-dwellers, they presumably became liable to the "regular" taxes levied on the sedentary population, which, in turn, were assimilated, or had already been assimilated, to the taxes to which the Persian population were traditionally subject. With this the Mongol terms underwent modifications in their meanings. Kühb lost its meaning of an "occasional" tax paid by Mongols. Kalán (a term not found in Djuwayní) also probably underwent modification. Bartold thinks that it was a tax levied on sown lands and on the peasantry in general. Caferoğlu accepts this view with some reserve. Masson Smith, following Bartold, thinks that kalán meant the pre-Mongol and essentially sedentary taxation of the conquered people and that it designated in the early Ilkhan period mál, "fixed" or "regular" taxation paid by non-Mongols (Mongol and nomadic taxation, 55). This may be so, but in many of the passages in which the word occurs it could carry a different interpretation. Al-'Umari, quoting al-Djuwayní on the Mongol army, states that the ruler took from them kühb, ulág, and badraka (Masálih al-abýr wa mamálk al-amár, 11). The passage in Djuwayní reads kühb wa *awúrídáti wa khádrájíti wa sádir wa wáríd wa tarí'b-i yárn wa ulág wa *slínl (i, 2). This suggests that al-'Umari understood kalán in the sense of occasional levies (*awúrídáti*), which meaning it could bear in many, if not most, of the passages in which it appears; (cf. also the passage in Seyf Harawí's Tärkh-namá-i Hardá, ed. Muh. Zobáyri al-Shákhrá, Calcutta 1943, 439; which states that Fakhr al-Dín, the Kurth malik of Harát, gave exemption to the people of Harát from
the khulāt and 'awdrīdāt-i divānī in 698/1298-9).

In Ghazān's yarlīgh on the grant of ikfa'dt to the Mongol army, although the term khulān could bear the interpretation of sedentary taxation levied on the conquered peoples, it could equally well mean occasional taxes ('awdrīdāt) and, this is, perhaps, more likely since the passage clearly refers to the Mongol army and not to the population in general. It reads, "It is known to everyone that formerly in the time of our good fathers the Mongol ulūs used to demand every kind of requisition (muflābād) and vexatious demand (muwāšāt), such as ḥabūr on flocks, the upkeep of the great post stations, the bearing of the heavy burdens of the law (yāsāk) and khulān, which in these days we have once and for all removed" (Ṭārīkh-i mubārak-i Ghāzānī, 304). On the other hand, the phrase which occurs later in the same document, mardum-i ārīh ki bi khulān dar āmāda va ḥaḍ kān (308) could be plausibly explained as "soldiers who have been brought into the assessment for sedentary taxes but [still] perform military service", though it need not necessarily bear this interpretation. If kāl means, as Minovi suggests, money paid by someone to the divān in lieu of performing military service as irregulars (ārīh), then the phrase could mean, 'soldiers who have been brought into the assessment for sedentary taxes and give money to the divān in lieu of service as irregular forces (cf. Badī' al-Zamān Frīzānī, Kulliyāt-i Šāms, Tehran 1966, pt. vii, 404-5), but this interpretation is not in keeping with the general tenor of the yarlīgh in question.

The term khulān occurs in the Mukdtabāt-i Rasḥīdī. In a letter from Rasḥīd al-Dīn to his son Shihāb al-Dīn, governor of Shuṣhtar, in which the tax lists for Kullīyāt are set out, there are separate headings for tamghā, khurādāt-i arbāb, māl wa ḥarādāt-i divānī, mawādīr, nīrā mawā'qapnī, nībārā, ārīh, and khulān. In a later letter, it seems probable that they continued to be based primarily on the land, though, as shown by 'Alā'i-ye Tabrīzī, there appear to have been an increase in poll-taxes and taxes on industry. When, however, these assessments were partitioned locally, it may be that this was sometimes done on the basis of a poll-tax.

Rasḥīd al-Dīn's account of the Ilkhanid administration prior to Ghazān Khān suggests that considerable variety prevailed in the fiscal administration. In assessing his account it must be remembered that his object was, in part at least, to show that the administration was in a state of disorder and that extortion had ruined the peasants. He states "before describing how the Lord of the World (Ghazān Khān) reformed conditions in 'Irāk-i 'Aḏjam, Āḏharbāyjān, and the provinces whose dwān taxes consisted of ḥabūr and tamghā, I will mention briefly what a state of confusion had prevailed prior to this. The situation was such that these provinces were given on a muḥāša'a contract to governors (kubūrī), each one being assessed at a fixed sum, "regular" expenses (ṭāḥādī-i muṣarrarī) being debited against it. The governor used to levy two ḥabūr from the subjects (ra'aṣiyāt) and in some places twenty or thirty ḥabūr. The governor's instructions were to allocate among the individual taxpayers the sum due on account of ḥabūr according to the revenue assessment (dājm) given to them [reading bunūhī sāḥibī for naṭīja sāḥibī]. When an ilī came to the province on account of some matter or to demand a tax or something that was needed, the governor, in order to give the individual taxpayers (kubūrī) and the illis would come and then-" (Ṭārīkh-i mubārak-i Ghāzānī, 243-4). Unfortunately, it is impossible to tell from the Persian text whether 'Irāk-i 'Aḏjam and Āḏharbāyjān were among the provinces whose divān taxes consisted of ḥabūr and tamghā or whether they fell into another category of provinces.

Hamd Allāh Mustawfī's account in the Nuzhāt al-kublāb also suggests that considerable variety prevailed. He states that the important province of Khūrāsān enjoyed a special status. This was because most of the ważirs and scribes of the supreme divān were Khūrāsānīs, and so they had constituted Khūrāsān, Kuhistān, Kumīs, Māzandarān and Tabaristān into a separate province (mamlakat), the accounts of which were kept apart from those of other provinces. Hamd Allāh alleges that they put 200,000 dinārs annually against the revenues for the expenses of the army of Khūrāsān, thus reducing the amount due to the central treasury. This situation continued until the reign of Abū Sa'id, when Ghiyāth al-Dīn Muḥammad b. Rasḥīd al-Dīn found out and stopped the practice. He had intended to draw up an account of the taxes of the province, deduct from the total the regular expenses of the province, sums for the šāfs of the soldiers and other local expenses, and to have the rest remitted to the treasury, but he died before he was able to implement this reform.
Ghāzānī which states that prior to Ghāzān's reforms 80% of the drafts on the revenue of Khurasan were unpaid (34).

In his account of the revenue of the different provinces and districts, Hamd Allāh makes a difference between the revenues of certain towns and their surrounding districts (wildyāt), the former being provided by the revenues of the towns and the latter by the tax on lands (khardī-i ḍiwan). Among the towns and districts described in this way, all of which were along the main trade routes, were Bahgādād, Kūfā, Wāṣīt, Hilla, Iṣfahān, Sūltāniyya, Kanvūn, Khūšāb, Khāgān, Hamadān, Yazd, Tabrīz, Ḍiğān, Aḥar, Shuṣhtar, Āwa, Sāwa, Zandjān, Maragha, and Şhrāz. The tax of the last five were farming. Writing of Fārs, Hamd Allāh states that the ḍiwan was in his time 2,571,200 currency dinārs (dinār-i rādīq) and that in the provinces (wildyāt) they were levied for the most part in kind (maḥbūl), but in the towns they were fixed as ṭamgīd (115). The inference to be drawn is that the taxes outside the provinces were mainly land taxes. Hamd Allāh makes no mention of ṭamgīd or other taxes in his description of the provinces of Kirmān, Khūrāsān, Māzandarān or Šabaristān. So far as the last three are concerned this may have been because of the special situation which prevailed in Khūrāsān. In ʿĪrāk-i ʿArab, what survived of the assessment of Ḥājdāḏūdī was known as ḫurārāḏī-i ṭārīk and was included, when Hamd Allāh was writing, among the sums due to the ḍiwan (muṭawāḏḏāḏīḵāt-i ḍiwan), which amounted in the Khand year 35 (A.D. 1335) to 300,000 currency dinārs. He points out that if the same amount of land had been under cultivation as in the time of ʿUmar double this amount would have been yielded (29). In Kūfā ḫurārāḏī was paid at the rate of one-third of winter and summer crops, the remaining two-thirds being equally divided between the tenant (reading tānī) and the cultivator (reading barisgar). The province (wildyāt), at the time he was writing, was assessed by the ḍiwan (? mubarrār bi ḍiwan ast, 31). Orchards (bāḏgīštān) in ʿĪrāk-i ʿArab paid ḫurārāḏī, either according to the old assessment of Ḥājdāḏūdī or according to a new assessment (ḵurārāḏī-i ḥāḏīk) (31).

It is somewhat little known that this "double" system of taxation bore heavily upon the people and also that it was the additional "Mongol" taxes which were felt to be especially onerous (cf. the poems of Ħārūn Bahā quoted above). Hamd Allāh Mustawfī alleges that most of the districts of ʿĪrāk-i ʿAdjam were ruined because of ṣabūḏūr and that the people had abandoned their homes, "so much so that in Kazwīn the Friday prayers were not performed" (Tahrīḵ-i gūzāda, 604). The tax officials brought up in pre-Mongol traditions, probably disapproved of the new taxes, just as the ʿulamāʾ had earlier disapproved of the muḥāṣṣ. They were unable to abolish them altogether. The most that they could do was to limit them, or sometimes to abrogate them temporarily.

In a letter to his son, Amir Maḥmūd, when the latter was governor (bāḵšīm) of Kirmān, Rashīd al-Dīn states that it had been reported to him that he (Amir Maḥmūd) had removed oppression against the people of Kirmān and had ruined them by imposing upon them additional cesses, ḍiwan dinārs (ṭaffuṭt wa ṭahālīq-i ḍiwan) and repeated royal drafts (ḥaṣālāt-i sūltānī) and by the levy of ṣubān, ṣabūḏūr, [money for] soldiers (ṭīrāḥ) and various expenses (ḫurārāḏī-i muṭaʃafarriḵā [Muḥālāt-i ḍiwan-i ḍiwan, 11]. He instructs him to remit for three years ṣabūḏūr, ṣabūḏūr, ṣuṭwald (occasional taxes) and the ḍiwan dinārs levied for Kirmān and the Great Urdū, so that prosperity might return to the deserted places and uncultivated lands, and agriculture be resumed. As for his own estates in Bām, seed and advances for the purchase of draught oxen and food were to be given to the peasants if they so desired (ibid., 12).

The reforms of Ghāzān Khan may have succeeded to some extent in ameliorating the condition of the peasants: certainly Rashīd al-Dīn alleges that prosperity returned during his reign. Hamd Allāh Mustawfī, on the other hand, while he gives due emphasis to Ghāzān’s reforms, shows that the change in agricultural conditions was not dramatic, though he alleges further improvement under Ṣadḫāyāt (Ṭahrīḵ-i gūzāda, 606).

Such figures as are given by Hamd Allāh Mustawfī and Waṣṣāf, incomplete though they are, suggest that the improvement was only marginal and that there was a striking fall in revenue compared to Ṣalṭānī prior times. Prior to the reign of Ghāzān, the ḍiwan received annually, according to Waṣṣāf, 18,000,000 dinārs, or according to Hamd Allāh Mustawfī 17,000,000. After Ghāzān’s reforms, the figure rose to 21,000,000 but fell in 1335-40 to 19,203,800. It is not clear whether these figures include the sums which were deducted for the expenses of local administration or not. Under the Ṣadḫāyāt ruler, Mālikšāh, ḍiwan revenue had amounted to 215,000,000 red gold dinārs, the equivalent of Hamd Allāh’s estimate of 500,000,000 current dinārs (see further Petrushevsky, who estimates the ḍiwan revenue for the pre-Mongol period on the basis of figures in the Nuzhāt al-bulūḥ to have been 100,580,000 currency dinārs, op. cit., 479 ff.). The figures for the two periods are not necessarily strictly comparable, because the extent of the land alienated from the control of the ḍiwan and of crown lands was not identical. The evidence, fragmentary though it is, would, nevertheless, seem to point to a marked decline in the revenue reaching the ḍiwan, though the decline was not equal in all provinces. If the revenue was still derived largely from land taxes, as would seem to have been the case, such a decline could be largely accounted for by first a decrease in the amount of land under cultivation consequent upon depopulation and the increase in the number of nomads, and secondly the removal of large areas of the country from the fiscal control of the agents of the central government.

Ṣaḥāwīds and Kāḏīārs. Under the Ṣaḥāwīds, there was a revival both of agriculture and trade, and it seems likely that the sums reaching the ḍiwan from ḫurārāḏī once more increased, but the proportion which they formed of the total may have fallen somewhat. Such figures as are available do not give a detailed breakdown (though an examination of Ottoman records for those provinces which from time to time came under Ottoman domination would doubtless throw further light), while the fluctuation in the extent of mamālīk and ḥāṭṭa land [see Ḵaša] together with the changing distribution of ṭūyūs, ṭuyūshūs, and ṭukbūf further obscures the situation. Minorsky, on the basis of the figures in the Taḏḵīrāt al-muṣlīm, puts the revenue towards the end of the Ṣaḥāwīd period at 800,000 ṭāmāns, excluding revenue directly collected by the ḥāṭṭa administration. He suggests that land taxes may have been responsible for 65% of the total. This may be an underestimate. He also analyzes the estimates of the revenue given by European travellers, which, he points out, were, in the absence of official statistics and the secrecy surrounding the question of state revenue, purely hypothetical. Chardin, who gives the
fullest account, puts forward, with some reserve, a total figure of 32,000,000 livres or 70,000 tumdns. This figure is not far short of that given in the Tādqīkār al-mulāhāt, but Chardin's figure includes 14,000,000 francs from demesnes, i.e. khāsā, and only 2,000,000 francs from provincial revenues (Tādqīkār al-mulāhāt, 173 ff.).

In the 18th century there was a period of recession. Rustam al-Hukamār puts the revenue, excluding pīghāsh, under Karim Khān (whose writ did not run in Khurasān) at 150,000 tumdns (Rustam al-tavāriż, 322). In the nineteenth, the general trend was again towards expansion, although the total area under the control of Persia had greatly diminished. In the absence of statistics, however, it is not possible to give detailed figures, though an examination of the records of the mustaafsī would, no doubt, yield further information. M. T. Gokbilgin, writing about 1815, states that the total revenue did not much exceed three million tumdns, of which the land taxes and revenue from crown lands probably amounted to two-thirds (History of Persia, ii, 336, 340).

At the end of the reign of Fath ʿAli Shāh (1797-1834), the revenue is reported to have amounted to 2,081,532 tumdns in cash and payments in kind worth 379,217 tumdns. The main constituents of the latter were 163,084 kharūdar (675 lbs each) of wheat, at 2 tumdns each, 12,850 kharūdar of rice, at 3 tumdns each, and 965 mams of silk, at 6 tumdns each. (Revenues of Persia ordered by the late Shah to be paid to the General credit of Government, India Office, LP and S/j, vol. 53, quoted by C. Issawi, The economic history of Iran, 301-2.)

By about 1868, despite the sharp fall in silk production in Gilān, the total revenue had increased by 313 crores of tumdns (or £6,544,000) and amounted to 4,361,660 tumdns (or £1,244,664) in money, most of which was from land tax, besides payments in kind in barley, wheat, rice, and silk valued at 350,840 tumdns (or £220,336) (Thomson, Report, op. cit., 250-1). The revenue of Khurasān, which towards the end of the reign of Fath ʿAli Shāh had been ca. 200,000 tumdns in money and 46,000 kharūdar in grain, was about the year 1876, although the population had decreased (because of the contraction of the frontiers), some 340,000 tumdns in money and 46,000 kharūdar in barley and wheat, 620 kharūdar in rice and 83 kharūdar in tobacco. The whole of this was absorbed in payments for military service, pensions, salaries and other local disbursements (F.O. 416/26, App. (A) in Hardinge to Grey, London, 23 December 1905, separate and confidential). Thus agriculture still retained its early 20th-century importance as the main economic activity of the country, and the state still depended, as it had in earlier times, upon land taxes for its current expenditure. Basically, the old patterns of land revenue assessment and collection, which had shown a striking continuity over the centuries, lived on and rulers still looked to the land—and this, in effect, meant to the peasants—to provide them with the material resources to support themselves and their governments. (A. K. S. Lambton)

III.—In Ottoman Turkey.

This term denoted in Ottoman usage both the land tax and the poll-tax on the state's non-Muslim subjects. In some documents the term khardi ru'usu refers to the djizya [q.v.] payers (M. T. Gökbilgin, XV-XVI. asrîlarda Edirne ve Paşa livası, Istanbul 1952, 158; the kānumāne of Kandiya dated 1081/1670, in Ö. L. Barkan, XV ve XVI asrîlarada Osmanlı imperatorluğuunda sirâz ekonomisinin hukuki ve mali esasları, i. Kanunu, Istanbul 1943, 351), whereas the word khardi was only used for the tax put on the land. In the early period, both the khardi and djizya were collected by the khardidin, an officials appointed to collect the khardi, so that the officials collecting the djizya were also called khardidin (Başbaşalian Arşiv Genel Müdürlüğü, Malye mudever defterler, no. 2775, p. 455). This state of affairs can also be seen in a khardid register showing the records of khardi and djizya between the years 954-6/1547-9 (Malye mudever defterler, no. 191).

The lands of the Ottoman Empire were, in financial theory, divided into three categories (1) ardiş-šabriyye; (2) ardiş-šabriyye; and (3) ardiş-
memleket, but in practice there was a great variety of application. Qəşur land was the land given to the Muslims at the time of the conquests in return for a tithe. Kharadji land was the land retained by the non-Muslims in return for a tithe or greater proportion levied on its product, the kharadji-mubâsama, plus an annual requirement in cash.

The so-called ard-i memleket (that is, state or mîrî land) was not the property of the subjects (re'îyâ) but cultivated by them on a temporary basis; they paid kharadji-i mubâsama instead of qəşur, according to the amount of produce obtained from the land, and kharadji-i mawazzaf instead of the fîst âkîf (Barkan, Kanunlar, 4, 66, 297-8, Kânûn-name-i Sultân Süleyman ve Ebu's-Su'âd Efendi'nin ma'rûfsi risâlât, in MTT, i (Istanbul 1331), 109).

The 1051/1640 tabâr缺陷 of the island of Crete, newly added to the Ottoman Empire in 1640/1641, is listed and perhaps the last register showing what the kharadji lands were and how this tax was applied. It was decided that one-fifth should be taken as kharadji-mubâsama from the produce of the lands retained by the non-Muslims. Those harvesting two crops a year would pay kharadji twice. The vineyards and orchards were surveyed and a dirham-i sharîh was taken annually from every 'âDIR of them. Kharadji-mubâsama was 'âDIST from the land, even if the owner did not sow it. Kharadji lands were the full property of their owners, and therefore they had right to sell them as they liked; when the owner of the land died, it was divided between his heirs. If the non-Muslim owner of kharadji land abandoned his land and fled, then his land was rented out and afterwards his name would be removed from the list; when the owner of the land died, it was divided between his heirs. If the non-Muslim owner of kharadji land abandoned his land and fled, then his land was rented out and its kharadji was taken from its produce (Barkan, Kanunlar, 351-2). The financial difficulties of the Christian re'îyâ in a newly-conquered land were taken into consideration. For example, in the island of Cyprus, immediately after its conquest in 980/1572, a register was made, and as a result of it, the non-Muslim subjects, taking into consideration their financial situation, were classified into three groups: the rich, people with average incomes (the middle class), and the people with lower incomes (Barkan, op. cit., 105)."
The heads of Christian villages, and their notables such as priests, were charged with the responsibility of collecting the kharāḏī, angaria and the other taxes (cf. Polonýs Simeon’s seyahat namesi (1608-1619), tr. H. D. Andreasyan, Istanbul 1964, 134).

The Christian dependent provinces like Ragusa or Dubrovnik, Moldavia and Transylvania were counted among the tributary rē’dyā in which they paid an agreed, fixed amount every year (the kharāḏī mahlā in gold (cf. N. H. Biegman, The Turco-Ragusan relationship, The Hague 1967, 132-3, 138, 140, 142 and C. Orhonlu, Osmanlı tarhine ait belgeler: Telhisler (1597-1607), Istanbul 1970, 35); but the situation of Ragusa, because it accepted the payment of kharāḏī as a result of a peace agreement and not after conquest, was somewhat different to that of Moldavia, Wallachia and Transylvania. The taxes taken from the peace agreements made after the victories of the Ottoman Empire in the west, at the times when it was powerful, were also described as kharāḏī, e.g. those paid at certain times by Austria and Venice (L. Fekete, Die Staatsschrift in der türkischen Finanzverwaltung, Budapest 1965, i, 481). In the 11th/12th century, when there was a dispute over the question of borders, the Ottomans claimed (basing their argument on the defters) that the villages and towns in dispute belonged to the empire because of the presence there of kharāḏī-paying non-Muslim subjects (Fekete, Türkische Schriften aus dem Archiv des Palatinus Nikolaus Esterhazy, 1660-1645, Budapest 1932, 65 ff., 82 ff.).

From the end of the 12th/13th century, the task of collecting kharāḏī in the largely non-Muslim regions passed into the hands of the non-Muslim local elite (priests, headmen, etc.). From this time, too, the word kharāḏī came to be linked with the word bāḏī in the phrase kharāḏī we bāḏī, which was current till the Tanzimat period (K. Schwarz, Osmanische Sultansterkunden des Sinai-Klosters in türkischer Sprache, Freiburg-in-Breisgau 1970, 149 (dated ni2/12), 162 (dated ni4/1780) 185 (dated ni2/1858). The officers charged with collecting the kharāḏī were everywhere called kharāḏī-emlīs, and at the beginning of the 19th century there was established an office of kharāḏī which looked after various problems involved in the tax and which later also took care of the gīz̄aya at the same time.

The Tanzimat decree of 1839 brought a new concept of citizenship into the society of the Ottoman state, the idea that both the Muslims and the Christians living in the Empire were to be treated as equal before the law. This involved the question of taxation, including the kharāḏī, for the abolition of which there was pressure from Western diplomats in Istanbul.

A decision on this was only taken after the 1856 reforms, when both kharāḏī and gīz̄aya were abolished, and instead, non-Muslim subjects were to pay a tax in lieu of military service (bedel-i ‘askeri) (cf. G. Muir Mackenzie and A. P. Irby, Travels in the Slavonic provinces of Turkey-in-Europe, London 1866, 13, 67); the tax is also mentioned under the names ‘askeri, kharāḏī, gīz̄iya, imādasiyye, nizamıyeye, bedel-i (cf. James Barker, Turkey, New York 1877, 384; for the bedel-i ‘askerîyeye, see Düsütür, Istanbul 1289, ii, 26-33, and see also Badal).

(Gencel ORHONLU)

IV.—IN THE INDIAN SUB-CONTINENT

In India, the term kharāḏī was less common in the administrative literature, being replaced by other expressions such as bāṣīl or muḥṣūl, meaning revenue or land-revenue. As in other Muslim lands, the kharāḏī in Muslim India also had two distinct forms, to which the names of muḥsāsam or muḥsāsam-i muwaṣa’a, the latter being less common in the largely non-Muslim regions, were given. The former is defined as an impost which depended on the actual produce of the land, and was leviable only when the land was cultivated; the latter depended on the return that the land was capable of yielding, and was due whether the land was tilled or not. It is the waṣīfa which is meant when the term kharāḏī is mentioned by the Muslim writers or historians of India, unless the muḥsāsam is specifically named.

The earliest record of the imposition of the kharāḏī in Muslim India relates to the reign of Sultan ‘Ala‘ al-Dīn Muhammad Ḥanīf al-Dīn (870/1466-1316), who fixed the standard of the revenue-demand at one-half of the produce, an arrangement which set the pattern for the agrarian system in the 7th/i3th and 8th/i4th centuries. A notable aspect of the implementation of the kharāḏī was a remarkable degree of harmony in the relation between the Sultan and the tribute-paying Hindu chiefs.

The system initiated by ‘Ala‘ al-Dīn was never completely put into effect and soon fell into desuetude; it was not till the time of Shēr Shāh that any effort was made to revive it. The changes which the Dīlū sultans endeavoured to introduce were afterwards perfected in the system which the Mughal administration under Akbar adopted concerning the imposition of the kharāḏī. Akbar first established a uniform standard of length which he termed gāz-i iūdā (from the Arab dīrā bi h) and having adopted the dīrā bi h, as the measure of surface area, he fixed it at 3,000 square gāz. The land was divided into four kinds on the basis of its potential fertility. Of these four kinds, only the category called Perowy, i.e. land kept out of cultivation for a short time to regain its strength, was in reality the kharāḏī-i
wa'af of the Islamic law which Akbar imposed, and the person immediately liable for the khardi was the husbandman, who was assured of all required assistance by the state. In terms of the principles of this kind of khardi, the cultivators who paid taxes direct to the state received proprietary rights from the conquerors in respect of the lands which they tilled. Akbar’s system of khardi revenue collection did not cover his entire dominion, for the outlying saba contained large tracts of land which were left unmeasured; hence, in such cases, the Emperor himself, in accordance with the rules of khardi-i mukasama, retained ownership of the land. The tenure and the position of the cultivators under Djahangir and Shahjahan was pretty much the same as was in vogue under Akbar’s policy of settlement. The ownership rights of the husbandman to the land of the khardi-i wa’af continued to prevail even throughout Awrangzib’s puritanical reign. Under Awrangzib, the religious jurists on whose fatwas or pronouncements the royal orders were issued, sought guidance not from the rules or orders of Shēr Shāh or Akbar, but from the standard Islamic law books or commentaries written at an earlier period in the Arab lands. Standard authorities such as Abu Ḥanifa and Abu Yūsuf were closely consulted when fatwas regarding the khardi were drafted, with the result that Islamic terms, ideas, and institutions, which were not in accordance with the facts of indigenous Indian life, were imported into the Muslim Indian system more vigorously.

In the midst of the chaotic political conditions following Awrangzib’s death in 1128/1717, when some strong-armed adventurers took over the reins of rulership as sabaars in outlying areas of the empire, the regular institution of the khardi fell into disruption. The exigencies and characters of the rulers in particular territories brought about various pressures on the land, so that in some localities the cultivator, who was normally left with two-thirds of the produce of the land after paying one-third as khardi, had to remain content with the bare minimum necessary for his and his family’s subsistence. This state of affairs continued to prevail in the country till the British rulers brought about a settlement of the land revenue in 1793-94. *(Abdus Suhain)*

**KHARAG** (usually shortened to Kharg; Kharak in Arabic), a coral island in the Persian Gulf off the coast of Persia at lat. 25° 16' N, long. 50° 19' E. Lying 55 km. northwest of Būshahr [q.v.], the island is 8 km. long from north to south and 4 km. broad. Much of it is covered by treeless hills with a maximum height of 75 m. Four km. to the north is the smaller island of Kharg (Arab. ‘Abū Ubaydah). Between the two islands and also west of Kharg are banks where pearls of exceptional value were sometimes found until commercial pearl-fishing withdrew away in the present century.

Whether Kharg is to be identified with one of the islands in the Persian Gulf mentioned in the Greek and Roman sources remains uncertain. An examination of burial caves and rock carvings has indicated that a Christian community existed on the island in the 3rd century A.D.

The early Muslim geographers list Kharg as belonging to the ša‘b of Asur (see [FIRUZA-ŠAB]). It is also described as lying opposite the town of Djanāb [q.v.]. According to Ibn Khurraḍādhbih, Kharg as a port of call on the route from al-ʿAlā to Umān and India was known for its cereals, grapes, and dates.

Yākūt, who visited Kharg more than once, saw the shrine pilgrims believed to be the tomb of Muhammad b. al-Ḥanafiyya [q.v.], a belief Yākūt declares unhistorical. Yakut quotes ʿAbū Ubayda as saying that ʿAbū Ṣufra, the father of the renowned Umayyad general al-Muhallab [q.v.], was a native of Kharg who, for his military prowess, was adopted by the tribe of al-Azd. ʿAbu Ṣubayda’s statement is corroborated by verses of al-Ḥarām-i Yākūt, the lord of Bandar Rīg on the mainland 35 km. to the northeast. Building a fort on the northeastern side of the island, the Baron proceeded to develop a flourishing community, described in detail by the Englishman E. Ives and the German C. Niebuhr, who stayed there in 1171/1758 and 1178-79 respectively. Shortly after Niebuhr left, the Dutch were driven out by Mir Muḥammand of Bandar Rīg, who took up residence on the island. Karim Khān Zand [q.v.] then invested the island and forced Mir Muḥammand to flee to al-ʻAlā, where he met his end. Karim undertook to turn Kharg over to the French East India Company, but the suppression of the company prevented the arrangement from being consummated. Again during the reign of Fath-Allāh Shāh [q.v.], Persia was on the point of giving Kharg to the French but was thwarted by British pressure.

In 1247/1832 bubonic plague on the Persian coast impelled the British Political Residency in the Gulf to move temporarily from Būshahr to Kharg, and consideration was given to making Kharg its permanent site. When Persian arms advanced against Afghanistan, the British landed troops on Kharg in 1254/1838 and held it until 1250/1842, during part of which time the Residency was headquartered on the island. Lord Auckland, the Governor General of India, dreamed that “Kharg ... could become the Singapore of the Persian Gulf”. The initial Russian protest against the occupation of Kharg had failed to sway the British government, but prolonging the British presence there would have run the risk of giving Russia an excuse to march against Persia in the north, and in 1260/1844 the British coal depot was removed from the island.

Britain at the outset of its war with Persia in 1273/1856 again seized Kharg, whose Persian garrison had already been withdrawn. This time the grip on the island was kept for only a little more than a year. General Sir J. Outram, commander of the expeditionary force, advocated without success transferring the Political Residency from Būshahr to Kharg. For years thereafter the island’s importance derived in part from the skill of the pilots it provided for the upper Gulf and from its quarries for stone used in road building.

The growth of the oil industry has given Kharg a newly significant place on the map. The waters off the mainland coast of Persia (now Iran) are too shallow to accommodate large ships, while the island, lying 30 km. away from the coast, has waters deep enough
for this purpose. When Iran's production of oil for export mounted in the mid-20th century, Kharag was selected as the new terminal for shipping crude oil. Pipelines were laid to bring crude in from the producing fields as well as refined products from Abadan oil. Huge storage tanks were built on Kharag to hold millions of barrels of oil. Tankers were dispatched to carry the oil away berth at a jetty or a private pier. Kharag itself also lies within a recently-discovered area for the production of oil, with the Darius field stretching westwards from the island into the waters of the Persian Gulf. Moreover, the National Iranian Oil Company has constructed on Kharag one of its most elaborate petrochemical complexes. The few details which are reported concerning the external life of Kharakani point to a humble origin. He is said to have been a donkey-driver at the time when he was called to the mystic path (Samânî). As a youngster, he tended the cattle for his parents. But even in his later years he lived very close to the peasants of his home country. He seems to have travelled very little. There are no reports about his formal education, and he claimed to be an illiterate (ummi) who was ignorant about the correct pronunciation of even the most commonly used Arabic formulas (Anšârî, Tabâštî, 510). Some of his sayings show traces of a local dialect.

Kharakani described himself as a resident (mu'âmîn) of the small towns and villages where they were born. Another mystic of this type was Abû'âbab al-Kâsaš al-Ábã, a butcher turned into a mystic, who enjoyed a similar reputation as Kharakani. He is reported as having prophesied that his "little bazar" (bâsarâk) would, after his death, be taken over by Kharakani (Anšârî, Tabâštî, 308). There is no evidence, however, of a formal initiation in the form of the bestowal of a hâjdâ, which is a required prerequisite for membership in the mystic order of Kharakani and Kharakânî. The learned Sîfî skâyîs of the larger cities, in particular of Nîshâpûr, took a lively interest in these single-minded and uncompromising individuals, and they were seen as representatives of the mystic way. Whether or not the reports about the last two visits is questionable, the attention paid to Kharakani by the great Sûfis of his time is undoubtedly historical, and it fits very well into the pattern of Khurasanian mysticism in the beginning of the 9th and the 10th century. The learned Sûfî skâyîs of the larger cities, in particular of Nîshâpûr, took a lively interest in these single-minded and uncompromising individuals, and they were seen as representatives of the mystic way. Whether or not the reports about the last two visits is questionable, the attention paid to Kharakani by the great Sûfis of his time is undoubtedly historical, and it fits very well into the pattern of Khurasanian mysticism in the beginning of the 9th and the 10th century.
al-Karani [q.v.] in spite of the fact that they never actually met. The line of mystic tradition which runs through al-Bīṣṭāmī and Kharakānī was later in the same century attached to the classic silsilatul Sūfīm by Ābū ʿAṣīl al-Fārmādī (d. 472/1084). In addition to his regular affiliation to Abu Iʿlāṣīm al-Gūrhānī (d. 469/1076-7), al-Fārmādī chose also Kharakānī as his initiator, although it is hardly likely that both men ever met personally. In this way, Kharakānī has become a spiritual ancestor of the ṣūfīs of the Kharakānīyyūn out of which the Nakhshbandiyya order developed in the 8th/14th century. The interest of later generations in Kharakānī’s mysticism is also shown by the use of anecdotes about him in Sūfī epic poetry, notably in the works of ʿAṭṭār and of Mawlānā Ḍalāl al-Dīn Rūmī. Shāhīd al-Dīn Yāḥyā al-Suhrawārdī, the Shāykh al-Maḥṣūdī al-Dastānī (d. 417/1026), who is often attributed to Kharakānī have been preserved.

Bibliography: In addition to the works quoted in the article: Hudiwīrī, Kashfal-maḥṣūdī, Tayfūrīyya tradition in Bīṣṭām, Abu ʿAllāh Abū Ṣayyīkh Muhammad al-Dastānī (d. 417/1026), who is often fannā the self to which they really belong. Command created world, and the “brave ones” (khalfr) who remain attached to the created world, and the “brave ones” (dīwān-mardaḍ) who venture out to aspire for a return to the world of the Command (ṣālam al-ame) to which they really belong. The path of the latter goes through severe ascetic training and should end with the total extinction of the self (fana?) and the subsequent permanence in the will of God. The ascetic preparation has no value in itself. The attainment of the goal is entirely an act of Divine Grace. This idea is linguistically expressed by the use of passive verbal forms whenever there is a reference to the fulfillment of the mystic’s aim. At that stage, the mystic ceases to be the actor of his own deeds and the speaker of his own words. The highest gift granted to the adept is gnostic knowledg (marṣīyya) which is to be distinguished from the positive knowledge (ḥīm) of the theologians. When the former kind of knowledge has been attained to its full extent, it appears to be identical with the contents of the religious Laws. Kharakānī emphasizes that he would refuse to travel any path that would deviate from that of the Prophet. In spite of this adherence to Islamic orthodoxy, he dares to discourage other mystics to travel on to Mecca once they have “crossed the deserts of Kharakānī”, i.e. after they have visited him and have accepted his teaching. The way of Kharakānī is a path of sorrow (andaḥ) and anxiety (ḥabīb) which is contrasted to the joyfulness (gāhād) and relaxation (baṣīt) of mystics like Dāstānī and Abū Saʿīd. Humility and self-glorification are curiously mixed in the utterances of Kharakānī. He claims to be one of the radiating servants of God, and many of his sayings have the form of direct revelations from the Unseen. There are also some accounts of experiences in the higher world. One of his pupils recognizes him as the bīd of his age. The superior status of the shaykh enables him to act as a mediator for other people before the Divine Judge. On the other hand, Kharakānī takes great pains to conceal the graces bestowed on him. Neither his ascetic merits nor his miraculous powers, which in the case of Kharakānī consist in particular of the gift of foresight (fīrāsā), should mislead the true mystic into false pretensions. It is therefore to be regarded as a special favour of God to His friends that He helps them to conceal these graces from the eyes of the profane. (On the characteristics of Kharakānī’s mysticism, see also S. de Beaurecueil, Ansārī, 65-67.)

The sayings of Kharakānī have been collected by one of his followers in the Kitāb Nūr al-wulūm. Of this work, only an abstract seems to have survived in the so far unique manuscript British Museum Or. 249, dated 658/1259 (cf. Rieu, Catalogue of the Persian manuscripts in the British Museum, i, 3423; ed. by E. E. Bertel’s, in Iran, iii (1927), 155-224 = Izbrannoe trudy. Sufizm i suфизская литература, Moscow 1965, 201-55; the linguistic particularities of this text have been studied in the Introduction to Bertel’s edition as well as in M. Taqī-Bahārī, Sabkhasnātī, ii, Tehran n.d., 226-8 and G. Lazard, La langue des plus anciens monuments de la prose persane, Paris 1963, 123-4 and passim). Considerably more of the contents of the original has been preserved in the long section on Kharakānī in the Supplement to Aṭṭār’s Tadhkhirat al-asīyā, ii, ed. Nicholson, Leiden-London 1907, 207-55. The Nūr al-wulūm has been divided into 20 chapters, the last of which contained hagiographic stories (manaḥ☆b) about the shaykh. Another chapter was devoted to the prayers (mundd☆d) of Kharakānī. A small separate collection of prayers is also known to exist (cf. H. Ritter, in Isl. xcv (1939), 63). The attribution of the edition of the Mundd☆d of Abū Yāzd al-Bīṣṭāmī to Kharakānī (cf. L. Massigön, Essai sur les origines du lexique technique de la mystique musulmane, Paris 1968, 274) needs to be verified. Two short risālas attributed to Kharakānī have recently come to light in Pakistan (cf. A. Munzawi, Fīhrīst-i nushkhāt-i khafī-i farsi, ii, Tehran 1349 sh., 1101 nos. 10165-10166). There are also a few quatrains attributed to him (see, e.g. Nadīm al-Dīn Dāya, Mirdād al-bādā, ed. Tehran 1377/f1377, 25, 28; Amin-i Aḥmad-i Rāzī, Haft Iḥlīm, ed. D. Pākalī, Tehran 1340 sh., iii, 335; Rūdī-hull Khān Hidāyat, Riyād al-arṣīfīn, Tehran 1305/1889-8, 28-9; idem, Maṣāḥ☆s al-fusahāb, ed. Tehran 1392/1878, i, 66, Ethé, Catalogue of the Persian manuscripts in the India Office Library, i, Oxford 1903, no. 1747, fol. 1b). A commentary to one of the sayings was written by Nadīm al-Dīn Dāya (cf. F. Meier, in Isl. xxiv (1937), 38 n.). One of the divine-inspired utterances (gāhīyya?) of Kharakānī has been studied by Kāsim Labīhān Bahkī. AL-KflARA&l, ABU BAKR MUHAMMAD B. AHMAD
B. (Afi!) BISHR, BAHA* AL-DiN and SHAMS AL-DIN (and
also ABU MUHAMMAD CABD AL-DJABBAR B. CABD ALDJABBAR B. MUHAMMAD) AL-THABITI AL-HUSAYNI
AL-MARWAZ!, Persian mathematician, astronomer and
geographer, who also concerned himself with philosophical questions. He seems to have been a native
of Kharak (see Yakut, s.v.) near Marw, whence his
nisba (which Hadidji Khalifa, Kashf, Tehran 1947,
338, reads as al-Khiraki). He lived in Marw, whither
he had been summoned by the Khwarazm-Shah Kutb
al-DIn Muhammad (490-521/1097-1127) or by Atslz
(521-51/1127-56), and he also lived in Nlshapur. He
died at either Marw or Kharak in 533/1138-9.
Amongst his works, al-Risdla al-shdmila, on
arithmetic, and al-Risdla al-maghribiyya are lost,
but there are extant manuscripts of his works on
cosmography: (i) Muntahd 'l-idrdk fi takslm (or
takdsim] al-afldk, which included, according to
UadidjI Khalifa, 1852-3, three parts—(a) the structure of the spheres, the movements of the heavenly
bodies, etc. (b) the shape of the earth, with its devision into an inhabited zone and an uninhabited zone,
the differences in the ascendants (tdli<) and the
ascensions (matdli*), according to geographical
position (c) chronology; the conjunctions, especially
those of Saturn and Jupiter; and the periods of
revolution (adwdr). In this work there is a description
of the five seas borrowed from al-Djayham (301;
913-14), in which it is asserted that the Atlantic
communicates with the Indian Ocean, just as the
Black Sea communicates by means of the Don
(Jams) with the Baltic (ed. and tr. C. A. Nallino,
Albatenii Opus astronomicum, Milan 1903-7, i, 169-75).
(2) Kitdb al-Tabsirafi Him al-hay*a, a work basically
concerned with astronomy, and shorter than the
preceding work. According to HadjdjI Khalifa 338, i

1059

it was dedicated to the minister Abu '1-Husayn CA1I b.
Naslr al-DIn, and contained two parts concerning the
celestial spheres and the earth respectively. In it, the
author shows the positions of the apogees for the
beginning of the year 1444 of the Seleucid era (i
October 1132), and he brought the longitudes of
al-Battanl down to his own time (Nallino, op. cit.,
i, 240).
In these two works, al-Kharaki develops the
theory that the celestial bodies do not move along
imaginary circles, but are drawn along by material
spheres. The antecedents of this view can be found
in Ptolemy's Planetary hypotheses, and the same idea
was set forth by al-Khazin [q.v.] and by Ibn alHaytham [q.v.]. Kutb al-DIn al-Shlrazi (633-710/12361311) airs this view in his Nihdyat al-idrdk fl dirdyat
al-afldk, referring both to al-Kharaki and to Ibn alHaytham, and in Europe, it was known to Roger
Bacon (ca. 1214-92).

(E. WIEDEMANN - [J. SAMS6])
KHARAN, a former native state of western
Balucistan, now incorporated in Pakistan. Geographically, it comprises a wide basin, that of the
Mashkel river in the west and the Baddo in the east,
between high ranges of mountains, the Ra3s Kuh
rising to 9,900 feet; the valley terrain includes an
extensive rigistdn or sand desert. The population is
largely Balu6, with some Brahms in the eastern part.
The early history of Kharan is very obscure. Local
tradition says that the Nawshirwam chiefs entered
Kharan in the 8th/i4th century. Over the ensuing
centuries, these chiefs gave a vague allegiance to
rulers in Persia, Kalat and Afghanistan at different
times; up till the period of Nadir Shah Afshar (midi8th century), Kharan seems generally to have been
considered as an extension of the Persian province
of Kirman. The energetic Naslr Khan of Kalat [see
KILAT] brought Kharan under his suzerainty, until
conflicts in the latter half of the igth century between Mir Khudadad Khan of Kalat and Azad Khan
of Kharan inclined the latter to the Afghan side.
In 1884, Sir Robert Sandeman, the pacifier of Balucistan, visited Kharan and arranged a settlement
between the rival rulers. Kharan continued to
acknowledge Kalat's general suzerainty, but now
received an annual subsidy from the Government of
India and referred disputes to the British Political
Agent in Quetta (see T. N. Thornton, Colonel Sir
Robert Sandeman: his life and work on our Indian
frontier, London 1895, 101, 180-2). It was around this
time also that the frontier on the west of Kharan and
the adjacent parts of Balucistan with Persia was
demarcated. Few travellers visited Kharan before
Sandeman's time; one of the few who did, H. Pottinger
(1810), alludes to the fine camels of Kharan and to the
fact that the local chief, Sardar cAbbas Khan
Nawshirwam, had recently declared himself independent of Mahmud b. Naslr Khan of Kalat (Travels in
Beloochistan and Sinde; accompanied by a geographical
and historical account of those countries, London 1816,
129-30).
Disputes and conflicts with Kalat in 1940 led to
an agreement whereby Kharan was recognized as a
separate native state under its own Nawab. The latter
immediately acceded to Pakistan in 1947. In 1952


KHARANA, a fortified building, usually referred to as Kasr Kharana. It is strategically located in the Transjordanian desert, 60 km. SE of 'Ammān in lat. 31° 42' N. and long. 36° 79' E., on the edge of a wadi at the meeting of several desert tracks. The land is stony, infertile and geologically basaltic (whence conceivably a connection of its name with Arabic harra [q.v.]), and there is no obvious water supply; 2 km. to the WSW is an Upper Palaeolithic-Mesolithic site, with an abundance of flint implements. The entrance to Kasr Kharana (see Plate xxix a) incorporates two stone blocks with part of a Greek inscription, suggesting that there was an earlier building nearby, of the late Roman or Byzantine period.

The building is approximately 35 m. square, and is two stories high; it is built of rough masonry with decorative brick inserts and plaster details. The outer wall has a round tower at each corner, and semi-circular towers at the centre of the N, E and W sides. The single entrance is on the S side, flanked with quarter-round projections, with a large window above and a row of decorative niches. The walls are pierced with loopholes of unusual design, the very opening resting on a single stone against which two bricks are set diagonally. Between the two rows of loopholes and an upper row of rectangular openings are horizontal bands of decorative brickwork inserted in the masonry, the bricks being placed diagonally to produce a herringbone pattern.

Inside, the covered entrance leads to a central courtyard, surrounded on all sides by basins of varying dimensions, on two floors; in fact, there was once a gallery, which has now disappeared (see Plate xxix b). Access to the gallery, and to the rooms on the upper level opening off it, was by means of two sloping ramps. The larger rooms on the upper floor are roofed by transverse vaults of stones set end to end, supported on triple engaged columns without bases or capitals, all plastered over. Two of these rooms have semi-domes at the far end, supported at the angles by squinch arches (see Plate xxx a). The rooms are plastered, with simple decorative mouldings, and a number of carved roundels with formal, symmetrical plant designs.

Important evidence for the date of Kasr Kharana was the discovery by B. Moritz in 1905-6 of a graffito inscription on the wall of one of the upper rooms (see Plate xxx b). This inscription in eleven lines, and another three-line inscription nearby, are amongst the earliest extant painted Arabic texts. The last three lines contain the statement, "'Abd Allāh ibn 'Umar wrote [it] on Monday three [nights] remaining from Muḥarram of the year two and ninety" (tr. N. Abbott). This date corresponds to Monday, November 24th, 710 A.D. It has been conjectured that 'Abd al-Malik b. 'Umar (whose name is given thus at the beginning of the inscription) was a member of al-Walid's entourage, returning from a visit to Mecca in 710 A.D. While the inscription cannot be interpreted in any way as evidence for the Muslim origin of the building, it does provide a useful terminus ante quem. Most authors, and notably K. A. C. Creswell, have identified the building as Sāsānian, and have associated it with the Persian occupation of 614-28 A.D. Creswell, and others, have observed that many of the structural and decorative features, such as the use of elliptical arches, the squinches, the engaged columns supporting transverse arches, and the quarter-round entrance towers, find their parallels in Sāsānian and Mesopotamian architecture; Creswell has also pointed out that the obviously defensive nature of the structure sets it apart from the majority of the later Umayyad desert palaces, which were seldom fortified.

a. General view, showing the main entrance with quarter-round towers (upper section restored)

b. The internal courtyard. Note the springing of arches and the traces of a gallery, now disappeared, on the first floor.
a. Upper floor room, with a semi-dome supported on squinch arches.

b. Squinch arch in upper room, with graffito inscription between the springing of the arch and the angle of the walls, dated 91/710.
The etymology of the name Khwarazm has evoked much speculation. In his article Khwarazm in the Muqaddimah, ed. Beirut 1374-6/1955-7, ii, 395-8, Yākūt offers a folk-etymology relating to two outstanding features of the province, the food gained for the Khwarazmians from the Amū Daryā and its channels, sc. the fish, and the trees and bushes which probably covered some part at least of the region in early times and supplied fuel for cooking; the translation of Ibn Faḍlān (tr. Arends, 1969, 805-36) remarks on the cheapness and easy availability of firewood there. Outside the realm of fancy, an obvious meaning for the name might well be "lowlands", if the -zam element of the Achaemenid name for Khwarazm, Huwārazmīs, links Middle and New Persian zamīn "land" and the first element in New Persian hādār "low, abject". Another suggestion has connected the first element with kharāhid "sun" and has explained it as "the land of the rising sun", reflecting Khwarazm's position on the northeastern periphery of the Iranian heartlands; and a further explanation has been that of "fruitful land", linking the first element with New Persian khurūrdan "to eat". Tolstov has even explained it as "the land of the people Khwrarī or Kharrī", connecting these with the Hurrians who founded the Mitanni kingdom in northeastern Mesopotamia and the Lake Van region in the middle of the second millennium B.C., presumably positing a migration of the proto-Hurrianic peoples westwards from Central Asia. Whether Khwarazm is to be identified with the Arzanem vače "Aryan range" of the Avesta, sc. with the homeland of the old Iranian sacred books, as was maintained by, e.g. Marquart, is unproven but the unlikely: W. B. Henning suggested a possibility that the Gāthās, the oldest part of the Avesta, were composed in northern Khurasan, the region of Marw and Harat, perhaps then part of the pre-Achaemenid kingdom of Khwarazm.

It certainly seems that in Achaemenid times Khwarazm was a flourishing land, and on the evidence of the Behistun and Persepolis inscriptions, was subject to some degree of Achaemenid control. Khwarazm or Huwārazmīs provided a "dark-blue stone" (?) turquoise for decorating the palace of Darius at Susa. Herodotus alludes to what he calls "the plain of the Akēs River", i.e. the Oxus, as part of the Achaemenid dominions, and mentions the presence of Chorasmian and Parthian troops in the army of Xerxes as a special division under Artabanus son of Pharnaces; he further says that these soldiers were equipped in the same fashion as the Bactrians, sc. with Median caps, bows and short spears. By the time of Alexander the Great, however, the Khwarazmians had somehow thrown off Persian control, and when Alexander was in Bactria in 328 B.C. he received a visit from the King of Chorassian, Pharasmanes, and his retinue of 1,500 cavalrymen. Apparently Pharasmanes claimed sovereignty over all the steppes westwards from Chorassia to Colchis on the Black Sea shores—by no means an impossible boast, given the long-standing political, commercial and cultural connections of Khwarazm with the Volga basin and South Russia.

Once the exiguous Greek sources become silent, we are dependent for literary evidence about the next centuries on the equally fragmentary information from the Khwarazmian Islamic scholar Birūnī (d. after 442/1050) [q.v.], a Khwarazmian patriot who was clearly conscious of the ancient glories of his home-land. In his Alīkhār al-bābīya, ed. Sachau, Leipzig 1875, 35-6, tr. idem, The chronology of ancient nations, London 1879, 42-2, he has a section on the ancient history and rulers of Khwarazm and on its era. He also wrote a special history of the province, the Kiāb al-Muṣāmara fi akhbār Khwarazm, cited by Yākūt (who visited Khwarazm personally in 616/1220-30, travelling from Marw in the depths of the harsh steppe winter) and utilised by Bayhaḵī in the closing section of his Mafhūm al-Musulūmīn, ed. Ghani and Fayyād, Tehran 1324/1945, 655-91, tr. Arends, Istoria Musulūmān (1030-1041) 8, Moscow 1969, 805-36; it is regrettable that no parts of this work on the pre-Islamavid history of Khwarazm have survived.

Until recent decades, we have had to depend largely on Birūnī for the history of the semi-legendary and pre-Islamic past of Khwarazm. He says that the land was first colonised 980 years before Alexander the Great, sc. before the Seleucid era, i.e. in 1292 B.C., when the hero of Iranian epic Siyavush came to Khwarazm, and his son Kay Khusrav was established on the throne 92 years later, in 1200 B.C. He starts giving names only with the Afrighid line of Khwarazm-Shāhs, having placed the ascension of Afrāgh in 616 of the Seleucid era, i.e. in 305 A.D.

The oldest Chinese name for Khwarazm, Yue-kiên, given in the annals of theEarlier Han (first and second centuries B.C.), suggests as the centre of Khwarazmian power Gurgāndj [q.v.], earlier form Urgāndj, on the left bank of the Amū Daryā in lower Khwarazm. However, Ptolemy mentions that this centre lay on the right bank of the river, corresponding to the position of the royal palace excavated by Tolstov at Toprak-kala and that of the later capital of the Afrighids, Kāb [q.v.] or al-Firādat-Pil, and this seems both historically and archaeologically more probable. The remarkable results of Soviet archaeological work have indeed vastly widened our knowledge of the pre-Islamic history of Khwarazm. Well over 1000 pre-Islamic and early-Islamic coins have been found, together with many inscriptions in the Khwarazmian language and script on vessels, documents, etc. (see on these, below). In general, these results show that Khwarazm, dates assigned to it, are not to be relied upon, for he was writing about matters which he could not verify. Thus V. A. Livshits has shown from dated Khwarazmian artefacts that Birūnī's era from the Siyavushid foundation of the kingdom and from the establishment of the Afrighids, were never in actual use; instead, there was an official era beginning in the opening years of the Christian era, and probably to be connected with the rise of the new, pre-Islamic line of Shāhs and the achievement of independence from Parthian control, a control which seems to be attested by the clear Arsacid influence in coin designs, etc. (The Khwarezmian calendar and the era of ancient Chorassian, in Acta antiqua academiae scientiarum hungaricae, xvi (1968), 433-46, and see Khwarazm-Shāhs).

We are wholly dependent on archaeology for any information at all on social and economic topics. Soviet research has provided much basic data, though these may be capable of various interpretations. It has shown the presence of extensive agricultural estates, with outlying field systems irrigated by networks of arāls or canals, and with central concentration points and fortified citadels, within which the peasants and their herds could take refuge. It is likely that, as at all times in its known pre-modern history, Khwarazm's borders were under pressure from the pastoralist nomads of the surrounding...
steppes, probably by peoples like the Massagetes and Sakas in early times, and certainly by Turkish tribes like the Oghuz, Khplek, Pechenegs, etc., in Islamic times. Birñun speaks in his Añhr, 236, tr. 224, of annual expeditions led by the Khãrazm-Shãhs against the Oghuz, so that there was an autumn festival in Khãrazm called faghbiiriya “that of the King’s expedition” (faghbur = Iranian baghbur). It seems certain that in the 4th/10th century a group of Oghuz, perhaps semi-sedentarised and practising some agriculture and fishing but still inclined by nature to plundering and rapine, were established near the mouth of the Sýr Daryá or Jaxartes only ten stages from Khãrazm, and their Yabghãu or leader spent his winters at their settlement of Yengi-kent (Díh-i naw, al-Qarya al-gjadída, modern Díl ankent-kala). The fortified nature of the Khãrazmian agricultural domains can thus be easily explained by this need for security against external raiders. It is less certain that these fortified enclosures were, as Soviet authorities have suggested, designed also for internal defence purposes, in the shape of peasant revolts against the “feudal” landowners of the province.

Tolstov adduces in support of his argument the events surrounding the Arab conquest of Khãrazm in 937/1251 by Kýtabya b. Muslim al-Báili, the lieutenant in Khurrazád of the Khãrazmian Shãh, b. Yusuf. There had been attempts by the Arabs in the early Umayyad period to extend their raids through Transoxania to Khãrazm, and historians like Balâdhûrî, Ñabari and Ibn al-al-Hír mention various raids, such as that led by Salâm b. Ziyâd in 61/681 against a town on the borders of Khãrazm (possibly Hazarasp) where the local Iranian princes of Soghdia had banded together to resist the Arabs. Kýtabya was able to intervene in internal Khãrazmian politics because he was summoned in from Marw by the Afrîghid Shãh, unable by himself to make headway in a civil war with his younger brother Khurrazád (“the sun-born one”), who had seized power. Tolstov interprets Khurrazád’s movement as one of social protest, of the Neo-Mazdakite type familiar in the disturbed countryside of Persia at this time, a rising of the urban and rural masses against the Khãrazm-Shãh and the landed aristocracy (what Ñabari, ii, 1237, calls “the dihkáns and marzbnáns”). He bases himself on Ñabari’s information that Khurrazád confiscated the slavegirls, fine horses, precious articles, etc. of those connected with the royal court; but the social implications of all this, if there were any, are not really explicit in the Arabic sources. See H. A. R. Gibb, The Arab conquests in Central Asia, London 1923, 42-3; Tolstov, Auf den Spuren der altkhozischen Kultur, Berlin 1953, 239-45; B. Spuler, Iran in früh-islamischer Zeit, Wiesbaden 1952, 31.

At all events, the two Arab invasions of this year, entailing the killing by the Arabs of the Khãrazm-Shãh himself, brought for the province the first time into the Arab orbit, and the Arabs were able to exact the payment of tribute and the supplying of auxiliary troops. Much damage seems to have been wrought by the incoming Arabs. Birñun says that Kýtabya slaughtered all those who knew the old Khãrazmian script and who knew the old historical traditions. This is doubtless an exaggeration. The requirement of tribute lapsed, and Islam was certainly not implanted immediately. The Afrîghids themselves did not become Muslim till three generations or so later, perhaps in the caliphate of al-Ma’ümán. The Shãhs continued to join with the Soghdian rulers of Transoxania in common hostility to the Arabs, encouraging intervention by the Turks and Chinese; in 133/751 we hear from Chinese sources of an embassy from the Shãh Shâwus(n) (whose name is also known from coins) to the Imperial Court (Chavannes, Documents sur les Tou-kiue (Turcs) occidentaux, St. Petersburg 1903, 145). The Khãrazmian language survived for several centuries to come, and so must some at least of the culture and lore of ancient Khãrazm, for it is hard to see the commanding figure of Birñun, a repository of so much knowledge, appearing in a cultural vacuum.

The persistence of the Khãrazmian language was, in fact, an outstanding manifestation of Khãrazmian ethnic and cultural vitality. Linguistically, this eastern Iranian language occupies a position midway between Soghdian on the east, known to us from a large number of Manichaean, Buddhist and other texts, and the rather less well-known Parthian on the west; an especially interesting feature of Khãrazmian is its conservative character in preserving many Avestan words (cf. the hypothesis, mentioned above, that the Gâshãs were composed in northern Khurrazân, then part of the pre-Achaemenid state of Chorasmia). It was a written language well before the Arab conquest, utilising, like Pahlavi, Parthian and Soghdian, an alphabet ultimately derived from the Aramaic one. This early stage of the language is known to us from the finds of Soviet archaeology, coin inscriptions, legends on pottery and silver vessels, documents on wood and leather, and many funerary inscriptions from ossuaries, but few of these texts have so far been satisfactorily published. It seems likely, however, that the Khãrazmian script emerged around the first century B.C. and was probably influenced by the practice of the Arsacid Parthian chancellery. Kýtabya’s invasions may have ended the old scribal tradition, but the language itself persisted, now written in the Arabic alphabet but with several characters modified to render the characteristic sounds of Khãrazmian, e.g. ẞ for the labiodental fricative v or ß, and ß for the affricate ts (as in Pashto) and probably for its voiced equivalent dz; these modified characters are to be found, for instance, in several manuscripts of Birñun’s works where Khãrazmian names and terms are cited. It may be that Birñun knew something of the old Khãrazmian script, but this is uncertain. Khãrazmian speech struck the Muslim geographers and travellers to the province as particularly qu?er and harsh; Ibn Fa’ðlan compares it to the chatter of the Oghuz, so that there was an autumn

The main sources for our rather exiguous knowledge of later Khãrazmian are the glosses in the Khãrazmian scholar Zamakhshârî’s Arabic dictionary the Muqaddimát al-adab, together with Khãrazmian sentences in a series of Arabic legal works adapted for use in Khãrazm, in particular, the Khwnat al-munya of Mu’âddar b. Mâdu’ar al-Zâhidî (d. 658/1260). Khãrazmian culture and speech felt the pressure of Turkish infiltration from northern Khãrazm southwards, leading to the disappearance of the original Iranian character of the province and its complete Turkisation today, but Khãrazmian speech probably lasted in upper Khãrazm, the region round Hazarasp, till the end of the 8th/14th century. See on the Khãrazmian language, W. B. Henning, in Handbuch der Orientalistik, 1. Abt., 4. Band, 1. Abschnitt, Iranistik, Leipzig-Cologne 1952, 25, 50-8, 82-4, 109-20, and D. N. MacKenzie,
In Cambridge history of Iran, iii, The Selucid, Parthian and Sassanid periods, ch. xxv(f); the Khwarazm which Hennig was working till his death remains unpublished, but a section of it has now been edited by MacKenzie, A fragment of the Khwarazmian dictionary... London 1971.

The religious pattern of early Islamic Khwarazm shows the gradual permeation of Islamic faith and learning, so that Khwarazm became, like Khurasan and Transoxiana, a bastion of Sunni orthodoxy and scholarship, attested by the large number of traditionalists, lawyers, theologians, etc. with the nisha “al-Khwarazm”. The great mathematician Muhammed b. Mūsā al-Khwarazmī (d. after 238/854) [q.v.] flourished at a time when the Khwarazmī-Shāhs were only just becoming Muslims themselves, and in the following century we have such outstanding figures as the poet and prose stylist Abū Bakr Muhammed b. al-‘Abbās al-Khwarazmī (d. 383/993) [q.v.], and the Sāmānīd secretary and official Abū ‘Abbāl Mūhammed b. Ahmad al-Khwarazmī [q.v.], author of the pioneer encyclopedia of the sciences, the Ma‘ālik al-ulūm. The Arabic literary and philological sciences flourished there, as is shown by the section on the judaica Khwarazm in Thālibī’s anthology, the Yadmat al-adhar, ed. Cairo, i, 194-255, and by the figure of Bīrūnī himself. Biruni himself was still to some extent dependent on the position of the Amīr Daryā and its frequently-changing channels; the citadel and its frequently-changing channels; the citadel and palace of the Aflatun Shāhs in Kāthā was gradually undermined by the river waters, and by the mid-4th/10th century the citadel and old city had been abandoned and a new city built to the east. As against the products of Khwarazm, the sources mention fruit (especially melons, which in the 3rd/9th century the Ma‘ānish and al-Wāghik were exported in leaden, snowpacked containers as far as Baghdad, and which Ibn Batūta also praises as ones of incomparable quality), dried fish, textiles, cheese, snow, bows, etc.; whilst imports from the steppes and forests included sheep, camels, furs, hides, honey, hardwoods, and above all, Turkish and Şakbāli slaves.

In the 4th/10th century Khwarazm was nominally under the suzerainty of the Sāmānīd Amirs of Bughdrā, but little is known of the internal history of the province during these last few decades of Aflatun rule. In 385/995 the Ma‘ānish of Gurgandj overthrew the ancient dynasty and themselves assumed the title of Khwarazmī-Shāhs, but in 408/1017 the province passed to the Ghaznavids; this control by Sultan Mahmūd meant the end of political power in Khwarazm exercised by local dynasties, just as the extinction of the Sāmānīs in Transoxiana meant the end of direct Iranian rule there. In the cases of both regions, the assumption of power by Turkish rulers and the breaking-down of the northeastern bulwark of the Iranian world against pressure from the steppes inaugurated an accelerating process of ethnic and linguistic turkisation; Khwarazm became wholly Turkish, and in Transoxiana, only the restricted district of Tajikistan survives of the formerly vast Iran extérieur. Khwarazm came into the Salgār orbit after the downfall of Ghaznavid power in Khurāshān,
and was ruled by Turkish slave governors on behalf of the Saljuq Sultans. In the last years of the 5th/10th century, the governor Anusha-Ghar a'la succeeded in founding an hereditary line in Khwarzm, whose members also took the title of Khwarz-sultans and who were, after the middle years of the 6th/12th century, virtually independent (for details of the history of these three centuries before the Mongol invasions, see Ulugh-Beg).

The extensive empire built up by this last line of Khwarz-sultans nevertheless crumbled before the Mongol onslaught, and the Shah Allah-Din Muhammad's capital of Urgenc (the former Gurgandj) fell to Caghatay and Ogedey in 618/1221 after a valiant defense. After this, the northern part of Khwarzm and the lower Syr Darya region came within the lands of the Golden Horde for 140 years, with only the southern part, including Khiva, coming to Caghatay and Ogedey in 618/1221 after a valiant defense. After the end of the Arabshahid line, there followed a century, virtually independent (for details of the Arabshahid line, see Shadiarat al-Atrakhiyya in the history of his land because none of his subjects was educated enough to undertake this task.

After the end of the Arabshahid line, there fol-
allowed various fāidānī khāns of Čingizid lineage but little competence or power, who were summoned from the steppes; the real holder of power in Khwāzī was generally the īnāq (i.e. senior member and military chief) of the Kongrat tribe, who simply sent these khāns back to the steppes when they proved inadequate for his purposes. It was in the 12th/13th century that relations between the Khānāte of Khwāzī and the expanding power of Russia began to assume some importance. Already, the Ural Cossacks had been attracted by the famed richness of Khwāžī and had raided New Urgenc. In 1717 Peter the Great, drawn by the possibility of opening up an overland trade to Bahār and India, and acting on a pretext that was to be much used in the process of the Russian reduction of Central Asia, viz. the release of Russian prisoners, sent a military expedition against Khwāzī under the Circassian adventurer Bekovī. The expedition failed, but in 1135/1740 the Persian conqueror or Nadīr Shāh Afšār conquered Bahār and Khwāzī temporarily; however, Nadīr’s nominee to the throne in Khwāzī, Tagīr, did not long survive the Shāh’s withdrawal.

From on now onwards, the Khwāzī Khānāte in general and the topography of the capital begin to be well-known from the accounts of Russian and western European travellers and explorers. The Khwāzī suffered badly from the raids from the south of the Yomut Türkmen of the Kara Kum desert, who almost completely destroyed the city shortly before 1184/1770; these Türkmen were however driven off and the city restored in that year by the Īnāq Mūhammad Amlīn. In 1225/1804 the Īnāq Itīzuč, grandson of Mūhammad Amlīn, assumed the title of Khān, and the remaining Khāns of Khwāzī were all from his line. Warfare with the Khāns of Bahār continued in the early 19th century, and in an expansionist phase under the Khān Mūhammad Rabī‘īn (1221–41/1806–26) and his son Allāh Kull (1241–55/1820–42), the Khwāzī Khānāte assumed its greatest extent, from the shores of the Aral Sea and the Sīr Dāyār mouth, to the south of Marw. But Russian expansionism now assumed serious proportions. The winter expedition of 1839–40 from Orenburg under General Perovski failed miserably, but soon afterwards, the Khān had to accede to a set of Russian demands, after vainly trying to open up relations with Great Britain. The Russians founded a fort named Kazarinsk at the mouth of the Sīr Dāyār in 1847, used subsequently as a base against the Khānāte of Khokand and Tashkent, but also constituting a threat to the flank of Khwāzī. The Khānāte was prosperous enough internally at this time, as is shown by the Sīfārāt-nāma-yi Khwārīzma, the account of the Persian envoy Rūdā Kull Khān, who visited Khwāzī in 1267/1851 to negotiate the freeing of Persians captured by the Türkmen in Māzāndarān and Khūrāsān and then sold in the slave markets of Khwāzī (French tr. by Ch. Schefer, Rellation de l’ambassade au Kharezm de Riza Qouly Khan, Paris 1878). It continued, however, to be harassed by Türkmen depredations, and was at odds with the Khānāte of Bahār. When in 1873 Russian forces from Orenburg, Krasnovodsk on the eastern shore of the Caspian, Perovski on the lower Sīr Dāyār and Tashkent, advanced simultaneously on Khwāzī, the Khān had to capitulate after some fighting. Sayyīd Mūhammad Rabī‘īn lost all his territories on the right bank of the Sīr Dāyār, and in his true successor Khānāte on the left bank, was to be under the protectorate of Russia, to consider himself as “the obedient servant of the Emperor of all the Russians”, and was to pay a heavy war indemnity. The Khāns of Khwāzī were never considered by the Tsarist government to be on the same level as those of Bahār. Internal dissensions within Khwāzī and attacks by the Türkmen still continued, but the last Khān, Sayyīd ‘Abd Allāh (1918–20) faced an invasion by Bolshevik troops and had to abdicate in February 1920 in favour of a nominally independent Khwāžī Shāh, People’s Soviet Republic. This lasted only till 1924, when the internal frontiers of Central Asia were redrawn by the USSR government on ethnic lines, so that the right-bank areas of the old Khwāzī Khānāte were incorporated in the Uzbek SSR and the left-bank ones in the Turkmen SSR.

(C. E. Bosworth)
mentioned at all by Biruni. However, there are one or two tentative confirmations of Blruni's names e.g. of the Artjamâk, Shâh in the time of the Prophet Muhammad, according to Biruni. At the time of Khatayba's two invasions of 937/932 (when the Arabs were invited in by the Shâh to aid him in a succession dispute, but ultimately turned on him and killed him), the then Shàh is named by Biruni as Askadjamûk son of Askadjavâr, the form of the latter's name being confirmed on a coin as Askatsvâr (in this particular case of an earlier coin of the same name). Askadjamûk's own son Shâwushfar[n] seems to appear on coins, and must in any case be identical with the ruler Shao-shien mentioned by the T'ang annals as sending an embassy to China in 133751 asking for assistance against the Arabs (Chavannes, *Documents sur les T'ou-kise (Turcs) occidentaux*, St. Petersburg 1903, 145). See for an analysis of these coins lemma V. A. Livshits, *The Khurasanian calendar and the era of ancient Chorasmia*, xvi (1968), 439-44.

The first Islamic name of Biruni is that one typical of the convert, 'Abd Allah b. Turkasbatha, whose reign should probably be placed in the early 3rd/9th century. However, even amongst the last Shàhs with Islamic names, Ibn al-Â'îb, viii, 310, mentions a Shàh with the second element included by Ibn Biruni as Abu Nasr b. Askâtâm, who rebelled against his nominal suzerain, the Sàmanid Amir of Bukhârâ, Nûb b. Naşr, in 332/943-4. It seems that the Sàmanids had extended their authority over Khârazm by the early 4th/1oth century. When Ibn Fa'dlân came from Baghâd in 909/921 accompanying the mission from the Caliph al-Mukâdîd to the King of the Volga Bulgârs, his party went firstly to Nâsir b. 'Abd Allah b. Askâtâm, who was the "Amir of Khârazm-Shàh, and apparently exercised power over Khârazmian territories, i.e. in Gurgândî in his time of the Ma'mûnids also adorned their capital with fine buildings, and a minaret now preserved in the ruins of Kunya Urgenc has an inscription describing how Ma'mûn II ordered its building in 401/1011 and supervised the laying of its foundations (see Barthold, *Turkestan down to the Mongol invasion*, 147 n. 2). The Ma'mûnids unfortunately came up against the expansionist policies of the Ghaznavid Sullivan Mumdûb b. Sebûtgitin, who aimed at turning the flanks of his enemies the Kârhânîds by securing possession of Khârazm. In 405/1014 Ma'mûd demanded that Ma'mûn II place the Sultan's name in the Muhaqqa of the Khârazmian territories, i.e. in effect recognise him as overlord of Khârazm. Mumdûb's sister Kâh-Kâldî was successfully wife of two of the Shàhs, and when Ma'mûn was assassinated in 407/1017 by a patriotic reaction against his submission to the Ghaznavid, Ma'mûd had a pretext for intervention, the avenging of his brother-in-law. Ma'mûd's army invaded Khârazm, defeated the local forces at Hazarasp, unleashed a reign of terror in Gurgândî against the regicides, and carried off large numbers of slaves to Ghazna. See for these events, Barthold, *Turkestan*, 275-9; Nâzîm, *The life and times of Sultan Mumdûb of Ghazna*, 56-60, 184-5; Sachau, in *SBWA*, xxiv (1873), 290-301.

Thus from 408/1017 onwards, Khârazm was incorporated in the immense Ghaznavid empire, and possession of it gave Ma'mûd the preponderance in Central Asia against the Karâkhânîds. It was difficult to control so distant a province as Khârazm directly from Ghazna, hence the "Amir of Khârazm" at the time of the 'Abbásid Revolution, 'Abd al-Malik b. Harhâma, mentioned in Narshâkhi, *Ta'rîkh-i Bûkhârâ*, tr. Frye, *The history of Buhûrâ*, 62. It is further strange that so peripatetic an observer as Ibn Fa'dlân, who first visited the Shàh Muhammad b. 'Arâk in his capital Kâth and then stayed over three months in Gurgândî waiting for the winter ice and snow to end, does not mention anything of the political situation in Gurgândî or the existence there of a rival governor. Yet towards the end of the 4th/1oth century, Gurgândî was certainly in the hands of the Ma'mûn family of amirs, for the *Bu'l-dîlâm* (392/982), tr. 122, describes the town as "formerly belonging to the Khârazm-Shàh", but now under the control of a separate pâdishâh or ruler, the Amir of Gurgândî.

This amir, Abu 'l-'Abbâb Ma'mûn b. Muhammad, in 385/995 overthrew the Afrighids of Kâth and killed the last Shàh, Abu 'Abdallah Muhammad b. Abmad, whose successor accordingly calls al-Shahid "the martyr". Abu 'l-'Abbâb Ma'mûn assumed the historic title and founded a brief-lived second line of Khârazm-Shàhs (385-408/995-1017), and the Ma'mûnids court of Gurgândî became a centre of learning and point of attraction for scholars and literary men from all over the eastern Islamic world. The Shàh Abu 'l-'Abbâb Ma'mûn II b. Ma'mûn (?) 399-407? (1009-17) and his Visier Abmad al-Suhaylî were surrounded by a brilliant concourse of figures like the philosophers Ibn Sinà and Abû Sahîl al-Mashhî, the mathematician Abû Nasr b. Askâtâm, who was the "Amir of Khârazm-Shàh", and the famous local man Abu 'l-Khâyir al-Hasan b. al-Khamirâ. The philologist Abû Ma'nûr 'Abd al-Malik al-Thâlibî moved to Khârazm from his home town of Nishâpûr, impelled by the unsettled conditions there consequent upon the fall of the Sàmanids, and became an intimate of the Shàh, to whom he dedicated various works, including a "Mirror for Princes", the *Kâtib Abad al-mulât al-âkhrâmshâh*, ed. and tr. by T. R. Topuçoğlu, unpublished Manchester Ph.D. thesis, 1975. The Ma'mûnids also adorned their capital with fine buildings, and a minaret now preserved in the ruins of Kunya Urgenc has an inscription describing how Ma'mûn II ordered its building in 401/1011 and supervised the laying of its foundations (see Barthold, *Turkestan down to the Mongol invasion*, 147 n. 2).
Altuntash and his two sons form the short third dynasty of Shahs (408-32/1017-41). Altuntash was the loyal servant of Mamun and his son Mas'ud, defending the frontiers of Khwarzam with the recruitment of auxiliary troops from the Klpek, Kudjet and Caghrat Turks, and he died in battle fighting for Mamun against the Karakhanid Altitgin in 423/1032. His son Harun succeeded as de facto ruler in Khwarzam, though Mas'ud conceded to him only the title of his representative in the lands of the Khitay al-dar. The interests of Altuntash's line were now clearly divergent from those of the Ghaznavids. Harun sought the alliance of the Saltjuk Turks and the Karakhanids, but Mas'ud procured his murder in 425/1034. His brother and successor Isma'il Khandan became the Sultan's bitter foe, and at this time when Mas'ud had his hands full coping with the Saltjuk incursions, was able to rule as an independent ruler. Isma'il was expelled from Khwarzam in 432/1041 by Mas'ud's ally, the Oguz Yabgu of Dian and the Saldiuk court. It was his son Arslan Arghun (551-67/1156-72) who had greater freedom of action after the death of Sandjar and the collapse of Saltjuk power in the east, in so far as relations with the Kara Khitay allowed, for the latter claimed suzerainty over the Karakhanids in Transoxania and over Khwarzam. However, provided that tribute was forwarded regularly to the Gür-Khan's ordu or military camp in Semireçeye, the Kara Khitay were little disposed to interfere in internal matters. The Khwarzam-Shahs especially coveted the Transoxanian possessions of the Karakhanids, and intervened with profit in the quarrels of the Khans of Samarkand and their turbulent Karluk tribal troops; hence in 533/1138 Il-Arslan invaded Transoxania on the latter's behalf.

The reign of Il-Arslan's son and successor 'Ali al-Din Tekish (565-66/1172-1200) brought the Shahs to new heights of their power, and Tekish was able to check the ambitions of the Ghurids (q.v.) in Khurásan and to bring about the final demise of the Great Saltjuk sultanate in western Persia. Tekish was placed on the throne with Kara Khitay help, but he soon rebelled against these last, and made an effort to ward off the Kara Khitay army which invaded Khwarzam by the traditional expedient of opening the dykes of Khwarzam and flooding the land lying in the invaders' path. Over the ensuing years, he was involved not only against the Kara Khitay again but also against his brother and rival for power Sultan Shah, who had established himself in northern Khurásan, and against the Ghurids. He secured his northern frontiers by conciliation of the Klpak and other Turkmen tribes along the lower Syr Darya, and the Khwarzamian armies which came to terrorise Persia and to earn an unenviable reputation for cruelty and barbarity there, included large numbers of steppe Turkmen, many of them still pagan.

Tekish first came westwards to Ray in 588/1192 and demanded that the Saltjuk and Iledegizid Atabegs of western Persia should place his name in the Khitay immediately after that of his father, Tekish. However, in the next year he mounted a further invasion, and in 590/1194 defeated Topghr il-Arslan, the last of the Great Saltjuk line, thus extinguishing this dynasty in Persia. Tekish was now able to occupy all Dibul as far west as Hamadan, so that his territories became coterminous with those of the resurgent 'Abbásid caliphs, and in 595/1199 the caliph al-Nasir deemed it prudent formally to invest Tekish with the sultanate of Træk (sc. 'Irak-i Adjami, western Persia), Khurásan and Turkistan; however, when Tekish died in the next year, the population of Dibul rose and massacred all whom they could find of the hated Khwarzamian occupying troops.

Tekish's son 'Ali al-Din Muhammad (595-617/1200-20) continued his father's anti-caliphal policy, but for many years he was preoccupied in the east by his own opponents, the Ghurids, the Kara Khitay, the Klpak of the northern steppes, and Uthman Khán, the last Karakhanid ruler in Samarkand. For long, he was careful not to break with the Kara Khitay, and welcomed their support in ejecting Muiz al-Din Muhammad Ghür from Khurásan in 601/1204. After the Ghürid sultan's death two years later, the Ghürid empire fell apart, and much of its territories fell briefly into the hands of the Khwarzam-Shahs. 'Ali al-Din could now dispense with Kara Khitay support, and when the latter became increasingly Sandjar's difficulties with the Karakhanids and the Oguz tribesmen of Khurásan; for details, see ATEIZ B. MUHAMMAD B. AN&ÖTITGIN.

Atsila's successors, beginning with Tadj al-Duny wa'll-Din Il-Arslan (551-57/1156-72) had greater freedom of action after the death of Sandjar and the collapse of Saltjuk power in the east, in so far as relations with the Kara Khitay allowed, for the latter claimed suzerainty over the Karakhanids in Transoxania and over Khwarzam. However, provided that tribute was forwarded regularly to the Gür-Khan's ordu or military camp in Semireçeye, the Kara Khitay were little disposed to interfere in internal matters. The Khwarzam-Shahs especially coveted the Transoxanian possessions of the Karakhanids, and intervened with profit in the quarrels of the Khans of Samarkand and their turbulent Karluk tribal troops; hence in 533/1138 Il-Arslan invaded Transoxania on the latter's behalf.
distracted from Transoxanian affairs by the revolt in Semirečye of the Mongol chief Küllüg, he was by 668/1272 able to kill Uthman Khân and succeed to the remainder of the Karâhânîd heritage in Transoxania. 'Alâ' al-Dîn was now assured of commanding prestige throughout the eastern Islamic world, though like his father, he continued to be satisfied with the circumscribed territorial designation of Khwârazm-Shâh and with that of Sultan. 'Alâ' al-Dîn knew from correspondence that the 'Abbasîd caliph had in the past incited the Ghurids against him; and he denounced al-Nâsr as unfit to rule and proclaimed an 'Alîd as anti-caliph. He began to march on Bagh-dâd, but in the winter of 617/1220-1, snowstorms of unusual severity halted his forces in Kurdistân and Luristân, and news of unrest among the Kîpîâks compelled him to return to the Khwârazmian frontiers. The menace of the advancing Mongols, successors to Küllüg in Semirečye and Karâshgaria, coincided with 'Alîd al-Dîn's closing years, and this new factor in Middle Eastern affairs was to occupy the attention of his son Djalâl al-Dîn (7) Minburnûrû (617-28/1220-31) and to lead to the downfall and complete disintegration of the extensive but transient empire of the Khwârazm-Shâhs. For these last events, see Cîrinî-şîrân and Djalâl al-Dîn Khwârazm-Shâh, and for the general history of this fourth dynasty of Shâhs, see Bosworth, in Cambridge history of Iran, v., see CîngîzKhân and Djalâl al-Dîn Khwârazm-Shâh.

The factor in Middle Eastern affairs was to occupy the Ala al-Dîn's closing years, and this new compelled him to return to the Khwârazmian frontiers. The menace of the advancing Mongols, successors to Küllüg in Semirečye and Karâshgaria, coincided with 'Alîd al-Dîn's closing years, and this new factor in Middle Eastern affairs was to occupy the attention of his son Djalâl al-Dîn (7) Minburnûrû (617-28/1220-31) and to lead to the downfall and complete disintegration of the extensive but transient empire of the Khwârazm-Shâhs. For these last events, see Cîrinî-şîrân and Djalâl al-Dîn Khwârazm-Shâh, and for the general history of this fourth dynasty of Shâhs, see Bosworth, in Cambridge history of Iran, v., The Saljuq and Mongol periods, ch. i.

The Mongol governors of Khwârazm do not seem to have employed the title of Khwârazm-Shâh, nor did the line of Sûfîd local rulers in the post-Il-Khânid period adopt it (see for these rulers, Khârazm). The title of Khan of Khwârfân is an introduction (madhâbî) to the elements of the sciences (auwâl al-sinâ'îd) which explains the key terms used by the various groups of scholars, artisans and government officials, in particular those terms which were left out of current lexica. Al-Khârazmî did not set out to write an essay on the aim and structure of the sciences, as al-Fârâbî (d. 339/950) had done in the Îshâ'î al-îhsân, or presented a Weltanschauung, as the Khwârn al-Safà were doing in their Epistles at about the same time. As a dictionary of basic technical terms drawn from many disciplines, and as a description of contemporary practices in the sciences and in the chanceries, the Mafâtîh is of considerable value for the study of Islamic culture. The book is divided into two roughly equal sections dealing respectively (i) the religious sciences (uluwm al-khârfâ) and the Arabic sciences associated with them, and (ii) the "foreign" sciences (uluwm al-âdâm). Each discourse is divided into sections (babs) and further into chapters (fâsîl). The subjects of the sections in the two discourses are the following: (i) 1. jurisprudence, 2. dialectical theology (kâtîm), 3. grammar, 4. the secretarial art (kâtâba), 5. poetry and prosody, 6. history; (ii) 1. philosophy, 2. logic, 3. medicine, 4. arithmetic, 5. geometry, astronomy and astrology, 7. music, 8. mechanical devices, 9. alchemy. Al-Khârazmî's book shows that to call the philosophical, natural and mathematical sciences "foreign" was not at that time a sign of rejection of these disciplines, but simply a statement of the fact that they had been developed by non-Arabs (âdâm). The book clearly implies the conception that to be considered educated, one had to be acquainted with both major branches of learning.

Bibliography: The standard critical edition of Mafâtîh al-uluwm is that of G. van Vloten, Leiden 1895, repr. 1968. There are other oriental prints. C. E. Bosworth describes six Istanbul manuscripts not used by van Vloten in Some new manuscripts of al-Khwârizmî's Mafâtîh al-uluwm, in JSS, ix (1964), 345-5, and comes to the conclusion that they do not add much to the elucidation of the text.

A useful general account is C. E. Bosworth,
A pioneer Arabic encyclopedia of the sciences: al-Khwārizmi's Keys of the Sciences, in Isis, lv (1963), 97-111. A number of E. Wiedemann's Beiträge zur Geschichte der Naturwissenschaften bei den Arabern deal with various parts of the Mašfāth. Originally published in Sitzungsberichte der Physikalisch-medicinischen Gesellschaft in Erlangen between 1906 and 1923, they are now conveniently reprinted in E. Wiedemann, Aufsätze zur Arabischen Wissenschaftsgeschichte, ed. M. ibn Tawlt al-fandji, index), he...
AL-KHWARAZMI (often written AL-KHWARIZMI), ABU OIA'FAR MUHAMMAD B. MUSA, mathematician, astronomer and geographer, who utilised the Arabic language. He lived in the first half of the 3rd/9th century (ca. 154-ca. 225/800-47), and should not be confused with two other important persons with the same nisba [q.vw.]. We know that in his youth, during the caliphate of al-Ma'mūn, he worked in the Bayt al-Ḥikma [q.v.] of Baghhdād, but we know very few other biographical details. However, his main works are well known to us, since many of them were translated into Latin in Spain and exerted a powerful influence on the development of mediaeval thought. If the attempts at dating put forward by C. J. Toomer (Dictionary of scientific biography, vii (1973), 338b) are correct, almost all these works were composed during the reign of al-Ma'mūn.

His Algebra, called al-Muḥaṣṣar fi ḥisāb al-dīrād wa 'l-mukābala [ed. with Eng. tr. F. Rosen, The algebra of ... , London 1831, repr. New York 1906; ed. A'li Musta'fā Musharrāfa and M. Mursi Ahmad, Cairo 1939] was translated partially by Robert of Chester as Liber algebra et almucabola [ed. with Eng. tr. L. Ch. Karpinski in Liber alghoarismi, ... , I973), 358b) is correct, almost all these works completely into disuse. The term ḥijāb may derive, according to Gandz, from Assyrian gabra; this etymology may be feasible, since, in the hundred or so mathematical tablets going back to the second millennium B.C., there appear algebraic problems parallel to those put forward by al-Khazari and which, according to Bruins (Computation in the old Babylonian period, in Acts of the XI111th International Congress on the History of Science, held in Moscow, 1971), show that the Assyrians knew the six model equations [see ḥišāb] used by the Muslim scholar. However, from the strictly historical point of view, there is the problem that the word is not attested in any intervening language, such as Greek, and it is difficult to hold that it could have survived solely in Aramaic till the time of al-Khazari. It is more likely that the word comes from medical terminology where ḥijāb has the idea of resetting a dislocated limb, just as today, in the dictionary of the Real Academia Española, algebra designates an algorithm and algebriasa is a synonym for a specialist in wounds and broken bones. On the various mathematical operations involved in algebra and on the typical equations used in it, see ḥišāb and also G. A. Saliba, in Centaurus, xvii (1972), 189-204.

Almost at the same time as the Algebra was being translated, John of Seville made known the Latin version of an adaption made either by himself or by some Muslim author of al-Khazari's Arithmetic, lost in the Arabic but which must have been called Kǔb ḥıšāb al-adad al-hindi or K. al-Dham' wa'l-tafrīk bi-ḥisāb al-Hind. John of Seville's work was called Liber alghoarismi de practica arismetica (ed. B. Boncompagni, ... , II, Rome 1857; K. Vogel, Mohammed ibn Musa AlKhwarismi's Algorismus, Aalen 1963; A.-P. Juschkewitsch, Über ein Werk des Abä 'Abbālāh Muḥammad ibn Mūsā ... zur Arithmetik der Indier, in Homage to G. Harig, 1964, 21-63, with an appendix containing a photographic reproduction of the Cambridge ms.). The connections among the various mediaeval works deriving from al-Khazari's one are not well established, but all of them have enough characteristic that they explain how to work with the numbers which we today call "Arabic" and which were known in the 3rd/9th century in the Iberian peninsula. Concerning these numbers, mediaeval scholars invented all sorts of etymologies and legends. Gaspar of Tejada asserted that "zero is not a sign, but an empty space" (cf. G. Menéndez Pidal, Los llamados numerales arabes en Occidente, in BRAH, cxlv/2 (1959), 179-208), an idea that one finds much earlier in the Mafātīḥ al-'uṣūm, ed. van Vloten, 58, ll. 1-4, in regard to ṣarkan, a line brought into a calculation to indicate "nothing", i.e. to keep the order, and whose value is expressed in Latin by nulla figura or in German by Null. On the other hand, this same sign appears in Abraham ben 'Ezra to separate the whole number from the fraction. Other popular etymologies of the time derive algorithm from the name of a hypothetical Algor, king or philosopher, or from the coupling of the Arabic article al- with Greek arithmos, when in reality these technical terms come from the name "al-Khazari", as Reinaud showed (Mémoire ... in Mem. Acad. Insct. et Belles- Lettres, xviii/2 (1849), 303-4.

The actual form of the numbers is unimportant for the operations described in the Liber alghoarismi, but the existence of operations carried out by means of nine or ten symbols implies a knowledge of the rules expounded by al-Khazari. In Spain, these were known by the 4th/10th century, proving the existence of a system of numeration by position. In regard to the form of the numbers used at that time, this is still debated. Destombes (Un astrolabe carolingien et l'origine de ses chiffres, in Annales de l'histoire intern. d'hist. des sciences, viii-lix (1962), 3-45) suggests that the monk Vigila of Albelda was present at the consecration of the monastery of Tipoll in 977 and that he knew the system of numeration by position, which he refers to in the appendix to Book iii of St. Isidore when he cites the skill of the Indians as able to create the nine figures described in the Esorcius ms. d. 12; the numbers are given from right to left and must therefore be incontrovertibly of Arabic origin, and their form derives, according to Destombes, from that of the Visigothic letters used in the second half of the 10th century as they appear on the Carolingian astrolabe. Given the fact that at this time of the appearance of this system of numeration by position, there must have existed various systems of representing the numbers, the need for tables of equivalents becomes evident, such as those of Alvaro of Oviedo. It also explains why in 1229 the Senate of Florence forbade their usage and imposed the practice of expressing numbers wholly in letters in order to avoid the possibility of a minor corruption in the form of the numbers or in the usage of different systems simultaneously, thus giving rise to errors.

The Liber alghoarismi and similar works all explain the operations of adding, subtracting, multiplying and dividing; they show how decimal and
sexagesimal fractions should be used; and they use the so-called Egyptian fractions, sc. those with 1 as the denominator and from which one can obtain the others by means of addition (e.g. 1/3 + 1/15 = 2/5; 1/4 + 1/28 = 2/7). This type of fraction already appears in the Rhind papyrus and developed over the ancient and mediaeval periods, especially when the system of Kür'ānic inheritance rules gave rise to the 'ām al-farrā‘ (see FA‘RA‘). In 1488, it has been reproduced in Osiris, v (1938), 38, and its antecedents can be found in the similar Arabic tables of an earlier period and triangular in shape. A sexagesimal table of the type just mentioned was to be found in the work of Kūhiyār b. Lābbān (ca. 360-420/971-1032) called Kiṣāb fī usul kiṣāb al-Hind (facs. edn. M. Levey and M. Petrucci, Principles of Hindu reckoning; Madison 1965). E. S. Kennedy and W. R. Transue, A mediæval indian algorithm, in AMM, liii (1956), 80-3, but is unfortunately lost, and the oldest version preserved is that in the Latin version of the Astronomical tables of al-Khwārizmi translated by Adelard of Bath (1126). Tables of this type recall those of the cuneiform tablets.

Another of al-Khwārizmi's works which had a great influence in the birth of western science was his Zīgī al-Sindhind, which was translated into Latin by Adelard of Bath (ed. H. Suter, Die astronomischen Tafeln des Muhammed ibn Māṣūl al-Khārizmi, Copenhagen 1914; Eng. tr. and excellent study by O. Neugebauer, The astronomical tables of al-Khwārizmi, Copenhagen 1962). This work became the subject of a commentary by a certain Ibn al-Muthanna, lost in Arabic but preserved in Latin (ed. E. Millás Vendrell, Madrid-Barcelona 1963) and in Hebrew (ed. and tr. R. Goldstein, New Haven-London 1967), from which it appears that al-Khwārizmi's work had two recensions; Adelard used the minor one, corrected by Maslama al-Madjritl for the position of Cordova. Some complementary pieces of information on the transmission and the contents of the Tables can be found in El libro de los fundamentos de las tablas astronomicas of Abraham ben "Ezra (ed. and study by J. M. Millás, Madrid-Barcelona 1947) and in the monographs of J. J. Burckhardt, in Vierteljahrschrift der Naturforschenen Gesellschaft in Zürich, cvi (1961), 213-31, of E. S. Kennedy and M. Janjanian, in Contaurus, xi (1965), 73-8, of Kennedy and W. Ushakhs, in ibid., xiv (1969), 89-96, and of Neugebauer, in A. loccit's leg, studies in honour of S. H. Taqizadeh, 209-12.

In the Astronomical tables of al-Khwārizmi, in the translation that the first medieaval mathematical symbols appear, sc. three tides in a triangular arrangement followed by a number and placed above another indicate the sum of the first and second; if, on the other hand, there is a single dot, it indicates remainder. These notation systems as found in the West stem from the Arab world, and their connections with older systems, e.g. those of Diophantus, remain to be studied. An analysis of the Tables reveals their mixed character and the multiplicity of sources used. Thus the theory of the moon comes from an intermediate source which did not know the Almagest; the methods used for determining the true longitude of a planet stem from the Sūria Siddhānta and the Janda-Jādāyaka; the values of the movement come from Brahmagupta; and in the ms. of Corpus Christi College (which comes from Adelard's version) there is an allusion to the to-and-fro movement explained at length by Atarqu [see AL-ZARKĀJ], which stems equally from Indian sources. A similar origin can be recognised in the equation of the sun and in the primitive sine tables with R = 150 (Ibn al-Muhammād alludes to this value) replaced in Maslama's adaptation by others with a base = 60, a number of Hellenistic origin. On the other hand, the methods used to determine the direct and the retrograde movements of the planet stem, directly or not, from the manual Tables of Theo. Other elements stem from the Zīgī ma‘mūnī and the Zīgī al-ğāh. In the determination of the parallaxes, the repetitive algorithm from the Janda-Jādāyaka is used, and this presents a certain parallelism with the method used by Kepler to determine the eccentric anomaly.

Al-Khwārizmi's other works were not known in the mediaeval world. His geography or Kitāb Sūrat al-arq (ed. H. von Mißl, Leipzig 1926), has been the object of a detailed study by C. A. Nallino, al-Khwārizmi e il suo rifiutamento della Geografia di Tolomeo, in Raccolta di studi, v, Rome 1944, 456-57. It consists of lists of co-ordinates of the main towns and geographical features, which are sometimes, but not always, in harmony with those of Ptolemy. His source of inspiration might possibly have been the mappa mundi constructed for al-Ma’mūn by a team of geographers in which al-Khwārizmi himself would have been included. The K. Sūrat al-arq depends, even if indirectly, on the Geography of Ptolemy, some of whose errors he corrects, e.g. the excessive length of the Mediterranean.

His Istikhradī izārīkh al-Yahūd (ed. in al-Rasā‘il al-mutafa‘irihā fi’l-hay‘a, Hyderabad 1948) has been studied by E. S. Kennedy in Scripta mathematica, xxvii (1964), 44-9; internal evidence dates it to 208/823. This richly-documented work forms one of the oldest pointers which we possess concerning the Jewish calendar, and it necessitates the revising of many things previously written on the subject. Al-Khwārizmi was further the author of two works on the astrolabe (see J. Frank, Die Verwendung des Astrolabs nach al-Chwārizmi, in AGNM, iii (Erlangen 1922), of a historical chronicle, Kitāb al-Ta‘rīkh, and a book on sun-dials, Kitāb al-Rukhāma, both these latter lost. In regard to the first of the two, it may be surmised that it gave an astronomical explanation of history like that later given by Abū Ma‘shar, al-Nawbakhthī and the writer in al-Andalus Ibn al-Khayyāt (d. 447/1055).

KHARBGA, a type of the game of draughts
played in North Africa. Although the root kh.r.b.g. is known, yet the origins of this game are lost in the mists of time (squares marked out for it have been found at the tops of pyramids in Egypt). Kharbga, which is one of the four games brought into Ifrikiya by the Banū Hilāl, is played on a square board made up of holes marked out in the ground or in rock and has 49 component squares or “houses” (bit, dīr); the board can equally be traced out on a stone slab or on a sack covered over with sand. According to the number of holes along each side, the game is called by the following names, khamāṣiyah if there are 5, and sabāḥiyah if there are 7. The central square is called dīr al-wasī, and is remarkable by the fact that after the first move of the first piece it remains unoccupied all through the game; other squares of special note or with particular functions surround the central one and serve in the game as places of security.

The game is played by two people, and once the game is set up (mansūb), the players (khārbīg or kharbāg) are surrounded by an audience of interested people who follow the game and offer advice. After having placed on the board, two by two, the differently-coloured pieces called kalb (sing. kāb “dog”; this term is known in the Egyptian, Greek and Arab cultures, see Dozy, Supplément, s.v.) are placed on the board, two by two in the places chosen for this by the players. The course of the game depends on this; each player moves his pieces whilst endeavouring to foresee his opponent’s moves, and good players can plot the course of the opponent’s moves as far as eight future moves. The game consists of “eating up” the opponent’s “dogs” up to the last one by inserting them between two pieces and not going beyond them. In practice, the pieces can in principle be placed anywhere, and the players move them in turn. The substance and nature of the pieces varies according to the place where the game is played. They are black and white; the white ones are pebbles or snail shells, and the black ones are dried lumps of camel dung, peach stones blackened by the sun or even date stones. There are 24 of each colour for the games. The first stage is the placing of the pieces two-by-two in the places chosen for this by the players. The course of the game depends on this; each player moves his pieces whilst endeavouring to foresee his opponent’s moves, and good players can plot the course of the opponent’s moves as far as eight future moves. The game consists of “eating up” the opponent’s “dogs” up to the last one by inserting them between two pieces and not going beyond them. In practice, the pieces can in principle be placed anywhere, and the players move them in turn. Except, it seems, along diagonals.

Kharbga is played in the spring and out-of-doors, in a specified place between the tents and left vacant for this very purpose. Elderly men come and play the game in the afternoon until sunset. At the backs of shops, kharbga is played on sacks, and the shop-owner, who sets out four or five games of the pieces, serves drinks at the same time. Shepherds, whilst out on the job, play on sloping and uneven terrains from where they can keep an eye on their flocks. This social pastime is more popular in the north than in the south. Besides the water brought by the sayls of these valleys, al-Khardj contains four unusually deep spring-fed pools (“wāyn”), three clustered together in the northern part of the district and the fourth, Khafs Daghra, in the southern part. A channel called al-Sayb provides water for irrigation from ʿAyn Sambā in the north.

The two most important towns in the north are al-Salamiyya and al-Yamāma. The name al-Yamāma (q.v.), which in earlier times was applied to much of what is now called Najd, has become restricted geographically to this one town, though the older usage has been revived by giving the name to a hotel and other establishments in al-Riyadh. Farther south lie Naḍīm, al-Dilam, and Zumayka. The largest of all the towns is al-Dilam (or al-Daim; al-Daylam in a verse by ʿAntara)

The two most important towns in the north are al-Salamiyya and al-Yamāma. The name al-Yamāma (q.v.), which in earlier times was applied to much of what is now called Najd, has become restricted geographically to this one town, though the older usage has been revived by giving the name to a hotel and other establishments in al-Riyadh. Farther south lie Naḍīm, al-Dilam, and Zumayka. The largest of all the towns is al-Dilam (or al-Daim; al-Daylam in a verse by ʿAntara)

Many of the names given above occur in the literature of the Diāhilīyya and the early Islamic period. The dominant element in the population of al-Khardj then was the Banū Rays b. Thalāba, a branch of Bakr b. Wāḍi (q.v.). Today the settled people of the valley belong in the main to ʿĀl Ṣiyāḥ (said to be of Kaḥṭān), the Dawāsir, Banū Tamīl, and Banū Ḥālīd (q.v.). Bedouins are from Subay, the Suhāl, and ʿĀl Ṣamīr.

The district as such does not figure prominently in historical records until the 12th/13th century, in the middle years of which the men of al-Khardj stood forth among the principal opponents of the new movement of the Wahhābiyya (q.v.). In 1187/1773 ʿAlī Suʿūd of al-Dīrīyya (q.v.), the secular champion of the Wahhābiyya, captured the foremost enemy town, al-Riyadh, which held the ground between al-Dīrīyya and al-Khardj. Zayd b. Zāmil, the lord of al-Dilam, took up the gauntlet against the Wahhābiyya and paid a large sum in gold to the Ismāʿīlī chief of Naḍīm (q.v.) to join him and others in a campaign against ʿAlī Suʿūd which ended however in failure. In 1190/1776 ʿAbd al-ʿAzīz b. Muhammad ʿAlī Suʿūd defeated Zayd and secured the submission of al-Dilam. The first ʿamīr sent to al-Khardj by ʿAlī Suʿūd was Sulaymān b. ʿUmayyān, who held office for sixteen years and whose family

remained associated with the district long thereafter. After Ibrahim Pasha of Egypt occupied al-Dilam in 1833 by the "Turks" from Egypt returned to Najid and took al-Dilam. When the "Turks" from Egypt withdrew, Turki b. 'Abd Allah Al Su'ud made al-Dilam the new Wakhābī capital and reincorporated al-Khardj in the state. The kādi of al-Khardj under Turki was the noted Ḥanbali divine, 'Abd al-Rahmān b. Husayn, a grandson of the founder of the Wakhābīya.

The "Turks" from Egypt returned to Najid and took al-Dilam. Faysal, who had succeeded his father Turki as the Wakhābī Ilmām, based himself on al-Khardj, where Khurāshīd Pasha pursued and overcame him in 1854/1858 in a battle at al-Dilam and Zumayka and sent him a prisoner to Egypt, whence he eventually escaped to resume his rule in Najid. Faysal appointed a younger son of his, Su'ud, as amir of al-Khardj. On the death of Faysal in 1828/1865, Su'ud's challenge of the right of his older brother 'Abd Allah to the succession precipitated a long civil war that ensued Al Su'ud and opened the way for the ascendancy of Al Rashld of Haṣān. The forces of Muhammad b. 'Abd Allah Al Rashld fought against Khargird and put them to death. The fortunes of Al Su'ud were revived by 'Abd al-Asīz, son of Faysal's youngest son 'Abd al-Rahmān. 'Abd al-Asīz recovered al-Khardj in 1320/1902 and then repulsed an attack against al-Dilam by 'Abd al-Asīz b. Muhammad Al Rashld. About ten years later the grandsons of Su'ud b. Faysal, still closely connected with al-Khardj, launched an abortive rebellion against their cousin 'Abd al-Asīz b. 'Abd al-Rahmān. In the end, 'Abd al-Asīz forgave them and took into his entourage their leader, known as Su'ud al-Kabīr ("the Elder"), to distinguish him from Su'ud b. 'Abd al-Asīz, who later became King Su'ud. Su'ud al-Kabīr was married to 'Abd al-Asīz's favourite sister, Nūra. As King of Saudi Arabia 'Abd al-Asīz was fond of visiting al-Khardj for diversion. He kept his stud of Arabian horses there, and a model farm run by Americans provided him with fresh produce.

Bibliography: See the bibliographies for al-Aflālī and al-Dawāsīr. (G. Rentz)

Khardj, Kharja, Khardj, Khardj, or Khardj, has been the name of at least two different places in north-eastern Persia but is at present only current for one of them.

1. Khardj in the sīrātāna of Turbat-i Haydariyya, or, more precisely, the dīkhāstān of Rūd-i miyān Khaf, is situated at about 6 km. to the southwest of the latter place. It is now a small settlement, the inhabitants of which live on the growing of cereals there, and a model farm run by Americans provided him with fresh produce.

2. Khardj in the district of Dīmā, which is mentioned in the biographies of three prominent mystic poets of the Timūrid period, is certainly not identical with the former place. Kāṣm-i Anwār [q.v.] died at Khardj of Dīmā in 837/1433-4 and was buried there in the garden of his estate. A mausoleum was erected at this spot to the order of Mīr 'Ali-Shir Nawālī [q.v.] in ca. 892/1487 (cf. Dawlatshāh, 348 ff.). In 817/1414 'Abd al-Rahmān Dīmā [q.v.] was born here and his nephew Hāttīl [q.v.] spent his life in the vicinity of the tomb of Kāṣm-i Anwār, where he found the inspiration for one of his maṯnawī-poems. At present, there no longer exists a place by the name of Khardj in the area of Dīmā. Several Persian travellers and scholars have since the last century identified its site with modern Langar which lies on the road from Meshhad to Turbat-i Shaykh-i Dīmā. As a common noun, langar of langarḵāna was used to denote an alms-house, as it was frequently attached to the tomb of a holy man. Sometimes it has developed into a place-name, and there are quite a few instances of this to be found in Khurāshīn. A similar development may very well have taken place in the case of Khardj. The shrine, which now exists at Langar and which contains no clues for its identification, has been ascribed to an unknown saint of the 12th/13th century by E. Diez on the basis of a popular tradition recorded by Khanykov.

AL-KHĀRGŪSHI, Abū Sa'd (or Sa'd) 'Abd Allah Mūhammâd, a celebrated preacher (and therefore nicknamed al-Wârî) and ascetic, was born in the Khâرجush street of Nîshâpur: the arabised form of his name is al-Khârkûshî. He went to Baghdâd in the year 393/1002 on his way to perform the pilgrimage, and thereafter resided at Mecca for a while, returning to Nîshâpur to die there in 406/1015 or 407/1016. Three works are ascribed to him (Broekelmann, I, 218, S 1, 361). The first is a biography of Mūhammâd, or rather a classified collection of traditions relating to him, in 8 volumes, variously entitled Sharâf al-Nâbi (al-Mustafâ, al-nubuwâ) or Dalâ'il al-nubuwâ; a Persian translation of this, by Mâbûmâd b. Mūhammâd al-Rawandi, is extant (Storey, Persian literature, i, 175-6). The second is a treatise on onenomaracy entitled al-Bîghâr wa 'l-nidhâr, a pietistic compilation. The third, and most important work, is a systematic account of Şûfism in 70 chapters, Tahâdib al-asrâ'r, which has survived in a single manuscript (Berlin, No. 2819). This last work derives not directly from al-Khârkûshî himself, but from the recension of Abu Râ'îfân. It has been shown (cf. A. J. Arberry in Petermanns Mittheilungen, xxx (1884), 172 ff.; S. D. Goitein (ed.), Travels in Yemen: an account of Joseph Hâlay's journey to Najran in the year 1870, written in Sansâni Arabic by his guide Hayyim Habshush, Jerusalem 1941; J. Halévy, Voyage au Néjârân, in Bulletin de la Société de Géographie, Series 6, vi (1827), 36, 259, 582-4; A handbook of Arabia, i, Admiralty War Staff, Intelligence Division, London 1916; W. B. Harris, A journey through the Yemen, London 1893; H. Scott, In the High Yemen, London 1942.

KHÂRIDJÎA B. ZAYD B. THÂBIT [SEE FUKÂHÂ AL-MÂDÎNA AL-SÂRÂ], in Suppl.

KHÂRIDJITES (al-Khâwrîdîs, sing. Khâridî), the members of the earliest of the religious sects of Islam, whose importance lies particularly, from the point of view of the development of dogma, in the formulation of questions relative to the theory of the caliphate and to justification by faith or by works, while from the point of view of political history, the most important thought they played was disturbing by means of continual insurrections, which often ended in the temporary conquest of entire provinces, the peace of the eastern part of the Muslim empire during the two last years of the caliphate of 'Ali and during the Umayyad period, and involuntarily facilitating first Mu'âwiya's victory over 'Ali, then that of the 'Abbâsids over the Umayyads.

I. The origins of the Khâridî movement.

Opportunity for the schism was given by the proposal presented to 'Ali by Mu'âwiya during the battle of Siffin (Šafâr 37/July 657) [q.v.] to settle the differences arising out of the murder of Uhîmân, which had provoked the war, by referring it to two referees who would pronounce judgment "according to the Kur'ân". While the majority of 'Ali's army readily adopted this proposal, either because they were tired of war or because the "Kur'ân-readers" (bûrârâ) hoped there would emerge from this Kur'ânic judgment the justification of the furious campaign they had conducted against Uhîmân which had ended in the latter's assassination, one group of warriors, mainly of the tribe ofTamilm, vigorously protested against the setting up of a human tribunal above the divine word. Loudly protesting that "judgment belongs to God alone" (la hubuma itâ li-lâlâhî) they left the army, and withdrawing to the village ofHarârâ [q.v.], not far from Kûfa they elected as their chief an obscure soldier, 'Abd Allah b. Waḥhāb al-Râsîbî [q.v.]. These first dissenters took the name al-Ḫârâiyâ or al-Muâkkhîma (i.e. those who repeat the above phrase; cf. Râsîl, viii, 759, note 1), which is often applied by an extension of meaning to the later Khâwrîdîs also. This little group gradually increased on account of successive defections, especially when the arbitration ended in a verdict quite contrary to what the bûrârâ expected (probably in Ramâdân or Shawwâl 37/Feb.-March 658); on this occasion a large number of partisans of 'Ali, including a number of bûrârâ "went out" (Ḫârâ'â) secretly from Kûfa (to which the army had gone during the truce) to join the camp of the Waḥhâb, who in the meantime had gone to the Dîghâh country on the left bank of the Tigris, to a place who describes it and its many tributaries in some detail.

(A. K. IRVINE)

AL-KHAIRID (al-Khârîd), or Ghâyil al-Khârid, one of the principal watercourses of the Yemen. It originates about twenty km. north of Sanâ'â, near Hadâka'n in Arhab, and runs inland in a north-by-north-easterly direction, draining the eastern escarp of the highlands, towards the oasis of the Dîjâw, where it is joined by the Wâdî Mağhâb and veers to the south-east. After leaving the oasis, it unites with the Wâdî al-'Aţf and is lost in the sands of Ramlat Sab'atayn. According to popular belief, it reappears in the Hadrâmawt. Just east of Shîrâ, in Nîhm, where there are hot and mineral springs, it becomes a perennial river, one of the few in South Arabia, and is noted for supporting good-sized fish (Barbus arabicus), even in a dry summer. These provide a livelihood to the local inhabitants, who supply them to the Sanâ'â market. Otherwise little is known of this part of the wâdî because of the bad reputation of the inhabitants of Arhab, and the Sanâ'â-Dîjâw road avoids the region. It is, however, well cultivated by the inhabitants, the Dhû Husayn. In the Dîjâw itself an efficient agriculture is possible only by means of extensive irrigation schemes. This part of Wâdî al-Khârid is presum-
which commanded the exits of the roads from Fars and the bridge-head, at which in those days stood the little village of Baghda, which later was to become the capital of the empire. The rebel camp lay along the Nahrawan canal. It is to this episode of the exodus from Kufa that the Khawaridi owe their name ("those who went out"), more probably than to a general epithet expressing the idea that they had gone out of the community of the faithful as it was later interpreted, probably at quite an early period (cf. the name of the Jewish sect of the Pharisees, which Ed. Meyer, Ursprung und Anfänge des Christentums, II, 283,4, derived from the incident of their separation from the partisans of Judas Maccabeus in 163 B.C., quoting in support of his explanation the name of the Khawaridi). Another name given to those first Khawaridi (which has also been extended to their successors and seems to be the one which they gave themselves) is al-Shurdt (pl. of shurt), the "vendors" i.e. those who have sold their soul for the cause of God (this idea is found in several contemporary verses).

The extreme fanaticism of the Khawaridi at once manifested itself in a series of extremist proclamations and terrorist actions: they proclaimed the nullity of 'Ali's claim to the caliphate but equally condemned Uthman's conduct and disclaimed any intention of avenging his murder; they went farther and began to brand everyone infidel and outside the law who did not accept their point of view and disown 'Ali as well as Uthman. They then committed many murders, not even sparing women. Little by little the strength of the Khawaridi army grew by the accession of other fanatic and turbulent elements, included a number of non-Arabs, attracted by the principle of equality of races in the faith that the Khawaridi proclaimed. 'Ali, who had so far tried to avoid dealing with the rebels, in order to avoid a war in his rear so long as he had to face the army of Mu'awiya, after the rupture of the preliminaries of peace was obliged to take steps to avert the growing danger. He attacked the Khawaridi in their camp and inflicted a terrible defeat on them in which Ibn Wahab and the majority of his followers were slain (battle of al-Nahrawan, 9 Safar 38/17 July 658 [q.v.]). But the victory cost 'Ali dear. Not only was the rebellion far from suppressed and was prolonged in a series of local rising in 39 and 40, but 'Ali himself perished by the dagger of the Khawaridi 'Abd al-Rab'man b. Muljam al-Muradi (see IBN MULJAM), the husband of a woman whose family had lost most of its members at al-Nahrawan. The tradition that a conspiracy of Khawaridi had aimed at killing simultaneously 'Ali, Mu'awiya and the governor of Egypt, 'Amr b. al-'As, is certainly apocryphal.

It should be noted that the narratives of Arab historians on the origin of the Khawaridi movement are very confused and contradictory, and seem to have lost sight of the real connection between it and the arbitration; on the other hand the nature and date of the latter are quite uncertain. The reconstruction which is given above is that proposed by the writer of this article (see Bibl.) against the view of Wellhausen (followed by Lammens and Caetani), who thinks that the Khawaridi rebellion and the arbitration are independent of one another and even dates the battle of al-Nahrawan before the verdict of the arbiters.

II. The wars of the Khawaridi under the Umayyads.

The wise and energetic administration of Mu'awiya, succeeding the feeble and vacillating rule of 'Ali, prevented the agitation of the Khawaridi from breaking out, but it did not succeed in extinguishing it any more than it succeeded in suppressing the feelings and aspirations of the Shi'a. Our sources mention several risings that broke out in Kufa and Basra during the twenty years of Mu'awiya's reign (40-60/660-80), but they were promptly put down and only served to increase the roll of martyrs, the worship and avenging of whom became one of the features of the Khawaridi movement. It is at Basra in particular, under the governors Ziyad b. Abhi and his son 'Ubayd Allabh, that we find most risings and suppressions of risings. These insurrections, of which the most formidable was that of Mirdas b. Udayya al-Tumml Abi Bilal [q.v.], settled the tactics of the Khawaridi, whose raids henceforth took the form of guerilla warfare and owed their successes mainly to the rapidity — which soon became legendary — of their cavalry (the names of some of their horses are preserved in Arabic works on hippology). They mobilised unexpectedly, swept through the country, surprised undefended towns and then retired rapidly to escape the pursuit of the government troops. The centres of concentration of the Khawaridi were the marshy country of the Bakti and Basra (pi. of BARTA) and around Diokha, on the left bank of the Tigris, where their movement had originated, from which they could, if defeated, rapidly gain the mountainous lands of the Iranian plateaus.

It was only with the great civil war that broke out after the death of Yazid I, that in the midst of the general disorder the Khawaridi movement assumed serious dimensions and contributed more than anything else to render precarious the hold of the pretender 'Abd Allabh b. al-Zubayr [q.v.], on the territory that he had at first been able to subdue. After the fall of Ibn Zubayr, it was the Umayyad governors who had to wage a hard struggle with these indomitable rebels, enemies alike of victors and vanquished. It is at this time that we begin to distinguish among the Khawaridi half-political and half-theological subdivisions, the origin of which is not at all clear, for the tradition which makes them appear at the same time quite suddenly at Basra on the death of Yazid has probably altered the real succession of events. In any case, we henceforth find the Khawaridi breaking out throughout the eastern part of the empire (Syria was always free from them and Africa only knew them under the 'Abbasids) into serious rebellions, at the head of which they placed individuals who have given their names to the Asharit or as the case, to the Shafiyya and to the Sufiyya [q.v.]. Of all these movements the most dangerous to the unity of the Muslim Empire and the most terrible on account of its ferociously uncompromising character was without doubt that led by Nafi b. al-Azraq [q.v.], which gave the Khawaridi temporary control of Kirmân, Fars and other eastern provinces, constituted a permanent threat to the security of Basra and surrounding country, and which al-Muhaball b. Abi Su'ra at first, and later al-Hadi al-Di b. Yusuf only overcame (in 78/698 or 79/699) after long years of effort which ended in the defeat and death of the last and most remarkable of the Azraqi leaders, the valiant Kaftar b. al-Fudjâa [q.v.]. Less serious and less extensive and prolonged, but quite as stubborn as the Azraqi movement, was the insurrection which was called after Shabab b. Yazid al-Shaybâni (76-7697) after he did not begin it but was only its most distinguished leader; it began in the high Tigris country between Mardin and
Nisibin and its object was the conquest and devastation of Kufa. The partisans of Shabib, who advanced only in little bands of several hundred horsemen, but who often gathered round them large bands of malcontents, sowed terror throughout Irak, and having several times defeated al-Hadjidji’s troops were only destroyed by the help of an army of picked troops summoned from Syria. Shabib himself perished, drowned in the Dujayl, while trying to reach the mountains of Karman; his successors caused a certain amount of trouble to the governors of Yazid II and Higham but never again were a serious danger.

Arabia was another field of Khairih activity, where during the rule of Ibn al-Zubayr between the years 65/684-5 and 72/691-2 their leaders Abu Taliv, Nadja b. Amir and Abu Fudayk captured in succession Yamama, Hadramawt, Yanam and the town of al-Tau, and were only restrained by religious scruples from taking the holy cities. They were only destroyed after the intervention of al-Hadjidji, but they left the seeds of future movements, especially in the eastern part of the peninsula.

Owing mainly to the energy of al-Hadjidji, Khairijism seemed definitely quelled. Another factor contributed considerably to its failure, namely the fanaticism and intolerance of the rebels, whose religious disputes ended in splitting their ranks and sometimes resulted in the removal of their ablest leaders on the charge of having on some occasion failed to observe the absolute irreconcilableness of their principles. Another cause of weakness may be recognised in the eternal feud between the Arab element and that of the Mansili which brought fatal consequences along with it, especially among the ranks after the death of Kasari b. al-Fudayl. But under the last Umayyads, in the midst of the irreparable collapse of the central government, the Khawaridi again raised their heads, and resumed their exploits, this time not in little bands but in large bodies. While the two most serious risings of this period, those of al-Daibak b. Kai al-Shaybani (q.v.) in the Dihman and of Irak and that of Abd Allah b. Yabyaa, surnamed Taiib al-Hash, and of Abu Hamza [see al-Mugitar b. ‘Awp] in Arabia (in the course of which Medina itself was occupied), ended in defeat, it is nevertheless true that the anarchy which they provoked destroyed the eastern rampart of Umayyad power and enabled the ‘Abbasid insurrection to penetrate more easily to the heart of the empire.

Under the ‘Abbasid caliphs, the Khairij movement may be said to be practically extinct in Irak and adjoining regions. Except for a few local risings, promptly suppressed, Khairijism no longer presented any serious danger and only survived as a religious sect, without, however, any remarkable vitality or wide dissemination. In Eastern Arabia, on the other hand, in North Africa and later on the eastern coast of Africa, one of the principal branches of the Khawaridi, that of the Ihadiyya, played an important part in politics, and even after this role was ended it continued to be of importance from the religious point of view. It survives in our day with its dogmas, its rites and its special laws.

III. The political and religious theories of the Khawaridi

The Khawaridi, who, as we have seen, never had any tendency of military and political action, did not have either a uniform body of doctrines. Their teachings seem to us like the particular views of a number of independent sub-sects (the heresiographers number not less than a score including principal and subsidiary together), some of which represent theological schools as well as political movements of a collectivist character, while others confine themselves to expressing differences of individual opinions among the theorists of the sect. One article is common to all: it is that which treats of the question of the caliphate, a question which has been the starting point of all the religious divisions in Islam. On this question, the Khawaridi are opposed equally to the legitimism of the Shii and the quietism of the Murjii. On the one hand they assert what Wellhausen aptly calls their “non-conformity” i.e. the obligation on believers to proclaim illegitimate and ipso facto deposed the imam who has gone off the right path (this is how they justify their abandonment of ‘Ali after his acceptance of the arbitration); on the other hand they declare every believer who is morally and religiously irreproachable to be capable of being raised by the vote of the community to the supreme dignity of the imamate, “even if he were a black slave”. The result is that each of their leaders has been recognised by them as amir al-mu’minin, although none of them had, among other things, the qualification of Kwaraji birth. Consequently it is the other caliphs besides their own that they recognise as legitimate, who was Bakr and ‘Umar (the latter is particularly venerated by them); ‘Uthman only during the first six years of his reign; and ‘Ali till the battle of Siffin.

Another capital article of Khairiji heterodoxy is the absolute rejection of the doctrine of justification by faith without works. They push their moral strictness to the point of refusing the title of believer to anyone who has committed a mortal sin and regarding him as a murid (apostate); and their extreme wing, represented by the Azrakis, says that he who has become an infidel in this way can never re-enter the faith and should be killed for his apostasy along with his wives and children. Of course all non-Khairiji Muslims are regarded as apostates. Here we have the principle of isririyd (religious murder) which we find applied from the beginning of the Khawaridi movement, even before it had been formulated in theory, and which found its completest application during the war of the Azraks. This ferocious principle forms a strange but not illogical contrast with the spirit of tolerance shown by the Khawaridi to non-Muslims and which in some of their schools goes so far as to recognise as equal to Muslims in every way those Jews or Christians who will pronounce the shahida with the modification: “Muhammad is the Apostle of God to the Arabs and not to us.” The tendency to the levelling of the Arabs and the Mansili (which was already a result of their attitude to the problem of the imamate) was pushed so far by one of the theorists of Khairiji doctrine, Yazid b. Abl Anisa (founder of the Yastiyya), that he says that God will reveal a new Kur’an to a prophet among the Persians and that he will found a new religion for them, divine in the same sense as Judaism, Christianity and Islam, which will be no other than that of the Sabil mentioned in the Kur’an.

The same Puritanism which characterises Khairijism in its conception of the state and of faith is found in its ethical principles: it demands purity of conscience as an indispensable complement to bodily purity for the validity of acts of worship; and one of their sects goes so far as to remove Sura XII from the Kur’an (Sura Yelp) because its contents...
are worldly and frivolous and make it unworthy to be the Word of God. If, on the other hand, they do not allow-stoning, this is due simply to the fact that they do not recognize the authenticity of the famous verses added by 'Umar to the primitive text of the Kur'an (cf. Nödeke-Schwally, Gesch. d. Qur'ans, i, 488-54).

Outside of general principles and a few particular cases, the law and dogmatics of the Kharawïdî are not known to us in their totality except for the Ibadiyya, whose survival to the present day has preserved in its integrity their religious tradition. The Ibadiyya represent (as do the Shi'îyya on the other side) a comparatively moderate school and their present views, in dogma as well as law, have been to some degree influenced by other Muslim schools. Attention has recently been drawn (by C. A. Nallino, in RSO, vii, 455-60) to the very close connection between the dogmatics of the Ibadiyya and of the Mu'tazila. It may also be supposed that it was the latter which, in certain points at least, received a stimulus from Kharidjism. What seems beyond doubt is that, as Wellhausen points out, Kharidjism played a very important part in the development of Muslim theology, either directly or by the impetus which it gave to reflection on the problems of the faith.

Although Kharidjism seems to us an essentially popular movement in its origins, we must be careful not to think of it as devoid of intellectualism. On the contrary, the very radicalism of its theories must have exercised an attraction on many cultivated minds, much as similar doctrines have done in other times and countries. It is particularly at the time of the early 'Abbasids, under the influence of and at the same time in opposition to the refined and sceptical culture of the period, that we find many scholars and men of letters who were thought to cherish Kharidjî views, without this preventing their frequent high society and enjoying the favour of the court. The best known of these Kharawïdî is the famous philologist Abû 'Ubayda Ma'mar b. al-Mughâna (q.v.), regarding whose fanaticism, in conversation at least, a rather piquant anecdote is recorded by Ibn Khallikan (i, 107 of the 1310 edition; the poetic quotation should be corrected from the Amili of the Murtaḍâ, iii, 88-9).

Poetry and eloquence were also cultivated among the Kharawïdî, which is explained by the fact that the majority of their leaders, especially in the early days, belonged to the Bedouin element in the military camps of Kufa and Başra. Collections were compiled of the khabab pronounced by the Kharidjî leaders, and what survives of them, besides giving an excellent idea of their views, gives us a fairly high opinion of their oratorical talent. We also possess numerous fragments of their poetry (which had also been collected in particular hadithi), especially of those of 'I'mrân b. Hīṭtân (q.v.) (who is at the same time considered one of the founders of the Kharidjî fiqh). A long list of Kharidjî orators, poets and jurists was prepared by Diḥḥî (see Ch. Pellat, Diḥḥî and les Kharidjîtes, in Folia Orientalia, xii (1970), 195-209).

The wars of the Kharidjî had been recorded from the beginning of Arabic historiography in several works which have not come down to us in their entirety; we know, however, the substance of the more important among them, the authors of which were Abû Mîkhnafl, Abû 'Ubayda and al-Madâ'inî from the extracts which have been preserved in the historical sources given below.

Kharîta (or Kharîta), "map" in modern Arabic, derived from French "carte", (see I. I. Krachkovsky, Istoria Arabshaya geografisckaya literatura (Moscow-Leningrad 1957), with Arabic tr.
Cartography had been practised in the Middle East since ancient times, but with the advent of Islam it received a new impetus due to the political and administrative requirements of the expanding Islamic world. Thus in the 2nd/8th century a map of al-Daylam was prepared for al-Hadджаджи b. Yûsuf (d. 95/714); then a map of the Swamps of Bašra is said to have existed during the reign of the Abbasid caliph al-Manṣûr (235/849-57). (Krachkovsky, op. cit., i, 59, 206; cf. Shawkat, op. cit., 2, 3). Whatever the quality of such maps, the Arabs' direct knowledge of the region gathered during their early campaigns, coupled with indigenous methods of drawing maps, probably enabled them to draw these.

It is not, however, until the early decades of the 3rd/9th century that we come across the first detailed world maps drawn in Arabic. This became possible through the introduction to the Islamic world of the Greek, Indian and Iranian astronomical and geographical works in the 8th and the early 9th centuries. It was during this period until the 17th century, cartography was practised as a science and passed through several stages of development. Muslim astronomers and geographers drew world maps and regional maps, as well as sea-charts, following various traditions until their mediaeval techniques of cartography were replaced by the modern ones. The first world map, the original form of which is not extant, was constructed by the scholars of Baghdad who worked in the Bayt al-Hikma "House of Science," there under the patronage of the caliph al-Ma'mûn (198-218/813-33). This map was named after the caliph as al-Sûrat al-Ma'mûniyya. According to al-Masûdî (d. 345/956), who had seen this map directly, it depicted "the universe with spheres, the stars, land and the seas, inhabited and barren (regions of the world), settlements of peoples, cities, etc." It was, he says, more exquisite than the world maps of Claudius Ptolemy, Marinus and others, (al-Masûdî, Tanbih, 33; cf. al-Masûdî, Murûdî, i, 183-205. According to al-Zuhri (lived ca. 532/1137), al-Fazârî had made a copy of the map, and al-Zuhri's own work, the Kitâb al-djârâfîyya, was based on this copy of the Sûrat al-Ma'mûniyya, ed. Muhammad Hadji-Sadok, Damascus 1968, 306; cf. Krachkovsky, op. cit., 867, 270). As the arrangement of the geographical material in the Arabic world's work follows the ancient Iranian system (see Djuhrâfîyya), it is possible that al-Sûrat al-Ma'mûniyya represented a synthesis between the Iranian system and the Ptolemaic system according to which the inhabited world was divided into seven climates parallel to the equator and divided according to the length of the day. It is evident, therefore, that while much of the data of the map was derived from Ptolemy's Geography, a substantial amount of it and its arrangement must have come from non-Greek sources.

It was during this period that Muhammad b. Mûsâ al-Khârazmî (d. after 232/849 [q.v.]) wrote his geographical work entitled Kitâb Sûrat al-ârd. Though essentially based on Ptolemy's Geography, the work gives in a tabulated form the co-ordinates of places (cities, mountains, rivers, etc.) arranged according to the Ptolemaic climates. There is little doubt that the work must have been originally accompanied by regional maps of each of the climates or by a single world map, but none of these seem to have survived. The four maps produced in the printed edition of the work seem to be later recensions of the original maps depicting djustrat al-djâwarî, a map of the seas, guls, etc., of the Nile and the Sea of Azov drawn by the author. (For the maps, see Kitâb Sûrat al-ârd, ed. H. von Milik, Leipzig 1926, Tafl I (djustrat al-djâwarî); Tafl II (shapes of the seas, guls, etc.); Tafl III (Map of the Nile); and Tafl IV (Map of the Sea of Azov). Shawkat reasons that since al-Khârazmî wrote a brief work, he did not draw a complete map of the world but confined himself to drawing the four maps as an illustration, see op. cit., 7-8). Al-Khârazmî's maps have now been fully reconstructed by S. Raxia Jafrî on the basis of the data given in his Sûrat al-ârd (A critical revision and interpretation of Kitâb Sûrat al-ârd by Muham- mad b. Mûsâ al-Khârazmî, thesis, Aligarh Muslim University, unpublished). A comparison of these maps with those of the extant maps of Ptolemy (see E. L. Stevenson, Geography of Claudius Ptolemy, New York 1932; cf. the map of Afrika by al-Khwârazmî as interpreted by the Indian Ocean, Kanal, Monumenta Cartographica Africnae et Aegypti, iii (Époque Arabe), Fasc. I, 1930, 525), shows their close resemblance to each other, just as the maps reproduced in al-Khârazmî's work resemble those of Ptolemy.

Thâbit b. Kûra (d. 288/901 [q.v.]), who was credited with an excellent translation of Ptolemy's Geography into Arabic, also drew a world map called Šifât al-dinûn (Krachkovsky, i, 206), but it has not survived.

The maps enumerated above followed what may be called the Greco-Muslim tradition in cartography, yet they differed from the maps of Ptolemy in several aspects. First, they did not follow the Ptolemaic technique of conical projection. The cartographers drew their maps with latitudes and longitudes as straight lines as though they were on a plane surface without any regard to the spherical shape of the earth. Al-Bûrûnî (d. after 442/1050 [q.v.]), criticising Marinus for some assumptions in his map of the earth, and also al-Battânî (d. 317/929 [q.v.]) for his determination of the direction of the bibîa, says that "They treated the meridian circles as parallel straight lines and the parallels of latitudes as straight lines. Thus they have fallen into this outrageous error," (al-Bûrûnî, The determination of the co-ordinates of positions for the correction of distances between cities, tr. of Kitâb Taqâdîd nihâyât al-amâkin li-taâlîr masâqâfî al-masâkin, by Djâmî Allî, Beirut 1966). Similarly, al-Zuhri was critical of the scientists who had constructed al-Sûrat al-Ma'mûniyya, for, he says, while the earth was in fact spherical in shape, they drew the map of the earth on a plane, a method followed in the construction of the astrolabe (op. cit., 304). Again, while in the Ptolemaic maps the inhabited world is divided into seven climates (subdivided into 21 parallels north of the equator and 4 parallels south of it), in the Greco-Muslim maps only the broader division of the climates is followed, while the subdivision into the parallels is neglected. Thirdly, differences in the physical features as depicted on the Ptolemaic and the Greco-Muslim maps can also be noticed. For instance, in the Ptolemaic maps the Indian Ocean is shown as a lake, while on the Greco-Muslim maps it...
is shown as having water communication with the Pacific (the "Encircling Ocean") in the south-east. Again, Ceylon in the Greco-Muslim maps is much smaller in size than that shown in the Ptolemaic maps. These and similar dissimilarities were partly due to the more intimate knowledge of Asia and Africa enjoyed by the Muslim geographers and cartographers. Moreover, the Muslim astronomers of the later period had revised the astronomical tables of the Greeks as well as those of the early Muslim astronomers in the light of their own observations, which must have helped the cartographers to draw more accurate maps (for details, see Shawkat, 11. 5).

During the 4th/10th century Abū 'Hasan Ibn Yūnus (d. 390/1000 [q.v.]), along with al-Hasan b. Ahmad al-Muhallabi, prepared a world map for the Fāṭimid caliph al-'Azīz (365/869-96). It was drawn on a Tustar silk cloth and woven in gold and different colours in silk. On it were shown the climes, mountains, rivers, cities, seas and the different routes, and Mecca and Medina were prominently depicted on it. It cost 22,000 dinārīs. Except for some differences in the south-eastern coast of Arabia and the northern coast of Africa, it conformed to the map of al-Khārīja or Khārīta (ibid., 12-13).

Also in this century, Abū Zayd Ahmad b. Sahl al-Balkhī (d. 322/934 [q.v.]) initiated a new tradition in cartography. Practically it exercised a deep influence on later cartographers and became the most popular style of cartography in the Islamic world. Al-Balkhī wrote a geography of the Islamic world entitled Ṣawwar al-akhlīm, in which he described each of the various provinces, calling it an iklim. Though brief, the work was a description of the maps produced by the author with his boundaries, main cities and towns, rivers, mountains and the main roads connecting the cities. He also drew maps of the Indian Ocean, the Mediterranean and the Caspian and a world map in which Mecca occupied the central position. Neither the geographical treatise nor the maps of al-Balkhī have survived independently. However, his maps were copied and probably improved by al-Iṣṭakhri (ca. 340/951 [q.v.]) and his treatise incorporated in the latter's work. Al-Iṣṭakhri drew 21 provincial maps (including one of the world) which are found attached to his Kitāb Masālik al-mamālik. (For the maps, see al-Masālik wa 'l-mamālik, ed. Muḥammad Dālibī 'Abd al-Ḥālīm, Cairo 1961; see also ibid., 195-205, for a discussion of the maps by the editor; see also coloured maps in a Persian translation of Al-Iṣṭakhri's work entitled Masālik wa mamālik, ed. Ḥassān Bādī, Tehran 1960; 1961). Another geographer who followed the cartographical tradition of al-Balkhī was Ibn Hawkal (ca. 367/977 [q.v.]). One of the outstanding geographers of the time, Ibn Hawkal produced an excellent work on the geography of the Islamic world, his Kitāb Suraṭ al-arḍ. Though essentially based on the Balkhī-Iṣṭakhri tradition, the work includes the rich personal experiences and observations of the author. For his work, Ibn Hawkal drew 22 maps, including a world map. In his opinion, some of the maps of al-Iṣṭakhri were excellent, whereas others were confused and full of defects. Hence, on al-Iṣṭakhri's own request, he revised some of the former's maps (Ibn Ḥawkal, Kitāb Suraṭ al-arḍ, ed. J. H. Kramers, Leiden 1939, ii, 329-30). A glance at the maps of Ibn Hawkal shows that they are superior to those of al-Iṣṭakhri. A third follower of this school was al-Mukaddasi (ca. 375/985 [q.v.]), who was perhaps the most original of the geographers of mediaeval Islam. In his Kitāb Ábbās al-lākālīm fi mā'rifat al-akhlīm he gave a systematic account of the geography and the cultural aspects of each of the provinces of the Islamic world. Having rearranged the provinces, he drew the maps of 12 of them (for al-Mukaddasi's maps, see Kamāl, iii, fasc. 1, 672-7), and claimed to have drawn a more accurate map of the sea round Arabia in the light of his own experiences and the information derived from experiences of sailors whom he had met (al-Mukaddasi, ed. M. J. de Goeje, BGA, iii, Leiden 1877, 10-1). It seems therefore, that the cartographers of the Balkhī school continuously laboured to improve the maps of their predecessors.

This new tradition of cartography differed fundamentally both in approach and content from the Greco-Muslim tradition, and could be described as reflecting the Islamic political point of view of the time. As against the Greco-Muslim maps in which 'Irāq was usually placed in the central clime (i.e. the fourth), in the world maps belonging to the Balkhī school, Mecca occupied the central position. Another interesting feature of these round world maps is that south is placed at the top and north at the bottom, for which religious reasons are assigned (Shawkat, 21, n. 3, is of the view that the geographers put south at the top of their maps because of reverence for the cities of Mecca and Medina in Arabia, beyond which there was no land). Again, land is surrounded by the "encircling Ocean" and reaching nearest to each other at the Isthmus of Suez, thus conforming to the Kūr'ānic concept of terra incognita as an extension of the African continent. Then, the Mediterranean and the Indian Ocean are depicted as two "gulfs" coming out of the "Encircling Ocean" and reaching nearest to each other at the Isthmus of Suez, thus conforming to the Kūr'ānic concept of the two gulfs meeting at al-Bāzār (q.v.) ("the barrier", XXV, 55/53). Thus the Indian Ocean, though connected with the Pacific in the south-east, has no water communication with the Atlantic. The separate sea maps are usually geometrical in shape, and resemble a bird or some other figure, which are again based on ideas of Muslim traditionists. In these world maps, arbitrary boundaries of the provinces (iklims) of the Islamic world, as well those of the non-Islamic regions, are drawn so as to convey an overall picture of the political and the ethnographic divisions of the world. It is above all, in their provincial (iklim) maps that these cartographers display their originality. In each of these maps, the boundaries, cities and towns, rivers, mountains and roads are shown with great dexterity. Obviously, the main purpose of the author was to highlight the Islamic world. These maps, therefore, may be taken as a distinctive achievement on the part of the cartographers of the Balkhī school and an improvement on the mathematical division of the climes of the Greco-Muslim maps.

K. Miller attributed some maps which have traces of the Balkhī school in them to the famous Sāmānid wazīr Abū 'Abd Allāh Muḥammad b. Ahmad b. Naṣr al-Ḥāyānī, the author of the lost work called Kitāb al-Masālik wa 'l-mamālik (written 372/982) (Mappae arabicae, Stuttgart 1931, Islam Atlas, Band v, Tafel 66-70, 72v and 73r). It is unlikely, however, that these maps were drawn by him, for in his work he followed the Ptolemaic arrangement of the seven climes.

One of the earliest Persian geographical works produced in this century was the anonymous Ḥudūd al-ʿilām (compiled in 372/982-3). According to V. Minorsky, the author "worked on the basis of some previous maps", probably a modified form of Abū
Dja'far al-Khazin's maps, upon which he seems to have made some improvements. However, the map upon which the anonymous author worked has not survived. (Minorsky based his view on Barthold's suggestion that al-Balkhi's book on geography may have actually been an explanation of Abū Dja'far traditional terra incognita is replaced by sea which covers most of the southern quarter, the Indian Ocean is connected with the Atlantic, and Africa acquires a small size (for al-Biruni's map of the sea, see Fig. 1). Al-Biruni's theory was adopted by many a later geographer and cartographer. (For example, see Abu

![Map of the seas by al-Biruni](image)

Fig. 1. Map of the seas by al-Biruni as contained in his Kitāb al-Tafhim li-awnā'il al-tamālim (written in 420/1029), British Museum, MS. Or. 8349, f. 58.

al-Khazin's maps, see Hudūd al-Sālam, tr. 18, n. 5; for Minorsky's view, see ibid., p. xv). It might have belonged to the tradition of the Balkhi school.

It was, however, left to al-Biruni to introduce new concepts in physical geography which resulted in innovations in the world maps hitherto drawn by the Muslim cartographers. He was the first to propound the theory that the Indian Ocean must have a connection with the Atlantic through certain channels south of the Mountains of the Moon, the traditional sources of the Nile. He argued that just as al-Bahr al-Kabīr (the Indian Ocean) penetrated into the northern continent (Asia) on the east and entered it in many places, creating many islands there, similarly, the continent, to keep up the balance jutted out into al-Bahr al-Dirāndah (the Southern Sea) in the west. He continues that in this region, the sea had entered the mountains [of the Moon] and the valleys, with a continuous ebb and flow, and was stormy, causing shipwrecks and preventing sailing, but in spite of this it was still connected with the Uṣayyāni (the Atlantic) through these narrow passages. He then says that towards the south and beyond these mountains, signs of the connection of these two seas have been discovered, even though no-one has personal experience of their connection. Thus al-Biruni conceived of the inhabited continent as being surrounded by the "Encircling Ocean" (al-Kānūn al-Mas'udī, Hyderabad 1955, ii, 538); and in his map of the seas, the

During the 5th/11th centuries, Māhmūd al-Kāshgārī [q.v.] drew a rather unusual world map with a linguistic basis, giving prominence to the Turkish-speaking regions and placing Kāshgār at the centre of the world, with other regions receding to the periphery. (For his map, see Kamāl, iii, fasc. II, 741; cf. Miller, op. cit., Arabishe Welt- und Länderkarten, Band v, Weltkarten, 142-8.)

While the Balkhi school was gaining popularity with the cartographers in the east, in Europe some of the most outstanding maps in the Greco-Muslim tradition were still being produced. In Sicily, the well-known geographer al-Sharīf al-Idrīsī (d. 560/1166 [q.v.]), who lived at the court of Roger II, produced a series of world and sectional maps at the orders of the king. Taking the Ptolemaic maps as the basis, he constructed a large silver map. He then draw a world map and by dividing each of the seven climates into ten longitudinal sections, he drew a separate and detailed map of each of these sections. Into these he incor-
porated the geographical information collected from Arabic as well as Norman sources. The maps form a part of his monumental geographical work Kitāb Nuzhat al-mughālī fi 'ṣīhrār al-dārāk, and except for the silver map, all have fortunately survived the vicissitudes of time. (For his maps, see Miller, Band i, Heft 2, Heft 3; and Band vi). Al-Idrīsī's maps represent the best example of Arabo-Norman cooperation in cartography.

An interesting world map belonging to the middle of the 6th/12th century exists in an anonymous work entitled Mabkhāṣār Ibn Hawkal, in which the shape of the inhabited world is drawn elliptically rather than round. The Indian and the Atlantic Oceans are separated by a narrow isthmus of land near the sources of the Nile, which is connected with the terra incognita and which is partly visible (of the three mss. of this, two carry the title Kitāb Hayat al-aqīl al-ard wa-makhāriṣa fi 'l-sūl wa 'l-sārat al-mašruṭ bi-diğawāfīyya, Kamāl, iii, fasc. II, 804-17. Kamāl reproduced all the maps belonging to the various mss. of this work. One of these (B.N. No. 2214), according to Kramer, is an abridgement of Ibn Hawkal's ms. Top Kapu Saray No. 3346, which was copied in 479/1086 with supplementary annotations relating to the period of the epiposition, i.e. 534-80/1139-94, see Ibn Hawkal, ed. Kramer, pp. v-vii. Among the various maps belonging to the manuscript of this work, there is a map of the Nile reproduced by Kamār in his edition, i, 149, but it differs in detail from the map of the Nile by al-%ārāmī (see above).

To this century also belong the six maps of Ahmad al-Tūsī, one of the earliest Muslim cosmographers and author of the Persian work Kitāb ʿAḍāqib al-mabkhasa (written ca. 576/1180); these were probably drawn in the Bābghī tradition, and are the maps of the Caspian (Bābgh Kāzwm), the Mediterranean, al-Dībāl, al-Sind and the Persian Gulf (Krachkovsky, 325).

During the 7th/13th century, a number of world maps were produced, some of which belonged to the Greco-Muslim tradition and others to that of the Balkhī school. A peculiar world map belonging to the former tradition and dated 646/1248 is found in a fragment of a Persian geographical treatise. By this map, the Indian Ocean passes south of the Mountains of the Moon and then turning northwards joins the Atlantic and the Mediterranean, thus surrounding what appears to be the continent of Africa. However, the terra incognita is also shown covering part of the southern quarter of the earth and then extending northwards around Africa where it joins Spain (see Kamāl, iii [1935], fasc. V, 966; the volume containing the Persian geographical treatise (Leiden ms. Ar. 1899) also contains an astronomical treatise by Ahmad al-Sīdīzī copied in 646/1248). The author seemed to have been influenced by al-Bīrūnī, but at the same time persisted in retaining the terrai incognita on the map, and it was this which led him to connect it with the European mainland. To the Greco-Muslim tradition also belonged the Syriac world map of Bar Hebraeus ( Ibn al-Idrīsī, A.D. 1226-86 [959-], Miller, i, 9; v, 169; cf. Krachkovsky, 371-4).

The elliptical world maps attributed by Miller to Ibn Saʿīd al-Maghribī (d. 673/1274 or 685/1286), see Miller, Band v, Tafel 71, and i, 21-2, are more likely to be the work of the anonymous author of the Mubkhasa Ibn Hawkal. Ibn Saʿīd's world map, on the other hand, follows the Greco-Muslim tradition, but the terra incognita is replaced by sea in the southern quarter of the earth and the Indian Ocean is connected with the Atlantic south of Africa, whose southern part is fork-shaped. However, the author seemed to have been confused with regard to the outlines of the continents and the islands. (For the world map of Ibn Saʿīd, see L. Bagrow and R. A. Skelton, History of cartography, London 1964, Pt. xxvi).

The maps drawn by the cosmographers of the 7th-13th and 8th-14th centuries present some special and interesting features. For instance, the world map of Zakariyya b. Muḥammad al-Kazwīnī (d. 685/1285) follows the tradition of the Balkhī school, but the “Encircling Ocean” is shown as being surrounded by the legendary ʿān al-bayāt (“the Fountain of Life”) flows into the terra incognita. (Miller, Band v, Tafel 80 (2. Kazwini Gotha). However, his map of the sea is based on that of al-Bīrūnī and the climatic world map is in the Greco-Muslim tradition (ibid., Weltkarten, 129-32). The world map of Sirāḏī al-Dīn Abī Hāfs ʿUmar, called Ibn al-Wardi (q.v.) (d. 861/1457 or 850/1446), is similar to that of al-Kazwīnī, following the Balkhī tradition of cartography and depicting the legendary ʿān al-bayāt surrounding the “Encircling Ocean” and the ʿān al-bayāt (ibid., Band v, Tafel 75-9; Weltkarten, 134-8). On the other hand, al-Dīmāshiṭī (d. 727/1327 [q.v.], drew diagrams, distinctive in their nature, of the relative distribution of various races in the inhabited parts of the world (ibid., Band v, Weltkarten, 130-41).

By this time, new trends seemed to be appearing in Islamic cartography. Of great interest are some maps in which the Muslim cartographers used a grid of horizontal and vertical lines representing latitudes and longitudes, which form small squares within which place names are shown to indicate their geographical positions. Whether this new experiment in Islamic cartography was due to any influence of Chinese cartography, in which the rectangular grid was used as a scale to indicate distances, or whether it was indigenous to Muslim cartographers, is not certain. We have some examples of Mongol maps of this design produced in China during this period; for instance, the Mongol map of A.D. 1329 which formed part of the History of the Yuan Shih used the rectangular grid. Krachkovsky believed that this map may have been drawn on a representative of the Iranian-Arab school of cartography and that the place names given on the map were possibly in the Mongolian language initially, and the map later translated into Chinese (Krachkovsky, 398-9). However, since the Islamic maps of this category differ fundamentally from their Chinese prototypes, in that the former use the horizontal and the vertical lines to represent the latitudes and the longitudes, while the latter use them to form squares to indicate distances, it is not unlikely that the concept of using a grid was originally borrowed from the Chinese by the Muslim cartographers, considering the fact that Mongol rule at this point covered much of the region between Iran and China.

A notable example of this class of maps is the world map of ʿAbd Allāh al-Mustawfī (d. 750/1349 [q.v.]), in which the inhabited world is divided into 9 parallel divisions beginning from the equator and going northwards. Thus, the squares formed are approximately of $10° \times 10°$, each degree being equal to 56 2/3 Arabian miles (according to al-Maʿmūn’s astronomers). Place names are then arbitrarily written within each of the squares, and so are the names of the seven climates around the circum-

KHARĪṬA OR KHĀRĪTA
ference of the inhabited world. The map shows traces of al-Biruni's concept of sea covering the southern quarter of the earth, and southern Africa is fork-shaped, as in some of the maps discussed above. In his detailed map of Central Asia, Iran, etc. called by Miller "Irān-karte", al-Mustawfi used a rectangular grid in which each of the squares represents $x^2 \times y^2$ and the names of the main cities and towns are given in each of the squares. The map covers longitudes from 64° to 111° from west to east and latitudes from 10° to 45° north of the equator (the Muslim astronomers generally calculated their longitudes beginning from the Canary Islands (0°) to China (180°)). Again, according to al-Mustawfi, his map spreads between the 1st and the 6th clime north of the equator, but these are arbitrarily mentioned and seem to have no relation with the actual astronomical divisions of the climes as worked out by the astronomers. With an arbitrary division of the parallels of latitudes and with no regard for the sphericity of the earth in drawing the longitudes, it was hardly to be expected that the places would find correct geographical positions as known to the Muslim astronomers (Miller, Band v, Tafel 83-6; Band v, Weltkarten, 178-82).

Another example of this category of maps is the world map of Hāfiz-i Ābrū (d. 833/1430 [q.v.]). While the three regional maps accompanying his work on geography are drawn after the tradition of the Balkhi school, his world map belongs to the category under discussion and resembles in many respects that of al-Mustawfi. The world map is superimposed on a grid of squares of $x^2 \times y^2$ with vertical lines representing the longitudes and horizontal lines representing the latitudes. The longitudes begin at 0° (passing through the west coast of Africa) and then go eastwards up to 180° which crosses a place called "Kankanūz" (Kang-diz), a legendary town which, according to the Persians, was built by Kay Kā'ūs or Dījam in the most remote east, behind the sea, Minorsky, Hudud al-Siām, 189).

Muslim astronomers also drew maps of cities and towns and the direction of the kibla [q.v., 2. Astronomical aspects], of which quite a few examples are extant, see Miller, Band v, 149-54 for the kibla maps.

In the 10th/16th century, the members of the al-Sharafi al-Sifaksi family of Tunisia distinguished themselves by drawing several maps between 958/1551 and 1559 (preserved in Marciana, Venice) has now been proved by V. L. Ménage to be of European origin (Taeschner, 2; Ménage, The map of Hājjī Ahmed and its makers, in BSOAS, xxii (1958), 297-314; cf. Krachkovsky, 457-8; G. Kish, The suppressed Turkish map of 1556, Ann Arbor 1957).

It may be pointed out here that the world map hitherto attributed to Hājjīl Ahmad of Tunis and dated 967/1559 (Band v, Weltkarte, 111-12; Band v, Weltkarten, Tafel 72, 82, "Kankanūz" (Kang-diz), was a legendary town which, according to the Persians, was built by Kay Kā'ūs or Dījam in the most remote east, behind the sea, Minorsky, Hudud al-Siām, 189).

According to Miller, was an attempt to combine the Catalanon sea map with that of al-Idrisi to produce a new Arabic sea map. Another member of the family, Muhammad b. All al-Sharafi, produced a world map in 1009/1601, the eastern half of which was based on al-Idrisi and the western half (Mediterranean and the Atlantic coast) and the Black Sea on Catalanon portolanos (Krachkovsky, 455-7; cf. Miller, Band v, Weltkarten, 175-7).

**Turkish maps and sea-charts.**

During this century, Turkish cartographers made some very significant contributions to Islamic cartography. In fact, they may be said to have formed a bridge between mediaeval Islamic and modern cartography. Among the most prominent examples are the maps of Plri Re'is [q.v.] (d. 962/1554). He drew a world map, completed in 959/1553, only the western part of which has been preserved. This portion depicts the Iberian peninsula, north-west Africa, the Atlantic Ocean and the coasts of the islands of America. Drawn on a gazelle hide, it includes coloured pictures and notes about the countries, peoples, animals and plants. It was presented to Sultan Selim in 923/1517.

A portolano chart, the map has a mathematical basis, and Plri Re'is used some twenty maps in constructing it, four of which were by Portuguese explorers, including the lost map of Christopher Columbus recording the discoveries made by him during his third voyage (A.D. 1498). In 1512-18, Plri Re'is drew a second map showing the northern part of the Atlantic Ocean and the newly-discovered regions of North and Central America. Sevim Tekeli points out that a comparison of the two maps shows that Plri Re'is followed the new discoveries very closely. His sailing manual for the Mediterranean, the Bahriyye, included numerous maps of the Italian portolanos and probably based on them, each representing the portion of the Mediterranean coast treated in the respective chapter (see Dīghīfrā'yah, vi. The Ottoman geographers (Taeschner); cf. Sevim Tekeli, Plri Rais, in Dictionary of Scientific Biography, New York 1974, x, 616-9).

We may finally mention the maps of Kâthib Celebi [q.v. (1017-67/1609-57), drawn by him in the first manuscript of his Dīghīfrā'yah; these were mainly based on modern European cartography (Taeschner, 2; cf. Abdülhak Adnan Adivar, La science chez les Turcs ottomans, Paris 1939, 107-8). Also, a manuscript of the Near and Middle East was printed by İbrahim Müteferrika, dated 1139/1728-79 or 1141/1728-9 (Taeschner, loc. cit.).

**Arab Sea-charts of the Indian Ocean.**

Although there are no direct references to the existence of Arab sea-charts in the works of the Arab navigators, Ibn Mājdīd [q.v.] (d. after 905/1500) and Sulaymān al-Mahri (first half of the 10th/16th century) (see G. R. Tibbetts, The navigational theory of the Arabs in the fifteenth and sixteenth centuries, in Agrupamento de estudos de cartografia antiga, xxxvi (Colima 1969), 19), one does find references to Arab sea-charts of a type in the Portuguese and other sources. At an earlier date, according to Marco Polo,
the “Arabs had good charts” (Tibbetts, Arab Navigation in the Indian Ocean before the coming of the Portuguese, London 1971, 4; cf. A. Teixeira da Mota which Ibn Mājid had shown to Vasco da Gama during his meeting with the latter in East Africa. The chart, according to João de Barros, depicted the entire coast of India and had the meridians and the parallels drawn on it in the Moorish (i.e. Arab) way but had no rhumbs of the winds indicated on it. The squares formed by these lines were very small, hence the coast traced between the two rhumbs of north-south and east-west was very exact. In the opinion of Teixeira da Mota, the parallels may have represented the altitudes of the stars and were probably traced in the scale 1/4 by 1/4 of an isba', conforming to the altitudes given in the works of Ibn Mājid and Sulaymān al-Mahrī, and the meridians could have been lines of equal distance, east-west, at an interval of perhaps 24 hours or 8 zāms (1 zam being equal to 3 farṣaḥs) (op. cit., 61-5, 69-72; on the value of 1 zam (= 3 farṣaḥs), see ibid., 57, n. 9). Teixeira da Mota further points out that according to Le Livro de Marinharia d'André Pires (ca. 1550), 5 isba's of the Moorish maps were to be taken as being equal to 8 parts which was 8° (i.e. 1 isba' represented 1° 36', whereas the correct value is 1° 37' (ibid., 74-5).

The second example is that of the nautical map possessed by a skilled navigator of Mogadishu met by Sir Thomas Roe. Drawn on a parchment, this map was lined and graduated in an orderly fashion. But Teixeira da Mota believes that the map may have actually belonged to the European type, for the pilot spoke Portuguese and the Portuguese had since long established themselves in East Africa and maintained close relationships with the local navigators (ibid., 72-3).

From the above example, it may be concluded that the Muslim navigators of the Indian Ocean did evolve an indigenous technique of drawing sea-charts with graduated lines in which the parallels represented the altitudes of the stars in isba's and “the meridians”, the fixed distances. According to Tibbetts, the Arab navigators of the Indian Ocean had followed a system of measuring the massāfīt or distances (The navigational theory of the Arabs in the fifteenth and sixteenth centuries), 16). These could have been represented by the vertical lines on the charts.

Finally, it may be said that Islamic cartography, despite its technical drawbacks, as pointed out by scientists like al-Bīrūnī, did serve the purpose of the conqueror, the traveller and the scholar alike throughout the Middle Ages. The mistakes initially made persisted, even though in certain aspects like regional maps there were signs of progress. Its influence in the Islamic world lasted until the 17th century, when it seems to have been replaced by modern cartography.

**Bibliography:** given in the article. (S. MAQBUL AHMAD)

**KHARITA OR KHARITA — AL-KHARRAZ — AL-KHARRAZ**

early in the 3rd/9th century, he joined al-Nihājī, Abū ʿUbayd al-Bursī, Saʿīl al-Saʿātī, Bishr al-Haffī, Dhu’l-Muḥṣīn al-Munṣūr, Muḥammad b. Maʾṣūr al-Tūsī and other Sūfī shaykhīs. He travelled extensively from an early age, though only few details about his itineraries are known from his own statements. His final departure from Bağhdād may be connected with the wave of persecution of the Sūfīs instigated by the Ḥanbalī Ḥūlām al-Haffī during the co-regency of al-Muwaffak (257/872-873), for he is reported to have been accused of infidelity by a group of ʿulāma' for some daring expressions in his Kitāb al-ṣira. According to his own testimony, he visited al-Ramla, Jerusalem, and Sāyyā and lived in Mecca for eleven years, regularly visiting Medina in order to perform the pilgrimage from there. He was expelled from Mecca by the governor because of his teaching. During the last part of his life, and perhaps during an earlier period, he lived in Egypt. From there he travelled to al-Baṣrā in order to meet the Sūfī Abū Hātim al-ʿAṭār, and he also visited Raywān. According to the best attested report, he died in 286/899.

Like his contemporary al-Djinayd (q.v.), al-Kharrāz strove to combine a doctrine of ecstatic mysticism with orthodox support of the religious law. He affirmed that any еxtatic (bābak) doctrine that contradicts the apparent meaning (ẓāhir) of the law is false. Upholding the superiority of the prophets over the saints (aṣḥāb al-ṣāliḥ), he argued that every prophet is a saint before becoming a prophet. He addressed a letter to a group of Sūfīs in Damascus, refuting their heretical view that they could see God with their hearts as the inhabitants of Paradise will see Him with their eyes. In a book on proper conduct in the vicinity of the sacred places (adab al-salāt), he described the significance of its rites for the Sūfī. Al-Kharrāz is credited by al-Sulami and others with having been the first one to speak about the states of annihilation (fānā) and subsistence (bābak) (q.v.). This is not literally correct, for these concepts had been used by earlier Sūfīs and were commonplace among his contemporaries. They appear, however, as fundamental in his doctrine and designate the highest stages of the mystic “beyond which no mortal mind can reach”. He defined fānā as “annihilation of the consciousness of manhood” and bābak as “subsistence in the contemplation of Godhead”. At the highest stage, so he stated in his Kitāb al-ṣira, the mystic loses his (human) attributes and attains the attributes of God, a doctrine disputed by al-Djinayd and expressly condemned as heretical by al-Sarrādī.

Fig. 3. Map of the world by Hāfiz-i Abru as contained in his untitled work on geography (written between 817/1414-5 and 823/1420), British Museum, MS. Or. 1577, ff. 7b-8a.
Fig. 4. Map of the world as contained in al-İşāḥrī’s Kitāb al-Manāḥī (written towards the middle of the 4th/10th century), Leiden University Library, Cod. Or. 3101, pp. 4-5.
**KHARRUBA** (see **MAKVIL**).

**KHARSHI** (Persian *khāršī* "hard substance from China"), also *ḥādīd *šīnī* "Chinese iron" (J. Ruska, *Tabula Smaragdina*, Heidelberg 1926, 70, tr. 75), to which corresponds the Persian *shān *šīnī* (*Āṣīr-i ḉabra*, tr. H. Blochmann, i, 40) is not zinc, as often assumed, but a highly-storied alloy, the constituents of which have not been established with certainty. According to the physical qualities attributed to it, *khārshī* would best correspond with hard lead, i.e. an alloy consisting of a mixture of lead, antimony and small quantities of copper, iron and tin. Next to gold, silver, iron, copper, lead, and tin, *khārshī* is mentioned as the seventh "metallic substance" (*khār *zār, *m*fāštī *al-*ūlām, ed. van Vloten, 252; Dījbīr, *K. al-Khwāds al-hobr*, see M. Ullmann, *Die Natur- und Geheimwissenschaften im Islam*, Leiden-Cologne 1972, 143; Dimāḏiḡ, *Nūḡbāt al-dahr*, ed. Mehren, 1866, Arab. text 48, tr. 52) and called "mercury" (*fǎrīb*) by the alchemists. In his *K. al-Sirr al-rabbānī* fi *ṭīm al-mīḍān*, an alchemical treatise on the theory of the proportions to be mixed, Iznaḏī deals with this metal in a separate section (M. Ullmann, op. cit., 243). Rāzī compares it with the "Chinese mirrors" (*al-mardīyāt al-%intiya*) and Dījbīr with lead (both following al-Bīrūnī, who in his *K. al-Dimāḏiḡ*, Hydrobabad 1955, 261 f., deals with *khārshī* in a special chapter). This "strange substance" (*dawḥar gharib*) was "all but unknown" to the Arabs: this is probably the meaning of *shābī bi 'l-maʿāḏm* (*Kh *zārām, loc. cit.); van Vloten's interpretation "colourless" is less likely, since occasionally the yellow colour of *khārshī* is mentioned.

**Bibliography:** In addition to the references in the article, see E. Wiedemann, *Aufsätze zur arabischen Wissenschaftsgeschichte*, ed. W. Fischer, Hildesheim-New York 1970, i, 49 f., 106, 697, 703 f., 707, 833, iii, 599. (A. Dietrich)

**KHARTABIRT** (see **KHARTPERT**).

**KHARTPERT**, a stronghold of eastern Armenia situated on a rock (Armenian, *pert*) 350 m./1,150 ft. above the plain of Khaz'it (g.v.), to be identified with the *Hīn-Za[Y]t of the Aramaic texts (and already in Ammianus Marcellinus, *castellum Ziala*, whence, through a confusion, the Arabic *Hīn *Ziyād, a term in use till the 16th century). The corrupted form Khartpert is found in colloquial Armenian (whence already in the Byzantine author Cedrenos, ii, 419) and in modern Turkish. The Latin and French authors at the time of the Crusades use forms like Quart-Pierre, Al-Dimāḏiḡ, ed. Mehren, 190, thought that Khartpert was the name of the fortress and *Hīn *Ziyād that of the settlement as a whole, but this appears to be a personal interpretation.

Khartpert was situated on the Arab-Byzantine borders, which were frequently crossed and re-crossed by armies from both sides. It is mentioned by Ibn Khurraḍādbihī, but is nevertheless not apparently cited in the Islamic historical sources before 567/977-8, when the Ḥamdānīd Abī Taghlib took refuge there with a brother-in-law, a Byzantine vassal. In the 6th/12th century, after the Turkish invasions, it fell temporarily to a Turkmen called Dījbūk, and soon afterwards to the Artuksids, amongst whom was the celebrated Balak, who imprisoned then Jocelyn of Edessa and Baldwin II of Jerusalem. When Diyār Bahr was partitioned between rival branches of this dynasty, Khartpert fell within that centred on Hīsn Kayfa, and then under a subordinate branch of these last Artuksids in 581/1185. The town played a big part at the time of the Ayyūbīd al-Malik al-Kāmil's expedition of 631/1234 against the Rūm Saldūk Kaykābd, who annexed it directly. It passed subsequently into the hands of all the powers who transiently held power over the region during the Mongol period, and in the 9th/15th century the Banū Erene, the Duḡḥādīr, the Āf Koyunlu (g.v.), and finally, after an interval of Safawī control, into the grip of the Ottomans in 921/1515. The Ottoman governors established themselves at the foot of the rock at Mezere, now named Maʿmūrat al-ʿAzdī (a name later extended to all the province, along both banks of the Euphrates). In the 9th/15th century Khartpert had been visited by Joseph Barbaro (*Viaggi*, ed. Venice 1545, 49-9) and it was described in the 12th/17th one by Ewlyā Celebi.

The population, partly Armenian until the massacres of the present century, had nevertheless been largely Turkicised and Kurdicised over the preceding centuries. According to the register from 936/1530 published by Ī. L. Barkan, its revenue at that time was about 250,000 a[hçe]. The town possessed an old mosque and a more recent one built by ʿUzūn Ḥasan, a madrasa and 50 (?) schools. Amongst the industries mentioned were saddles or "Chinese mirrors" (*al-mardīyāt al-%intiya*) and Dījbīr with lead (both following al-Bīrūnī, who in his *K. al-Dimāḏiḡ*, Hydrobabad 1955, 261 f., deals with *khārshī* in a special chapter). This "strange substance" (*dawḥar gharib*) was "all but unknown" to the Arabs: this is probably the meaning of *shābī bi 'l-maʿāḏm* (*Kh *zārām, loc. cit.); van Vloten's interpretation "colourless" is less likely, since occasionally the yellow colour of *khārshī* is mentioned.

**Bibliography:** This is given essentially in the arts. of *EI* (Besim Darkot), and *H. W. Darkot, H. W. (s.v. Khurpat).* It is named in most of the Arabic geographers from Ibn Khurraḍādbihī and Ibn Serapion onwards (information summed up in Le Strange, *Lands*, 116-7), till the time of Ewlyā Celebi, ed. 1314/1896-7, iii, 216-17, and the 19th century travellers, Moltke, Brant, Hommaire de Hell, Saudredzkī, Taylor, Tozer, Lynch and Lehmann Haupt (summed up in Kitter, *Erkundungen*), and finally Cuiinet (cf. Darkot in *IA*). The most important Muslim and other mediaeval historians include Ibn al-ʿAqlī; Ibn al-Azraq al-Fārīkī, *Ṭaʿrikh Mayyāḏfārīn*, Marwānīd period ed. B. A. L. Awad, 1959, Artuksid one resumed by Cl. Cahen in *Le Dīyar Bahr au temps des premiers Artuksides*, in *JA* (1955); the historians of the campaign of 631/1234, especially Ibn Wāṣil and Ibn Bībī; those of Jocelyn and Baldwin's captivity (Foucher of Chartres, Matthew of Edessa); and Michael the Syrian and Bar Hebraeus. The inscription of 561/1166 (REA, No. 3271) has now been more satisfactorily published by Sauvaget in his *Quatre décrets séleucides*, Damascus 1947; another unedited inscription has been brought to light. For archeology, see especially A. Gabriel, *Voyages*, 257-8. There is an Artuksid coin given in *I. and C. Artuk, İslambol ... sikkeler katalogu*, i, 396. (Cl. Cahen)

**BANŌ KHRUS** (Persian *bhūkhud*) or **BAŠ KHRUS** (Turkish *Bey Khris*), a tribe which has played an important role in the history of the *Ibadīyā* (g.v.) in *Umān*. Descendants of Yaḥmād, a branch of al-Azd (g.v.), members of the tribe migrated to *Umān* in pre-Islamic times and established themselves in a valley which came to bear their name. Wāṭl Bani Khrūs runs down from the heights of the western mountain range of al-Ḥadjar to join Wāṭl al-Đar before debouching on the plain of al-Bāṭina and then
into the Gulf of ʿUmān. On the right bank not far below the juncture of the two valleys is the famous ʿ Ibāḍī stronghold of al-Rūstāk [q.v.].

Yahyā ibn Ishaq provided most of the ʿ Ibāḍī Imāms of ʿUmān before the advent of the Yaʿrubī dynasty in the 12th/13th century, and of these a goodly share were ʿKharūṣīs. The first ʿKharūṣī to be elected to the high office appears to have been al-Wārīṭ b. Kaʿb (179/922-938), during whose tenure of power the centre of the ʿ Ibāḍīyya is believed to have moved from al-Basra to ʿUmān. Ḥādī ibn Ishaq al-ʿKharūṣī became the head of the community. Upon his assassination in 1338/1920, the succession went to Muḥammad b. ʿAbd Allāh, a grandson of Saʿīd b. ʿKhaṭfīn, who reigned until his death in 1373/1954. For the careers of these later ʿKharūṣīs, see ʿUmān.

ʿAl-ʿIḥāṣāsī, Abū ʿ-Ẓafīr ʿAṣīm b. al-Ḥāṣib ʿAṣīm b. ʿAṣīm al-ʿIḥāṣāsī, a Moroccan saint, member of the ʿIḥāṣāsī order [q.v.]. Originally from Andalusia, he owed his ethnic name to the town of al-ʿIḥāṣa, which was situated on the al-Kāfī mountain on the Mediterranean coast. He was born at Fez in ca. 1002/1593-4, where he studied and had, in particular, Abī Ḥamīd b. ʿAbd Allāh Maʿn al-Andalusī as his pupil. Al-ʿKādirī [q.v.] devoted a work called al-Zāhir al-bāṣīm to his maṣāḥīḥ. He died at Fez on 19 Ramadan 1083/8 January 1673 and was buried in the mausoleum of al-Ashyakh. (M. Lakhādār)
buy in full, without any authorisation for re-exportation. Thus in the time of the Crusades there was a kind of “war of wood” with the Latin East which was sustained by conciliar decrees as clear-cut in intention as they were useless in practice. As early as the 10th century the Byzantine emperor John I Tzimisces had forbidden the sale of timber to the Muslims of the Maghrib, but they managed to buy already-constructed ships at Amalфи or to re-use valuable parts of unseaworthy vessels. It has been said that the decline in Muslim shipping at the end of the Middle Ages resulted from the scarcity of wood. This idea cannot be accepted in its entirety, since the Byzantines, who had a wealth of wood, still allowed the Italians to achieve mastery of the sea, but this scarcity undoubtedly played a part.

Bibliography: For topics on which the information is both scattered and tenuous, it is impossible to provide a proper bibliography. The essential facts on the production of wood and naval arsenals can be found in the articles by Maurice Lombard (reproduced in a posthumous collection, *Espaces et réseaux au haut Moyen Âge*, Paris and The Hague 1972), Arsenaux et bois de marine dans la Méditerranée musulmane (VIIe-Xle s.), in *Le Navire et l’économie maritime* ... Second colloquium on Maritime History, Paris 1958, 53-106 and Le bois dans la Méditerranée musulmane, in *Annales ESC* (1959), 234-54, with good bibliographies up to these dates. For trade, see the histories of Levantine trade and the Crusades, and Cl. Cahen, *Douanes et commerce dans les ports méditerranéens de l’Égypte Médiévale*, in *JESH* (1965), and the few references cited in this article. (Cl. CAHEN*)

**AL-KHASHABĀT**: pl. of Arabic *khashaba* “wooden beam”, the name given to wooden pillars which in mediaval times were driven into the seabed at the place where the *Ṣaḥāb* al-ʿArab empties into the Persian Gulf. These beaches were placed at six miles’ distance from ʿAbbadān, and were meant to guide sailors in danger of being drawn into a dangerous whirlpool and also on occasion to signal the approach of pirates. Al-Maʾṣūdī, *Musnad*, i, 250, 330-1 = §§ 2-3, mentions al-Khāṣāzī, *Mafatih*, 124, states that lamps were lit on their upper parts. Nāṣir-i Khusrav, *Safar-nāma*, ed. Schefer, text 90, tr. 246, gives a more exact description. They consisted of four teak columns set obliquely in their upper parts. Nasir-i Khusraw, *Shark Kasidat Ibn ‘Abdun*, and is said to have taken his name from these. Moreover, al-Khashabiyya was another name for the Kaysānīyya [q.v.] and then was applied to the adherents of the doctrines which were current among the latter, like that of the return (raḍ’a [q.v.] and that of metempsychosis (*tānāsakh* [q.v.]). The poetical representative of these doctrines, Kūlaḡyir, is called a Khashābi and is said to have been gained for the *Khashabiyā* by the poet Khāndif al-ʿAsadī (ʿAbd Allāh, viii, 33-4, xl, 47, where Khandif is to be read instead of Khandak).

According to Muḥammad b. ʿAbd al-Khāṣāzī (Mafāṭīḥ al-ʿItīm, ed. van Vloten, 29), the name al-Khashabiyya was used for a group of the Zaydiyya [q.v.] known as Ṣurkhābiyya after a certain Ṣurkhāb al-ʿAtarī, of whom nothing seems to be known; it might be possible to think of the Ṣurkhāb who played a part in Tabaristan in the time of Hasan b. Ṣayd [q.v.]. (cf. Ibn Isfandiyar, *Ensl. tr. E. G. Browne, Leiden-London 1905, Index*). It must be left undecided whether they were called Khashabiyā after their weapons or perhaps on account of Kaysānī doctrines which asserted themselves among them. The same statement occurs in Abu ʿl-Maʿallī, *Bayān al-adāyn*, in *Christianitas przesone*, ed. Ch. Schefer, i, Paris 1833, 157, where Ṣurkhā is to be read instead of Ṣ-thāl.

**According to a statement given on the authority of al-Layth (apparently Ibn al-Muzaffar), al-Khashabā**...
biyya was also the name of a section of the Djahmiyya [q.v.], which maintained that Allah does not speak and that the Qur'an is created (LA and TA, s.v.). (C. van Arendonk*)

KHAŞİ (A), pl. khyyăın “castrated man, eunuch”.

I.—In the Central Islamic lands.

From the 4th/10th century especially, several euphemisms were applied to eunuchs, who were numerous in the palaces and frequently invested with important functions: notably kâddîm (coll. khadham, pl. kuddādīm, maw'alla, shaykh, usādīh (see M. Canard, 'Akhur ar-Raddī, ..., i, 210-1, note), later on jawāshî (which, according to al-Makrizī, Hist. des Sultans Mamlouks, tr. Quatremère, t/2 (1849), 132, comes from the Turkish jâbâsîh = Osmanlı tapançî “servant” and also designating in the administrative language of Egypt a military position in the bodyguard, all in the Arabic-speaking world; in Turkish, kâddîm/hadîm, khâdîja/khâda/koca and âçha, in Persian khâdâja and âqâhâja (q.v.v.), were employed. Placed before or after the name of the person concerned, these terms are not generally ambiguous, but employed on their own, in the sing. or the pl., most of them can cause confusion, particularly the first, kâddîm (q.v.), equally frequent in the ancient texts to designate normal slaves, and even free servants; it is the same, in Muslim Spain and other parts, with fa'tâ, ghumâm (q.v.v.), and one never knows exactly what an author intends by these words when the real state of the person cited is not known from other sources. On the other hand, eunuchs were often named Yâkût, Kâfür, 'Anbar, etc. (see in al-Kalâşandî, 39th v., 45, the honorific titles corresponding to these names), but even these epithets are not sufficient to identify them as such. Khaşî, by contrast, is never equivocal, and the same can be said of makhkîs (passive participle particularly frequent in the passages of al-Mutanabbî about Kâfür (q.v.)); these terms, as well as kâddîm, are opposed to fašt “stallion”, and there is a characteristic example in the distinction between the two famous homonyms, Mu'âsh al-Fâbi and Mu'nis al-Khâdîm (q.v.v.).

Even so, the use of the preceding terms and of the word khaşî itself allows an uncertainty to continue, for it does not permit the distinction to be made between the two fundamental categories of eunuchs: in Arabic, khaşî designates, properly speaking, the man or animal who has undergone the ablation of the testicles (called among other things khyyā, khyyây, the operation being called khaṣî), whereas the correct equivalent deprived of all his sexual organs, is a madâţîb (pl. madâţib); this latter word, which rhymes with maslāb “castrated by evulsion” (al-Mas'ūdī, Murūjû, viii, 149 = § 3290), while distinguished from it, rarely appeared in the texts, as is the case with the verb dâshâ and the verbal noun dâzâb; one encounters at times one or the other in the account of a mutilation inflicted on a slave by his master or even on a free man by a flouted husband who takes vengeance on his rival. With regard to this, one of the most frightful stories is that of a Sind slave surprised by his master in the company of his wife and punished by the latter in the following manner: dâshâ dakhara-khâ; taking the sons of his tormentor as hostages, he forced their father to mutilate himself (dâshâ naša'-khâ) with a knife, after which he threw the children from the top of the house (al-Mas'ūdī, vi, 264-5 = 2472; al-İbâhî, Mustârâf, Cairo n.d., ii, 203).

Similar acts of cruelty enter into the arsenal of folkloric themes, and the Thousand and One Nights, where the person of the eunuch plays a characteristic role (notably 3rd, 7th, 27th, 107th, 237th, 719th nights; see N. Elissâdet, Thèmes et motifs des Mille et une Nuits, Damascus 1949, index), offer several examples of the mutilation of a man by a mistress (113th night) or a jealous husband (33rd night), or to punish the seducer of a young girl (59th night); even a schoolmaster is seen depriving himself of his virility (403rd night), and a slave who refuses to be freed, is castrated and sold at a very high price (275th night). Independently of more or less legendary traditions, the case is cited of 'Aתחילa b. Sahî, emasculated by a king of Yemen (al-Djabiz, Hayawān, i, 120-1), which could however be the result of an accidental castration; perhaps the epithet of al-Fâbi is to be added to the name of 'A�향âma b. 'Abâda (q.v.). The famous story is also reported of the letter of 'Alâhâm (Hayawān, i, 121-2) or of Sulaymân (al-Alâhî, ed. Beirut, iv, 275) or of al-Wâlid (ibid., iv, 278) b. 'Abd al-Mâlik ordering the governor of Medina or Mecca to take a census of akhsî the effeminate men of the two holy towns; having read khaşî, the official had two (or nine of them) castrated, notably the singer al-Dalâlî (al-Alâhî, iv, 273 ff.) by one named Badarâkus/Badarâkus, who was a circumciser; this last detail does not figure in al-Djabiz and, despite the traditions which tend to make it an historical fact, the whole account is, by all appearances, nothing other than a pleasing anecdote, forged to provide evidence of the inconveniences of the Arabic script, but later exploited by anti-Umayyad authors. Some cases of accidental castration were also related, and it seems that some doctors practised from early on such an operation, when the state of an illness made it necessary (Hayawān, i, 121-3). At all events, the vocabulary used rarely permits the specification of the exact nature of the emasculation undertaken, and in a famous passage (Aƙâsin al-tâkâsîm, 242; ed.-tr. Pellat, Descr. de l'Ocident mus. au IVe siècle, Algiers 1950, 57-9 (where “inciser”, p. 57, should be replaced by “trancher”); Germ., Engl., Span. tr. in A. Mes, Renaissance, and on the tranal. of this work, ch. xx1), al-Mukaddasî uses the collective khadam and the verb khaşî in the part of his description which applies to complete eunuchs, i.e. to the madâţîb. To judge by this text, two methods were used for the emasculation of eunuchs that the author has been able to encounter: simultaneous ablation of the testicles (misra'd) and the penis or incision of the scrotal sheath (safan) and evulsion of the testicles first of all, then cutting of the male member; after this operation a rod of lead was placed in the urethra and replaced after each urination, until the healing was complete, in order to prevent the tissues from joining. However, this horrible mutilation was not general, and it is probable that the majority of eunuchs were not actually madâţîb, but khyyāy properly so-called, who had undergone a khaşî consisting, for the operator (khaşî), of incising and at the same time cauterizing the scrotum by means of a red-hot blade
of iron and removing (sall, salb or imtildkh) the testicles. This emasculation is also called mals or main, since it is especially associated with rams. As for wasid, another form of castration, it consisted of binding the cord supporting the testicles and making them gush out, when they underwent a crushing (radd) and atrophied naturally; twisting of the cord (‘ab) was also known. Al-Ḍābiḫī (Hayawanī, i, 130-1) gives us to understand that the first of these processes was applied to men and speaks immediately afterwards of animals, but it is highly likely that, never having had the opportunity to see the operation practised on a human being, he generalised, although the word wasid, probably deprived of its technical meaning, is also used for a man (see below).

In fact, if curious investigators were able easily to interrogate stock-breeders and obtain exact information on the castration of animals, they were less well informed on emasculation of men, and, as far as we know, al-Muḥaddasī alone reports at first hand the information supplied by eunuchs whom he says he had questioned. Speaking of the Byzantine origin who fell into the hands of the Muslims at the time when the latter made incursions into the territory of Byzantium, this author states that he had come across children whose parents had had them castrated in order to consecrate them to the service of the Church; he also demonstrates that the religious origin of emasculation was not unknown. In fact, the Council of Nicaea (325 A.D.) had clearly prohibited eunuchs from the priesthood, but they could be choristers and even priests in the Oriental Church. eunuchs from the priesthood, but they could be

...while on one may estimate that the majority of white eunuchs, besides being less and less numerous as the centuries progressed, originated from Spain in the Middle Ages, there is a scarcity of information for a much later period, and it is not known exactly where the operations were performed. The authors who were found further afield in the harems and courts of the sovereigns of Iran and Turkey.

Concerning the blacks, their origin is sufficiently well-known, for it is evidently identical to that of the slaves [see 'abd], on which, moreover, there is some precise information. Al-Muḥaddasī distinguishes three kinds: the first, which is, he says without any other specification, the best, was exported to Egypt; the second, that of the Berbers, was sent to Aden; the third “resembles” the Abyssinians. Al-ʾIṣṭakhri, 40, remains equally vague in saying that the eunuchs sold in the Muslim lands are neither Nubians, nor Zandji, nor Ethiopians, nor Bedja, but belong to a still blacker race; al-ʾMāḍīṣī (Budā, iv, Ar. text 69, tr. 65) speaks of the Zaghl (?) and Zagwā; al-ʾIdrīsī (tr. Dozy-de Goeje, 3; partial edn. Peires, Algiers 1957, 4; ed. Naples-Rome, 1, 1970, 19) cites Takrur (q.v.), as a region from which the Moorish merchants imported gold ore and wadīd. (It is a fact that the Takrurīs, besides the Rūm, Indians and Ḥabashi, belonged to one of the four races which supplied the Mamlūk sultanate with eunuchs, see D. Ayalon, Names, titles and "misbas" of the Mamlūks, in Israel Oriental Studies, v
(1975), 220.) For his part, Ibn Battuta (iv, 447; partial tr. H. A. R. Gibb, London 1957, 330) says that they came from Bornu, via Zawila [p.], to the Mediterranean world. But that given that emasculation was practised secretly, it is difficult to know the centres where it was carried out in the Middle Ages. According to the Hudud al-Islam, 165, the Sudán is, without doubt, the land from which the majority of eunuchs came; in a lively passage, the author adds that the Egyptian merchants stole children there—on the latter must certainly have sustained conversations (cf. al-Mascudi, Murudi, viii, 148-9 = § 3290) on the behaviour of the latter having expressed the wish to mutilate himself, the Prophet is said to have recommended fasting for young men who were unable to get married, adding that fasting was a khamis. All this evidence confirms the tendency of certain pious Muslims to deprive themselves of the pleasures of the flesh and, thus, they had the habits of the Prophet against the weakening of the community that would have resulted from it. In any case, there is no text forbidding the possession of eunuchs, and it has been noted that Muḥammad received them and accepted one who was offered him by the Muṣawiqis [q.v.] at the same time as Mary the Copt (Hayawdn, i, 163). Neither can the Kur‘an serve to enunciate a rigorous prohibition. The verses 118/119 of Sūra IV certainly read: “Let God curse (the demon) who said: ‘... I will ordain them to modify the creation of God’, but it is open to divergent interpretations: for Anas b. Mālik, Ibn ‘Abbās, ‘Ikrīma, it is definitely khamis (of animals rather than of men) that is visualised, whereas for Sa`īd b. Diūbayr and Muğāhīd, it is a matter simply of “the religion of God” (in Hayawdn, i, 179). Besides, it is not that al-Masḥūd (Murādī, viii, 179) does not obvious that the operation was carried out, for a sum of 40 to 60 piastres, by two Coptic monks, under the protection of the government, to whom an annual tax was paid. Contrary to what other authors have said (notably E. Lévi-Provençal, Hist. Esp. Mus., ii, 125; E. W. Bovill, Golden trade, 244: 10% of survivors; H. von Maltzan, Wallfahrer nach Mekka, Leipzig 1865, i, 48-9), the Swiss traveller claims that the children (from 8 to 12 years) who died were a very small number. These young eunuchs were valued at 1,000 piastres at Asyūt, whilst they had been bought for 300 piastres. The annual figure (150) that Burckhardt gives corresponds to that of Frank; he adds that two years previously Muḥammad b. ‘Āli had had 200 young slaves from Dārāfīr castrated to offer them to the Ottoman Sultan. Until recent times, slaves from Muslim states situated further to the north raided Central Africa; women slaves and eunuchs passed clandestinely via Djibouti to people the harem of the Ḥiğlās (L. Massignon, Annuaire du monde musulman, 4th edn, Paris 1955, 357, 385).

A priori, these practices hardly appear legal. Before Islam, although some isolated cases of castration were reported (see above) and although the Arabs of the period without doubt possessed some eunuchs (it is sometimes thought that a reference to them appears in the Kur‘ān, xxiv 31, where it is said that women can show their finery to their male servants who have no carnal desire, al-ib‘īn ghayr ail l-‘irba), they cannot have had them produced regularly on their territory, so that the question of knowing whether emasculation of men was permitted was not put clearly to the first Muslims. With regard to this, the hadith is not very explicit, and we must once more place a certain amount of confidence in al-Dhābī, who reports a reply of Muḥammad to ‘Uṯmān b. Māz‘ūn: the latter having expressed the desire to mutilate himself, the Prophet is said to have replied to him that it was fasting (ṣawm) that had replaced castration (khāmis; var. wāidiq) in Islam (Hayawdn, i, 128-9); in the collections of āhadith, it is said simply that Ibn Māz‘ūn wanted to devote himself to celibacy (la‘ība), Ibn Ḥajar Ḥamadānī (ed.-tr. Bercker, 329) it was the same with capus (Hayawdn, i, 131). In addition, a special reasoning to justify it was to compare khāmis improperly with the mark of the red-hot iron practised on flocks and herds (ibid., i, 166).

If, in the final reckoning, the castration of domestic animals was always tolerated, and the legality of the possession of eunuchs does not seem to have given rise to serious discussions, considerations on the behaviour of the latter must certainly have sustained conversations (cf. al-Masḥūd, Murādī, viii, 128-9 =
§ 3288-90); but al-Djabiz is probably the first author to have recorded his observations on their characteristics and the transformations that they undergo physically, morally and intellectually (Hayawdn, i, 106 ff.; in a more condensed form in Mušaḥḥarat al-dijawari wa'l-ghilman, ed. Pellat, Beirut 1957, 52-5; ed. Hārūn, Cairo 1965, ii, 123-5; cf. al-Bayhaḵī, al-Maḥāsin wa'l-maṣawī, ed. Schwally, Giessen 1902, 509-12; al-Thaʿlabī, al-Latāfi wa'l-qarārif, Cairo 1915, 124). He remarks truly that if emasculation takes place before puberty—which is the most frequent case—the beard and body hair do not grow, but the hair of the head, eyebrows and lashes remain and never fall, exactly as with women, who do not experience baldness (i, 108, 114; cf. al-Tawḥīdī, Imād, i, 160-1). Eunuchs have soft skin, a florid complexion, but they become lined and thin very quickly with advancing age, which does not prevent them from enjoying a great longevity, for they do not use their strength to copulate (i, 137). Their voice, having changed after the operation, is recognisable (i, 113) by everyone (which allows kāḥiyās to include them easily in their imitations; al-Masūdī, viii, 156, 164 = §§ 3300, 3302). They have long feet, knotted fingers in their old age, long limb bones, and by contrast with castrated animals, thick (which is an error, for they are thin), their muscular tonicity is poor, and their flesh is flaccid; their walk is ungainly (Hayawdn, i, 116) due to the weakness of their nerves. Because of the fatidness of their sweat, they give off a peculiar odour, contrasting on this point with the animals who, after castration, smell no longer bad (i, 106; al-Masūdī, viii, 149 = § 3290, asserts on the contrary that their armpits do not give off a fetid odour); finally, urinary incontinence is their lot (Hayawdn, i, 138). If the operation takes place in adulthood, the pilary system disappears, with the exception of the pubic hair (i, 113), and strength diminishes (i, 115).

The character of eunuchs is comparable with that of women and children (i, 135-6); like them, they particularly like playing with birds. Finding in food and drink (they appreciate wine especially; i, 158) a kind of compensation for the deprivation of other pleasures, they have a tendency to excess, with which, with their continence (vii, 223), explains their obesity (i, 111). They are avaricious, indiscreet, as quick to lose their temper as to show their joy or to weep (i, 135), inclined to gossip and slander. They despise the common people and accept only the powerful and the rich as masters (i, 136, 159). They like domestic work, but are ill-adapted to arduous trades (i, 117); on the other hand, they endure long horse rides better than the Turks and Khārāḏīs (i, 136) and are excellent at archery; especially devoted to that are white eunuchs who deploy their warlike qualities against the Byzantine to avenge themselves for the mutilation that the latter have made them undergo; they dedicate themselves to harbouring an illegitimate child and avaricious, and to include them easily in their imitations; al-Masūdī, viii, 148 = § 3289) and that the Ottomans preferred as harem attendants negroes who had been completely castrated and who were physically ugly. Besides, al-Muḥaddasī records that, according to Abū Ḥanīfa, eunuchs could marry (and take concubines, adds al-Djabiz, i, 123, 166); however, it must in practice have been very rare (see e.g. Ibn al-ʿAḫḫīr, ix, 39, with regard to a eunuch of ʿAqīd al-Dawla who has as wife an Abyssinian slave), but Burckhardt (Travels in Arabia, London 1829, 158-9) asserts that "Extraordinary as it may appear, the grown-up eunuchs [of the Kaʿba] are all married to black slaves." The patience of the children that their wives brought into the world was naturally attributed to them: this curious assertion is explained by the automatic application of the principle according to which se pater est quem justae nuptiae demonstrant and also by the fact that a khaṣ is not always maʿmūn al-liḥrāb; in fact, during the operation, the child might experience such fear that one of his testicles would rise up into his body and escape mutilation (cf. Hayawdn, i, 129, where this statement is followed by the remark that a maḏbūb, in these conditions, preserves a testicle and remains neither a man nor a woman nor even an eunuch); if it is the left (for it is popularly held that this is the procreative one; Hayawdn, i, 123), the half-eunuch secretes sperm
and can engender children; if it is the right one only, the beard grows, but the case has been known of a man deprived of his left testicle who had a child whom he could not repudiate because he looked exactly like him (i, 123-4).

Generally, eunuchs lived with their master, whether he was a private individual or a ruler, and did not mingle much with the populace, especially as they were easily recognisable and as the humber people did not refrain from hurling gibes at them (al-Tabari, iii, 274; al-Mas'udi, viii, 318; cf. i, 339). In the palaces of the caliphs, in Cordoba as in the East, they were always numerous, despite the high price that was asked for them; by way of example, Leo Africanus (tr. Épaulard, 139, 209) states that in Morocco a slave girl was worth 15 dinārs, a man, 20 and a eunuch, 40; in general, it is double the price of an ordinary slave that is mentioned by the sources. The historians charge al-Āmin (al-Tabari, iii, 950 ff.; cf. Abū Nuwās, Diwān, 288: rhyme and wādī) with having bought many more eunuchs than his predecessors and with having had them constantly in attendance at his side, associating them even in the affairs of state. His successors largely imitated his example, and the figures supplied, although to be treated with caution, remain very high; in the time of al-Muktafi (289-95/902-9), there were in the palace 10,000 ādām, 10,000 blacks and whites (Subkibā), and the king of Gao owned a eunuch as early as the end of the 4th/10th century (Bardjawan [q.v.]). Without doubt, the most famous and successful in the reign of the Fatimid al-Muktadir (295-320/908-32) sheltered 11,000, comprising 7,000 blacks and 4,000 whites (Hilal al-Sabi', Russūm dār al-khilāfa, ed. M. 'Awāwīd, Baghdad, 1964, 8). It is remarkable that al-Kalāqashandīfī (v, 92) also mentions the figure of 10,000 for the court of Dihlī, but precise details of this kind are rare and are clearly exaggerated. However, the organisation of the corps of eunuchs is well-known, particularly under the Fatimids (see below). In the Islamicised lands of West Africa, the custom of surrounding oneself with Turkish slaves and eunuchs bought in Cairo also spread (Ibn Faḍl Allāh Ḫūzayfī, Somāl, iii, 485). It would be easy to multiply the examples.

In Persia, a notable case cited is that of Manucihr Subfī, who, in 564/1169, hatched a plot against Saladin (Ibn Abī'l-Sādī, 208) and a eunuch, ii, 123) reports that some rich eunuchs bought estates in the marches (see 'awāsim, tawukhr) recruited fighting men and made attacks on the Byzantines to revenge themselves (see above) for their very serious injuries. It may not be by chance that several governors of Tarsūs [q.v.], notably Bīghr, mawla of Ibn Abī'l-Sādī, were white eunuchs who launched expeditions against the Rūm (see Vasiliiev-Canard, Byzance et les Arabes, ii, 3, Brussels 1968, 130) and that Ḫamal, commanding the naval forces in the Mediterranean, was also one (ibid., index).

In a general way, the eunuchs were authorised to circulate freely in the harems and served as intermediaries between their master and his wives and concubines. This freedom of movement permitted a number of them to become accomplices of the women who hatched plots (see for example M. Taibī, Mīrut al-aghlābī, index) and to participate in the political life of the state. Although Hilāl al-Sābi', (Russūm, ii) says only that some [white] eunuchs used to surround the throne of the Caliph, brushing away the flies, while others, armed with cross-bows, killed the birds of ill-omen or those that were too noisy, it is certain that not all were assigned domestic functions, and history provides us with examples of the political and military rôle that a number of them, as in Greece, Rome or Byzantium, succeeded in playing throughout the centuries.

As early as the 3rd/9th century, al-Ḍībāi (Ḥayawān, i, 125) reports that some rich eunuchs bought estates in the marches (see 'awāsim, tawukhr) recruited fighting men and made attacks on the Byzantines to revenge themselves (see above) for their very serious injuries. It may not be by chance that several governors of Tarsūs [q.v.], notably Bīghr, mawla of Ibn Abī'l-Sādī, were white eunuchs who launched expeditions against the Rūm (see Vasiliiev-Canard, Byzance et les Arabes, ii, 3, Brussels 1968, 130) and that Ḫamal, commanding the naval forces in the Mediterranean, was also one (ibid., index). In the same way, in 307/919 the admirals commanding the Fātimid and Byzantine fleets respectively were both eunuchs (al-Kindī, Judges, 276). At this period, moreover, there were numerous generals who were ḥāyīyān (for example Mas'ūdī, Muflīh al-Muḳṭadīrī, etc.; see Vasiliiev-Canard, ii, 1, index); similarly, some of them were leaders of the Huḍjāriyya [q.v.]. Without doubt, the most famous and successful in his enterprises was Kāfir [q.v.], who died in 357/968 after he had been master of Egypt and Syria; it will be noted that he was black. Under the first Fātimids, Ustādī Jawhar [q.v.] who was a Slav eunuch, played a role so important that he merited a special biography. A little later, Bardjawan [q.v.] who was also white, was the tutor of the caliph al-Ḥākim; having assumed the functions of regent of the Fātimid Empire, he was killed by another eunuch, Raḍīn, on the orders of the caliph. The organization of a body of a thousand eunuchs (al-Kalāqashandīfī) Subfī, iii, 485) under this dynasty may still be noted because In the 6th/12th century a number were to be found in charge of various forces, directing rival states and governing important towns (see, for example, N. Elissēeff, Nūr al-Dīn, ii, 327, 340, 385, 484, 557, 657); in the reign of the Fātimid al-ʿĀdīd, the black eunuchs exercised a considerable influence (B. Lewis, op. laud., 71-2) it was his muṭʿāmin al-aghlāfa, Jawhar, who, in 564/1169, hatched a plot against Saladin (Ibn Abī-Abīrī, ix, 103). Eunuchs were still found among the troops of the latter (Imād al-Dīn, al-Fāṭḥ al-bussī, 324; tr. H. Massé, 287) who took Karakūsh completely into his confidence (Bahār al-Dīn [q.v.]). It would be easy to multiply the examples.

In Persia, a notable case cited is that of ʿAwāsim, Khān Muḥammad al-Dawla, sometime governor of Isfāhān during the reign of Nāṣir al-Dīn Shāh; he had been taken prisoner in Fāṭḥ al-ʿĀdīd's [q.v.] campaign against Russia and castrated. On his death, his property was claimed by the Persian crown on the grounds of his having been a slave, though this was disputed (Great Britain, Public Record Office, F.O. 60/29. Murray to Clarendon, No. 69, Baghdad, 8 August 1856). ʿĀdīl Shāh, the nephew of Nāṣir Shāh, into whose hands he had fallen.
It goes without saying that such accession to the throne, which was exceptional, is in contradiction to the law of Islam which demands the physical integrity of the ruler. A. Mez (ch. xx) mentions that a eunuch functioned as a ḥāḍī at Damietta, but it is certain that the ḥāṣyān, from the sole fact of their mutilation, were normally excluded from the magistrature [see khaṭ]. However, Niẓām al-Mulk (Ṣiyāṣat-nāma, ed. Schefer, Paris 1891-3, 41) considers that it is preferable to transfer the functions of muḥtārīn on a eunuch and it will be noted that, under the Ottomans, the control of the ṭawfīk of the Holy Cities and most of the mosques was assured up to the 16th century by the ṭapīt aghāst [q.v.], in the 17th century by the latter and the ṭiṣlār aghāst, respectively the Chief White Eunuch and the Chief Black Eunuch, in the 18th century by the ṭapīt aghāst alone, after the weakening of the power of the whites (see below).

It should be noted that, in different courts of Muslim rulers, the eunuchs were organised in a body at an early date. According to the account of the Byzantine embassy received by al-Muqtadi at Bağhdād on Monday 24 Muḥarram 305/17 July 917 (see Vasiliev-Canard, ii/1, 238 ff.), the Ḥujjariyya and eunuchs of the Caliph were to be seen positioned between the latter and the soldiers; some of them accompanied ambassadors during all their visits. At the court of the Fāṭimids (see al-Balkhashandi, ʿṢubh, iii, 480-t), the eunuchs (mawṭaḍd) were used immediately after the amīr. The officials in private service were eunuchs, of whom those of greatest dignity wore a turban passing under the chin and were therefore called muḥānnaḫ. “The most exalted rank among the muḥānnaḵs eunuchs was held by the one who had the charge of wrapping a special crown round the head of the Caliph for ceremonial occasions. Next [came] the ṣāḥib al-maḍjīd or master of the audience hall; the ṣāḥib al-risāla, or master of correspondence; the ṣāḥib al-buṣūr, the intendant of the palaces; the ṣāḥib bāyṭ al-māl, or director of the Treasury; the master of the registry (ṣāḥib al-dafṣar) who directed the general offices (dawān); the bearer of the inkwell (kāmil al-dawūd); the superintendent of the Caliph’s kinsmen (ṣamm al-aḍābūr); the head of the household (ṣāḥib al-mawṭaḍd). Important household offices held by non-eunuchs included the deanship of the women’s apartments in the royal palace began to play an important role in political affairs. Chardin placed the number of eunuchs at court at ca. 3,000, and says that these were mainly white persons coming above all from the Malabar coast (Voyages, Amsterdam 1711, 283-5). But under ʿShāh ʿAbbās (985-1038/1578-1629) it became common practice to enslave and castrate Georgian and other captives taken in war and to use them as palace servants, especially in the royal ḥaram. According to the Taḫkiṣir al-mulāḳā, he was the first šah to introduce white eunuchs into the palace alongside the black eunuchs (i, 312 ff.). He also initiated the practice of immuring the royal princes in the ḥaram. This practice unfitted them for rule and in due course enabled the palace eunuchs to dominate affairs of state. On the death of ʿShāh ʿAbbās II in 1077/1667, the palace eunuchs contrived the succession of ʿShāh Sulaymān and seized control of the state. On the latter’s death in 1105/1694, with the connivance of Maryam Begum, ʿShāh Sulaymān’s aunt, they placed ʿShāh Sulṭān Hūsayn on the throne. He left the management of affairs of state entirely to them. They succeeded in extending their influence over military as well as civil affairs, the only check on their power being the faction which prevailed in their own ranks and the rivalry of the religious party under Muhammad Bākīr Maḏjīlī. The irresponsible character of their government and the faction to which it gave rise was one of the main causes of the decline of the Ṣafawī dynasty. The ḥaram of ʿShāh Sulṭān Hūsayn, and with it the number of eunuchs, reached enormous proportions and swallowed up a large part of the revenue.

After the fall of the Ṣafawīs, the eunuchs never again achieved political influence on a large scale.

In 1887 it was reported that there were only thirty-eight eunuchs in the royal ḥaram (l’Tīmād al-Salṭāna, Rūznāma-i Ḵẖāṣīr-i l’Tīmād al-Salṭāna, ed. Iraj Afghār, Tehran 1966, 644).

(A. K. S. LAMBOTON)

III.—In Turkey.

It is believed that there were eunuchs in the palaces of the Seljūqs of Rûm or Anatolia, and in those of the beyliks of the Čandarlıgulları [see MANDARLI] in Kastamonu in the 8th/14th century (see Fuad Kırpülli,Bitsans müesseseberinin Osmanlı müesseseberine tesiri hakkında mühahalar, in Türk Hukuk ve İtkisî Tarh, Mucemmus, 1 [İstanbul 1931], 208-11). Their first appearance in the Ottoman state was in the first half of the 9th/15th century, and these eunuchs...
were of two kinds: white (ak agha) and negro (karâ agha). According to tradition it was Murad II (824-55/ 1421-51) who first employed the khâdim aghas (white chief eunuchs) in the palace; during his reign the ak khâdim aghas (white chief eunuchs) in the harem occupied the offices of kapî aghastı (chief white eunuch in the Imperial Palace), khâmîsanıdâ-bâšî (the title of the fourth officer of the white eunuchs) and sârî aghastı and khâdim bâšî (chief clerk of the imperial pantry); above them all was the Dâr al-sa’âda aghastı (chief eunuch of the palace) (Tayyâr-zâde ‘Ali, Ta’rîh-i Endûrân, Istanbul 1929, i, 34). Later, some eunuchs of particular ability were employed outside the palace. The mention of some well-known government officials bearing the title of khâdim or jawâshî in the first half of the 9th/15th century may indicate an earlier date for the employment of white chief eunuchs in the palace. For instance, the appointment on several occasions of Şehâb-ı Din Paşa (Kula Şâhîn, d. 853/1454) during the reign of Murât II to the office of beylerbeyi of Rumelia means that his early life and upbringing should be placed in the reign of Celebi Mehemmed (805-24/1403-21). (Neşri, Dîhat- namû, ed. Taeschner, Leipzig 1951, i, 170, 181, 230; M. Tayyib Gökblîgîn, XV ve XVI inci asrîlarda Edirne ve Paşaeli livast, Istanbul 1952, 255-7). The use of negroes, that is black eunuchs, in the palace started during the reign of Selim I (855-86/1451-81) and from the beginning of the 10th/16th century we find negro eunuchs employed in the Ottoman palace. The head of the eunuchs in charge of the Bab al-Harîm (the office of the chief white eunuchs) in the palace because of their maleficent influence there. However, among the white eunuchs there were some who rose to the office ofKhâdim Mefrmed Pasha (1031-2/1622-3) in the reign of Murât III; Khâdim Hasan Pasha (948-51/1541-4) in the reign of Suleiman the Magnificent (M. Tayyib Gökblîgîn, XV ve XVI inci asrîlarda Edirne ve Paşaeli livast, Istanbul 1952, 255-7). The number of existing eunuchs should not be brought into Rumelia under any circumstances. But he was killed in the battle of Peterwardein, and the possibility of enforcing this decision was then lost in 1129/1717 (Râshîd, Ta’rîh, Istanbul 1282, iv, 175-6; Derwîsh ‘Abd Allah, Risâle-i Tabârdanîyaye, Köprüli Küttâphânesi, ii, 433, ft. 66a-b). The process of abolishing slavery and the negro slave trade in the Ottoman Empire started during the reign of Mahmûd II, and in Dümâdâ II 1273/February 1857 a firman was issued prohibiting slavery and the slave trade in the Ottoman lands (Dustûr, Istanbul 1299, 1st series, v, 368, 396, etc.). After this, slavery and the use of eunuchs gradually disappeared, their use persisting longest in the harems of the palace.

(CENGÎZ ORHONLU)
AL-KHAŞİB — KHASS
AL-KHAŞİB, name given to AHMAD B. 'UBAYD AL-‘AZZAM B. AHMAD B. AL-KHAŞİB, vizier of al-Muktaḍir and al-Kāhir, who was probably the grandson of al-Muntaṣir’s vizier Ahmad b. al-Khaşib [see AL-DIYARAKR]. He was originally secretary to the caliph’s mother, and then suddenly was made vizier after the fall of al-Khākānī, but only filled this office for a few months (Rāmāḍān 313/Dhu ‘l-Kāda 314/Nov. 925-Jan. 927). Faced with the hostility of the military leaders, and treating administrative affairs in a very perfunctory way, he immediately ran into serious difficulties which he was unable to surmount. He re-appears in 318/930 as a financial official in the Persian provinces, and then as one of the caliph’s counsellors who brought about the fall of the vizier al-Husayn b. al-Kāsim. He became vizier for the second time under al-Kāhir, from Dhu ‘l-Kāda 321/Oct. 933 till Di‘āmādā 322/April 934, but was unable to prevent the intrigues of the former vizier Ibn Mūkla [q.v.] nor to put down the discontents of the palace guards, who ended up by imprisoning the caliph.

Under al-Rādi, al-Khaṣib still held important functions in the central administration, but was exiled for some time to ‘Umnān by the vizier Ibn Mūkla, upon whom he was later able to take vengeance. He helped ‘Abd al-Raḥmān b. ‘Iṣā during his short vīzīrat (324/936) and died in Baghāsh in Shawwāl 328/August 940.

AL-ḴĀṢĪR [see SALM AL-ḴĀṢĪR].

Ḵāṣī [š] (A.) and its fem. ḫāṣṣa “personal, private, pertaining to the state or ruler”. In Ottoman administrative and society, ḫāṣī and ḫāṣṣa were generally used interchangeably, with pl. ḫāṣṣašāh and ḫāṣṣas, see on these various forms, Meninski, ii, 530-1. It appears in Turkish literature for “a person close to the ruler”, “something personal to the ruler”, in the 7th/13th century, see Mecûdūd Mansuroğlu, Sultan veled-in (1226-1322) türkçe manzumeleri, Istanbul 1938, vv. 26, 48-9, 53-4, 143-5, 149. The word, used for describing the palace services of a ruler, widely appears in the Ghaznawid state (Ta*rikh-i Bâyḫâbî, ed. Ghamî and Fayyâd, Tehran 1342/1964, 235, 253, 271 and passim), and then was used in the Great Saljūq state in regard to the Sultan’s personal revenue. From the existing registers, three types of ḫāṣṣa can be distinguished, and sometimes ḫāṣṣa-i indicu, sometimes ḫāṣṣa-i indicu [q.v.] (see Z. Velidi Togan, Ummi türk tarihine giriş, Istanbul 1946, 278-9). The words ḫāṣṣa and ḫāṣṣa were used synonymously during the first period of the Ottoman empire. Then ḫāṣṣa came to be used for the services and matters concerning the ruler and his palace (ḫāṣṣa bostiţânlâ, ḫāṣṣa dostiţânlâ, ḫāṣṣa doghatiţânlâ etc.), while ḫāṣṣa-i sancak the sandjaf, ḫāṣṣa-i hekime the ūlā hekim, ḫāṣṣa-i kânsî, and ḫāṣṣa-i kânsi, meaning the imperial lands (see O. L. Barkan, Osmanlı imparatorluğunda sârit ekonomisin hukûk ve mali esasları, 1. Kanunlar, Istanbul 1943, index).

The ḫāṣṣa lands followed a course similar to that of the timār system. From the existing timār defters, it appears that the ḫāṣṣa lands stretch back to the reign of Bayezid I (791-805/1389-1403) (Başbakanlık arşiv Genel Mühürdârlâ, tapu defterleri, 1/1, Misir, 331, 332) and beyond. The term ḫāṣṣa, pl. ḫāṣṣas, in the Ottoman timār system was used for the more extensive timārs. There were only timārs during the first period of the Ottoman state (for the 804/1402 and 807/1405 timār entries, see Sûbeyle Unver, Yıldırım Bayezid’in oğlu İsa’nın bir emri, in Belleten, xii (1944), 335, 337), but at the beginning of the 9th/15th century the term ḫāṣṣa was also used for some personal timārs: in 821/1418, 822/1419, and 590/1192, (H. İnalci, Hicri 835 tarihli sure-i defter-i sancak-i Ar-avdan, Ankara 1954, 33-55). Hence at this time the timār included the ḫāṣṣa; the timārs of begs which were called ḫāṣṣa and sezämet were also alike called “great timārs”. The ḫānsı-nâmes show how the ḫāṣṣa was used. In the ḫānsı-nâm of Mehmed Fâthîb, it is indicated that the most productive lands in the provinces were to be included in the ḫāṣṣa of the Sultan, and that the defterdârs or treasurers had the authority to confiscate the lands of a person, if they discovered that he had had productive land, and give him less productive land as a ḫāṣṣa. The viziers, it was stipulated, were to have ḫāṣṣa lands with an income of 1,200,000 akbës, the beglerbegs those with an income of 1,000,000, the defterdârs those with an income of 600,000 as long as they remained in office; for this see Fâthî känsı-nâm-nâme-i 2/1, 75. Because the ḫāṣṣa lands, rather than the eyâletes, constituted the basis of the administrative system, the ḫāṣṣa lands assigned to a sandjâk beg were made more numerous during the 9th/15th century (for the ḫāṣṣa of the sandjâk beg of Üskûp, see Hicri 835 tarihli sure-i defter-i mücmeli-i vilâyet-i Yeled ve Incebn ve Hudeside ve Semîca ve Res ve Üskûp ve Kalhâmdân ve tevâhî, ed. H. Şahanâvî, Israîl-i 1330, 7). After the organisation of a sandjâk, the villages and ḫāṣṣa lands there could be terminated as ḫāṣṣa land with the permission of the sandjâk beg, if it was thought to be necessary, or some of the timār land could be made into ḫāṣṣa (M. Teyib Gökbilgin, XV. ve XVI. asırlarda Edirne ve Paşa livast, Istanbul 1955, 74; Hicri 835 tarihli sure-i defter-i sancak-i Aravand, pp. xxiii, xxiv, xxvii, 12, 39, 101). ḫāṣṣa lands were the administrative units with the highest ḫāṣṣa income in 934/1527-8, the sandjâk beg of Semendere (622,000 akbës) had the highest income among the sandjâk begs; in contrast to this, the sandjâk beg of Vojnâk (52,000) and that of Khrâqisî or Khrâqisîen (81,000) had the lowest ḫāṣṣa incomes (for the other provinces, and the ḫāṣṣa lands of beglerbegs and the pashas, see A. D. Barkan, 1577-1952 yil Yayınları, 25-7; for the ḫāṣṣa lands of the Grand Vizier, the Kabbe-alti viziers and retired viziers in 1070/1660, see Hezarfen Çelebi, Telhîşî ‘l-beyân fi kawdmn-i al-i Öğümân, 43b, 46a, 47a ff., and cf. Kâmil Kepeci tasnîfî, Haslar kalemî defterî, no. 3069).

The ḫāṣṣa lands were administered on the basis of the registers made up annually, and according to the sources were divided into three: (1) ḫāṣṣa-i...
The **khâṣṣ** lands of Viziers, Amirs, beglerbegs and other high officials of the imperial Chancery or Devlet; and the **khâṣṣ** lands called paşamlık which were appropriated to the needs of the Sultan's wives.

Any surpluses from all these at the end of each financial year were added to the **khâṣṣ-i humâyûn** treasury. The **khâṣṣ** lands given to the Sultan's wives were awarded for life, and could not be transferred to anyone else. The holders of **paşamlık** **khâṣṣ** died or had no further need for it, then it would be transferred to the Sultan's wives. In the 10th/16th century onwards, the number of viziers, beglerbegs, and other high officials of the imperial Chancery or Devlet significantly increased, but the **khâṣṣ** lands allotted to them became insufficient and inadequate, and henceforth there was the need to,**khâṣṣ** lands called kâmil **khâṣṣ** (Kâmil Kepeci Tasnîfi, no. 3065). From the 10th/16th century onwards, the number of viziers, beglerbegs increased, but the **khâṣṣ** lands allotted to them became insufficient and inadequate, and henceforth there was the need to

The **khâṣṣ** lands of high officials and administrators formed an important part of the revenues of every province; for example, they constituted 48% of the general revenue of Rumelia, 26% of Anatolia, Karaman, Dulkadiye and Rum (Sivas), 31% of Dîyarbekir, 48% of Aleppo and Damascus, and 86% of Egypt. Out of all the Ottoman provinces, they formed 277,244,782 akçe, 31% of the total revenue; the other **khâṣṣ** lands and timârs comprised 206,186,394 akçe, 37% of the total revenue (Barkan, Topkapı 1393-94 (fi. 1738-39) maâlî yazma ait bir bülte ornek, in İktisat Fakültesi Mecmuası, xvi (Istanbul 1955), 277).

According to the calculations made from the 1071/1660-1 budget, about three-quarters (1 billion, 800 million) of the total revenue of the state (2 billion, 400 million) went to the officials in charge of **khâṣṣ**, timâr or mahl lands; the revenue from **khâṣṣ** lands was not always sent to the capital, but could be spent on the spot (Barkan, Osmanlı büççlerine ait notlar, in İktisat Fakültesi Mecmuası, xvii (1960), 190).

The value and extent of **khâṣṣ** lands would vary according to the productivity of the provinces and sandjak. Although the most productive lands were already included in the **khâṣṣ** estates at the beginning of the 10th/16th century, their boundaries and the revenue accruing from them tended to increase by a considerable amount (the shares of state and of the officials supervising the shares of state and of the officials supervising the shares of state and of the officials managing the lands eventually decreased in the empire (Barkan, Topkapı 1393-94 (fi. 1738-39) maâlî yazma ait bir bülte ornek, in İktisat Fakültesi Mecmuası, xvi (Istanbul 1955), 277).

The **khâṣṣ** lands were exempted from all taxes and from the entry of officials. The revenues of the **khâṣṣ** lands were managed by a **sandjak** who was under their command the **sandjak** of Mardin, see Nejat Göyunc, XVI. yüzyılda Mardin sancağı, Istanbul 1969, 142-7). From the agricultural produce of arable fields, vineyards, orchards, etc., there were, also, revenues from the dişya, sheep tax, yayla tax, başlık tax, firewood and hay tax, bride tax, başlık又有 irregular taxes, fânûl tax, pasture tax, tapu tax, ởi tax, taxes on the produce of nomads and revenues from some of the mukâfâ-as in the towns, all of which constituted the income of the **khâṣṣ** lands. In the cities, such items as taxes on the başkâne (slaughter-houses), kirisân-kâne (cutgut factory), the ihsâd tax, bozakânâne, rents from shops, etc., formed part of the revenues of the **khâṣṣ**; however, agricultural products constituted the greatest part of the **khâṣṣ** revenues.

According to the comparisons made between the years 1550 and 1650-70, there was a 50% decline in the revenues from agricultural products, hence the revenues of the **khâṣṣ** lands were topped up by other means. Accordingly, some of the timârs and seârânets, and even the **khâṣṣ** lands of viziers, beglerbegs and sandjak begs, were added to the **khâṣṣ-i humâyûn** lands (see Kâmil Kepeci tasnîfi, haslar kalemi, no. 3065). When a vizier or a beglerbeg retired, some of his **khâṣṣ** was added to the **khâṣṣ-i humâyûn**, but some was left to him as a retirement **khâṣṣ** (Kâmil Kepeci Tasnîfi, no. 3065). From the 10th/16th century onwards, the number of viziers and beglerbegs increased, but the **khâṣṣ** lands allotted to them became insufficient and inadequate, and henceforth there was the need to
However, the taxes on the reßâyâ living and working on the khasil lands were collected by emîns, who had nothing to do with the voyvodas (Malâyeden müdevver defterler, no. 7534, pp. 1047, 1220). Beside the voyvodas, there were also some other officials, including the khasil hâbis or clerks, appointed by a decree (Malâyeden müdevver defterler, no. 7534, p. 567). These officials were in charge of managing the imperial khasil lands, with authority to pursue runaway cultivators and safeguard the interests of the imperial treasury in the khasil lands. They also had such duties as ensuring the transference to the treasury of heirest estates and abandoned properties, the inheritors of which had disappeared and had not returned within 6 months (Kânûn-nâme-i sultânî ber mûlâciba ûrûf'i Oltâmâni, ed. H. Iналîkî and R. Anhegger, Ankara 1956, 70-1).

In earlier times permission was not given for the khasil lands to be farmed out on sûltâm (see) [H. Iналîkî, Arvandîn ûlûs, 123-5], but this was not adhered to in later applications (Halît Ongan, op. cit., 8, 43, 85; cf. Arazi Kanunûndemê ve Evsunud Efendînîn arayiî mûéalîk fetvalarî, in MîT, 1/z (Istanbul 1313), 324). Although the principle of not giving out khasil lands thus still existed at the beginning of the 11th/17th century, the actual practice had become established (M. Çagatay Uluçay, op. cit., 231). In 1826-7 the register of the khasil lands, amounting to 23,507,943 ahtên, were given out as sûltâm for the sum of 26,272,485 mûrîd (see Kâmîl Kepçî tanwîfî, haslar kalemî, no. 3060).

During the composition of the register, the children on the khasil lands were not registered as such (khasilîdî ex defter), but were assumed to be registered through the registration of their fathers. Natural calamities such as drought and epidemics affected the khasil lands, leading to the emigration of reßâyâ from their villages and farms to other places (Baş-bakanîk arşiv genel müderrîslû, Malâyeden müdevver defterler, no. 7534, pp. 560, 1661).

Gradually, the khasil lands belonging to the ranks of viziers, beglerbegs, and sandjak begs, were abolished and were added to the mûrl mukdta'ât lands, and payment in cash was made in lieu of these lands, leading to the emigration of reßâyâ from their villages and farms to other places (Baş-bakanîk arşiv genel müderrîslû, Malâyeden müdevver defterler, no. 7534, pp. 560, 1661).

In 1833 this office was abolished, its memory survived in the names of certain places; for example, one of the names of the Eyyub kâdîî in Istanbul was Khâsî-î reßû or Khâsil Kadâş; the name Khâsî-köy as the name of villages in Rumelia and Anatólia shows their former status (see Türkiye'de meskun yerler kilavuzu, Ankara 1944, i), the most famous ones having this name being the town of Khâşkoy (Haskova) in Bulgaria and the town of Khâsî, founded in 1865, in the Hatay province of Turkey.

160. However, the taxes on the reßâyâ living and working on the khasil lands were collected by emîns, who had nothing to do with the voyvodas (Malâyeden müdevver defterler, no. 7534, pp. 1047, 1220). Beside the voyvodas, there were also some other officials, including the khasil hâbis or clerks, appointed by a decree (Malâyeden müdevver defterler, no. 7534, p. 567). These officials were in charge of managing the imperial khasil lands, with authority to pursue runaway cultivators and safeguard the interests of the imperial treasury in the khasil lands. They also had such duties as ensuring the transference to the treasury of heirest estates and abandoned properties, the inheritors of which had disappeared and had not returned within 6 months (Kânûn-nâme-i sultânî ber mûlâciba ûrûf'i Oltâmâni, ed. H. Iналîkî and R. Anhegger, Ankara 1956, 70-1).

In earlier times permission was not given for the khasil lands to be farmed out on sûltâm (see) [H. Gradually, the khasil lands belonging to the ranks of viziers, beglerbegs, and sandjak begs, were abolished and were added to the mûrl mukdta'ât lands, and payment in cash was made in lieu of these lands, leading to the emigration of reßâyâ from their villages and farms to other places (Baş-bakanîk arşiv genel müderrîslû, Malâyeden müdevver defterler, no. 7534, pp. 560, 1661).

In 1833 this office was abolished, its memory survived in the names of certain places; for example, one of the names of the Eyyub kâdîî in Istanbul was Khâsî-î reßû or Khâsil Kadâş; the name Khâsî-köy as the name of villages in Rumelia and Anatólia shows their former status (see Türkiye'de meskun yerler kilavuzu, Ankara 1944, i), the most famous ones having this name being the town of Khâşkoy (Haskova) in Bulgaria and the town of Khâsî, founded in 1865, in the Hatay province of Turkey.

The terms Khâsî-î humdûûn and Khâsî-î pâdüshâhî gradually disappeared after the Tanâtâmî, as explained above, but continued to be used for the services related to the Imperial Palace and to the Sultan, e.g. the khâsî treasury, khâsî avvâllarî or infantry, khâsî bostandîlarî, khâsî suvdrîlarî or cavalry, khâsî-î khâbed, khâsî ordusu or imperial guard regiments, khâsî-î muessizîleri, khâsî-î 'aske.serialize, khâsî-î taburlarî or battalions, khâsî-î kâhür, treasury for the imperial stables, khâsî-î oda or khâsî-î baghete, mathâkh-î khâsî or imperial kitchen (for the other terms, see Uzurçarşîlî, Osmanî devletînin saray teksîldî, Ankara 1945, index).

KHAŞ — KHASSA

(CENGİZ ORHONLU)

KHASS, KHAŞSA in Persia [see KHAŞA].

KHASS BEG or ARLANK BEG b. BALANGIRI (d. 547 or 548/1153), Türkmen amir under the Great Seljuqs of Iraq and western Persia. The name Khaş Beg seems to have been bestowed on him because of his favoured position under Sultan Mas'ud b. Muḥammad (529-47/1134-52); it is used in similar contexts in the works of Diālā al-Dīn Rūmī and in the Kitāb Dede Körküt. During the latter years of Mas'ud's reign, Khass Beg secured an ascendency in the state, disposing of such rivals as Togha Yüreq's amīrs and the Great and Little Chambars or Büyük ve Kutuk Odalar. The name Khass Beg seems to have been bestowed on him because of his favoured position under Sultan Mas'ud b. Muḥammad (529-47/1134-52); it is used in similar contexts in the works of Diālā al-Dīn Rūmī and in the Kitāb Dede Körküt. During the latter years of Mas'ud's reign, Khass Beg secured an ascendency in the state, disposing of such rivals as Togha Yüreq's amīrs and the Great and Little Chambars or Büyük ve Kutuk Odalar.

KHASS ODA, the "Privy Chamber" of the Ottoman palace organisation and the most important of the four departments comprising the Enderun or Inside Service (the others being, in decreasing order of importance, the Treasury or Khaşiye [q.v.], the Privy Larder or Kūlā-ı Khass and the Great and Little Chambers or Büyük ve Külük Odalar. The Khass Oda as we know it was created by Mehmed the Conqueror, who in his Kānān-nāme mentions by title its four chief officers and its staff of 32 pages or 12 Oghlans [q.v.], who became known as the Khass Oda gülmənd or Khass Odalar. Selim I increased their number to what became the classic one of 40, and entrusted to them the duty of guarding the Prophet's mantle [see MUKAĐIRAT]; in the 12th/13th century, according to d'Ossun, they still numbered 40.

The principal ones of these 40 pages waited on the Sultan personally in the Māh-bayn apartments [q.v.] of the palace, becoming thereby known as the Mārāf, their duties included helping him to dress, shaving him, etc. The chief page was the Ṣilbhdär or Sword-Bearer, but the supervision of the Khass Oda was the responsibility of the White Eunuchs, the particular one in charge being known as the Khass Oda Bağlı. In Mehmed's Kānān-nāme, one of his duties was as Şāhık-i 'Arj or presenter of petitions to the Sultan. By the 18th century, however, the Khass Oda Bağlı's duties were, according to d'Ossun, restricted to certain ceremonial duties as Master of Ceremonies of the Inside Service (Enderun Teşrifikātı).

KHASSA, plur. khawāns, also ḥāşiyā, plur. ḥāshiyāyāt, "sympathetic quality" is a recurring theme in magic and occult sciences indicating the unaccountable, esoteric forces in animates and inanimate Nature. The conception that everywhere in Nature such forces are active or can be activated, developed during the Hellenistic period. It was believed that all objects were in relation to each other through sympathies and antipathies, as is evident in the mysterious forces of the magnet—and that diseases could be caused and cured, good and ill fortune be brought about as a result of the relations of these tensions. Unlike peripatetic philosophy, this way of thinking renounces a rational explanation of phenomena. It was voiced in the Ḩawās of Bolos of Mendes (ca. 200 B.C.), the Arvogisofos of Xenocrates (see M. Ullmann, Das Steinbuch des Xenocrates von Ephesos, in Medizinhistorisches Journal, von Ephesos, 1968, 49-64; idem, Neues zum Steinbuch des Xenocrates, in ibid., viii (1973), 59-76), the Cyranides and other hermetic treatises, in the Book of Animals of Timaeus of Gaza and in the books of agriculture. These views also entered into medical and pharmacological literature (see Galen, viii, 421; xi, 823; xii, 192 Kühn; Dioscorides, passim) and gained a theoretical foundation in the Neo-platonic doctrine of the graded structure of the world.

The translation of the above-mentioned Greek works carried the doctrine of the occult qualities of Nature to the Arabs, among whom it found an extraordinarily fertile soil and called forth an extensive literature. Muḥammad b. Zakariyya al-Rāzī, "Djabir b. Hayyān", Ibn al-Djazzār, Abū 'l-Ḥalām b. Zuhūr, "Alī b. Ayyamīr al-Djilā'ī and others wrote books with the title Ḥawās al-taṣāwī or the like. Furthermore, there is hardly any Islamic work on the natural sciences in which the Ḥawās are not treated at greater or shorter length. The "Books of stones" by Aristotle and Tīfāš, the "Books of animals", by Ibn Abī l-Hāwāfīr and Dāmīrī, the "Books of plants" by Ibn Wāḥshiyya, the "Books of poisons" by Ibn al-Bīfīkī and Ibn al-Mūbārak, the encyclopaedias of Kāzwīnī and Nuwayrī and the manual of medicine by "Alī b. Rubban al-'Tabarī, are all full of information on the most remarkable effects of "sympathy".

KHASSA, plur. khawāns, also ḥāşiyā, plur. ḥāshiyāyāt, "sympathetic quality" is a recurring theme in magic and occult sciences indicating the unaccountable, esoteric forces in animates and inanimate Nature. The conception that everywhere in Nature such forces are active or can be activated, developed during the Hellenistic period. It was believed that all objects were in relation to each other through sympathies and antipathies, as is evident in the mysterious forces of the magnet—and that diseases could be caused and cured, good and ill fortune be brought about as a result of the relations of these tensions. Unlike peripatetic philosophy, this way of thinking renounces a rational explanation of phenomena. It was voiced in the Ḩawās of Bolos of Mendes (ca. 200 B.C.), the Arvogisofos of Xenocrates (see M. Ullmann, Das Steinbuch des Xenocrates von Ephesos, in Medizinhistorisches Journal, von Ephesos, 1968, 49-64; idem, Neues zum Steinbuch des Xenocrates, in ibid., viii (1973), 59-76), the Cyranides and other hermetic treatises, in the Book of Animals of Timaeus of Gaza and in the books of agriculture. These views also entered into medical and pharmacological literature (see Galen, viii, 421; xi, 823; xii, 192 Kühn; Dioscorides, passim) and gained a theoretical foundation in the Neo-platonic doctrine of the graded structure of the world.

The translation of the above-mentioned Greek works carried the doctrine of the occult qualities of Nature to the Arabs, among whom it found an extraordinary fertile soil and called forth an extensive literature. Muḥammad b. Zakariyya al-Rāzī, "Djabir b. Hayyān", Ibn al-Djazzār, Abū 'l-Ḥalām b. Zuhūr, "Alī b. Ayyamīr al-Djilā'ī and others wrote books with the title Ḥawās al-taṣāwī (or the like). Furthermore, there is hardly any Islamic work on the natural sciences in which the Ḥawās are not treated at greater or shorter length. The "Books of stones" by Aristotle and Tīfāš, the "Books of animals", by Ibn Abī l-Hāwāfīr and Dāmīrī, the "Books of plants" by Ibn Wāḥshiyya, the "Books of poisons" by Ibn al-Bīfīkī and Ibn al-Mūbārak, the encyclopaedias of Kāzwīnī and Nuwayrī and the manual of medicine by "Alī b. Rubban al-'Tabarī, are all full of information on the most remarkable effects of "sympathy".
Finally, abstract entities were also believed to possess mysterious forces: al-Buni, al-Djill, al-Nadrum and others wrote about the ḵẖ̱āṣṣa of letters and numbers, of the names of Allāh and of the verses of the Kurʾān.

Bibliography: P. Kraus, Jābir b. Ḥayyān, i (MIE 45), Cairo 1942, 61-95; H. Ritter and M. Plessner, Picatrix, London 1962, passim; M. Ullmann, Die Natur und Geheimwissenschaften im Islam (HO, Erg. Bd. VI/z), Leiden 1972, 393-416, see iv s.v. ḵẖ̱āṣṣa, vii, 27; D. Sourdel, Vizirat, 338). One is tempted to render ḵẖ̱̱s̱a or ḵẖ̱awdss by "court" or "courtiers", which are terms

Although Sasanid society had possessed four estates divided into several classes (cf. A. Christensen, L'Iran sous les Sassanides, Copenhagen 1944, 97 ff.), it is not impossible that Persia (and possibly Greece; cf. al-Fārābī, K. al-ṧrāf, 133-4) exercised an influence on the division adopted by the Muslims (cf. al-Thaqlībī, Histoire des rois de Perse, 469, 608, 730; Ibn Nubāta, Sarh al-拉萨̱n, Cairo 1903, 44-5; ed. 1964, 67), but the aristocratic spirit of the Arabs is enough to account for this dichotomy. All the same, one of the earliest authors to speak about the ḵẖ̱āṣṣa and ṣ̱m̱m̱, Ibn al-Muḳaffaʿ, who in various of his writings uses the terms in the general sense mentioned above, but gives to them a different timbre in one passage of al-ʿAdāb al-ṣāḥīb (ed. Kūr ʿAll, in Raʾāfīl, ṣ̱ḏr al-Ṭābiʿī, 1946, 13) where the attitude which one should adopt according to whether one is in the presence of a member of the ḵẖ̱āṣṣa, understood as comprising people of merit and quality, or of the ṣ̱m̱m̱, a thousand times more numerous; in practice, this author divides mankind, in relation to himself, into two categories, and in this passage alludes to a personal ḵẖ̱āṣṣa made up of friends having outstanding moral qualities. If the same conception is transferred to the level

of the rulers, one finds already the idea of a ḵẖ̱āṣṣa confined to their intimates and confidants. The historians often mention the persons who were closest (ḵẖ̱āṣṣa) to the caliphs and sultans. Thus Ḥabība b. Dhuʿayb al-Khuzayfī in relation to ʿAbd al-Malik (see al-Dījahshīyār, Ṣawāwī, 34); Yazīd b. al-Muhallab had a specially favoured position (ḵẖ̱āṣṣa) at Sulaymān b. ʿAbd al-Malik's side, who allowed his protégé to sit next to him on his throne (ibid., 50); Sālim al-Suḍūrī was part of Ṣaman b. ʿAbd al-ʿAzīz's ḵẖ̱āṣṣa (Murādī, op. cit., 410 = § 2717; al-Masʿūdī goes as far as saying that Muṣʿīya had his ḵẖ̱āṣṣa, without however naming anyone specifically. Under the ʿAbbasids, Ṣaḥābī b. ʿAll, al-ʿAbbās b. Muhammad and ʿAbd al-Malik b. Humayd were the ḵẖ̱awdss of al-Manṣūr (al-Dījahshīyār, 37, 97), ʿAbd ʿAbbād Thābit b. Yabīyā was the ḵẖ̱āṣṣ of al-Maʿmūn (Murādī, vii, 3, 35 = § 2695, 2723) and Ibn al-Zayyāt was one of the ḵẖ̱awdss of al-Muʿtaṣim (Ibn al-Tiṣkāqī, Ṣāḥbānī, 233). Many other examples could be cited of these persons, officials or courtiers, who enjoyed the sovereign's special favour. Naturally, there were amongst all these, a certain number of parasites (cf. al-Khāṭīb al-Baghdādī, K. al-Taʿīfī, Damascus 1927, 99). In another sphere, the word ḵẖ̱āṣṣ was applied to "royal" institutions and estates. Under the ʿAbbasids and Fāṭimids, landed estate belonged to the non-Arabs and especially to members of their families were called diyaʿ al-ḵẖ̱āṣṣa. Similarly, the productions of the jīrās manufactories were sometimes called ḵẖ̱āṣṣ (cf. Serjeant, Materials for a history of Islamic textiles, Beirut 1972, 138). The bayt al-māl al-ḵẖ̱āṣṣ was created at a later period by the ʿAbbasid caliphs in order to distinguish the privy treasury from the public one supplied by state revenues; a department called the ṣīrān al-muʾtaṣib al-ḵẖ̱āṣṣ was set up during the reign of al-Mutawakkil to take charge of the royal household expenses.

Various viziers, high officials and rebel chiefs who occupy an important place in Islamic history also had their ḵẖ̱āṣṣa (cf. Ibn al-ʿAṭār, Ṣawāwī, Beirut n.d., i, 412; Ibn al-Diwālī, Munaṣṣabāt x, 143; Ibn al-Fuwāṭi, Muʿjam al-adab al-ṣūfī muʿjam al-ʿulām, Bagh-dād 1967, iv, 756; al-Azdī, Thābit Ṣawāwī, op. cit., 67; Ibn Abī Ḥadīdī, Sharh Nakhlī al-balāgah, Beirut 1963, iii, 17; etc.). The ḵẖ̱āṣṣa described so far had a personal character and only merited being called thus in relationship to the person who had chosen it; whatever its unofficial role may have been, it had no legal status. However, one part at least of the ruler's entourage made up a wider ḵẖ̱āṣṣa, which was itself able to intervene, or had the right to intervene, in affairs of state, e.g. to share in the designation of an heir presumptive or the installation of a new caliph, without taking into account the fact that certain of its members had precisely-defined functions. It is unfortunately difficult to discern its exact composition, since the sources give hardly any details in this regard. The oath of allegiance called bayʿat al-ḵẖ̱āṣṣ was given to the caliph, before the bayʿat al-ʿʿaμmā, by a group of which we do not know the criteria for its membership. Nor can we enumerate those persons who were privileged to pass through the ṣīrān al-ḵẖ̱āṣṣ into the palace at Bagh-dād or at Sāmarrā, who were allowed into the maṣāfīls or dār al-ḵẖ̱āṣṣ (dīwān-i ḵẖ̱āṣṣ amongst the Mughals of India), or who could be cited before the tribunal of maṣālīm al-ḵẖ̱āṣṣ set up for them (cf. al-Ṣāhībī, Ṣawāwī, 20, 22, 27; D. Sourdel, Vizirat, 338). One is tempted to render ḵẖ̱āṣṣa or ḵẖ̱awdss by "court" or "courtiers", which are terms
vague enough as a blanket designation for what is hard to pinpoint precisely in reality; but one may nevertheless try and define further that lot of khâssa.

It is quite probable that the khâssa in the east was not substantially different, at least in early times, from that described by É. Lévi-Provençal: "The khâssa at Cordova [was] originally composed above all of aristocrats of Arab stock, and more particularly, of relations more or less distant from the prince in power". In official ceremonies "these Ahî Kurayshy were in first place; they were followed by groups of high officials in the central administration" and by the legal and civil magistrates included within the khâssa, "whether they were members of the Arab nobility or slave officials", as well as by "the holders of more or less honorific posts, which their riches, old-established or recently-acquired, had allowed them to purchase for money, in order to acquire in this fashion a place in the most privileged social class" (Hist. Esp. musulmane, iii, 188 ff).

For its being placed in an eastern context, this institution ought probably to be given some altered touches (cf. A. Mez, Renaissance, ch. x) and to be rounded out by various pieces of information derived particularly from the descriptions of official ceremonies (e.g. see M. Canard, Le ceremonial fâtimide et le ceremonial byzantin. Essais de comparaison, in Byzantion, viii, 1951), and by lists of notabilities and officials (e.g. see al-Kalkashandî, Sahnî, iii, 480-8, tr. B. Lewis, in Islam from the Prophet Muhammad to the capture of Constantinople, New York 1974, i, 201-8), but prudence is still necessary.

Lévi-Provençal's last remark provides an easy transition allowing us to pass from the khâssa of the state to that of the nation, for without thinking in any way of the venality of appointments, Ibn al-Fakîh, Buldân, ii, tr. Massé, t, proposed precisely to take it, following here al-Faṣîl b. Yâbiya, as the rich and cultivated people, at the side of the rulers and their ministers, with the rest of humanity making up a completely uninteresting 'âmma. If the categories of the rulers and their ministers are only to be expected, the other two are remarkable because this writer includes in the khâssa a higher class ('îyâs) which has been raised to a higher level through riches, and "people of middling status whose education has made them assimilated to the previous class", i.e. the bourgeoisie, which is largely made up of merchants who have grown rich (and these were often scholars also) and the intellectual elite. The idea of a bourgeoisie is very recent, and al-Marsafî himself still places the middle class amongst the khâssa, but one would like to know more about the aghtdm set up in al-Andalus and probably responsible for retreating out crimes committed by this intermediate class (cf. Lévi-Provençal, Hist. Esp. musulmane, iii, 156-7). As for the intellectual elite, it would require an unusual amount of modesty for authors to place themselves in the 'âmma when they talk of the two great social classes. In practice, the secretaries of the administration tend to apply the term khâssa to the ruler's entourage, of which they were a part, whilst literary men and the authors of religious works apply it to an ill-defined élite which corresponds to the educated people mentioned by Ibn al-Fakîh. It would probably be unfair to base oneself on the criterion adopted by the philologists who wrote works on the lbn al-'âmma [q.v.], because all the people utilising this medium of expression, not in classical Arabic at all but in dialect, 'umîyya, were part of the 'âmma, including gross and untutored rulers. This linguistic criterion cannot then be upheld, especially as authors recognise that the khârsa generally use a language which is different, and in any case, more correct than that of the 'âdwa, even if they may at times commit the faults which, for instance, al-Harîrî has brought out in his Durrat al-khârsa fi awdân al-khârsa.

If writers do not seem to have composed much else on the khâssa and were content to address themselves to it as did Sîbî Ibn al-Djawzî with his Ta'ânîsh wa-l-'âmma, the 'âmma is a theme of Arabic literature which was first treated from a critical point of view. Thus al-Dhâhîbî has left a Risâla fi tawâdî al-'âdwa, and Abu l-`Anbas al-Saymari was the author of the Masûrî l-sawwâd wa-akhtâr al-sifâ wa-l-'âdwa, etc. (cf. C. E. Bosworth, The medieval Islamic underworld, i. The Banâ Sâsûn in Arabic society and literature, Leiden 1976, 30 ff.).

The title given to his opuscule by Abu l-`Anbas [q.v. in Suppl.] shows revealing a mentality current at that time which tended to make no differentiation between the various elements making up the 'âmma and which tended to assimilate this last to the mass of population which was, in greater or lesser degree, turbulent. Hence the terms awdâ, awdân, awdâm, etc. were applied to the 'âmma, all of these being pejorative expressions inspired by an aristocratic vision which an Abu l-`Anbas who has been assimilated into the last to express. Whether the khâssa in its proper sense was—justifiably—the recipient of only praises for its moral and intellectual qualities and for the adaî [q.v.] of which it had a monopoly (cf. for example, Abu Hayyan al-Tawhîlî, Imâmî, iii, 61, 151-2), all possible sins were fathered on to the 'âmma. It was ignorant, without any morality, unrespecting of religious obligations, and let itself be easily manipulated by the khâssa, whose play-thing it was (but the two classes then needed each other). It was conformist for some, but easily won over to heterodox teachings for others, and it was the 'âmma which made up the hordes of extremist sects, all the more so because it was incapable of distinguishing the true from the false, hence acted without due reflection and easily rallied to mischief-makers. It does not seem necessary to dwell any further upon this unattractive picture which writers sketch out, but this general picture which writers sketch out, but this general picture...
AL-KHASA WA 'I/AMMA — KHATA

The social structure of Islam, Cambridge 1969, 395; 
Lane, Lexicon, 746-7, 7150; (M. A. J. Bres)

**KHASSARIYYA** (under the Mamlûks). These 
were the sultan’s bodyguard and select retinue. Most 
of them usually belonged to the corps of the reigning 
sultan’s freedmen (mughtarawat, aglabî, djiûlân). Most 
of the commanders (amîrs) rose from the khâssakiyya.
They were considered to be the most prestigious body 
within the Mamlûk military aristocracy, and were 
those closest to the sultan. Frequent reference is made 
to their being sent on special missions inside and 
outside the Mamlûk sultanate, their being appointed 
governors of some of the Syrian provinces, and their 
being dispatched to arrest and imprison rebellious 
amirs and governors. There were amongst them, 
box-holders (dawdûrîyya), cup-bearers (sugâtî), 
treasurers (khâssindarîyya), masters of the robe (dirâmî-
ryya), armour bearers (sîlâhârdârîyya) and shoe-
bearers (hashmahandarîyya). The rest of the khâssâ-
kiyya held no offices and were inferior in status to 
the office holders.

The numbers of the khâssakiyya varied considerably. 
The minimum number was 40 and the maximum was 
1,200. The increase of the number of the khâssakiyya 
was a clear symptom of the decline of the military 
aristocracy in the later years of the Mamlûk sultanate, 
but their tasks to curtail chief process met with only 
partial and temporary success.

**KHASEK,** Turkish form of Persian khâssagi 
from Aрабî khês, “private, special, confidential”, 
applied to persons in the personal service of 
medieval Turco-Islamic rulers (see further 
khâssakiyya).

The term was used in the Ottoman palace service 
from the 10th/16th to the 13th/19th centuries and 
in military organisation. The first of these usages was 
as applied to the Sultan’s concubines who were known by 
the title of khâssaki. Their number varied between 
4 and 7 (Mabûnî had 6, and the Last Year III had 7), and 
these were the special favourites of the sultan, above 
all other concubines, and honoured by the title of 
badûn with their own private apartments and attend-
ants. Those bearing a child to the sultan were called 
khâssâkh sultan. Thus Kholdûn Sultan (q.v.), one of the 
Süleyman the Magnificent’s badûns, Kholdûjî 
Turkân Sultan, one of the seven khâssaks of Sultan 
Îbrahim, Gûnlûh Emetullâh Sultan, one of the 
baddûns of Mehmed IV, were all therefore called by 
the honorific title of Khâssâkh Sûlûn (for this last 
lady, see Topkapî Sarayi Mû Ârjî, N.D. 2081, 
33/10). When a sultan died, some of the khâssâks who 
were childless or whose children had died might be 
given in marriage to one of the ministers or high 
officials. (For documentation on the Khâssâkh Sûlûns 
in the period 936-1223/1530-1809 see Topkapî Sarayi 
Mû Ârjî, Unpublished Catalogue, N.E. 6/245.)

The 4th, 8th, 10th, 14th, 18th, 20th century 
corporations or corps of the Janissary corps were called 
khâssâkh oraturdays. Each one of the khâssâks or corpora-
tions was headed by an agha, 
the most senior of these aghas bearing the title of 
Bash Khâssâkh “Chief Khâssâk”; these khâssâks, 
according to tradition, were introduced during the reign 
of Mehmed the Conqueror. Just as it was customary 
for the sultan’s attendants, together with the 
greyhounds, to accompany him on his hunting 
expeditions, so there were four senior aghas of the 
khâssâks who walked, two on the sultan’s right and 
two on his left, when he went to the mosque; 
in these aghas of the four companies were dispersed. 
Located the title of kûnbûrî khâssâki. The most senior of 
them, when promoted, became the Turnâdji bahlî (baud-
nin-i sîlehdîrîyân, Sûleymaniye, Esat Efendi Kütü-
phanesi, no. 2068, ff. 85, 86 etc.). The number of the 
four khâssâki companies amounted to 1,018 in 1032/ 
1623 and 1,120 in 1074/1664 (Uzuncârshî, Osmanlı 
devleti teşkilâtında kapalîleri okulâ, Ankara 1943, 
i, 205). These refer to the abolition of the Janissary corps in 1241/1826.

There were also the bostânîî khâssâks, numbering 
500 in the 12th/18th century, who formed a group 
within the larger organisation of the Bostânîîs which 
were looking after the palace gardens and orchards 
as well as undertaking certain other palace services. 
These khâssâks were chosen from among the 
bostânîîs, and 60 of them acted as escorts for the 
ruler round the imperial boat, with a khâssâkh agha 
in charge of the boat. The bostânîî khâssâks also 
acted as diplomatic couriers (Topkapî Sarayi Mû Ârjî, 
N.D. 2939, Mehmed ‘Aţâ, Ta’rîkh-i Enderûn, 
Istanbul 1292, i, 293 ff.). One should also mention 
the bostânîî khâssâks (also called wezîr hârabulaibi), 
who performed the duty of carrying correspondence 
between the sultan and the Grand Vizier, and others 
who held such offices as hâmîn bahlî (the palm 
burner), hâlch emînî (collector of dues on fish brought 
to market in Istanbul), gharîb emînî or emînî-i hâmî 
(collectors of dues on wine). The bostânîî khâssâks 
were abolished in 1244/1829 (Uzuncârshî, Osmanlı 
devletin saray teşkilâtî, Ankara 1945, 474).

**KHÂTA** (A), a mistake, which is made in 
thought, speech or action (a fault which one has is 
called ‘ayb), the opposite of wassîb, what is correct, 
hence in the field of knowledge, error; in that of 
action, omission, failure, all this, of course, un-
intentional. From the last meaning develops that of 
wrong which one commits, transgression; whether 
this is to be regarded as unintentional or— 
as in khâta’i and khâ ‘i—deliberate (sc. a sin) is a 
disputed point with the lexicographers. Khâta’i 
and khâ ‘i (the latter is found only in the Kâmî, 
so that it is hardly classical) are synonymous (or phonetic 
variants?). Khâta’i is sometimes regarded as an 
infinite of khâ ta’i used as a substantive (which it 
initially was and still is), sometimes as a substantive 
from akhîla’i (which it has become through linguistic 
usage), and sometimes as belonging to both. The 
lexicographers have the most diverse opinions 
regarding the more accurate definition of the meaning
of these two verbs, within the sphere of ideas above outlined. Khafa* and khaffi are exceedingly rare ... more frequently only the verbal forms khati*a and ahkija*a are used as synonyms.

The use of khaja* as a technical term is in keeping with the general use of the word; the principles used in it are as follows:

1. Error in logic (opposite of sawdb), synonymous with badiji, the "invalid" (opposite of bahk); the former pair of concepts ought to be used in questions of ijtihadd [q.v.] and the latter in questions of fiqih [q.v.] (this may be the result of the corresponding use of the word in the Kur'an, so that Islam and the other religions are contrasted with one another in bahk and badiji, opposite views in the furû of the fikh [see riik], as sawdb and khaja*; but there is only one verb for each, asabha and abkha*, which points to the artificiality of this distinction, and in reality the rule is often not observed; in other branches of learning also khaja* and badiji are used promiscuously, as indeed are sawdb and bahk also. The works which deal with the usul al-fikh [see yuful] discuss the question whether the mudhija* [q.v.] mudihak can err. In the orthodox view, however (as in the polemics regarding the mudhijah fi 'l-shar'iyydt), the other meanings of khaja* come into consideration, so that it is doubtless correctly explained that by "being right" is not meant agreement with the actual facts, but that the mudhijah has duly fulfilled the task imposed on him and therefore cannot be punished (while according to the orthodox consensus, every non-Muslim is doomed to the pains of hell eternally), and that to that attitude his ijtihadd leads him is what is right for him by Allah's decree itself. This ambiguity in terminology must have contributed to the ambiguity in tradition. That, taken purely logically, several differing views could be right at the same time, has never been asserted. The mudhijah in the wrong is not punished for his error and is not considered as being in a religious error (dali*), but is regarded as excused and is rewarded; this is of interest here, in so far as it is illegal. It may be more accurately defined as an act contrary to law, in which the intention of committing an illegal act is lacking, while the action itself may be deliberate; any negligence is left quite out of the question in the juridical appreciation. The Mu'tazills asserted that one of the Mu'tazila* could not be punished by Allah for it, for punishment is only conceivable for a deliberate illegal act. Orthodoxy on the contrary teaches that, while khaja* is not a sin (ishlm), any negligence, however, is something deliberate, and the khaja*, as its result, is liable to be punished (it was regarded as belonging to the 'asurid muhtasaba, happenings only indirectly intended, in themselves not deliberate, for which man can equally be made responsible); but Allah in his mercy will overlook the punishment in the next world. The khaja* is thus considered as an ameliorating, often even exonerating, circumstance in the infliction of punishment in this world (shubha [q.v.]); it cannot be punished by hadd [q.v.]. But not all of Allah's rights are waived: anyone who, contrary to the prohibition, kills an animal in the haram [q.v.], the sacred territory of Mecca, whether with 'amd (deliberately) or from khaja* (unintentionally), has in the opinion of all four usul madhhabs, to make the prescribed atonement. Dawâd al-Zâhirî alone in this case considers khaja* as an excuse. This is doubtless connected with what is ultimately a pre-Islamic idea, that Allah has an especial right of ownership to the haram, its plants and animals (cf. Gaudefoy-Demobymes, Le Pêlerinage à la Mekke, 7, 11); it follows that an unintentional infraction of this right of property is to be atoned for like an intentional one (the substance of this is also found in the following difference of opinion): Mâlik and Ahmad
KHATAK — KHATAM

b. Hanbal do not require a special compensation if
the animal has an owner—who, of course, must be
compensated—i.e. does not belong to Allah; Abū Ḥanīfah and al-Shāfi‘ī demand it in every case, so that
they extend their area of application). In KHATAM there
also is a full liability for any injury done to another.
Here ḥisāṣ [q.v.] is a special case; it is application is
excluded when KHATAM is present; and instead, the
diyā [q.v.] is to be paid and the ḫaffārā [q.v.] to be
performed. For further details, see the article KHAT.
Section i, 5, 6, where the variations of KHATAM in
the meaning of an unintentional act are given. From them
it will be seen that this terminological use of the
word is based on the two meanings “error” (in the case of
KHATAM fi ‘l-ḥisāṣ) and “failure,” “accident” (in the case of KHATAM fi ‘l-ḥisāṣ) and is no more uniform
than the use dealt with under i.

Bibliography: The statements of the diction-
naries are collected in Lane, Arabic-English lexicon, i/2, 761; on its use as a technical term, see Dictionnaire des technical terms used in the sciences of the Musulmans, i, 401-2; Dorschcháni, Definitiones, ed. G. Flügel, 104; for further details the works on wsd and the ḥish-books are indis-
ensible. See also kātāt. (J. SCHACHT)

KHATÁ [see ismā‘īl, šāhīn].

KHATAK, a Pashto tribe living in the Kohät and Pashtunwál district of the North-West Frontier region of former British India, now Pakistan, estimated at about 200,000 individuals; for their gene-
ology, see the table in AFGHÁN. They are Ḥanafí Sunní Muslims, and their original home area has been
the Shāhwal valley in Waziristán. In the early 8th/14th century they were driven by other Pashtún tribes to the southern portion of the Téri mountains of Kohät, where they now live as neighbors of the Bangash tribe. They speak the so-called
“soft” dialect of Pashto [see AFGHÁN, ii. The Pashto language], but a section of this tribe, the Akora
Khataks, live in Nowshera Taksül of the Pashtunwál District, and have adopted the “hard” dialect.
The Khataks are the only major Pashtún tribe which is divided into the two main Pashto dialects.

Although not mentioned in the Bābur-náma, the Khataks appear in 10th/16th century documents. Malik Ako (or Akūrāy) led his clan of Khataks to the land they occupy to this day west of the confluence of the Kabul and Indus Rivers. He was granted the land from the Indus to Nowshera (1386) by the Mughal Emperor Akbar, and given the right to levy ferry tolls at the Attock crossing [see ATRAK], in return for keeping open this part of the road to Kabul, then a province of the Mughal Empire. This stretch formed part of the famous Grand Trunk Road from Hindu-
stán to Khurṣhān. Control of the Attock crossing brought the Khataks into conflict with the neighbor-
ing Yúsufzay tribe living north of the Kabul River, who had, at this time, been resisting Mughal encroach-
ments into their areas. The Khataks took advantage of Akbar’s attempted suppression of the Yusufzays to occupy part of their lands. Later, the Khatak Yúsufzays were caught up in the struggle for
succession between Auranzib and his competing brothers (1068/1658). The Khataks were then hard hit by the abolition of the Indus ferry tolls. During most of the second half of the 11th/17th century the Khatak and some other tribes were in constant rebel-
lión against Auranzib, a resistance in which Khush-
ös Khán [q.v.] was the guiding force. He secured the assistance of the Afrídíd (led by Malik Davyā Kghan and Aymál Kghan), but failed with the Yusufzays because of the historic Khatak-Yúsufzay feud. There

was no major resistance by the Khataks against the Mughals after Auranzib. In 1824 the Khataks, in
confederation with the Yusufzays, formed a tribal army under Akbar Shāh, Sayyid of the Pîr Bâbâ family, and gallantly resisted the advance of the Sikh Mahārājā, Randjît Singh. In 1828, Khatak tribesmen joined the forces of Sayyid Aḥmad of Barell (sup-
ported by the family of the Pîr Bâbâ Sayyids), who defeated the Sikhs. The British found the Khataks
most of the second half of the nth/i7th century the succession between Aurangzib and his competing

tribes, plays a great part in festivities and folklore.

(RAVAN FARHADI)

KHATÁM, KHÁTIM (a.) (P. muhr), seal, sign-
et, signet-ring, the impression (also khatam) as well as the actual seal-matrix; it is applied not only
to seals proper, engraved in incuse characters with retrograde inscriptions, but also to very common
seal-like objects with regular inscriptions of a pious or auspicious character; for the latter, which are
amulets and further readily distinguished from seals by the absence of a personal name, see TILSAM; indeed anything with an inscription stamped upon it may be called khatam. Here we are only concerned
with seals in the strict sense of the word. The word khatam is said by Nöldeke, Mandatliche Grammatik,
112 to be of Aramaic origin, and in this he is followed by Fraenkel, Aram. Freuds., 252, who also recog-
nises a loan word in bārakas, seal-clay.

The part played by the signet-ring in the east cannot be better illustrated than by the following
quotation from Lane (Modern Egyptians, 1860, 31).

Describing the dress of a Muslim Egyptian he says:

“The little finger of the right hand (it is allow-
able to wear it on a finger of the left hand) is worn a

seal-ring (khatam), which is generally of silver, with a
carnelian, or other stone, upon which is engraved the
wearer’s name; the name is usually accompanied by other words ex-

pressive of the person’s trust in God, etc. The Prophet

disapproved of gold; therefore few Muslims wear gold
rings: but the women have various ornaments (rings,
bracelets, etc.) of that precious metal. The seal-ring

is used for signing letters and other writings and its

impression is considered more valid than the sign-

A little ink is dabbed upon it with one of the fingers, and it is pressed upon the paper; the person who uses it having first touched his tongue with another finger, and moistened the place in the paper which is to be stamped. Almost every person who can afford it has a seal-ring, even though he be a servant. The use of seals dates from remote antiquity in the east, and they have never been supplantated by the spread of a knowledge of the art of writing and the use of the signature. It has happened in the west also.

In the east, the seal takes the place of the signature and it is the former that gives validity to a document even if the latter is also used. The seal is also much used as a guarantee that property will be kept intact and thus takes the place of locks and keys. Goods are simply roped up in a packet and the knots sealed with the owner's seal, a plan which to Chardin, for example, appeared more reliable than the western system, owing to the practical impossibility of counterfeiting a seal. It is also used to stamp property as a mark of ownership (e.g. books and bindings) and in this way corresponds to a coat of arms in the west.

The possession of another person's seal is evidence that the latter has delegated his authority. There is abundant evidence of these usages in the east from very early times. Pharaoh, for example (Gen. xlii, 42), gave to Joseph his signet-ring, as the Sultan of Turkey did to his grand vizier. Jezabel (I Kings, xxii, 8) forges a letter in Ahab's name and seals it with his seal to give it validity. The books of Esther and Daniel give similar examples of the power of the Persian king's seal. Herodotus (i, 195) tells us that every Babylonian carried a seal and the abundance of seals, usually cylindrical in form, that have survived from ancient times in Mesopotamia, illustrates this statement. Seals of authority, such as the Sultan of Turkey did to his grand vizier, are still used in numbers, whether made for mounting in rings or pierced for suspension. In South Arabia also the pre-Islamic civilisation has left numerous specimens of its signets.

No seals of the pre-Muslim Arabs are known. The earliest Arab seals come from Egypt with papyri and belong to the period soon after the conquest. Whether we can accept or not the story, men in Mecca could write in the time of Muhammad, we must suppose that seals were in common use in this important commercial centre as in other parts of the east. Tradition, in any case, has a certain amount to tell about the Prophet's khatam. Al-Buhairi, Sahih, Bälak 131-13/1894-6, vii, libas, 48, says that the Prophet wished to write to the Byzantines. He was told they would not read his letter unless it had a seal, so he adopted one of silver with the inscription Muhammad rasûl Allâh. According to al-Mas'udî, he adopted this ring in Muharam of the year 7/May-June 628. The Prophet is also said to have originally worn a khatam of gold, but gave it up when he forbade the wearing of gold rings and silk and brocade (Buǧârî, loc. cit.). Women did not observe the prohibition of gold rings and ʿAbâsha for example wore them (ibid.). The Prophet wore his signet on his right hand and used to take it off when he went to the private (al-Tirmîdhi Sahih, Bälak 1242/1826-7, i, libas, 324). Opinions differ as to the proper hand and finger for the ring, and there is no established rule. Later stories illustrate the Prophet's disapproval of metals other than silver for signet-rings. He is reported to have said that a brass ring savoured of idolatry, that an iron one was emblematic of souls condemned to eternal fire, while words could not express his horror of a gold ring; meeting the wearer of one, he cast upon him a terrible frown and turned away as if he had encountered a dog or an infidel. The Prophet's seal was handed on and used by his successors, who had however also their own seals, until Uqba b. Mas'ud lost it in a well at Aris, or in Zumzam, or according to others in the Tigris near Mawsil. The Prophet's interdiction has been generally observed, and it is exceedingly rare to find signet-rings of the more precious metals or mounted with the more valuable precious stones, upon which there was no embargo.

The earliest known seal of a Muslim is that of ʿAmr b. al-ʿĀṣ, conqueror and governor of Egypt whose signet was a bull (Râfer, Fuhrer, No. 556). Whether this is due to local influence, or whether the representation of an animal was not unusual with the pre-Muslim Arabs, is impossible to say. Other Arab seals bearing animals are known of this period, but the rigorous avoidance of images of living things was soon applied to seals also, for we soon find seals in Egypt of the Muslim type, although as late as 8/707, we find the governor Kurra b. Shârik using a wolf (Râfer, Fuhrer, No. 593). The seals of Abû Hâ'im b. Yâbirî (No. 572) and of the head of the Treasury Rashîd b. Khâlid "who trusts in God" (No. 577) are already of the style that became stereotyped. A notable seal from Egypt is that of the tax-collector Nâjid b. Muslim which bears his name in Greek and Arabic (No. 578). Bilâd al-Sham signets of authority, such as the Sultan of Turkey did to his grand vizier, are still found in Syria and Asia Minor in the 4th/10th century (cf. Schlumberger, op. cit., and Halil Edhem, op. cit.). Here also under Byzantine influence we find double sided impressions of seals in lead (bullae); of these the most notable is that of the Kâkûyûd ʿÂla' al-Dawla of 430/1038-9 with a horseman on the obverse (Halil Edhem, No. 30). Another remarkable seal from the same region is that of the Hamûdî Muhammad b. Sa'd al-Dawla Abu l-Mâ'allî Shârif with obverse a bust of St. Theodore and his name in Greek characters (op. cit., No. 31).

The materials of these early impressions are the same as in later times, a special kind of clay (karkas), or lead, appended by cords to the documents as in the mediaeval west also. When the seal is stamped on the documents itself, it is done with a special thick kind of ink and the impression is received by the impression; red wax is also used when the climate permits it. As in mediaeval Europe, there are instances recorded in the east of bullae of the precious metals, silver and even gold for very special occasions (Reinaud, op. cit., i, p. 112).

Charles White (op. cit.) deals very fully with the use of seals among the Turks and the guild of engravers in Istanbul. The latter have, he says, a special quarter in the bazaar called after them kâkâkir čarşî. The members of the guild are Muslims (in contrast to the dealers in stones, who are usually Jews) of fair education conversant with Arabic, Persian and Turkish. A few can decipher the Kûfic character. Their training is a long one. Apprentices after a good education take lessons from the best calligraphers of the day and then serve seven years with a master-engraver. When their indentures have expired, they become journeymen (kâfî), until they can acquire a business of their own and be admitted into the guild as master-members (usta), the number of whom is limited to fifty. Their shops are regularly searched by the police lest they be tempted to put their skill to illegal uses, such as the engraving of false coin-dies. Such great care is taken to ensure the genuineness of a seal that the trade are forbidden to engrave two seals exactly the same for the same person. When a seal is lost the owner has some trifling alteration made in the new one, such as a change in
an ornament or the date, so that the forgery can be detected if his first seal should fall into evil hands.

The Istanbul engravers date the origin of their art in the time of the caliph 'Uthmān and say the first engraver was a certain Muḥammad al-Ḥidżāżī who engraved seals for 'Uthmān and ʿAlī bearing their names with the additional epithet ʿabd Allāh; the rings were of silver and the stones were bloodstones.

White's account of the seals of the sultan and dignitaries of the Ottoman empire follows d'Ohsson. The sultan has three seals of different sizes, all of emerald set in gold with the same inscription, the tughrā (v.v.) and a religious legend. The first is a small seal always carried by the sultan and handed to his secretary as required. The second is somewhat larger and is entrusted to the grand treasurer of the harem, who uses it for all matters relating to the harem—the Mughal Emperor Akbar similarly had a special seal for all documents relating to the harem. The third imperial Ottoman seal is the seal of state confided to the grand vizier of the day, who is supposed to keep it in his bosom day and night. The head of each department of state has also his own seal for matters relating to his office.

Persons of distinction do not usually wear signet-rings on their fingers. Great dignitaries have a confidential seal bearer (muhrād) who carries the signet in a small bag in his breast pocket and produces it when required inked for the stamp or clean if wax is used. People of humble rank carry their seal in the breast pocket or suspended round the neck. The impression of the signet stands for a signature, although for documents of importance the latter is also necessary. In the case of the sultan, the seal used and the presence or absence of the signature vary with the importance of the document, as does the format of the latter.

Chardin's account of the seals used by the Șâh of Persia is similar. There are three seal-keepers (muhrād-bâış) but they only affix the seals, which are kept in a box in the palace sealed with the king's own seal. Friday is the usual day for sealing documents; the muhrād prepares the seal and the paper and makes the impression on a sign from the Shah, who does not usually do it himself. There are three great seals, used for military, civil and foreign affairs, and two small seals used for the palace accounts etc. The same inscription is in the centre of the three large seals, banda Shâh wîlâyatal Sulaymân ast 1080 (A.H.); the small seals have dîn in place of wîlâyat. One of the large seals has a quadrat round it and another has the names of the 12 Shî'î Imâms. At the king's death his name is erased and that of his successor engraved on it. Of the general use of seals, Chardin observes that it would not be easy to steal one, as they are worn around the neck and only taken off in the bath; they are also worn on rings. It is rarer to find a seal counterfeited than a signature in Europe. The seal engravers used a drill and a small wheel with emery.

Abū 'l-Faoll in the Āyn-i Akbarī devotes a special chapter to the Emperor's seals, which are used in the three branches of the government—"indeed every man requires them in his transactions". (Here we may note that English officials in India in the 18th and 19th centuries found it necessary to have a seal with their names in Persian characters).

At the beginning of his reign, Akbar had a circular seal bearing his name and those of his ancestors back to Tīmūr in the nasta‘īlī characters; later he had a simpler one with his name only in the nasta‘īlī character. The former was at first used for letters to foreign kings and the latter (known as wuzūk) for home affairs but the distinction was not maintained. A second seal used for juridical business was lozenge-shaped (mīhrābī) and bore an appropriate verse in praise of justness, round his majesty's name. For other business a small square seal with the legend Allāh Akbar, djalā djalāluhu was used and the harem, as already stated, had its own special seal.

The great figures of Muslim tradition had of course their seals. That of Sulaymân b. Dâwūd is particularly famous and plays an important part in many of the stories of his miraculous exploits. It was held in particular awe by the dīvān. Dīmāshqī, the Solon of Persia, according to Sa'dī, was the first person to wear his signet on the left hand. In Firdawṣī's story of Shāpūr II's escape from captivity in Rûm, he reveals his return by sending an impression of his signet to the grand mōbed.

Coming to more historical periods, we have a record of the seal inscriptions of all the early caliphs (e.g. in Mas'ūdī, Kitāb al-Tanbīh, under each caliph; collected by Hammer-Purgstall and von Murr); specimens of the seal inscriptions of several early Caliphs still exist; (cf. Halîl Edhem, op. cit.) Tīmūr's seal bore his special mark, three small circles arranged in a triangle, and the motto rasti rusti, and an impression still exists in the Bibl. Nationale (de Sacy, op. cit.). Johnville mentions a ring of "mout fin or" bearing his signet which was among the presents sent to St. Louis by the Shâykh al-Djibâl. Specimens of the seals of sultans of Turkey and other high Turkish dignitaries are given by Hammer-Purgstall (op. cit.). Of these, the most remarkable is the original seal of Sultan Muṣṭafā II of 1106/1694-5 found on the battle field of Zenta (1697) where its bearer, the Grand Vizier Elmas Meḥmed Paşa, was killed. A special medal was struck by the Austrians to commemorate this trophy. The tughrâ is a feature of the imperial Turkish seals; it is said to be an imitation of the impression of the hand, because Orkhan's sign-manual was the impress of his hand in red ink. Tīmūr is also said to have used this primitive signature, but we know that he was not illiterate. The tughrâ is also traced back to the Prophet himself.

Muslims have followed the example of the Prophet in having simple inscriptions on their seals. Sometimes the name alone is used, sometimes it is accompanied by a brief pious inscription, often indicative of humility; if the owner has the name of a person mentioned in the Kur'ān, the reference is frequently worked into the seal inscription. The name is given in a simple form and titles are as a rule avoided, in keeping with the general modesty of the signet; for examples of legends, see Reinaud and Hammer-Purgstall; in later times in Persia and India seals became much more elaborate and the seal of a minor official of the Mughal court of the end of the 18th century often has several lines of bombastic inscription and forms a striking contrast to the seal, for example, of the great Sinān Paşa, five times Grand Vizier of Turkey, with its modest inscription "O God Thou art full of mercy, pardon poor Sinān, son of ʿAbbās".

The commonest materials for rings are silver or copper; and if a stone is mounted in it with the seal, it is one of the less valuable stones, cornelian, garnet, jacinth, agate, coral; the turquoise is not uncommon and one often sees them carved as amulets with inscription inlaid with gold. When not worn on a ring, the seal is mounted on a handle and carried in a bag; sometimes the stone itself is pierced for suspension and worn round the neck. The shapes of Arab seals
vary; oval is naturally the commonest, but they are also square, hexagonal or octagonal; a round shape is not common except for the largest sizes.

The art of the seal engraver was at its best, like that of calligraphy, in the 16th and 17th centuries. Its decline in the 18th was followed by the practical extinction of the art in the 19th. The names of few celebrated engravers have been preserved. Altm at the court of Timur was reckoned a master of his art. Abu 'l-Fadl gives the names of four masters of the craft at Akbar's court, each of whom was a specialist in a particular branch.

(J. ALLAM)

The seal from which every ruler in the Islamic lands utilised in order to authenticate documents signed in his name, had a design peculiar to each ruler, and was the symbol of his power. Hence when a caliph proved to be in a physical state unfitting him to govern, his seal was taken from him. Moreover, it was his seal which the caliph entrusted first of all to his confidants, i.e. usually to his successive viziers. Nevertheless, it seems that the caliph always retained a personal seal, quite distinct from the official seal which he used to authenticate his letters.

In the central administration of the 'Abbāsid period, there was an organisation of state specially charged with the task of gathering together the documents, letters and inventire patents prepared by the chancery or Divān al-Rasā'il and then ready to receive the caliphal seal. This was the Divān al-Khātam, which played on these occasions a crucial rôle, since it had to be certain in advance that the documents prepared for sealing were in conformity with the caliph's and vizier's instructions on the one hand, and in conformity with the administrative rules then in force on the other hand. In the first decades of the 'Abbāsid caliphate, there were at times bitter contests for control of the Divān al-Khātam. In practice, the vizier, at a time when his duties and sphere of competence were not clearly defined, could not exercise his powers properly unless he controlled this office; hence it happened that its head might, out of animosity towards the vizier, hold back deliberately the execution of orders and in this way bring all the administrative machine to a standstill. It was at a later period, from the opening of the 3rd/9th century, the custom to give the vizier direct control over the office of the seal, and the chroniclers note generally, in this connection, that the viziers received "the seal and the vizierate". If this detail no longer appears at the end of the century, it is because by that time the vizier's control over the whole administration of offices making up the caliphal administration was firmly recognised, and the office of the seal could no longer function except under his direct orders.

Bibliography: D. Sourdel, Le vizirat 'Abbāsida, Damascus 1959-60, index. (D. SOURDEL)

In the Maghrib, at the present time, Khatam (dialectical, khāt'am) denotes not only seal-rings, but any kind of ring worn on the finger. The seal itself, whether mounted on a ring or on a stem, is called fāba. Its impress, stamped with thick black or violet ink, served until a recent time for the authentication of official documents, whether emanating from the baniṣṣā of the Sharifian Mahāzīn or from the tribal hāids. For judicial acts, the fāba is rarely used; the complicated flourishes of the signatures of the audials (ṣudāl) and the kadīs take its place. The impresses of the sīrāfis and the Great Arab and Persian houses have been preserved. They are usually circular in shape, but sometimes oval. Reproductions of them can be seen in Nehil, Lettres chérifennes, Paris 1916, and in H. de Castries, Sources indiètes de l'histoire de Maroc, Paris 1905 ff. In general, the sultans used two seals, a large one and a smaller one, and the vizier of ḍājū slightly was left with the responsibility of affixing it. The same procedure doubtless obtained in Muslim Spain; the historians of the Umayyad caliphs and mulūk al-faḍla'ī often give, after a physical sketch of the ruler and a list of his honorific titles, the legend inscribed on his seal (see Lévi-Provençal, Hist. Esp. Mus., iii, 13). Khatam, an Arab tribe (the name is tripotite, although in several European editions of Arabic texts we find it wrongly vocalised as a dipotite). They inhabited the desert region from the deserts of the Arabian peninsula, the mountainous territory between al-Tāf and Nadjrân along the caravan route from Yemen to Mecca. Historiographical theory on the migrations of the tribes, which is bound up with their genealogical systematisation, makes them settle, at the time of the separation of the sons of Ma'add, in the mountains of al-Sarēt [q.v.], from which the Azd are said to have driven them at the time of the migration of the South Arabian tribes after the burning of the dam of Ma'āch, to the lands they occupied in historical times (al-Bakrī, Muqālam, ed. Wüstenfeld, 28, 38, 41-2 = Wüstenfeld, Die Wohnsitze u. Wanderungen d. ar. Stämme, in Abh. G. W. Götz, xiv, 39, 53, 58 = Muqadāsīyyah, ed. Lyall, 113-14, following Ibn al-Kalbī; Yādūr, Muqālam, i, 464, ii, 526-7; Wüstenfeld, Register s. d. genealog. Tabellen, 130-1). According to this theory, the Khatāmī (like the Jadīla [q.v.] who figure everywhere as their brethren) were part of the tribes of 'Adnān, their descent being Khāṭāmī b. Annārā b. Nizār (Ibn Hishām, Sīra, ed. Wüstenfeld, 49-50; Ibn Kutayba, Ma'ārif, ed. Wüstenfeld, 50; al-Makdisi, Badī', iv, 110-11, who all attribute this view to "the genealogists of Mudur"). But another theory (Ibn al-Kalbī-Caskei, Gānhart an-nasab, Leiden 1966, table 221) connects them with a branch of the Sāhamī according to the genealogy: Aftāl, surnamed Khatāmī b. Annār b. Irāš b. 'Amr b. al-Ghwāth (the latter is also the father of the Azdī tribes) or more
KHAṬİ'AM — KHAṬİ'AM

Simply, Khaṭ'ām b. 'Amr b. al-Ghawth (see also Ibn Durayd, Ḥaṭib, ed. Wüstefeld, 302; Ibn Kūtabya, 50; Ibn Ḥishām, 50; Aḥzānī; xv, 152; Wüstefeld, Geneal. Tabellen, 9; Hamdānī, Ḩudur al-'Arab, ed. Müller, 116, gives the isolated genealogy: Khaṭ'ām b. Rabī'ā b. Āmir (?) and Ibn Kūtabya, 50, makes Anmār the son of Sāba', cf. Reiske, Pirmiae lineae, 133; Masūdī, ii, 148 = 998, replaces Iraš by Ṭabba', however contradictory statements seem to indicate that, like so many other tribes, the Khaṭ'ām do not represent an ethnic unit but rather a confederation of clans of different origins. This seems also to be deducible from the etymology of their name, which connects it with the verb takḥāt to smoulder oneself with blood on the occasion of a pact of alliance (on this custom, cf. J. Pedersen, Der Eid bei den Semiten, 21; 25; 26 and the bibl. cited there). Other etymologies which make Khaṭ'ām the name of a mountain or of a camel are not worthy of consideration (Ibn Durayd, 302, 304; Harmāsā, ed. Freytag, 72, 375; L. A., xv, 56). In any case we always find the Khaṭ'ām associated with tribes of the south, either in alliances made on the occasion of expeditions (e.g. al-Aḥzānī, ix, 17; xii, 47-8; xviii, 35-6) or during the ridda (al-Ṭabarī, i, 1985-6), or latterly in the groupings of the tribes stationed in the military camps of Bṣāma and Kūfa (al-Ṭabarī, i, 1985-6); but in ii, 1382, we find them also grouped with the Kinnā, Kays ʿAyān, Muzayyina and even Kūraysh, all tribes of the north, under the general denomination of ʿAhl al-ʿĀliya. It seems that at this time (101/720) the territorial principle had prevailed over the ethnic one). Their principal clans were the Shahrān, Nāḥiṣa and ʿĀklūb, the latter, according to the South Arabian genealogy, was of another origin (Aḥzānī, Rabī'ā b. Nizar, 53), but Ibn al-Kalbī (Caskel, table 224) makes him nevertheless descend from Khaṭ'ām.

We have no authentic information on the Khaṭ'ām for the remote period in the history of the Arabian peninsula (the identification proposed by Blau, ZDMG, xxii, 658; xxiii, 561, n. 6 with the ʿĀṣrāfratī dār ‘Uṣur, of Usur and his descendants, is quite untenable). From the 6th century we find them inhabiting, along with other tribes of diverse origins, the districts of Bṣāma, Turāba, Ḥurash and Tabāla; this last was the centre of the cult of the God Dhu 'l-Khalaṣa (on him see Wellhausen, Annali, xii, 47, 129; xv, 56). In any case we always find different ʿAmāl women were married to Kurašī, Daws, Bahilā etc., worshipped (Yākūṭ, i, 791; ii, 465; 723; iv, 62, 567 [= ʿAḥzānī, xi, 152], 578, where there are numerous references to the neighbours of the Khaṭ'ām and to the assignation of the part of the territory of Bṣāma at the end of the 1st century A.H. to some members of the Umayyad and Ḥaḍīmi families; Hamdānī, 135-6; Ibn al-Kalbī, Kūfāl al-ʿĀṣmām, ed. and tr. Atallah, 29-30).

Among the numerous guerilla wars in which the Khaṭ'ām were involved (cf. ʿAḥzānī, vii, 119; xii, 47, 51-2; xiv, 25; xviii, 35-6; Nakārī, ed. Bevan, 46; Yākūṭ, ii, 735; iv, 56; Hamdānī, 170, the best known is that of Fāy al-Riḥ in which their chief Anas b. Mudrik (or Mudrika), allied to the greater part of the Maḥūdhī, defeated the Banū ʿĀmir b. Ṣaṣā'a commanded by ʿĀmir b. al-Tufayl [q.v., who lost an eye in the battle (Nakārī, 468-72; Ibn al-ʿAḫrī, i, 474; Ṣaḥāḥ, ed. 1293, iii, 102-3; Dīnār al-ʿĀmir, ed. Līly, Intro., 62-3, nos. x, xi (Mufakhdātī, n. cvii), xii, xiii, xxv, xxvii, Suppl., nos. i, 19). Anas b. Mudrik, famous also as a poet, was the hero of an other enterprise of the Khaṭ'ām, sc. that against the Banū Dīshām (Aḥzānī, ix, 17) and that in which he killed the famous poet-brigand Sulayk b. Sulakā (Ḥamāsā, 415-16; Aḥzānī, xviii, 123-8; Ibn Kūtabya, Ṣirr, ed. de Goeje, 217). The biographical notes on Anas, who lived for several years after the introduction of Islam, have been collected by Levi della Vida in Caetani, Annali dell' Islam, x, 499-500 (year 40 A.H., § 547).

The position of the lands of the Khaṭ'ām enabled them to play a part in the Abyssinian expedition against Mecca. They tried to oppose Abraḥa's advance, but beaten by him, they were forced to guide the enemy's army as far as al-Ṭāhif (see the sources collected in Nöldeke, Gesch. d. Pers. u. Araber, 206-17). The spread of Islam at first left them indifferent (no heed need be paid to the story in al-Ṭabarī, i, 1079-80, of the Khaṭ'ām asinna of Tabāla, Ṣaṣīm bint Murr, who saw a divine light on the face of ʿAbd Allāh b. ʿAbd al-Muṭṭalib, the future father of the Prophet. The only interesting feature of the story is the epithet "Judaising", Mutawwawida, conferred on the ʿāṣma). Their first relations with Muḥammad were certainly hostile (Wājidī, tr. Welhausen, 387; al-Ṭabarī, i, 1730-1), but they ultimately sent him an embassy and recognised him, and accepted a letter from him which declared all the blood-feuds previous to Islam abolished (Ibn Saʿd, i, 34, 78; Annali dell' Islam, i, 330, year 10 A.H., § 28, cf. also § 23, 326-7).

On the death of the Prophet, only a section of them rebelled (Annali, ii, 573-4, 581, 585, year 11 A.H., § 87-8, 98, 104). The destruction of the sanctuary of Dhū 'l-Khalaṣa by ʿAbd Allāh b. Ḥarīr al-Bagdālī must have broken their resistance, along with that of other tribes who were grouped round this turbulent centre (al-Ṭabarī, i, 1985-6). During the wars of conquest we find them in the army of Syria (Ibn ʿAsikīr, in Annali, iii, 588, year 15 A.H., § 664, cf. also al-Ṭabarī, i, 3287, 3408), as well as in those of ʿIrāq (al-Ṭabarī, i, 2188), and as we have seen, they formed part of the tribes quartered at Baṣra (Pellat, Mīṣīlī, index) and Kūfā.

Several Khaṭ'āmī women were married to Kurašī. One of them played rather an important part in the early history of Islam, Ṣama bint Umays [q.v., in Suppl.]. Her sister Salmā was the wife of Hamzā b. ʿAbd al-Muṭṭalib (Annali, loc. cit., § 285, Ibn Saʿd, vii, 209); a daughter of Anas b. Mūdrik, Ṣama, was the wife of Khālid b. al-Walīd (Ibn Ḥādīr, Isbāba, Cairo, ed., vii, 6, no. 39; Annali, i, year 37 A.H., § 412, x, 499).

The Khaṭ'āmī poets were few in number; the most notable is Ibn al-Dumayna [q.v.]. Bibliography: Given in the article.

G. LEVI DELLA VIDA

KHAṬṬA (pl. ḥaṭṭā and ḥaṭṭātā), moral lapse, sin, a synonym of ḏāن (pl. ḏānātā). The root ḥātā is means "to fail, stumble" (in Hebrew, Prov. xix, 2), "make a mistake" (e.g., one says ḥaṭṭātā of an archer whose arrow misses the target); [see KHAṬṬA].

The form ḥaṭṭāt appears five times in the Kurān, and the root ḥātā is frequently found there. It combines within itself the three meanings of "error" (ḥaṭṭātā, e.g., XVII, 33), "culpable lapse" (ḥaṭṭātā, e.g., XVII, 31; cf. ḥaṭṭātā, XCVI, 16), and "sin" (ḥaṭṭātā, ii, 81, 112, VII, 161; XXVI, 82; LXXI, 25). However, "sin" is more often conveyed by ḏānātā, ḏānātā; a sāyyā is an evil action, and an ṣāmā is a very grave sin, a crime against God.

We likewise find sometimes ḥaṭṭātā, but more often ḏānātā, and occasionally ṣāmā or sāyyā, in works on ʿim al-ḥalām, fiqh and tasawwuf. It would be tedious
to study each of these terms separately; sufficient to say that in endeavouring to pin down the idea and the theological aspect of sin in Islam, reference should be made above all to the article **khafa** rather than to that on **khalfa**.

I. Kur'anic references. On one hand, sin brings down divine anger and punishment (for **khalfa**, see II, 81; IV, 112; LXXI, 53); but on the other hand, it nevertheless remains within the operative sphere of the divine mercy. Thus Abraham says, “It is He whom I ardently desire to forgive me my sins (**khafi**-dil) on the Day of Judgment” (XXVI, 82; cf. VII, 161). God, through His apostles and prophets, summons mankind to Himself in order to pardon their sins (XIV, 10; XLVI, 31; LXXI, 4). If a man avoids grave sin (**tashm**) and depraved actions, he will receive pardon from his Lord (LIII, 32). God gives absolution from sin (**dhanb**) and accepts repentance (XL, 3), and He forgives sins (**dhuwab**) completely (XXXIX, 53).

God is the All-Pardoning One whose power to pardon is endless, **al-khafar al-khafi**,** two of the "Most beautiful names" upon which pious Muslims like to meditate (see al-**asma**-al-**husna**). However, one sin is unpardonable, sc. the rejection and the disowning of God and His Oneness (IV, 48, 137; XLVII, 34). Impious persons, guilty of **kufar** and **shirk**, will only receive pardon if they repent (VIII, 38). Those who have perpetrated an evil action (**sayyia**) and remain “encompassed” within their sin (**khalfa**) will bring down on themselves the torments of everlasting hell-fire (II, 81).

Thus there are three types of sins mentioned in the text of the **Kur'an**: (1) minor sins, not affecting one’s faith, which can be submitted to the divine mercy (LIII, 32); (2) grave sins (**kaba’ir**,** al-tashm**, according to XLII, 37) and “depraved actions” which God may pardon immediately or may punish for a specific period, according to His mysterious will (cf. II, 284; III, 129); and (3) **kufar** and **shirk**, attacks on the Divine Oneness, which cannot be wiped out except through repentance (**taubah**) and which, failing this last, remain under the threat of eternal hell-fire: “those guilty of **kufar** will be rounded up in Gehenna” (VIII, 36).

II. The traditions. There are numerous traditions which stress the idea of sinfulness and the fate reserved for the sinner, out of which two main themes emerge:

(1) Faith and sinfulness. There is a certain amount of self-contradiction here. (a) Some traditions stress salvation through faith. The divine pardon is assured, provided that there is not rejection of faith in the One God. Thus the Prophet related that **Djibril** appeared before him and comforted him by this assurance: “Every member of your community who dies professing the Oneness of God will enter paradise”. The Prophet repeated, “Even if such a person is guilty of adultery and theft?” **Djibril** replied, “Even if he is guilty of adultery and theft” (Muslim, **Imam**, 113). Certain traditions (ibid., 201-8) go so far as to affirm that God “does not take into account” sins of simple intention, seeing that the thoughts involved are not expressed in words not realised in deeds. The delicate conscience of the believer who discovers in himself “evil thoughts” which he is “too scrupulous to express”, is praised as an act of faith (ibid., 209).
(b) However, according to another chain of traditions, “grave sins” are considered as an attack against faith itself: “The Messenger of God said that whoever is guilty of fornication is not a believer, any more than he who steals or drinks wine” (ibid., 100, cf. 101-5, and al-Bukhari, **Huda** i, 6, 20, etc.). (c) In any case, the Prophet’s intercession at the Last Judgment for the sins of his community is emphasised in many traditions (see **sharika**).

(2) What are the “grave sins”? The Kur’an mentions clearly and on several occasions the **kaba’ir** or “grave sins”, grave sinfulness (**tashm**) and “depraved actions” (**fahsh**), and gives various examples of each class, but without setting up a precise table. One tradition, which has been seen as a version of the “seven capital sins” of Christian morality, enumerates them thus: “The Messenger of God said, Avoid the seven deadly sins (**mabiha**). When he was asked what these were, he replied, ‘Associating others with God (**shirk**); sorcery; unlawful homicide (except when there is a legal reason); despoiling an orphan of his property; flight from a battle being waged against the enemy; and taking advantage of the weakness and credulity of virtuous women (**muja**-nati)” (Muslim, **Imam**, 144; al-Bukhari, **Wa**ayda, bbd 23). The tendency towards a laxity which tends to blur the distinction between grave and lesser sins is condemned: “Anas related: Indeed, you commit sins which are only a single hair’s weight according to your own view, but in Muhammad’s time we used to consider them as grave sins” (al-Bukhari, Risha, bbd 32).

III. Tafsir and ‘ilm al-kalâm. Discussions and elaborations went on through the course of the ages, emphasising such-and-such Kur’anic verse or such-and-such tradition, according to the tendencies of the different schools of thought.

(1) The definition of grave sins and lesser ones (**kaba’ir** and **shugba’ir**). This distinction, which appears already in both the **Kur’an** (e.g., LIII, 32) and traditions, has been developed at great length by the various schools. The exact definition of **kaba’ir** remained variable. It can be said that the generally-accepted idea of moral lapse or sin was one of disobedience (**ma’siya**) to the prescriptions of the divine law, to the point that **ma’siya** often becomes a synonym for **khafi’** or **dhanb**. It was then readily explained that it was the hardening of the heart and persistence in evil-doing which constituted the seriousness of the sin, expressed by Ibn ‘Abbâs as “Everything forbidden by God, once persisted in, becomes a grave sin”. Moreover, it is related from ‘Umar and Ibn ‘Abbâs (text cited by al-Nawawi) that “No sin is a grave one, if one asks pardon for it; but no sin is a venial one if the sinner persists in it”. In other words, persistence in minor sins makes them become grave ones.

Is there, then, only a difference of degree between great and small sins? Mu’tazil tradition, as represented by the **khadi** Abd al-Djabbar, states that a man whose acts of disobedience (**ma’siyad**) on the whole outweigh his acts of obedience (**fa’siya**) is guilty of “grave sin”, whereas, on the other hand, a man whose acts of obedience outweigh his acts of disobedience is only guilty of “lesser sin” (**shur** al-**sia** al-khamsa), ed. ‘Abd al-Kartm (Ithmân, Cairo 1934/1956, 789). For the Ash’a’ rif al-Djuwayni (Ishbâd, ed. Luciani, Paris 1938, 331), every sin is necessarily grave, in relation to the divine Majesty. Sin is a failure of duty towards God, and every failure of duty towards God is necessarily grave. However, there are sins of greater or lesser degrees of gravity. The two views expressed here are certainly completely divergent, but it seems that one might posit a simple difference of degree amongst the “acts of disobedience”.

The leading members of the various schools nevertheless attempted to lay down different kinds of sins.
(a) For the Khāridjīs and Mu'tazīlīs, the "actions of the limbs" form an integral part of faith [see IMAN, 1170-1, §§ 1, 3]. Consequently, grave sins which are destructive of faith are deliberate acts of disobedience against the Kur'ānic injunctions, above all, against the 'bāddāt "pillars of Islam", and against those prescriptions whose non-performance is punishable by the ḥudūd. (b) The usual Sunnī trend of thought seeks to establish a list of sins which are, as such, grave, but even here, there is some variation. The Shāfi'ī jurist Taqī 'l-Dīn al-Shahrazūrī puts forward this tautology: "Every sin which has grown so grave that one can call it a grave sin is in fact a grave sin" (cf. al-Bāḍjurī, Ḥāṣiyya 'alā ... Dia'marat al-tawḥīd, ed. Cairo 1352/1934, 114). As for lists of kābā'ir, these vary amongst writers; al-Bāḍjurī's popular manual gives two different enumerations, and asserts the validity of both (ibid., 102, 104). These lists refer almost invariably to the kābā'ir about the mābākbā'ir mentioned above, and to Kur'ān, VI, 157, and they freely admit that the number seven is not a limiting one. One may state that the following are unanimously considered as "grave sins": apostasy from the faith, kufr and shirk, insults to the Prophet, fornication and adultery, sins against nature, murder, stolen liquors, theft on a serious scale, and flight in battle. [38]

Al-Nawawī relies on Muhammad b. 'Abd al-Salām in his commentary (ii, 170) in order to set forth this criterion: if there is any doubt about the gravity or lightness of any sin which has been committed, it should be compared with the "seven capital sins" of the ḥudūd. If it proves to be less serious than the least grave of those, it belongs to the saghdār. In the opposite case, to the kabdār. According to the consensus of Sunnis, and contrary to the Khāridjīs and Mu'tazīlīs, tauba for grave sins is not necessary for salvation. If the sinner repents, and if God accepts his repentance, the sin is "wiped out"; it requires neither reaparation nor penitence, for it no longer exists. For, as al-Diwdānī remarks, "God extends His pardon for grave sins to several other sins mentioned in it. The prudent believer should therefore eschew all sin, lest he suddenly finds that he has committed one of the gravest possible ones.

(a) Sinning and repentance. The idea of repentance (tauba) is common to the varying schools. For example, we find it expressed in identical terms in 'Abd al-Diwbār (Sharḥ al-wṣūl, 791), just as in al-Idījā'i al-Dīgīrī (Sharḥ al-mawṣūlī, ed. Cairo 1325/1907, viii, 314). This formulation is "regret for an act of disobedience against God in itself, combined with the firm intention of avoiding it in the future": Cf. also in the Tafsīr al-Dīgīrī, ed. Flügel, Leipzig 1845, 74, the two definitions of tauba and sincere tawbah. If, although an act of repentance is shared, the degree of the necessity to repent is formulated differently by the various schools.

(a) The Khāridjīs and Mu'tazīlīs, relying on Kur'ān, II, 81, condemn to hell-fire everyone who remains "encircled" by his own sin, and for those who have committed grave sins, only repentance accepted by God can avoid eternal hell-fire. When a moderate Mu'tazīli like al-Zanāghāshī comments on the words "He pardons whomsoever He wills" (Kur'ān, III, 129), he explains, "... in tauba, for God is only inclined to extend His pardon to those who repent"; and he strongly opposes the interpretation attributed to Ibn 'Abbās—"God extends His pardon for grave sins to whomsoever seems good to Him, and punishes whomsoever seems good to Him in regard to venial sins". According to the Mu'tazīla, it is not that the tauba is efficacious in itself, but because of his justice, God is bound to accept it when it is sincere. The Mu'tazīla of Baghdād explain in general that He remits the punishment on the grounds of repentance (cf. 'Abd al-Diwbār, op. cit., 75).

(b) The Asbā'ī school, on the contrary, insists on absolute freedom of action by the Almighty. Only one wanted to establish an equivalence with Christian terminology, one would have to say that, according to the dominant Sunnī trend of thought, only these lastnamed sins really merit being called "mortal sins" (though the ideas at work here do not really correspond).

A comparison with the "capital sins" certainly fits the kābā'ir better, and every "capital sin" is not in itself (in Christianity) a "mortal sin". In Sunnī Islam, God, in His mercy, can therefore either pardon every "grave sin" apart from kufr and shirk, or else, in His justice, punish it by a period in hell-fire. It is for these sins that the Prophet's intercession can be invoked. Must the believer repent of them? Certainly, if he wishes to remain faithful to the divine prescriptions and regain complete purity of heart and intentions (ikhhās). The rules concerning tauba [q.v.] are very numerous. In regard to perfecting the purity of a man's faith, it is necessarily required. Furthermore, if tauba for grave sins is strongly urged, these last can nevertheless be "wiped out" by istighfrā' and/or istisfār. Other authors define these last as sins connected by the Qur'ān with hell-fire, but even here, there is some variation. "Every sin which has grown so grave that one can call it a grave sin is in fact a grave sin" (ibid., v, 455), just as in al-Idījā'i al-Dīgīrī, on Kur'ān, II, 82), and on the contrary, insists on absolute freedom of action by the Almighty. Only one wanted to establish an equivalence with Christian terminology, one would have to say that, according to the dominant Sunnī trend of thought, only these lastnamed sins really merit being called "mortal sins" (though the ideas at work here do not really correspond).

All this concerns judgments made on the perfection of the believer's status. But one must point out that according to the consensus of Sunnis, and contrary to the Khāridjīs and Mu'tazīlīs, tauba for grave sins is not necessary for salvation. If the sinner repents, and if God accepts his repentance, the sin is "wiped out"; it requires neither reaparation nor penitence, for it no longer exists. For, as al-Dīgīrī remarks, if God's pardon "were to come into effect after the sinner's repentance, it would no longer be an act of pardon" (Sharḥ al-mawṣūlī, viii, 311). It is when "grave sins" are wiped out neither by tauba nor istīkhār that God can, if He wills, show Himself as Pardoner. To sum up: on one hand, divine punishment of grave sins which have not been repented of is not necessarily obligatory (cf. Fakhr al-Dīn al-Dīgīrī, Mafītih al-ghayb, ed. Kur'ān, II, 82), and on the other hand, if the punishment does not come into effect, it can only be temporary. Consequently, "it is untrue that tauba is necessary for the pardoning of sins, with the exception of shirk" (ibid., v, 455), and one finds the same teaching in other Sunnī sources. According to al-Baydāwī on Kur'ān, II, 81, the "encircled" by sin of those threatened with (eternal) hell-fire refers only to those impious per-
sons guilty of hujf or shirk. Those believers who have committed grave sins do not come under the verdict of this verse.

On all these points, the Hanafi-Maturidi trend of thought is very close to the Ašh'arī attitude, with one difference, however (cf. L. Gardet, *Dieu et la destinde de l'homme*, Paris 1967, 304 and ref.). For the Ašh'arīs, everything is submitted to the inscrutable Divine Will which may, just as it pleases, pardon straightforwardly or punish straightforwardly in any period of time the believer who is guilty of prevarication; and there are no reservations here. It is therefore possible that for a certain period of time, there will be sinning believers in hell-fire, but it is not certain. For the Hanafi-Maturidi theologians, God's promises must always come into effect, and God has threatened punishment for grave sins, even when committed by a believer. Hence it is "obligatory that certain individuals out of those who have committed grave sins will be punished" (Maturidi thesis adopted by the Ašh'arī al-Lakānī, *Dinawarat al-taubīd*, verse 177). It is uncertain whether such a prevaricating believer will be condemned to spend some time in hell-fire, but it is certain that some sinning believers will spend some time there.

IV. Tawlawf—A few examples. We find in the works on mysticism a spiritual life and on mysticism ascendant classifications and analyses of the various kinds of moral sins. In Şī'ism the most frequently-employed term is *dhanb*, *duwmāb*, rather than *khatīb* (e.g. al-Kalābādhī, *Kut al-kulūb*, ed. Arberry, Cairo 1934, 64). One may cite as an example al-Ghazālī, who in his *Ihyā‘* *ilm al-dīn* (iv, treatise on *taubah*, ed. Cairo 1352/1933, 2-53), takes over the analyses in Abu Tālib al-Makki's *Kūl al-bulāb* and endeavours to classify these sins according to their nature and to lay down a precise list of *khabīr*:

1. The classification of sins (*dhanb*). According to Abu Tālib al-Makki and al-Ghazālī, these are of four kinds (a) the "lordly" (rabibbiyya) ones, such as pride, scorn, boastfulness, arrogance, love of praise, love of life, ambition and despicable behaviour; (b) the "satanic" (ghafrīyya) ones, such as envy and deceitfulness; (c) the "bestial" (shayfīyya) ones, such as greed, covetousness, anger and concupiscence; and (d) those attributable to "wild beasts" (sabūtīyya), such as furious anger, lust for battle and murder.

2. The enumeration of the "grave sins". Al-Ghazālī firmly maintains the distinction between grave and lesser sins (*Ihyā‘*, ibid., 28 ff.). The list of grave sins which he puts forward is not governed by the number seven for the sūrūh in the *Kāfīb*. He proposes lists varying between four and eleven, and cites al-Makki's view that there are seventeen. In this last case, they may be grouped as follows: four come from the heart, sc. the sin of shirk, persistence in evil-doing, lack of confident belief in God's Mercy and lack of any fear of His power to punish; four come from the tongue, sc. bearing false witness, misusing an upright man (muhkam), perjury and sorcery; three stem from the belly, sc. drinking wine and intoxicants, despising orphans of their wealth and practising usury; two are connected with the genitalia, sc. fornication and homosexuality; two with the hands, sc. murder and theft; one with the feet, sc. flight from the battle field; and finally, one is connected with the whole body, sc. disobeying one's parents.

In regard to moral sin, certain extremist Sūfī traditions oscillate between two attitudes which are opposed in principle, but which are at the same time often apparently mixed together in fact. An attitude of laxity carried to excess, with which one might accuse those called the *Ibāšīya*, asserts that anyone who attains to union with God no longer has to worry about the fear of sinning, nor about the prescriptions, injunctions and prohibitions of the law. Opposed to this is the rigorism of a special variety of the *Mālid-ma'īya*, which is characterised by a deeply-rooted care to shun the praise and admiration of men; in order to achieve this, such a person will make no attempt to avoid actions which seem to be scandalous, but will indeed instigate them. In the first case (the attitude of laxity), we have the abandonment of all asceticism, and in the second ("rigorism"), we have ascetic behaviour which goes to the point of being perfectly content with disdain and disapproval, shunning what are undoubtedly sins, but embarking on acts which look like sins in the eyes of men.

However, the dominating fact in the counsels and adjurations of the Sūfī masters is the necessity of avoiding any kind of voluntary sin, and this goes to the point of a refined scrupulousness of heart (*wurad*). Man, the *sāhīf*, is fallible and a sinner before God, hence he must take account of this feebleness and his small stature as a created being, in relationship to the greatness of the Almighty. Self-control, awareness of one's spiritual condition (*muṣāwa*), is necessary. From the time of al-Muhāsibī onwards, examination of one's conscience (muḥkama) is rigorously prescribed, and al-Ghazālī insists upon it (*op. cit.*, 336-61, esp. 346; cf. Asin Palacios, *La espiritualidad de Alghazal*, iii, Madrid-Grenada 1940, 80-103). Al-Ghazālī goes on to say that the heart is like a mirror which is pitted and spoilt by rust, and which must therefore be cleaned and polished, so that the superior world can be reflected in it.

Bibliography: given in the article.

A. J. Wensinck — [L. Gardet]

**KHAṬĪB** (Av.), plur. *khulub*, was, among the ancient Arabs, the name for the spokesman of the tribe. The *khāṭīb* is therefore often mentioned along with the *shā'ir*, the poet (Ibn Hishām, *Sira*, ed. Wüstenfeld, 934, 938; Yākūt, *Buldān*, iv, 484), and, like the *khā'id* and the *sayyī'id*, was one of the leaders of the tribe. The character and significance of his office is clearly explained by Dībāzī, *Kīb al-Baydāwī wa l-tabylin*, Cairo 1332, i. The distinction between *khāṭīb* and *shā'ir* is not absolutely definite, but essentially is that the *shā'ir* uses the poetic form while the *khāṭīb* expresses himself in prose, often, however, also in *sadī* (*q.v.* cf. Dībāzī, *op. cit.*, i, 159); his speech is introduced with *amman ba'du* (al-Hariri, ed. de Sacy, 1822, 42). According to Dībāzī, there were only a few *khulub* who were also *shā'ird* (i, 27). In the *Dīgbilīyya* al-Ghazālī says the *khāṭīb* is said to have been more highly esteemed than the *khāṭīb*, but when the numbers of poets gradually increased and the latter's art declined and they became beggars, the *khāṭīb* obtained more prestige (i, 136; iii, 227). The *khāṭīb* is also associated with the story-teller, the *kāfīb* (*q.v.*), and with the *ašbāb al-ashāb wa l-'āthār* (Dībāzī, i, 167-8 and passim); the office was sometimes hereditary in the same family. The *khulub* did not form a gland or caste; they were the men who had the ability to speak to men. They appear not only at the head of a *waṣīd* to negotiate as representatives of their tribe, as we know from the *Sira* (cf. Goldzimer, *Abhandl. zur arab. Philol.*, i, 20), but, like the poets, they were also the leaders in the war of wits with the enemies (*muṣāba*). The *khāṭīb* had to be able to extol the glorious deeds and the noble qualities of his tribe and to narrate them in perfect language and to be able likewise to expose the weaknesses of his opponents. He had therefore to be *fāṣīb* and know how to employ *ba'da* (*q.v.*)
in this way to overcome his opponents (cf. The Mufad-
dallyat, ed. Lyall, xci, 4; ed. Wright, xcv, 20; Ibn Bihm, ed. Thod-
kanakis, S.B. A. Wem, xlv (1902), 95; Kâmil, ed. Wight, 20). Lampoons give the following characteristics of a poor khatib: his pronunciation is bad, he turns to and fro, stammers, coughs, strokes his beard and twists his fingers, a sign of cowardice (Hamâma, ed. Freytag, 650, verse 5; Kâmil, 20). It is in keeping with the character of the ancient Arab khatib that he is included among the fighters, ains and nobles (al-
Kutâm, op. cit.; Dâjîb, i, 134, 172), indeed, khatib itself is used as a name for a brave warrior (Dâjîb, i, 125). When the khatib makes a public appearance his insignia are lance, staff or bow (al-makhdîsî, just as a man taking an oath carries tokens of masculine honour; he often strikes the earth with it (cf. al-
Kutâm, xvi, 6; al-Khidîlî, 27, 45; Dâjîb, i, 197-8, iii, 3 ff., 61-2).

In the earliest days of Islam the khatib retained much of his old character. “The prophet came forward as a khatib” after the conquest of Mecca (Ibn Hašham, ed. Wüstendfeld, 823) and spoke publicly with ceremony and authority. But the khatib now became solely an address to the Muslims, not a part of the war against the enemy and muṣâhârâ was no longer part of the activities of the Muslim khatib. But it is quite in keeping with the nature of early Islam and with that of the Arab khatib that the ruler himself was spokesman and that he not only made edifying speeches from the minbar as khatib but also issued orders, made decisions and pronounced his views on political questions and particularly questions of general interest. This was the case under the first four caliphs and the Umayyads (cf. Dâjîb, i, 190), and the governors appointed by them also acted as khatâb (e.g. al-Yaμâlî, ed. Houtsma, ii, 318; Dâjîb, i, 170). The local governors, appointed by the latter were also entrusted with the control of the minbar and of the salât (al-Tabari, ii, 920). Diatribes against and commands on the enemy were part of their minbar speeches, e.g. the curses on ‘Affi and occasionally on ‘Alâ and al-
Zubayr (Dâjîb, i, 165). Khatib was therefore still synonymous with “leader”; a poet of the Khawaridi holds in his right hand during the khutba, his insignia are lance, staff or bow (Djahiz, iii, 135). An inheritance from the ancient Arab spokesman is the staff or lance which the Muslim khatib holds in his right hand during the khutba, a custom which provoked the scorn of the Persians (Dâjîb, iii, 135). But the close connection between the khutba and divine service gave the Muslim khatib a specifically religious character. After the alteration of the wars of the first generations, this element became more predominant and in the time of the ‘Ab-
bâsids, as early as Hârûn rašîd, the caliph left it to the khatib to deliver the sermon at the service while he himself was simply a listener (Dâjîb, i, 161). But in theory, the leaders of divine service in the great mosques are representatives of the caliph (cf. Ibn Khâlidun, Mukhadimmâ, Cairo 1322, 173).

The Egyptian Fatimid still occasionally preached the khutba behind a veil, namely three times in the month of Ramadan and at the great festivals (Ibn al-
Taḥhrîri, ed. Juynboll, ii, 486-2; ed. Popper, 337 ff.; al-Makrîzî, Khatib, Cairo 1334, ii, 322, 327, 329). On this occasion his highest dignitaries stood on the steps of the minbar (op. cit., 327, 329), while on the other hand the râ'is of a district often stood on the minbar if the khatib was preaching, a custom which testifies to the original high rank of the kha-
tib, but was later condemned by strict authorities on morals (Ibn al-
Hâjî, Khatib al-Madhdhal, Cairo 1320, ii, 74). Special khutâb were everywhere appointed. There were three of them in Cairo under the earlier Fâtimid period for the ‘Amr, Ibn Tûlûn and al-
Azhâr mosques; cf. al-Makrîzî, Khatibî, ii, 348; as a rule it seems to have been the honorary office of a khatib; cf. op. cit., 224. On the ‘Id al-
’Aṣâr, a special khatib pronounced the khutba on a minbar with nine steps in the sanctuary of Ħusayn in Cairo, while the chief khatib conducted the salât; the khâbit conducted the on this occasion was given a silk robe and 30 or 50 dinars (al-Makrîzî, Khatibî, ii, 224-5). On other occasions the khatib received a robe of honour (op. cit., ii, 387). The khatib usually was also the conductor (imâm) of the Friday salât at which he preached and, according to Abû Hanîfâ and a tradition of Mâlik, he must actually do so unless there were special reasons for a deviation from the rule. The daily salâts are as a rule conducted by other imâms (al-Mawardî, Al-
Akhâm al-sulâÔtayya, ed. Enger, 181). According to al-
Shâfî’î and Mâlik, the Friday worship with khutba can only be held in one mosque in each town, if the size of the town does not make it impossible, while Abû Hanîfâ has no such rule. The khutba was therefore delivered, for example, in Cairo after the end of the Fâtimid period in the mosque of al-
Hâkim only, because Saladin appointed a Shâfî’î chief khatib. This state of affairs was altered by Baybars when he appointed a Hanâfî chief khatib (al-Makrîzî, Khatibî, iv, 53). Abû Hanîfâ on the other hand allows the worship in which a khatib takes part only in a large town (misr), in which the ruler of his deputy is present in person. The other schools are less rigorous on the point. But the imâm-khatib of the Friday service is, according to the other schools also, in theory the representative of “the highest imâm”. Several imâms can be chosen, if necessary with their exact functions defined. According to al-
Mawardî, 172, the Sultan appoints the imâms of the larger mosques, in keeping, with the theory of their representative character. But, according to al-Kâshâshâdî (Subh al-
A‘âdîb, Cairo, iv, 39), each mosque under the Mamlûks had its own khutab while the Sultan only concerned himself with the larger mosques. The office of khatib of the most important mosques was as long as it was according to Ibn ‘Abd al-
Zâhir, the Shâfî’î chief khatib was khatib of the great mosque in the citadel of Cairo (cf. P. Ravaisse, Zoubdat kachf el-mamdlik, 1894, 92) and it was regarded as a special distinction, anxiously coveted, when Saladin after the conquest of Jerusalem chose the khatib Muhâr al-Dîn Abu ‘l-
Ma‘âlî as the first khatib in the Aqṣa mosque (Shîhâb al-Dîn, Kitâb al-Ra‘ādatayn fi akhbar al-
Baybars, Cairo 1288, ii, 108 ff.). The document confirming his appointment under the Mamlûks is further evidence of the khatib’s dignity (cf. al-Kâshâshâdî, op. cit., ii, 222-5; al-
Umarî, Khatib al-Târif bi ‘l-
muṣâhârâh al-
gharîf, Cairo 1312, 126-7). He is the natural authority to whom new converts announce their conversion to Islam (Ibn al-
Hâjî, Khatib al-
Maddhal, 76), the people touch his robe il‘l-
tabarrakh, etc. (al-
Shârâ‘î, Khatib al-Missâb, i, 106). According to al-
Mawardî, 185, the khatib ought preferably to wear black clothes, according to al-
Ghazâlî, white, while the first mentioned would be bida‘a (Ihya’i, Cairo 1322, 131 ff.). His insignia are al-
šâ‘înâ, the “two things of wood” i.e. the minbar and the staff or wooden sword which he has to hold in his hand during the sermon, according to the fihb books also. According to the law of 1911 applied to al-
Azhâr, art. 59, every one who has passed through the second of the three divisions of the institute can become a
KHATIB — AL-KHATIB AL-BAGHDADI

khafib. While in al-Azhar itself only one khatib is appointed (al-Zayyati, Ta'rikh al-Azhar, Cairo 1320, 209), there were in 1909 in the mosque of the Prophet in Medina 46, in Mecca 122 khafib, besides their deputies. They enjoy certain benefactions and the office is on the whole hereditary (al-Batanuni, al-Riha fi al-Hadisayia, Cairo 1329, 101, 242).

Beside the official khatib, the wa'fs exercised the function of an edifying preacher, when he pleased (cf. A. Mez, Die Renaissance des Islam, 1922, 318 ff.).

J. PEDERSEN

AL-KHATIB AL-BAGHDADI, ABU BAKR AHMAD B. 'ALI B. THABIT B. AHMAD B. MAHDI AL-SHAFII, known as AL-KHATIB AL-BAGHDADI, was born on 24th Dhu’l-Qaddûl 392/1005 May 1002 (Ta’rikh Baghhd, xi, 266) in Hanîkovan, a village in the neighbourhood of the Nahâr al-Malik below Baghhd (Saâdi, Wâfi, vii, 191; see M. Streck, Die alle Landschaft Babyloniens, Leiden 1900, i, 27). According to Ibn al-Nadîdjûr (see Y. al-Shâh, al-Ishsh al-Baghdadi, Damascus 1364/1945, 17) he was born in Ghuzyayya, a hamlet about half-way between Kîfva and Mecca. The son of the preacher (khafib [q.v.]) of Darâgînân, a large village on the west bank of the Tigris below Baghhd, he began his studies very early with his father and other sha'yâkhî (Ta’rikh Baghhd, xiv, 75-6; iv, 393; i, 351-2). Proceeding from the Kur’ân he occupied himself primarily with hadîth, a science which remained all his life the centre of his interest, even when he extended his learned studies to other branches of science, above all to fiqh, and also after he had become famous as preacher far beyond the walls of Baghhd. At the age of twenty, in the year in which he lost his father (ibid., xi, 359), he set out for Basra in search of hadîth, on which occasions he seems to have stayed also in Kîfva. Three years later, in 413/1024 (Yâkût, Uddâbî, i, 246), he set out on a second journey which brought him to the north and east as far as Nîshâpûr. On the way, either on the outward or the return journey, he collected further hadîth material in Rayy and Isfahân, whither his teacher from Baghhd al-Barkanî (Ta’rikh Baghhd, iv, 372-6) had given him a letter of introduction to Abû Nu’aym [q.v.] (preserved in Ibn ‘Asâkir, al-Ta’rikh al-kabîr, Damascus 1329/1922, i, 400; Yâkût, Uddâbî, i, 258 f.; cf. al-Dhahabi, Hujût, iii, 276; 3093), as well as in Hamadân and Dinawar. How long he remained en route is not known in detail; according to his own testimony (Ta’rikh Baghhd, iv, 374) he was back in Baghhd in 429/1038. In the following years his preaching secured him great fame and he became an authority in hadîth because of his profound erudition in this field. One of his biographers (al-Dhahabi, Hujût, iii, 317; 3141) says that preachers and teachers of tradition usually had to submit the traditions they had collected to his expert opinion before quoting them in their sermons and lectures. On the other hand, al-Khâtib seems to have suffered from the hostility of the Hanbalis, who were numerous and powerful in Baghhd at this period. After having been at first a Hanball himself like his father, his preference for the Shafi’i school—probably definite after a journey to Nîshâpûr (Ta’rikh Baghhd, iii, 197)—and his theological opinions, which were quite uncompromising in their Ash’arism, attracted to him the hatred of I mam Ahmad b. Hanbal’s pupils who were enemies of all bold theological speculation. In spite of the Hanball opposition and thanks to the protection of Caliph al-Kâ’îm and the vizier Ibn al-Muslima [q.v.], he succeeded in opening a course of lectures on hadîth in the al-Mansûr mosque (Yâkût, Uddâbî, i, 246 f.). Retaining a bitter resentment at the enmity shown to him, al-Khâtib seems never to have lost an opportunity in his lectures and writings of making malicious insinuations against Ahmad b. Hanbal and the Hanbalis and even of attacking them openly (cf. al-Ishsh, op. cit., 210-17). On that account, later generations accused him of ta’âsib (legal and theological bias) (Ibn al-Diwâzî, al-Miṣâ, a hamlet about 254 f.; al-Ishsh, op. cit., 92-119). His teaching activities brought him occasionally also to other Syrian towns like Sûr (Tyre), known to him from earlier journeys (R. Sellheim, Arabische Handelsmaterialien zur arabischen Literaturgeschichte, Wiesbaden 1974, i, 69-73, no. 20). A personal mishap enragcd suddenly the Shi’i circles in Damascus against him. Arrested by order of the Fâtimid governor, he had a narrow escape from execution only through the intercession of a distinguished Shi’i personality and by a precipitous flight to Sûr. Returning to Baghhd via Tarâbulus (Tripoli) and Aleppo after the Saldjûks had restored order there, al-Khâtib, the “Hâfiz of the east”, died in Baghhd on Monday 7 Dhu ’l-Hijjah 463/5 September 1071 (Ibn ‘Asâkir, op. cit., i, 401), in the same year as Ibn ‘Abd al-Barr [q.v.], the “Hâfiz of the west”. In the presence of a great crowd he was buried beside the tomb of the venerated Bishr al-Hâfî [q.v.].

Al-Khâtib’s fame is in general based on his biographical encyclopaedia of more than 7800 scholars and other personalities, among whom were also included women, connected with the cultural and political life of Baghhd. He seems to have corrected and completed it right up to the year he died (cf., e.g. Ta’rikh Baghhd, iii, 308, 336). It is known under the title Ta’rikh Baghhd and there is a printed edition in 14 volumes: Cairo, 1349/1931 (repr. Beirut 1969). Praiseworthy as al-Khâtib’s monumental work indeed is, it should not be overlooked that he intended to
produce with his biographical work a reference book for traditionists, through which chains of transmitters (imāda), relations between teachers and pupils, questions on the reliability of a hadith-scholar etc. can be ascertained, checked and established. The arrangement and contents of the biographies, set down in a not strictly alphabetical order, show also that a traditionist rather than a biographer has been at work. A look at the rest of al-Khātīb's extensive scientific production makes it clear that his works on hadith have made him the great critical systematiser of hadith methodology. In addition to Brockelmann, I, 401 and S I, 563 f., there are mentioned: al-Kifāya fi ma'rūf ʿuṣūl al-riwāya, on the ideal rāwī (transmitter) (printed Hyderabad 1357/1938, Cairo 1972; cf. al-Albānī, Fihrist makhfīdāt . . ., 268, no. 947; Goldziher, Muh. Stud., ii, 185 f.); al-Dīdāmī l-ʾākhīs l-arāwī wa-dādāl al-ʾāmīs (al-Albānī, op. cit., 267, no. 938); Takhdī al-ʾāmīn, with the central question whether it is forbidden or permitted to determine traditions in writing (ed. by Y. al-ʿIṣbāḥ, Damascus 1949; on this see A. Ates, in Ilāhiyyat Fakūlles Fergisī [Ankara], i (1952), 91-103; ʿA. al-ʿAzzāwī, in MIMA, xviii (1953), 302-5; M. Weisweiler, in Oriens, viii (1954), 193-4; al-Sharāf ʿashūb al-ḥadīth, a work on the prominent signification of the traditionists (ed. by M. S. Ḥattūḥū, Ankara 1972; cf. al-ʿAzmī, op. cit., 268, no. 127; al-ʿIṣbāḥ, op. cit., 212, 219); al-Sābī wa ʾl-lābīsī, a biographical dictionary of traditionists (only in the Chester Beatty ms. 3508, dating from the 7th/13th century); al-Muʿtaṣimīs fī takmilat al-Muʿtaṣimīs wa ʾl-muḥāshellīs, on the correct spelling and pronunciation of resembling denominative verbs from ṣabīl, ḥaqqīt, ṣahāba, min nuwādir al-tashīf wa-dādāl al-ḡāfī, with a French translation by G. Salmon, L'Introduzione toponomastica a l'Historia di Bagdād, Paris 1971; O. Spies, in Isl. xvi (1970), 224 (= Brockelmann, I, 401, 61 f.); other manuscripts, e.g. Chester Beatty 4702, 4818; M. N. al-ʾAlbānī, Fihrist makhfīdāt dāl al-mawṣūla al-šāhīrīyya al-munawwīsāmīn makhfīdāt al-ḥadīths, Damascus 1390/1970, 266, no. 936, cf. 269, no. 935; al-Muḥāshellīs, abstracs and continuations see Brockelmann, i, 401, S I, 563 and G. Makdisi, Ibn ʾAqīl, Damascus 1963, 32 ff.; al-Khātīb's introductory chapter on toponomy (Ta’rīḫ Bagdād, i, 4-101) was published with a French translation by G. Salmon, L'Introduction toponomastique à l'Histoire de Bagdad, Paris 1904; the ḥaḍīths were compiled by Ahmad b. Muhammad al-Ḥammarī al-Maghribī, Muḥāṣṣa l-ṭarīqī tiḥādīth Ta’rīḫ Bagdād, Cairo, 1958; for further literature see Brockelmann, op. cit.; Munir ud-Din Ahmed, Muslim education and the scholars' social status up to the 8th century Muslim era in the light of Ta’rīḫ Bagdād, Ph.D. thesis, Hamburg 1968. KHĀTĪB DIMĀSHK [see al-ʿAṣSIM].

KHAMT [see KHĀTAM].

KHATMA, KHITMA (a.), pl. khītām, the technical name for the recitation of the whole of the Qurʾān from beginning to end, the verbal noun from khyātama, denominative verb from khyāt, the complete recitation of the Qurʾān is, especially if it is done within a short time, a meritorious achievement, e.g. in eight nights, as Ubayy b. Ka'b is said to have done ( Ibn Sa'd, iii/2, 61; cf. on Ibn Ṣa'd, ibid., iii/2, 53). It is related of Sulaymān al-ʾAṣmāʾī
that he accomplished the khatma at times according to Ibn Mas'ūd. For a dead man, the reciters were asked to recite the Surah al-Khatamāt (i.e. in the 1001 Nights in the story of the merchant Ayyūb and his son). In Egypt the khatma was used as an entertainment for guests. In modern Mecca the so-called thikāt, now called ṭamīrīd at al-khatamāt, was asked to recite the reading of Ibn Mas'ūd. In South Arabia a khdām is presented to one who has recited the Kūrān. It is presented to one who has recited the sacred text of the Kūrān, subsequently down the sacred text of the Kūrān, subsequently is presented to one who has recited the sacred text of the Kūrān, subsequently.

The Arabic writing used, according to tradition, even as early as the lifetime of Muḥammad, for setting down the sacred text of the Kurān, subsequently underwent a diffusion corresponding to the expansion of the Islamic faith and to the development of the Islamic civilisation in which it came to full fruition. A script of alphabetic and phonological type, belonging to the vast family of Semitic scripts, it showed in this capacity the characteristics of a consonantal script, with vocalisation signs added in the form of accents, and thus belongs to the category of scripts of which "the orthography always comprises an element of interpretation by the reader, an ideographic element" (M. Cohen). Its conditions of use and development were therefore determined by its association with the language with which it was required to express, in terms of social facts to which we shall have to return, for the Arabic language became very quickly a major academic and literary language, while experiencing here and there diversifications of articulation and pronunciation which belonged to the sphere of colloquial usage and were consequently ignored at the level of orthography. This very individual script was also applied to other languages where the conditions thereby created do not prevail. On the other hand, in the evolution of Arabic script, the shapes of the letters themselves underwent changes in appearance which were not only linked to the rare attempts at orthographic adaption imposed by the cultural milieu, but were also determined by other influences, technical, aesthetic and psychological, within Arabo-Islamic society during its evolution in the course of the centuries, not the least of these influences being the assimilation of graphic writing to an art-form.

It would be impossible here to make a proper study of either the nature or the evolution of Arabic writing in its many different manifestations, while taking into account the principal studies dealing the subject, without some preliminary and indispensable remarks, regarding both its scope and its propagation. These remarks can only be brief and inconclusive, because the perspective has been insufficiently pursued to this day: it appears in fact more to the curiosity of the historian and the sociologist than to that of the specialists who have hitherto interested themselves in decipherment or in stylistic analysis of Arabic writings. It nevertheless opens up directions of research which can only prove to be fruitful, inviting us to consider, behind the simple observation of palaeographic facts, the meaning and the value of the evidence carried by the documents themselves. Here we encounter some of the questions of a general order which have been posed by the linguist Marcel Cohen when he has reflected on the conditions of birth, expansion and transference of different types of script, and has been obliged to envisage them in the terms of the axioms affirming that "the use of the script is a function of its utility in a given society" (see La grande invention de l'écriture et son évolution, Paris 1956, passim).

The first point to be underlined in this sense is, without doubt, the incomparable prestige which has constantly been enjoyed, in the world of Islam, by an Arabic script borne, it could be said, by the expansion-movement of the religion with which it had been associated from the beginning. As the instrument of materialisation and transmission of a message identified with the Divine Word, this script permitted, among the members of the first Muslim community, the precise conservation of the letter of the revelation and, thus facilitating its study as well as its memorisation, obtained a sort of "sacred character". The reality of this "consecration" as confirmed by the textual Arabic sources; the data regarding this subject, found in the Kūrān itself and the hadīth, also in personal opinions of various authors, deserve a more extensive and systematic exploration than has been undertaken hitherto (see, for example, the attempt made by F. Rosenthal, Significances des scrits arabes. Sauf la véritable écriture, in Ars Orientalis, iv (1961), 15-23; cf. idem, Abū Haiyān al-Tawhidi, on ponmansī, in Ars Islamica, xiii-xiv (1948), 1-30).

At the same time, the Arabic alphabet benefited in its diffusion outside Arabia, from the rapid propagation of Arabic as a liturgical and cultural language of the Arabo-Islamic empire, itself constituted shortly after the conquest to which Muhammad had given the first impulse and which followed almost immediately upon his death. The various usages, profane as well as religious, for which the Arabic script was henceforward adopted, conferred upon it a considerable expansion in its territorial scope: not only did it take the place of local scripts previously employed, in the same way that Arabic was to some extent substituted for the autochthonous languages temporarily reduced to an inferior role; but it was also offered to all Muslims, by means of the teaching of the Kūrān, first written and read in Arabic, as the means of graphic representation of various non-Arab languages, those which continued to be employed or which were gradually revived, in various provinces of this rapidly-fragmented empire, or even those which were introduced, in differing circumstances, by new ethnic elements, but which all encountered, in the course of the centuries, a preferential treatment linked to the development of states and of national feelings. Thus the Arabic script became the script of Iranian languages (such as Persian and Pashto or Afghān) or Turkish languages (such as the Qırımān Turkish of the Ottoman Empire and other Turkish dialects then current in Adharbaydjan, in the Caucasus, in Turkestan and as far away as China) languages of the Indian (the Urdu variety of Hindustani) and Malayan peninsulas (the ancient script of Malay, as well as languages belonging to Madagascar and the Comoro islands), languages of North Africa (Berber), of mediaeval Spain (literature of the al ja'ma [q.v.]), of Slavonic Europe (the Croat language, for example), and of Black Africa (languages of the Bantu family, such as Swahili, or Sudanese languages, such as Hausa, Peul and Kanouri from the Chad region). At the same time, it was the object of other episodic usages (for more precise details and essential bibliography, see M. Cohen, Grande invention, 184-6, and doc. 199-11).
It would thus not only appear difficult to distinguish formally from the Arabic script the various scripts of the Islamic domain which borrowed its alphabet, but it is even more difficult to draw with precision, over the course of the centuries, the contours of the geographical area marked by its usage. The historical mutations of the Muslim world, losing some of its provinces, making gains in other directions and attaining its actual limits by the device of proselytism and peaceful conversion, provoked constant modifications in the parallel developments of a language, a religion and a script, whose contour-lines did not necessarily coincide. There were of course some absolute regressions on the part of Islam and of Arabic speaking (the reconquests of Spain and of Sicily, for example), resulting in a similar abandonment of Arabic graphisms, except in the case of ornamental inscriptions; but there were also cases where the spoken Arabic language declined, ceasing to cope adequately with the administrative or literary requirements, but the Arabic script survived, linked to the maintenance of the academic Arabic languages in circles still Islamised. Also, there were cases of Islamic gains, at once territorial and demographic, especially notable in South-East Asia and Black Africa, which resulted in an expansion of Arabic graphisms surpassing that of the language to which it corresponded with that of the Muslim faith itself; on the other hand, areas Islamised in ancient times, where Arabic retained its prestige as a religious language, have seen in modern times a decline in the use of the Arabic script, as decisions have been taken favouring the phonetic notation of, for example, Turkish, Malay, Malagasy or African languages into the Latin, and sometimes the Cyrillic alphabet.

The consequences of these various phenomena of replacement, or on the contrary, of adoption, of the Arabic script cannot be evaluated quantitatively in a precise manner, any more than can the effects of the recent tendency to an increased utilisation of this script, in the Arab countries, for the practical reasons of the proliferation of documentary material and especially of the progress of education and the spread of literacy, familiarising the vast masses of the population with the alphabet.

This progress at least seems clear-cut, and the crystallisation of sentiments linked to a new consciousness of Arabism and of its cultural patrimony even today reinforces the vogue and the universality of a script which has never ceased to transcend, as a mode of symbolic expression, the frontiers of the Arabic-speaking world. We know in fact to what extent its characters, privileged symbols of a true politico-religious unity, were able, by emotional as well as practical means, to impress upon the minds of Muslims of every race and every country that recognised them, from the classical period of Islam onwards, their superior and incontestable artistic worth. In that period, in fact, when the triumphant society which had adopted the Arabic characters used them for utilitarian ends (arches, historical inscriptions, coinage, that of all kinds derived purposes (copies of the Qur'ān, pious inscriptions, religious texts), the script was tending through its use in these media towards a high degree of aesthetic and decorative accomplishment in accordance with certain rules of formal beauty, as well as with the exigencies of literal meaning. The practice of writing Arabic was from that time onward an art, as well as a science, reserved for initiates. All the same, the experts in calligraphy were judged worthy, and this has remained the general rule in every Muslim society, to attain to the double distinction of artist and respected sage, acceding sometimes to the rank of masters of the "science of letters" (see hurof), itself a branch of the divinatory science of ḍiyār (q.v.) and an instrument of a talismanic art linked to certain aspects of mystical speculation.

This exceptional situation regarding the Arabic script over the centuries, in a particularly vast world where the "thing written" was at once admired and preserved, is insufficient alone to explain the abundance and the variety of documents on which today all knowledge of the forms belonging to this script, and their history, must rely. Developments of another order must also be invoked, among them one factor which in its way considerably influenced the development of Arabic civilisation, viz. the widespread manufacture of paper in the lands of Islam from the 9th/10th century onward (see kaghd). The expansion of this industry, which was not without effect in the sphere of economic exchanges and the transmission of sciences, facilitated the manifestations of the art of writing in providing the most convenient medium, with the smoothness of its surface and its lightness, a medium that was durable and not too costly. Sheets of paper of various formats, which could be carried, rolled up, folded and sealed, thus supplied the indispensable material for innumerable letters and archives, the latter sometimes enriched with artistic and illuminated signatures, which came to supersede the rare and costly specimens previously represented by pieces of tanned skin or parchment (see dild) as well as by papyri (see kirtas). Their use permitted hand-written books, preserving in Arabic the texts of literary or academic works so that they proliferated at such a rate that the profession of copyist-cum-book-seller became, in the mediaeval Islamic cities, a profitable occupation in the context of the growth in popularity of "reading-rooms" and of private libraries (see mizana). It was not only intellectual life that gained a fortunate boost; but from that time on, the educated Muslim became a indefatigable writer, recording the oral tradition of his masters through the medium of the written word, never hesitating to comment upon or summarise, pen in hand, his own works as well as those of his predecessors, from whom he gladly reproduced extracts and quotations.

In the same line are the effects of another technical invention, which came much later to the Islamic world, that of printing with movable characters. From its expansion in the Near East in the second half of the 19th century—four centuries after its invention and diffusion in western Europe (although impressions on blocks of wood had made their appearance in the 'Abbāsid period, in the 4th/10th century for the reproduction of prayers in Arabic and of talismanic formulas; cf. M. Cohen, Grande invention pl. 53)—dates a new transformation in the conditions of usage of Arabic writing, which have recently been further aided by the advent of typing and other industrial processes. The phenomenon, interesting to consider in itself, could have resulted in a radical normalisation of Arabic writing, an undertaking which is still recommended in some quarters today in the form of various projects for the improvement or even the replacement of the traditional alphabet. In fact, it resulted only in the hardening of some types of usage, halting, in favour of the most widespread cursive, that is the "oriental" cursive, the evolution of signs which have preserved to this day in printed texts the features of a hand-written script.
We must return to the various functions supplied by Arabic writing in the mediaeval world in order to understand the abundance of stylistic varieties which corresponded, in spite of its constant orthography, to successive or concomitant stages of its development in the course of the centuries.

The writing practised by government scribes in their compilation of archives or their official documents could not be the same as that of calligraphers working to satisfy the taste for luxury of some patron, nor that of pious people copying the texts of the Kurān, nor that of scholars making rough drafts or taking down speeches and discussions as dictation, nor that of merchants writing private letters and statements of account, nor that of makers of amulets and magical diagrams, for example. The greater or lesser degree of legibility required in each case—which it was a case of documents intended to be widely read or appreciated solely from an artistic angle, or designs of limited, technical and sometimes even esoteric usage—intervened to modify the types of letters used; thus certain types of script reserved for certain uses are differentiated, scripts of diplomacy or of business accounts, for example, but also artistic scripts illustrated by inscriptions on objects of common usage, such as the illegible anthropomorphic script on letter seals, or precious objects of inlaid metal, are disguised as the gesticulations of small figures (see on this subject, D.S. Rice, The Wade Cup in the Cleveland Museum of Art, Paris 1954, 22-33), or on the contrary, the rigid and simple “kūfī” or “astronomical” scripts used particularly for the figures and other markings born by astrolabes (see for example, M. Destombes, Les chiffres coufiques des inscriptions astronomiques arabes, in Physisc, ii (1960), 197-210).

Other types may have been given shape by the influence of the many different regional milieux and national temperaments which coexisted in the world of Islam and whose heritages it is difficult to define with certainty. Even if our remarks on this subject may be connected with reflections concerning other families of scripts (see the collective work devoted to L'écriture et la psychologie des chiffres coufiques des instruments astronomiques, Paris 1967, completed by the more recent commentaries supplied by J. Sadan, Encore du nouveau sur scribes et copistes, in REI, xiv (1975). But we should not at the same time forget the influence exerted by the utilisation of different techniques, which were prevalent both for monumental and furniture inscriptions and could range from incision and sculpture in champlevé, in stone and stucco, to painting on plaster or pottery, to carving on metal, to inscriptions in relief or to the complex construction of mosaics with cubes of glass and especially, with fragments of brick and ceramic.

Actual fact does not allow us to establish, as has sometimes been suggested, that there are two separate categories of Arabic characters, one represented by epigraphic documents of every genre and the other by manuscript texts. It is known, in fact, that the eminent calligraphers often provided, by setting them down on paper, the models for inscriptions subsequently executed in every other manner and that a trait peculiar to the artisans of the mediaeval Muslim world was that they loved to prove their virtuosity by transposing, from one material to another, and from painting to sculpture, or from metal to ceramic, or conversely, worked. It seems, on the other hand, that the supple involutions of rounded letters, sometimes credited solely to the talent of the copyist, are found from the 6th/12th century onward in monumental inscriptions and that there is, on the other hand, no shortage of ancient manuscript having recourse to the angular characters incorrectly described as “lapidary”. But in any case, it must be admitted that the nature of the technique practised is often sufficient to explain the variations, at the same time multiple and concurrent, without being of exactly simultaneous usage, that are to be found among inscribed compositions, of the same date and of the same origin, established on different material bases. There is no doubt that here we find the determining cause of much in the way of subsequent stylistic ramifications, of which the birth would otherwise appear fortuitous.
Here should be added the effects of choices which are more difficult to discern in their motivations, for they were linked with the very attitude of mediaeval Muslim society to artistic invention, to its taste for the repetition of formulas and the conventions of workshops, to its admiration for redundancy and sumptuousness which developed under the aegis of patrons motivated as much by love of ostentation as by concern for their own glory, and which gave rise to the refinement of sumptuous manuscripts which multiplied in the same way as that of monumental and movable epigraphs. These last factors in the differentiation of shapes acted, however, without going against the spirit of conservatism which marked Arabic writing on the level of orthography and which held to a great extent to the spirit of an Arabo-Islamic civilization conscious of its superiority, at the same time reserving to a small elite the monopoly of a written communication of limited accessibility and destined to remain thus.

For all these various reasons (more extensively developed by J. Sourdil-Thomine, *The development of Arabic script*, in *Cambridge History of Arabic Literature*, i, ch. i), the Arabic script was abundantly used in an Islamic milieu over the course of the centuries, and innumerable documents bear witness to it. Such wealth excites admiration, but it also explains the difficulties always encountered by those wishing to study it methodically: the world of Arabic palaeography remains that of scattered and unevenly accomplished exploratory studies, where general surveys of sufficient completeness are lacking. On the one hand we shall stress the defects of patons motivated as much by love of ostentation and sumptuousness which developed under the aegis of patrons, and on the other hand we shall indicate the deficiency, we shall content ourselves here with a summary of the first efforts devoted to the study of the preceding account, replies to certain aspects of the problem (thus M. Minovi and S. al-Djaburi, *Dirasat fi ta'rikh al-khatt al-'arabi*, Beirut 1972, or to both of these at once (S. Y. Rice, *The unique Ibn al-Bawwab manuscript in the Chester Beatty Library*, Dublin 1955). Here there are only to be found provisional elements and incomplete syntheses upon groups of graphical variations which seem, by their very volume, to have dampened the enthusiasm of the specialists, who, although a list of their works might give the impression that each of these subjects was covered at length, have never dealt with more than a small part of an immense and still partially unknown field.

As the science of studying Arabic graphisms, which figures among the modern disciplines of orientalism but remains a science in its infancy, Arabic palaeography has not yet given birth to a single manual or introductory work other than one major publication, which after many years of planning remains incomplete. The idea for this work first occurred to Adolf Grohmann when he attended the lectures given on this subject by Josef von Karabacek in 1910 and 1912 at the University of Vienna. Only two volumes have appeared to this date (A. Grohmann, *Arabische Paläographie*, Teil i, Vienna 1967; Teil ii, Vienna 1971), which there is little hope of ever seeing completed. The historical summary of the first efforts devoted to the study of Arabic writing, first in the Islamic world (i, 4-32), then among a growing group of western orientalists from the beginning of the 17th century to the present day (i, 32-65) is followed, after remarks bearing on materials of writing (*Die Schriftenstofte*, ii, 66-131) only by analyses concerning the topics of script defined by the author as "lapidary" (*Das Schriftenstücke*, ii, 3-290), types whose study is certainly of vital importance, but whose various aspects are not sufficient to characterize the evolution of Arabic writing in its entirety.

There is also the survey, meticulous but of limited scope, compiled by B. Moritz in 1910 in the first edition of the *Encyclopaedia of Islam* [v. ARABIA]. Other similarly hasty surveys followed, which attempted not to place Arabic writing among the various systems known of notation of language signs (thus M. Cohen, *Grande invention*, esp. 181-6, 234-8, and 328-30, where the previous works are mentioned and remarks of a methodological order made; see also J. Sourdil-Thomine, *L'écriture arabe et son évolution ornementale*, M. Rodinson, *Le monde islamique et l'extension de l'écriture arabe, in L'écriture et la psychologie des peuples*, 249-61, 263-77; and D. Divinger, *The alphabet, a key to the history of mankind*, London and New York 1968, i, 210-13), or which attempted to place it before a more extensive public by increasing the number of illustrations (thus E. Kühnel, *Islamische Schriftkunde*, N. Abboud, *Arabic palaeography in Art Islamique*, viii (1941), 67-104, which combined with a critical study of the preceding account, replies to certain positions adopted by A. Jeffery on the possibilities of identification of ancient Arabic scripts). Finally, there have been others who have confined themselves, either to geographical areas (for example O. Houadis, *Essai sur l'écriture maghrébine*, in *Nouveau mélanges orientaux*, 1886, 85-172, or to a period or to such-and-such a series of specimens and the information they provide.

In the absence of any means of ameliorating this deficiency, we shall content ourselves here with presenting a provisional survey of the results obtained. On the one hand we shall stress the defects in orientation of the scanty working-material that exists, and on the other hand we shall indicate the principal opportunities that present themselves for tackling this vast question, pursuing a double approach: bringing out on the one hand the specific traits of the Arabic script of sumptuous manuscripts of ambitious titles, of which the most important are those occurring in the preceding account, and the present day for the consistency of its system of transcription, whilst drawing attention on the other hand to important chronological phases discernible in the evolution of its shapes. Furthermore, it should never be forgotten that in addition to these major stages, there were secondary phases, linked together, following one another in succession or on the contrary overlapping, in a somewhat anarchic process of development, according to the changing modalities of usage and the great artistic flowering to which allusion has been made above.
London 1875-83; B. Moritz, Arabic palaeography, Cairo 1905; E. Tisserant, Specimens codicum orientalium, Bonn 1914; A. J. Arberry, Specimens of Arabic and Persian palaeography, London 1939; G. Vajda, Album de paléographie arabe, Paris 1955; S. al-Munadjidji, *İl-İlāb* ve *İl-İkhtiyarat*, i, i. al-Namâdji, Cairo 1960; and to which may be added collections of exercises in decipherment conceived at any early date (such as M. Bresniers, Eléments de calligraphie orientale, Algiers-Paris 1855, or L. Cheikh, Spéci-mens de écritures arables pour la lecture des manuscris anciens et modernes, Beirut 1885 and 1895).

In fact a search has to be made in works belonging to disciplines other than palaeography, in the narrow sense of the term, in order to find some of the most positive results regarding the study of Arab characters. Thus we may mention the important data obtained concerning the writing of the first centuries, through the progress of the science of papyrology. To the conclusions, today considered obsolete, reached by a Silvestre de Sacy and forming the basis for subsequent researches (as in his Noveaux apéritifs sur l'histoire de l'écriture des Arabes du Hâdjaz, in *JA*, s. (1827), 209-31), there have succeeded publications by a Grohmann, starting from the experience of Adolf Grohmann or of N. Abbott, as well as several other specialists (see on this subject the synthesis-data in A. Grohmann, *From the world of Arabic papyri*, Cairo 1952, esp. 69-93, and Einb. Jüdischer Texte, in *Einführung und Christentum des arabischen Papyrakunde*, i, Prague 1955, esp. 88-103; cf. *Arabisch Papyrakunde*, in *Handschrift der Orientalistik*, i/s, Leiden-Cologne 1966). These permit appreciation of the true value of such texts, difficult to decipher from equally identifiable mint centres and bearing inscriptions composed invariably in carefully executed scripts. These types of information have sel-dom been collated as they deserve, though mention should be made of the first results in this field, contained either in catalogues compiled according to modern rules (see the table of letter-forms set out by J. Walker, *A catalogue of the Arab-Byzantine and Post-Form Reconstructions*, London 1956, p. cii), or in specialised *Corpus* essays (see for example, the remarks of a palaeographic order contained in G. C. Miles, *Early Arabic glass weights and stamps*, New York 1948, 29).

Studies which have proved particularly fruitful, from the viewpoint of palaeography, are the works devoted by epigraphists to this decorative aspect of Arab inscriptions and to the ornamental distortions of their characters, which constitute one of the most significant features. Not only has the sys-tem inaugurated by Samuel Flury concerning certain artistic schools locatable in time as in space (see for example, his *Islamische Schriftstil*, Amida-Diyanet X1, Jahrhundert, Basel-Paris 1920; idem, *Le décor épigraphique des monuments de Ghazna*, in *Syria*, vi (1925), 60-90; idem, *Le décor épigraphique des monuments fatimid du Caire*, in *Syria*, xxvii (1936), 505-76; and *Ornamental Kufic inscriptions on pottery*, in *Melanges L. Masson*), iii, Damascus 1957, 301-17, and *Le style des inscriptions arabo-siciliennes à l'époque des rois normands*, in *Études d'orientalisme dédiées à Lévi-Provençal*, i, Paris 1962, 307-15; M. Ocaña Jiménez, *El cufico hispano y su evolución*, Madrid 1970), but a similar method has been applied to the study of inscriptions on movable objects (L. Volov-Golombek, *Plaïted Kufic on Samanid epigraphic pottery*, in *Ars Islamica*, vi (1966), 107-23). Then the procedure used for precise cases has also on occasion received particular attention (thus J. Sourdrel-Thomine, *Quelques réflexions sur l'écriture des premières stèles arabes du Caire*, in *Annales asiatiques*, xi (1972), 23-35). Elsewhere, observations of this type have been collected and linked together in an ambitious treatment, such as that which was attempted by Adolf Grohmann, starting from a truly encyclopaedic knowledge of the question, but in a manner too diffuse to allow a clear perspective of the evolution of the whole phenomenon (see A. Grohmann, *Arabische Paläographie*, ii, cited above, of which the plan of research has been announced by the author in *The origin and early development of floreted Kufic*, in *Ars Orientalis*, ii, (1957), 183-213).

Finally, the studies brought to fruition more specifically under the disciplines of codicology, the science of manuscripts and their dating, utilising with profit the examination of their various external characteristics, must in their turn not be forgotten, even if they are still far from attaining a degree of scientific precision sufficient to bring to palaeography the elements of certainty that might be expected. There is, in fact, a contrast between the minute care taken by these users and collectors of every copy of an Arabic text to add to it notes supplying its history, on the one hand, and the in-sufficient use, on the other hand, made of these notes in modern times to establish the dating of these copies and, thereby, the classification and verifica-tion of their scripts.

Certainly, the details recorded in modern cata-logues, details supplied by the title pages or the final pages of manuscripts and enabling us to dating them by means of their colophons as well as by the various marks of ownership, certificates of donation such as *wādk*s (*q.v.*), seals, reading marks and certificates of audition that they contain, have served as points of reference, in the case where they have been noted: introductions to critical editions of good quality, presentations of collections, studies bearing on the conditions of transmission of incipits, texts, announcements of discoveries shedding new light on opinions previously held (see for example, J. Schacht, *Sur quelques manuscrits de la bibliothèque de la mosquée d'al-Qarawiyyin à Fès*, in *Melanges Lévi-Provençal*, Paris 1962, 271-84, or S. M. Stern, *A Manuscript from the library of the Ghaznavid Amir 'Abd al-Rashid*, in *Paintings from Islamic lands*, *Oriental Studies* no. 4, Oxford 1969).*

Nor has use ever been made for purposes of system-atic classification nor of description of series of manuscripts belonging to such-and-such a type of
especially for the series of new hypotheses subsequently expressed by N. Abbott (The rise of the North Arabic script and its Kur'anic development, Chicago 1939), A. Jeffery (review in The Moslem World, xxx (1940), 191-8), R. Blachère (Introduction au Coran, Paris 1947, 83-9), and G. Levi Della Vida (Frammenti coranici in carattere cufico nella Biblioteca Vaticana, Vatican 1947), without forgetting the very illuminating note by A. Grohmann (The problem of dating early Qur'ans, in Litt., xxxii (1958), 213-31) taking the discovery of a new fragment of the Kur'ân on papyrus as a basis for proposing the attribution to the 1st/7th century copies of the style previously called bidâjî.

Certainly, the conclusions reached till now, especially concerning the calligraphic material in ornamental "kufic" known as "lapidary", remain fragile and imprecise. There is no scientifically defensible position other than to suspend in this regard all judgement until there have been made, with the most minute observations of detail, regroupings by families, which comparisons and careful indexing will perhaps enable us to apportion chronologically and geographically. There is no guarantee even that the points of reference established then will not appear to be deceptive in regard to the work of research and analysis which will have to be done and which would have to take account of extensive collections not yet inventoried like that of the Damascus Kur'âns of Istanbul (cf. J. Sourdel-Thomine and D. Sourdel, Nouveaux documents). But, in spite of these reservations, the several working hypotheses already adopted, according to which were recently classified in an approximative manner the 164 exhibits of a remarkable exhibition of Kur'âns of all kinds (see M. Lings and Y. H. Safadi, The Qur'ân. Catalogue of an exhibition of Qur'ân manuscripts at the British Library, 3 April — 15 August 1976), prove themselves to be indispensable in enabling the reconstruction, by means of Kur'ânic scripts alone, of the history of Arabic manuscript writing and its enrichment through elaboration of forms and the introduction of illuminations sometimes foreign to the shapes of the letters.

Beside these various scientific considerations, there are furthermore the data supplied by the ancient textual sources which have for a long time served as a basis for the reflections of the specialists and which should not be neglected. Even if most often they do no more than repeat one another and thereby ensure the permanence, to the modern milieux of calligraphers, of notions which were enunciated by the authors of the mediaeval period and which seem to have been subsequently perpetuated without being always fully understood, they show the interest felt by an erudite traditional society in the writing which it used, and they reflect in this sense the fruits of an instructive and solid experiment.

Certainly, the ideas which to this day have been extracted and expressed in western surveys correspond to a view of the problems at once formal and incomplete. What has been largely extracted from them is either the names of famous scribes considered to be the heads of schools and presented in the course of accounts of an anecdotal character, or enunciation of rules of calligraphy remaining obscure in the absence of an adequate terminology, or lists of technical terms, especially those which were in use to designate the styles of writing which scholars were content to enumerate. Even when an approach has been made on a more critical level, and attempts
made to determine the exact bearing of the terms adopted, to this day it is rare for sure conclusions to be reached. Whence arise the discussions which are still pursued among modern authors; and whence should be reached. Whence arise the discussions which are certain divergencies of interpretation concerning the adopted, to this day it is rare for sure conclusions to be reached. When the chronological indications developed in this manner have permitted them to determine, from Ibn Mūkla (273-328/886-940) to Ibn al-Bawwāb (d. 418/1022 or 432/1042) and to Yāḥyāt al-Mustaʿsim (640-58/1242-58) the most logically-supposed phases of a progression towards the elegance and suppleness which characterised, over the centuries, the evolution of the Arabic writing practised by scribes and copyists.

Such are the works on which at present our knowledge of the history of Arabic writing rests. The provisional assessments which may be drawn from them can conveniently be grouped under a small number of rubrics.

The first of these rubrics concerns the archaic Arabic writing which is seen to appear in the 1st/7th century and the importance of which rests on two fundamental features: the coherence, on the one hand, of its system of consonantal notation based on the existence of an alphabet, defective perhaps but already well established; and on the other hand, the normative quality accorded to it from that time, which was to enable its form to be maintained under the most elaborate of later graphical variations.

This archaic or primitive Arabic writing was employed in Arabia at the very beginning of Islam, from the lifetime of Muhammad and during the caliphates of his immediate successors. The most ancient sources of evidence other than literary at our disposal are firstly, rare and uncertain: fragments of undated copies of the Kurʾānic text or letters of Muḥammad on parchment of which the authenticity has not yet been firmly demonstrated. Subsequently, some inscriptions are found on coinages of the type known as Arabo-Sasanid or Arabo-Byzantine, and of greater importance are various lapidary remains, notably an epitaph from 31/652 preserved on a stele in the Cairo museum, of which the alphabet has already been extensively studied, and a historical inscription from 58/677-8 in the name of Muʿāwiya found in Arabia near al-Ṭāʾif on a dam out in the countryside. These texts permit a clear knowledge of the crude forms, so simple in fact as later to cause confusion, of the seventeen characters which constitute its alphabet, eighteen if we are to include the double letter ʾām-ʾalif, still more counting the variations imposed on the isolated, initial, medial or final letters, put forward by the grammarians, from the 2nd/8th century, according to an original scheme taking account both of their appearance and of their phonetic characteristics. The shapes thus used had been inherited from earlier Semitic scripts, but according to a line of descent which cannot easily be established. They required in any case an orthography which was the object of some later improvements, by the addition of supplementary signs, but which always demanded a reading of the Arabic based on the recognition of the words themselves and thus permitted only to trained scholars to do this.

This orthography was first based on the small number of signs adopted to designate the twenty-eight phonemes of the Arabic language, twenty-five consonants and three semi-vowels, without counting the long vowels ā, ī, ʾā, corresponding to the three vocalic tones of classical Arabic, and the short vowels which, in a Semitic language are generally considered as foreign to the "skeleton of the word" but which require no less a special system of notation, which became evident, according to the textual sources, before the end of the 1st/9th century, the sign having been assigned to two or three phonemes, these were subsequently differentiated by the
adjunction, above or below the line, of one, two or three of those diacritical points which have been preserved to this day and to which was added also a special sign, the ḍāddā or taḥdīdī, to mark the doubling of a consonant. Thus it became possible to distinguish letters such as bāʾ, tāʾ, thāʾ, nūn and yāʾ, in their initial and medial forms, or hāʾ, kāʾ and ḍīm, dāʾ and ḍādī, rāʾ and sīn, sād and ẓād, lāʾ and rāʾ, ʿayn and ḍhyn as well as fāʾ and kāf. The introduction of this practice, which in general may be seen as the initiation of a process put into practice by Syriac writing, cannot be dated with certainty, especially as the pointing appeared to be more or less necessary according the difficulty of the words transcribed and according to the more or less hieratic and stylised character required for the writing; but the example supplied by the inscription of Muʿāwiya mentioned above would seem to prove that its use in moderation, in the form elsewhere of little oblique strokes rather then points, dates back to the same antiquity as the use of the Arabic alphabet in the ancient Muslim era. Then, later in the same century, appeared special signs for vowels.

As for the shapes themselves, we should emphasise not only the simplicity of the contours and the irregularity of proportions, but also the abundant use made of ligatures, which joined the letters between themselves in the interior of the words, so as to give the illusion of a continuous line in which the letters were placed. This fact would seem to prove that the Arabic script derives from a "well-worn" script in which characters already degenerate were preferred to facilitate the joining of cursive script; but the question remains open as to where or when this degeneration took place, and the reasons drawn from the vast family of Aramaean writings which was formerly spread over the entire Near East.

The question of origins, for which the basic documentation continues to be limited to the rare inscriptions known as "Proto-Arabic", has excited a number of theories from the statements of Bernhard Moritz, re-examined by Nabia Abbott, to the recent hypothesis of J. Starcky (see on this subject J. A. Sourdel-Thomine, Les origines de l'écriture arabe à propos d'une hypothèse récente, in REJ, xxxiv (1960), 153-7; cf. on the same point the reservations of A. Grohmann, Arabische Paläographie, ii, 7-33), but to this day the question cannot be considered settled. The ancient Arabic sources, which attribute the invention of the Arabic script to persons of legendary nature, presented, according to the accounts in question, in different contexts, are on this point of very little help: they content themselves with affirming that the script was in use in the Arab kingdom of the Syria-Mesopotamia region as well as in Mecca in the 6th century A.D. On the other hand, the researches of modern scholars have as yet produced only controversial approximations. The opinion which has prevailed for more than fifty years would have it that there was a progressive transformation, in Arabic characters, of the symbols used, several centuries earlier, by the Nabataeans of the kingdom of Petra. The petitio principii on which this opinion rests and which consists in assimilating to the inscriptions known as "Proto-Arabic" the "Nabataean-Arabic" inscription of al-Namārā, quite different in appearance and two centuries earlier, has recently been vigorously opposed by specialist scholars of Nabataean who deny the existence, in its cursive forms, of the least resemblance to the future Arabic forms. These same specialists insist on the total hiatus that would in fact exist, as regards writing, between the distant period of the zenith of the Nabataean kingdom, in the 1st/2nd century A.D., and the birth, in the 1st/7th century, of the Islamic state whose development ensured that of Arabic writing. So there arises for them the necessity to search out the prototypes of the Arabic characters in the symbols which served for the notation of other languages used, between the 3rd and the 6th centuries A.D., in the pre-Islamic Near East, especially in the Christian Arab kingdoms of Lower Mesopotamia, around the famous intellectual centre of al-Hira [q.v.]. These symbols are not known to us today through any relics, but there remains as a clue the fact that the archaic Arabic script, this "linked cursive with reduced bodies for letters", as it has been strikingly defined, obeys the same principles as the Syriac script, of which some varieties no longer in use could well have been in practice in al-Hira and in its surroundings.

Distinguished from archaic Arabic writing by its concern for equilibrium and regularity—this will be the second rubric—is "the imperial script" of the following period, which deserves the dynastic title of Umayyad. While remaining faithful to the preceding orthographic system, eventually improved in copies of the Kūrān by the notation of short vowels, in the most anciently attested form, that of red dots, this script was in fact modelled, from a stylistic point of view, by the taste of the sovereigns who distinguished themselves in this sense by various innovations. Such was the official decision of the caliph ʿAbd al-Malik imposing the use of Arabic on the scribes of the central as well as of the provincial administration, and ordering the composition in that language of the coinage, which represented henceforth a new type, without any décor other than calligraphic. One notes that from his reign date the first specimens of Arabic writing worthy of comparison with Greek inscriptions previous to the conquest, and it is no accident that these specimens are found on milestones, themselves erected according to ancient usages. It subsequently fell to the lot of the successors of ʿAbd al-Malik to leave on the walls of the first monument of Islam, the Dome of the Rock in Jerusalem, an epigraphic band of hitherto unequalled importance.

Thus there rapidly came to be felt in full force the effects of a quest for equilibrium imposing on the various letters of the alphabet a stricter form, and permitting their classification into three series based on simple geometric schemes: tail and straight letters producing, above the base line, perpendicular or oblique strokes of variable dimensions; those which develop, on the level of this central axis or slightly above it, loops formed like little circles or like quadrangular figures of variable dimensions; and those finally which exhibit, still in a timid manner, below this same axis, curves which are more or less open and generally treated as simple fragments of almost perfect circumferences. These results had been obtained by the vertical elongation of the alif, the horizontal extension of the dāl and especially of the āʾāʾ or the kāf, the harmonisation of the shape of the letters with loops, the extension of the terminal curves of the rāʾ and especially of the kāf or of the final nūn, the eventual turning towards the right of the termination of the final yāʾ. The same shapes could be inscribed in a rigid manner on stone or rough parchment, for texts slowly copied and intended to last on account of their religious or historical value (manuscripts of the Kūrān or
royal inscriptions, for example), or on the contrary copied more casually, with rounding and modification of forms, when it was a question of less important texts and of private or even official letters, and written with light pens on the uniform and smooth surface of sheets of papyrus.

Differences in treatment thus began to engender observable graphical variations, without, however, permitting a distinction at that stage between a dignified and a cursive script, marked solely by the requirements of legibility and speed, and a more dignified script aimed purely at the requirements of art or of prestige. These differences none the less indicate the two directions which were soon to be followed and on the basis of which certain specialists formerly considered themselves authorised to insist on a supposed ancient duality of Arabic writing of which the two equally primitive forms, the angular form known as “kufic” and the flexible known as “nasīḥa”, would correspond to different systems destined to be perpetuated side-by-side. Today emphasis should be laid, contrary to such a hypothesis, on the fundamental unity of the earliest Arabic writing, which Bernhard Moritz and Adolf Grohmann agreed in recognising; but it is nevertheless correct to place in the Umayyad period the individualisation of the currents which subsequently led to the ramification of its styles according to two principal branches.

It is to the nature and the vitality of the first of these currents that the third rubric should then be devoted, envisaging an angular script, at the same time slow of execution and naturally ornamental, whose aesthetic value and nobility always prevailed over convenience, but whose usage no less characterised the ancient 4th-5th century. Not only were copies of the Kur’ān transcribed in this style until the middle of the 4th/5th century, but it was also used to preserve works of erudition or pious texts of all kinds which were written on parchment, while monumental inscriptions owed to it their astonishing decorative quality. Thus we may speak of a constant flowering of kufic over several centuries, simple kufic at first when the means for enriching and adding to it were subjected. Thus there came about a proliferation of vertical strokes with counter-curves applied in the guise of “rising tails” to continue, on the upper part of the band, the final letters, which originally finished below the base line. Use was already also made of breaks with rectangular turns, of elongations of all kinds, of braiding, indentations, ornamental ligatures and folding knots which characterise especially the multiple varieties of braided kufic, although such a succinct enumeration cannot possibly take into account the gifts of imagination which made of every new decorative kufic inscription a work of art that was unique, because based on the previous establishment of an alphabet and of an ornamental répertoire belonging to it.

Now these are precisely the typical details of this genre which marked the specific styles of the local schools which should be distinguished if one is to follow with any advantage the history of kufic writing. Thus we observe the Syrian characters of certain types of ḍjam, ḥā or ḫā’. Similarly, the taste for braiding certain letters which might be, according to local tradition, the ḍāl, the ḥāf or the ḥā for example, the taste also for superimposed motifs such as knots on tall strokes inserted between neighbouring letters such as the two ǧāms of the word Allāh, would distinguish the works from ḥurāsān where, in the 5th/6th century, particularly refined specimens are noted. In still another context, the direct decoration of letters with flowers would have prevailed especially in an Egyptian milieu, and the perfection attained in this respect by Fāṭi-
Khatt

mid inscriptions, belonging to the style to which the name Karmathī “Carmathian” was for a long time erroneously applied, would crown the success of efforts begun in the mid-3rd/9th century. Finally, the sobriety which for many years remained in use in the western provinces of the Empire, in Andalusia as well as the Maghrib—which should be interpreted as a sign of artistic regionalism—concealed in the 4th/10th century, at the time of the apogee of the Umayyad caliphate in Spain, the nature of a kufic script that was already scholarly beneath an archaic appearance of the inscribed line.

In this fashion, one may understand the fragmentation and proliferation of the local schools to which reference should be made in order to supply even a concise picture of the varieties of angular writing practised during the first centuries of Islam. Such a precise picture has never yet been drawn; but only this would enable us to understand the stylistic developments and variations which are seen subsequently to become blurred in the latter phase of this evolution, when kufic became, after the 6th/12th century, a script set in its purely ornamental role and in some respects outdated. If in fact it continued to be used for the ornamentation of architectural surfaces, it no longer had any other role—and this would be the final phase of the evolution—except to supply controlling outlines to purely decorative compositions, which could without any geographical restriction call upon all the formulae previously tried, mingle them in the most imaginative fashion, and in particular, set a seal on their transfer from East to West. But these compositions, while continuing to be legible, were no more than symbolic, henceforth used only for transcribing short religious invocations without historical counterpart. Aesthetic quality and concealed religious sense were all that counted, and they explain the birth of varieties such as “square kufic” which had been influenced by certain Chinese characters and which succeeded in engendering, from Central Asia to Turkey, complex and rigid types of lace-work where the distinctive fundamental features of ancient Arabic writing are barely recognisable.

It is, however, this writing whose original aptitudes for flexibility and speed are immediately revealed when one tackles, under the fourth and last rubric, the success gradually enjoyed, in the post-Umayyad period, by a rounded script whose use soon spread well beyond the offices of the administration. Not only, in fact, did this favourite script of the vizier Ibn Mukhān [q.v.] who, in the first half of the 4th/10th century, took the initiative in codifying for the first time in a precise manner, by measuring them with pointing, the relationships of relative proportions binding together the various letters of the alphabet; it also fell to him to make the first systematic treatment of the best-known “six styles”. A little later his reputation as a theorist of calligraphy was eclipsed by that of such accomplished artists as the great Ibn al-Bawwāb [q.v.] at the start of the 5th/11th century—the period in which cursive writing was judged of sufficiently high prestige to be employed subsequently in copies of the Qurʾān—and the no less famous Yākūt al-Mustaṣimī [q.v.] towards the end of the 7th/13th century. This was the period of the apogee of the rounded script often known by the convenient dynamism of the name of “Ayyūbīn masāḥah”, before the scribes of the Mamlūk period turned towards redundant forms and a taste for thick interweavings of vertical strokes, and also before the appearance of novel tendencies, belonging especially to Iran and Turkey, which had two principal objects: on the one hand, the deliberate segmentation of the written line into sections “suspended” obliquely, in the true sense, one above the others according to a new art of writing which developed under the aegis of ʿIlkhānīd and Timūrid princes before coming triumphantly into its own with the works of Mīr ʿAllah of Ḥarāt; on the other hand, the methodical pursuit of a “monumentalisation” of cursive writing applied to vast surfaces, as was the rule for example in the schools of Shāykh Hamd Allāh in the 13th/16th century or of Ḥāfīz ʿUṭmān more than a century later.

The rounded graphic forms thus ultimately held sway in the majority of Islamic lands, at all levels of the art of writing, and supplanting the hieratic forms for which they became substituted, since the 6th/12th century, in the lapidary inscriptions themselves. In this context, one could return to some of the remarks previously made in response to the more beautiful and baroque realisations of ornamental kufic, while bearing in mind that a chronological and geographical classification has not yet been made of the most original schools according to which they flourished. Nevertheless, we should not forget the relative consistency of shapes which remains an essential characteristic and which justifies in a sense the sentimental attachment still shown today by every literate Arab, the attachment to a script of which the apparent variations have never been an obstacle to legibility while being the source of constantly renewed aesthetic achievements.

(J. Sourdell-Thomine)

ii. — IN PERSIA

The calligraphy which developed in Baghdad culminated in Yākūt al-Mustaṣimī [d. 697/1298], the last great calligrapher at the ʿAbbāsid court. Thereafter Baghdad lost its importance, and in such
calligraphic styles as muhakka', riżān, thulūh, naskh, ta'wīl, riḍā'ī, all of which made up the "six styles", altāfrāfī, rifydnī, thulūth, naskh, tawfi*, riḍān, all of which made up the first period. This script was used for large-sized frames and also for public buildings and their inscriptions.

Although in the section on khāṭṭ al-masāḥif, Ibn al-Nadīm's Fīrūzī says that the Persians, in the first period of Islam's appearance, used a type of calligraphy called kirāmūs (read pirāmūs?). See Atlas-i Khatīf, 126-30 for writing their copies of the Kur'ān, yet there is no early-enough attested surviving manuscript here. Badrī Atābāyī, on pp. 399-400 of his work Fīrūzī-i Kur'ānā-yi khatīf-yi khāṭṭ-ka-hāna-yi saṭānātī, Tehran 1351/1972, gives a Kur'ān page as an example of this kirāmūs style of calligraphy, yet this seems hard to prove or dispense.

Some Persian scholars, e.g. Baγānī and Rūkīn al-Dīn Hūmāyūn-Farrūkhī have argued that this style of calligraphy emerged during the Sāsānid period and continued until just after the advent of Islam. (see Atlas-i Khatīf, 397-9).

In order of their development, the different styles of calligraphy are as follows:

Kūfī. Kūfī script continued to be in use for some five centuries after the advent of Islam, especially for writing Kur'āns. Moreover, it was used for writing the titles of manuscripts and their sections and the basmalas at their beginnings until almost the end of the 7th/13th century, often as an element of decoration.

The oldest extant Kur'ān written in Persian is dated 108/623, and appears to have been written for the 'Abbasīd caliph Ma'mūn, see Muḥīn al-Shāhī, Sahīh-i Irān dar naṣīr u taqwīs-i ma'dīrī-yi islāmī, in Wāḥidī, no. lxxvii, Tehran 1371, 75-85. The Kur'ān copied by Zayn al-Abīdīn Shārīfī in 1323/935 during the reign of the Kāḏūr Muzzafar al-Dīn, in kāfī and naskh script, represents a harking-back to the ancient kūfī style of calligraphy.

The Rīḍī type of kāfī script was often used, together with thulūh, as a decorative element on buildings until recent times. Good examples of kīfī writing, in various types, are the inscriptions of the Pīr 'Alamārī tomb (built in 418/1027) in Dāmghān, and the Haydariyya Mosque (built in the 6th/12th century) in Kāzarīn.

Muhakka ("strongly expressed [word], tightly-woven [cloth]") has as its main characteristic the feature that the left corner of the letters are angled. This script was used for copying Kur'āns, and like muhakka, started to go out of circulation after the 12th/18th century in favour of naskh.

Thulūh ("one-third") is generally said to have derived its name from being based on the principle of a third of each letter being sloping. This is the script from amongst the ḏālīm-i sittā which has survived longest. It was and still is used for every kind of frame and for book titles in all Muslim countries. The most able calligraphers in this script are: Bāyūnghur (d. 857/1453), Asād Allāh-i Kirmānī (d. 895/1480), Kamāl al-Dīn Hāfīz Hārawī (d. 974/ 1566), 'Abd al-Bāqī-i Tabrīzī (10th/16th century), 'Alī Kūlī-i Shīrāzī (10th/16th century), 'Alī Rūdāfī 'Abbāsī (11th/17th century).

Naskh ("act of cancellation, abrogation"). Here, the Persians, just like in thulūh, followed the style of Yākūt al-Muṣṭaṣimī. There are some Persian manuscripts in naskh of the 5th/11th century which already show a gradual transition from kūfī. The most clear example of this is a manuscript of Abū Mansūr Muwaṭṭāk b. ʿAlī al-Ḥarawi's pharmacological book, the Kitāb al-abimin ʿan ḥakīk al-adwiyā (now in Vienna); this was written in 447/1055 by a Persian scribe called Asādī Tāsh (see Flügel, Die arabischen, persischen und türkischen Handschriften der kaiserlich-königlichen Hof-Bibliothek zu Wien, 1865, ii, 534).

After a period of temporary decline, naskh, during the Mongol period, regained its beauty during the Timūrid period, but reedech again in the 18th and 19th centuries. Persian naskh had a flavour of the rīdān script until the 18th century. Aḥmad Nāyīrīzī gave to it in the 12th/18th century a new style and liveliness, until it almost acquired a nastaʿlīk character; it had an angular look and the verticals of the letters became relatively finer, giving this script a particular beauty and fineness. ʿAlī Ḏāhir Ṣāfārī (8th/14th century), Bāyūnghur, ʿAbd Allāh Tabbākh-i Hārawī, Asād Allāh-i Kirmānī, Muḥammad Ḏāhir-i ʾIsfahānī (d. 1195/1772), Zayn al-ʿAbīdīn-i ʾIsfahānī (d. 1300/1882), Mīrzā Tāhirī-i Tabrīzī (20th century) are the most powerful exponents of this script. Modern Persian calligraphers follow the example of Aḥmad Nāyīrīzī in thulūh and naskh calligraphy.

Taʿwīl is a variety of thulūh, with its letters somewhat more compressed and rounded. Another special feature of it is that the letters like َوُؤُرُدَث are joined to the letters following them. Sometimes, however, one may come across examples of taʿwīl in which all the letters are almost joined together; sometimes the final letter of a word would be joined to the first letter of the following word. This script was used in Persia for the final page, sc. that with the colophon showing the date and place of copying and the scribe's name, of elongated format Kur'āns.

Ribā is a smaller version of taʿwīl and has the same rules. Ribā, which was formerly used for writing letters, epics and stories, later came to be used for writing the final pages of a Kur'ān, especially those of learned books. The Ottoman calligraphers created a script called this tījāsā or khāṭṭ al-tījāsā.

Djalī, djalīl was a name given to every large type of script, but was more specifically used for the large type of thulūh. The djalī variety of thulūh, which was little developed during the Sādūqī period, gradually started to become more beautiful by the 9th/15th century, and reached its utmost beauty during the Timūrid and especially ʿAṣławīd periods. This script was used for large-sized frames and also for public buildings and their inscriptions.

Ghunar, ghubari (“dust,” “dust-like”) is a term for every type of very small script difficult to read with the naked eye, but is often found in the naskh script; some very small-sized Khur’ans were written in ghubari script.

Musalsal (“strung together”) is a term for the letters of Nastaliq script when joined to each other, rather than a special type of script. It was sometimes practised by calligraphers to show off their skill.

Shikasta, siyah, a script considered to have been used from the Umayyad period onwards, has no artistic appearance and was used in financial registers and suchlike. The question whether it existed during the Sasanid period has been put forward. See Ahmad Gulcin Majallat-i Ta’lik-i Siyak, in Majallat-i Diniyati-yi A’dabiyyat, Tehran 1344/1965.

Tashiki (“suspension, hanging together”) is said to have got this name from its letters being connected to each other, and is in fact a compound of tawashi, riqa and naskh scripts, according to Persian scholars, and it is alleged that the sinuous style of the letters of the Pahlavi and Avestan alphabets played a role in its formation. Tashiki was used for writing books and letters and also in the diwans for official correspondence; it apparently started to be formed perhaps in the 7th/14th or 8th/15th centuries and by the 7th/13th century it emerged in its definite form. It was not used very much until the 8th/15th century, but then started to slowly lose its importance, and give place to shikasta ta’lik; the works on calligraphy call the ta’lik either ta’lik-i hadim or ta’lik-i asli. The invention of this script is attributed either to Khwaja Abu’l-A’im (of whom nothing is known) or to Hasan b. Husayn ‘Ali Farisi Katib (4th/10th century). Ahmad b. Ali b. Ahmad-i Shahriz (8th/15th century) was one of the great exponents of this script. The letters of ta’lik are joined to each other, and letters like ۶۶ ۶۶ ۶۶ ۶۶ would be joined to each other, and the script simpler than shikasta ta’lik.

Shikasta ta’lik (“broken ta’lik”) is the result of writing ta’lik rapidly. The letters are written in a more intricate style, which makes shikasta ta’lik difficult to read. It started to appear in the 8th/14th century, and was developed by Khwaja Tadj Salimaniy-i Isfahani (d. 897/1491). Shikasta ta’lik declined in use when nastaliq started to spread everywhere in the 7th/13th century, and was used decreasingly after the 19th century. Nowadays it is used in Persia for artistic display and for variety. Khwaja Ikhshiyar Al-Din Munshi (10th/16th century) was especially famous for this script. Persians customarily call this script simply ta’lik without the prefix shikasta.

Tarassul (“correspondence”) is a name given by the divan secretaries to a plainer form of shikasta ta’lik.

Nasih-i ta’lik, nasih-tashiki, nastaliq, is said in the works on calligraphy to have been formed by joining naskh and ta’lik, and this compound gradually came to be pronounced as nastaliq. Although it is said that it was invented by Mir ‘Ali Tabrizi (d. 850/1445), the existing manuscripts contradict this view and show that the invention of this script goes back as far as the 7th/13th century. In Turkey and in Arabic countries it is erroneously called ta’lik.

Nasta’lik, after its emergence, became divided into two styles: (a) that of Mirza Dja’ar-i Tabriz (9th/15th century) and Agha-i Tabriz; (b) that of ‘Abd al-Rahman-i Khvarami (9th/15th century). The first style, developed in Khurasan, was accepted as being particularly suitable to Persian taste, whereas the second style, developed in Western Persia, was gradually forgotten. The first style, later called the “Khurasanian style”, flourished under such able masters as Sulain ‘Ali-yi Mashhadi (d. 926/1519), Mir ‘Ali Harawi (d. 951/1544) and Baha Shaha-i Isfahani (d. 996/1587), and reached its highest point of beauty with Mir ‘Imad-i Hasan-i Sayfi (d. 1024/1615 or 1027/1617), modern Persian calligraphers follow his path.

Shikasta nastaliq, hafl-i shikasta, came into existence at the beginning of the 12th/17th century under the Safawids, as a result of writing nastaliq rapidly and of the calligraphers being under the influence of shikasta ta’lik. Official correspondence had been done in shikasta ta’lik until then, but was now replaced by shikasta nastaliq. Murtada Kull Khan Shamlu (d. 1100/1688), Shafira (d. 1081/1670) and Darwish ‘Abd al-Majid-i Ta’likan (d. 1185/1771) are the great masters of this script. Nasta’lik was used in writing literary works, whereas shikasta nastaliq was used mostly in writing letters and sometimes for official correspondence. Nowadays it is sometimes used in writing poetry in an artistic fashion. The Turks, however, showed very little interest in this particular script.

Tahiri (“epistolary”) is a more simple form of shikasta nastaliq, used for writing letters and taking notes.

Muhannad, hafl-i muhannad (“facing each other”), is not a special script. Although it is possible to apply muhannad to any type of script, this was especially done with naskh and hafl.

gündgün-i Kurgan, in Wahid, Tehran 1350/1971, no. xc; Abd al-Hayy Habibi, Tārikh-i khatt wa nusfehПодробный текст здесь.

III. IN TURKEY

The Turks also followed the path of Vāṭūlāt al-
Musta’sīnī in the aḥlām-i sītā until the conquest of
Istanbul in 857/1452. But with refinements of mathe-
matical and dimensional precision introduced by
Shāykh Hamd Allāh (840-926/1436-1520), the famous
calligrapher of Sultān Meḥmemmed II and
Bayezīd II’s reigns, these scripts reached a peak of
beauty, and as a result of this a Turkish style e:
After the conquest, other types of script came
into existence, and gradually Istanbul became a
centre for the calligraphic art.

The Turks elevated the main Islamic scripts, the
Aḥlām-i sītā, to the highest point of beauty; hence
the expression became current, “the Kurān was
revealed in Mecca, recited in Egypt, and written in
Istanbul”.

Kafī. The Sāljuqīs if Anatolia inherited the use
of this script from the Great Sāljuqīs of Persia. The
best examples of its ornamental use on buildings
are on the Karatay madrasa (built in 649/1251)
and Indje Mināre madrasa (built in 662/1264 at Kon-
yā.

The Ottomans did not favour the kafī script much,
though it had a restricted use during the first two
centuries of the empire on buildings in Bursa, Edirne
and Istanbul, e.g. the Fāṭih mosque in Istanbul.
Muhābāk and rikān. Muhābāk was especially
used for writing inscriptions within frames, and
rikān for writing Kurāns. These two scripts reached
their artistic peak in the 9th/15th century, but from
the 10th/17th gave place to ṭaḥlīl. Notable
calligraphers here were Shāykh Hamd Allāh (840-
926/1436-1520), Ahmad-i Karahisarī sometimes used
the ṭaḥlīl style.

In the 10th/16th century, so that a distinctive Ottoman
script was followed for some of the texts done in
rikān during the period of the Anatolian Sāljuqīs.
This but method was mostly generalised to
thulūh. Ahmad Karahisarī sometimes used the
musalāsī style.

Siyākāt, siyāk. We already know that siyākāt was
used in the financial land register and naskh offices
by the Sāljuqīs of Anatolia (see Houtsma, Recueil
de textes, Histoire des Seldjoucides d’Asie Mineure,
ii, Leiden 1902, 253). We do not much know about
the situation of siyākāt during the first period of
the Ottoman Empire, i.e. up to the reign of Meḥmemmed
II, since very few official registers of this period
have survived. We do, however, come across the
use of siyākāt in the documents of that Sultan’s reign.

Ṭaḥlīl. Although we find some simple patterns in
this script in the documents of Meḥmemmed II’s reign,
it was little-used in the later periods, and was
not favoured to any great extent by the Ottomans.
(For examples, see: Fatḥ-nāma-i Ārbiq. Topkapı
Sarayi Arşivi no. E. 10822, and Naṣir Öz, Topkapı
Sarayiında Fatih Sultan Meḥmem devrine ait vekhalara,
in Belleten, xiv (1950) 49. Şıkasta taḥlīl and tarrassul,
like taḥlīl, were not used in Turkey.

Dīvānī. Although the script, according to the
Turkish sources, was allegedly invented for writing
official documents and registers of the Dīvān-ī
Humāyūn founded by Meḥmemmed II after the
conquest of Istanbul, there is no doubt that it must
have existed before then, probably evolving through
the inspiration of taḥlīl. Reading dīvānī depends on a
knowledge of its rules, since in this script letters like
waw and zaruruda are joined to following letters like
following them. Dīvānī written contrary to
the rules is called dīvānī kirmast “broken dīvānī”.

Authorise and sign it using rikāī script; hence this
last was called idgāha or khatt-i idgāha. The
calligraphers mentioned under thulūh and naskh also
used these two scripts very beautifully (see album of
Shāykh Hamd Allāh, Topkapı Sarayi Library,
E.H. no. 2084, 2086, and also album of Hāfiz Oth-
mān, Mehdī III, no. 3635).

Dīlāt. The most typical and beautiful examples of
dīlāt in the period of the Anatolian Sāljuqīs, al-
though they lack any dynamic quality, are on the
portals of Indje Mināre madrasa and the Sāhīb
Atatū kulliyye in Konya. The first change in dīlāt
made by the Ottomans dates from the 9th/15th
century, so that a distinctive Ottoman dīlāt starts to
emerge. The pioneer here was the calligrapher
Allā b. Yahyā al-Sūfī, writer of the inscription on
the Fāṭih mosque and the Bāb-i Humāyūn in Istan-
bul. Dīlāt acquired an especially vigorous character
in the 19th century through the works of Mustafā
Rākīm (1173-1241/1757-1825), and thus an “Ottoman
dīlāt school” was established. Mehmēd Dīlāl al-
Dīn (d. 1253/1837) also founded a school of dīlāt
reminiscent of Ahmad Karahisarī’s style of three
centuries previously, but it was only followed by a
few; Turkish calligraphers today follow the way of
Mustafā Rākīm. Şahlīk Bev (d. 1297/1880), Şamil
Efendi (d. 1310/1912), Bādī b. al-Khattāf al-’Arabī,
Baghdad 1388/1968; idem, Badī’ī al-Khāff al-
’Arabī, Baghdad 1391/1971; Muḥammad
Azīza, La calligraphie Arabe, Tunis 1971.
(All Alparslan)
This is also a result of writing dlwdnl rapidly. We do not know the names of the dlwanl calligraphers until those of the end of the 19th century, since it was not customary to sign the documents issued by the Dlwanl. Dlwanl reached its peak of perfection in the 19th century. Some of the dlwanl calligraphers, famous at the beginning of the 20th century, are Sâmi Efendi, Kâmîl Ağdî, Ismâ'îl Hâjkî Altunbezer (d. 1940), Hâljî Öyzağfî and the still-living Hâmjî Aytâz. The use of dlwanl passed to the Arab lands through the Ottoman influence, and is still used in those countries.

Dlal dlwanl. This is a variant type of dlwanl with the letters written within each other, and used for writing fomâns and berâtâs. It was written, like dlwanl, from the top-right hand of the sheet to bottom-left hand in an oblique direction and with every line upwards at its end. The same vowel points used in ìluluk ar used in this script, and empty spaces are filled with small dots. Dlal dlwanl flourished from the 9th/15th century onwards, its perfection being in the 19th century. The calligraphers of dlwanl also wrote in this script.

Nastâ'îlîk. We come across the first examples of this script in Turkey during the reign of Mohammad II. It was brought to Turkey by calligraphers coming to the Ottoman court from Persia, and flourished under Darâvsh ʿAbdî (d. 1257/1847) and Kâtîb-zade Mehmed Reftî (12th/18th century), and reached as high a standard of beauty as in Persia. It was Yasârîzade Mustafa ʿIzzet (d. 1265/1849) who freed Turkish nastâ'îlîk from Persian stylistic influence, and thus a distinctive Turkish nastâ'îlîk style came into existence. This last has unchanging geometrical and mathematical measurements, and the letters are slightly wider and longer than in Persian nastâ'îlîk. Şâmî, Khusûlî and Neqâm al-Dîn (d. 1760), are the great masters of this style. Although the Turks called the type of nastâ'îlîk written rapidly and contrary to the rules ta-lih kirmasî, it is more correct to call it nastâ'îlîk kirmasî. Nastâ'îlîk, used for writing poetry and for inscriptions, was also in use in the office of Şaykh al-İslâm.

Sâmak. This was very little used in Turkey, though the official papers of the Şaykh al-İslâm's office were sometimes written in this script. Turkish ẓikasta nastâ'îlîk is less complicated than that of Persia.

Rûhâ, rîhî. This was probably invented during the second half of the 12th/18th century by simplifying dlwanl script, on the evidence of the archival sources. The main characteristics of this script are that its letters are less rounded and more straight. Rûhâ was used along with dlwanl in the Dlwanl-i Humâyûn, and just like Persian ẓikasta nastâ'îlîk, it also became a standard form of hand-writing amongst Turks, used for letters and every kind of correspondence.

The type of rûhâ used in the Bâb-ı ʿAli was an improved form devised by Mumtâz Efendi (d. 1267/1852), and hence was called Bâb-ı ʿAli Efendi rûhâ. A second change in rûhâ was made by ʿIzzet Efendi (d. 1302/1920), hence is called ʿIzzet Efendi rûhâ; this has softer lines than the previous type. Rûhâ written rapidly and without adhering to the rules is called rûhî kirmasî.

Khaṭṭ-i muṭâlâmî. Much importance was originally attached to this script. There are very beautiful patterns of it in the Ulu Camii in Bursa, but use of it decreased after the 10th/16th century. It was also called ẓaynâl yazî “mirror-like writing”.

Appendix. Artificial scripts used in both Persia and Turkey.

These are the scripts which have been invented by distorting other scripts.

Resim yazî. This means drawing pictures with script. Although this could have some attractive aspects, the first-class Persian and Turkish calligraphers did not attach great importance to this practice. It was used in ìluluk, and is the re-arrangement of a kâdigit or some other important saying in a way which is difficult to read.

Khaṭṭ-i ʿabdul ("tree-like writing"). In this script, so-called by western scholars, the letters bear a resemblance to the branches of a tree. It was applied to ìluluk, and was sometimes used in both Persia and Turkey for writing book titles.

Khaṭṭ-i suvbîlî ("byzantine script"). The letters of this script, invented by the Turkish calligrapher ʿArif Hikmet (d. 1337/1918), resemble a byzantine, and are also reminiscent of the letters of dlwanl.

Ālev yazîlî ("flame-like writing"). The letters of this script, which was invented by the Turkish calligrapher Ismâ'îl Hâjkî Baltadjioghlu (still alive), resemble a flame. This style may be also applied to ìluluk.

(Ali Alparslan)

iv. — IN MUSLIM INDIA

The earliest extant Arabic writing in the form of
an inscription is found in South India at Trivandrum. This is an old mosque at Koelum and has been written in a very crude form of naskhī style of writing: Ismā'īl—109 [727]—b. Malik Dinār, in three lines (Maṭail Recorded, Ahmedabad. Dn, i, 51. However, the Pakistan Archaeological Department has recently discovered near Thāṭa at Būnhbāore two inscriptions written in ḥāfe script on marble slabs and dated 390/902 and 294/906 (M. A. Ghaffur, The calligraphers of Thāṭa. Tashkhit, 1965, 165). The conquests in Sind of Muhammad b. Kāsim in the Umayyad period (93/712) had extended beyond Daybūl to Multān, and he had built mosques in the conquered area; this doubtless implied the official introduction of Arabic script into the Indian subcontinent. There are two old inscriptions in Sind, one at Rorrh on an old mosque of Khrāṣṭa Khrāṣṭ dated 341/954, and the other at Sakhās showing the date of death of one Sa'd al-Dīn in 483/994. Both are in ordinary naskhī characters (Epigraphia Indo-Moslemica, Calcutta 1952, 54, 120).

In the early 5th/11th century, the Ghurānidīs [q.v.] under Sultan Mahmūd began raiding into Northern India and established military headquarters at Lahore. Mahmūd had struck at Lahore his tankhas, which bore both Arabic and Sanskrit versions on their two sides and became a centre for literary activity. There is extant in the Panjab University Library, Lahore, an Arabic ms. of the Bahdīrat al-nūfūs wa'l-asrār fi ṭa'rifāth al-khīrat al-muḥkār by 'Abd Allāh b. Malik which was transcribed at Lahore in 438/1044 in a very ordinary naskhī script. The present writer has also discovered an Arabic inscription on the rear wall of the Katt Masjd in Ahmadābād which is dated 24 Rabi al-awwal 452/14 July 1065. It is in an ordinary naskhī script, and may be read as: "This Mosque was built on 24 Rabi al-awwal year 452". Its authenticity is guaranteed by two Persian separate inscriptions on the tomb of Atīka Kān in Karachi 1968, 49, 63). This style of writing, such as ṣughrā, ḥāfi, naskhī and thulth.

Also, during the period of the Slave Kings of Dīlī and after, the copying of manuscripts flourished, the naskhī script being especially popular. It is recorded that Șīhāb al-Dīn, the calligrapher, was made Șad-dīr Dīhān during the Khānlī period (Ṭabrīz-i Firāqgāhī, Calcutta 1865, 355; Farighi, ed. Lucknow, 189, 133, 322, 335, etc.). The introduction of the nasta’līk script into the sub-continent was mostly due to the Mughals, Mr ‘All Tabrīzī being generally regarded as its originator, who wrote one manuscript of the Kulīyāt of Khrāṣṭa Kirmān in 798/1395-6 (B.M. Add. t8.113) at the court of Sultan Ahmad Dīlāyīr at Baghādād. There exists an illustrated manuscript of the Memoirs of Būbur in this script which was copied by ‘All al-Kāthī in 937/1530-1 in Ahrar state in India, and many calligraphers seem to have used this style of writing. In the mausoleum of Akbar at Agra, the Emperor’s sarcophagus on top of the mausoleum was adorned in inscriptions this style of writing, written by the scribe ʿAbd al-Ḥakīm.

In the pre-Mughal period, when use of the naskhī script flourished, special attention was devoted to the writing of the Kurʾān, and a special style arose within the sub-continent for the Kurʾān; hence the script used on this paper came to be called the khāṭir-bīkhār (Wadjīl ʿAll, Maṭail wa-maḏjima al-funūn, Lucknow 1913, 331; Ch. Huart, Les calligraphes et les miniatures de l'Orient Musulman, Paris 1908, 51). There exists in the Kābul Museum a Kurʾān which was transcribed in this style by ḥāfe Abū Bakr Yaḡīb b. Nāṣir al-Dīn at Lahsī (Sind) on Friday, 17 Rabi al-awwal 1374. One manuscript of a commentary on the Kurʾān in the library of the Panjab University at Lahore has the text of the Kurʾān in this Būbur script and the commentary in ordinary naskhī.

During the absence of the Emperor Humāyūn in Persia, Shāh Shāh Sūrī built in stone the grand mosque in the old fort of Dīlī, with its arches and façade adorned with Kurʾānic inscriptions, including Sūrat Yāsīn on the central part of the façade in thulth characters, perhaps the finest example of thulth from that day.

Abū ʿ1-Fadl ʿAllāmā [q.v.] devoted a full chapter of his ʿAnānī ʿAbbarī to calligraphers and miniaturists, reflecting Akbar’s patronage of outstanding artists. Nasta’līk was especially favoured; its exponents included Mullā Muhammad Ḥusayn of Kāšmīr, ʿAbd al-Rahīm, Mūshkin Kālām. He was the lover of the Persian court in India. During this period, the calligraphy of Akbar’s reign (see Oriental College Magazine, Lahore 1934); also, there exists an inscription on the wall of a mosque in Nagawar (Rajputana) composed and written by Kāṭūb al-Mulk Dūrī in 976/1569-9 (Epigraphia Indo-Moslemica, 1950, 38-9; Badāwīnī, Muntahhab al-tawāriskh, Calcutta 1869, iii, 227-9). There were many other calligraphers at Akbar’s court employed various styles; the calligrapher Bākī Muhammad of Buhārār, who wrote the decorative inscriptions on the tomb of ʿAtīk Kān in the compound of Ḥaḍrat Nīzām al-Dīn Awlīyā at Dīlī, should be mentioned here. At Akbar’s court, Aṣḥāf Kān (d. 980/1572) was the Mir Munsī [see Katīb, iii. In India], and also a poet; his duties included the inditing of farmāndās (Muntahhab al-tawāriskh, iii, 188). The calligraphy used for these farmāndās was the khāṭir diwānī, one of the varieties of writing which could not be immediately read by everyone ( Bakārī, Afghān, i, 376). This style for writing farmāndās was used only at the Mughal court in India.

Akbar died in 1014/1605, and his son Dāghānīr [q.v.] who succeeded him especially encouraged the fine arts. During this period, ʿAbd al-Rahīm, Muhammad Ḥusayn of Kāshmīr and ʿAbd Allāh, were given the titles of Anbarin Kālām, Zarrīn Rākīm and Mughīrīn Kālām. He was the lover of the Persian master Mr ʿAll of Harāt, and it is recorded that once he was given a special present by Khān-i Khānān ʿAbd al-Rahīm of Iranān of an illustrated manuscript of the Khamsa of Niẓāmī ( Taʿrikh-i Dinā
During the reign of Shah Djahân, who succeeded his father Djahangîr in 1037/1628, two great calligraphers came to his court from Persia, sc. Ruknâ, who wrote the manuscript of the Gulistân of Sa'dî in 1048/1638, and who was also a poet, and ʿAbd al-Rashîd Daylâmî, who was related to the famous calligrapher Mir Ḥusnî of Persia and was made the royal librarian. Muljam-mâd Salih Kanbu has a special chapter dealing with this art in his Amâl-i sâliḥ (Calcutta 1939, iii, 443-6). It contains mention of Muhammad Murâd of Kâvûr, Ākâ Rashîd Daylâmî, Mir Muhammad Šâhî and Muhammad Mu'min, the sons of Mir ʿAbd Allâh Muṣṭâfâ Râkâm, Šâraf al-Dîn ʿAbd Allâh, Mir Sayyîd ʿAllî Tabrîzî and Šâmil Muhammad Dîjâr Khân, called Kifâyât Khân and inventor of the shîkastâ style of writing, and Djamâl al-Dîn Yûsuf, who also used the same hand (see Art Islâmica, xi, 433-5).

This interwoven shîkastâ script is defined by Anand Ram Mukhlîs in his Miḥrâb al-isfîlîh. One manuscript of the Gulîstân of Sa'dî transcribed by Dîjâr Khân Kifâyât Khân in 1086/1675-6 is preserved in the National Museum of Pakistan at Karâčî, written for his son ʿAbd Allâh, called Darâyât Khân; this style was accordingly called Darâyât al-khatt, hulîl al-khattî, etc. It may be recalled that the Emperor Aurangzîb [q.v.] used to write out copies of the Kûrân and send them to the Holy Cities of Arabia, but he never signed these; he was the pupil in calligraphy of Sayyîd ʿAllî Khân Dîjwâr Râkâm, who died in 1092/1686 (Tadhkhirat-i khushnuvisân, Calcutta 1910, 56-7).

[M. Abdullah Chaghatai]

v. — In South-East Asia

Here the Arabic script was, until ca. 1500, almost exclusively used for writing Arabic, the Trêngguan stone inscription, dated probably 726/1326 or 788/1386 and written in Old Malay, being a noticeable exception. At the beginning of the 16th century the Arabic script became one of the most common scripts for Malay and other languages, and is still used. One of the oldest known texts in Arabic script in South Asia is the Arabic inscription of Leran on the northern coast of East Java, probably to be dated 475/1082. This tomb stone of “the daughter of Maymûn” may have been imported, together with its inscription. In any case, it remains so far an isolated testimony to the use of the Arabic script in Indonesia, since the next example, the tomb stone of Sultan Malik al-Ṣâlîh of Tarai in northern Sumatra, is dated 691/1292. This was followed by a number of other tomb stones, all but one written in ornamental Arabic script of Persian type and probably imported from Gûdjarât. The exception is the inscription from Mine Tujuh in Atjeh, dated 782/1380 and written in a type of Malayan script, but apparently influenced by the style of Arabic writing. A few other Arabic tomb stones in the Malay peninsula are dated in the 9th/15th century. In Java, the most important are found on Muslim tomb stones (maṣ'ûn) in Troloyo, near Tronlan. They have a quotation from the Kurûn or other sacred texts in Arabic on one side, and a date expressed in Old Javanese numerals on the other. The script, fully discussed by Damais (Études javanaises, i. Les Tombes Musulmanes datées de Trélody, in BÉFEQ, xlviii/2 (1957), 351-415), corresponds to that of contemporary Arabic inscriptions elsewhere in the Muslim world. The best known Arabic inscription in Java of this period is that on the tomb of Malik Ibrâhîm at Grèsik, northeast of Surabaya, dated 822/1419 and beautifully written in an ornamental Arabic which is similar to the contemporary inscriptions of Tasâû and Gûdjarât.

Bibliography: J. G. de Casparis, Indonesian palaeography, in Handbook der Orientalistik, vi, section 1, 70-2 and literature quoted there. (Ed.)

KHATT, more precisely al-ḥaft bi-râmi, the original name for Arab geomancy. In the Islamic era, râmi (or ẓâmil al-râmi) was dominant, but with the growing influence of astrology on the occult sciences, the term shâkîl (pl. aṣghâl), “figure” was used (see below, the expression aṣghâl al-râmi, aṣghâl al-turâb, hulîl al-aṣghâl), From shâkîl are derived “squill” a figure in geomancy, and “to squill”, to practise divination by sand, cf. G. Ferrand, in JA, roth Series, vi (1905), 193. In Madagascar, the words sikili and shidy also denote geomantic figures, cf. G. Ferrand and M. Steinschneider, in ZDMG, xxxi (1877), 762-5.

The development from ḥaft to râmi began with the juxtaposition of the two terms. Indeed, ʿaṭṭâr al-râmi is frequently used to denote geomancy (cf. for example, Ibn Khaldûn, Mukaddâma, i, 203-9, tr. by Slane, i, 232-40, tr. Rosenthal, i, 226-34, Leiden ms., Cat. de Jong and de Goeje, iii, 184). Instead of ʿaṭṭâr, darb began to be used especially in dialect; darb is in fact the modern substitute for ʿaṭṭâr, which was used originally to denote lithomancy, so we find that ʿaṭṭâr = ʿaṭṭâr = darb as terms for geomancy.

At first sight, ʿaṭṭâr is the line which the geomancer traces on the sand when, strictly speaking, he is practising psalmomancy. This is the meaning of râmi also, but, as well as the sand, râmi and ʿaṭṭâr mean the black or white lines on the hooves of wild cattle or on the flanks and the backs of stags (cf. TA, vii, 351, l. 29; details in T. Fahd, La divination arabe, Leiden 1966, 197 f.). Lexicographers have shown that ʿaṭṭâr, ʿim al-ḥaft and ʿim al-râmi (cf. TA, v, 129, l. 4) are perfectly synonymous.

Târîk and darb are also synonymous and originally denoted the “casting of pebbles”, that is, lithomancy (al-ʿarâb or al-arâb biʿl-ḥasâ). The technicalities of this cleromantic rite are unknown to us, but it is certain to us, that the marks made by the pebbles on the sand have been posed by a questioner, from the signs which resulted in making ʿaṭṭâr biʿl-ḥasâ the act of posing the question, which has been posed by a questioner, from the signs which are given by the way pebbles have fallen on top of each other. Instead of pebbles, grain or nuts could be used (cf. Ibn Khaldûn, op. cit., i, 192; ii, 177; tr. de Slane, i, 192; ii, 205 f.; tr. Rosenthal, i, 214, ii, 201).

From the marks made by the pebbles on the ground lines were traced in the sand, and from this idea there has been a gradual development which ultimately results in making ʿaṭṭâr (or darb) biʿl-ḥasâ the synonym of ʿaṭṭâr biʿl-râmi. The technicalities of this cleromantic rite are unknown to us, but it is certain to us, that the marks made by the pebbles on the sand have been posed by a questioner, from the signs which are given by the way pebbles have fallen on top of each other. Instead of pebbles, grain or nuts could be used (cf. Ibn Khaldûn, op. cit., i, 192; ii, 177; tr. de Slane, i, 192; ii, 205 f.; tr. Rosenthal, i, 214, ii, 201).

Thus al-ʿaṭṭâr biʿl-ḥasâ and al-ḥaft biʿl-râmi, two different divinatory practices, became progressively confused in the Islamic era and denoted geomancy in general; this may be explained by the great variety of geomantic procedures. ʿAṭṭâr was the observation of the fall of pebbles on sand; the marks they made were joined by other marks (khâft) in order to complete a figure (shâkîl). When these figures became

6. **Musalsal** by Bekir Paktan (Turkey).

7. **Siyāhat** (Turkey).

10. Shikasta Nasta'liq by 'Abd al-Majid Talkahi (Iran) (Ghazali cand az Hafiz bā hatt-i khoshnuvsān-i maṭbūt, Tehran).

15. *Resim yazl* attributed to Müstafâ Râkîm (Turkey). The picture represents the *basmala*.

stylised at a particular place, a board was used, which was covered with sand or even flour, and the finger was drawn over it at random; the shapes formed in this way were then examined. A sheet of paper could be substituted for the board, and on it pencil dots were marked at random or, according to Ibn Khaldun, on four lines (cf. ref. in Doutté, *Magie et religion*, 3759; compare R. Jaulin, *La geomancie*, 17, n. 1).

Behind this popular, primitive practice lay a divinatory art of extreme complexity. Indeed, since the introduction of astrological and mathematical speculation into the science of geomancy, we must deal with a theory as esoteric as that of the *diafr* (v.-fr.). As in the *diafr*, one is successful in the study of geomancy by being able to isolate numerous speculations and determining laws from them. The *Analyse formelle* by R. Jaulin, with contributions by R. Ferry, F. Djean and B. Jaulin, achieves this aim. It is not possible to give a complete picture in an article of restricted size. But it should be said that the sixteen shapes, which are obtained by the permutation of the four basic lines and their eight joins, giving rise to four even and four uneven symmetrical shapes, reduce the basic geomantic values by assigning to them agreeable or contrary meanings; they are also associated with the "external" and "internal" elements concerned with more or less reassuring or dangerous, favourable or ill-omened ideas (cf. Jalil, *op. cit.*, 53-71).

In this mathematical analysis, arithmomanic and geomantic considerations have had their part to play, but they do not in themselves make a geomancer. In geomancy, two other components must be represented, astrology and a predisposition to "perceive hidden meanings" (*i'darak al-ghayb*). Ibn Khaldun emphasises these two aspects in a long paragraph devoted to this art of divination (*Muhadimma*, i, 203-9, tr. de Sane, 23-42, tr. Rosenthal, 226-34, with references and figures in the notes).

After a description of the sixteen geomantic combinations, each named and classified into favourable and unfavourable, Ibn Khaldun explains this classification by the astral influences which are brought to bear on each of these nhóm*.* In fact, the sixteen geomantic combinations are set under the domination of the twelve signs of the zodiac and of the four cardinal points. From then onwards the geomancers, called by him *munadidimamin*, "astrologers", have derived meanings to provide geomantic figures from astrological speculations. The author contests the validity of this method, disagreeing with the fact that the astrological deductions have natural signs as their basis while geomantic deductions rest on conventions.

Even more aberrant, Ibn Khaldun thinks, is the pretension of certain geomancers to succeed in perceiving the unknown by applying their minds to the geomantic figures and then abstracting a complete understanding of the human sphere and penetrating the spiritual realm, in the manner of the soothsayers and, particularly of those among them who practise omnolatry, hydromancy and lecanomancy. Ibn Khaldun thus concludes: "The truth that you must present to the mind is that the supernatural cannot be revealed by any technique; it cannot be perceived by an elite class of men naturally predisposed to pass from the conscious world into the spiritual". Concerning the doctrine of Ibn Khaldun relating to divination, see *La divination arabe*, 45-50. According to him, the astrologers qualify as the type of men called "Venusians" because of the influence which Venus exerts on them on the day of their birth, by which they are fitted to perceive supernatural phenomena.

Because of a verse in the Qur'ān (XLVI, 4), interpreted by some as alluding to geomancy (cf. Tabari, *Tafsir*, xxvi, 3, l. 3 ff.) and a hadith noted by Ajā'ib b. Yusār (Wensinck et al., *Concordance*, i, 40), which speaks of a prophet who practised geomancy excellently, some licence has been given to this art and it has been allowed to experience an amazing expansion across the Islamic world. Like oneiroscopy, Arab geomantic science extends beyond the frontiers of the Muslim empire, both to the Indian coasts and the coasts of Byzantium, and to the Latin West and Black Africa and Madagascar (cf. C. H. Becker, *Neue Literatur zur Geschichte Afrikas*, in *It.*, iv (1915), 305; B. Carra de Vaux, *La geomancie chez les Arabes*, ap. Paul Tannery, *Mémoires scientifiques*, iv (1920), 299-327; A. and L. Delatte in *Mélanges F. Cumont*, Brussels 1936, 575-658).

This expansion has led to a great number of manuals and treatises, examples of which can be found in almost all the Arab collections in the East and the West. Many are anonymous works like: *Risāla fi 'l-rāmī* (Aya Sofya, 4755 (1), *risāla 34*); *Rasā'il il 'silm al-rāmil* (ibid., 4860 (64), l-9, cf. also ibid., 2052 (36), 14); *al-Munawwab fi 'ulum al-rāmil* (Asir Ef. 1266, 6 = Reisulkuttab Mustafa Ef. 1268, 112b); *Kitāb al-rāmil* (Beşir Ağa, 450; al-Kašshāb al-ašhar wa 'l-šāhār wa 'l-rāmil* (ibid., 433); *Risāla fi 'l-rāmil*, in Turkish (Fatih, 3430); *Fi 'l-rāmil wa 'l-nudjām* (Kâmil, 189, 6); *Fi 'ilm al-rāmil* (ibid., 1468, 7); *Kitāb *fi 'ilm al-rāmil* (Nuruosmaniye, 3639); *Kutub 'ilm al-rāmil* (Bagdad Vehbi Ef., 920-6; Saray, Ahmet III, 3475 ff.); *Fi 'l-rāmil* (Leiden, Cat. de Jong and Goeje, iii, 184; Gotha, Cat. Pech, 457 ff.); *Ashkāl al-rāmil* (Cambridge, Trinity College, Cat. Palmer, p. 29, the page describes several geomantic figures); several geomantic mss. in Karşuni at Oxford (Bodleian vi, col. 596 f., no. 180, 3 and 4; col. 598, no. 181, 2, 4, 0); *Kitāb 'āqīb fi 'l-rāmil* (Aleppo, Sbath, 58, 5; 590, 1 (abridged) and 2: K. al-Shadara wa 'l-thamara wa 'l-mukhta, attributed to Daniel, 1180, 1 and 81); Vatican, Cat. Levi Della Vida, iii, 299-317; Berlin, Cat. Alt. wandt, 4200-12; Kanz al-mukhti (Copenhagen, xxiii, in Turkish); etc.

Among the best known authors of geomantic works are Abū ʿAbd Allāh Muhammad al-Zanjātī, who founded a school in this field. His followers are called al-Zanjātīyya, and in fact a ms. from the collection Ismail Saïd Sinc er (Ankara), 1, 211, not foliated, 24.5 × 17.5 × 1, nakṣī, no date, entitled *K. fi 'ilm al-rāmil* (*ālā tarīb al-Zanjātīyya* ... (the same collection, under No. 1, 1970, contains a madājmū'a with two geomantic drawings; *Bayān fi darb al-rāmil*, pp. 1-38, attributed to al-Zanjātī, and *Risāla min *'ilm al-rāmil* (*sīhā-rāf al-damīr*, pp. 39-61, anonymous); the work which is attributed to him bears different titles: K. *Fi 'āf al-ašhāf* (*al-āqīl al-ašhāf* (Saray, Ahmet III, 1663, 120 ff., 28 × 20, nakṣī, very fine illustrated copy, no date); *Hulāl al-ašhāf* (Nuruosmaniye, 3638, 28 fol., 25.5 × 17, fine nakṣī, no date); lithographed in Cairo in 1280/1863 under the title K. *al-Fasī fi wāqī *'ilm al-rāmil*, and also edited in Cairo in 1316/1908 under the title al-Absāl al-mardisiyya: fi 'l-aṭhār al-rāmilīyya.* There is also Lūbāb al-lūbāb (*fi 'ilm al-ḥafṣ wa-āshāf al-tarīb* (Cairo ms. 7612). The geomancy of al-Zanjātī was translated from Persian into Greek verse by the monk Arsenius in 1266 (cf. M. Steinschneider, *Europ. Übersets.*, 7, no. 22).

Next in order of fame comes ʿAbd Allāh b. Maḥfūz
al-Munadjdim, who, according to the colophons of the mss. Esat Ef. and Raşg Pşa, died before 664/1265. His work is entitled Muhallalât Ibn Mahâfîz fi l-raml (Râşg P., 964, 72 fols. 21.5 x 16). It is a fine copy made by Abîmd İsa from an exemplar dated from 664/1265, and it was made by Abîmd İsâ (who is mentioned in the colophon of ms. Paris 5834, 2) under the name of Muthallat Ibn Majûfuf (see above). Other Arabic geomantic writings have been translated into Latin, the one of Ahmad b. ʿAbd b. Bakr al-Wanâharî (wrote before 1167/1753), Sâhâm al-râbî fî ʿl-muhammas al-khatt al-ramli (Leiden 1233; Algiers 1535; GAL S II, 1042); Saṭîn b. Saʿîd b. Ahmad b. Abî Bakr al-Wanâharî (wrote before 1176/1773) to one side and Kazîm and al-Shîbîr on the other. This difference of opinion is probably the result of the variation in extent of the name for the coast of al-Baljrayn and ʿUmân, which is also apparent in the usage of geomancy. In contrast to al-Khatt, a strip of coast on the Persian Gulf. The Arab geographers are not agreed as to its exact extent. While Yâkût limits the name to the coast of al-Bâbhrayn and ʿUmân, which is also apparent from the mention of al-Kaff, al-ʿUkayr and Katar, al-Bakrî says definitely that al-Khatt is the whole coast between ʿUmân and al-Baṣra on the one side and Kâzîm and al-Shîbîr on the other. This difference of opinion is probably the result of the variation in extent of ʿUmân and al-Bâbhrayn in the wider sense of these terms in course of time.

In addition to the authors cited in La divination arabe, the following should be mentioned: Abu ʿIsmâl al-Zanâtî, probably from the Zanâtiyya school, Dhakhrî fî al-khatt (ms. Paris, 1275, 9; GAL S II, 1040); Yâyân al-Dîn ʿUmar al-Khîţabî, al-Dhakhlrafi l-khatiṣiyya fi tâdîm ʿl-raml wa l-sâdidat al-khâtî (ms. Gotha, 1917; GAL S II, 1041); Muḥammad b. ʿAbd ʿAbd Allâh al-Andalusi, al-Durr al-muḥiṭ bi-ṣifat al-ʿamal bi-ḥukm al-basîf fi ʿl-raml (Berlin, 1947; GAL S II, 1040); ʿAbb Ahmad al-ţaqaţî, al-Hâghiya al-ṣâḥsîyya al-ramliyya al-falâkîyya (GAL S II, 1039); Yahyâ b. Abîl Allâh b. Saʿîd al-Manâni, Raʾif al-igdâl ʿan waqî al-ṣâkhî (Alexandria, 1279, 9; GAL S II, 1042); Saṭîn b. Abîl Allâh b. Saʿîd b. Ahmad b. Abî Bakr al-Wanâharî (wrote before 1167/1753); Sâhâm al-râbî fî ʿl-muhammas al-khatt al-ramli (Leiden 1233; Algiers 1535; GAL S II, 1042); Saṭîn b. Saʿîd b. Ahmad b. Abî Bakr al-Wanâharî (wrote before 1176/1773) to one side and Kazîm and al-Shîbîr on the other. This difference of opinion is probably the result of the variation in extent of the name for the coast of al-Baljrayn and ʿUmân, which is also apparent in the usage of geomancy. In contrast to

Several other geomantic writings are known which are enumerated in La divination arabe (202-4). It should be noted that two of them have been translated into Latin, the one of Abîm ʿAbd b. Zunbul al-Muḥâllâ, surnamed al-Ramâmî (died after 800/1400) entitled K. al-Muḥâllâ ʿaṣâ al-muḥâllâ fi ʿl-râmî (ms. Uskûdar, Selim Âga, 547 bis, 168 fols. 29 x 20, naskhî, no date), an excellent and well-illustrated treatise with an introduction and a thirty chapters (cf. F. Klein-Franke, The Goemancy of Abîm ʿAbd b. Zunbul: a study of the Ambic Corpus hermeticum, in Ambix xx (1973), 26-33 and that of Abû Sâʿîd Kâjîlî b. Fârûq b. Ṭârûbûs entitled Thabarrîst fî al-muḥâllâ ʿaṣâ al-muḥâllâ fi ʿl-râmî (ms. Paris 5834, 2) reworked by Abû ʿAbd Allâh b. Ḥârûn al-Sûsî, ms. Algiers 1531; Bayezit Umûmi 4652, 23 fols. 19 x 14 taḥîkî, in Turkish). It was translated into Latin by Hugo Sanctallens (M. Steinschneider, op. cit., 36, No. 545; P. Tannery, in CRAIBL xxv (1897), 319; partially edited ap. Tannery, Mémoires scientifiques, iv (1920), 373-402; tr. ibid., 405-9).

The Arabic geomantic writings have been translated into Latin, such as Aljahfîn arabici filii Quaesitiones Geomantiae a Platonete (= Plato of Tivoli) in latinum translatae ex antiquo mss., Fasciculus Geomanticus, Verona 1687, 2nd. ed. 1704 (Steinschneider, op. cit., 64b); similarly, Gerard of Cremona translated an Arabic geomantic work under the title Liber geomantiae de artibus divinentibus (Steinschneider, op. cit., 30, No. 84); Bernardus or Bernardus Silvestris translated a geomancy established according to the twenty-eight mansions of the moon under the title Experimentarius oder liber fortunae and many mss. of this survive (cf. ZDMG, xxv (1871), 338-90; other references in Steinschneider, op. cit., i, No. 27). An Astrologia terrestres attributed to one Abî ʿAbd b. ʿUmar has been translated from Arabic into Italian and German (Steinschneider, op. cit., ii, 132-33; Nic. Catani, Del "khet-er-Raml" ou art de lire Vavenir sur le sable, in RT, 1920, 267-76; R. Davies, A system of sand divination, in Sudan Notes and Records, iii (1920), 157-62, and in PW, xvii (1927), 123-9; N. Eliséeff, Thèmes et motifs des Mille et Une Nuits. Essai de classification, Beirut 1959, 127-8 (five examples of the usage of geomancy, three for indicating a person and two for predicting the future). Abou Bakr ben Choai'b, La bonne aventure chez les musulmans, in RA (1906), 63-70; G. Ferrand, Un chapitre d'astrologie Arabico-Maîgache, in JA, 10th series, vi (1905), 193-273 (a chapter taken from ms. 8 of the Arabico-Maîgache collection in the B.N., Paris); Hâghîy al-Khalîfa, iii, 478-81; J. Maxwell, La divination, Paris 1927, 135-7; P. Tannery, Le Rabolion, in Mémoires scientifiques, iv (1920), 295-311; A. and L. Delatte, in Mélanges F. Cumont, Brussels 1936, 575-578; R. Jaulin, La geomancie. Analyse formelle, Paris-The Hague 1966 (= Cahiers de l'Homme, N.S. IV).
these wide applications of a fairly general term there is a particular, according to which al-Khatt was a particular settlement on the coast which belonged to the 'Abd al-Kays. A. Sprenger has adopted this view, which was held by al-Baladhuri amongst others, and there is much in favour of locating al-Khatt preferably in the Gulf of al-Bahrain. The place was in any case noted as a market for the famous Khati lance-shafts imported from India and sold to the Bedouins. The name of al-Khatt seems to be old.

If A. Sprenger is right in connecting it with "regio Athene" and "Chateni" in Pliny, Nat. Hist., vi, 28, 147, and the "Atta vicus" in Ptolemy, the name dates back long before the Islamic period.  

Tha'alibi, who reproduces a selection of poems by al-Khattabî, compares him with Abu 'Ubayd [q.v.].

Of the twelve or so works which are attributed to him, one only, so far as we have been able to ascertain, has been published, the Bayân Ǧâzâ al-Kur'ân, ed. 'Abd al-'Alîm, Alîgarh 1953; ed. 'Abd Allah, Alîgarh 1957. Tha'alibi, in Thalâth Rasûl fi Ǧâzâ al-Kur'ân, Cairo 1955, 17-66. Several others exist in manuscript (see Brockelmann, I, 165, S I, 275): Ma'ânî al-sunnah (al-sunan), commentary on the Sunan of Abû Dâwûd (see Brockelmann, S I, 267, adding the manuscripts mentioned by 'Abd al-'Alîm, p. wâw); K. Ǧâzâ al-Khâlidî; Ǧâzâ al-Ǧâdî'îma al-muẖâdînî; Ǧâzâ al-mâsâdî Ǧâzâ al-Ǧâfî'; K. al-Ǧârî; K. al-Mughîdî (or al-Ǧârâ); K. al-Ǧâlî; K. al-Ghunya Ǧan al-kalâm wa-awâlî; Ǧâlî da'wâtî li-Abî (Ibn) Khayyâm.

Bibliography: Whereas his contemporary Ibn al-Nadîm does not mention him in the Fihrist, his friend Tha'alibi considers him worthy to appear among the poets mentioned in the Yatîma (Iv, 321). Main notices: Samânî, Amâsî, 222b; Subklî, Ǧudâbâl al-Shâfi'iyya, ii, 218-22; Ibn al-Imâm, Ǧudâbâl, i, 127; Dhhâbî, Tadhkîra, iii, 209; Ibn al-Dhawî, Muntaṣâm; Ibn Khallîkîn, i, 153-5; Baḥâdî, Khânuma, ed. Sâwî, 1934, iv, 101-13; Yâlûf devotes to him two notices, the first under Ahmad, Irqâḍî, ii, 81-7 = Ǧudâbâl, vi, 246-60, and the second under Ahmad, Ǧudâbâl, xii, 268-72; Sîyûât, Bughyâ, 239; F. Buštânî, Da'îrât al-maʿârifî, ii, 494; Goldziher, Muh. St., ii, 256 (where Ceuta should be corrected to Bust, thus in Muslim Studies, tr. Barber and Stern, ii, 235 n. 6); Brockelmann, I, 165, S I, 275. (Ed.)

KHÂṬṬÂBIYYA, extremist Shi'î sect in al-Kufa founded by Abu ʿl-Khâṭṭāb al-Asâdî [q.v.] (killed ca. 139/755). Abu ʿl-Khâṭṭâbî claimed that the Imam Ǧâfar al-Sâdîq [q.v.] had appointed him as his deputy and legate (waṣî) and taught him the Greatest Name of God. He was at first encouraged by the Imâm, but later, probably still before 139/748, was repudiated and cursed by Ǧâfar. As a result, his followers split up into several subsects.

The reports of the heresiographers about these early sects are based on two accounts which are partially complementary and partially contradictory, and which can be traced back to the contemporary Hâshâm b. al-Hakam [q.v.] and to Abû ʿĪsâ al-Wârâqî (writing after 270/883), whose ultimate source is unknown. The former account is reproduced by al-Nawbakhtî and Saʿîd b. ʿAbd Allâh, while the latter is quoted most extensively by al-Ǧâfî. The following summary combines the two accounts with additional information from other sources.

One group continued to accept Abu ʿl-Khâṭṭâb as their leader and asserted that he was a messenger prophet sent by Ǧâfar, who was God. They held that there must be at all times two prophets, one speaking (mâtûk) and the other silent (ṣâmîl). In the time of Muhammad, he had been the speaking prophet and ʿAll the silent one, and now Ǧâfar was the speaking prophet and Abu ʿl-Khâṭṭâb the silent one. They considered all imâm-prophets, including Abu ʿl-Khâṭṭâb, as God. This doctrine is to be related to the belief ascribed to the Khattâbiyya in general, that the divine Light or Spirit inhered in the bodies of the imâms. They held that Abu ʿl-Khâṭṭâb had lifted the fetters of the religious law from them, considered false testimony in favour of their sectarian brethren as licit, and interpreted the religious duties and sins mentioned in the Kur'ân as referring to certain specific persons.

A second group, the Bazâghiyya, were the followers of Bazâgh b. Mûsâ the weaver, who was killed during the lifetime of the Imâm Ǧâfar. They considered Bazâgh, like Abu ʿl-Khâṭṭâb, as a prophet sent by Ǧâfar. While they testified to the prophethood of Abu ʿl-Khâṭṭâb, the latter repudiated Bazâgh's claim. They asserted that every one of them was inspired (yâhâ ilâyihi), that they would not die but be raised to heaven when their worship reached perfection, and that they were able daily to see their "dead".

Their claim of immortality was repudiated by the ʿUmâriyya, followers of ʿUmâr b. Ǧabîl al-Adîlî. Like the Bazâghiyya, however, the ʿUmâriyya claimed that they were all imâm-prophets and that Ǧâfar was God. When they assembled in al-Kufa to worship Ǧâfar, ʿUmâr was seized and killed by Yazîd b. ʿUmar b. Hubayya (governor 129-31/747-9).

Another group were the followers of al-Ṣarî al-Aṣqâm, who claimed that Ǧâfar had sent him as a prophet, calling him the Yâmmâ (abnd* al-islâm) in accordance with the statement of the Prophet: "Salmân is the Son of Islam".

The Muʿammariyya, followers of Muʿammâr b. al-ʿAbhar the corn dealer, affirmed that the divine Light had been transferred from ʿAbd al-Muṭṭalib through Abû Ṭâlib, Muḥammad and the Imâms, and the imam-prophets to Ǧâfar, Abu ʿl-Khâṭṭâb and finally to Muʿammâr. With the passing of the Light from the bodies of Ǧâfar and Abu ʿl-Khâṭṭâb, the latter had become angels, while the persons now claiming to be Ǧâfar and Abu ʿl-Khâṭṭâb were in fact impostors. Muʿammâr was the God on earth who was obedient to the Greatest God in heaven. The Muʿammariyya denied that the world would come to an end and held that the bliss of paradise and the punishment of hell took place on earth. They claimed that they would be raised to heaven alive with their bodies, and also taught libertinism.

The account of al-Ǧarrâ enumerates as a further subsect the Khattâbiyya [q.v.] the Mufâdaḍaḥiyâ, followers of al-Ǧuḍîr al-Muṣâbîr al-Muḥammadî [q.v.] of al-Kufa, who considered the Muṭṭalib, then the Imam Ǧâfar and Abu ʿl-Khâṭṭâb, the latter having become angels, while the persons now claiming to be Ǧâfar and Abu ʿl-Khâṭṭâb were in fact impostors. Muṭṭalib was the God on earth who was obedient to the Greatest God in heaven. The Muṭṭalibíyya denied that the world would come to an end and held that the bliss of paradise and the punishment of hell took place on earth. They claimed that they would be raised to heaven alive with their bodies, and also taught libertinism.

The account of al-Wârâq enumerates as a further subsect the Khattâbiyya the Mufâdaḍaḥiyâ, followers of al-Ǧuḍîr al-Muṣâbîr al-Muḥammadî of al-Kufa, who considered the Muṭṭalib, then the Imam Ǧâfar and Abu ʿl-Khâṭṭâb, the latter having become angels, while the persons now claiming to be Ǧâfar and Abu ʿl-Khâṭṭâb were in fact impostors. Muṭṭalib was the God on earth who was obedient to the Greatest God in heaven. The Muṭṭalibíyya denied that the world would come to an end and held that the bliss of paradise and the punishment of hell took place on earth. They claimed that they would be raised to heaven alive with their bodies, and also taught libertinism.

Statements attributed to the Imâm Ǧâfar accent the lowly social status of the followers of Abu ʿl-Khâṭṭâb and al-Muṭṭalib, characterising them as scum (ṣafila) and outcasts (ṣâḥîfî). Some sources identify the Khattâbiyya with the Mukhâmamsa sect [q.v.]. This identification does not appear valid for the early Khattâbiyya sects described above, but must refer to a later stage which may, however, have begun still in the time of the Imâm Ǧâfar.
The assertions of some Imami sources broadly identifying the nascent Khattabiya [q.v.] with the Khattabiya, must be viewed with caution. More specifically, it is reported that a group of supporters of Abu l-Khattab after the latter's death joined the followers of Muhammad b. Isma'il b. Di'aifar, claiming that the spirit of Di'aifar had devolved on Abu l-Khattab, and from him, on Muhammad b. Isma'il. There are also reports associating al-Mufaddal with Isma'il b. Di'aifar. After the death of Di'aifar, however, al-Mufaddal supported the imamate of Musa. Although he evidently did not approve of the condemnation of Isma'il pronounced in other Imami circles. The doctrine of the Isma'il movement emerging out of obscurity about the middle of the 3rd/9th century shows little affinity with the specific doctrines of either the early Khattabiya or the Muhummisa and generally repudiates Abu l-Khattab. Muhummisa texts which eventually were adopted into Isma'il literature, like the 'Umm al-Kitaab, are secondary importations. The bulk of the Khattabiya-Muhummisa evidently remained within-in the extremist fringe of the Isma'iyya. Muhummisa doctrine formed the basis of the beliefs of the Nusayriyya [q.v.], who revere Abu l-Khattab, al-Mufaddal and his son Muhammad as the sabs [q.v.] of the Isma'iyya. Musa, as Musa al-Rida.

**KHAWAND [see KHAMUND].**

**KHAWARDJ (see KHARIDJITES).**

**KHAWARIZM, KHAWARIZMI, etc. [see KHANZAD, KHARAZMI].**

AL-KHAWARNAK, a place situated about a mile east of Na'dajf [q.v.] in Ifrak. Inhabited at first by the tribe of Iyad, a palace was built in it by the Lakhmid chief Nu'mân (d. after 418 A.D.) for his Sasanian suzerain. It was there that Parwiz heard the news of the defeat of Dhukar [q.v.]. The palace was enlarged and used by the early 'Abbasids. It was in ruins in the 8th/14th century. The pre-Islamic Arab poets frequently quote al-Khawarnak as one of the "30 wonders of the world", along with the neighbouring castle of Sadir (perhaps Ukhaydir [q.v.]). Al-Khawarnak is also celebrated for having given rise to the proverbial expression "the reward of Sinimmar", the Greek architect who had built it and who was executed by Nu'mân. The name Khawarnak seems to be of Iranian origin (Huvarna, "with a beautiful roof" according to Andreas, or Khawarnar, "place of feasting" according to Vulers), although Ibn Djinmi connected it with the Arabic Kharnik and Nöldéke with a Rabbinical Hebrew word meaning "arbour, plantation".

KHAWASS [see KHAASS].

KHAWASS AL-KUR'AN, the art of drawing prognostications from verses of the Kur'an to which beneficial effects are attributed. The sacred text is used here in the same spirit as in rhapso- donomy ("im al-hur'a") and onomatomancy [see GAPR and HURÔF]. But it is here more particularly a case of the "natural properties" (qaraxax) which certain formulae of a magical and superstitious nature can have, based upon suitable Kur'anic verses, letters drawn from these verse, words, names of angels, prophets or God, prayers bearing celebrated names and poems (e.g. the Burda). Hence these varied elements are treated just as the "science of properties" treats animals, plants and minerals, by calling attention to the sympathy and antipathy which exists between them (on this science, extensively developed in Islam, cf. P. Kraus, *Jabîb ibn Bayyân*, ii, 61 ff.; M. Ullmann, *Die Natur- und Geheimwissenschaften im Islam*, Leiden 1972, 393 ff.). Two series of results are sought from this practice, prognostications and beneficial effects (mandii). Medical prognostications are the most sought-after,
and the treatises of popular medicine are crammed with them (e.g., see al-Dā‘ wa-l-dawā‘ of Ibn Kayyim al-Djawziyya), which deals more specifically with the medical properties of the Fā‘itha; the K. Khawā‘ṣ al-Fā‘itha al-ghartha‘i of ‘Abd al-Kādir al-Djīlī; and the literature on al-Tibb al-nahawā‘ī.

There is an abundant literature on these properties, and a large number of them are treated in compilations like the Durrat al-khwā‘ṣ wa-khaws al-tibrā‘ī ft ‘ilqat al-khaws al-tibrā‘ī (d. 244/858) or the Ta’dikriat al-l‘-lā‘ib of al-Anṭākī (d. 808/1409). There exist also some monographs, of which the most famous is the K. Manfūṣ al-kur‘ān of ‘Abd Allāh al-Tamīlī, who wrote at the end of the 4th/10th century (Istanbul Univ. Libr. A 2243, ff. 48, 28 × 13 cm, naskhī, N.D. but fairly old). This includes a large number of superstitious uses of the Kur‘ān aimed at arriving at a knowledge of hidden things. ‘Abū ‘l-‘Abbās al-Djīlī (d. 627/1232) wrote both a K. Manfūṣ al-kur‘ān (ibid., A 5582, ff. 132, 23 × 14 cm, very fine naskhī) and a K. Sirr al-maktab min al-t‘lām al-makhtūn wa-khaws al-kur‘ān (ibid., A 4514, ff. 71, incomplete, 15 × 9.5 cm, naskhī). A K. Manfūṣ‘ swar al-kur‘ān and a K. Khawā‘ṣ al-kur‘ān al-tā‘īom are attributed to Dī‘far al-Sādīq (see Sezgin, O.A.S., i, 430). One should also mention the K. Manfūṣ ‘fī fikr al-dā‘ of Ibn ‘Abd al-Salām b. Idrīs al-Marrakushī, which divides up the famous basīda of al-Būṣṭī into several sections and describes the beneficial effects residing in each (see Ullmann, op. cit., 445-16).

Bibliography: For other works and for fuller details, see T. Fahd, La divination arabe, 214-45, esp. 241-3. One can also find in Ahlwardt’s Berlin manuscript catalogue, under no. 4155, various works on the khaws al-kur‘ān and under no. 4176, six works on the akhtāb or ad‘īya reputed to have special properties. The magical character of such prayers has been demonstrated by Goldziher, Zauberelemente im islamischen Gebet, in Orientallische Studien zu Th. Nöldeke gewidmet, Giessen 1906, i, 303 ff. (T. Fahd)

KHAWBAR [see KHOBAR].

KHAWLĀN. i. The name of a South Arabian tribe, of great antiquity and now divided into two branches. The larger section, which al-Hamdānī calls Khawlān al-šaybī, is now known as Khawlān al-i‘ṣādī and dwells south-east of Ṣan‘ā‘ on the upper reaches of the Wādī Dhāna, with the lands of Murād to the south-east and Nahm, in the highlands proper, to the north-west. The tribe now belongs to Bakīl. Their territory, which was described by Carsten Niebuhr in 1763 and visited by Eduard Glaser in 1885-6, is a very mountainous region, bisected by numerous tributaries of the Wādī Dhāna, and with a widely scattered population. It is noted for the cultivation of cereals and grapes. The chief town is Džhāhān, and of lesser import are Bayt al-Kibīl and Tan‘īm. The latter was formerly renowned as a centre of the Yemeni Jews and possessed many synagogues. The Khawlān consist of many independent clans and families, rarely under a single ruler, dispersed throughout innumerable fortified villages, and have always been loyal Zayds. Their savagely fanatical temperament and warlike disposition have given them a reputation for feuding and division. The Arab genealogists give as their eponymous ancestor Khawlān b. ‘Amr b. Mālik b. al-Jarrīḥ b. Murra b. U‘dād b. Zayd b. ‘Arif b. Zayd b. Kabīl b. Khawlān al-i‘ṣādī.

The other branch of Khawlān, variously known as Khawlān al-shām, Khawlān b. ‘Amīr, or Khawlān Khudā‘a, lives just south of the Hijāz border, in the mountains north-west of Ṣan‘ā‘, on the Ṣan‘ā‘-Mecca road, four days’ journey from the port of Hall. They too are described by Niebuhr, who mentions a number of their villages but no large towns. Since it is alleged that gold used to be mined in the region at Kufā‘, some authorities, most recently von Wissmann, have identified Khawlān al-shām with the Biblical Hawlā. The district is fertile and produces grapes, wheat, and coffee in abundance. The Khawlān are also Zayddis and have their own sha‘b, but maintain no contact with the southern Khawlān. Their genealogy may be seen in the variant given for Khawlān by some Arab writers, notably Yākūt: Khawlān b. ‘Amr b. al-Hāf b. Ḫudā‘a b. Mālik b. ‘Amr b. Murra. Since, however, Ḫudā‘an states that the Khawlān al-ša‘īya also belonged to Ḫudā‘a, the distinction between the two tribes may be taken as regional rather than genealogical. Von Wissmann has suggested that originally the tribe of Khawlān occupied the entire area between Ṣa‘da and Šīrwa‘, but was split in antiquity into the two branches by which we now recognise them by the invasion of Ḫāṣid and Bakīl, who now occupy the intervening territory, and in which lands it is interesting to find the village of Bayt Khawlān on Ḫiṣāl Ḫāṣīr Nabi Shu‘ayb [q.v.] and the mountain Ḫur Khawlān.

The two-fold division of the northern and southern Khawlān is reflected in the ancient inscriptions where the tribe is frequently mentioned. The earliest reference, in RES 3022 (Minaeana), is probably for the southern branch. The inscription may be dated to the latest in the late 3rd B.C. and tells how Saba‘a and Khawlān attacked a Minaean caravan en route from Ma‘in to RGM (in or near Nadjārān). Later references, which belong for the most part to the time of the Sabaeo-Ḥimyarite wars of the 3rd century A.D., are more explicit in drawing a distinction between ḤWLN ḤDLM, with which the towns of ṢRWH and T[NM and probably the tribe KBSYM and ḤWLN GDDM (also GDDN, QGDDTN, and GDDHN), which possessed the city of 5TDGN (e.g., Jāmine 1577, 601, 616, 649, 649, 658, CH 308). There can be no doubt that the former were Khawlān al-ša‘īya and the latter Khawlān al-shām.

In Shābān 1o/Nov. 631, envoys of Khawlān appeared before Mūhammad in Medina and confessed Islam on behalf of their tribe. They were instructed in the teaching of Islam by the Prophet himself, and promised to destroy their idol ‘Amīr Anas; they then received the usual gift of honour of 1½ ounces of silver and returned home. After the death of the Prophet they at first joined the general movement of apostasy, but Ya‘lā‘ b. Munya, whom the Caliph Abū Bakr sent against them with an expeditionary force, succeeded in regaining them for Islam in the course of the year 11/632. Politically they were on closer terms with the government in Medina than the other tribes of the Yemen, which was probably the result of their relations with the Persian rulers in Ṣan‘ā‘. They afforded shelter to both the Persian princes Djuḥayyāh and Fayrūz who were driven out of Ṣan‘ā‘ by the rebellion of the Arabs under Kays b. ‘Abd Yagūḥ b. Makhir and supported them till help came from Medina.

Members of the tribe of Khawlān, after their lands were finally opened to Islam upon the submission of the Yemen in 13/634 or 14/635, played an important part among the south Yemeni Saba‘ites in the conquest of Egypt and settled there. We frequently find Khawlāns in important positions in Egypt; in Old Cairo (al-Fustāf) they gave their
name to a quarter, and the name generally is not rare in the papyri and on Arab tombstones. One of the most distinguished of the companions of the Prophet is buried there, `Abd al-Rahmān b. Mishkam ʿAbū Muslim al-Khawlān.

### al-KHawlān, ʿAbū Muslim ʿAbd Allāh b. Thuwaḥ

One of the eight Successors allegedly famous for their asceticism (ṣuḥādā′). He was born of the tribe Khawlān in the Yaman. One report (Abū Nuʿaym, Hilya, ii, 125) has it that he only became a Muslim in Syria during the caliphate of Muʿāwiyah, but other reports say that he had already been converted to Islam during the prophet′s lifetime while still in the Yaman. When al-Awasd b. Kays (cf. Ibn Ḥadjar, Tahdhib, xii, 236 and Abū Nuʿaym, Hilya, ii, 128; or: b. Ḥab, cf. Taftari, i, 1795) al-ʿAnṣāf Ḥuʿl-Himār summoned him to embrace his cause, Abū Muslim refused and was consequently thrown into a fire which did not harm him. He was then given leave to travel to Medina, where he arrived a year later. To record the undertaking of a pious devotee and one of the kādīs, he was appointed to it. He eventually settled in Syria. It is also said that he participated in a campaign into Byzantine territory. The sources have preserved various reports in which Abū Muslim boldly criticised Muʿāwiyah. Furthermore, it is alleged that he offered Muʿāwiyah his services as a messenger in an endeavour to appease the latter′s attitude towards ʿAli. He died in 62/682.

Although Abū Muslim is considered as one of the forerunners of Islamic asceticism, reports about his ascetic behaviour are on the whole very few in number. The most extensive account of his habits and the miracles ascribed to him is preserved in Abū Nuʿaym′s Hilyat al-aʿlāyīt, in which also a few sayings attributed to him can be found. This information is, on the whole, insignificant. It seems, moreover, that he was not only claimed by Muslim ascetics. It is also suggested in several reports that he had affiliations with Jewish as well as Christian circles.

On the one hand, Abū Muslim′s suffering at the hands of al-Awasd reminds one of Abraham and Nimrod. Besides, Kaḥb al-Aṣbāḥ (q.v.) called him the sage (ḥākim) of the community, although he had to admit to Kaḥb on one occasion that the Torah was right where he himself had been wrong (Hilya, ii, 128). On the other hand, a Christian monk once asserted that in his books Abū Muslim was mentioned as a companion of ʿĪsā b. Maryam (ibid.). Furthermore, cf. the ṣuḥādā′ budnī discussed below, which smacks of Christian influence.

Although generally recognised as a reliable transmitter of traditions, Abū Muslim is credited in the canonical collections with the transmission of only a few. The best known of these is a ṣuḥādā′ budnī (q.v.): “My love will be realised for those people who love one another because of me, my love will be realised for those people who visit one another because of me”, etc. (cf. Muḥ. al-Madani, K. al-Iḥbāf al-a′nīyya fi ʿa-bādith al-budnīyya, Hyderabad 1323, 10, no. 47 and Abūn b. Ḥanbal, Mṣnad, Cairo 1313, v, 236, 237, 239 and 326). In several ṣuḥādā′s of this tradition (cf. Mālik b. Anas, Muwaffaqi,
ed. 'Abd al-Bakl, ii, 953 f., Ahmad b. Hanbal, *Musnad*, v, 229, 233, 247) his name seems to be confused with that of another transmitter called al-Khawlanī, namely *'A'idh* Allāh b. 'Abd Allāh Abū Idrīs, one time bādi of Damascus. Since Abū Idrīs is considered as really too young (born in A.H. 8, he died in 80/699, cf. *Tahdhib*, v, 86 f.) to have transmitted this *badī* *husūl* from the Companion Muḥammad b. Dābal, Abū Muslim's name may have been inserted to bridge the gap in an otherwise imperfect *isnād*. Confusion of the two Khawlanīs seems to be also apparent elsewhere (cf. Balādhurī, *Ansāb al-asgārī*, i/v, ed. M. Schloessinger, Jerusalem 1938, 60).

KHAYĀL, the most important song form in the classical repertoire of north Indian music, is regarded by some to have been invented by Amīr Khursāw (651-725/1253-1325) and attributed to others by Husayn Ṣāḥīb ʿAḍāmī (862-934/1458-1528), the ruler of Dāmūl, who was dispossessed by Bihālī Lodī in 1476. Whatever its genesis, there is little doubt that it saw its greatest development during the Muslim period of Indian history and that its major exponents have generally been Muslims. It arose as a reaction to the traditional composition dhūrūf, whose rigid and austere character seemed to inhibit improvisation and technical virtuosity. In contrast, khayāl, as its name implies, was intended to afford greater freedom to the musician's imagination. The two forms continued to exist in competition with one another, their advocates riving among themselves and claiming superiority for their respective styles. In the 12th/18th century, khayāl received a tremendous impetus as a result of the efforts of Muḥammad Ṣāḥīb (d. 1265/1758) and that of his court singers Ādā Rāng and Sādā Rāng. It now leads all musical compositions and is regarded as the most significant contribution to the development of music. Its content deals primarily with religious and amorous themes, and consists of a relatively short set piece employed as the basis for improvisation.

KHAYĀL, Miḥ Muḥammad Taṣṭ, of Ahmadābād in Gujarat (d. 1173/1760), author of a collection of tales in 15 volumes entitled *Bustān-i Khayāl*, composed in Persian prose between 1155/1742 and 1169/1756, at the request of his patron Nawwāb Rashīd Khān, or, according to some manuscripts, for the two brothers Nawwāb Rashīd Khān and Nawwāb Muḥammad Iṣbāk Khān, sons of Dījar ʿAlī Khān (Nawwāb of Bengal 1170-4/1757-61 and 1176/1763-5); an account of the contents of this work, which is made up partly of historical legends and partly of fantastic fairy tales, is given by Estē, *Cat. of Persian Mss. of the Bodleian Library*, No. 496, pp. 34-2 (Estē).

**Bibliography:** Estē, in Gr. I. Ph. ii, 342. (Ed.)

KHAYĀL AL-ZILL ("Shadow fantasy"), popular Arabic name for the shadow-play, possibly brought over from South-East Asia or India and performed in Muslim lands from the 12th century A.D. to the 20th one. Although occasionally presented during the long evenings of the Ramadan fast, it has now virtually disappeared with the spread of education, the cinema and television.

The only extant texts of medieval Arabic shadow-plays were composed in the 7th/13th century A.D. by an Egyptian ophthalmologist, Ibn Dānyāl (q.v.), and consist of a humorous pageant of Egyptian life under the Mamluk ruler Baybars I (q.v.). More frequently, the shadow-play amounted to no more than a general guideline for the performers. In the Ottoman period the shadow-play spread through North Africa and other Arabic-speaking countries, as the Ottoman Turks popularised the *Karagöz* (q.v.), in which several stereotyped characters amused an unsophisticated audience. The *Karagöz* also penetrated Anatolia, the Arab countries, Greece and Roumania. Iran had its own form of shadow-play, as had Muslim communities in Central Asia, but they did not attain the same popularity. After Ibn Dānyāl's time, one finds scattered references to Arabic shadow-plays; however, only from the 12th/18th century onwards is relatively more known. In Syria and in most of North Africa a *Karagöz*-type prevailed, but Egypt held to its own tradition of shadow-play, which usually presented the adventures and misadventures of characters in the market-place or on Nile boats (e.g. *li b* al-maḥrub, *li b al-imāsāh*).

A standard khayāl al-zill performance in the 18th and 19th centuries was usually constructed on the following lines: a large sheet was hung as a screen on an improvised stage in the open air, in a coffee-house, or, more rarely, in a public hall, and a bright lamp placed behind it. Between the two, small (often 30 cm. high) two-dimensional figurines, of thin coloured translucent leather, were manipulated by the shadow-play master, who was called the muḥaddīm. He used several sticks to move the head and limbs of the figures, through holes specially pierced into the figurines; the shadows thus cast on the screen were both lifelike and lifelike. One or more persons assisted the muḥaddīm in this task and in the recitations of the different characters. The texts recited were memorised, rather than read, but often seemed also to bear the mark of improvisation, not unlike the *commedia dell'arte*. The *li b* ("play") started with a *mašīa* ("prologue") and was divided into *fusūl* ("acts"), although some plays were of one *fusūl* only. Songs and music were interspersed as needed, prose alternating with verse. The vernacular predominated and the contents and style were geared to a familiar background, e.g. the bath-house or the market-place. The plot was simple enough, usually based on misadventures and misunderstandings. Slapstick— including severe thrash-
advised him occasionally on grammatical problems in his writing. In the capital, Khayal soon won the favour of Suleyman the Magnificent, to whom he was introduced by the Grand Vizier Makbül (Maḳṭūl) İbrahim Paşa [q.v.], who had patronised the poet on the Defterdar Iskender Celebi's recommendation. Almost all his ballades, which have no particular literary distinction, are dedicated to Suleyman. The more generous favours of the Sultan aroused the jealousy of most of his fellow-poets, particularly of Dhatī (‘All, ibid., f. 459a) and Tahsilgali Yabäy [q.v.] who frequently attacked him with his punget satires, to which Khayal did not fail to retort. Following the execution of Iskender Celebi and İbrahim Paşa in 947/1535 and 943/1536 respectively, Khayal lost two powerful protectors. Although ‘Aṣḥāb Celebi says unconvincingly that the Sultan's favours never diminished ('Aṣḥāb Celebi, ibid., f. 271b), it seems that Khayal began to feel uncomfortable at the court during the grand vizierate of Rüstem Paşa [q.v.], who was not particularly inclined to the arts. He must have hinted to the poet that his presence in the capital was no longer desirable, for we see Khayal pressing for a post outside Istanbul, more exactly, to become Rumeli Kebâbçul of an army to Sandıq Bey, the one in which he had obtained. Khayal's public life after this period is somewhat obscure. His meeting with Fuḫūlī in Baghdad, which must have taken place during Suleyman's sojourn in 947/1534, is mentioned only by ‘All (ibid., f. 5066) without further comment. He died in Edirne, where he is buried (for the present state of his burial place, see A. N. Tarlan, Hayalî Bey Divanı, Istanbul 1945, XI).

Khayal is an outstanding and original Dinâne poet of his time. He wrote a few dozen brilliant lyrics which are lost, to the casual reader, in the mass of mediocre ghâals of the most conventional type. His reputation is thus disproportionate to his poetical achievement. It may be that the circumstances in which he left the court after the disappearance of his powerful protectors, and the fact of his apparently being an ‘Alawī in an environment where orthodox Islam was predominant, were important factors for his comparatively secondary position among his more celebrated colleagues. Although his superiority to Bâkî [q.v.], as claimed by A. N. Tarlan (Hayalî-Bahi, in Edebiyat Fâhîlesi Türk Dili ve Edebiyat Dergi, no. 1 (1946), 20-38), may be debated, since Khayal is far from having the mastery of form and the flow of style of the “Sultan of Poets”, there can be no doubt that some of Khayal's lyrics are more heart-felt and are more imbued with pervasive mystic passion than is the case with Bâkî and with the two prominent followers of his school, Şeykül-İslâm Yabäy and Nedîm.

Khayalî’s Divan has been edited by Ali Nihad Tarlan (Hayalî Bey Divanı, Istanbul 1945); this is based on manuscripts available in Istanbul libraries. Bibliography: see the tekbâres of Sehît, Lâşîf and ‘Aṣḥâb Celebi, and the biographical section of Alî’s Künh al-akhbâr, s.v.; Mu'allim Nâjdî, Esâmî, Istanbul 1308/1892, 137; Gibb, Hist. of Ottoman poetry, iii, 58; Fahîr İz, Eski Türk edebiyatında nâmîn, i/1, Istanbul 1966, 272-80 (selections from his ghâzals). (Fahîr İz)

KHAYBAR, the name of a famous oasis, and of its principal settlement, about 95 miles/150 km. from Medina; the district owes its renown to events which took place there in the years 7 and 20 A.H., not to natural features which distinguish it from other oases in the region. For this reason the
ancient Arab geographers, although they do mention it, provide only the briefest of information about it, giving special praise to the abundance of its palm trees.

1.—Geographical information.

Only al-Bakri and Yākūt have devoted to Khaybar as much as two pages in their Muṣājam: the former is concerned primarily with the details of certain places in the interior in the light of their historical importance, the latter informs us that the place-name Khaybar encompassed the entire wilāya and that this wilāya comprised 7 hiṣn whose names were: Ḥisin Naṭm, al-Kamūs (= Ḥisin Abū 'l-Hukayk), Ḥisin al-Shiḳḳ, Ḥisin (al-)Naṭāt, Ḥisin Ḥ-Sullimin (sic), Ḥisin al-Watḥ and Ḥisin al-Katibī. All these place-names are found in the historical Arab sources and are listed alphabetically in the Muṣājam of Yākūt. Wustenfeld (Die von Medina auslaufenden Hauptstrassen... 15) adds to them two other names, al-Yaḳṭūlī, ii, 56, another two, al-Bakri, 331, one other.

Yākūt states in addition that Khaybar was the equivalent of Ḥisin in the dialect of the Jews and since there were several of these in the region, the locality was also designated by the plural form Ḥayyābir. He quotes some verses where mention is made of the fever which was endemic in the oasis, and of the abundance of its date-palms.

From the texts of modern geographers we can glean some supplementary information: distance from Medina: 60 mīls; altitude: 2,800 feet (thus Doughty ed. Wustenfeld, 313) states that Khaybar encompassed the entire oasis and that this oasis should have consisted of a movement from fertile regions towards the desert; and that the emigration began probably after the destruction of Jerusalem in 70 A.D., but proceeded steadily on account of the persecutions which the Jews continued to suffer in Palestine. Also, in our opinion, a factor would have been invitations sent to relatives and friends by those who, having settled in Arabia, were satisfied with their new situation. How did this satisfy me? In our opinion, the Jews found in Arabia conditions favourable to their spirit of initiative and appropriate to their customs. We believe that sufficient attention has not been paid to the following circumstances: (1) The traffic in precious merchandise from India and the Far East, diverted from Mesopotamia to Arabia following a series of grave events, had brought to the inhabitants of Khaybar a certain prosperity; (2) The Arabs were not at that time capable of producing for themselves the tools, the weapons, the textiles, and the jewelry which they needed or coveted, and the Jews, being skilful artisans and drawn by nature towards commerce, were in a position to supply these objects because they understood the art of manufacturing them or the means of importing them; and (3) Arabia was a vast country with a sizable population which offered, now that economic conditions were much improved, considerable opportunities for commerce.

In our opinion, the Jews in Arabia, besides their activity in agriculture (they were the pioneers in the cultivation of the oasis) and their commercial activities in their capacity as craftsmen, bankers and money-lenders, probably carried on these in collaboration with the Arabs, who provided the capital, and that while the Arabs acted as intermediaries between them and the tribes of the interior. The Jews possessed considerable wealth and it would seem difficult to suppose that this was due solely to the work of farmers and artisans whose production was for local consumption only. In fact, despite the absence of precise information, we possess certain indications. Some objects found by the Muslims in a redoubt at Khaybar (Caetani, 7 a.H., § 6) seem to us significant: a siege-engine, 20 bales of Yemeni cloth and 500 cloaks. Wellhausen, apparently struck by the singularity of the existence of such a machine among the Jews, attempted to explain it, suggesting (tr. of al-Wạḳdī, 269, n. 1) that these were used for settling quarrels among the families of the community. It would seem more logical to suppose that it was being stored in a depot for future sale, in the same way that swords, lances, shields, etc. had been sold by the Jews. Equally, the 20 bales of cloth and the 500 cloaks must have been intended for sale, as it is not conceivable that such a quantity of luxury goods was kept for the exclusive use of the Jews. If one accepts the idea of commercial activities undertaken especially by the Jews of Medina (cf. moreover M. A. Shaban, Islamic history, a new interpretation (600-750), Cambridge 1971, 10, 13), one understands better the reasons for which Muḥammad attacked them in particular. His hostility towards the Jews would have had economic causes similar to those which have brought about persecutions and pogroms in so many countries during the course of history.

According to Caetani (7 a.H., § 7) Muḥammad was moved to attack Khaybar by motives of political opportunism: on the one hand, the pact concluded with Kurayḥ at Hudaybiyya gave him the assurance of not being attacked by them during the expedition; on the other hand, if he conquered Khaybar he would
be able to satisfy with ample booty those of his companions who, having hoped to capture Mecca, were disappointed and discontented.

Montgomery Watt has drawn attention to the fact that the Banu 'l-Nadīr, driven out of Medina, had taken refuge in Khaybar and that their chieftains and the chieftains of other Jewish groups, eager for revenge, were intriguing against Muhammad along with the Arabs tribes of the neighborhood. So Muhammad had not only a just motive for attacking them, but there was also the positive necessity to destroy these enemies, more formidable even than the Kuraysh because of their adherence to their own religion, their intelligence and their superior culture. Muhammad Husayn Haykal (385-6) maintains that the Prophet did not feel sure of the northern fringes of the peninsula: he was afraid lest the Jews established in the oases of Northern Arabia betray him, and lest Heraclius and Ksirā seek help from them against him. The sources give support to the view of Montgomery Watt, showing that the Jews, already responsible for the coalition which had laid siege to Medina in 5 A.H. and worried by the growing power of the Prophet, continued to stir up the Arabs against him. Haykal's opinion, however, is to be rejected in that it is inappropriate to consider him as the agent of subsequent developments. In the year 7 A.H. Muhammad was not yet a figure to be reckoned with in the estimation of the rulers of the empires to the north of the peninsula. While giving full credit to the opinion of Montgomery Watt, one should not overlook the fact that the Prophet was in great need of arms and money to accomplish his objectives and he knew that he could find these among the Jews at Khaybar (the sources give precise details of the arms and type of arms captured by the Muslims from the Jews at Medina and at Khaybar; Caetani, 4 a.H., § 13; 5 a.H., § 49; 7 a.H., § 34).

Muhammad marched against Khaybar with 1,800 or 1,600 men and 100 horses (according to al-Mas'ūdī, Tanbīth, 256, with 1,400 men and 200 horses). The date of departure indicated by Ibn Ḥishām, sc. Mubarram 7/May-June 628, is to be preferred to those of other sources (see Caetani, 7 a.H., § 7 and n. 2). The march of the Muslims was secret and rapid, and the Jews only became aware of their arrival when they went out to their work in the fields. Alarmed, the inhabitants of the oasis took refuge in their homes, confident of their ability to defend themselves there, and from that time onwards each family or group held defensive positions in its own redoubt.

The attack by Muhammad had been foreseen, but no serious preparations for withstanding it had been made; at Khaybar there was no political authority which could have imposed a communal defence policy, and it seems moreover that discord reigned there (Caetani, 7 a.H., § 9, and 8). Their defensive policy was limited to seeking, with promises of reward, the support of the neighbouring Arab tribes. In fact, several thousands of the Ghatafan, pressed by the insistence of and the rewards offered by the Jews, came to Khaybar to offer their aid, but they withdrew at the very moment when their aid was needed. The sources explain their departure, describing how they had left their women, children and livestock in an encampment in the middle of the desert and, hearing great uproar from that place, they believed that the Muslims were attacking it and they rushed to defend their families (another version attributes their departure to a mysterious voice which warned them of danger [Caetani, 7 a.H., § 22]). Now, the Ghatafan embraced Islam immediately after the conquest of Khaybar and they did not return to Khaybar until after the successful completion of the operation; Muhammad conceded to them a hill in the oasis and one may suppose that this concession was the price of their withdrawal.

The process of the military operation has not been clearly described in the sources, and for purposes of reconstruction, the historian cannot base himself on the topography of the oasis, nor on a survey of the remains of ancient constructions in the harra, nor on the local tradition which indicates the sites where Muslims and Jews fought one another. The actual place-names, which Doughty collected, differ entirely from those mentioned in the sources (Caetani, 7 a.H., § 6); one site alone can be identified, the place where 'All gave proof of his valour, and this only because there is a mosque bearing his name. We restrict ourselves here to drawing out from the detailed accounts of the sources those aspects which characterised the hostilities and the more famous episodes of the two facts should be noted. First, in the oasis there were three regions: al-Naṣāt, al-Shīb and al-Katība, probably separated by natural diversions (sā'ūdīs, lavadrits, swamps). Second, each of these regions contained several kisān. Those which Muhammad besieged and which provided for the Jews homes, store-houses and stables (Caetani, 7 a.H., §§ 26, 28) could probably be described as "farm-strongholds", the term applied by Ph. Lippens in his Expédition en Arabie centrale, Paris 1956, 37, to the buildings in another oasis, also called Khaybar, situated to the south of Mecca on the Bīṣā-Abā road (cf. Fu'ād Ḥāmza, Bilād, 263); "farm" because after the fashion of the buildings described by Lippens, the kisān of our Khaybar were surrounded by cultivated fields, and by many palm-groves (Muhammad ordered the felling of 400 palms around one kisān to force the defenders to capitulate; Caetani, 7 a.H., § 17); "strongholds" because they were raised up on the hills or on the basalt rocks of the oasis as to be more defensible, such as the kisān of the principal settlement which stands on a long, basalt crag (Doughty, ii, 76) and the kisān of al-Zubayr which, we are told by the sources, stood on the summit of a cliff (Caetani, 7 a.H., § 27).

The situation following the retreat of the inhabitants into their redoubts was as follows. The Jews, after a rather bloody skirmish in front of one of the kisān, avoided combat in the open country and Muhammad, having none but the most primitive means of assaulting the fortifications, found himself obliged to invest one kisān after another, and to wait until the capitulation of the defenders should become inevitable through lack of water and food. This did not prevent those besieged from transferring, under cover of darkness, women, children and treasures from one kisān to another as the situation demanded; sometimes the warriors themselves, to make their resistance more effective, passed from one region to another, from al-Naṣāt to al-Shīb and from al-Shīb to al-Katība.

There were, during these sieges a number of skirmishes preceded by duels, a number of sorties by the defenders, some attacks by the Muslims and exchanges of arrow-shots between the two sides (Caetani, 7 a.H., §§ 15, 20, 21, 22, 27, 28, 29, 31); among the Jews there were spies and traitors who, in order to save their own skins, gave useful information to the enemy, in particular, concerning the use of certain machines of war which the Muslims learned to use at this time (Caetani, 7 a.H., § 28). All these episodes are recounted in great detail by the Arab chroniclers; there were others which had much greater
repercussions and consequences for Islamic history and law.

As those besieged in one of the ḥijras defended themselves stubbornly (Caetani, 7 a.H., § 20-3), first Abū Bakr, then ʿUmar, took up the standard in the hope of breaking down their resistance, by putting themselves at the head of the attacks; but they still failed. Muhammad then declared that the next day he would entrust the standard to "a man who loves God and his Prophet and whom his Prophet love"; he then called to ʿAll (this tradition, reported by Ibn Ḥīḥām, 1579 and 1580, shows a Shift tendency) and ʿAll, cured of his opthalmia after the Prophet had spit into his eyes, killed a valiant Jewish chieftain with a sword-stroke which split in two the helmet, the head and the body of the unfortunate victim. He then gave another proof of his exceptional physical strength. Having lost his shield, he lifted one of the doors of the ḥijra from its hinges and defended himself with it, then used it to make a bridge whereby the attackers gained access to the redoubt. The door was so heavy that later, when it was put back in place, eight men were needed for the purpose. ʿAll had showed his prowess at Badr, at Ubud and elsewhere, but this fact astounded the Muslims (al-Ṭabarî devotes a page and a half to it, 1579-51); it was greatly exaggerated (see Doughty, ii, 126), and finally became one of the reasons for which the futuwa [q.v.] made of ʿAll the prototype of heroes.

At the start of hostilities, the Muslims suffered from lack of provisions (Caetani, 7 a.H., § 24, and cf. 9 a.H., § 42). Their need drove them to kill, disable and cook a score of asses which had escaped from one of the ḥijras. Muhammad declared that the meat of horses, mules and asses was forbidden and the cauldrons in which the ass-meat was being cooked were overturned. This judgement was nevertheless mitigated: it is permissible to eat even forbidden foods when one is forced by necessity (Kurʾān, II, 168/173, VI, 119/118, XVI, 116/114).

One of the women taken prisoner in one of the ḥijras, Ṣafīyya, who was married to a Jewish chieftain, caught the attention of the Prophet (Caetani, 7 a.H., §§ 27, 30, 36 and n. 4); but she threw his mantle over her, a sign that he had chosen her for himself; then Ṣafīyya's husband was put to death, and she herself was married to the Prophet, whose sole concern at this time was that the oasis should continue to be cultivated, and by the Jews, since Arabs did not like working on the land. The Prophet limited himself to subjecting the Jews to a perpetual servitude, reducing them to the status of land-servants. For this reason, in later years when an interest in legal matters developed (see Doughty, ii, 5), and finally became one of the reasons for which the futuwa [q.v.] made of ʿAll the prototype of heroes.

A Jewess laid before Muhammad, who was dining with his Companions, a roast sheep (Caetani, 7 a.H., § 37). Muhammad took from it his favourite part, the shoulder, but putting it to his mouth he noticed that it had a strange taste and spat it out (according to one tradition the sheep spoke to him to warn him). One of his fellow-diners who had tasted the dish fell ill and died some time later. The woman confessed her crime (during the hostilities at Khaybar she had lost her husband and other close relatives), but it is not known whether Muhammad had her executed or pardoned her (al-Ṭabarî, i, 1584, says that he did not punish her, ṣadqāna lā ṣaad). The Prophet ordered the restitution to the Jews of the books containing the holy Scriptures (Caetani, 7 a.H., § 38). It was at Khaybar that he laid down instructions concerning the sale and exchange of precious metals (Caetani, 7 a.H., § 38).

After about a month and a half of hostilities which cost the Muslims very few casualties (a score of dead; Caetani 7 a.H., § 43), the Jews asked the Prophet to offer them an agreement and they capitulated, accepting his conditions (thus Ibn Ḥalîdîn, ii, App. 39, and his version is preferable, in its details, to those of the other sources: Caetani, 7 a.H., § 15 nn. 1 and 2, and § 33). Under the terms of the agreement, the Jews were to remain in the oasis on their land and were to cultivate it, but in future were to hand over one-half of the produce to the Muslims. From a legal point of view, the pact was defective, since it did not define the situation of the Jews and did not say whether they were to remain the owners of the soil which they were to cultivate (Caetani, 7 a.H., § 34); it must be assumed that the problem was not even envisaged by the Prophet, whose sole concern at this time was that the oasis should continue to be cultivated, and by the Jews, since Arabs did not like working on the land. The Prophet limited himself to subjecting the Jews to a perpetual servitude, reducing them to the status of land-servants.
tionists came to their aid—with material suiting the interests of one or the other party, as will be seen below when we shall deal with some of the traditions collected by Yahyā b. Ādam (d. 203/818) in his Kitāb al-Kharāṣṭī, on the nature and the distribution of booty and the spoils of war.

The goods of the Jews (Caetani, 7 a.H., §§ 39, 41-42), of which Muhammad took possession by his conquest of Khaybar, consisted of movable and immovable property. The former was divided among the warriors; all the objects would have been piled up to await distribution, and anyone who took anything out of turn was compelled to return it. As for the land, the sources are not clear, either what was the kind of property to be divided, or on the manner by which the distribution was effected. Caetani maintains that the Prophet divided solely the produce of the lands of Khaybar; on this point he is categorical (7 a.H., §§ 33, 41 n. 2 218; 10 a.H., §§ 100-102; 20 a.H., § 237; 25 a.H., § 559) and Montgomery Watt, 250, is in agreement with him; Caetani criticises (10 a.H., § 100 n. 1) Baron von Tornauw and M. van Berchem, who did not doubt that in 7 a.H. the Prophet divided up the property, the former in Das Eigenthumsrecht nach mosaischen Rechte, in ZDMG, xxxvi (1882), 298, the latter in La propriété territoriale et l'impôt foncier sous les Califes, Geneva 1886, 8-9. Caetani bases his conclusion on a passage of al-Baladhuri according to which the Prophet divided up the property, the former in the relevant traditions (ibid., §§ 9; on the significance of the word wafyafa in this text, see translator's note on p. 112 no. 9), and other parts were distributed (ibid., § 91). And §§ 90, 91), against expenses of his guests, and of delegations coming to him from the interior of the peninsula, and against any other eventualities (ibid., §§ 91, 94, 95). Thus the Prophet, when in the event of the death of 'Umar, was concerned with the interests of the state.

But let us examine the traditions collected by Yahyā b. Ādam which reveal the efforts made by the traditionists to import the concept of the Prophet at Khaybar. First of all, they draw a distinction between ghanima (that which is taken by force, *sulh* and *fay* (that which is obtained by treaty, *wakf*) (Yahyā b. Ādam, §§ 7, 12); since it could not be deduced that Khaybar had been captured *sulh* (see e.g. ibid., 18), and since it would have been difficult to expunge traditions according to which the Prophet had reserved for himself part of the lands of Khaybar (see the variant version of al-Baladhuri and Yahyā b. Ādam, § 9), there were traditionists who settled the question declaring that the fifth part of the ghanima having first been detriated—this part belongs to God and it is "given back" by God to those whom He has named (Kūrān, VIII, 42:42) His Messenger, the Messenger's relatives, the orphans, the needy, the wayfarer—the rest belongs to the Muslims who have captured it, and must be divided among them equitably (Yahyā b. Ādam, §§ 4, 11, and cf. 18, 12, end), one part for each warrior and two for his horse, if he has brought a horse with him (the question becomes controversial if he has two, ibid., § 7). Others (ibid., and § 8) declared that the lands are excluded from the ghanima: these (ibid., and § 101) are *fay* and (ibid., and § 48) belong to the Muslims, that is to say, to the Muslim community (al-Ṭabarî, i, 158a, is explicit: Khaybar was a *fay*). Others again, resorting to subtlety, claim that the Imām after having taken the fifth part and thus having made of the lands a ghanima, may distributed the remaining 4/5 between the warriors who had captivated it, or hand over the whole to the Muslims in perpetuity as a *fay* (Yahyā b. Ādam, §§ 9, 10, 101; in the *fay* there is no fifth share, ibid., § 12, and cf. §§ 17 and 101).

The Imām may abstain from the distribution to the warriors, because the Prophet at Khaybar kept for himself a portion of the lands (ibid., § 9) on the significance of the word *wakf* in this text, see translator's note on p. 112 no. 9), and other parts were distributed (ibid., § 9). Muhammad assigned some shares of the produce of al-Katiba (his fifth) to his wives and to

What makes the distribution of goods at Khaybar interesting to the historian is a variant account, presented as a tradition by al-Baladhuri (26) and confirmed by other traditions in the collection of Yahyā b. Ādam (§§ 90, 91, 94, 95). These traditions change substantially the account given above of the assessment and distribution of the lands at Khaybar, and change it in such a manner that one is tempted to suppose that all these traditions were inventions in spite of their provenance (we consider them to be authentic), in order to justify the decision of 'Umar about the lands of Sawād—a decision which was certainly judged politically correct, if not necessary, by most of the people, but which, to be rendered legitimate in the eyes of all, had to be supported by the precedents of the Prophet referred to in traditions. According to the variant account, the land of Khaybar was divided into 36 parts (instead of 18) and Muhammad divided half of this amount among the troops (Yahyā b. Ādam, § 90); of this half he also received a share for himself (ibid., §§ 91, 94); the other half he reserved to provide funds against administrative needs and matters in hand (ibid., §§ 90, 91), against expenses of his guests, and of delegations coming to him from the interior of the peninsula, and against any other eventualities (ibid., §§ 91, 94, 95). Thus the Prophet, when in the event of the death of 'Umar, was concerned with the interests of the state.
certain members of his family. Calculations have been made of the quantity of dates and grain which this fifth would have provided (Caetani, 7 a.H., § 42), and there have been attempts to assess the amount of the rents accruing to the Prophet from the oasis cultivated by the Jews; they were certainly considerable, but Sprenger's idea, that Muhammad could have maintained with these revenues an army of 4,000 or 5,000 men, is an exaggeration (Caetani, 7 a.H., § 40).

The Banu Bakr made a change in the situation established by the Prophet at Khaybar; 'Umar made no change during the first years of his government, but in 20 a.H. he modified it completely. That year (Caetani, 20 a.H., § 234-237) he announced in a speech delivered in the mosque of Medina that he had decided to expel the Jews from Arabia. To justify this decision, which reversed the pact concluded with them by the Prophet, he claimed to have learnt, and to have acquired positive verification, that Muhammad had declared before his death that two religions could not co-exist in Arabia. According to Caetani, the traditions which report this phrase of the dying Prophet and those which accuse the Jews of misconduct and of crimes were invented; equally, one should doubt the veracity of the suggestion that Muhammad warned the Jews that he was reserving the right to expel them later, and that he was leaving them their lands only in so far as it was pleasing to God, all land being the property of Muslims. These traditions tend evidently to absolve 'Umar from the charge of having acted against the will of the Prophet in his decision regarding the land of the Sawâd.

Caetani claims that the true motive for the new assault was made by the caliph's contingent and local: the oasis could henceforth be cultivated by slaves, whose numbers had been greatly swollen through military campaigns outside Arabia (al-Baladhurî in a way confirms this motive, saying that the Muslims, having become powerful, were now in a position to expel the Jews). Having removed the Jews far away from the oases of Arabia, giving them lands in Syria, 'Umar proceeded to a new partition of the oasis, in the sense that he assigned to the beneficiaries of the produce the ownership of the land from which they were receiving their rents.

The success of the Prophet at Khaybar had as an immediate effect an increase in his power, for several tribes, enemies until that moment, embraced Islam and recognised the hegemony of Medina (Caetani, 7 a.H., § 49); another consequence of great importance lay in the economic advantages which Muhammad and the Muslims, particularly the Muhadjîrin, gained from the conquest of the oasis: Muhammad because on now he could rely on fixed revenues, the Muslims because it was not only ʿĀisha who could cry out "Now we can have our fill of dates". Many had cause to rejoice in the change in their economic situation. However, the historical importance of the event lies not in the facts above indicated, but in the pact concluded between Muhammad and the Jews which set more or less directly the style for relations between the Muslims, conquering vast territories beyond the confines of Arabia and the non-Muslim peoples who fall under their domination. (For a juridical interpretation of this pact, the relevant traditions and the additions which were made to them, see Santillana, i, 359-62 and n. 235).

The history of Khaybar during the succeeding centuries is bound up with that of the Hijâjâd and of the Najîd, and offers nothing of interest.

It may be noted that some Jews either stayed in the oasis or returned there (al-Mukaddasi, 95; Caetani, 20 a.H., § 220; Vartebana, who travelled in Arabia during the early years of the 7th century, noted that in a locality between Damascus and Medina (Khaybar?) lived between 4,000 and 5,000 Jews (but Pirenne doubts this, pp. 215-16). Towards the mid-12th century, the Jews were in considerable numbers there (Pirenne, 76). In the mid-19th century, Khaybar was part of the amirate of the Al Rashîd, whose capital was at Ḥāʾil, and it stayed under the domination of this dynasty until its collapse following the death of ʿAbd al-ʿAzîz b. Rashîd (1906). It then belonged to the Sharîf al-Ḥusayn of Mecca until 1922, when it was captured by Taṭālûn, son of ʿAbd al-ʿAzîz Ibn Saʿūd (in 1918 he had defeated the troops of the Hijâjâd near al-Ṭâḥîf (OM, iv (1924), 599). On these events, see in particular, H. St. John Philby, Saʿūdî Arabia.

KHAYBAR or KHYBER PASS, one of the principal passes (together with the Kurram, Tochi, Gomal and Bolan Passes) through the mountain barrier separating the Indus valley plains from Afghanistan. The pass runs north-westwards for ca. 33 miles/50 km. from the Shadi Baglar opening up to a further 6 miles/10 km. beyond Fort Jamrud, itself 7 miles/12 km. from Peshawar, to the barren plain of Loi Dakka, which then stretches to the Kābul River banks. The highest point of the pass is at Landi Kotal (3,518 ft./1,070 m.), an important market centre for the region, after which the road descends to the beginning of Afghan territory and Landi Khana. The surrounding country, now falling mainly within Pakistan, is controlled by Afridi Pathans, with Mohmands to the north.

The pass has been of great strategic importance all through history as a gateway for invading armies to debouch on the plains of northern India. It was probably used by Alexander the Great's generals, and in Islamic times, was used at least once by Māmmūd of Ghazna and on various occasions by Bābur, and more recently, by Nadir Shah Afsār and Ahmad Shah Durrānī. In the 19th century, it became especially valuable as the most direct channel for the Government of British India to exert pressure on the Kings of Kābul, being little blocked by snow during the winter months. During the First Afghan War (1839-42) there were various skirmishes between British troops and the Afridis. A Khyber Agency was created by the Government of India, with a special officer in charge of it, during the Second Afghan War (1878-80), the guiding policy being non-interference with the undependable nature of the Khyber Rifles, they were disbanded and their place taken by regular government but supplying their own arms and equipment, by the Scouts and by the Frontier Constabulary. Under the viceroyalty of Lord Curzon (1899-1905), an extension of broad-gauge railway had been made to Fort Jamrud and a road to Landi Kotal, and in 1925 a narrow-gauge railway was constructed as far as Landi Khana. After 1947, Pakistan became responsible for the Khyber Agency, which was attached to the Peshawar division of the North-West Frontier region of West Pakistan.

KHAYL (a.), a fem. sing. noun with a collective meaning denoting the equine species. The term has no singular and, like ībīl “camel” and ghānam “sheep”, it is to be included in the category of collectives for domestic animals forming the basis of nomadic life (see Ch. Pellat, *Sur quelques noms d’animaux en arabe classique*, in GLECS, viii, 95-9); however, the plurals ḥhayl and ʿakhyl are found for it. The extent of the concept of ḥayl covers the whole range of terms comprising, in Islamic society, the activities based upon use of horses, such as, with āsh, the nouns barīd, ḥayl, ḥild, ʿakhd, ḥarād, ṣawī, ṣarrī, ṣaward, ṣawānd, ṣayd, and ʿabād [q.v.]. According to the Arab philologists, ḥayl “horses”, from the double radicals ḥ- ʿ, y.-l. is supposed to refer to the “haughty gait” of these proud animals (lit. ḥaylāl ʿāshīf al-khaylī); but this ingenious explanation is, even in the eyes of Ibn Sidūl himself, somewhat subject to caution (Mukhassas, vi, 165). One might well ask whether ḥayl is not from a substratum of terms inherited from the languages preceding Arabic, which may be confirmed by the parallel usage of preciser terms, like ṣarā “riding horse”, ḥawād “excellent runner”, ṣāʾīr “mule”, ṣāʾīn “stallion of noble blood”, ṣanā ṭah “non-thoroughbred mare”, bir ḥawān “nag of non-Arab stock”, which all have plurals. In the same way, Latin had, at the side of the classical equus, the vulgar caballus of Gaulish origin.

Starting from its metonymous sense of “mounted troop”, ḥayl furnished, by the process of derivation, some exact denotations, such as ḥaylāʾ “equitation” and ḥayyāl “horseman”, but without the knightly connotation of ṣurūr or the military one of the old Persian term swēdr (pl. swēdr, aswēdr, asūwēdr); it was also said of the Turanian peoples that they were a ḫawm ḥaylāyām “mounted race”.

In Arabia, at the outset of Islam, horses were very few in numbers and, thanks to the kūlwāt al-ḥayl bi, the names and pedigrees are even known for the most famous of them (see G. Levi della Vida, *Les <<Livres des chevaux>> d’Ibn al-Kalbi et d’Ibn al-A’rdbi*, Leiden 1963, index). After 1881, there were formed the Khyber Rifles, a force of jezailchis or tribal levies, who were paid by the Government of India and who guarded the pass until the risings of the Afridis and Orakzais under Mullah Sayyid Akbar in 1897-9. Thereafter, the Khyber Rifles were supported by a mobile British army column in Peshawar, and the British became responsible for the safe passage of caravans through the pass. After the Third Afghan War of 1919 showed the undeniable nature of the Khyber Rifles, they were disbanded and their place taken by regular British troops, by Khassadars (local tribesmen enrolled for escort and simular duties, paid by the government but supplying their own arms and equipment), by the Scouts and by the Frontier Constabulary. Under the viceroyalty of Lord Curzon (1899-1905), an extension of broad-gauge railway had been made to Fort Jamrud and a road to Landi Kotal, and in 1925 a narrow-gauge railway was constructed as far as Landi Khana. After 1947, Pakistan became responsible for the Khyber Agency, which was attached to the Peshawar division of the North-West Frontier region of West Pakistan.
was doubtless following these examples that the great confederation of Gharatân [q.v.], spread over Najd, utilised the system of the himâ, favoured by having at their disposal relatively rich pasture lands on the fringes and slopes of the great plateau, with drainage from running streams. The results of this well-thought out stockraising policy showed positive results, since in the 6th century, several tribes, including the Banû 'Abs, were each able to fit nearly a thousand riders; it is at this time that the sayydî assumes the name of fâris and the ra'is that of kâdî al-khayl. One of the oldest-established and most famous of these reserves for breeding horses was the vast himâ Darsìyya [q.v.], which in the time of the caliph 'Uthmân had several tens of thousands of beasts, horses as well as camels. Equally flourishing was the himâ of al-Baqî' near Medina, which had a permanent water supply for the whole year. Correspondingly, the great carvan centres of the Hijâz had near them their own himâs forming a protective zone against the depredations of nomads.

The Prophet Muḥammad, conscious of the supreme value of the horse for the success of Islam, was skillfully able to appropriate the resources of the existing himâs for the benefit of the new community, at the same time strengthening their invariable character by their integration of function into the Islamic karam. Consequently, the warriors for the faith benefited considerably from these reinforcements for their campaigns of razzias. Admittedly, there was a need at first to cope with the incredulousness and indiscipline of the Bedouin plunderers, but some severe reprisals soon instilled in them a respect for "closed tracts belonging only to God and His Messenger" (âl himâ illâ lillah). The effects of this policy of utilising horses were immediate, and thus one sees the Banû Sulaymân, at the time of the conquest of Mecca, bringing to the Prophet the support of some 800 horses. The karam territories were enlarged and new ones created.

The Orthodox caliphs, and 'Umar especially, concentrated their efforts on building up the potential forces of horses for Islam; the establishment of the reserves of al-Rabâdha, which was several hundred square km. in extent, and of al-Nâdidi (tasâlih), harnassing could not permit a tradition of equitation which might become a school. Moreover, shoeing was only a rudimentary cavesson or snaffle (lijâ[m], from Persian blance of a saddle. The bridle "the gourd-shoot" (kabak), in tournaments, polo, the dira'id. "the goad-shoot- ing" (kabak), jousting and arms-play on horseback; at the present time, only the Afghân bus-hakshi "goat-dragging" can give any idea of the spirit of competition and the enthusiasm animating these equestrian sports, in which virtuosity and brutality existed side-by-side. Far from equalising these feats, the Arabian Bedouins only used their horses for occasional straightforward charges over short distances, getting the maximum from the animal's resources. Hence their method of riding was of the simplest. Not knowing the use of saddles, stirrups and bits, they rode bareback or with a saddle-felt (mirghâba) strapped on, and with some padding attached in the rough semblance of a saddle. The bridle (lijâdm, from Persian liham) was only a rudimentary cavesson or snaffle-bit, whose snaffle was usually of cord or of wood (see Lâ, root lâ), min); such a primitive method of harnassing could not permit a tradition of equitation which might become a school. Moreover, shoeing horses with nails (tasmir), a Gallo-Roman invention in the 6th century, being unknown, some Nadjî tribes used, on hard and pebbly terrains, a sandal of iron or leather (nâl), as is attested in a verse of al-Kuhâyf al-'Ukâyli (see Aâhm, xxii, 250), which must have considerably restricted the horse's speed when ridden fast.

The method of riding used by the Arabs of 'Irâk and Syria was quite different and much more elegant. Amongst the Lakhûmids, heirs of the Parthian-Šâsînâd
method, and amongst the Ghassānids formed in a similar tradition of the Greeks, the tribes were much more habituated to use of the horse than their brethren in Arabia. They used at that time a method of harnessing perfected long before, and from antiquity till the 8th/14th century, hardly changed. The saddle shaped like a cradle, built upon a wooden saddle-bow (kayyab) and shaping both the cantle and the pommel, resembled somewhat the modern type said to be "for rapid riding". Held in place by a single or a double saddle-girth, it generally had also a breaststrap and a buttocks-strap to prevent it sliding either forwards or backwards. For display purposes, a large cloth over the hindquarters, richly decorated (the kunbādā), was added, as many Persian miniatures on equestrian themes show; the saddlery of persons of high rank showed a luxury sometimes excessive, in which applied work in precious metals and encrustations of precious stones competed in display. At a time when the Mamluks had levelled down the saddle-cantle so that they could shoot backwards in the ancient Parthian method, the Persians conceived the idea in the 8th/14th century of a saddle with a high back, not very compatible with a rational method of riding, but suitable for shooting with the archer or cross-bow, which had become a common weapon of war. The soldier thus armed had in fact to rear up in the stirrups and wedge himself against the cantle. This kind of saddle-cum-chair has persisted till the present day, above all in the Maghribi, but was strongly criticised by the Mamluk Muhammad ibn Maghfi, in his treatise on hunting written in 772/1371 (K. Ūns al-mala',..., Paris 1880, 13-14), who found in it seven major faults which militated against good riding technique (see F. Viré, review of Saracen archery by J. D. Latham and W. F. Paterson, London 1970, in JSS, xvi (1972), 260).

As for the bridle and its bit, these remained unchanged from the time of the great civilisations which evolved them. The ensemble comprised essentially a bridoon with a curb-bit (lazma), whose slender lower parts, curved inwards in an S-shape (whence the name mādīf, from Persian mādīh, "stylised"), operate as a lever. The beams could be more or less severe in degree, with or without allowing freedom for the tongue, according to the hardness of the mount's mouth. The deplorable invention of the curb-bit, called—perhaps wrongly—"the Arab curb-bit" and a real instrument of torture going contrary to all the natural principles of the horse's handling, seems to have come from a need to reduce the animal to a simple machine, at a time when there had been formed regular corps of mounted cavalry, mounted on entire horses or stallions which were hard to control and with which co-ordinated mass movements required absolute discipline and perfect execution. It is nevertheless true that, from the viewpoint of modern equestrian art, the backed saddle, the Arab curb-bit and the heavy stirrups with soles, all of which make up the image of the perfect "Arab knight" and the Maghrībi spahi, show a total ignorance of a rational method of riding based on the mount's accord with his rider's desires. The addition to the bridle of a fixed martingale (Persian sarafsar "headrope", Maghrībi jabābādā, classical bākama), Persian in origin, appears ca. the 5th/11th century in miniatures paintings.

Spurs, used in China from the 2nd century B.C. onwards, were probably known at the time of the Lakhmids, but not very widespread. In the likeness of the stirrups of Mexican gauchos and of the Mongols, these were made of wood, and according to al-Muhallab (Kāmilli, ii, 228, and ibn Khallīkān, Cairo 1299/1882, ii, 192, tr. de Slane, iii, 510), it was allegedly al-Muhallab b. Abī Ṣufra, governor of Khuṣaynīn in 79/699 and leading figure in the suppression of the Khāridjīs of al-Diayfārī, who was the first to equip his cavalry units with forged iron stirrups, since the wooden ones then in general usage broke too frequently in the course of military engagements. These schematic details about the harnessing of the horse in Islam cannot be absolutely authentic for all space and time, since each land and each period had its own usages and customs in regard to equipment, according to its own special resources. Differences of detail appear when one compares, on one hand, the information of western authors like the Andalusī Ibn Hudhayl [q.v.] with that of easterners like Ibn al-Munghir [q.v.], and on the other hand, places them alongside the documentation provided by iconography. Riders and horses were indeed one of the most-used themes in the minor arts; miniatures, ceramics, textiles, carved ivories and engraved copper-ware objects depict a great variety of types of harnessing and accoutrements in sense of princely court-life. The richness which these objets d'art endeavour to depict confirms the description given in the 6th/11th century by the chronicler Ibn al-Tuwair (525-627/1131-1220) of Fatimid ceremonial at the festival of the New Year (see M. Canard, La procession du Nouvel An chez les Fātimides, in AIEO Algiers, x (1952), 374-9). He speaks there in fact of saddles worked with gold, silver and enamelling, hung with brocade and siglattun; the 70 mounts of the caliph himself bore necklaces of gold and amber collars round their necks, and anklets plated with precious metals round their feet. An animal equipped was estimated to be worth a thousand dinārs.

With the help of all the Arabic texts dealing with horses and, especially, the two mentioned above plus the "Book of agriculture" (K. al-Fīlāṭa) of the Andalusī Ibn al-'Awwām [q.v.], one can get an idea of the level of horsemanship practiced by the Muslim cavalryman in the Middles Ages, apart from the Arab Bedouin. The authors, whoever they may be, were never able to disentangle the three concepts of hippi-
forward in the so-called “French” manner gave an adequate amount of stability. The insistence of the authors on an indispensable equal length of reins and on the synchronisation of the use of the two spurs brings out clearly the absence of any predominant action of a rein or a leg.

In contrast to all the other treatises, an accephant manuscript of the Paris Bibliothèque Nationale (Az. No. a815) puts forward a more thoughtful method based on a constant exercise: a circular training-routine (nadwar), at all the varying paces and with two hands. Without being described completely and explicitly, it envisages the change of pace and the correct backing, with release of the bit, followed by a period of the grand trot, and describes this perfectly. Nevertheless, this documentation is a late one, and one may well think that it has been inspired by western techniques; one accordingly wonders whether in this method of riding, the average Muslim rider ever, one day, rose to this degree of perfection. Whatever the truth, it must be admitted that over a long period of time, equitation amongst the Muslims regressed, whereas amongst Christendom, it improved progressively up to the methods of the great school of horsemanship.

It can easily be imagined how important, in the economic life of the Islamic world up to the modern period, was the upkeep of cavalry units, with all that they needed of furnishings and equipment. Because of these exigencies, a number of specialist artisans, connected with farriery, saddlery and harness-making, had an era of prosperity, and there were hardly any Islamic settlements without their susb al-sarradjin or their bāb al-haddādin. A good amount of the basic equipment required for these activities were imported in Bāqf al-wad. Saddles and boots, from Berbera [q.v.], via the Red Sea and from Hīfījia via Kayrawān and Barka, where they were tanned, there came luxurious panther skins, the saddle-carpets preferred by the Mamluks and whose use was spread by the Turks to the cavalry forces of Central Europe. The saddle felts (misb, pls. ansāb, musāb) were sought from Armenia, Adhbar, Jīlān, Kūnis and Mawṣil, as well as pack-saddles for beasts of burden. In Susa furnished expensive sumpter-cloths. Imports was not limited to these materials and manufactures, but extended also to lively nags (birdakh, pl. bardakh) from the Mongol and Byzantine worlds, equally good as mounts and as beasts of burden; they formed a lively element of trade at markets and fairs set up at the gates of towns. As for mounts of Arab stock, these were most often the objects of direct trade between breeders and purchasers, see the K. al-Tobayṣir attributed to al-Dīḥūs, tr. Ch. Pellat, in Arabica, i (1954), 158-60; J. Sauvaget, Historiens arabes, Paris 1946, 10-12; M. Lombard, La chasse et les produits de la chasse dans le monde musulman (VIII-XI siècle), in Annales, xxiv/3 (1960), 577-85. Despite all the speculations in horse-dealing and trading which this lively commerce in horses engendered within Islam, one can be certain that no one ever thought of speculating financially in regard to the semen (sāb) of stallions, since the Prophet had formally proscribed making money out of breeding. According to certain traditions, the mating of mares and asses was allegedly forbidden, but the importance attached to mule-breeding studs [see BAGH] by people in the Islamic world proves that such a prohibition was never in fact put into force; even so, the mules of the Caucasus, and especially of Barqā’s [q.v.], were imported and prized for their speed and endurance.

But if the Muslims freely imported horses, their sale outside the Dār al-Īslām [q.v.] was, in the first Islamic century, absolutely prohibited and considered as an illegal act by the majority of jurists, who based themselves, in the interests of the legal requirement of ḥijād, on the divine words “Prepare against them whatever force and cavalry you are able to get to-gether, of those held ready (min ribāt al-ḥayl), to overawe thereby the enemy of God and your own...” (Kūr’ān, VIII, 62/60). The horse was thus elevated to the rank of fighter for the faith and received two shares in the plunder if it were of Arab stock, whereas its rider had only one. The horse-potential thus revealed itself, for the new community, as the nerve-centre of warfare and the secret of victory, it was further forbidden for Dhmimīs [see DHMIMA] to ride horses. Later on, when the Islamic frontiers had reached their maximum extension, these rigours were relaxed and applied only then to horses of pure Arab stock, to which Abū Ḥanīfa added valuable mules. However, in Morocco right up to the eve of the Protectorate, the prohibition of riding horses was applied to the Jews, at a time when elsewhere, and for a long time back, this law no longer bore down on non-Muslims. The latter, all through the Ottoman empire, only had the bother of obtaining a special authorisation from the sultan in order to export horses to foreign lands. Since then, horse-breeding among Muslims were abandoned in all Muslim states. Certain lands relaxed these at quite an early date; a proof of this is the felicitous introduction, in the 18th century, into the British studs, of the famous stallions Darley-Arabian and Godolphin-Arabian which inaugurated the Stud-Book and were the origin of the present pure-bred English stock. From this last and by breeding with new Arab stocks, M. Gayot obtained in 1833, in the Pompé de China, from Chânlup, the perfected type of Anglo-Arab horse, which now holds the top rank in international racing. At the side of that, the Maghribi Barbary horse has continued to restock the numerous stables for training horses and equestrian centres of France, after having built up over a century and more, the glory of the splendid squadrions of North African spahis.

KHAYMA (A.) “tent”. When the ancient poets and the writers of the Middle Ages spoke of a nomad’s tent they generally described it by the very widely-known Semitic term bāyi [q.v.], which refers to a dwelling of some kind, either permanent or temporary, and so is not without ambiguity. A more precise term is bāyi ḡawar, lit. “dwelling of hair”. But this word can also cause confusion since the ductus is the same as in bāyi ḡawar, “verse of poetry”. There is, however, less confusion in the spoken language and the expression has a typically bedouin air; it is still current among nomadic and semi-nomadic tribes from North Africa to the Near East where, beside the normal name for tent, bāyi/bh, b. ḡawar, there occurs no less frequently, in the speech of rural peoples, town dwellers and even transhumants, the term Khayma/ khyama. This word has followed a curious semantic evolution (see below) and has come to acquire the general meaning of a mobile dwelling made of animal hair, wool or any other material except leather. Today, among many rural people and even town dwellers, the memory of a former nomadic way of life is preserved by their actually using khaymah/khema to denote a house, and it has totally replaced bāyi/bh. For a number of reasons, therefore, it seems conve-
nient to record under this heading a general exposition of the use of the tent among the tribes of the Muslim world including the nomadic, semi-nomadic and those becoming sedentary.

1. — ANCIENT ARABIA

Arab philologists of the earliest periods of Islam have collected the vocabulary of the tents that were used in pre-Islamic Arabia; in particular al-Asma‘, author of Kitab al-akhkhas wa-al-bayyit (quoted in the Fihrist, Cairo ed., 82). Mediaeval commentators on archaic poetry and lexicographers have widely exploited the documentation which they repeat in their work, and from this material ancient terminology may be reconstructed, even though there is no hope of answering all the questions that arise from it. Given that ancestral practices tend to be maintained, it may be possible to infer from the present-day situation, to a certain degree at least, what obtained before and immediately after the birth of Islam.

According to the author of the Lisān, the mīqāl, mazāla, made of goat’s hair, was the most spacious tent. Although the term has several meanings it does not appear to have been used frequently; one occurrence of it is found in the Nābi‘id of Dhjafr and al-Farazād, ed. Bover, 506, for example. Next in size were those tents which was also made of hair according to Abū Zayd al-Anqār (in L.A.). This word would seem not to have been widely used, for the lexicographers are not agreed about its meaning and some even take the wasāf as the smallest tent.

The bāyī or bāyī ṣa‘ar was also of goat’s hair and of average size. It served as a dwelling for breeders of small livestock (that is to say, of numerous beduin) and the term takes on a type of generic significance.

The khibd was probably similar to the bāyī in size, but was distinguished from it by the camel hair (wabar) or wool (ṣif) that was used to make the awning. Apparently it was the usual dwelling of the camel-bearing nomads, who were called akh al-wabar in contrast to akh al-madar, the sedentary peoples. Although the influence of alliteration may have played its part in the formation of these expressions, their literal meaning must have some significance. Even so, it is impossible to be certain whether the distinction between bāyī and khibd, which are both equally frequent in ancient texts, corresponds to a different geographical distribution, or to a contrast between two large categories of nomads in Arabia [see BADO], or simply to different levels of life within one tribe.

Suradik denotes a cloth tent of quite large dimensions; a jistik was a smaller tent used by travellers; the midrab, described as a “royal jistik”, was likewise a tent under which important people camped when travelling (today the word occurs in military vocabulary); and bubbā was applied to a hide tent (adim).

Finally, there is the term khayma. It does not figure in the lists of various tents that can be gathered from classical lexicographical works, but it seems to be approximately synonymous with julla, arish and ṣarīḥ, all of which denote simple shelters. Originally a khayma was erected on three or four stakes (a‘wād, ā’l) driven into the ground with supporting cross-members (ṭawrūd) covered with branches (ṣadjar) or grass (yummān, one of the Graminaceae). It was essentially a rudimentary shelter, circular in construction, which the nomads would erect especially near wells and watering-places. Its welcome coolness would have provided shelter from the rays of the sun and they must have also erected frames around their tents to benefit more completely from the slightest breeze. There is, therefore, nothing surprising in the fact that in the Kur’ān, LV, 72, the plural bhiyām denotes the tents in which were the houris. ‘Hilla (Kur’ān, VIII, 170/171) means a sort of canopy and these two terms are the only ones of those under discussion which are attested in the Holy Book—except bayī, which is very frequent but which never denotes a nomad’s tent there.

The meaning of khayma given by the dictionaries is found again in classical poetry (e.g. Nābi‘id, 173, 333-4, 395, 1004), and just when this meaning evolved—an evolution which is being maintained today—is not known. The extension of the meaning (for which the reason is not clear) had arisen at a fairly ancient period, since the mediaeval lexicographers use khayma or one of its plurals to define a tent of any type whatever (e.g. Lisān, s.v. b.b.b.: al-bubbā, min al-bhiyām). Given that in ancient Arabia there does not seem to have been a specific term to denote the awning, it is not impossible that before it was applied to the entire tent, the word had a more restricted meaning; the roof of a khayma implies the idea of stretching it over something and it may follow also from a passage of al-Bark al-ṣahīmi by ‘Imād al-Dīn al-Iṣfahānī (ms. Oxford, Marsh 425, f. 4b), where it is stated that among the main products of the town of Āmid appeared busa‘, furush and bhiyām, all woven products.

Whether the material used was hair or wool, the awning of the Arab tent was made of bands (faliṣja, ḥubka) sewn side-by-side and forming a rectangle. The length and number of these bands would vary according to the desired dimensions, but their width had to be of the order of 50-80 cm., so that they would be more easily manageable and replaceable. Those that were placed at the two edges, that is, those that form the larger side of the rectangle, were called kisr or kars. Inside the awning, one or several bands of hair or wool (jarihā), about twenty cm. wide at the most, were attached to the sewing of the faliṣjas and ended perpendicularly at the large sides with two kisrs. Each jarihā was equipped at each of its extremities with a device for anchoring it called hâtār, and it was to this that the ropes (funub, pl. a‘fūb) were attached and tied to pegs (waṣīd, pl. wa‘ād) driven into the ground some distance away with a mallet (miyad or miyada). The anchoring of the tent was completed on the small sides of the awning by cords (ṣār, pl. suṣūrṣāra), shorter than the ajnab, but similarly joined to pegs (also called ṣār). The words hâtār and hīštubutu both denoted a band placed vertically around the awning to fill the space which separated it from the ground.

In a bayī, so the dictionaries say, the main ridge piece, which was of considerable importance, was called dā‘īṣa, but Arab tents do not seem to have used a ridge pole, since the central jarihā takes its place. It is said that this jarihā rested on vertical posts (ṣamūd, dī‘ ṣma, budnī‘ budnī‘) and there were pads of felt (lībā, pl. al-‘ībā) on which the chamfered ends of the posts were cushioned to prevent it from being pierced. The same precaution was probably taken for the side jarihās, which in the big tents leaned on slanting poles, shorter than the others, in order to diminish any sag in the awning. The same construction may still be seen in the East (see below) and it is worthy of note that in North Africa, where the ridge pole is used, it is the only part of the tent, mutā‘is mutandis, not to have a name which is attested in ancient Arabia.
Finally, to prevent water from penetrating underneath the tent it was surrounded by a drain (mu'ayyayin) edged with moulded earth (iyād). Inside, the lay-out scarcely differed from what can be seen today (see below). The section reserved for women, like the palanquin, was generally called ḥādir, pl. ḥādir, from the name of the curtain which separated it from the rest of the tent; poets frequently hymned the rabīṭ al-ḥādir.

**Bibliography:** Apart from the dictionaries, see especially G. Jacob, Altsarabisches Beduinleben nach den Quellen geschildert, Berlin 1897. (Ch. Pellat)

### ii. — In the Near East

The noun khayma belongs primarily to the city-dwellers’ vocabulary. It is applied to various kinds of tents, whatever their form and whatever they may be made from. The desert peoples are aware of this, but for preference they use the term bayt ša‘r for their portable home, often abbreviated simply to bayt.

Apart from the question of size, bedouin tents vary very little from one region to another. Essentially, the bayt is always rectangular and never circular; it is made out of a roof covering of the hairy skin of a black goat, sometimes mixed with camel’s wool (suf, gotba, Sba), walls of the same material, poles and cords. The technical terms used to designate the different parts of the bedouin tent are not always identical in all tribes.

The roof is called ṣafi al-bayt by the Tiyāḇa of BiR al-Sab. It is made up of several oboi̇ng bands or panels, shīhā (pron. shegag, pl. shibāb (shegag) sewn together, their number depending upon the importance which one wishes to accord to the tent. The dimensions and especially the roof covering fluctuate between 8 and 12 m., and the width, which is limited by the weaver’s technical skills, is rarely more than 70 cm.

The roof covering is supported by several tent-poles (‘āmūd, pl. ‘āmūdā) placed in parallel rows, one of which, in the centre, forms the ridge-pole. Since there is a danger of its being torn through tension and especially through its own weight where it is stretched over the poles, it is reinforced by transverse strips called ḥāfānā, tarīga, etc. These are sewn together on the internal surface in such a way as to hold together between themselves the shibāb. These strips are 10-15 cm. wide, and they extend beyond the dimensions of the tent, from one side to the other, by some 15 cm. After being folded over and sewn, a loop is thereby made at each extremity, through which a small stick can be placed. Thanks to an attachment contrivance which has a V-shape, the connection between these sticks and the tent-pegs (awāt̤, pl. awāt̤ā) can be effected. The pegs are fixed into the ground and held by cords (kabāl, pl. ḥādāl, or ānb, pl. ānāb), which secure the tent and make the roof covering taut and in place.

In the customary law, reparation for the tent’s honour, as an insult to the host but equally to his dwelling. When a stranger comes into a Bedouin’s tent, he must, at the moment of taking possession, be made to feel not only his physical or moral, whilst he is there, is considered to be a guest. Any attack on his person, or any interference with the objects or the personal belongings in the tent-walls. The rear wall, placed against the frame of only middling status who have newly adopted se- dentary life, since they no longer have to make big upheavals and migrations.

The names of the tent-poles vary according to position. In an ʿādiya tent, the central pole is called ʿamūd al-ʿusāfī, or ʿamūd al-ʿamūd; the front one is called ʿamūd yad al-bayt; and the rear one, ʿamūd al-ridjīl, according to the terminology of the Tiyāḇa.

The tent is open at the side opposite the direction of the wind, and the other three sides are closed by the tent-walls. The rear wall, placed against the direction of the wind, is called ṭawaf. A narrow band, about 25 cm. wide, is sewn on to the top edge, and reinforced with an additional strip. When the wind changes direction, the ṭawaf is moved and the opposite side opened up. In summer and weather permitting, the tent is opened as far as possible; even the side-walls are rolled up, thus making the bayt into an open octagon. At this time, the bayt changes its colour; the heavy goat’s hair roof covering is replaced by a cotton cloth. Often, old jute sacks are used, on which can still be seen imprinted the exporter’s trade-mark.

The bayt is divided into two parts, separated by a curtain hooked on to the internal tent-poles, which has sufficient height for the people in one compartment not to be able to see what is happening in the other. One of these two compartments is reserved for receiving menfolk and is called the rabā‘a or magʿad al-ridjīl. In the middle, a hearth is scraped out and used for making coffee. The other one is reserved for the womenfolk, and is called the mahrām or nahrām. Here, the cooking is done and the provisions stored.

The womenfolk are responsible for preparing the materials and sewing up the various components of the bayt, their erection and dismantling. This is an essentially feminine activity, for the men must always be ready to ward off a possible attack.

Despite its apparent frailty, a bedouin tent is hard-wearing and often lasts for a whole generation. The erection, bind, of a tent often means that a new hearth has come into being. The master of the new dwelling must, at the moment of taking possession, offer a blood-sacrifice to appease the spirit of the place where the tent has been raised up. The central pole (al-ʿusāfī) is then smeared with the sacrificial blood; sometimes the ṭawaf is also sprinkled with it. A further sacrifice is necessary if the tent is significantly enlarged. Finally, when the ṭawaf is worn out and has to be replaced, a blood-sacrifice often accompanies this operation.

However humble it may be, a Bedouin tent is above all a dwelling-place. It has accordingly certain strictly-defined rights, and contravening them can have extremely serious consequences for the offender. When a stranger comes into a Bedouin’s tent, he is considered to be a guest. Any attack on his person, physical or moral, whilst he is there, is felt not only as an insult to the host but equally to his dwelling. In the customary law, reparation for the tent’s honour is as severe as the penalty attracted by someone guilty of an involuntary homicide. In his turn, the guest must show great respect for the dwelling
which has received him. If he shows himself unworthy of the confidence shown to him, the tent’s master brands him as a traitor to the rules of hospitality; he may then be liable to corporal punishment, abhorrent to the Bedouin, and be perpetually dishonoured.

The right of asylum also inheres in the ḥaṭy. A murderer who manages to escape his pursuers and to take shelter in any dwelling, which is not his own or that of a close relative, has secured refuge from danger. Moreover, it is not necessary, for his security, actually to enter the tent; he may merely touch the ropes or even reach the protective zone around the tent, sc. the inviolable area called by the Bedouin maḥārīm or maḍārīḥ al-ḥaṭy. In order to delimit this, a strong and vigorous man stands at the entrance of the tent and hurls a large stick straight in front of himself. The spot where it falls marks the extreme edge of the zone within which the rights of the tent operate. This idea of inviolability is not dissimilar to that of the sacred area of pre-Islamic times, like the ḥaram, the ḥimā and the baṣfa.

iii. — NORTH AFRICA

The nomads and semi-nomads of North Africa and the Sahara live in several different types of tent, but these are basically similar, and the differences can most often be explained by economic and geographical features. Besides batt and bat ʔ-string, the usage of which has now spread to the major nomadic groups, the word ʔ-ʔarma is the one most current in Arab speech. In Berber three main terms appear: ʔem and variations among the Touareg, ʔarga and variations in the east and south-east of the Berber area, ʔahma and variations in the central and western areas. The first two terms are Berber, while the third could be derived from the Arabic, although a convincing etymology has not been established. In the different northern Berber languages, words denoting the main parts of a tent are borrowed from Arabic, treated in different ways and not of major interest. Those belonging to Berber are extremely varied, and could give rise to an interesting study in linguistic geography, but it would be too much to cite in the present article, which must be restricted to discussing essentially Arabic (and Touareg) terminology.

As elsewhere, the rectangular awning is made of bands (ʔelq, pl. ʔelfa) 70-100 cm. wide and varying in length up to 18 m. They are black or brown in colours and sometimes have a white border (in Libya). In some regions, the wool and goat or camel hair which make up the main material are sometimes mixed with palm fluff (ʔif) or vegetable fibres. A more rudimentary awning can equally well be made with long plaits of dwarf palm leaves (ʔówn, or ʔarín (ʔstįpą barbüśa) or of alfa grass (ʔal bénéfic [q.v.]). Among the Touareg, the awning is made from the skins of goat, sheep, moufflon (less and less) or even ox, coarsely cut and sewn one after the other to form equal bands (ʔalhähr). The whole is supported either by a single vertical pole (ʔaŋṣānkiyi) about 2 m. long, surmounted by a little wooden ridge-pole, or by two arches (ʔengu) of tamarisk wood aligned 1.5 m. apart and linked by a cross-bar. In the first type, the vertical pole is used especially in the rainy season so that the awning has a sufficient fall for water to drain away. At other times it is replaced by two poles supporting a cross-bar, but this second type is becoming less common.

In the rest of North Africa, only the first type of frame is used and there are some significant variations in it. In the east the ridge pole is a broad square stay-block (Tripolitanian: ʔorťał) which becomes longer and narrower in the Tunisian South (ʔorťał) and the Algerian South-East (ʔenję); in Morocco, longer ones are seen, called ʔammar, and reaching a length of 2 m. The ridge-pole may be supported by a single vertical pole (ʔaša), as in the Sahara, Libya and Tunisia, or by two slanting poles as in the large tents of Tripolitanian (except the Djaɓal Taʕlis), or by two intersecting poles, which may be quite short as in Tunisia and Awrâs, or simply by vertical poles, more widely spaced as the tent becomes longer.

The ʔfrgā, the descendant of the classical ʔarîka, is everywhere to be seen but it is supported by a ridge-pole. Often secondary ʔfrgās are added to the main one; they are supported by slanting poles which raise the awning to drain off rainwater and to maintain a convenient height inside. The awning is fitted with small cords (ʔibl, ʔärfa, ʔemghbl) which are fastened to the ʔfrgās and to the ʔfrgās on the small sides with wooden hooks; at the other ends they are fixed to pegs (ʔutd, ʔelesem). Among the Touareg these pegs (ʔataq in the east and west sides, ʔunu in the north one, ʔmadəq in the south one) generally number twelve, equally spaced around the cardinal points and fastened directly to the edges of the awning, which they support. On the south side the central peg (ʔagm) is longer than the others and is used to raise the awning to provide an entrance. Nowhere does the awning touch the ground, and the empty space is filled according to the climate with brushwood, rush matting or special long narrow covers (ʔefsā, ʔefsā). In North Africa the place where the ʔfrgā ends on one of the long sides is directed towards the centre of the encampment or the ʔdawr [q.v.], and access is gained by lifting the edge of the awning; this forms a door during the daytime. Finally, the tent is surrounded by a trench (ʔnįwęn) or; cf. above, ʔnų’y) for draining away any rain-water.

The classical ʔąjįli “room in a bay” survives as ʔįli (Fr. guitoune), the name given to shelters made of sackcloth or pieces of material or of canvas produced in Europe (South Tunisian: ʔįli). In Morocco, the official tent of state authorities is made of unbleached cloth decorated with black patterns and is of conical design; it is called a ʔbšmān.

The nomads load the dismantled tents on to asses. When they arrive at the camping ground the task of erecting them (verb: ʔbnd) is reserved for the women. Once the frame and awning have been stretched out on the ground and the pegs put into position—by guesswork but generally exactly spaced—the woman calls her neighbours to help her. She creeps under the awning to lift it over the poles, and then the tent is anchored and the usual furniture put back into place.
Among the Touareg, the left side on entering is reserved for the man and there are placed his seat, his arms, his saddle-bags and also his water-skin. The woman uses the right side where she puts her possessions as well as the bags of food, the kitchen utensils and dishes, which are rudimentary. Two fires are built in front of the tent, one for warming oneself and the other for cooking. Each tent is occupied by a family. The boys sleep with their father, the girls with their mother on sheep skins spread on the ground; the richer families have carpets.

Elsewhere the interior arrangement of the tent may vary, but it shows some common features. The kitchen utensils usually include a cooking pot, a copper pan, a dish on which to bake bread, a water jug, platters and winnowing baskets of esparto grass, wooden spoons, leather water bottles—which are also used for churning butter—a sieve, skin bags for dry food, and woollen or hair bags for grain. The fire is kindled in a hollow in the ground, which is surrounded by three large stones or topped by an iron tripod. In some tents an opening is made in the awning above the fire to allow the smoke to escape. A pottery stove is used especially for the preparation of coffee and tea and it is fed with charcoal. The mill is generally shared between several tents. The simplest type consists of two semi-spherical millstones. The upper one is pierced by two holes, one hole in the centre is to receive the grain to be milled and the axle mounted in the nether millstone; the other is set at an angle to hold the wooden crank, which sets it working, and often requires the efforts of two women. In addition to all this equipment, there is a loom for the flilhs and a second loom for weaving carpets, covers and woollen garments etc. The nomads sleep on mats and wrap themselves in covers. The area kept for the women (kḅafla) is sometimes separated by a curtain (kḅyl) hung between the poles, but often carpets, covers, clothes and miscellaneous possessions are piled on nets mounted on legs to provide an adequate separation.

It is the men's responsibility when the flilhs have to be sewn to make a new awning (they rarely last more than five years) or to replace a damaged band; (a) to prepare the wooden pieces for the frame.

Each operation is accompanied by prophylactic rites intended to protect men and beasts. The ornamentation of the ridge pole, which has a symbolic value since it supports the whole construction, includes drawings which originally had a magical significance. Finally, various objects and amulets are supposed to ward off the djinn and to assure the prosperity of the tent's inhabitants.

prised both the forest zone of northern Mongolia
and the Lake Baikal region and also the steppelands.
The characteristic modern Mongol felt tent or ger is
essentially similar to the Türkmen őy, i.e. it has trellis
walls, and the roof of light poles, also felt-covered, is
born upon a roof-ring, though the shape is usually
conical rather than domed. Thus a great deal of
wood is required for its construction, a commodity
scarce in the steppes and one which often has to be
brought from a considerable distance. The Mongol
do, however, have another type of tent, the mųyɣan,
which is a low tent requiring much less wood and
in recent times covered with cotton cloth purchased
from Chinese traders; this is taken on Mongol cara-
vans, with the ger used for camping at the regular
pasture grounds (see O. Lattimore, The geographical
factor in Mongol history, in Geogr. Jinnal, xx(1) (Jan.
1938), 9-10, also in Studies in frontier history, col-
seems accordingly probable that the Mongol ger
evolved in the prehistoric (sc. pre-13th century) past
of this people from the tents of the forest peoples,
perhaps from an origin like the tepee or wigwam of
the Tuva forest tribe of northern Mongolia, of Turk-
ish peoples of this region like those dwelling in
proximity to Mongol tribes around Lake Khubsugul,
and of the reindeer-herding Tungus, which is a con-
ically-shaped covered mobile with skins or birch-
bark (Turkish uruda, Mongol obuyбабай, cf. A. Róna-
Tas, Preliminary report on a study of the dwellings
of the Altai peoples, in Aspects of Altaic civilisation,
Proceedings of the Fifth Meeting of the PIAC, ed.
D. Sinoz, Bloomberg-The Hague 1963, 50). Cer-
tainly, the Mongol epics of recent times, of the Orot
of north-western Mongolia, describe the hero's tent
as made with a framework not of wood but of animal
bones, and as covered not with felts (since forest
dwellers have no sheep) but with animal pelts (B.
Vladimiritsov, Le regime social des Mongols, le foda-
lisme nomade, Paris 1948, 49). In regard to the fit-
tings and furnishings of the ger, the central fireplace
or hearth has always been the focal point; amongst
the Kazak Turks of western Mongolia, this is now
usually a four-legged iron fireplace, and it is gradually
replacing the old stove (see Róna-Tas, Notes on the
Kazak yurt of West Mongolia, in Acta orientalia
Hung., xii (1961), 84).

The earliest Mongol sources, such as the Secret
history and the accounts of the Mongol expansion of
the 13th century, both Islamic and European (the
latter including e.g. the travel narratives of William
of Rubruck and John of Plano Carpini) state that,
at that time, the steppe peoples, Turks and Mongols,
often transported their tents in ox carts (see Vla-
dimiritsov, op. cit., 50-1, and also ыраbа and
кaнqни; these last were not only highly-mobile
within the steppe, but could be very quickly loaded
up with the tents and the whole encampment (Mongol
хүнyянгүриyн "circle") quickly broken up.

Bibliography: given in the article, essentially,
but note that Part A of Aspects of Altaic civilisa-
tion (see above) is devoted to "The dwellings
of the Altaic peoples". (C. E. Bosworth)

KHAYR (A.), charity, gifts in money or kind
from individuals or voluntary associations to needy
persons. The religious significance of khayr in Islam
is still quite clear, although assistance to the needy
is nowadays extended mainly by secular govern-
mental agencies; such assistance is regarded as
"public welfare" rather than "charity". A public
benefit is indeed implied in khayr. The word has the
sense of freely choosing something, i.e. virtue or
goodness, a service to others beyond one's kin. It
also means goods such as properties or things that
have material value (H. Wehr, A Dictionary of
Modern Written Arabic, Wiesbaden 1961, s.v.). There
are few studies of khayr in earlier or modern times,
though there are brief references scattered through
the literature on the Ottoman Empire, Khedivial
Egypt and the Indian subcontinent.

Khayr must be considered in relation to zakáй and
sadaka (qq.v.). See also practically synonymous
with khayr in the sense of charity. Zakáй refers to
an obligatory tax collected by Islamic governmental
agencies and prescribed in the Kur'án and Sunna.
Zakáй in its traditional and precise form has almost
disappeared, but khayr, as a broader and more
informal quality and activity, continues. Khayr
occurs in the Kur'án in its general sense of virtue and
good works in obedience to God and religious law
(e.g. III, 103, XXII, 77, IV, 113) as well as material
wealth (e.g. C, 8). In interpretations of Kur'án and
in philosophical works the term is used similarly.

Private charity and public welfare are extended
out of mixed motives: humanitarian, to relieve
misery, and political, to reduce instability. On the
part of the private donor, moreover, there is the
motive of doing good in accordance with religious
precepts. This motive operates strongly in khayr
among Muslims as well as non-Muslims minorities
living in larger Islamic communities. Christian and
Jewish charities were an important function of the
millets under the Ottoman rule and continued after
it, often with help from co-religionists in Western
countries.

Today charity by individual Muslims to less for-

tunate members of their religious communities is
still widespread. Part of these donations are those
made by voluntary associations which stand
between the individual and the government and
disburse larger sums more widely. A United Nations
survey made in the mid-1960s found several hundred
such associations in Lebanon, Jordan and Syria,
and a beginning even in Kuwait, where the govern-
ment, with vast oil revenues, was already the main distri-
butor of funds going to the needy (U.N. Economic
and Social Office in Beirut, Survey on Social Develop-
The activities of these associations, though signif-
ificant, have been seldom studied in detail, though
published reports and observations yield some details
on several countries.

In Egypt in 1960 there were about 3,200 voluntary
charitable associations (джам'ийат диниyyat or
кhayrriyya) with a religious basis, with 700,000
members, a total income of £ E 6 million (coming
from members' dues, modest fees paid by the needy,
and governmental subsidies), extending a variety
of services to several million people at a total cost of
£ E 4 million (M. Berger, Islam in Egypt Today,

In Iran the structure of voluntary associations
seems to be looser. As in other Muslim communities,
however, in Iran individual donations are made to local
imáms for formal institutions such as clinics,
schools and scholarships, as well as directly to the
needy. Donations to poor families occur mainly on
the anniversaries of the deaths of Fáṭima and the
imáms venerated by Shi'is. They are also made in
times of threat or danger, even in connection with
"modern" activities. For example, in 1974 a business-
nan started to construct an air-conditioned building,
with the help of several architects and engineers
trained in the U.S.A., in the most expensive and
modern area of Tehran. Before the first column went up, the foreman told the builder he must sacrifice a sheep for the workers to eat and protect them: the blood of the sacrificial sheep would avert the shedding of the workers' blood on the job. Very little is known about the distribution of funds by the local ωμάς, nor are they taken into account in governmental calculations of need. Donors to these ωμάς do not have a formal role in the distribution of these funds, although they are duly registered by accountants who keep records of income and disbursements (source: personal observation and interviews).

Khayr and ωωφ [q.v.] overlap, for example in public conveniences such as water fountains [see ωωφλ] and soup kitchens (ωμάτελ) erected in Ottoman times. Somewhat similar to Khayr, also, is the largesse often distributed by rulers, especially on accession to power. Such largesse is, in turn, a forerunner of the welfare programme of modern states.

Although women in Islamic countries have not traditionally been active in public affairs, their recent emergence into public roles has been associated with private charity and governmental welfare programmes. Among the earliest employments outside the home which became widely approved for women are teaching, nursing and social work. These professions are regarded as extensions of the Islamic ideal of women as the guardians of home and family. In several countries it has been customary in recent decades for the women members of the families of heads of state (in republics as well as monarchies) to be active in promoting education and the care of the needy. Thus in 1973 the شهلا-بند of Iran opened the first national seminar on social welfare by reviewing the development of private philanthropy, defining current social needs, and indicating the need for governmental coordination of the means of meeting these needs (Plan and Budget Organization of Iran, Nakhustin.simimad-i milli-yi rifākh-i idżima', Isfand 1352 (February 1973), Tehran, n.d. and no pagination). This seminar, indeed, was the prelude to the creation of a Ministry of Social Affairs a year later. Such ministries had already been established in other countries, for example in Egypt as early as 1939. The first woman to become a member of an Iranian cabinet, Farrukhru Parsay, was Minister of Education from 1968 to 1974. Similarly, the first woman to join a cabinet in Egypt, Hikmat Abū Zayd, became Minister of Social Affairs in 1962.

The state has always assumed some of the burden of assisting the needy. Its role increased as modern industry and urbanisation developed, while public needs grew and the capacity of individuals and voluntary associations from public consideration in Islamic countries. Khayr, however, continues, and even zakāt has been men-

In Islamic countries where socialist ideas and rhetoric have recently made headway, welfare has been tied to ideology and to the religious tradition of mutual social responsibility among Muslims, or al-takāfūl al-idżima as developed by several writers, especially in Egypt (Sami A. Hanna and George H. Gardner, eds., Arab Socialism. A Documentary Survey, London and New York 1967, 3). The increasing role of government has led to widespread exaggeration of achievements, for example a claim by an official Egyptian agency reporting to the United Nations in 1967 that: "After the revolution of 1952, equal opportunities were eventually granted to the people" (United Nations Department of Economic and Social Affairs, Organization and Administration of Social Welfare Programs. A Series of Country Studies, United Arab Republic, New York 1967, 1). A U.N. evaluation of state programs only two years later described them as still rather weak in concept, administration and effect (United Nations Economic and Social Office in Beirut, Studies on Social Development in the Middle East, 1969, New York 1970, 1, 11-13).

On top of the increasing role of the state came, after World War Two, the increasing role for the organisation of states, the United Nations. Through publications, surveys, seminars and conferences, various U.N. agencies encouraged the "developing" (or formerly "underdeveloped") countries to expand and systematise their welfare programmes. The U.N. also spread the new conceptions of welfare, going beyond traditional "remedial" care of the needy to "preventive" policies to enable the needy to maintain themselves and even further to "developmental" programmes which would enable the people of all classes to play a greater part in national growth based upon broad planning (United Nations Department of Economic and Social Affairs, Proceedings of the International Conference of Ministers Responsible for Social Welfare, 3-12 September 1968, New York 1969, 76, and Training for Social Welfare, Fifth International Survey. New Approaches in Meeting Manpower Needs, New York 1971, 2, 64-5). Special United Nations seminars for the Arab states have been held since 1949 (see, for example, Fourth United Nations Social Welfare, Seminar for Arab States in the Middle East, Baghdad, 6-21 March 1954, New York 1955).

These governmental and inter-governmental influences and discussions have all but removed Khayr by individuals and voluntary associations from public consideration in Islamic countries. Khayr, however, continues, and even zakāt has been men-
tioned noticeably in one of the aforementioned U.N. seminars. In preparation for it, the U.N. Secretariat sent a questionnaire to seven Arab states, which elicited reports that in most of them this tax was still being collected and spent "in accordance with Islamic principles" (Third United Nations Social Welfare Seminar for Arab States in the Middle East, Damascus, 8-20 December 1952, New York 1953, 60). It is possible that the welfare programmes of governments are overestimated through the tendency of states and international agencies to issue many reports, while traditional khayr is underestimated because individual donors and voluntary associations are scattered and not given to public reporting.

For a treatment of charity in Turkey see the Supplement, s.v. Khayr.

Bibliography: M. Berger, Khayr Allah Efendi, Ottoman physician, historian and administrator; born in Istanbul ca. 1235/1819-1820 of a family which had provided chief physicians for the Empire. He followed in the profession of his father 'Abd al-Hakk Molla (d. 1270/1853-1854) and after completing the madressa education he became the mullah of Izmir in 1256/1840-1841, to be promoted in the following year to the rank of kadi of Mecca. Meanwhile, he studied medicine at the Mektebi-i Tibbiyye and graduated in 1260/1844. Appointed ders nizâri (director of studies) at the Tibbiyye School, he transferred from the 'timiyyeh (religious) to the mülhiyye (civil) branch of administration. Thus in Radjab 1265/May-June 1849 he was appointed as the President of the Council of Education. In 25 Radjab 1267/18 May 1851 he was also entrusted with the vice-presidency of the Enstrûmen-i Dânîh (Academy of Arts and Sciences) and in Shawwâl 1268/July-August 1852 he became a member of the Medîlis-i Wilâyî-İ Ahkâm-i 'Adîlîyeye (High Council for Judicial Ordinances). Nominated Mekâîyi-İ Umâmîyyeye nizâri (Minister of Public Schools) on 22 June 1854, he returned to the field of education. Upon the establishment of the Ministry of Education in March 1861 he was charged with the function of mústekhir (undersecretary) and on 7 Safar 1275/16 September 1858 he assumed responsibility as deputy minister. On 21 May 1859 he became the administrator of the Mektebi-i Tibbiyye. In Radjab 1278/January 1862 he was moved to the directorship of the 6th sector of the Istanbul Municipality [see Baladîyya]. He was again appointed a member of the Medîlis-i Wilâyî-İ Ahkâm-i 'Adîlîyeye on 12 Safar 1278/July-August 1864, and in the same year he visited Europe to take a cure. Back in Istanbul, he went to Tehran on 3 May 1865 as Ottoman minister to the Persian court, and died there in Shawwâl 1282/December 1865-January 1866. His younger son is the well-known poet 'Abd al-Hakk Hâmid [q.v.].

Khayr Allah Efendi contributed much to the modernisation of Turkey through his publications. He undertook to write a general history of the Ottoman Empire, but could not go further than the year 1026/1617. This work was published under the title Develî-İ 'âliyeye-i 'Umâmîyyeye ta'rikî (Istanbul 1271-81, 15 vols.), and was later continued by 'Ali Shewki, who took it up to the year 1058/1648 (Istanbul, vols. xvi-xviii, 1289-92). The author abandoned the annalistic method of Ottoman chroniclers and adopted the modern systematic treatment of history. He also made use of Western sources written in French. He seems to be the first Ottoman playwright, with his Hikâyet-i İbrâhîm

Pâşâ be İbrâhîm-i Gulgeni written ca. 1260/1844 (first printed in Türkç, no. 1 1935, 77-91, for the second time by Aytekin Yakar, İstanbul, Ankara 1964). His publications also include translations from the French on subjects ranging from medicine to agriculture. Among his printed works are Mahdîi-İ tibbiyye (Istanbul 1258), a collection of medical articles, Beýi-i dehdânî (Istanbul 1264), a treatise on agriculture, Kâfi-i Afrikâ (Istanbul 1268), Malte-Brun's work on geography, and Maudî-î hicmet (Istanbul 1270), a textbook on physics prepared for rüştüyye (secondary) schools. His Avrâmpî siyâhat-nâmesî, a narrative of his European tour in 1864, still remains unpublished (Ms., Library of the Faculty of Language, History and Geography, Ankara).

Khayr al-Din Pasha

beylical madjlis al-’akhbar, and a member, and then president, of the madjlis al-akbar or Parliament set up in 1861. In these positions, he worked for the reform of the judicial system (which, of course, did not affect personal law, which remained within the sphere of competence of the sharī’īa courts, but was confined to criminal law and to commercial and agricultural practices).

In November 1862, Khayr al-Din gave up his posts as Minister of Marine and president of the madjlis al-’akhbar, whilst remaining a member of the latter and of the madjlis al-’akhbar. Behind this partial retirement, which lasted till 1869, was his opposition to a Tunisian loan raised in Europe; the agreement for this was nevertheless made, and it opened the country to bankruptcy. In 1864 a revolt sounded the knell of the period of reforms begun in 1857. During these years, he acted as the Bey’s envoy to Istanbul and other European capitals.

When he returned to politics in 1869, Tunisia had to accept, because of Muṣṭafā Khaznadār’s maladministration, a financial commission to direct the country’s finances, in which French and British influence was paramount; Khayr al-Din now became president of this. Till July 1877, he endeavoured—at first, as waṣīr muwdhār, and then, after Muṣṭafā Khaznadār’s fall on 21 October 1873, as waṣīr iṣlāh—to reform the Tunisian administration and to introduce a sound financial programme which would enable a debt which swallowed up about half of the country’s annual revenue to be reduced. Amongst the measures which he adopted during this time was an agricultural regulation defining the rights and obligations of all those concerned with agriculture, including the khāmmāzīs and others. He also set up a mixed tribunal for cases between Tunisians and foreigners involving less than 1,000 piastres. He tried to improve the economy by decreasing export dues and increasing import ones. To help corn exports, he planned to build a railway line between Jendouba and Tunis. One of his most valued collaborators at this time was Muhammad Bayram al-Khamis, who became president of the muwaṣṣal al-mamlakī and was able considerably to increase the income from these charitable foundations. The sums confiscated from Muṣṭafā Khaznadār were used to finance a new modern school as successor to the maktab harbi, al-mudaraṣa al-sādikīyya, opened in 1875 as a place where the Tunisian élite could receive an adequate education.

Khayr al-Din wanted above all to fulfil Tunis’s financial obligations to the foreign creditors of the financial commission, in the hope of preserving the country’s political independence. This involved necessarily a careful and economical policy, precluding the adoption of large-scale reforms. Moreover, the Tunisian people had a greater need, psychologically, for a period of peace and of just government than for reforms, since the memory on the period 1857–64, when taxes had risen and there had been a culmination in the rebellion of 1864, was still very fresh. Nevertheless, Khayr al-Din made an effort in 1877 to inject fresh life into the constitution and to re-open the Parliament, at the time when the Turkish constitutionalists had achieved temporary power in Istanbul; but Muḥammad al-Šādīk Bey [q.v.] firmly opposed this.

On the international plane, Khayr al-Din was always a firm supporter of close links between the Bey’s official suzerain, the Ottoman Sultan, and Tunis. It was, in his view, the best safeguard against an increasingly burdensome European influence; whilst the Ottoman empire continued in existence, the Regency of Tunisia could retain a de facto political independence. During the Balkan War, in 1876, he showed his support by sending considerable material aid to the Porte, whilst refraining from sending troops in order not to incur French displeasure.

His departure from office on 21 July 1877 was due to various reasons. The Bey, under the influence of persons like Muṣṭafā b. Ismāʿīl, preferred a more pious and less economical-minded prime minister; because of two consecutive bad harvests, the treasury was empty, and the instalment of debt had to be paid. As for France and Britain, the twin pillars of the financial commission, the latter had never supported Khayr al-Din, and France abandoned him above all because of his help to the Porte and his refusal to let the Jendouba-Tunis railway line be linked with the Algerian network.

On his leaving office, Khayr al-Din fell into disgrace, and even feared lest his property be confiscated. But in August 1878, thanks to the mediation of Muḥammad al-Ṣafīr, head of the Madaniyya religious order [q.v.], he received an invitation from ʿAbd al-Ḥamīd II [q.v.] to come to Istanbul, where on 4 December 1878 he was made Grand Vizier. The sultan, who had just managed to throw off the Young Ottomans, hoped to find in an efficient and pliant and less economy-minded prime minister; il, preferred a more revolutionary and with the tanzimât [q.v.] style. During the eight months when he was at the head of the Sublime Porte, he was concerned with the deposition of the Egyptian Khedive Ismāʿīl, among other things. The main motive behind his dismissal, on 28 July 1879, was that his personal experience at Istanbul had turned him into a belated Young Ottoman, advocate of a parliamentary system and of ministerial responsibility. Until his death on 30 January 1890, he lived in retirement at Istanbul.

Khayr al-Din, as well as being a politician, was one of the first Muslims to be concerned with the causes of the decadence of the umma [q.v.]. In 1868 he published his study Aḥwām al-masālik ji maṣrījat aḥwāl al-mānālīk, the greater part of which gave a review of the countries of Europe from the economic, political, etc. points of view. More interesting is the introduction (2–89), in which Khayr al-Din sets forth his ideas on the possibility of the Muslims regaining their former grandeur. A good government which inspires the people’s confidence is the best means of achieving this. Khayr al-Din averred that Europe has not become strong thanks to Christianity, but rather to a good system of government in which the monarch has had to delegate some of his powers. Then he notes that it is permissible for the Muslims to borrow from the Europeans their technical inventions and their political system. It ought not to be difficult for the umma to re-introduce good government, since the sharī’īa prescribes it, and in the past, it had been shown as perfectly attainable, always bringing with it a period of glory for the Muslims. It should be further noted that, for Khayr al-Din, the modern European parliament is nothing but the institution of the ašr al-hall wa’l-‘awd [q.v.] adapted to modern needs and conditions. He claimed to remain within the tradition of classical Islamic political thought, and this explains why he considered his ideas as valid for the whole of the umma and why he was especially concerned with the position of the Ottoman empire, at the time the main Muslim power, and with the tanzimât. His opinion on these last was favourable. Although he favoured an Ottoman parliament, he did not consider it indispensable for the realisation of his ideal of a good government,
This explains why at the same time he paid so much attention to the 'umma? and the role which they ought to play in helping modernisation of the umma, since they comprised the greater part of the elite and could pronounce on whether the desired reforms were consonant with the ghara'a or not. In this regard, Khayr al-Din had an influence on the thought of Rifa'i Raffi al-Tahtawi (q.v.). Concerning Europe, Khayr al-Din adopted a suspicious attitude, for he feared that some day or other the Muslim world would fall an easy prey to the expansionist continent.

In the person of Khayr al-Din, statesman and theorist were combined in a happy manner, since the politician was himself always faithful to the principles set forth in his Akhwm al-masalik.

Ottoman sultan, sending an embassy with four ships and with 40 slaves for Selim I and an equal number for the pasha of the Dodea, together with a petition of the Algerian people, during the first ten days of Dhu 'l-Ka'da 925/25 October 3- November 15, whose text has survived in a Turkish translation (in Topkapı Sarayi, pub. by A. Temimi, in Revue d'histoire maghrébine, v (1976), 95-101). The envoys were very well received by the sultan (who died on 9 Shawwal 926/22 September 1520), and Selim accepted the overlordship of Algiers and sent via Hâjjî Hüsûn an investiture decree (khatî-i sherîf) and a flag (sandûq). Moreover, he sent to him 2,000 Janissaries and some artillery, and authorised him to enrol volunteers, to whom he promised the rights and privileges enjoyed by the Janissaries (Hađî, i, 249). The Turkish squadron coming from Istanbul was greeted on 20 September 1520 off Cerigo (see M. Sanudo, xxix, 284). From that moment, the name of the Ottoman sultan was inscribed on coins minted at Algiers and his name placed in the khatîla, thus affirming his suzerainty (Ghazawûtî, fol. 88b; for the coins struck at Algiers from 926/1520, see I. Artuk, Kanûnî Sultan Süleyman adina basîlan sikkeler, Ankara 1972, 29-31).

Soon afterwards, whilst his fleet was seizing Mostaganem, Khayr al-Din helped 'Abd Allah unseat Mustafa in Tlemcen, receiving payment of an annual tribute of 10,000 gold pieces (Ghazawûtî, fols. 93b-102a).

Khayr al-Din's domination in Algiers was temporarily interrupted through an attack of the sultan of Tunis, Muhammad, who had allied with Ibn al-Kâdî and Kara Hasan, head of the Turkish garrison in Cherchell. Defeated on the lands of the Flissat Unmunûd (Gomarîd, i, 126) and provisioned. At the opening of May 1529, Khayr al-Din attacked the fortress and took it on the 27th. With the débris, he built a causeway linking the islet with dry land, and thus secured a roadstead to protect his ships against the winds (Ghazawûtî, fols. 148a-152b; Gomarîd, 35). A few days later, an Algerian squadron seized nine Spanish ships which had come to the relief of Peñón (Ghazawûtî, fols. 154b-156a).

In summer of the same year, Khayr al-Din sent a detachment of fifteen ships under Aydin Reşîd to the vicinity of Oliva in Spain, in order to help the Moriscoes who were in revolt. Aydin Reşîd, having loaded his ships with as many Moriscoes as possible, put to flight off Formentera a Spanish squadron commanded by Rodrigo Ponce de León, and forced him to pay tribute of 30 loads (yilk) of silver (Ghazawûtî, fols. 162b-162a; fifteen ships, of which three were burnt and three sunk). Khayr al-Din sent two galleys to Istanbul to proclaim this victory to Süleyman. The dâ'û was Mustafâ told him about the negotiations with the King of France. (Ghazawûtî, fols. 163a-164b).

In May 1531, news reached Khayr al-Din that Andrea Doria was sailing towards Cherchell with a fleet of 40 ships, including 20 French ones (Ghazawûtî, fol. 167a-b), according to the terms of the Treaty of Cambrai of 5 August 1529 (Manfoni, 291, assures us that there were 30 ships, including 13 French ones). Khayr al-Din planned to go out and engage him with 48 ships, but Doria had to delay his departure through lack of supplies (Ghazawûtî, fol. 172a; Giovio ii, 129-30); he was in the vicinity of the Baelares when Andrea Doria had already attacked the fortress and after being repelled, had fled to Cadix, leaving on the ground 1,400 dead and 646 prisoners (Ghazawûtî, fol. 173a-b). Khayr al-Din then ravaged the coasts of Liguria and Spain, capturing abundant plunder. In 1532, he attacked the sultan of Tlemcen, who had the support of 14 Spanish ships based on Oran, and forced him to pay an increased tribute of 50,000 gold pieces. He then sent five ships to plunder the Spanish coasts, capturing inter alia 14 out of the 15 ships responsible for the defence of the coasts. Soon afterwards, he put down a revolt of 7,000 captive Christians, led by twenty Spanish nobles, for whom he had previously refused a ransom of 20,000 sequins (Ghazawûtî, fols. 215a-223a).

However, Khayr al-Din assumed the role of intermediary between Francis I and Süleyman, receiving in 1533 a French ambassador making his way towards Aleppo (J. Utsu, La politique orientale de François Ier Paris 1906, 76-80). Having received an invitation in a khatî-i sherîf which Sinân Câwûsh brought to him, he left from Algiers, and was there that the most famous corsairs of the age, like Sinân Reşîd (Ebreo) and Aydin Reşîd (Cacciavolo) joined him. With a fleet of 41 ships, Khayr al-Din and his corsairs ravaged the coasts of the western Mediterranean, seizing large amounts of booty (Ghazawûtî, fols. 123a-126b; Gomarîd, 393-5). Now feeling that he was strong, he decided in 1525 to march from Djidjelli on Algiers, invited thither by the populace, who were suffering hardship because of the loss of revenue from the corsair spoils. The occasion for this was Ibn al-Kâdî's prohibition of some ships of Khayr al-Din's loaded with Moriscoes from mooring in the port of Algiers. Ibn al-Kâdî went forth with 20,000 men to engage Khayr al-Din, but was beaten at Wadi Bugdura, and then at the head of the Banû Abbas, where he was beheaded by his own men (Ghazawûtî, fols. 127a-130b; Grammont, 31). From 1526 till 1528, Khayr al-Din strengthened his position by retaking Cherchell, where Kara Hasan had 500 men, at the same time forcing 'Abd Allah, sultan of Tlemcen, to pay the tribute for the past six years and to pay in the future 20,000 pieces of gold per annum; he also took Ténès and Constantine again, where the people had rebelled (Grammont, 34), and forced Hüsûn, brother and successor of Ibn al-Kâdî in Great Kabylia to pay tribute of 30 loads (yilk) of silver (Ghazawûtî, fols. 130b-146a).

The Spanish still controlled the island of Peñón, which faced Algiers at a distance of some 300 metres only, but they were poorly-armed and poorly-provisioned. At the opening of May 1532, Khayr al-Din attacked the fortress and took it on the 27th. With the débris, he built a causeway linking the islet with dry land, and thus secured a roadstead to protect his ships against the winds (Ghazawûtî, fols. 148a-152b); Grammont, 35). A few days later, an Algerian squadron seized nine Spanish ships which had come to the relief of Peñón (Ghazawûtî, fols. 154b-156a).

Khayr al-Din and his corsairs ravaged the coasts of Liguria and Spain, capturing abundant plunder. In 1532, he attacked the sultan of Tlemcen, who had the support of 14 Spanish ships based on Oran, and forced him to pay an increased tribute of 50,000 gold pieces. He then sent five ships to plunder the Spanish coasts, capturing inter alia 14 out of the 15 ships responsible for the defence of the coasts. Soon afterwards, he put down a revolt of 7,000 captive Christians, led by twenty Spanish nobles, for whom he had previously refused a ransom of 20,000 sequins (Ghazawûtî, fols. 215a-223a).
pursue the fleet of Andrea Doria, who had left
Coron for the Adriatic, and finally reached the Otto-
man capital at the end of the year (Ghasawdi, fols.
224a-226b).

Shortly afterwards, he departed for Aleppo after
an invitation from the Grand Vizier Ibrahim Pasha,
who bestowed on him officially the office of Kapudan
Pasha [q.v.], with the title of Naseer-i beglerbegi
(Ghasawdi, fol. 239a; State Archives of Venice, coll.
Tskbd. docs., dossier xv, 7, last ten days of Radjab
940/5-14 February 1534), which should be under-
ested as “Beglerbeg of the Islands” (i.e. Naseer-i
bahr-i sefidi), and not of Algiers (cf. Alberi, iii: 1. 30,
narrative of Daniele de’ Ludovisi of 3 June 1534:
“beilerbei del mare”; Ramperti, Libri tre delle cosei
die Turchi, Venice 1939, c. 22: “beglerbeey del mare”).

Some months later, Khayr al-Din set sail with a
fleet of 84 ships, of which 18 were his own, five be-
longing to corsairs and 61 newly-built. The mission
entrusted to him was the conquest of Tunis, whose
throne had been claimed by Rashid, brother of
Mawlay al-Hasan. After pillaging Reggio, San Lucido,
Cetraro, the Gulf of Naples with the adjacent islands,
Sperlonga, Fondi (on the flight of Giulia Gonzaga,
see E. Nicollini, Giulia Gonzaga e la crisi del Val-
desimo, in Atti dell’Accademia Fontianiana,
N.S., v [Naples 1942], 204-8) and Terracina, and
then taking on supplies of water and wood at the
Tiber mouth (Guglielmotti, iii, 384-5) and capturing
Bizerta, he seized La Goletta (Khalk al-Watdi) on
16 August and then on the 18th, Tunis, which had been
abandoned by Mawlay al-Hasan. The whole of
Tunisia fell into his hands after Mawlay al-Hasan
had been defeated at al-Kayrawan by an army of
10,000 men (Ghasawdi, fols. 235a-241a). He then
pacified a revolt of the Arabs for calling for Rashid,
who had remained in Istanbul, where he died shortly
afterwards (Hadjdil Khalifa, 44: Pecewli, Ta’irikha,
i, 492).

In April 1535, a new French ambassador, La
Forest, visited Barbarossa in Tunis and from there,
left for Istanbul; he had the task of preparing a
joint expedition of the French and the Ottomans to
plunder Corsica and conquer Sardinia and Sicily,
then under Spanish control (D. C. Rouillard, The
Turk in French history, thought and literature (1520-
1660), Paris 1938, 111-12). Charles V decided to
take action, and assembled an armada of 300 ships
and about 30,000 men. He reconquered La Goletta
on 14 June and on the 20th attacked Tunis with the
support of the Arabs and over 4,000 Christian
captives, who had broken their fetters and now threw
the Turkish ranks into disarray (these Turkish forces
amounting to 9,700 men). Khayr al-Din was hurled
out of Tunis and headed for Bône, whence, with 15
ships, he went to Algiers. He set off with 32 ships
for the Balearics, burnt and sacked Port Mahon in
Minorca (P. Estamislo - K. Agulo, Documentos re-
lativos al sitio y saqueo de Mahon por Barbarroja,
in Revista de Menorca (1898), 137-56; [1909], 261-80;
nom vidi) and Palma in Majorca, and returned on 15
October to Istanbul (Ghasawdi, fols. 257b-272a).
In the following spring, he went with 30 ships to the
coasts of Calabria, where he sacked La Castella
(Ghasawdi, fol. 272a-b; G. B. Moscato, Cronaca dei
mandamenti in Calabria, Cosenza 1963, 102).

Till spring 1537, Khayr al-Din was busy getting
ready the fleet which Suleyman had promised Francis
I for supporting his Italian expedition. During this
period, Suleyman took up a position with his army
at Valona, and the fleet, comprising 280 ships, con-
centrated along the Albanian coast. Whilst the
greater part of the ships under the Third Vizier
Lutfi Pasha headed for the coast of Apulia, Khayr
al-Din went with 60 galleys to escort 20 ships loaded
with provisions from Egypt. He then took part in
the unsuccessful siege of Corfu. From there, and
after the main part of the fleet had returned to
Istanbul, he went with 60 ships and seized Nio,
Zea and Naxos. In the next year, 1538, he attacked
and occupied Skiastos, Skiros, Tinos, Andros, Karpa-
tos, Kandelares and other islands of the Venetians
in the Aegean. Also, Crete was plundered for a week
and over 15,000 captives taken (Ghasawdi, fols.
278a-282b).

On 27 September, the Turkish fleet of 120 ships
commanded by Khayr al-Din clashed before Preveze
with a Christian fleet of 138 galleys and 70 ships
(Manfrouni, 137), which had been got together by
the Emperor, the Pope and Venice, under the command
of Andrea Doria; the engagement ended in the retreat
of Doria’s Imperial forces after some skirmishing by
the vanguards (for the battle, see now A. Büyükt-
Tugrul, Preveze denis munharebesine itikin geregeler,
in Belleten, xxxvii (1973), 51-85). The existence of
secret negotiations between Doria and Barbarossa,
shown in numerous published documents (see
Manfrouni, 332 f.; C. Capasso, Barbarossa e Carlo V, in Archivio Storico Italiano, lxix (1939), 159-208,
304-48) explains why the two admirals never pro-
vided each other and why they both adopted an
extremely prudent attitude towards each other.
Barbarossa, without hurrying overmuch, pursued
the Christian fleet and forced it to retreat to Ste.
Maure.

In the next year, Khayr al-Din went with 150
ships and reconquered Castelnuovo, taken in the
preceding year by the Christian fleet after the battle
of Preveze.

Khayr al-Din’s last appearance on the sea was in
1543, when, after the agreements reached between
Süleyman and Francis I, he was given the task of
co-operating with the French fleet in the western
Mediterranean. After ravaging the Italian coasts,
staying three days at Reggio and terrorising Rome
by a halt at the Tiber (Guglielmotti, iv, 177-18), he
joined the Duc d’Enghien, commander of the French
fleet, at Marseilles. The two united fleets sacked
Villefranche and unsuccessfully besieged Nice, Khayr
al-Din attributing this check to the shortcomings of
the French fleet (cf. Charrière, i, 578-9). The arrival
of Andrea Doria’s fleet and the Marquis del Vasto’s
army compelled Khayr al-Din to retreat and to
spend the winter at Toulon, which was evacuated on
this occasion by its inhabitants. However, he sent 25
galleys under Sâlib Reis and Hasan Celebi to plunder
the Gulf of Lyons and the Spanish coasts (J. Laroche,
L’expedition en Provence de l’armée de mer du Sultan
Suleyman sous le commandement de l’Amiral Hayred-
din Pacha dit Barberousse (1543-1544), in Turcica,
i (1969), 161-211; Ghasawdi, second part, ms. 1186
of the B. N., Paris). The Peace of Crépy in 1544 ended
the war between Charles V and Francis I, and Khayr
al-Din sailed back to Istanbul after pillaging the
coasts of Tuscany and the kingdom of Naples (ms.
1186, fols. 412a-45a; Guglielmotti, iv, 123-5).

Khayr al-Din spent the rest of his life in pious
works, amongst other things, having a madrese and
a mosque built at Beşiktaş, of which however no traces
remain (see T. Öz, İstanbul camileri, ii, Ankara 1965,
30). He died on 4 July 1546, and was buried at Be-
şişat, with the chronogram
[=953/1546] engraved on his tomb. The mausoleum was
 KHAYR AL-DIN — USTAD KHAYR AL-DIN

built by the architect Sinân (Öz, op. cit., ii, 10), and became the place for the ceremony of investiture for new bâbûdan pâgâhs (note at end of ms. 2639 of Istanbul Univ. Library, fol. 392-b). The Turkish fleet, before leaving on an expedition, would go there and fire a salvo in greeting (Uzunçarşı, Osmanlı defterinin mürkez ve bahriye teşkilâtı, Ankara 1948, 429; A. Bombaci, Le fonti turche della battaglia delle Gerbe (1560), in RSO, xx (1942), 279).

Very little is known of Khayr al-Dîn's private life. He was twice married: once, at Algiers, with a local woman, who bore him a son Hasan [q.v.], who was on several occasions beglerbegi of Algiers; and a second time, at the age of 77, with the 18-year-old daughter of the governor of Reggio (pillaged in 1543, see above), Flavia or Maria Gaetani (Haedo, i, 272; Guglielmotti, iv, 117). He also had a daughter who is buried near his türbe (Öz, loc. cit.).

Khayr al-Dîn gave the Ottoman empire a well-organised North African province. As Grand Admiral, he strengthened the Ottoman maritime presence, assuring it of a total domination which lasted for over 30 years. He has remained in the Turkish memory as a national hero. His name struck terror in the Mediterranean, but he also had a reputation for generosity and prudence (see the letter written to him by Pietro Aretino, beginning "Salve, o re iner[...]

On the other hand, on several occasions he had a daughter of the governor of Reggio (pillaged in 1543, see above), Flavia or Maria Gaetani (Haedo, i, 272; Guglielmotti, iv, 117). He also had a daughter who is buried near his türbe (Öz, loc. cit.).

Bibliography: Sources. The most important contemporary source is the Ghasawî-i Khayr al-Dîn Pağha by Sayyid Murâd, composed on the basis of directly-communicated reports from Barbarossa and his travelling-companions, and also on the basis of what he himself had personally witnessed; two redactions of the original exist, one in prose and one in verse, and there are other, second-hand redactions. It is preserved in several manuscripts but still unedited, and is divided into two parts; the first narrates Khayr al-Dîn's adventures from his birth till 1541, whilst the second, concerned with the French expedition of 1543-4, has only come down to us in ms. 1186 of the B. N. in Paris. Scholars have used it basically through the intermediary of a bad French translation of an Arabic résumé of the Turkish text (the Arabic text was published at Algiers in 1934 by Nûr al-Dîn 'Abd al-Kâdir; on this is based al-Zuhra al-na?ira, ed. S. Baba 'Umar in Jurnal de istorie et de civilizare al Maghreb, iii (Algiers 1969), 1-18 of the Arabic section). The French tr. was published in two vols. at Paris in 1857 by S. Rang and F. Denis as Fondation de la Régence d'Alger. Histoire de Barbarossa. On the other hand, the Italian tr. made from a Spanish version of the Turkish text (ms. 1663 of the Escorial, to which the citations in this article refer), was published by Giovanni Luigi Aicamora in 1758, and has been little used. This Italian tr. was published at Palermo by E. Peleaz in Archivio Storico Siciliano between 1880 and 1887 and as a monograph in 1889 with the title La vita e la storia di 'Abbâs ben Hîsâb, di Barbarossa (see A. Gallotta, Le gazzavî di İayreddin Barbarossa, in Studi Magrebini, iii (Naples 1970), 79-160).

Another contemporary work on Barbarossa is the Lüdîgâzî al-abîr or Lüdîgâzî al-abîhâr of Yeṭîm 'Ali Câlebi, d. 959/1552 (see A. S. Levend,  конструкци, is known, that in the private library of I. H. Uzunçarşı. There is an extract from this work in 'Âlî, Kûnîh al-âbbâr, 4th section, 3rd part, still unedited; this has been used by published at Madrid in 1955 (Biblioteca de autores españoles, lxxx-lxxxii), and in the Topografia et historia general de Arzgl by Diego de Haedo, written towards the end of the 16th century (Valladolid 1612 and Madrid 1927-9, in 3 vols.). The citations in this article refer to this last edition.

Collections of documents: Collezione di documenti inediti in relazione all'esperienza di Espana, 112 vols., Madrid 1842-95, for which there is a catalogue raisonné by J. Paz, Catalogo de la colección..., 2 vols., Madrid 1930-1; E. Charrière, Néociations de la France dans le Levant, i, Paris 1848; E. de la Primaudaûe, Documents inédits sur l'histoire de l'occupation espagnole en Afrique, in Rev. Afr., xix-xxi (1875-7); M. Sanudo, I diarii, 56 vols. Venice 1879-1902; E. Albéri, Le relations degli ambasciatori veneti al Senato, Sen. 3, vol. i, Florence 1840; M. T. Gökбülgin, Venedik devlet arşivindeki vesikalor külliyatında Kanunt Sultan Süleyman devri belgeleri, in Belgeler: Türk tarih belgeleri dergisi, i (Ankara 1964), 119-20 (nos. 27-8, 34, 40-1, 61, 82; the document xv. 7 is not included in this collection); idem, Venedik devlet arşivindeki birçok belgeden kolleksiyonu ve bizimle ilgili diğer belgeleri in Belgeler, v-viii (1968-72), 1-151 (nos. 131, 188).

Khayr al-Dîn's life is included, from the historical point of view, in H. D. de Grammont, Histoire d'Alger sous la domination turque (1515-1830), Paris 1887; C. Manfroni, Storia della marina italiana dalla caduta di Constantinopoli alla battaglia di Lepanto, Rome 1877; A. Samih Iler, Şimali Afrika'da Türkler, i, Istanbul 1937.

There are several more or less recent works, the last of which being E. Bradford's The Sultan's Admiral, the life of Barbarossa, London and New York 1968, of little worth. (A. GALOTTA)

KHAYR AL-DIN PASHA [see DİNDARLI].

USTAD KHAYR AL-DIN, Ottoman architect, popularly considered as the founder of Turkish architecture. We have very little certain knowledge of his life, and do not even know when he was born and died, but his father Ustad Murâd is known to have restored the Galata Tower after the earthquake of 913/1509. His name is not included in a list of architects in a defter from the first years of Sultan Süleyman's reign (Topkapı Sarayi Arşivi, D 7843), indicating that he may no longer have been alive then. In Ayvânsarayi Hüseyin Efendi's Hâdîbât al-Dinâmî, written in pers, the following information is given about him: "Khayr al-Dîn, the architect—who was the builder of the Mi'îmâr Khayr al-Dîn mosque opposite the mausoleum of Sinân Pağha in Diwân Yolu—was the architect of..."
Ustad Khayr al-Din — Khayr Pür

Sultan Bayezid. He is buried outside the Sinan Paşa mausoleum. There is a quarter bearing his name. This mosque, according to its inscription, was burnt down in 1316/1898 and rebuilt by Sultan 'Abd al-Hamid II. Taşyâr-zade Ahmed 'Aţâ Enderûnî, in 'Ata' Ta'rîkhî, Istanbul 1291, i, 76, attributes to him buildings in Edirne, Amasya and Istanbul during the reign of Bayezid II (886-916/1481-1512), and his information is repeated in Mehmed Târîhî, Şâh-i 'Âli 'Oltâmâdî, ii, 314.

Khayr al-Din seems to have begun his career outside Istanbul. The külliyye or complex of religious and educational buildings in Amasya of Sultan Bayezid, founded by the prince Ahmed, governor of Amasya, in his father's name, was his first major work, and was completed in 891/1486. In this project, on the banks of the Kizilirmak River (of which only the madrese, mosque, 'imaret, türbe and fountain survive today), the architect tried to give unity to the whole site by the plan chosen, which included two large domes, one after the other, and then three smaller domes at their sides.

The second and larger külliyye of Sultan Bayezid was built by Khayr al-Din in Edirne between the years 889/1484 and 893/1488. With its mosque, 'imaret, hospital, madrese, baths, kitchens and provision depots, this is one of the biggest social-religious foundations of the 9th/15th century. The mosque, with many tombs, dominates the architectural complex; it has a lofty dome, 21 m in diameter, mounted on four walls 19 m high. The low, nine-domed, small tâbâhânas are adjacent to the mosque. At the outer corners of the fountain courtyard, in front of the tâbâhânas, are two minarets with galleries.

More controversial is Khayr al-Din's role in the construction of the mosque of Sultan Bayezid in Istanbul, which was designed as a külliyye and completed in five years between 906/1501 and 911/1506. In this, the first plan of the single half-domed Fâtih mosque is taken up and developed further by the addition of a second half-dome to the north and one small dome on each side. The central dome is 18 m in diameter; the fountain courtyard has two rows of windows, and the two minarets, with single galleries and 87 m apart from each other, are at the outer corners. The various domes and arches of the mosque were restored by Sinan after the 915/1509 earthquake, according to the Tübâfat al-müt'mârîn.

Now Mustafâ Nuri Paşa, in his Notatîdî al-ułowî 'âtî (Istanbul 1327), put forward the name of Kemâl al-Din as the architect of the Bayezid mosque, whilst more recently, Rifki Melî Merî has suggested the name of Yaşâbî b. Sultan Şahî as the architect, basing this on records in Istanbul Belediye Library manuscripts; see his Bayesîd camii mimarî, in İlahîyet Fikhiîesi, Yuluk Araştırmalar Dergisi, i (Ankara 1958), 4; and i, 26. The architect of the mosque is Bayezid d'Istanbul, in Pros. First ICTA (Ankara 1961). There exist many certainly obscurities and chronological difficulties about the dating of the building process, but according to the mosque's inscription, work started on it at the end of 906/1501 and was completed in 911/1506; the dome was completed in the third week of Rabi'1 910, and in the next month, the outer courtyard of the mosque in the garden of the Old Palace and its boundaries were marked out and enclosed with walls. There does not seem to be any specific information about Yaşâbî's hand in it; Khayr al-Din had become architect-in-chief previously, and the sources indicate that Khayr al-Din was alive after Yaşâbî's death. It is also known that he was in charge of construction at the caravanserais, later known as the Pirînci Kham, at Bursa, built by the Sultan as a waqf to provide income for his mosque in Istanbul (Bursa Múzesi arşivi, Sharî'a register-defters, No. 20, entry No. 67; Kâmil Kepeci, Bursa Hanlari, Bursa 1935).

Khayrâbâd.

i. — A small town in Uttar Pradâsh, India, 27° 32' N., 80° 45' E., 75 km. north of Lakhnaû (Lucknow) on the Barell road, now of small importance but in Mughal times the headquarters of one of the five sârâhs of the sâba of Awadh (Abu 'l-Fadîl 'Allâmî, 'Abî-i Akbar,-eng. tr. Jarrett, Bibl. Ind., ii, 93, 176). Under the kingdom of Awadh [g.v.] it became the residence of the viceroy of Awadh; but after the British annexation of Awadh its importance declined with the rise of Sitâpur 8 km. to the north. Before the partition of the Indian sub-continent, the population of the town and surrounding district was about 60,000 Muslim. Except for the Dâlimî masjid, of the time of Shahjâhan, its buildings are undistinguished; Abu 'l-Fadîl's lists show it as possessing a brick fort.

ii. — A settlement on the west bank of the river Indus opposite Afak [g.v.] (Attock). Whether or not the name was deliberately given for its assonance with Afak at the south-eastern extremity of Akbar's dominions, as Abu 'l-Fadîl asserts (Akbarnâma, ed. Bibl. Ind., iii, 355), the name certainly means "obstacle". A popular legend (not in the Akbarnâma) has it that Khayrâbâd is the "habitation of well-being" attained after the "obstacle" has been successfully passed, and was named by Akbar after the successful bridging of the Indus at a notoriously treacherous point. The sârâh of Khayrâbâd is frequently referred to in accounts of Akbar's operations in the north-west after 989/1581.

Bibliography: Akbarnâma, iii, index s.v. Afak; and see Bibliography to Afak.

(K. Burton-Page)

Khayrâpur.

A forsightive state of the province of Sind in British India, now in Pakistan, lying to the east of the lower-middle Indus River between lat. 27°46' and 26°10' N. and between long. 78°20' and 70°14' E., and with an area of 6,018 sq. miles; it is also the name of a town, formerly the capital of the state, lying some 25 miles south-west of Sukkur and Rohri.

The southeastern part of what was Khayrâpur state is largely desert, but the alluvial plains in the north and west, adjacent to the Indus, are fertile and are irrigated by canals from the Indus valley, so that such crops as cereals, cotton, sugar cane, tobacco, oilseed and indigo can be cultivated.

The separate historical existence of the state
dates only from the late 18th century. In 1783 the Balúch chief Mr Fatih ʿAll Khan Talpur overthrew the Kalhoras of Sind and secured a sanad from the Durrān ruler in Kandahār as titular ruler of Sind. His nephew Mr Suhrab Khan (d. 1830) asserted his power in Khayrpur town, and founded a state of his own, whilst continuing to acknowledge the supremacy of the Tālpūr Mir of Sind at Haydarabad. By conquest and intrigue he enlarged his possessions beyond the environs of Khayrpur town southwards and eastwards to the Great Indian Desert fringes and westwards to the Indus. During the internal convulsions in Afghanistan which led to the supersession of the Sadozāy line by the Bārakzāy line of Dūst Mūammad [see ʿAFGHANISTĀN. v. History], the Mīrs of Sind withheld tribute, and by ca. 1813 the province had become virtually independent; in 1832 the independent existence of Sind was acknowledged by Britain. The Mīrs of Sind attempted to impede the passage northwards of British troops during the First Afghan War (1839–42), but one of the sons of Mr Suhrab Khan in Khayrpur, ʿAll Murād, was more co-operative, and after the operations in Sind by Sir Charles Napier and its annexation in 1843, ʿAll Murād became Mir of Khayrpur and also honorary Raʾīs of Upper Sind.

In the internal disputes in Khayrpur and friction with the Government of India—Sir Bartle Frere was placed at the Mir's side as chief executive with his successor preferred mats of palm leaves. Mir ʿAll Murād did not die till 1894, and was then succeeded by his son Faʿiz Muhammad.

In 1947 Khayrpur state acceded to Pakistan, but after the administrative reorganisation of 1955 it was merged into the province of West Pakistan, and is now a District, under a Deputy Commissioner, with 6 sub-divisions named after the earliest Mirs (Khaypur, Gambat, Kīti Dīgī, Mr Wah, Faʿiz Gandj and Nāra). In 1961 the population of the District was 472,137, this being overwhelmingly rural and 83 % Sindi speaking. The town of Khayrpur, which is today an important textile centre, had 34,144 inhabitants in 1961.

District census report, Khairpur, Karachi N.D. 2000; and tābīt of the former Bahāwalpur State [q.v.] in West Punjab, now in Pakistan; the town is situated in lat. 29°35′ N. and long. 72°28′ E., 38 miles to the north-east of Bahāwalpur town. See Imperial gazetteer of India 9, xv, 216.

KHAYSH (A.; pl. ḫayyāḥ, ḫayyāḍ, n. of unity, ḫayyān, a coarse, loose linen made with flax of poor quality and used in the manufacture of sacks, wrappings and rudimentary tents. The Arabic dictionaries only mention, in its literal sense, this meaning; Dozy (Suppl., s.v.) renders it by "canaves; linen; serpillière; treillis", and de Goeje (BG 4, iv, 355) remarks that this linen is manufactured in Tabaristan. Sometimes, the expression ʿArab al-ḥaysh is used to designate the Bedouins (Quatremère, Mém. géogr. éth. sur l'Égypte, Paris 1821, ii, 218).

However, this term clearly designates a means of obtaining a certain freshness of air, without the texts in which it appears being always explicit, for example when Ibn al-Fakhrī (Buldān, 88; tr. Massé, 388) says that the Cordovans have no need of water in summer. In a certain number of mentions, the use of the expressions fi ḫaysh or, better still, bayt ḫayyāḥ (al-Dījāhīs, Bukhālāʾ, 187; idem, Rasāʾīl, ed. Ḥārūn, i, 393) leads one to think that it has the meaning of a summer room. T. al-Hādjīrī (the editor of Kišāb al-Bukhālāʾ, 322) puts forward the view that ḫaysh, in this sense, is the Persian ḫamān "a summer room" and it is probable that the usage comes in fact from Persia. Al-Muṣṭaḍaff (449) says that he saw at Shirāz some baytāt al-ḥaysh "where water runs constantly, brought by pipes which encircle the room, reaching it from high up". Perhaps the walls were bare, but they may also have been covered with ḫaysh; in any case, al-Ṭabarī (iii, 418) recounts that al-Manṣūr had a pavilion hung with ḫaysh that was constantly moistened; his successors preferred mats of palm leaves (Gaudfroy-Demobynes and Platonov, Monde musulman, 381; cf. Mez, Renaissance, 354-60; ḫubbāt al-ḥaysh).

Finally, the word ḫaysh designates another process that can be identified with certainty when it is used in connection with the verb āllāba "to hang up" (al-Dījāhīs, Bayawān, i, 82; al-Bayhaqī, Maḥāsin, 394): in this case, it means a kind of fan, of which a detailed description will be found in Dozy (Suppl., s.v.); al-Shārshālī, (Sharī, ii, 313; cf. al-Ghusūlī, Maḥādī, i, 65; Miskawāyih, i, 167; Mez, loc. cit.; M. Canard, in AIEO Alger, vi (1942-7), 177, n. 79) speaks in the same way of a mirawahat al-ḥaysh and says of this apparatus that it "has the form of a ship's sail; it is hung from the ceiling and a cord is attached to it set it in motion; it is moistened with water and sprinkled with rosewater. When anyone wishes to take a siesta or sleep at night, he pulls the cord and the apparatus moves back and forth the whole length of the house, directing a fresh, perfumed breeze on to the sleeper". In fact, young slaves were appointed to work the ḫaysh, whose use, which seems to have made its first appearance in ʿIrāq from the 8th/7th century, has not disappeared in that country, where it is, however, designated by the Indian name pānda (see Lughāt al-ʿArab, ix (1931), 621-3).

Bibliography: Given in the article. (Ch. PELLAT)
Tailors, whether free men or slaves, were well-paid. According to al-Abbas b. al-Hasan, vizier to al-Muktafi (289/902-8), and to al-Muktafiri (295/908-9), "when an artisan like a tailor (khayyam) works with silk brocade (dibda) he earns a thousand dinars a day, but when he works only with kufi (cloth of inferior value), he gets then forty dinars; when an artisan like a tailor (khayyam) works with cotton, he earns then twenty dinars a day, but when he works only with kufi (cloth of inferior value), he gets then five dinars; when an artisan like a tailor (khayyam) works with cotton, he earns then twenty dinars a day, but when he works only with kufi (cloth of inferior value), he gets then five dinars. Tailors, whether free men or slaves, were well-paid. K. al-Masdiil [fi afríd al-nudium]
tries to preserve a certain self-determinedness of the created world in relation to God's almightyness: God cannot interfere with the laws of nature (cf. Aghfar, Makabdit, 314, ll. 3 ff.), perhaps even not by a bharak at-\"oda\" as the BasrI school believed. The qualifying momentum (ma\#alsi\#at\") for an action lies in the action itself, not in the agent (cf. Sahl al-Makabat, al-\"A\"am al-\"Id Làmik), Cairo 1328, 21 ff.). The order of causality is guaranteed through tawallud (cf. Intis\"ur, ed. Nader, 50, ll. 1 ff.). Similarly, God has no power to do injustice (cf. Intis\"ur, 22, l. 4). For the same reason, Khayyat is able to hold an extreme position concerning the much-debated thesis brought up by the BasrI Mu\#azzil al-Shabham that "the possible in the state of its non-presence in the world, has some reality" (cf. R. M. Frank, in Al\#i del III Congresso di Studi Arabi e Islamici, Ravello 1966, 324 ff.). The potentially existent (ma\#adim) is, insofar as it is known by God and comprised by His power, not only "something" (g\"ay\" = 39), but also "body" (\"izim\", i.e. it is ma\#adim and ma\#adur \"alay\" in its corporeality as composed of substance and accidents. Through its accidents it possesses already in its pre-existence all qualities, with the exception of createdness (ma\#adur or ma\#adhit), which are added through the fact of creation and movement (because a body is not moving in the moment of its coming-into-existence; cf. Ibn Hazn, Fisal, v, 42, ll. 12 ff.; Baghd\"ud, al-\"Ar\"bayn al-\"Isr\"ab, 164, ll. 13 f.; R\"azi, Mu\#hasal, 38, ll. 14 f.). Incompatible with the possible as not-yet-existent is also the quality of permanence (b\"ab). In this case, however, Khayyat concluded that b\"ab is no separate quality or accident at all, but only an expression for the continuance of being. This meant that annihilation, too, does not result from God's withdrawing the quality of b\"ab and subsequent disintegration of the different parts of the body, as it was frequently believed, but through direct conversion into non-existence (\"id\"; cf. Abu Ra\#hd an-\"I\"\#ab, al-Ma\#ad fi l-\"I\"\#hab, in A. Biram, Die atomistische Substanzenlehre aus dem Buch der Stofffragen zwischen Basr\"ud und Baghdad\"ud, Berlin 1902, text, 58, apu. ff., and 69, l. 4 f.; also al-Mal\"ahimm, al-Falak\"i fi usul al-din, fol. 154b. with special reference to the death of human beings).

The theory seems not yet to be fully developed in Intis\"ur, 79, and passed over in silence in Intis\"ur, 23, ll. 2 ff.; on the other hand, it is not easy to differentiate it from the ideas of Shabham (cf. Aghfar, Makabdit, 504, ll. 16 ff.). Djubb\"ud attacked it on the basis that it implies the eternality of bodies (and matter, because bodies are material, whereas atoms and accidents are not, as long as they are not put together; cf. Baghd\"ud, Far\"b, 165, ll. 3 ff.). Khayyat, however, did not apparently react against Djubb\"ud, but against the older BasrI Mu\#azzil Abu \"I\"\#basyn Muhammad b. Muslim al-\"Ibl\"i, an adherent of Sahl\"i Kubba (from whom he seems to have got his niza\#a). Sahl\"i rejected the ma\#dud-theory (cf. Aghfar, Makabdi, 501, ll. 8 ff. and Baghd\"ud, Far\"b, 163, apu. ff.) as well as tawallud (cf. Aghfar, 233, ll. 3 f.); he stressed God's power to interfere with the laws of nature (cf. Aghfar, 309, ll. 12 ff., and esp. 310, ll. 9 ff.; also 370, ll. 1 ff.).

Khayyat differed from Sahl\"i in yet another point about which his discussions with him are expressly attested (cf. Ibn al-Mur\"ad, 72, ll. 26 f., sc. concerning t\"ad\"a\", i.e., the definition of belief and the eternity of punishment for the grave sinner. Khayyat upheld the intransigent and moralistic outlook of al-wa\"\#d wa l-wa\"\#at which he may have inherited from the ascetics among the Baghdad\"ud Mu\#azzil (ga\"\#syyat al-Mu\#azzala), in whose circle he had grown up, and which remained the view of the majority of the school; it is for this reason that he rejects, e.g. the intercession of the Prophet (\"as\"\#a\") (cf. Mu\#fdd, al-Fus\"u\#al al-mu\#\"\#fur\"a\", i, 47, ll. 7 ff.). The contrary attitude, centering around the idea of final remission for Muslim sinners or at least for some of them, according to God's free decision, was, however, quite frequent at this time. He also reacted against the caliphs in the theology of the influential "\"Idl\"ah\"" theologian Bishr al-Mar\"ad (d. 218/833), and was taken over also by another Mu\#azzil contemporary of Khayyat, al-Na\#h\"i al-\"I\"\#kh\"ar (cf. Van Ess, Fr\"uehe mu\#\"\#azzilische \"H\"asenographie, 144).

Khayyat considered the caliphate (\"in\"\#ma\") as necessary by reason, not only by revelation (cf. Ibn \"A\"rafa, in Hau\#\"\"ufiy\"a\"\# Di\"ma\"\#a al-Tan\"is, ix, 1972, 190). The sovereign may act freely according to his id\"at\"ah as long as he thinks to serve the benefit (gall\"a) of the community. This is how some irregularities of \"U\"\#man may be explained (cf. Ibn A\"b\"i al-Hadd, Shar\"k Na\"h\"i al-bal\"\#\"a, iii, 34, ll. 6 ff.). All had the highest qualities among the \"\#abh, but as he did not object to the caliphate of his predecessors, the \"\#abh must have been right in elevating him then. The reason for this and for their benevolence are unknown (cf. Ibn al-Murtad\"a, 86, ll. 12 ff., and Shar\"k Na\"h\"i al-bal\"\#a, i, 7, ll. 6 ff.). In the first civil war, \"U\"\#a acted in legitimate performance of dj\"ob, but the \"\#abh among his opponents, sc. \"A\"\#s\"a, Talba and al-Zubayr, will be exempt from divine punishment because they repented (cf. al-Sha\"y\"k al-Mu\#fdd, al-\"I\"\#d\"amal Na\"\#f\"u\#\"a, 132/1953, 28, ll. 3 ff.). There is, however, no exception for his enemies, especially Mu\#\"\"a\"\#a and \"A\"\#m b. al-S\"A\"\# (cf. Intis\"ur, 74, ll. 8 ff.). The agreement of the contemporaries (a\"b\"i al-\"I\"\#s) may be considered a convincing argument (\"ud\"\#i\") even if a few of them did dissent (cf. Abu \"I\"\#-Husayn al-\"A\"\#r, al-Mu\#\"\#amad, 456, ll. 14 ff., a reflection of the situation of the Mu\#azzil after the \"in\"\#ma\"). The community is infallible when it transmits hadith from the Prophet (cf. Intis\"ur, 72, ll. 3 f.), but isolated traditions (ahd\") have to be rejected (cf. Baghd\"ud, Far\"b, 165, ll. 10 f.). The Prophet is infallible when he speaks as a lawyer, because God demands obedience towards his commandments; in other cases, he may commit light sins which do not entail eternal punishment and do not cost him the solidarity of his adherents (cf. Intis\"ur, 71, ll. 16 ff.). In kalam, only the Mu\#azzil are competent (cf. ibid., 43, ll. 6 ff.); in spite of numerous disagreements in minor details (cf. ibid., 79, ll. 5 ff., 106, ll. 1 ff. etc.), they are held together through the usul al-bhamsa (cf. ibid., 93, ll. 2 ff.).

ledge has no predetermining effect); Makdisi, al-Bad' wa l-‘a‘rīqā, ii, 121, ll. 12 ff. (definition of man).

AL-KHAYYURĀN BINT ‘ĀTĀ AL-DIJURA-
SHIYYA, a former slave of Yemeni origin (on the Dijurāsh, see Ibn al-Kalbl-Caskel, Tab. 278), who was freed, and then was married to al-Mahdī, to whom she bore three children, Mūsā (al-Hādī), Hārūn (al- Raṣḥīd) and a daughter called al-Bānūkā (Ibn Kūtaybā, Ma‘ṣūrī, 180). According to a tradition given, in particular by al-Djahshiyyār (Wuṣ‘arāt, 136), she suckled al-Fadl b. Yahya b. Khalid al-Barmaki, whilst al-Fadl’s mother provided milk for Hārūn; this kind of alliance through co-lactation would accordingly explain the devotion shown to her by Yahyā b. Khalid, together with whom she ended up doing the work of government during the first three years of al-Rashīd’s reign, i.e. until her death in 173/789.

During the caliphate of al-Mahdī (158-69/775-85), she played a more obscure part but, even so, the strong influence which she held over him can be seen from his designation of Mūsā as the heir presumptive from 159/775-6 and then of Hārūn in 160/782-3; furthermore he excluded from the succession all other sons, especially those borne by his Hāshimī bride Raytā, daughter of al-Saffār (Ibn Kūtaybā, ibid.). Although Mūsā seems to have been submissive to his mother during his childhood, traditions agree in stressing that Hārūn was the preferred son. Al-
Khayzuran accordingly schemed to exclude the older son from the caliphate, and al-Mahdī may even have decided to change the order of succession in favour of Hārūn before he died suddenly in Muljarrām August 785.

Immediately after the caliph’s death an army mutiny broke out in Baghdad. Al-Khayzuran is accused of having started this disturbance in order to put Hārūn on the throne, but it does not seem to have had a political nature, for the troops were complaining of Harun before he died suddenly in Muljarram August 785.

Chroniclers vie in stressing the enormous fortune amassed by al-Khayzuran, and she engaged in some undertakings of public interest. It is particularly noted that she bought the house in Mecca in which the Prophet was thought to have been born, had it restored and turned it into a mosque. She is frequently cited in adāb literature and it must also be mentioned that ‘Utbah, the beloved of Abu ‘l-‘Atā’iyah, was one of her slaves.

Abbot, Two Queens of Bagh-

KHAZAF (A.), ceramics. The radical transformation of ceramics under the rule of Islam took place chiefly in areas where their production had long been established, such as near the vital river beds of Mesopotamia, Egypt and Transoxiana, as well as on the banks of ancient inland seas, lakes and the shorter rivers of Syria and Iran. Pre-Pharaonic beakers, bowls from Jericho, jugs from Eridu, ewers from Sialk, all point to early skills in shaping and painting. By the 20th century B.C. in Egypt, the glassy potential of certain minerals led to the firing of a ceramic body, often called Egyptian faience, made from a mixture of natron or plant ash and powdered quartz from pebbles. A glaze of similar composition, but previously pulverised, and often coloured turquoise, was added to the shaped body and might be painted with a black pigment. In Assyria, glazing started as early as the 12th century B.C., rhytons from Ziwibeh probably go back to the 8th century B.C. and the glazed friezes from Babylon and Susa are well-known examples. Under Parthian and Sasanian rule, the same area and adjacent lands produced a large series of vessels, including coffins, with a coarse sandy body and an alkaline glaze often coloured turquoise with copper oxide. Coloured lead glazing became standard in the Eastern part of the Roman world from the 1st century B.C., probably at about the same time as in China, but with neither influencing the other at that stage. The moulded shape, as well as the dark copper green colour, tended to imitate metalwork. It is difficult, prior to the zenith of the ‘Abbasid caliphate in the 3rd/9th century, to distinguish any new ceramic production. At Khirbat al-Mafjjar (q.v.), the Uma-
yyad complex near Jericho, pre-Islamic and lead glazed shapes are found in the undisturbed level
Problems of archaeology, classification and technique. Although archaeological missions have long worked in Western Asia, it is only recently that the Islamic levels have been examined scientifically, rather than being discarded before reaching the classical and prehistoric levels. Since the Islamic levels are the most easily accessible, they are often found disturbed either by more recent buildings or by unofficial excavations. Most of the ceramic finds belong to pit and sewer fillings and only rarely to sealed levels. Too few excavations have yet been fully published to permit anyone without an intimate knowledge of the material to gain a clear understanding of the development of Islamic pottery. Thus the crucial publication of the finds from Sāmarrāʾ in 1925 has conditioned most subsequent studies. Although other Islamic towns are as important from the ceramic point of view, they lack proper archaeological records. Apart from the Kalʿat Banāʾ Hammād (1913 and 1965), Bahlīk (1925), Susa (1928 and 1974), Mileta (1935), al-Minā (1938), Ani (1948), Ḥamāt (1938), Lashkari Bāzār (1963), Apamea (1972), and Nishāpūr (1974), the specialist must be content with preliminary reports such as those of Baṣra, Wāsit, Ctesiphon, Kūsh, Istakhr, Ray, Takht-i Suleyman, Kangāvār, İznik and Tarsus. In order to reduce considerably the time lag between excavation and publication, the whole study of the ceramics is best done in the field; photographs, profiles, descriptions of bodies with Munsell chart number and basic tests with chemical and microscopical examination should thus be included.

In such a vast area as the Islamic world, there has been a tendency in ceramic studies to rely on historical, and more particularly, dynastic classifications, with names of towns used in a rather arbitrary manner and subdivisions based on colours and decorative motifs. As a result it has been found more convenient to restrict such terminology and to bear in mind the wide spread of a technique at one given time, while concentrating on terminology and technical problems. When seen in the context of world ceramics, the Islamic potter has contributed fundamental glazing techniques in the field which, in turn, have made certain European developments possible. The compulsion to create a white background for decorative motifs led the craftsman to evolve various formulae in glazing which would allow for whiteness, first routine to the colour decoration and substitutes for the precious metalwares forbidden by the Faith. Chronologically, three methods of producing whiteness exist in early Islamic pottery: first, an opaque white glaze on a yellowish body; second, a white slip under a transparent and clear lead glaze, usually on a pink body; and third, a composite white body called sgraffito. The colour effects rely on the use of certain metallic oxides which fuse at similar temperatures as those required for the glazes: green and turquoise from copper, purple from manganese, blue from cobalt, all shades of brown from iron, and yellow from antimony or arsenic. Finally, the last technical step in Islamic pottery, is the controlled use of underglaze painting, which came into its own in the 7th/13th century and has been the dominant decorative technique ever since. A large variety of vessels and pottery bodies were made throughout Islam, as well as wall and dome revetments of baked bricks, glazed tile mosaics and tiles.

Early development of Islamic pottery. By the middle of the 3rd/9th century, a striking departure from the pre-Islamic shapes takes place in the creation of a visual reproduction of the plain porcelain from China datable to the 3rd—early 4th/9th—early 10th century. Numerous sherds of original bowls have been found in Mesopotamia with everted, straight or lobed rims and narrow or broad base rings. They are first mentioned in the Taʾrīkh-i Masʿūdī of Abu l-ʿAbad Bayhaqī [q.v.] as gifts by the governor of Khurasan to the caliph Ḥarūn al-Raṣūlī. Most of the Islamic copies are decorated with sparse, often spongy-looking, blue motifs; they consist of palmettes, loose calligraphy and stylised leaves, sometimes with added copper-green runs on an opaque white glaze. At times, the glaze, which might be an underfired alkaline one, is made grey by the addition of minute specks of manganese oxide. In other cases, dense compositions, not unlike the patterns of Byzantine mosaics, fill the cavetto of the short-lived polychrome lustre painted bowls and dishes; dashes and circles or both and even plain sang-de-boeuf lustre, decorate the outside. The 139 square tiles around the mihrāb of the Sidi Oqba mosque in Ǧayrāwān, ca. 248/862, provide a fascinating pattern book; the tiles with more complex designs in polychrome lustre were imported from Mesopotamia, whereas the simpler ones with bichrome designs could well have been made in the area. Monochrome lustre decoration on bowls, usually with simple compositions of animals, birds and even human beings silhouetted against a stippled background, have been found from one end of the Islamic world to the other throughout the 4th/10th century, including at Mardin al-Zāhrāʾ. The shape is usually that of the porcelain bowls already mentioned. A monochrome lustre painted bowl in Cairo with traditional palmette and tree design bears an inscription in the name of Ǧīhān, the commander-in-chief of Ḥākīm, who died in 403/1013; it seems to mark the end of a fairly abstract style. After this period, more freely-handled lustre painting, often incised through the lustre on to the tin-opacified white background, points to the traditional realism of the local Egyptian Christians with fish patterns, or representations of a priest, as well as a definite revival of Hellenism in the arts of Eastern Mediterranean with scenes of banquets or dancers, often painted in reserve. Such a new departure coincides with a change of body and shape away from earlier imitations of Chinese porcelain and formal designs of palmettes or animals. The simple flaring walls of bowls with either straight rims or everted, flattened ones have a coarser, gritty body; the glazed base ring remains narrow and occasionally the base bears the signature of a potter or pottery workshops. Earlier signatures are found inside the cavetto, such as that of Ibrāhīm, or inside the base ring in the case of Muslim. In Romanesque churches during the early period of
Italian commercial activities before and during the time of the Crusades in Syria, Fatimid lustre bowls had been embedded in the outer fabric of walls to adorn the structure of new churches in Lombardy and in the republic of Pisa. Excavations at the Kafāt Banī Hammad in the Maghrib have brought to light cross-shaped tiles painted in monochrome lustre of the 5th/11th century.

Besides vessels with cobalt or lustre painting, early moulded wares have been found on various Mesopotamian sites, at Fustat, and also below the collapsed structures abandoned by the last Zoroastrians in Takht-i Sulaymān, dated 331/943. Details, not unlike those of terra sigillata, and beaded geometric band compositions on the larger surfaces, are all covered with lead glaze, often coloured green or yellow; shapes vary from flat dishes, some with small feet, to bowls with vertical walls, and small cups. Other vessels of the same shapes, but not moulded, have a similar fine pinkish body with a vivid yellow and green colour scheme. Contrary to Sarre’s theory, life continued in Sāmarrā after the return of the ʿAbbāsids caliphs to Baghdaḏ in 278/892. The mint worked until as late as the middle of the 4th/10th century, while the potters continued even beyond that time. Their production, although less spectacular, emphasises technical research in the use of metallic oxides for runs, splashes and spots, with an increasing proportion of lead in the closer fitting glaze; the body colour changes from pale salmon to pink, the potting becomes thicker and the profiles less graceful. Such production is also common to Susa, Iṣṭaḵr, Rayy and Nishāpūr amongst other places. In Egypt, wares of the Fāyūm indicate a better control of the runs; excavations of Aḥḥabīd and Zīrīd towns of the Maghrib have brought to light deep bowls with straight vertical rims and simple animal decoration inside in yellow, green and manganese; the latter two colours are found in Umayyad Spain on an opaque background starting in the 4th/10th century.

The uses of slip. By the 5th/11th century, true Islamic shapes had evolved on the Iranian plateau and in Transoxiana: large dishes with flattened rims, and at the earlier stage, bowls with a wide lip encircling the middle, flaring walls. At this point, the second method of producing whiteness appears in the use of a white clay slip which hides the pink body. According to the visual impact required, the potter would paint the slip with plain metallic oxides in order to obtain variegated runs of colour, or else he would thicken the oxides with slip in order to prevent running under the transparent lead glaze. The first group has often been equated with T’ang three-colour funerary ceramics. It has now been proved that such a luxurious production in China virtually ceased after the An Lu-shan rebellion in 756 A.D., and in any case, could not have been the object of international trade. A more likely parallel could be found in the production of Northern kilns under the Liao dynasty in Southern Manchuria (907-1124 A.D.).

A second group, making full use of the slip technique, has been in turn labelled Nishāpūr or Samarqand wares according to the quality of design and execution. Recent publications have made it difficult to be so definite, since similar wares appear in Khurāsān, Transoxiana as far as Frunze and Sistān throughout the Sāmānids, Gāznavid and Ghūrid periods, by which latter time the production had become rather simplified and mechanical. The fact exists to this day in the Uzbekistan SSR. Early on, superb examples of calligraphy, such as blessings and proverbs, elaborated palmettes, such as textiles and designs, stand out against a white or colour slip background. A particular instance is the use of human representations on simpler bowl shapes from the area of Nishāpūr. The Zoroastrian survival with the Gabrī or fire worshippers, has long been overstressed at the expense of the thriving Nestorian and Syrian Christian communities of the region. This could partly explain the appearance of concrete scenes, the falconer on horseback and the more prosaic birds and horned quadruped compositions. Later, abstract and heraldic slip painting of a rather coarse kind also decorated bowls and cups under the Mamlūks and the Ottomans before the fall of Constantinople. A more refined type of slip decoration was occasionally used on Şafawīd and Ottoman ceramic shapes in the 10th/16th and 11th/17th centuries. A third group, that of sgraffiato wares, technically runs parallel in time with the two previous ones. The incised pattern through the slip into the pink body is designed either visually to counterbalance a splashed decoration, or later, it seems, to stand out as the sole ornament under a clear lead glaze, with the occasional green run, or with the glaze sometimes coloured green with copper oxide. In the latter case, the incision can be narrow as in metalware, or broader not unlike champi, in which case large areas of slip are lifted out; the contrasting shade of the naked body is often made even darker by painting in black or brown. The potters of Aḥbarbāyḏān seem to have produced the best specimens of sgraffiato, as emphasised by the excavations of Takht-i Sulaymān, and finds from the area of Gārūs, Aḵghānd, Rīdāliyya and Āmul in Māzdārdān. Less inspired animal designs with narrow incisions, have come from Rayy, Nishāpūr, Iṣṭaḵr, Širāz and western Afghanistan. There has been a tendency to date sgraffiato wares rather early, whereas it seems more now that if one is to relate the best of slip painted wares to the latter part of the Sāmānids rule, then sgraffiato, technically speaking, has to be placed later during the rule and more specifically the decline of the Great Saljūḳs (429-590/1038-1194), in particular under Togrūl III in Hamadān and the thriving regencies of the Khwarizmians such as the Gūrids (531-622/1136-1222 [g.v.]), both courts providing suitable conditions for a renewal of original ceramic production under their realm.

Although it was at its best in north-west Persia and was only used for a relatively short period, sgraffiato technique was subsequently produced throughout the Caucasus and Eastern Turkey as shown in the excavations of Ānl and Dvin. On the whole, the incised designs of diaper patterns or fanciful birds and animals, and also of figures, convey an impression of haste rather than of skill, although the latter do not lack humour. Either the lead glaze is colourless or made green with copper, or else the typical scheme of purple, yellow and green is used in an uncontrollable way. The technique seems to have spread to Cilicia, known at the time as Lesser Armenia, and to areas ruled over, if intermittently, by the Crusaders in the twelfth and thirteenth centuries A.D. The better-known production is that of Cyprus, with high-footed deep bowls or drinking cups; human décor, usually incised through the white slip under a colourless lead glaze, is unlike the heraldic Mamluk cups of the 7th/13th century and onwards, although the shapes belong to the same repertoire. It is not yet clear when and where the true style started to evolve in the Byzantium, but it certainly reached Europe in the late Middle Ages and flourished in Renaissance Italy.

Soft paste. It could be suggested that the second
half of the 6th/12th century was the very period which must also have witnessed the last of the three methods of producing whiteness. It is described by Abu 'l-Kāsim in his by now famous treatise of 700/1300, and consists of a man-made body; the ratio of ingredients between body and glaze is such that they adhere closely together. This fine white soft paste (also called frit) proved to be the ideal material to reproduce local metal and glass shapes, as well as the delicate Chinese northern white wares and the Ch'ing-pai (Ying Ching) porcelain of the south in the 6th/12th century. Never again were beakers and bowls to be so light and elegant; the shapes, when moulded or carved, remain pure white or might have a coloured glaze. A short-lived group of pitchers and bowls, called silhouette wares, is sparsely decorated with single animal or human figure at the centre; the thick design in black sharply contrasts with the white background; occasionally the transparent glaze is coloured turquoise. Lapilli (painted) wares are also shaped out of the same hard composite body with raised outlines for the broad designs of animals, so as to prevent the colour from running. On vertical shapes the result is less satisfactory. It is likely that these latter wares were produced in northern Mesopotamia as well as in north-west Iran.

On-glaze painting: Minā'ī. In the last resort, it is the paint brush which lends itself to the most fluent and versatile decoration; on the new white body of various shapes, from low stands to moulded vessels, the potter paints either in lustre or minā'ī (enamel) on the glaze, or in black and blue under a transparent glaze. Both minā'ī and lustre techniques require a second firing in a muffle kiln at a lower temperature. The more intricate manner of minā'ī painting, although varied and subtle in colour, failed to survive beyond the 7th/11th century. The best two examples are an undated slender beaker with scenes from the story of Bidjen and Manšijīa in the Shāh-nāma of Firdawsī, and a large dish with a vivid battle scene datable to the early 1250s A.D. on the basis of the names written alongside the main figures. A simpler bowl, with a seated figure and two attendants on a turquoise background, is dated 640/1242. Soon after this, the colour scheme deteriorates and the body, at times, reverts to earthenware. Only echoes of the best minā'ī survive in the 8th/14th century.

Lustre painting. A fragment of a lustre painted ewer in the British Museum, the earliest dated Persian piece so far known (575/1179), has a large band of seated figures, separated from a lower arabesque by a frieze of racing quadrupeds. Although Persian lustre painting (including lamp bases) has been traditionally divided into two main schools, Rayy and Kāshān, it might be that after the great feud in Rayy between Sunnī and Shi'ī communities in 582/1186-7, the latter group fled to their own in 7th/13th century Anatolia. One of the earliest uses of more than one colour appears on the entrance to Kay-Kā'ūs I's tomb in his hospital of Sīvas (614/1217-18). The inner dome of the Karatay madrasa in Konya (650/1251-2) illustrates the technique at its best, with a colour scheme of blue, turquoise and dark purple-black. In the Sirgali madrasa (640/1242) the glazed work is signed by a craftsman with a misba from Tūs. Although Tabriz buildings of the Mongol period no longer exist, tile mosaics do cover part of Oldjeytī's mausoleum in Sulţāniyya. The final phase starts with the Muzaffārids, especially in Yazd and Iṣfahān, with the introduction of green and brown colours with the addition of white. The patterning of glazed bricks with glazed ones to simulate courses of bricks (bindī technique) also increased and effects as well as the use of various ines of mosaics or terra cotta in panel compositions. The bulk of the production was sponsored by the Timūrids, seen at its best in Harāt and Samarqand. Later examples
are those of the Ak Koyunlu in the so-called blue mosque in Tabriz (870/1465) and at Isfahān, followed by the early buildings of the Ṣafawid era in Ardabil, Isfahān and Kirmān. The Ǧinlī Kōsk in Istanbul (877/1472-3) relates to the bindaʾrevetments in Harāt. Some of the best tile mosaic works of North Africa and Spain are datable to the late 7th/13th and 8th/14th centuries A.D. Spasmodic attempts at glaze tiling and tile mosaics were made in the first half of the 9th/15th century in Cairo. In the Indian subcontinent also, five colourful tombs in Multān bear dates from 547/1152 to 724/1324, and glazed bricks were used in the Bahmani complex of buildings at Bīdar; tile panellings were included in Rajput buildings of the 18th century A.D.

A Sevillian document of 1558 A.D. mentions cuerdas de seca for the first time; however, it is now used to describe a technique which prevents the glaze colours fusing into each other during the firing; the barrier consists of a purple line of paint with an added greasy substance which vanishes in the firing. The technique was already used in Achaemenian Susa; there are some examples at Madīnat al-Zahrāʾ; it came into full use in 8th/14th century Persia in order to imitate tile mosaics at a smaller cost. Examples are known from Timūrī Samarqand, the Yeğil mosque and tumb in Bursa, the Selimīye (931/1521) and the Ahmet Pasa mosque (ca. 961/1554) in Istanbul. Saḥāwī buildings from the 11th/17th century onwards used the technique extensively, as did those of the Kāḏjārs. There are a few examples in Lahore in conjunction with tile mosaics. The best-known remain those of Spain.

Underglaze painting. When the mediaeval potter discovers, often by accident, a new technique, it spreads rapidly in an already mature form. It is difficult to determine where underglaze painting came into being either on earthenware or soft paste, but by the first half of the 7th/13th century this last and major break-through was well-mastered; it gradually superseded earlier methods of decoration and became established over the centuries through a series of changing styles. Prior to the Pax mongolica, Persian underglaze painting in black or blue or in both under a transparent glaze, often coloured turquoise, either recalls the arabesques and figures scene from the lustre répertoire or reveals new motifs of flowing water weeds, fish or sharply contrasted striations. Both genres are well illustrated in the so-called Gūrgān material. Some soft paste bowls recall similar shapes in glass with the same slender splayed foot, although the T-shaped rim only occurs in ceramics. Other shapes include double-shell pitchers, one dated 612/1215, the ewers with phoenix heads, sweet-meat dishes, globular jars and a series of small figurines, including birds, animals, musicians, riders and mothers suckling their babies. In the so-called Raḵḵa wares, the Syrian potter developed during the same period a less contrived style of painting on dishes with flattened everted rims: typical court figures, riders, aquatic birds, compositions of arabesques, dragons’ heads and palm tree leaves. Similar treatment of motifs exists on the eight-pointed star tiles in the palace of Kubābādābād in Anatolia ca. 633/1236, as well as on simpler cross and star tiling under a turquoise glaze in other official buildings of the sultāns of Rūm in Kayseri, Aspendos, Alarān and Alanya.

The Pax mongolica. In the same way as the final extension of Ḥabbāṣid rule ruled a political vacuum early in the 3rd/9th century and thus made possible the creation of one area of influence, so, after a period of strife and weakening foreign influences in cosmopolitan Syria, the Mongol era was one of stability and brought about decided contacts with China along both sea and land routes, even as far west as Europe, as is proved by the Chinese silk damask of Pope Benedict XI dated before 1304 A.D. Through the rich Kāḏjīrī and other seagoing merchants, and many of the sinkiśed retinue of the Ilkhan court of Tabrīz, alien decorative themes, drawn at first from large quantities of celadons, textiles and no doubt commercial paintings and block prints, triggered off the new Islamic style in the most recent technique of underglaze painting from Cairo to Sarāy Berke. The transition from two-dimensional textiles to three-dimensional vessels implied skilful adaptation of the foreign motifs to a totally Islamic system of distribution. Two motifs new to ceramics stand out: the spiky lotus and leaf already picked up in miniature painting and enamelled glass, and the ogee panels, well-known from Islamic carved stone, stucco and metalwares. An intense leafy background, a general impression of grey, and the stylised imitation of the petal design on the outside of celadons, characterise the so-called Sūlṭānābdāb types. At their best, the main themes under a clear glaze are set in relief by a thickness of white clay also outlined in a greenish brushstroke on a manganese slip. Both genres are well illustrated in the so-called Gūrgān material. Two motifs new to ceramics recall the arabesque of flowers and the peony painted underglaze with petal panels of flat cobalt may warm the compositions of phoenixes or cranes in flight, cantering gazelles and sedate geese or Mongol couriers. The earlier and later wares rely more on a white background, with greater emphasis on traditional geometric divisions, radiating panels filled with crosshatching, groups of four dots, dotted circles, zigzag patterns or calligraphy.

Transition. By the middle of the 8th/14th century, the new blue and white Chinese porcelain of the Yūnān period had started to reach the Islamic world in as great a quantity as the long-favoured Lung-ch’iān celadons (also called Ghūrī or Martabani). In the same way as the latter was faithfully imitated, including the saucer base, so the potter took over the new bi-chrome treatment, without appreciating, it seems, that it was in fact the product of imported cobalt from Persia as well as a new experiment in export wares especially designed for the Islamic market by the Chinese potters, in shapes and in a style totally alien to their own taste. Traditional motifs were reorganised on the larger surfaces of dishes in concentric circles and lobed panels possibly akin to early so-called Sūlṭānābdāb panelled bowls and certainly to metalwares easily available in the large colonies of Muslim merchants established from the 3rd/9th century onwards in South China ports. Not only in Persia, but also—and perhaps even more—in the Mamlūk territories, variations on the Chinese lotus pond were produced in quantity, as gradually the running of the cobalt was controlled by the introduction of an added layer of frit over the soft paste body. In the first half of the 9th/15th century, Chinese export blue and white compositions, although still preserving a certain geometric quality, gradually reverted to a more delicate and restrained treatment of the surface. The Islamic potter, prior to his İznik follower in the 10th/16th century, picked up the trend and adapted the arabesque of flowers and the peony blossoms, dragons and waves to his own taste, using in turn, classic scroll, meander bands or diaper patterns, with petal panels on the outside of bowls and dishes. He seems to have been undaunted by the raids of Timūr and the internal strife in both Mamlūk and Ottoman lands at the turn of the century. It
should be emphasised that throughout the 9th/15th century, from Sistan and Farghana to the Mediterranean, this imitative production never overtook the more traditional decorative approach of radiating motifs and panels, either in blue and white or when black was added on the mediocre soft paste body. Such an approach is apparent on early so-called Kubachi wares, dated to the second half of the century: the well-controlled panels or circular compositions are painted in black under a turquoise coloured glaze. So-called Miletus wares are now known to have prevailed in the early stages of the Ottoman rule in Iznik, among other sites, as well as at Miletus. They differ in that the body is red earthenware, but the visual impact often remains geometric with little of the white slip left undecorated. More background is visible when debased Chinese motifs of flowers or birds appear on a field of scattered shapeless leaves. Only the more elaborate Mamluk wares carry a signature such as that of Ghaib or his atelier.

To this period also belong several series of tiles, also under-glaze painted and hexagonal in shape. The decoration recalls either elements of the early 9th/15th century A.D. Chinese blue and white dishes which display geometric blossom compositions or a bunch of flowers, or else the geometry of the transition period. The tiles in Miletus (ca. 843/1440) could have been made in Iznik like related ones a century later; they are neatly finished and the largest in dimension of the series. The Damascus group, including the tiles of the mausoleum of Tawrîzî (ca. 853/1453), is more freely painted with occasional purple and a turquoise border. Egyptian examples, hardly recalling Chinese themes, draw on architectural and bold vegetal motifs.

Ottoman rule. On the whole, the Ottoman potters of Asia Minor produced soft paste vessels with a fine white slip under a transparent lead glaze for the metropolis; and to a lesser extent, those of Syria, Egypt and North Africa also drew on the same technique and on a fund of designs from the nakkâshân, the special studio of court designers. Around the turn of the 9th/15th century, they borrowed from book-bindings and illuminations for the controlled, if austere, dark blue and white arabesque variations of stylised flowers and palmettes on dishes and deep bowls with a splayed foot. The lay-out of the ever signed by İbrâhîm of Kütahya (916/1510) is already less dense in design. By 923/1517, the final conquests of Selîm I had made available a large booty of Chinese wares in the area, including the famous red, Kutahya survived better and its 18th century A.D. production is well known by a series of dated pieces ranging in fact from 1716 to 1843. A most important group of tiles dated 1718-19, intended for restoration work in the Holy Sepulchre, are now in the Convent of Saint Saviour. The Monte Carlo group also belongs to this first period and was presumably inspired by the flimsy spirals of official tughrâs; sherds first found in Istanbul gave it the label; more have now been excavated in Iznik. A broken bottle in this style bears an Armenian dating which corresponds to 1529 A.D. The long- vexed problem of Armenian craftsmanship has now been resolved by the study of archives, which indicate participation and production of the non-Muslim minority at most stages of Ottoman history. The mosque lamp from the Dome of the Rock (956/1549) is the only dated piece of Iznik; it could well be one of the last examples of the first group, also known as the İbrâ-
16th century, the capital was moved first to Tabriz, then to Kaeswān and finally to Isfahān in 1006/1597-8, by which time the frontiers were more secure, the new sea route by the Cape had proved itself and the European East India companies felt strong enough to open new markets. It is difficult to locate precisely the ceramic production of the time, despite some indications given by foreign embassies, travellers and merchants. Mashhad, Kirmān, Shirāz and Yazd are mentioned. Isfahān must have been a great centre, too, although there is no reference other than to the tiled monuments. Be this what it may, the Persian potter of the 10th/16th century A.D. reacted to the impact of Chinese celadon and blue and white porcelain much the same way as his Ottoman counterpart; a substantial amount must have been available to provide inspiration, besides the specimens looted by the Ottomans and those in the collection of Şah ʿAbbās I which he donated to the shrine of Ardashir in 1015/16/1607-8. The blue and white blossom compositions and the wave border were re-interpreted on a soft paste body, as well as the polychrome Anatolian flower compositions down to the bent branches and the saz. Yet the zodiac dish of 571/1563 illustrates the regular recurrence of the geometric division of space. Eventually a style of impressionistic vegetal and animal designs was developed on jars, bowls and dishes, the shape of which owed little to the outside world. The less dramatic visual impact was probably due to a reduced contrast in the colours and relative control of the firing and the irregular quality of the glaze.

Although a few examples of so-called Kubād wares were found in that remote town of the Caucasus, it is not clear where in fact they were made; the early fortunes of the Safawi capitals eventually led them to Isfahān. The unusual compositions break away from controlled geometric; sketches of human busts verging on caricature, are more usual than animals or unidentified plants. Turbaned youths, foreign merchants and sailors, suitable females, enliven the répertoire of impressionistic vegetal and animal designs. Eventually a style of impressionistic vegetal and animal designs was developed on jars, bowls and dishes, the shape of which owed little to the outside world. The less dramatic visual impact was probably due to a reduced contrast in the colours and relative control of the firing and the irregular quality of the glaze.

Since emulating large export celadons and Chinese monochrome bowls and ewers, with moulded or carved designs, the Persian potter remained, in essence, faithful to his predilection for blue and white, contrary to his Ottoman counterpart who abandoned it fairly soon. Patterns of the Chia-ching (1522-66) and Wan-li (1573-1619) reigns were swiftly adapted, with a partiality for wild birds and animals, ludicrous landscapes and garden genre scenes, totally misunderstood. A few dates and potter's marks have been recorded such as the tassel mark. In most of the painting a black outline holds in the various shades of cobalt wash. At its best and most original, the production takes the shape of a large dish with a very white soft paste body; a carved arabesque in the cavetto surrounds a medallion densely filled with wild beasts or birds and foliage. A possible added reason for the continued production of Persian blue and white was the greed of the European market for the export porcelain, all the more so when the Chinese ports closed from 1659 to 1682 and replacements had to be found. Kirmān within reasonable distance of Bandar ʿAbbās (Gombren) on the Gulf certainly rose to the occasion and imitated Kraak porcelain with its paneling in the cavetto and central themes of flowers or bird on a rock. A number of 17th/17th and 17th centuries dated pieces show the gradual deterioration in the decorative treatment with a few exceptional pierced wares, imitation of celadons, humorous or slip-painted wares on a dark background, often called Gombren wares, the Persian version of similar Ottoman specimens, in both cases, copies of Chinese originals.

Some of the best underglaze painting remains that of the continuous tile programme undertaken in Isfahān, and later under the Zands and the Kašgāris in Shirāz, Kirmān, Tehran and Simnān. The introduction of famille rose colours brought a new flavour to flower compositions in mosque and madrasa tile panels from the end of the 18th century. It is also reflected in bowls of the 19th century, in which attempts to imitate European porcelain only preserve a certain Persian flavour. To this day, ceramics are a living tradition in Iran and all Islamic lands, more for practical purposes than as a distinctive part of the artistic production of the period.

 Unglazed wares. Undaunted by the passage of time, the large storage jar with lid, and the bowls which allows its water content to keep cool through slow evaporation, are a permanent product of the potter's workshop. It would require more systematic studies to appreciate their various shapes, volumes of content and ornament. Although decoration can be produced by incising or by painting on the leatherhard body, the best visual effects come from the use of dies and moulds, either as a complete half of a flask, two identical halves being luted together by a central band with the addition of handles and neck device, or in the shape of stamps. The best examples seem to have been produced from the 4th/10th to the 8th/14th century from the Mediterranean to Afghanistan and Transoxiana. Specifically Egyptian is a large series of surviving filters where the pierced area is made to allow its water content to keep cool through slow evaporation, are a permanent product of the potter's workshop. KHAZAL KHAN, IBN HADIJID DIABIR KHAN, Shakh of Muhammara, born ca. 1860, died 27 May 1936. On the death of Shakh of Hadijid Diabir Khan in 1881, leadership of the Muhasayn tribe, the great bulk of which resided in Persian territory, passed to Muzaffar Khan, Shakh Shadi's fifth son. His rule became unpopular on account of his meanness and avarice and on June 2, 1897, Muzaffar and his nephew 'Abd al-Djalal were shot dead, as they were disembarking from a boat at Fallahiyya, by three negro slaves. A large number of Arabs under Salman b. Mansur, a cousin of Khaz'al, were, however, on hand to give further support if necessary in the assassination attempt. It seems that Khaz'al approved the murder, even if he did not actually instigate it. (A. T. Wilson: A précis of the relations of the British Government with the tribes and sheiks of Arabianistan, Calcutta 1912, ch. iv) Muzaffar left no sons. Khaz'al quickly took charge of affairs and was later confirmed as Shakh by tribal election. The Persian Governor General of 'Arabistan, Sardar Akram, opposed Khaz'al's candidacy and endeavoured to have a councillor appointed as Shakh. He failed in this attempt and Khaz'al's position was confirmed by the Shah in April 1898 when the lahad of Mu'izz al-Saltana, which had also been held by his predecessor, was conferred upon him (J. G. Lorimer, Gazetteer of the Persian Gulf, 'Oman and Central Arabia, Calcutta 1915, i/2, 1744-1754).

Khaz'al followed with great success his brother's policy of endeavouring to extend the area over which the Muhabsayn held sway. The submission of the Karab (Ca'sb) tribe was completed during 1897 and in the autumn of 1898 Khaz'al mounted a successful expedition against the Bawiyya tribe in the area between the Kārān and Djarrābī rivers. By 1904 the Shakh had the de facto power to nominate the governors of Ahwāz and Māshūr and the central government was reported to exercise little authority south of Band-i Kfr (Major E. B. Burton to Government of India, Rawalpindi, Feb. 28, 1904, in F.O. 416/17). The weakness of the central government was also revealed by the fact that the collection of arrears of taxation from the Bant Turf could be undertaken in 1903, and again in 1905, only with the support of Khaz'al and his armed followers.

When the Persian government proposed to introduce Belgian customs officials into 'Arabistan in 1902, Khaz'al objected strongly, fearing that his power over his followers would be weakened as the degree of central government control increased. Wilson agreed that any attempt to impose new taxes on the Arab tribes of the area would have caused serious unrest and could have resulted in the deposition of Khaz'al unless he was successful in defending the tribes' traditional rights. (Wilson, op. cit., ch. v). One of Khaz'al's advantages in the subsequent negotiations was the fact that he owned a large area of land in Turkish 'Irak, and could realistically threaten to leave Persian territory together with his followers. More important reasons for Khaz'al's success in the negotiations over the introduction of the Belgians were, however, the degree of support which he received from the British diplomatic mission in Tehran and the number of armed followers which could call upon. A. H. Harding, the British Minister in Tehran, estimated that he could put 20,000 armed men into action against the central government if he so wished. (Hardinge to Lansdowne No. 57, 12 April 1901, marked confidential, in F.O. 609365). In May 1902 the authorities in Tehran agreed that the Shakh should receive a salary as the Director-General of Customs in 'Arabistan and that the Belgian official who was to be appointed should accept the Shakh's orders with regard to the duties to be paid by the local Arab inhabitants (see H. J. Whigham, The Persian problem, London 1903). In 1903 the Shakh received three important farmans confirming his land holdings and proprietary rights in 'Arabistan from Muzzafar al-Din Shah.

It was because Khaz'al possessed such local power, because he was suspicious of Russian designs in the Persian Gulf, and because he made serious endeavours to reduce the level of piracy in the waters under his control, that his friendship was regarded highly by local British officials (see the despatch by Major E. B. Burton cited above). After the discovery of oil at Masjid-i-Sulayman in 1908, Khaz'al's friendship became even more important, for the pipeline that was necessary to carry the oil to a deep water port had to cross his territory as well as that of the Bakhtiyār. Khaz'al granted the necessary wayleaves in 1909 and also leased land for the building of a refinery and loading jetties at Abadān (see S. H.

Longrigg, *Oil in the Middle East*, London 1961, 19-20. The Shaykh also assisted the British after Turkey joined the First World War. In 1910 the Shaykh had been made Knight Commander of the Order of the Indian Empire (K.C.I.E.) in recognition of his friendship towards British interests.

After the end of the war and with the rise to power of Rüştü Khan, the situation began to change. The official British promises of support for Khażal had been made conditional on the recognition of his obligations towards the Persian government. While the British government was weak the issue was largely academic, but when Rüştü Khan began to extend the power of the central government the problem became a pressing one. Khażal probably expected greater British support than he received. He was encouraged by London to seek an agreement with Rüştü Khan (see G. Waterfield, *Professional diplomat: Sir Percy Loraine of Kirkharle Bt.*, London 1973, chs. 6-9 for details and further references to the British diplomatic archives on this complex issue). In Nov. 1923 Khażal came to an arrangement with the central government over the payment of taxes (A. C. Millsbaugh, *The American task in Persia*, New York 1925, 216-36), but Rüştü Khan's expedition in the spring of 1924 against the Lurs to the north alarmed Khażal. He refused, with good reason, to go voluntarily to Tehran and in August he stated that he would resist Rüştü Khan by force if necessary. British intervention failed to bring about a reconciliation. The famines of 1903 were revived by the Šah and in September Khażal accused Rüştü Khan of violating the laws of Persia and of acting as a usurper. This outburst lost Khażal the sympathy of the British government which had begun to realise that British interests lay in the creation of a strong central government in Persia (R. M. Burrell, *British, Iran and the Persian Gulf: some aspects of the situation in the 1940s and 1950s*, D. Hopwood (ed.), *The Arabian Peninsula: society and politics*, London 1972). Khażal offered an apology for his statement in Dec. 1924, but Rüştü Khan was by now determined to extinguish the Shaykh's power. Military preparations were made by the Persian army during the winter of 1924, and on 19 April 1925, Khażal was arrested on board a boat at Muhammara. He was transferred to Tehran and kept there under virtual house arrest until his death.

(R. M. Burrell)

**KHAZAR**, a nomadic people in the South Russian steppes who flourished in the early Islamic period. The Khazar tribal union emerged in the course of the 6th century A.D. in the aftermath of a series of migrations of nomadic peoples from Inner and Central Asia. With the collapse of the European Hun state in 454 A.D., some of the nomadic elements of Attila's horde withdrew to the Pontic steppe zone. They were joined here, ca. 461 A.D., by waves of Oghur tribes which had been driven from Western Siberia and the Kasağh steppe by the Sabirs who, in turn, had been forced to migrate to the Kazakh steppe from their Central Asian homeland by the expansion of the Avar (Juan-juan, Uar-Hun) tribal confederation (on the history of these migrations, see C. Czegledy, *A nomád népék vándorlása napkeletől napnyugattyal* ['The Migration of nomadic peoples from East to West'], Budapest 1969). The Sabirs themselves arrived in the North Caucasian steppes and Volga region in the opening decades of the 6th century. When Avar (Juan-juan) hegemony in Mongolia was overthrown by the Turks (Türk, KÖK Türk) in 552 A.D., elements of the Avars (or perhaps the Hephthalites, whose tribal union was composed of kindred Uar-Hun tribes) migrated westward and entered the Volga-Pontic steppe zone after 557 A.D. where they subjugated some of the Oghur tribes. Avar dominion in this region was short-lived, for they were soon forced to migrate, together with some of their Oghur subjects, to Pannonia (ca. 567 A.D.), by the advent of their enemies, the Turks.

Although there are indications in Armenian sources (see *The History of the Caucasian Albanians by Movses Dâshourânsî*, tr. C. J. F. Dowsett, Oxford 1961, 70) and Arab sources (al-Baladhuri, *Fustûk al-buldân*, ed. De Goeje, 1941; al-Yâkîbî, *Historiae*, ed. Hostasna, i, 200-4) that would appear to give evidence of a Khazar presence in the Volga delta and in the Caucasus prior to the middle of the 6th century (see D. M. Dunlop, *The History of the Jewish Khazars*, Princeton 1954, 20-22, and M. I. Artamonov *Istorija Khazar*, Leningrad 1962, 116-7), for an evaluation of these sources the Khazars have nothing to do with the Akatsiv/Akatsir, Khotirs etc. who figure in Byzantine and Syriac sources during this period, see O. Maenchchen-Helfen, *The World of the Huns*, Berkeley 1973, 427 ff.; it is only under the aegis of the Turks that the Khazar tribal confederation (most probably an amalgamation, by this time, of Hunnic, Sabir, Oghur, Turk and other nomadic, Altaic elements) fully emerges on to the historical scene. It cannot be determined, at present, whether a tribe named "Khazar" actually existed prior to the conquest and organisation of the Volga-North Caucasian-Pontic steppe nomads by the Turks. It may well be that the Khazar tribal union was a creation of the Turks and the name of this new tribal grouping was thus coined, phonetically and historically, by our early sources via local, oral historical tradition, to those earlier tribes which ultimately came to compose it. In many of our early accounts, the ethonyms Khazar and Türk are interchangeable. In any event, it is under Türk leadership (the *Didebul Khaqan* of Movses Dâshourânsî, the *Didebul* of the *K'arMis Ts'khovreba*, Ziğnda of the Byzantine writers, perhaps to be identified with the T'ong Yabgu* of the Western Turks, see J. Marrott, *Osteuropdische und ostasiatische Streifzüge*, Leipzig 1903, 394, 498) that the Khazars figure prominently in the Preo-Byzantine wars of the first third of the 7th century. The Khazars, as allies of Byzantium, relieved the Sásânid pressure on Heraclius (610-41) by devastating Persian holdings in Transcaucasia. In 626, the *Didebul* Khaqan and his nephew, the Shâd (Shâtî in the Armenian sources) ravaged Caucasian Albania and in the following year turned on Georgia whose capital, T'bilisi, fell to them in 628 (Daskhurants'î, tr. C. J. F. Dowsett, 81-8, *K'arMis Ts'khovreba*, ed. S. Kaukhî-îshvili, *K'arîz* 1955, i, 225, 374-5). The Khazar-Byzantine alliance cemented during these wars remained, although subject to occasional buffets, the cornerstone of the Byzantine defence network against the nomads of the Eurasian steppes until the roth century.

Türk overlordship in the western half of their
realm had been steadily weakening during the first half of the 7th century as the result of internecine strife. With the submission of the Western Turks (On Ok) to the Chinese in 659, it came to an end. Two Turk successor states emerged in the western sector of the Eurasian steppes, the Khasar Kaghanate (perhaps under a scion of the ruling clan of the On Ok, the Nu-shih-pi as suggested by Artamonov, op. cit.) and the Bulghar-ongogur/Onogghundur state (a tribal union composed largely of Ogur elements led by the Dulo, the rivals of the Nu-shih-pi in the On Ok confederation. The Bulghar ruling clan may also have had Attild affiliations, see O. Pritsak, *Die Bulgarsche Fürstenliste und die Sprache der Protobulgaren*, Wiesbaden 1955, 36-8). The inevitable conflict that broke out between the two (reported, with mythic overtones, in Theophanes, Nicephorus Patriarchus and the Letter of the Khasar ruler, Joseph) ended with the defeat of Pontic (Magna) Bulgaria (Πιλατικα Βουλγαρια) in the 670s. In the course of this struggle, and perhaps even earlier, some Bulghar (the name may be etymologised in Turkic as meaning “the mixed ones”, see Gy. Németh, *A honfoglaló magyarország kialakulása* (“The Formation of the Hungarian State in the Conquest Period”), Budapest 1939, 95-6) elements migrated to the Volga-Kama region founding Volga Bulgharia. Another horde, under Asperukh, made its way to Byzantine Moesia and established Danubian Bulgaria there ca. 679. Other Bulghar tribes remained in the eastern Pontic steppe zone under Khasar rule.

The Khasars were now undisputed masters of the western Eurasian steppelands. Their hold over the North Caucasus, however, was contested by the Arabs who had begun to penetrate this region by 21/642-2. This was the first thrust in a series of wars that spanned a century. Much of the campaigning centered on gaining possession of Bâb al-Abâw (Derbend) (q.v.), a strategically-important town guarding the approaches from the steppe zone to Transcaucasia, and the Khasar cities Balandjar (Balangar, probably of ethnonymic origin, cf. the “Bârandjar” mentioned in Ibn Fadlan, *Kniga Al'hamda ibn Fadlana o ego puteyescestvi na Volgu v 927-922 gg.* (“The Book of Ibn Fadlan on his Journey to the Volga”), tr. and facs. ed. A. P. Kova-
levskiy, Kharkov 1995, 323 (f. 207b), or Z. V. Togan, *Ibn Fadlan’s Reisebericht*, in *Abh. K. M., xxi/vi/1* (1939), Arabic text, 30, or tr. M. Canard, in *AEOL*, i (1950), 107, who were, at this time, ruled by “Alp Ilit” (Il-teber/tever), a Khasar vassal (or perhaps a representative of the royal clan; this is implied in the Turkic title *il-teber* and was a practice common in the nomadic world). The detailed description of North Caucasian “Hunnic” shamanism given in *Daskhurants*’ account of Israyel’s mission is extremely valuable as it sheds some light on the religious practices that were, undoubtedly, present amongst the Khasars as well. The worship by these “Huns” of “Tangri Khan”, the cult of the sacred forest, worship of fire, thunder and lightning and the funeral practices described in *Daskhurants*’ (tr. Dowsett, 153-6, 161) all conform in general and in many of their specific traits to the descriptions of Turk shamanism in Chinese sources and later accounts of Turkic shamanism as practised up to the present century. The Islamic geographers (cf. Ibn Rusta, 139; for a discussion of these sources, see B. N. Zakhradz, *Kaspiyskiy svod svedenii o vostochnoi europe*, Moscow 1962, i, 146-7) note that the Khasar pagans practise a religion “similar to that of the Turks” (Gardizi specifically states that it resembles that of the Ogur/Ghuzz, i.e. shamanism).

During this same period, the Khasars apparently came into possession of most of the Crimea, except for Kherson which remained under a Byzantine administration. From here, they began to play an important rôle in the domestic politics of the Byzantine empire in connection with the ill-fated reign of Justinian II (685-95, 705-11). In the opening years of the 2nd/8th century, the Arab-Khazar struggle for hegemony in the North Caucasus quickened in pace. In 95/723, Maslama b. ‘Abd al-Malik retook Bâb al-Abâw which had, apparently, changed hands several times in the preceding years, and drove deep into Khasar North Caucasian “Hunnic” territory. Difficult but indecisive fighting continued until 111/730 when Djarrab b. al-Hakami, who alternated command of this important theatre of operations with Maslama when the latter’s services were needed elsewhere, was defeated and killed by the Khasars under the command of “Bârdîk (so Balfami, Ibn A’tham al-Küfî, *Kitâb al-Futâh*, Ms. Topkapi, Ahmed III, 2959, ii, ff. 180a-188b, has Bârsbîk. The relationship of Bârdîk/Bârsbîk to *P’arsbîk* (in Lewond, *Paimûf-ism*, ed. Ezeang’; St. Petersburg 1887, 101) noted...
as the “mother of the Khagan”, is unclear), son of the Khakan, as the “mother of the Kaghan”, at Ardabil. Perhaps with a view towards strengthening the resolve of the Khazars, a Byzantine-Khazar marriage alliance was arranged in which Constantine (later Constantine IV Copronymous), son of Leo the Isaurian, married Ciçek, the daughter of the Kaghan, ca. 732-733. Their son, Leo (755-775), was known as “the Kaghan”. The decisive campaign came in 119/737, when Marwan b. Muhammad (called “Marwan the Dear”, in Georgian sources), through a clever ruse was able to advance deep into Khazar territory, by-pass the Khazar capital, Attil, on the lower Volga and catching the Khazars unawares pursue him into the land of the Finno-Ugric Burţas, a subject people of the Khazars. Here, the defeated Kaghan agreed to become a Muslim and a subject of the caliph (the campaign is described in Ibn Aṭham al-Kūfī, al-Baladharī, Bālamū, and Ibn al-Aṯīr). Al-Baladharī, 208, reports that Marwan settled 20,000 Śakūlaba families from Khazar territory in Khákht and had Khazars transplanted to the steppe zone in the province of al-Laz between Šamūr and Shābīrūn. Continued Khazar submission, however, was contingent on a strong Arab presence (i.e., an army of occupation). This was an impossibility and consequently the conversion of the Khazar Kaghan was short-lived. Leo III’s victory over the Arabs some three years later, at Acroinon, in addition to further weakening the Umayyads, undoubtedly enabled the Kaghan (if he had not already done so) to break free of Arab overlordship. Thus, despite Marwan’s brilliant generalship, Arab rule was not and never would be firmly established on the Volga or even in the more accessible Daghistan where, in the 4th/10th century, Khazar rule reached almost up to the wall of Derbend [see Daghistan]. In effect, the Khazars and Arabs had fought each other to a standstill in the Caucasus. Although the campaign of 119/737, unlike the Arab advance defeated by Charles Martel at Tours several years earlier, was successful, the results were similar. The Caucasus and the Pontus became the border zone between the Arab world and Europe.

The Khazars, whose raiding was resumed by the second half of the century and was combined with the frequent revolts of the Christian peoples of Transcaucasia, gave little peace to the Arabs in that region; never again, however, did they constitute a serious threat to the Arab possession of Transcaucasia. The caliph al-Mansūr (136-58/754-75), undoubtedly in an attempt to better relations with the Khazars, ca. 760 ordered Yazīd b. Usayd al-Sulamī, the governor of Armenia, to marry a daughter of the Kaghan. The name of the Kaghan appears to have been *Baghārūs, cf. Ibn Aṭham al-Kūfī, ii, f. 241b. The marriage was arranged (the bride bringing a dowry of 10,000 dirhams) and her death in childbirth and that of her child shortly after (Baladharī, 210) perhaps served as the cause for two large-scale Khazar raids into Transcaucasia in 145/762-3 and 147/764-5. Perhaps the name of the commander of the Khazar forces is given in al-Tabraī, iii, 328, Cairo ed., vii, 7, as “As Tarkhan al-Khārazmī” and in al-Ya’qūbī as “Ras” (Historiae, ii, 446; John Rylands, Arabic Ms. 231 (801), i. 1524) or “Rāṣ” (Cambridge QCO, i, 1922). These names and the nisba “al-Khārazmī” point to an Iranian origin. Following Minorsky, Hist. of Shārān and Darband, 147, we may conclude that
indifference usually manifested by the Altaic, nomadic peoples of this time, and may well be a pious Karaim in Poland, "Les Karaimen en Galicie" (in Polonie, tom 2, 1947, 61-6; idem, Karaimen in Poland, Warsaw-The Hague-Paris 1961, 16 ff., amongst others, that the Khazars adopted Karaitism rather than Rabbinic Judaism has been forcefully countered by Z. Anker, "The Karaites in Byzantium, New York-Jerusalem 1959, 64-79.

At some time in 861, Constantine (later St. Cyril, the "Apostle to the Slavs") led a Byzantine mission to Khazaria, the ostensible purpose of which was to participate in a religious debate at the court of the Kaghan. The real motivation behind the embassy undoubtedly had to do with the 860-1 Rus' raid on Constantinople and questions of joint Khazar-Byzantine cooperation. According to the Life of Constantine (Constantinus et Methodius Thessalonicenses, Fontes, ed. F. Grivec, F. Tomšić, Zagreb 1960), some Khazars asked to convert to Christianity and were allowed to do so.

The later reports of the conversion of the Kazar Kaghan to Islam after the collapse of the Kazar state in 354/966 (Ibn al-Athîr, viii, 418; Ibn Miskawayh, ed. Fr. Amedroz-Margoliouth, text, ii, 203, v, 223, and al-Mukaddasî, ed. de Goeye, 361). In the latter adoption of Islam as the result of the campaigns of al-Ma'mûn (Abû 'I-Absâb Ma'mûn b. Mu'ammad) ruler of Gurgând (and later of all Khârāzm [see Khârâz shâhs]) may well be historical. Prior to 354/966, Islam had adherents not only among subject peoples (cf. in particular the Volga Bulgars) but amongst the Khazars as well. Attil, according to al-Mâlikî (220), had 10,000 Muslim inhabitants. Al-Baladhurî, 203, tells of the Khazars who were settled by Bugha the Turk in 240/854-5 in Shankur (Shankor) or "Shânkor" because of their interest in Islam and security. Confirmation of Bugha's activities in this area (warfare against the Khazars and Alans) is found in Mûneşcedîm bâšiî (Minorsky, Hist. of Shârûn and Darband, Arabic text, i, 3, tr. 25) and in the Kârtûtî T’skhouwrba (i, 256-7) which further notes that he settled 300 Khazar families in "Shânkor" (no mention is made of their Islamic affiliations), but then came under the suspicion of the caliph who feared he was taking council with the Khazars, his tribesmen ("tomâ misîa", which can also be translated as "his kinmen") and relieved him of his post. Bugha's campaign against this time, against the Georgian mountaineers, the Şanariyya (in Georgian Şanar) which led to an unsuccessful attempt on their part to enlist the aid of the Byzantines, Khazars and Şâkâlîba, should be viewed in light of the above.

The conversion of the Khazars to Judaism was no obstacle to continuing Kazar-Byzantine cooperation, especially in view of the unstable situation that was developing in the steppes. In 838 (for the dating, see S. Aliev, O datirvke nabega ruskov, upomnyatâ bîn Istanbûlgrom v Amolî, in Vostochnâe Istoriâkh po istorii narodov tugo-vostônîx i sântal'nîx evropei ("Eastern Sources on the History of the Peoples of South-Eastern and Central Europe"), ed. S. Tveritinova, Moscow 1967, ii, 316-21). Al-Mas'udî reports another raid after the year 300/912-3 (Aliev, op. cit., places this raid after 310/922).

Kazar willingness to allow the Rus' access to the Volga route in order to carry out these raids may perhaps be related to the hostilities between the Arabs and the Khazars in the Caucasus recorded in Mûneşcedîm bâšîî (as above). In the raid reported by al-Mas'udî, the Kaghan is said to have given his assent on the condition that the Rus' give him half of the booty. The Kaghan was unable, however, to prevent the slaughter of the returning Rus' by (probably for Byzantine Crimes) against the Hungarian tribal union, or elements of it, and the Pechenegs who were beginning to cause problems for the Khazars and ultimately the Byzantines (Ibn Rusta, 143; Constantine Porphyrogenitus, De Administrando Imperii, ed. and tr. G. Moravcsik - R. Jenkins, Washington 1967, ch. 42; Theophanes Continuatus, ed. Bonn, 122 ff.; Scylitzes, ed. Bonn ii, 129-30; for a full discussion of this question see F. B. Golden, The migrations of the Oğuz, in Archivum Ottonianicum, iv, 1972).

During the caliphate of al-Wâthîk (227-32/842-7), two Arab embassies were sent to Khazaria, one led by Mu'ammad b. Mîsâ al-Khârâzmi and the other that of Sallâm the Interpreter (al-Mukâddasî, 362; Ibn Khurrradâdbîhî, 162 ff.; Ibn Rusta, 149).

Kazar-Arab hostilities in the North Caucasus continued during the course of the 3rd/9th century on a reduced scale. Mûneşcedîm bâšîî (in Minorsky, Hist. of Shârûn and Darband, text, i, 17, tr. 25, 46) speaks of warfare that, apparently, persisted from Râdjâb 288/August 901 to ca. 300/912. The name of the Kazar ruler who figured in these campaigns is given as K-sâ (or T-niz K-sâ) b. Ibrîân (cf. Bûthân, the name of a Kazar commander mentioned in the Kârtûtî T’skhouwrba, ii, 218).

Kazar power was now on the decline. As with all nomadic tribal unions, there were continual centrifugal tendencies on the part of individual clans or tribes to break away from the power of the Kaghan. The first signs of serious internal difficulties of this nature may be seen in the revolt of the Kâbars (whose name may be etymologised in Turkish as "rebel", see Nêmheth, op. cit., 236-7) some time in the second half of the 9th century (Const. Porphyrogenitus, op. cit., 174). The Hungarian tribal union (to which the Kâbars attached themselves), which had, in the early 9th century, been hostile and had later become an ally (the Arpâd dynasty came to power under Khazar auspices, Const. Porph., 172) had now been replaced in the Pontic steppes by the Pechenegs. Moreover, elements of the turbulent Ogûz tribal union which had been allies of the Khazars against the Pechenegs were now under pressure from tribes to their east. They began to push towards the Volga, occasionally crossing it in search of winter pasturage (al-Mas'udî, Muradî, ii, 19; ed. Pellat i, 218) and skirmishing with Kazar patrols. Another new factor was the unification, ca. 853, of the Eastern Slavie tribes, some of whom had been tributaries of the Khazars, under the Rus' who were drawn to the Volga because of the lucrative trade that passed through Atlî. A series of daring Rus' raids into the Caspian lands of Islam began in the last quarter of the 9th century. Two large-scale raids took place in 298/910 and 299/911-2 (on the dating, see S. Aliev, O datirvke nabega ruskov, upomnyatâ bîn Istanbûlgrom v Amolî, in Vostochnâe Istoriâkh po istorii narodov tugo-vostônîx i sântal'nîx evropei ("Eastern Sources on the History of the Peoples of South-Eastern and Central Europe"), ed. S. Tveritinova, Moscow 1967, ii, 316-21). Al-Mas'udî reports another raid after the year 300/912-3 (Aliev, op. cit., places this raid after 310/922).
KHAZAR

Khazar Jews are mentioned as coming to the court of Vladimir I in 986 in connection with the religious debates that are alleged to have preceded his conversion to Christianity. The account, however, rather supports the parallel, in that Vladimir I, a son of Vladimir I, see G. Vernadsky, "the Khazar) "the Tzoule" (this form T'roule, found in the 12th century Vienna Ms., Nationalbibliothek, Cod. Hist. Gr. 35, f. 132a and in the 13th century Vatican ms. 977, f. 287a, is to be preferred to the "Tzoulus" of the Bonn ed.) was attacked and conquered by a joint Rus'-Byzantine force in which "Sphengus, the brother of Vladimir, who was the brother-in-law of the Emperor" (Basil II, cf. γαλανός τοῦ βασιλέου of the ms. cited above and not "brother" as in the Bonn ed.) led the Rus' forces. The identity of "Sphengus" and the location of "Khazaria" have not been convincingly demonstrated thus far (it has variously been suggested that Sphengus is Mstislav, a son of Vladimir I, see G. Vernadsky, Kievan Rusia, New Haven 1948, 75 and that "Khazaria" is to be found in the Crimea, in the Oghuz, the Torki, the Abkhaz or Djurz (Georgians), both of whom had hostile relations with the Amirs of Gandja. Münzdijmin bāshī, in Minorks, Studies, text. 11, tr. 17, states that the Abkhaz attacked Arran and were beaten off by Pađ of Gandja in 417/1026. The Khazars' history is probably more geographically accurate than the information reported in the 12th century Vienna Ms., Nationalbibliothek, Cod. Hist. Gr. 35, f. 132a and in the 13th century Vatican ms. 977, f. 287a, is to be preferred to the "Tzoulus" of the Bonn ed.) was attacked and conquered by a joint Rus'-Byzantine force in which "Sphengus, the brother of Vladimir, who was the brother-in-law of the Emperor" (Basil II, cf. γαλανός τοῦ βασιλέου of the ms. cited above and not "brother" as in the Bonn ed.) led the Rus' forces. The identity of "Sphengus" and the location of "Khazaria" have not been convincingly demonstrated thus far (it has variously been suggested that Sphengus is Mstislav, a son of Vladimir I, see G. Vernadsky, Kievan Rusia, New Haven 1948, 75 and that "Khazaria" is to be found in the Crimea, in the Oghuz). Münzdijmin bāshī, in Minorks, Studies, text. 24, tr. 51, reports that in 456/1064 the remnants of the Khazars, consisting of three thousand households, arrived in Kievan Rus'. Münzdijmin bāshī, in Minorks, Hist. of Sharvdn and Darband, text. 24, tr. 51, reports that in 456/1064 "the remnants of the Khazars, consisting of three thousand households, arrived in Kievan Rus' (which Minorsky, Hist. 107, identifies with Khâyuk, lands now occupied by the Turkic Kumaks in Dâghistân) from the Khazar territory. They rebuilt it and settled in it". In January, 1016, a territory called "Khazar" in Scylitzes (ed. Bonn, ii, 464) which was ruled by a certain Georgius (now probably a Christianised Khazar) "the Tzoulus" (this form T'roule, found in the 12th century Vienna Ms., Nationalbibliothek, Cod. Hist. Gr. 35, f. 132a and in the 13th century Vatican ms. 977, f. 287a, is to be preferred to the "Tzoulus" of the Bonn ed.) was attacked and conquered by a joint Rus'-Byzantine force in which "Sphengus, the brother of Vladimir, who was the brother-in-law of the Emperor" (Basil II, cf. γαλανός τοῦ βασιλέου of the ms. cited above and not "brother" as in the Bonn ed.) led the Rus' forces. The identity of "Sphengus" and the location of "Khazaria" have not been convincingly demonstrated thus far (it has variously been suggested that Sphengus is Mstislav, a son of Vladimir I, see G. Vernadsky, Kievan Rusia, New Haven 1948, 75 and that "Khazaria" is to be found in the Crimea, in the Oghuz). Münzdijmin bāshī, in Minorks, Studies, text. 11, tr. 17, states that the Abkhaz attacked Arran and were beaten off by Pađ of Gandja in 417/1026. The Khazars' history is probably more geographically accurate than the information reported in the 12th century Vienna Ms., Nationalbibliothek, Cod. Hist. Gr. 35, f. 132a and in the 13th century Vatican ms. 977, f. 287a, is to be preferred to the "Tzoulus" of the Bonn ed.) was attacked and conquered by a joint Rus'-Byzantine force in which "Sphengus, the brother of Vladimir, who was the brother-in-law of the Emperor" (Basil II, cf. γαλανός τοῦ βασιλέου of the ms. cited above and not "brother" as in the Bonn ed.) led the Rus' forces. The identity of "Sphengus" and the location of "Khazaria" have not been convincingly demonstrated thus far (it has variously been suggested that Sphengus is Mstislav, a son of Vladimir I, see G. Vernadsky, Kievan Rusia, New Haven 1948, 75 and that "Khazaria" is to be found in the Crimea, in the Oghuz). In 1079 and 1083 A.D., the Khazars are again mentioned in the Rus' chronicles in connection with events in the principality of Tmutorokan' where they appear to have wielded some power (PRSL i, 204-5). Individual Khazar took service with the various Rus' princes. Thus, s.a. 1106 A.D. we read of an Ivan Kozarin ("the Khazar"), the voivoda of Kiev who drove off a Polovtsian (Coman) attack (PRSL i, 140). A Hungaro-Latin source (Thuróczi, cap. 500) mentions a "princes Bissemor (= Ung. Besemô "Pečeneg") nominee Kazar", which would indicate that Khazar elements had joined the Pečeneg union. Documents from the Cairo Geniza purport to tell of religious debates among Khazars in "Khazaria" in the 11th and 12th centuries. The reference, however, was probably to events in the Jewish communities in the Crimea which was regularly called "Khazaria" or "Gazaria" in later Greek and Latin
As with many steppe empires, Khazaria did not suddenly vanish, although it appeared to, but rather it gradually melted back into the steppe. The nomadic elements were undoubtedly incorporated into the Pee-neg, Oghuz and ultimately Coman-Kipçak tribal confederations (this would probably explain the presence of the Hebrew loanword Shabbat in Coman-Kipçak: Shabat kium, Karağıy-Balkar: Shabat K’un, cf. also Çuvaş: Şəhəm). The collapse of Khazar power after 354/965 had severe consequences for Byzantium which—as the orientation of Constantine Porphyrogenitus’ De Adm. Imp. would indicate—was already seeking to establish a new balance of power in the steppe zone in the 940s-950s. With Khazaria now unable to blunt the thrusts of oncoming nomadic invaders, Byzantium’s Balkan borders and, even more crucial, the Crimea, Constantinople’s eye into the steppe, were extremely vulnerable. The volatile Oghuz tribal union in the steppe to the east of Khazaria which had hitherto been held in check by the Khazars (cf. the Oghuz prisoners held by the Khazars as reported in Ibn Faḍlān, ed. Togan, text 16, tr. 31) or allied with them (in joint operations with the Pee-neg, ed. Kovalevski, 313, ed. Togan, 44, reports that there were 25 subject peoples who sent hostages to the Khagan’s court) which, in addition to the tribes that formed the Khazar union, included the Volga and Pontic Bulgars, the Burjas and other Finno-Ugrians (including at one time the Hungarians), the ‘Huns’ of the North Caucasus as well as the aboriginals of that region, the Iranian Alan/As of the Caspian steppes and North Caucasus and various Slavic tribes. Its borders extended to Kiev in the west, the Volga Bulghar realm in the north (near present-day Kazan’), the steppes of Khazarazm in the east and the Crimea and the northern Caucasus in the south. The Khaganate, in its political and economic organisation, evidences all of the characteristics of other, Altaic, nomadic tribal empires of the period. It was presided over by a ceremonial Khagan (probably of Türk-UFACT origin, descent from the Türk royal clan being one of the main criteria for the assumption of the Khaganal title), while the actual governance of affairs was in the hands of the ḍaʿid (the head of the Ibn Rusta-Gardżid tradition) or the ḍag (cf. the règ of Constantine Porphyrogenitus, De Adm. Imp., 182, the Bek-Vülək of the al-Iṣṭakhri, ibn Hawkal, ed. Kramers, ii, 390, tradition). Ibn Faḍlān (ed. Togan, text. 43-4) calls him the ‘Khākān B-h’ who he notes, was assisted by the ‘K-n-dr Khākān’ and Dəwshīhe-r’. This system is a variant of the well-known Turkic dual kingship. The ceremonial Kagha-nate, described by the Islamic geographers (who regularly distinguish between the Khākān and the ‘Khaqan’), has parallels in the Turkic world. The earliest precedent for this particular evolution of the Khaganate may be seen in the institution of the I K’e-han (‘reb Khagan “House Khagan” of the Turks themselves) noted in Chinese sources. Seen in this light, Artamonov’s speculations (op. cit., 275 ff.) associating this institution with the judaization of Khazaria and the alleged coup d’État of Obadiah in the early 9th century, are to be dismissed. Many of the ancient Türk traditions which underscored the shamanic aspects of the Khaganal office, were preserved by the Khazars. Thus, the ritual of the ceremonial strangling of the Kaghan at his investiture (al-Iṣṭakhri, 224), during which the new Kaghan on the verge of losing consciousness is asked to state the length of his rule (should he exceed it, he is killed; Ibn Faḍlān notes that the Khākān may rule no more than forty years) is identical to the ritual practised by the Turks as described in Chinese sources (Liu Mau-Tsai, Die Chinesischen Nachrichten zur Geschichte der Ost-Türken (T’u-küe), Wiesbaden 1958, i, 8).

The Khazars, or at least the “royal” or core tribes, continued to practice a modified form of nomadism, wintering in their cities (which were large conglomerations of nomadic yurts, hence little archaeological evidence has survived) and passing the summer in the steppes (al-Makdisi, iv, 66). Agriculture and fishing were also practised. (On the nomadism of Western Eurasia, see G. Gyorgy, A honfoglalás magyarázat (Conquest Period Hungarians), in Archaeologiai Értesítsé, xxvii (1970), for a description of this system as practised by the Árpád Hungarian. On the material culture of the Western Eurasian nomads, see S. A. Pleteneva, Ot kolyev k gorodom (“From nomadic encampments to cities”), Moscow 1967). The importance of fishing in Khazaria is confirmed by al-Iṣṭakhri who notes that isinglass was the only product made by the Khazars themselves. Khazaria exported to Byzantium and the lands of Islam large quantities of furs, obtained as tribute from subject peoples, but imported the material for clothing from Gurgan, Tabaristan, Aqharbāyjān and Rüm. The Hudd al-ʿAlam, tr. Minorsky, 161, indicates that livestock breeding, as might be expected, was practised and was one of the numerous exports of Khazaria. But, unanimously with our other sources, the Hudd, 162, notes that “the wealth and wealth of the King of the Khazars are mostly from the maritime customs”. Khazaria took ample advantage of its favourable geographical position lying astride the great commercial arteries between east and west, north and south. The Kagha-nes of All, like the Volga Bulghar ruler, took a tithe on all trade passing through their territory. Nomadic empires (cf. the Turks and their relationship with the Soghdians) regularly encouraged trade because of this lucrative source of revenue. According to al-Mas’ūdī, Muruǧi, ii, 22, ed. Pellat, i, 220, the Khazars had no sea-going vessels; yet according to Hilāl al-Šābī (ed. Amedroz, 217, below), the dams built at Derbend were intended as a defence against the ships (mārkāb) of the Khazars. There is some evidence to indicate that the Khazars minted their own coins. These were imitations of contemporary Arabic coins with many mistakes. Some, apparently, bore Turkic runic inscriptions; see A. A. Blikov, O Khazarškom šekane VIII-IXw. (“On Khazar Minting”), in Trudi gosudarstvennogo ermitaža, xii (1971).

With regard to Khazar urban sites, our sources present a number of a Khazar toponyms, few of which can be located or given etymologies with absolute certainty. In addition to Balagur and Samsun (see above), we may note All, the name of the Volga and the Khazar capital located in its delta. L. N. Gumilyov, Otkritie Khazarii, Moscow 1966, has recently advanced the thesis that the Khazar capital
was submerged by a rise in the level of the Caspian and consequently hopes of finding this largely “tent” city are slim. The al-Iṣṭaṣḥārī: Ibn Hawkāl tradition reports that it was divided into two parts (al-Masʿūdī, Murādī, ii, 7, ed. Pellat, i, 212, and the Letter of Joseph, Kokovtsov, op. cit., 74-5, 102, say it was divided into three parts), a western (called "Khazarān") in Ibn Hawkāl and in Ibn Rusta, 165, who elsewhere, see below, reports a different tradition (p. 130), in which the king, al-Iṣṭaṣḥārī: Ibn Hawkāl, ed. Kramers, ii, 389) and an eastern part. Another tradition, that of Ibn Rusta: Gardīzī al-Bakrī and al-Marwazī, going back to al-Dījamī via al-Dījamīdī, calls the Khazar capital *Sarācshīn (Sarācī = common Turk, “yellow”) whose relationship to “al-Bayūdā” (“the White City”); Sarācī in some Bulgharo-Oghuric dialects denotes “white”) is unclear. It should be borne in mind that “white” cities and fortresses in this region are not toponymical rarities and may have taken their name from the coloration of the bricks used in their construction. The later Sakṣiṃ may be a garbling of this name. Within Sarācshīhīn is another city: H-bn-l- or Khamīlihī (Ibn Rusta, 139; al-Muṣkaḍī, f. 355; Yākūt, Muʿjam al-Buldān, i, 730, 793, ii, 477; Huddād, Tuṃsiniysky ms. f. 38b (H-m-d), Ibn Khuwādādbbīb, 124, 154-5), all of which may be corruptions of *Khan Dakhh “The Khan’s City” (cf. “Cambaļuc” of Marco Polo for Peking). The relationship of this form to the city *Kulūgh, Turk, “blessed, fortunate” (Gardīzī, Oxford, Bodl. Ouseley 240, p. 474; Huddād, Tuṃsiniysky ms. f. 38b; cf. also the H-th-ch, H-l- or of al-Bakrī and al-Marwazī, which may be either a separate and distinct city or the same city reported in the not-always-critical al-Dījamīdī, which form the bulk of our sources for the Khazars, is not clear. Marquart (Streisfues, 18), Lewicki (Zrîldi arabškies, i, 29, 129) Zajczkowski (Ze studidw, i, 29, 115, 177 respectively). Unfortunately, we do not, as yet, possess any texts in the Khazar language (a recently discussed Hebrew document from the Cairo Geniza, see Cambridge, ms. T-S 12.122, which may have been written by Khazar Jews in Kiev, has an inscription in a variant of the Türk runic script which was used by many of the nomadic tribes of Central Asia and Eurasia. It has yet to be satisfactorily deciphered. Moreover, it consists of one word and hence can hardly be considered decisive). It is generally accepted that Khazar must have been, broadly speaking, Alatī; whether this was common Türkic or a form of Bulgharo-Oghuric is still the subject of polemics. Our sources provide little guidance here. Thus, al-Iṣṭaṣḥārī: ed. de Goeje, 222, in one passage, remarks that Khazar does not resemble Türkic, Persian or any other language. Elsewhere (p. 225), he states that it is similar to Bulgharic. Al-Bīrūnī (al-Āṭār al-bābīya, ed. Sachau, 42) remarks that the Bulghar and Sūwār speak a language which is a mixture of Türkic and Khazar. This would seem to contrast Türkic and Khazar and perhaps place Khazar in the Bulgharo-Oghuric grouping. But one must bear in mind the complicated nature of our sources, which undoubtedly compounded the complexities of the linguistic situation in Khazaria where common Türkic, Bulgharo-Oghuric, Finno-Ugric, Iranian and Slavic were spoken. Individual Khazar words, names, titles, hydronyms and toponyms scattered in Arabic, Persian, Hebrew, Byzantine, Rus’, Armenian and Georgians cannot fully answer this question because the difficulties of interpretation and the paucity of their number (depending on what one is willing to consider Khazar, there are, roughly, some fifty known Khazar words), Khazar titles are invariably Türkic or an-and connects this with Varašan, Swār (in the north Caucasus and Volga Bulghar lands, undoubtedly from the ethnonym Sabur), Kīshal (?) and Bełānd.

The religious situation in Khazaria was quite complex. In addition to Jews (whose numbers grew due to the migration of their co-religionists from Byzantium as the result of the persecutions of Romanus Lecapenus (919-44) reported in al-Masʿūdī, Murādī, ii, 8, ed. Pellat, i, 212, and the Khazar Cambridge Document, Kokovtsov, op. cit., 35, as well as from the Islamic lands) and Khazar converts, there were large numbers of Muslims and Christians as well as pagans of various types (Türkic, Slavic and Finno-Ugrian). In Aṭṭī there was a principal mosque with a lofty minaret and 30 mosques. In the year 310/922-3, the Khazar ruler received a report that in a Muslim country a synagogue had been destroyed (the name given in Yākūt, Muʿjam, ii, 440 is not clear; cf. Marquart, Streisfues, 4, 477 ff.). He therefore had the minaret destroyed and the muʿaddābidhīn killed. He left the mosque unharmed for fear that all the synagogues in Muslim lands would be destroyed.

The question of Khazar ethnic affiliations remains one of the most difficult aspects of Khazar studies. Given the context in which the Khazar state came into being, we may perhaps look to the Türkic world more specifically, perhaps, to the Türkic world for an answer (al-Masʿūdī’s comment, Tanbīh, ed. de Goeje, 83, that the name Khazar is Iranian and in Türkic is Sabīr is undoubtedly a garbling of the fact that elements of the Sabirs formed one of the constituent tribes of the Khazar confederation. Both names may be explained in Türkic with the meaning “nomad”, “wanderer”, “North”, “conqueror” (cf. Yaqūt, A ḥadith, 37. This might also account for al-Masʿūdī’s confusion). Unfortunately, we do not, as yet, possess any texts in the Khazar language (a recently discussed Hebrew document from the Cairo Geniza, see Cambridge, ms. T-S 12.122, which may have been written by Khazar Jews in Kiev, has an inscription in a variant of the Türk runic script which was used by many of the nomadic tribes of Central Asia and Eurasia. It has yet to be satisfactorily deciphered.

This would seem to contrast Türkic and Khazar and perhaps place Khazar in the Bulgharo-Oghuric grouping. But one must bear in mind the complicated nature of our sources, which undoubtedly compounded the complexities of the linguistic situation in Khazaria where common Türkic, Bulgharo-Oghuric, Finno-Ugric, Iranian and Slavic were spoken. Individual Khazar words, names, titles, hydronyms and toponyms scattered in Arabic, Persian, Hebrew, Byzantine, Rus’, Armenian and Georgians cannot fully answer this question because the difficulties of interpretation and the paucity of their number (depending on what one is willing to consider Khazar, there are, roughly, some fifty known Khazar words), Khazar titles are invariably Türkic or an-
cient Inner Asian loanwords long associated with Turkic: Kaghan, Khatun, Alp (both a name and title, as is true of many names in Turkic), Baghatur, Beg, Tegin (Ir-tigin), Diaghul, Il-teber, Shak, Tarbaghan, Tarmal (Tolmal), Tudun and Yilik (Ulik).

Other titles (or perhaps names) are problematic, cf.: Baligitis (Belgits?, Ballidget, B-i-Ehkiti?, Tsiutté (Tsilti?), Didauqit-git, K-na-ti, Salfitan. Similarly, some Khazar personal names are clearly Turkic, cf.: Æxi (Æsxi), Bulan, Cizch, Corfan, Kadiitik (Kədəritik), Barsbeht (Barsbeht?), while others pose numerous difficulties of interpretation: Bārδjīk (if it is not a corruption of Barsbeht?, see above), Balbšt, Blušťa, Cersan, Ækš, Kasar,imals (both a name and title, as is true of many names in Turkic), BolusÚll, Bdshtwa, BluFánFulBschütan, &at* Kasar, &at'n, Bhāgatur, Ziebel. A few names show Iranian influence (cf. Hasir Targhan and perhaps Kündagis, with the Turkic diminutive suffix -lik). Of the tribal names, we know only Khasar (K'azar), Karda Khasar and Kabarl Kavar. The clan name Ænsa (Hudād, ms. Tumanskii, f. 38b), if it is not a corruption of Ighā/İşāh, may well be a garbling of the Turk Āqghina. Of the nomina, we know only the obviously Arabised al-liğāda (Ibn Âš'ām al-Kûfî, Topkâpl, Ahmed III 2956/i, f. 19b), a kind of tent-cart. With the possible exception of Sahnab (if it is to be read as Sharkil), none of these forms shows specific Bulghar-Oghric characteristics (i.e. Turun for Tudun).

Another major question of Khazar studies, for which there is as yet no ready answer, is the relationship of the Khazars to the origins of Eastern European Jewry.

Bibliography: Partial bibliographies of the Khazar question are found in: A. Varnolmskins, Th' Khasars; A Bibliography, in Bulletin of the New York Public Library, xliii (1939) and his later Th' Khasars: (an annotated) Bibliography, in ibid., lxiii (1959); B. D. Weinryb, Th' Khazars, an annotated Bibliography, in Studies in Bibliography and Booklore, Library of Hebrew Union College-Jewish Institute of Religion, vi (1963); Gy. Moravcsik, Byzantinoturcica, Berlin 1935, l, 83 ff.

The major works on the Khazars are M. I. Artamonov, Ol'kh donezechovedstvo istoriy ("Outline of the Most Ancient History of the Khazars"), Leningrad 1936 and his later Istoriya Khazar, Leningrad 1962 which is useful from the archaeological standpoint. A. Zajczkowski, Zv Studiow nad zagadnieniem chazarzhkim ("Studies on the Khazar Question"), Cracow 1947, is important from the Turcological viewpoint, but rather weighted in favour of Khazar-Karaim ties. D. M. Dunlop, Th' History of the Jewish Khazars, Princeton 1954, an excellent outline of Khazar history with detailed treatment of Arabic, Hebrew and Byzantine sources. P. B. Golden, Q'azar Studies, An historico-philological Inquiry into the Origins of the Q'azars, in Monographs on Medieval Eurasia, i, Lisse-Budapest, forthcoming, is a detailed treatment of the Khazar "Sprachreste" with emphasis on the Turcological aspects of the Khazar question. Z. V. Togan's "Hazarlar" in IA is fanciful and at times uncritical.

The major Arabic sources for the Khazars are, in addition to the geographers of the Bâq'a series, al-Balqahri, Ktâb Fu'âdh al-Bulladân; al-Dimahkîl, Cosmographie, ed. F. Mehrens, St. Pb. 1866, Ibn Âš'ām al-Kûfî, Ktâb Fu'âdh, Istanbul, Topkâpl, Ahmed III 2956 (extracts can be found in Togan, Ibn Fa'djân's Reiseberichte and A. N. Kurat, Muhammad bin Â'sam al-Kâ'fû'nîn Ktâb al-Fu'âdh, in Anth. Unw. Dil ve Tarîkh-Cografya Fakûllesi Dergisi, vii (1949); Ibn al-Âdîl, al-Kâmî fi 'l-Tarîkh, 1851-76; Ibn Fa'djân (see the Kovalevskiy and Togan editions cited in the text); al-Idrisi, Geographie d'Edrisi, tr. A. Jaubert, Paris 1836-40; al-Makdisî, Ktâb al-Bad' wa'l-Tarîkh, ed. C. Huart, Paris 1899-1919; al-Kazwînî, Cosmographie, ed. Vüstenfeld, Göttingen 1848; Sharaf al-Zamân Tâhir Mîrâj, Qutb al-Usrâ fi sharh Kitâb al-Bulût, tr. A. J. Yâkubâ, Historia; Yâkût, Muqaddamât al-Bulûtân, and the Judeo-Arabic work of Yehuda hal-Levi, Book of Kusar (Ktâb al-Khazar), tr. H. Hirschfeld, New York 1946. The Armenian sources are extremely important: Lewond, Paqmûram, ed. I. Ecezangâ, St. Petersburg 1887, as Ghévond, Histoire des guerres et des conquêtes des Arabes en Arménie, by V. Chahazarian, Paris 1926; Movses Khorenats, (see the Armenian Studies, ed. C. de Boor, Leipzig 1885; Theophanu Continuatus, Historiae, ed. J. Beker, Bonn 1838. The Georgian compilation, the K'art'lis Ta'khovneba (see text above), contains valuable supplementary material on Khazar activities in the Caucasus, but is generally unconcerned with events outside of Georgia proper. P. K. Kokovtsov's Evreysko-Khazarshch'ke Perepis'ka (see text above) contains critical editions of the Khazar Hebrew correspondence and the Cambridge Document with an exhaustive commentary. Of Persian works, Movses Khorenats' Histoire d'Arménie, ed. and tr. P. E. Le Vaillant de Florival, Venice 1841 and the Geography ascribed to him, Geographie de Moise de Corine, ed. and tr. A. Sokury, Venice 1882. The most important Byzantine sources for the Khazars are Constantine Porphyrogenitus, De Administrando Imperio (see text above), which gives a detailed analysis of the situation in the steppe in the mid-fourth century; Nicephorus Patriarchus, Brevarium, ed. J. Beker, Bonn 1837; Georgius Cedrenus, Ioannis Scylitzae ope, ed. J. Beker, Bonn 1839; Theophanu, Chronographia, ed. C. de Boor, Leipzig 1885; Theophanu Continuatus, Historiae, ed. J. Beker, Bonn 1838. The Georgian compilation, the K'art'lis Ta'khovneba (see text above), contains valuable supplementary material on Khazar activities in the Caucasus, but is generally unconcerned with events outside of Georgia proper. P. K. Kokovtsov's Evreysko-Khazarshch'ke Perepis'ka (see text above) contains critical editions of the Khazar Hebrew correspondence and the Cambridge Document with an exhaustive commentary. Of Persian works, Movses Khorenats' translation and re-working of al-Tabari is extremely useful as he adds many details missing in the Arabic original. The work is available (in full) only in H. Zotenbergs' translation, Paris 1867-74. The ms. of M. Minovis facsimile edition, Astan-i Kuds 7481 (Tehrân 1345/1926-7). The ms. of M. Minovis facsimile edition, Astan-i Kuds 7481 (Tehrân 1345/1926-7).
is, regrettably, damaged and difficult to read; the Oxford Ms. (Bodleian, Ouseley 240), is probably derived from it and should be used. The Rus' chronicles (Polnoe SobrаниеRusskikh Letopisey, i, Lawrence'eskaya letopis', Moscow, reprint 1962, and ix, Nikonorovskaya Letopis', Moscow, reprint 1965) make occasional references to the Khazars.

Important collection of sources (texts, translations and commentaries are: Ch. Fraenkl, Ibn Fadlan's and other Arabo-Armenian Sources über die Russen alter Zeit, St. Petersburg 1823; A. Ya. Garkavi (Harkavi), Shasaniyus musul' mamshchikh pisateley o slavyanakh i russikh ("The Accounts of Muslim Writers on the Slavs and Russians"), St. Petersburg 1870, and his Shasaniyus evreyshchikh pisateley o kozarskikh i kosarmorskikhistorii ("The Accounts of Jewish Writers on the Khazars and the Khazar Kingdom"), St. Petersburg 1874; A. Kunik - V. Rosen, Inostroya al-Debi i drugih avtorov o Rusi i slavyanakh, St. Petersburg 1878-1903, and the more recent F. Kuper - T. Lewicki, Žrđoba hebrajskije do dziejów Słowian i niektórych innych ludów środkowej i wschodniej Europy ("Hebrew Sources on the History of the Slavs and some other Peoples of Central and Eastern Europe"), Wroclaw-Warsaw 1956, and T. Lewicki, Žrđoba hebrajskije do dziejów słowiańskich, ("Arabic Sources for the Hist. of the Slavs"), i-ii, Wroclaw-Cracow 1956-69; the latter is still in progress. An interesting discussion of the "Hebrew Sources on the History of the Slavs and some other Peoples of Central and Eastern Europe") has contributed a number of very useful analyses of specific problems of Arabic sources relating to Eastern Europe in general and Khazar problems can be found in J. Marquart, Ein Arabischer Bericht über die arktischen Länder aus dem 10 Jh., in Ungarische Jahrbiicher, ix (1924); idem, Kultur- und sprachgeschichtliche Analekten, in Ungarische Jahrbiicher, ix (1920); T. Lewicki, Eorosvans arabes du IXe au XVIe siècle traitant de l'ombre jaune de la Baltique et de son importation en pays arabes, in Eosia Orientalia, ix (1962-3); S. G. Klyshansky, Drevneyshie upominanija slavyan v nizhem povolž'e ("The Oldest Mention of the Slavs in the Lower Volga Region"), in Vostočnole Istotschniki, ed. Tveritinova (1964), i; A. P. Novosel'egov, Vostočnole istotschniki o vostochnih slavyanakh i Rus' VI-IX evo ("Eastern Sources on the Eastern Slavs and Rus' VI-IX cents."), in Dvynaruskoe gosudarstvo i ego mesto v narodnoj zhizni ("The Ancient Russian State and its International Significance"), ed. A. P. Novosel'egov, V. T. Pashuto et al., Moscow 1965; F. Kmetiowicz, The Term Rdddniya in the Work of Ibn Ḥurāṣdīgh, in Folia Orientalia, xi (1969).

The Hungarian scholar, K. Czegtedy, in additoion to his important articles are: H. H. Howorth, The Khazars, were they Turks? in "La troisième session du Congrés International des Orientalistes, St. Petersburg 1876; S. Patkanov, Über das Volk der Sabiren, in Keleti Szemle, i (1900); J. Thüy, A Khazar is a mělčůšského ("The Khazar title Khazara"), in Keleti Szemle iii (1903); (J. Gy.) Moravský, Príběh plánar doba Tiszaki-
ký ("The Origin of the word Tiszákony"), in Seminárium Kondosanum, iv (1913); V. Mi-
norsky, The Khazars and the Turks in the Arab Sources de la des Chazarenreiches im neunten Jahrhundert, in Korosi Goma Archivum, iii (1940); M. I. Arta-
monov, Belaya Veša, in Sovetskaja Arkeologija, xvi (1954); H. Schonebaum, Zur Kabarenpfrage, in Aus der byzantinistischen Arbeit der Deutschen Demokratischen Republik (BBA 5, 1957); M. I. Artamonov, Sarkel-Belaya Veša, in Trudi volgo-
donskoj arkeologicheskoj expedicii, Materiali i issledovaniem po Arkeologii SSR, liii (1958) (Works of the Volga-Don Archaeological Expedition, Materials and Researches on the Archaeology of the USSR); see also there the article of I. I. Lysyshkin, Pamjatniki saltovo-mayatskoy kul'tury v basseyne r. Dona ("Monuments of the Saltovo-Mayats Culture in the Don river basin"); N. Ya. Polovoy, O marginale pokhoda russkich na Berdja i rusko-Khazarskich otnoshenijach v 934 g. ("On the Route of the Russian Campaign on Bargha and Russo-Khazar relations in 943") in Vissiniyshkh Frenemykh, xxv (1961); T. Lewicki, 'Arku', Un nom de tribu éminigique cité dans le lettre du roi Khazar Joseph (943e siècle), in Cahiers du Monde Russe et Soviétique, iiii (1962); O. Pritsak, A. Yodnur und Kazašskie Kaurar, in Ural-
Altaische Jahrbiicher, xxxvi (1965); P. B. Golden, The Qasaro-Hungarian Title of Personal name پنک ~ Tekh in Archivum Eurasiae Medii Aevi, i (1975); idem, The People in ibid.

On the Turkic runic script and inscriptions that
may have Khazar connections, see: A. M. Shcherbak, Neskol'ko slov o priyomakh Kena'yi runeishchikh
nadpisey, naydenikh na Dona ("A Few Words about
the Methods of Reading the Runic In-
scriptions Found on the Don"), in Sovetskaya
Arkheologiya, xix (1954); idem, Zhurnale na
keramike i kirpicakh iz Sarkela-Beloy Veli ("Signs on the
Ceramics and Bricks from Sarkel-Bela Veta"), in
Materiali i issledovaniya po Arkheologii SSSR
("Materials and Researches on the Archaeology of the
USSR"), lxxv (1959); idem, Les inscriptions
inconnues sur pierres de Khoumara (au
Caucase du Nord) et le proble de l'alphabet runique des Turcs
Occidentaux, in Acta Orientalia Hungarica, xvi
(1962); Gy. Németh, The Runic Forms
from Nagy-Szent-Mikl6s and the Runiform Scripts
in kind (ghallat) and stored them in the state granaries and
warehouses, giving out receipts (bara?at [see BARA'A.
In addition to some of the works cited in the
text, there is a relatively large body of literature
dealing with the history of the peoples and cul-
tures of the Eurasian steppes which has a bearing
on a number of problems of Khazar studies. The
following is by no means exhaustive, but should
provide a good guide to the study of the area as
a whole: N. I. Ash'amar, Bolgar i Cuvash ("The
Bulgars and the Cuvash"), Kazan' 1902; Z. Gombech,
Arpadkori irodok szemelynevvezek ("Our Turkic Per-
sonal names of the Early Period"), in Magyar
Nyelve, xi (1915); I. Berlin, Historicko-sud?bi
esvychnego naroda na territorii russkogo gosudarstva
("The historical Fate of the Jewish People in the
Territory of the Russian State"), Petrograd 1920;
V. V. Bartold (Barthold), Mesto prihlasivshikh
oblastey v istorii musei'mskogo mira ("The Place of
the Caspian Region in the History of the Musul-
main World"), first appeared in Baku 1925, now
to be found in V. V. Bartold, Turcs d'hommes et de
peuples finissant en -ar, (W. BARTHOLD — P. B. GOLDEN)
KHAZIN (A.), usual pl. khazin (the pl: Khazans
is found in the Kur'an in XXIII, 71, 73), etc. for
the angels who guard Paradise and Hell, literal-
ly, "he who keeps safe, stores something away", a
term of mediaeval Islamic administra-
tion for certain members of the financial depart-
ments (on which see BAYT AL-MAL and, for
Ottoman times, also KHAZINE and also of the
chancery. It was used in 'Abbasi times, for there
was prominent in the early 4th-10th century Mu'nis
al-Khazin (so-called in the press to distinguish
him from the commander of the guard Mu'nis
al-Muzaffar [q.v.], an associate of the vizier Ibn
al-Furat's in a kind of regency council, al-sâdâl,
set up when al-Mu'ktadir regained the throne in
296/908 after the failure of Ibn al-Mu'tazzî's putch;
Sourdel has suggested that Mu'nis may have been
the treasurer of the personal revenues (mal al-
hâsâ), the caliph's (Le vizirat abbâsidi, ii, 387-8,
742). But the term khazin could equally be used at
this time for quite menial and lowly members of
the caliphal household; in his detailing of the bud-
get for 306/918-19, Hilal al-Sabi enumerates the
wages of such servants as those who kept the stores
of bedding (khazîn al-faraq) and the one who
kept the supply of candles (khazîn al-Îam), these
being classed with the attendants of the
private chambers and the audience hall, the porters,
etc. (Vusara, ed. 'Abd al-Sattar Fârâji, Cairo 1958,
23).
We have some information from treatises on
finance and administration in Egypt about the
term's usage there under the Fâtimids, Ayyûbids
and Mamlûks. According to Ibn al-Mamûtî (d.
606/1209 [q.v.], the khâzîn was a secretary in the
Dhîân al-Mâl who collected the taxes paid in kind
(ghâzal) and stored them in the state granaries and
warehouses, giving out receipts (bara?at [see BARA'A,
KHAZIN — AL-KHAZIN

i) for these, and also securing the repayment (murtadi'i) of advances to the cultivators of seed (ikabadi); he kept an inventory of the holdings, for which he was strictly accountable, and then issued the produce when required (A.S. Cooper, Ibn Mammati’s rules for the ministries: translation with commentary of Qawanin al-Dawawin, Univ. of California, Berkeley, Ph.D. thesis 1973, unpublished, 238, 244; Cl. Cahen, Contribution à l’étude des impôts dans L’Égypte médiévale, in JESHO, v (1962), 269-70 (citing Makhlûme); Hasanain Rabie, The financial system of Egypt, A.H. 364-741 (A.D. 1169-1341, London 1972, 160-1). An extension of this function of store-keeper is that of keeper of books or librarian (khâzin al-kutub), whose duties included the careful guarding of books and their issue only against pledges of the equivalent value (Subki, Mu‘ad al-mi‘am wa-mudlib al-mukam, ed. Mub. ‘Ali al-Nadîdîr al-‘ali, Cairo 1367/1948, iii, and see further, Khâzîn.

However, the term was also used simultaneously in Egyptian administration for an official in the chancery or Dîwân al-‘Inâdî who acted as registry clerk and archivist in the department. According to the Kânûn dîwân al-rasâ‘îl of Ibn al-Sayrâfî (dispersion of what I have reproduced [q.v.]), the position of the Dîwân had under him seven speakers for various specialist jobs plus two non-specialists, the khâzin and the bâdî as doorkeeper of the office. Whilst not required to possess the encyclopaedic knowledge of adab and of administrative procedures required of the kâibî, the khâzin had to be a man of intelligence and the highest probity, for he kept the record of all incoming and outgoing chancery documents, placing copies of all letters sent out plus the originals of those received in a file or portfolio (îdhûra, pl. â’dîbîr) for each separate month. Hence if he was susceptible to corruption, he could easily abstract confidential documents, and Ibn al-Sayrâfî accordingly states that “the guiding reins of the whole dîwân are in his hands” (cited in Kâlqâlandî, Subh al-‘alâmî, i, 135-6, cf. W. Björkman, Beiträge zur Geschichte der Staatskanzlei im islamischen Ägypten, Hamburg 1928, 22, 39, 89).

Bibliography: Given in the article.

(C. E. Bosworth)

AL-KHAZIN, ABU DŻAFAR MUHAMMAD b. MUHAMMAD b. AL-‘USAYN AL-KHURASANI, astronomer and mathematician, originally from Khurâsân (not to be confused with al-Khâzîn [q.v.]). He was a protégé of Abu ‘l-‘Afdî Ibn al-A‘mîld (d. 159/969-70), minister in Rayy of the Buwayhî Rûkûn al-Dawla (326-66/937-76), and died between 350/961 and 360/971. Amongst his purely mathematical works, the Fûhrîsî, 282, ed. Cairo 393, and Ibn al-Kîtîf, 396, ed. Cairo 1936, of Kûn al-Madârîsâ al-‘adâdîyya (now lost), whilst Naṣr al-Dîn al-Tûsî, K. Shâkî al-‘alâfî ra İstanbul 1891, 148-51, mentions the Maţâlîb â’dîbiyya, mayl al-mu‘ayyî al-‘adâdîyya wa l-maţâlîb fi l-‘hûrâ al-mustâkîma, which contained a demonstration of the theorem of the sine for right-angled spherical triangles. According to the Fûhrîsî, 266, ed. Cairo 371, he wrote a commentary on the Elements of Euclid, but the only part of this that survives, in several manuscripts, is the commentary on the opening of Book X. Abû Naṣr Mânsûr, Rishût fi taṣâkî ma wa‘âsâ’l Abî Dżafar al-Khâzîn min al-tawî li’l-Sîdîr al-sâfîyîn, in Râdî’s Abî Naṣr ila ‘l-Bûrûnhî, Hyderabad 1948, 3, speaks of “his book on the Elements of geometry”, and we know that he set forth a defective proof of the fifth postulate of Euclid; ms. 1014 Leiden contains the reply of Abu ‘l-Dżûd Muhammad b. al-Layîf to a geometrical problem set out by al-Khâzîn. Moreover, it was possibly our al-Khâzîn who demonstrated, with a method closely connected with Hero’s procedure in his Dioptra, the formula of this latter author for finding out the surface of a triangle as a function of its sides. By using conic sections, he resolved the so-called equation of al-Mâhâ’în (x² + a²b = c²).

One of his best-known astronomical works is the Zâdî al-sa‘âbî (table of the plates of the astrolabe?), which he wrote for Ibn al-‘Ammîld (al-Bûrûnhî, Tahbîd nîdîyît al-amâdhîn, in RIMA, viii (1962), 110-20; two brief chapters concerning astronomical instruments in ms. Berlin 5857 may conceivably belong to this work, which Ibn al-Kîtîf considered as the finest and most splendid on the subject. According to al-Bûrûnhî, Abdâr, 326, in this work the author adequately sets forth the theory of the trepidation of the equinoxes along an 8° arc. The same author, in an obscure passage of the Tamhût al-mustâbarr li-taṣâkî ma’nd ‘l-mamarr when he deals with the correction of the transit in depth (comparison of the vector radii of two consecutive planets, each in relationship to its own maximum and minimum distance), states that Naṣr al-Sâdî deals only with the problem in his Zâdî al-sa‘âbî, although he was mistaken in another, unspecified work; he also sets forth the criticisms levelled by al-Khâzîn against Abû Maṣ‘ûr on this topic (On transits, tr. M. Safouri and A. Ifram, comm. by E. S. Kennedy, Beirut 1959, 85-7, 172). Abu ‘l-Dżûd Muhammad b. al-Layîf reproduces (ms. Leiden Or. 168 (a)) al-Khâzîn’s assertion in the Zâdî in which he deals with the chord of an angle of r° provided that it were possible to trisect the angle. Abû Naṣr Mânsûr devotes the rishût mentioned above to the correction of certain errors made by al-Khâzîn in this work. It can accordingly be deduced that the Zâdî al-sa‘âbî included at least two maddîs, together with a third one in which the author dealt with the following topics: a method for determining the ascendant, when the degree of the “midpoint of the heavens” was known but the oblique ascension was unknown (R. fi taṣâkîh..., 4-14); the way of determining the meridian when the degree of the sun is known (15-33); the determination of the azimuth of the hûbî “by means of the instrument” (fi ‘l-dîa = astrolabe?, 33-9); the movement of the apogees (39-42); and in a spherical triangle, if the sides are known, the angles are also known, and vice-versa. This last topic was one of those about which he corresponded with İbrahmîn b. Sinâ¼ (42-9).

Al-Khâzîn also wrote a commentary on the Almâgest in which he gave information about the value of the obliquity of the ecliptic (23°35’) obtained by the Banû Mûsä at Baghdad in 245/860 (al-Bûrûnhî, Tahbîd, 95), and also about the observations, likewise made at Bagdad in the year 212 of the Yazdîgird era’s 444 A.D. by Kâlqâlandî, 21, in which the observation of the spring and summer was determined (al-Bûrûnhî, al-Kâmîn al-mas’âdî, Hyder-abad 1954 ii, 655; on this work, see also al-Bâsî, Shâhî al-‘alâfî, 123). In another work, now lost, al-Khâzîn had in which the title Sirr al-‘alâmîn, al-Khâzîn probably set forth his theory according to which the heavenly spheres are solid, and developed the earlier ideas of Ptolemy’s Planetarûs hypotheses; this latter theory was later set forth by Ibn al-Hayyam and al-Khâräkî [q.q.v.]. Al-Khâzîn was furthermore the author of a al-Madârîsî al-habîr ila ‘l-im al-nâjîm,
in which were set forth two methods of determining the *aldmat Mujiarram (sc. the day of the week *aldmat Mujiarram, i.e., the day of the week corresponding to the 1st Muharram in any given year, cf. al-Bîrûnî, *Alâbarr, 202-3). In an unspecified work, he tried to pin down exactly the date of the Jewish Passover in the year of Jesus's crucifixion (idem, *Kânûn, i, 332). Finally, we know that in a *Kĩbûf ft 'l-âbâ'd wa 'l-adîrûn, he gave the diameters of stars between the first and the sixth magnitudes, but without specifying whether these calculations were his own personal ones or how he had arrived at them (ibid., iii, 1312).

Al-Khâzîn seems to have been an astronomer who made practical observations. He is associated with one or more determinations of the obliquity of the ecliptic; according to al-Bîrûnî, *TAhâdîd, 98, he was present when Abu 'l-Fadl al-Harawi made his observations in 348/959, which gave the value \( e = 23^\circ 40' \). All b. Abúmad al-Nasawî also speaks of the determining of \( e \) made by al-Khâzîn and a certain number of colleagues, by means of a circle ca. 4 m. (in diameter?), but does not mention any date or place; according to yet another source, al-Khâzîn measured \( e \) at Edessa in 359/970. At all events, al-Khâzîn and Ibn Sinâ (?) were both working on the idea of a progressive diminution of the obliquity of the ecliptic caused by the movement of its poles round "a point" (al-Bîrûnî, *TAhâdîd, 101). It is also of interest to mention that according to al-Bîrûnî, *AÎgâr, 258-9, *TAhâdîd, 57-8, and *Kânûn, 630-2, al-Khâzîn wrote a *mâdâla in which he put forward the idea of a solar model different from that of Ptolemy, and was concerned about the eccentricities or epicycles: viz., the sun goes round the centre of the universe in a path which is circular but moving with irregular speed, and a point situated on the line of the apsidles and different from the centre of the universe is the centre of the uniform movement of the sun. This system finds its justification in the fact that, according to al-Khâzîn, Ptolemy failed to observe any change in the apparent diameter of the sun in the course of the year. The same system was set forth by Henry of Hesse (1325-97) in his *De reprobatione eccentrorum et epicyelorum (cf. Claudia Kren, in *Iisîs, lv (1968), 269-81), but it is not easy to see any possible connection between the two authors. Finally, one may note that Ibn Khâlidîn in his *Proleggomena, tr. de *Slane, i, 111, tr. *Rosenthal, i, 115, tr. Montelli, i, 114, gives al-Khâzîn's determination of the latitudes corresponding to the seven climates.

KHÂZÎNE (al-Khâzîn), state treasury. In Turkish, the word khażîne acquired a meaning close to this at least in the 7th/13th century (*Tâmâlînî, *Tâmâlînî, *saraş teşkilâtî, Ankara 1945, 316), whereas at the end of the 12th/18th century the Treasury was supervised by the Superintendent of the Treasury, with the head clerk of the treasury under him; the seal of the Treasury was kept by the Superintendent of the Treasury and its key with the head clerk. When it was required to extract something from the Treasury, the Sultan's permission was obtained and it was opened in the presence of a number of clerks, the operation being registered on the spot and an entry being made in the main register. The officials working in the Treasury were under strict control, and could not fill their own pockets while working.
Thus at this time the supervision of the Treasury was done by the Superintendent and the ağhas of the Treasury, whilst the requisitions upon and the stocks contained in the Treasury were recorded by the clerks of the Treasury (Ta'rikh-i ʿĀṯār, i, 198, 199; for the stocks and a description of the Inner Treasury, see J. B. Tavernier, Nouvelle Relation de l’Intérieur Séral du Grand Seigneur, Paris 1675, 109 ff.). After an Ottoman sultan came to the throne, he would go to the Treasury and inspect the deposits personally. This was an important ceremony, in which the interior palace personnel would take part, and the head clerk of the Treasury would present a register, showing details of the Treasury deposits, to the sultan before he entered the Treasury (Şeb-i Arz, Dhayl-i Râhid, Istanbul 1202, 19; Ta'rikh-i ʿĀṯār, i, 254-6).

The Outer Treasury was under the management of the Head Treasurer, as a member of the Exchequer or Ḵâzîne-ye Ṿāmere, who was directly responsible to the Defterdar or Minister of Finance. The actual expenditure of the State was made from this Treasury. In 933-4/1527-8 there were in the Ḵâzîne-ye Ṿāmere 9 treasurers, under the Defterdar, 32 clerk and 23 apprentices, comprising respectively the Ḵâzîne-ye Ṿâme Ḵâzîne-ye Ṿâme a Ḵâzîne-ye Ṿâme Ḵâzîne-ye Ṿâme.At their sitting in a row behind the General or of the financial department the latter included braziers and an iron oven, as well as the money put into or taken out of the Treasury, see J. B. Tavernier, Le Voyage de Monsieur d'Araman, Paris 1675, 43, 52). In time of war, the money required for every use of the word “treasury” in this way indicates that the term was used as the equivalent of “finance” in general or of the financial department (Defterdarlı). For example, tax policy in Aleppo was determined according to the registers kept in “the treasury of the province” (wildyet ḵâzînesi).

The money brought to the Ḵâzîne-ye Ṿâmite was examined by the official in charge of weighing and assaying (veşezān, veşnezâr), who decided whether there was any spurious coinage and whether the total was correct. The money put into or taken out of the treasury was registered and recorded by the clerks sitting in a row behind the defterdar, and at their side were the weighers and assayers, who would count and fix the value of the money. The equipment of the latter included braziers and an iron oven, as well as scales and balances. After being weighed, the money would be put into bags and these bags would be taken to the treasury which was beside the assembling room before the Defterdar, or Bağdatlî, Le Voyage de Monsieur d'Araman, ed. Ch. Schoeler, Paris 1887, 237-8; Uzunçarşılı, Osmanlı devletinin merkez ve bahrîye teşkilâtı, Ankara 1948, 369-70).

The word “treasury” gradually came to be used from the end of the 10th/16th century onwards with a more diffused meaning in Ottoman usage. Thus the collected monies set apart for the supplying of a fortress garrison (e.g. that of Egri in 1011/1602) was called a “treasury” (see Orhonlu, op. cit., 39-41, 43, 52). In time of war, it would be sent by a suitable kind of the soldiers’ needs, and the state treasury containing the treasury registers were sent along with the army under the title of the “army treasury” (Ordu ḵâzînesi). The army treasury was transported.
in chests on camels, and was kept under the guard of Janissary cavalrymen in the Treasury tent at halting places. It was therefore necessary that the defterdâr should accompany the Sultan and the Grand Vizier on campaigns, taking with them the treasury registers in order to record the daily expenditure in detail. The treasury registers, together with the army treasury, were kept in the Treasury tent (Ferîdûn Bej, Münâbed-i âl-êslâmîn, Istanbul 1274, i, 139-99; Mustafa, Tarih-i Murâd, Istanbul 1290, i, 94; cf. Firdûsî's Mehmed Ağa, Nusret-nâm, simplified version by İsmet Parmaksızoğlu, Istanbul 1962-4, i, 177, 281, 294, 299-300). In order to give an idea of the size of the army treasury, one may note that there were 26 trains of camels assigned to carry the treasury for the army commanded by the Vizier Lâlâ Mustafâ Paşa during the Persian campaign of 1286/1287 (Başbakan Arşiv Genel Müşterîliâ, Kâmil Kepeci tasnîfi, Ruus defteri, no 232, p. 397).

The Interior Treasury was still richer in money and goods than the Khâzîne-i Âmire at the end of the 12th/13th century. Even at this period, there was very little aid given from the inner treasury to the Khâzîne-i Âmire or Outer Treasury, except in time of wars and financial crises. Nevertheless, these subsidies were credits and were returnable, as was the case in earlier times. In times of crisis, confiscation was often resorted to whenever the state treasury was in financial straits; these confiscations were usually of the wealth of officials, see Cavîd Baysun, IA, art. Mişâderê.

The losses of territory by the state during the various wars necessitated a reorganisation of the inner and outer treasuries. The need to find a new source of income led to the foundation of the "new receipts treasury", îsrâdî-î dîjâtî khâzînesî. Some sources of income were assigned to the new treasury, and whenever there was an annual surplus of more than 10 purses from the income of the state lands and the Haramayn, it was also transferred to this treasury. The "new receipts treasury" consequently grew richer than the state treasury, which was deprived of some of its income, so that further reorganisation became necessary (Djewdet, Ta'rikh, Istanbul 1309, vi, 272-3; Âşlm, Ta'rikh, ii, 350). The "new receipts treasury" continued its existence, despite its ups and downs, during the reign of Selîm III (see Enver Ziya Karal, III. Selimîn Hatt-î Humayunlân, Ankara 1946, 89, 92-3), but it was abolished after he was deposed (Başbakan Arşiv Genel Müşterîliâ, Hatti Humayun Vekilnamesi, no. 19418). As a result, part of the "new receipts treasury"'s income was stopped and the rest transferred to the treasury of the mint, the darâbbân-e-yi 'âmîre khâzînesî, which was a branch of the inner treasury. Thus state expenditure was met, as before, from the state treasury, and the surplus income was transferred to the inner treasury, the latter once more serving as a reserve treasury giving subsidies to the outer treasury in times of war or crisis. In the 19th century, changes began to be made in the Ottoman financial system. From 1820 onwards, about 15 of the Anatolian sandjaqs began to be governed by lieutenant-governors or muṭâsâlîms, without the appointment of provincial governors or wâlis, and of mutasarrifîs in the sandjaqs, and the income assigned to the wâlis and mutasarrifîs was registered as income to the mukuâla't treasury, which was the treasury for the niyâma-yi new army. After the abolition of the Janissary corps and the simâr system, the financial department was in 1834 divided into two, the khâzîne-yi 'âmîre, and the

mansûra khâzînesî, which supervised the income and expenditure of the Imperial army (muîkîme-yi 'âskerîyye). At the death of Mahmûd II in 1255/1839, there were the khâzîne-yi 'âmîre and exchequers for the mukuâla't, the munitions manufacture (bâråd-khâne) the awbâfî, the Haramayn and the zâhire in existence. With the establishment of separate ministries and government offices, it appears that branches of the treasury such as the dockyard, the arsenal, the kitchen, the zarîf and the Haramayn acquired a more definite shape. Each one of these branches of the treasury had an emin or superintendent, and a treasury assistant (kâtîhîyya) (Muştafa Nûri Paşa, Netâyişî al-awbâfîdî, Istanbul 1292, iv, 114-5, 118).

Formerly there was a special imperial treasury (gîîyî-î humâyün khâzînesî) for the private expenditure of the sovereign, and then in 1839 the office of the Sultan's privy purse (khâzîne-yi kâhîsâ dâ'îrîsî), in charge of the palace income and expenditure, was established. Because the property owned by the ruler was at this time all transferred to the state treasury, this office, which was made into a ministry, looked after the part of the estates and property left to the sovereign on condition of paying tax. The ministry of the Khâzîne-yi Khâsîsî continued in existence until 1908.

The Ministry of Finance was founded on 28th February 1838 and the financial matters, which were then in chaos, were more centralised. During the first months of 'Abd al-Medjid's reign, the Finance Ministry was abolished and divided into the financial department of the exchequer (neşârî-î khâzîne-yi 'âmîre defterdârîlîgî) and that of the mukuâla't treasury, but the Ministry of Finance was re-established in 1840 (Mehmed Thürîyya, Nûkhtet îl-awbâfî, Istanbul 1298, i, 48-9, 63, 72).

In 1871 it was decided to divide the ongoing expenditure into two headings for the annual budget (devletî muvaçârane defterî), the first was for specified and private expenditure for every government office, and the other was for the general expenditure incurred in the Ministry of Finance. For the first heading, there were included the Sultan's privy purse, the military treasury, the treasury of the dockyards for naval expenditure, the appropriation for the salaries of judges and Şâhrîa matters, the awbâfî treasury, the appropriation for internal domestic affairs, the appropriation for foreign affairs, the financial appropriation for the finance organisation abroad, the appropriation for trade and public works, and the appropriation for public education. Apart from the privy purse treasury or khâzîne-yi khâsîsî, every ministry and office was required to submit a register in the following year showing its annual expenditure and the payments for unexpected outlays which had been taken from the financial treasury (mâliyye khâzînesî) for details, see Dostîr, 1st Series, Istanbul 1290, ii, 70 ff.; the provinces were also to submit a budget and send the registers of balance, which they had prepared, to the financial treasury.

Belin, Essais sur l'histoire économique

Al-KHAZINÎ, Abu'l-Fath 'Abd al-Râhamân (or Rahmân) or 'Abd al-Rahmân Mangûrî, astronomer and physician who lived in Persia at the opening of the 6th/12th century. He is occasionally confused with Ibn al-Hayyâm, al-Khâzînî and other authors bearing similar names and writing on the same topics. He was in origin a young Greek slave of 'All b. Muhammad, treasurer of the court in Marv; his master took it upon himself to give him the best possible education, but we have written not the biographical details, and therefore do not know that he was a man of austere morality, that he had some pupils and that he enjoyed the patronage of the Sâlûqûk sultan Sandjâr b. Malik-Shâh (511-52/1117-57).

He wrote the following works: (1) al-Zûdî al-mu'âsâbar al-sanâfîr al-salânî, astronomical tables dedicated to Sandjâr and based on his personal observations, of which he mentioned in 525/1130. These were utilised, either directly or indirectly, by the Byzantine scholars George Chrysococces (in its accuracy to all those constructed by his predecessors. The concept of weight which emerges from his work stems clearly from Archimedes, and according to his definition (1, 1) it is the force inherent in solid bodies which causes them to move, of their own accord, to the right of the centre of the earth and towards this centre alone; this force, in turn, depends upon the density of the body. Al-Khâzînî also has some idea of the influence of temperature on density, and his tables of specific weights are in general correct. Bibliography: Brockelmann, S I, 902; Sarton, Introduction, liii, 216; Suter, 122 (no. 293), 226; Bayhâkî, Tâtimma, i, 128 ff. There is a basic study by R. E. Hall, in Dictionary of scientific biography, vii, New York 1973, 335-51, s.v. Amongst the works mentioned above, only the Mîzân al-bîkhâma has been edited (Hyderabad 1359/1940 and Cairo 1947); see also on N. Khânîkoff, Analysis and extracts of Kitâb mîzân al-bîkhâma... by al-Khâzînî in the twelfth century, in JAS, vi (1859), 1-128, and E. Wiedemann, Aufsätze zur arabischen Wissenschaftsgeschichte, Hildesheim 1970, indices. (J. VERNET)

Al-KHAZİR, a right-bank affluent of the Greater Zâb river [see Zâb], which drains the kûra of Nakkhâ, to the east of Mâwsîl; locally, it is called Barrîshû. It was on the banks of this river that there took place, on 10 Muḥarram 67/6 August 686, a decisive battle between Fârîd b. Ibrahim al-Mukhtar [q.v.] and 'Ubâyd Allâh b. Ziyâd [q.v.]. After having suffered a defeat at 'Ayn Warda [q.v.], 'Ubâyd Allâh made for 'Irâk with his army, but was intercepted by the forces of Ibn al-Ashâr, who was fighting in the name of al-Mû'âkhtâr [q.v.]. According to tradition, 'Umây r b. al-Hâbû b. Su'lâmî, who commanded the right (or left?) wing of Ibn Ziyâd's army, wished to get revenge for the defeat suffered at Mârdisî pâshî [q.v.] by the forces of Muhammad. Since he had formerly been Ibn al-Ashâr's secretary, he met the latter secretly and betrayed his own leader. Thanks to this act of treachery, Ibn al-Ashâr defeated Ibn Ziyâd, who was killed in the fighting together with several other Syrian leading figures. Another battle of very minor importance took place at Ma'rûbâ on the banks of the Kâdzîr in 293/905-6, see Canard, H'amandânî, 342.

Bibliography: Yskût, s.v.; Tahbari, index; Masûdî, Murâdî, index; Mubarrad, Kâmi, Cairo 1353/1938, 1012-13; see also KALB B. WABARA, 'Ubâyday Allâh b. Ziyâd. (ED.)

KHAZNADAR, KHAZINDAR, variants of khânînadar, "Keeper of the treasury" in Mamlûk usage. It is a compound of Arabic khâzîna, meaning treasury, and Persian dâr, meaning keeper; according to Kalkashandî (Subh, v, 463) "fast-talking scribes" transferred the alif from the second to the first syllable and dropped the tā' marbūta from khâzînâ, thereby producing khâzînâdar, which is the form found most frequently in Mamlûk texts. According to Ibn Taghrîbirdî (Nûṣûm, Cairo, vii, 183-4) the khânînâdar was one of several offices that Sultan Baybars al-Bundûkidîr either introduced or transformed, assigning them to military personnel. In addition to the khânînâdar, these included the dawâdâr, amîr âkhrâr, sarâghârâr, sukhâr, gâmadârîyya, budûjâd, ruûs al-huwâb, amîr sîlakh, amîr madjîs and amîr gîsidh. The context in which this passage occurs would suggest that Baybars made these innovations under the influence of Mongol practice. During the Fâtimid period this official was called sahîb bayd al-mâl, according to Kalkashandî (iii, 481).

Although the term was used in Mamlûk times for any person who served as keeper of treasures—to the caliph, for example, or to an amîr—it refers in par-
ticular to the officer who acted in this capacity for the Mamluk sultan in Cairo. Originally the office was given to an amir of forty, but later was upgraded and was filled by an amir of one hundred. The office ranks as twelfth among the twenty-five positions listed by Kalkashandi as reserved for military personnel in attendance on the sultan. Furthermore, the khāznindār was almost certainly overshadowed by the civilian nāṣir al-khāṣṣ, who, during his heyday in the Bahri period, often exercised almost complete control over the sultan’s financial affairs. The primary duties of the khāznindār were custodianship of the sultan’s treasuries (cash and otherwise) and distribution of gifts on certain ceremonial occasions. These duties were at times divided among three keepers. The khāznindār al-sinjī was responsible for the sultan’s precious fabrics (brocades, embroideries, silks), gold saddlery, and furs; this official worked in conjunction with the nāṣir al-khāṣṣ. The khāznindār al-‘ayn had custody of the sultan’s jewels; since these were kept in the harem, this functionary was a eunuch. The khāznindār al-kis was responsible for distributing alms to the needy during royal processions and to the sultan’s guests on ceremonial occasions. In Damascus the viceroy appointed four eunuchs as khāznindāriyya; they were responsible for the royal robes of honour and other gifts stored there.

In Ottoman Egypt, the khāsinndār was in charge of the Imperial Treasury, and variants of this title were given to similar officials elsewhere in the Ottoman empire. Khāsinndār and khāznindār were also used as titles for officials in India under the Dihli sultans and the Mughals.

(D. P. Little)

KHAZNADAR, Muṣṭafā [see Muṣṭafā KHAZNADAR].

AL-KHAZRAJJI, one of the two main Arab tribes in Medina. With the other tribe, al-Aws [q.v.], it formed the Banū Kayla in pre-Islamic times and the Ansār [q.v.] or “helpers” (sc. of Muḥammad) under Islam. The ancestors of the al-Khazradji are given under al-Aws. The following are the main subdivisions of the tribe:

- Amr al-Hārith
- Awf
- Ka'b
- Djinsham

Thā'abā

- Ghām
- Amr
- Tāzīd
- Ghāḍb

al-Nadīdīr

- Salīm (al-Ḥublā)
- Awf

- Salīm
- Salīma
- Amīr

Kawākila

Mālik
- ‘Adī
- Māzin
- Dīnār

Zurayk Bayḍā

Al-Khazradji and al-Aws settled together in Yathrib or Medina after leaving the Yemen, and for a time were subordinate to the Jews there. The leader in gaining independence from the Jews was Mālik b. al-‘Āqīlān of the clan of Salīm (Kawākila) of al-Khazradji. It is doubtful, however, whether at this time al-Khazradji was thought of as a unity, for the effective units seem to have been certain subdivisions, which may be called “clans”. It was groups of these which were involved in the feuds in Medina before the hijra. In the Constitution of Medina (Ibn Hishām, 341-4) there is no mention of al-Khazradji but only of its two main clans: al-Nadīdīr, al-Hārith, Awf, Sāʿīda and Djinsham.

In the period before the hijra, one of the prominent men among al-Khazradji was ʿAmr b. al-Nuʿmān of Bayḍā. He gained some advantages over the neighbouring clan of Zurayk, and later appears to have been involved along with al-Hārith in fighting against some clans of al-Aws. Hostilities between them increased until about 617 there took place the battle of Buʿāth [q.v.] in which ʿAmr b. al-Nuʿmān with support from al-Nadīdīr and some nomads defeated various groups of Awsis and others under Ḫudayr b. Simāk. Both leaders were killed. Two important Khazradjis, ʿAbd Allāh b. Ubayy of B. al-Hublā and ʿAmr b. Ḫimār of Salīma, were neutral at this period. ʿAbd Allāh b. Ubayy [q.v.] hoped, before the coming of Muhammad, that he might have become “king” of Medina.

The Khazradijīs seem to have been more numerous and more enthusiastic Muslims than the Awsis; 10 at the first ʿAkaba agreement as against 2; 62 at the second ʿAkaba agreement as against 11; 9 nukabāʾ as against 3; 175 men at Badr as against 63; 228 women named by Ibn Saʿd as against 121. Khazradji poets included Ḥusayn b. Ḥabīb of Maghāla of al-Nadīdīr [q.v.], Ka'b b. Mālik of Salīma [q.v.] and ʿAbd Allāh b. Rawḥa b. al-Hārith [q.v.]. Many descendants of the last were later found in Spain. During the Umayyad period, the Khazradijīs mostly supported the ruling dynasty, but al-Nuʿmān b. Baṣḥir, governor of Himṣ, threw in his lot with ʿAbd Allāh b. Zubayr.

(W. Montgomery Watt)

AL-KHAZRAJJI, Diyaʾ al-Dīn Abī Muḥammad ʿAbd Allāh b. ʿUṭmān al-Mālik al-Andalus, the author of a long poem which contains a versified treatise on Arabiometric poetry. This poem, entitled al-Rūmān al-Shāfiyya fi Ṭamay al-ʿurūd wa-l-ḥāṣiyya, is popularly known as al- Kaṣida al-Khażradiyya. The Khazradiyya is a didactic poem of 96 verses composed in ṭawwī metre containing the essence of al-Khalli b. ʿAbd Allāh b. Muḥammad’s theory of meter, and was thus originally meant to be learnt by heart. Many manuscript versions of this work have been preserved, but nevertheless almost nothing is known about the author. He is mentioned by Ḥādīdī Khallīa (see bibliography), who gives no information concerning his life, but he appears to have been active during the 7th/8th century in the western regions of Islam. His work became widely known in the East as a result of numerous commentaries which appeared subsequently.

In the West, the interest of orientalists in the Khazradiyya seems not to be justified by the rather
The contents of the Khazradiyya may be summarised as follows: Vv. 1-2 definitions of metres and rhythm feet; 3-9 the syllables as formative elements in a rhythmic foot; 10-12 the circles which al-Khalli b. Ahmad invented for his graphic representation of the Arabic metres, and the 16 metres contained in al-Khalli's circles; 13-17 general definitions; 18-24 simple and complex elision (zihdî); 25-51 exhaustive treatment of all possible changes in rhythmic feet; 52-70 application of the rules given in vv. 25-51 to certain well known verses in particular; 50-96 a discussion on rhyme (hâfiya) and all possible deficiencies of rhyme.

The biographical dictionaries give virtually nothing on his life, except that Sakhib states that he met him in Zabid and that his ancestor Ibn Wahhaâs had been praised for his learning by the commentator Zamaâshshari. According to Hâdidi Khalîfa, Khazradijî wrote three histories of the Yaman, impelled, so he says, by the prevailing disregard for the study of history. One was in annalistic form, apparently Al-Siqût al-masbâh wal-sabarjadi al-mahbûh fi man waliya al-Yaman wa-'l-Islâm. Of this work, the best-known part is Al-'Ukud al-lulu'iyya fi akhbâr al-dawla al-rasuliyya (ed. and tr. Sir J. W. Redhouse and Shakhî Mub. 'Asaıl, GMS, iii, Leiden-London 1906-18). This is for earlier times very much a compilation, drawing on authors like Bahî al-Din al-Djândjî and his K. al-Sulûk, the fulsome eulogies in it of the Rasûls, and its comparatively late date, have led G. R. Smith to compare it unfavourably as a source for Rasûlid history with the earlier historian of the Yaman Badr al-Din Muhammad b. Hátim al-Hamdâni, who wrote ca. 694/1295 the K. al-Simî al-qâhil fi al-thaman min al-Ghazî bi 'l-Yaman (see GAI I, 394). A further point of significance is the virtual identity of Khazradijî's al-Yaman with the Fâkhût al-samân... fi akhbâr man malaka al-Yaman of the Rasûlid monarch al-Malik al-Ashraf Ismâ'il b. al-'Abbâs (778-803/1377-1400); it is difficult to tell which of the two was written first, see Mingana, Catalogue of the Arabic manuscripts in the John Rylands Library, Manchester, cols. 406-10, and GAI S II, 236-7. The third history, some commentaries on the Khazradiyya are mentioned below in chronological order: Abu 'l-Kâsim al-Sharîf al-Andalus al-Sabîlî al-Gharnâtî, d. 760/1359 (Brockelmann I, iii, 321, S I, 545); Abu 'Abd Allah b. Abî Bakr b. Marzûk al-Khâtîb al-Tilmânî, d. 781/1379 (Brockelmann II, 239, S II, 335); Abu 'l-Kâsim al-Fattûb al-Sanhâdî al-Zamânnî, his commentary finished in 816/1413 (Brockelmann I, 312, S I, 545); Muhammad b. Abî Bakr al-Damâmînî, d. 837/1434 (Brockelmann II, 26, S II, 21); Abu 'l-Hasan 'Ali b. Muhammad al-'Kurashl al-Bâṣtî al-Kalaşdî, d. 892/1486 (Brockelmann II, 226, S II, 378, does not mention his commentary, but al-Ma'kãri, Analecets, i, 936 does); Abî Dîs'far Ahmad b. Dâwûd al-Balawî al-Gharnâtî, his commentary finished in 908/1502 (whether he himself nor his work mentioned by Brockelmann, but mentioned in Hâdidi Khalîfa ed., Tawd, iv, 203); and Zayn al-Din Zakariyyâ al-Ansârî al-Samâyîl al-Shâfi'î, d. 926/1520 (Brockelmann II, 100, S II, 117). In addition to the above-mentioned works, other commentaries exist: see lists in Brockelmann I, 312, S I, 545. Bibliographical details of editions of commentaries can be found in the Introduction of Basset's La Khazradiyyah.

Editions of the Khazradiyya (in addition to the works by Guadagnoli and Basset mentioned in the article): Madîma min muhimmat al-mustûn, Cairo 1328/1910, 505-153; edition and commentary by al-Damâmînî, with a second commentary added in the margin by Zakariyya al-Ansârî, Cairo 1323/1905. (P. SMOOK)

AL-KHAZRAJII. MUWAPPÂK AL-DIN ABU 'L-HASAN 'ALI B. AL-HASAN AL-KHAZRAJII AL-ZABIDI, called Ibn Wahhaâs, South Arabian historian who wrote under the Turkish Rasûlid dynasty (933-1126) in the Yaman, d. late 812/early 1410 aged over 70. The biographical dictionaries give virtually nothing on his life, except that Sakhib states that he met him in Zabid and that his ancestor Ibn Wahhaâs had been praised for his learning by the commentator Zamaâshshari. According to Hâdidi Khalîfa, Khazradijî wrote three histories of the Yaman, impelled, so he says, by the prevailing disregard for the study of history. One was in annalistic form, apparently Al-Siqût al-masbâh wal-sabarjadi al-mahbûh fi man waliya al-Yaman wa-'l-Islâm. One of the events dynasty by dynasty, Al-Kifdya wa'l-i'a'id al-Yaman wa-sakanahd fi 'l-Isâm, of which the best-known part is Al-'Ukud al-lulu'iyya fi akhbâr al-dawla al-rasuliyya (ed. and tr. Sir J. W. Redhouse and Shakhî Mub. 'Asaıl, GMS, iii, Leiden-London 1906-18). This is for earlier times very much a compilation, drawing on authors like Bahî al-Din al-Djândjî and his K. al-Sulûk, the fulsome eulogies in it of the Rasûls, and its comparatively late date, have led G. R. Smith to compare it unfavourably as a source for Rasûlid history with the earlier historian of the Yaman Badr al-Din Muhammad b. Hátim al-Hamdâni, who wrote ca. 694/1295 the K. al-Simî al-qâhil fi al-thaman min al-Ghazî bi 'l-Yaman (see GAI I, 394). A further point of significance is the virtual identity of Khazradijî's Al-Yaman with the Fâkhût al-samân... fi akhbâr man malaka al-Yaman of the Rasûlid monarch al-Malik al-Ashraf Ismâ'il b. al-'Abbâs (778-803/1377-1400); it is difficult to tell which of the two was written first, see Mingana, Catalogue of the Arabic manuscripts in the John Rylands Library, Manchester, cols. 406-10, and GAI S II, 236-7. The third one was in biographical dictionary form, complementing Djandji's work, compiled at the behest of al-Malik al-Alshraf. And called Tirâş a'dâm al-samân fi tabâbât a'sân al-Yaman or Al-'Ihâ al-fâkhîr al-hasan fi tabâbât akhâr ahi al-Yaman. Kâbhûla further mentions a local history of Zabid and Aden, the Mirât al-samân fi ta'rîkh Zubâb wa-'d-dâm, and Khazradijî's poetry was also collected into a disma.
